A DOG'S DAY.

BY ANNA C. STARBUCHE.

I've sneaked through all the city's streets
Without my leather muzzle;
I've lapped up water as I ran,
From trough and hydrant nozzle;
My legs are tired, my back is weak,
And yet I meant to do it.
In spite of city ordinance
That said my hide should me it.

I've snapped at heels of passers by
And caught their look of loathing;
'Twas fun to see their horror, when
I only tore their clothing.
One child was looking through a gap,
I stopped, and in he darted;
You should have seen the thirst for blood
That little villain started!

The moon came rushing from the house
With rusty guns and sabres,
The women bore the little child
In blankets to the neighbors.
They chased me long with dire intent,
But all their market fishes,
Went off with me in a gale,
No trace of canine ash.

At last my spots outstripped them all.
I reached a friendly haven;
I met a man whose ragged coat
And whiskers all unshaven
Betokened care and poverty;
And yet he stooped in pity,
And stroked the hair where ching the mud
And jeers of all the city.

He shared with me his crust of bread,
He shared with me his sorrow;
No home has beneath the sun,
He leaves me on the morrow;
He may not rest his aching head
Within this dusty city;
Suspicion ope his threshold eart
And shuts the door of pity.

I can but wag my gratitude,
And whine my fond affection;
I lift no shadow from his heart,
Nor share his soul's dejection;
But yet I mean to steal away
And follow, on the morrow;
I'll guard his steps from larking ill,
Nor seem to see his sorrow.

Rochester, N. Y.

The Comanche Indians.

[The facts in this communication are due to Horace P. Jones, the military interpreter at Fort Sill, Indian Territory, who has lived with and near the Comanches for the past fifteen years. There is no living man who has a more thorough knowledge of their language, habits, traditions, and customs. He is a man of intelligence, character, and integrity, and the facts stated can be thoroughly relied upon].

THE word Comanche for many years conveyed to the mind scenes of terror and bloodshed. Even at the present day a Comanche raid in Texas is much to be dreaded. Nomads by nature, the efforts to confine them to a reservation have only been partially successful, and some of the chiefs, with their followers, are frequently in open defiance of the Government.

Well known as the word is, but little actually is known of them by the public, and strange and exaggerated notions exist in regard to them and their numbers. For instance, it is generally supposed an Indian is always a stolid, dignified creature, never coming down to the level of fun and frolic. Let me disappoint such high expectations by stating at once that a Comanche is nearly as vivacious as a Frenchman, and as full of fun as an Irishman. They always see the ludicrous side of a subject, and are mostly on the broad grin when talking to you. They tease their squaws, get jokes off on each other, and, on the whole, are very generous and free hearted to one another. This

view will hardly suit the high-flown notion of a Comanche, but truth compels it to be written. In all talks and councils he is, nevertheless, very dignified and formal.

Lippincott's Encyclopedia says "A Comanche differs from other Indians in his intense dislike of spirituous liquors." Perhaps he did long ago. Jones says "the author must have seen them before my day." All I know is, that almost all Comanches will get as "drunk as a lord" if they can get the whiskey.

Before, however, explaining any of the traits or habits of the individual, let us say something of them in general. In the first place, the name "Comanche" is a word unknown to their language—to them it possesses no original meaning, and is only accepted and used by them after many years of application by the whites. Their tradition of the word is, that it was first applied to them as "Comanch" by the Mexicans. What the origin of it may have been I do not know. The name by which they call themselves is "Aenam," meaning people, or, as used by them, more properly speaking, it means "our people," or the "true people," though in saying our people they would say "te-witche nenn," the "te-witche" standing for "our," and meaning "our people certain." Perhaps some of your readers can give information in regard to the word Comanch.

The Comanches of to-day have more or less Mexican blood in their veins, and quite a number of pure Mexicans, captured when children, are counted as Comanches, though these latter occupy an inferior position among them, acting usually as servants; yet it is not impossible for them to arise to the dignity of a warrior, or even that of chief. The whole number of Comanches is a little over three thousand—not fifteen or twenty thousand, as is generally supposed—and are divided into seven bands, as follows. I give also the name of the head chief, or the oldest:—

<i>Band.</i>	<i>Chief.</i>
Nocomees, or Wanderers.....	Te-her-ha-quip, or Horse-Back.
Yampo-risous, or Root Eaters.....	Boo-swa-too-yah, or Iron Mountain.
Cooch-cho-tetkhas, or Buffalo Eat- ers.....	Malhay, or Hand-shaking.
Pena tetkhas, or Honey Eaters.....	Pos-wath, or White-handled Knife.

Qua-ha-das, or Workers in antelope
skins..... Paracoom, or He Bear.
Titchah-Kenas, or Sewers..... Taber-nan-ka, or His name is Sun.
Tenem-er-and, or Liver Eaters..... Pe-ha-tetkha, or "Something big
Best to eat."

Another band, now in fact extinct, were called "Polonemms." Here you observe the word "nenn."

The names of two of the above bands have become changed by usage. Properly, the "Yampericoos" are "Yampo-tetkhas," or eaters of "yampo" root, and the "Qua-ha-das" should be "Quahada-titchahkhas," the "titchah" being sewers, and the whole word meaning "sewers, or workers in antelope skins." You will notice the same "titchah," as used in "Titchahkenas," or "sewers."

The others chiefs whom I suppose I had better mention, for fear they may feel slighted, are as follows:—Titchah-kenas, Quirty-Quip, or Cheving Elk; Yampericoos, Cheevers, Howeah, Little Crow, Pena-tetkhas, Essa-hubet, or Milky Way, and Assa-toy-et. This comprises all of the head chiefs.

The name Assa-toy-et is incapable of English translation in a few words. The best idea I can give you of it is that an Indian would call a *shady blanket* Assa-toy-et. It means poor, shabby, and was given him as expressive of his poor and pitiable condition on his return from a long and unsuccessful raid. The name is correct in its application no longer, though he still retains it, for he is a well dressed, well fed old buck, and fortunately one of the most peaceably disposed. He is looked upon as the most reliable of all the chiefs.

The sign of the Comanche is the snake, the hand being made to imitate the snake's motion. This is the same sign as that of the Shoshones, or Snake Indians, whom the Comanches claim as their fathers. I do not know whether the Shoshones acknowledge them as lost children or not. The Shoshone language, however, is said to be similar in many respects. The Comanche language is spoken more or less by all the tribes on the southern plains. It is in fact the *Court* language, all councils with Kiowas and Plain Indians being held in Comanche. It is harsh and guttural

and, while the use of words may easily be acquired, to converse fluently is an art but few have attained.

Texas has been their home as far back as they can recollect, or have tradition. Some of the older living chiefs speak of having seen sugar cane and monkeys, showing that in their younger days raids were made as far as lower Mexico, and west through Sonora to the Pacific Ocean, for they speak of having seen "where the sun goes down in the big water." There is nothing improbable in this, for even now they make trips into Mexico, remaining away months at a time.

As is well known, they are the Arabs of our Plains, more at home on horseback than on foot, and owning large herds of horses. Their principal wealth is ponies. When chasing buffalo, or racing, they ride bareback, casting off all clothing except the breech clout; but at all other times they ride a saddle, with short stirrup, crowding the knees well up on the horse's withers. The saddles used are mostly of American make, though the old home made one is used by squaws frequently, and also for packing. It is similar to a Grinsley pack saddle—straight, flat sides, high pommel and cantel, and looks most terribly uncomfortable. It is made of wood, and covered with thinly dressed raw hide.

The natural dress of a Comanche consists of moccasins, leggings, and buffalo robe. The robe or blanket is tied around the waist and held up over the shoulders by the arms, or allowed to fall over the hips or legs at will. The moccasins are made of buckskin, with buffalo skin sole. The leggings are made of buckskin, old blanket flannel, or strouding, fitting tight to the leg, and fastened at the upper thigh with strings. A wide flap runs down the outside of the legging about an inch wide at the top, frequently a foot wide at the bottom, and fringed along the edge. This is not simply for ornament, but has a peculiar value as a protection from rattlesnakes, a very large species of which are plentiful in the Comanche country. In walking or riding through high grass a snake in striking at the leg—the part most exposed—is almost certain to strike this flap. No head dress is worn, but a lock of hair, braided or bound with red flannel or fur, and adorned with beads and feathers, is called the scalp lock; in addition the breech clout is always worn. These few articles compose the bucks' ordinary outfit, though in these degenerate days most of them wear cotton shirts, some waistcoats, and some even have a dress coat, and are capped with a felt hat most gorgeously decorated with feathers, ribbons, and military insignia. The dress of squaws is similar to that of the bucks, the legging and moccasin, however, is made in one piece, like a long stocking, ornamented on the side with silver and beads, and is made without the snake flap. In addition they wear a square shirt, made of dark calico, and in place of the robe worn by the bucks, many of them wear handsome bright colored shawls, tied in the same manner. No portion of the body is left exposed, for, be it remembered, that the Comanche maiden is very coy and modest; but more of this when I come to their moral condition. The faces of all bucks, squaws, and paposes are painted; the squaws and children usually one color, red, sometimes yellow; but the buck's is painted red, green, or yellow, sometimes all these colors, and frequently is additionally decorated with blue or black stripes across his forehead, cheeks, and chin, or in curves from the corners of the eyes, mouth, or nostrils; indeed, the painting of a buck's face is like a kaleidoscope, forever changing. The colors were originally obtained from berries, vegetable juices, and various colored earths, but are now usually purchased of the traders. Chinese vermilion, blues, pines, coppers, indigo, and ochre are bought by them in large quantities for that purpose.

The buck at all times has his ears ornamented with brass rings, bits of brass chain, or large beads. Those who can afford it wear a chaplet or brass plate, made of long slender white pipe, called hair pipe, strung like beads four or five in a row, and of twenty or twenty-five rows, forming quite an attractive ornament. This pipe is supposed to be made of clam shells. At all events, the making of it is a

secret. It commands a high price, is greatly in favor, and must afford the inventor a good income.

The war rig is somewhat different. The horse is painted most fantastically, and the rider wears in addition to his ordinary dress, a war bonnet made like a hood, ornamented in front with a pair of small buffalo horns, placed as the devil is supposed to wear his. A long flap or tail to the hood falls down the back, and is ornamented with row upon row of eagle feathers. Now armed with bow and arrows, shield and lance, our buck is ready for Texas, or wherever his fancy prompts. The lance is but little used in war; still it has its place. The credit of killing an enemy does not belong to the one who shot him, but he who first thrusts his lance into him takes the scalp and all the glory. Theoretically, he is the brave who spears his enemy; practically, the lance is never used except on the dead or wounded who are unfortunate enough to fall into their hands. The weapons named compose his natural war outfit, but *unfortunately* he is now possessed of more formidable weapons. I have yet to see the first Comanche buck that does not carry a Colt or other six-shooter, and, by the way, not all "of the olden kind, brass mounted," but some of the latest improved breech loaders. In addition to this, Spencer and Winchester carbines are common among them, over half of the bucks being in possession of one or the other, and the remainder own the old long Lancaster rifle, and so on, and so on, and so on. The rifle, however, is a very good weapon. How these Indians have become possessed of these arms I leave for our Indian Department to explain, but I can tell you that the weapons of those "killed by Indians" in Texas accounts for far too many of them.

I have already lengthened this article beyond reason, and yet have not explained all I desired. My next must include a few more general remarks on matters of bows, arrows, and so on, and then I will give the traditions, rites, superstitions, etc., which I hope you will find more interesting than a general summarizing, as this initial letter must be from necessarily. Yours, &c.

"B."

Fort Sill, Indian Territory, July, 1874.

For Forest and Stream.

CAMP LIFE WITHIN FIFTY MILES OF NEW YORK—THE WILDS OF NEW JERSEY.

"SUPPOSE that we take a few days in the woods," said a friend of mine to me recently. I had been at his house helping along the glorious Fourth, and we sat with burned fingers looking at the lake and thinking of the powder we had used up to celebrate the day.

"We can't find any woods worthy of the name in New Jersey, can we?"

"There speaks city ignorance. Have you never been in the Ramapo Mountains?"

As my friend had explored every corner of his native State, and as I had confidence in his judgment of what woods should be, having slept many a night beside him, under the great pine trees of Canada, with our camp fire lighting up the swarthy faces of our Indian guides, I agreed to his proposition to know several hundred traps, and to spend a "good night" at my door, he admonished me to be up at half-past three, A. M., sharp.

With sleepy, heavy eyes, I stumbled out of bed next morning, and did not awake till I found myself on the wagon seat riding up the valley at a rattling pace. The morning mist rose slowly, and before the sun obtained the mastery were almost soaked through, but we were well repaid for the wet by the several hundred traps, and the hills and the morning sun threw its stout rays across the valley, the scene was one of peaceful beauty. The magnificent rolling hills, green with the young crops and topped here and there with a great cotton-like bunch of mist; the little trim farmers' houses standing close along the road side, made a fitting foreground for the picture. We passed the inevitable headquarters of General Washington. You could not be landed anywhere in New Jersey, nor say a word, without being within stone's throw of one of the headquarters of that much quartered Father of the Republic. We drove along past Gen. Price's house, and the road, dropping a little, turns to the left and again climbs up the hill. Just where it is lowest, during the revolutionary days, a courier was galloping along hard and fast when four Tory bullets struck him, fired out of the bushes on the road, and sent him to his horse, though bleeding from every wound, and riding into a garden, fell from his horse into the arms of Mr. Garrison, dead, but with the papers entrusted to him safe. The story is pointless enough, but it has the true ring. A brave man's deed is as brave though done a hundred years ago as if it was of yesterday. We stopped at the house of Mr. Garrison, the grandchild of the one mentioned before.

"Could we get a wagon to take our traps up the mountain?" It was possible, but not easy. At last it came, however, with its two horses, rough and scrappy, but nevertheless able to tread their way along—what shall I call it? scarcely a road, rather a space clear of trees, but full of stones. But before I leave Mr. Garrison I must say that he is a doctor. No M. D. disfigures his name; his reputation is home made, and many a man and woman along the Ramapo mountains, and who were sent to him by a skillful and a dentist. He showed us the old fashioned turkey with which he operated, mixed up with specimens, petrifications, old Indian spear heads, beautifully made from flint, and massive stone axes, which, in the days long ago, had felled many a tree for the old Minniscink Indians. A clear headed, clever old gentleman was Mr. Garrison, with a fund of original thought, and bright ideas cropping up as rapid as those for which we were sent to him. His collection of curiosities, he owned some wonderful apple jack, the reader will long to find out his exact whereabouts.

Up the mountain we went with our scant baggage, playing a cheerful tattoo on the wagon bottom at each jolt. How far up we went I shall never know, but I made a rough calculation that for every mile of road traversed the actual distance was about double. And when we were on top of a large rock, we were struggling out of the space between two boulders. At last we cried enough, our things were dumped out, and we were left on the banks of a little bubbling stream. A fire and fried salt pork mutually helped in that momentous undertaking, dinner, and then the hard work began—digging our things up the mountain, for the road followed the valley, but a good place was found for a camp. The work of walking was not very rest, and in a few minutes the white sides of our little tent rose

amid the trees, and we were at home in the woods. The evening shadows were beginning to make the firelight acceptable when we sat down to a quiet pipe, a small drink, and a long sleep on the sweet hemlock branches, which made a carpet and a bed. How we always can sleep in the woods! The air, the hard work, the perfect feeling of freedom, all seem to help. Next day we went, rods in hand, in search of a trout brook, disdaining the one in the valley. We either walked too far, or not far enough, for no trout stream did we find, though we went over mountains as though climbing them was easy work. That night we were treated to a thunder shower just at dark. Though I have often heard thunder in the mountains, I have never listened to anything so grand before. The sky became as ink, and the lightning flashed for a good half hour before our turn came, and then the storm hurried up the valley, sweeping over us. First came the wind, and then a few dashes of rain, beating in our tent, which every moment swayed and trembled with the rushing air. A flash, sudden and quick, lit up the tree trunks, and for a half second the fire seemed out. It came with a rushing hiss as the lightning struck near by. A few seconds and the thunder followed, crash after crash echoing up the valley; thrown from hill to hill, now from one point, now from another, the final grand crash, and the noise of the wind that served a slight protection indeed, for minutes of the swashing rain, and another flash, with its grand roar of thunder, and the storm had swept over us, tearing up the valley in its mad rush of rain, wind, and lightning. The following day was calm and beautiful, and my friend, accepting the good things near home, fished the shining trout out of the brook till darkness put a stop to further fly casting. Again that night Nature insisted that the night was greater in the anticipation than in the reality, and we awoke in unison till sunrise and mosquitoes forced us up. Down came the tent, everything is hurried into its appropriate place, except the frying pan, an article which will never fit into any bag or box known to the writer, and we cast our possessions to where the wagon is waiting for us, and start for home.

On the way to do not forget Mr. Garrison, and again that apple jack makes glad the heart of man. We have a drive of twenty miles before us, and while we are enjoying it we agree that if people would only try a few days of such life they would find that existence off a hotel piazza was possible, and even agreeable. We go in search of health in crowds to the fashionable watering places, we breathe the air and eat the vile food, and pay heavily for the privilege of eating and drinking while that Nature made a temple far grander than any built by the hands of man, and that to it we may go and live a life free as air, and as happy as the day is long.

For Forest and Stream.

LOOSE LEAVES FROM A SURVEYOR'S JOURNAL.

A NIGHT WITH WOLVES.

IT was in the early part of our wood experience. I had the animal rather well (about *lynx*), and I was exceedingly anxious to secure as a trophy a pelt of one of the varmints. They seemed quite numerous in the neighborhood of our camp, some eighteen or twenty miles north of Stevens Point, on the Wisconsin, at that time a much smaller place than now, for this was early in the fifties. We knew there were plenty of the critters around by their howlings on the hills at night and the multitudinous tracks every fresh track and trail while that Nature made a temple far grander than any built by the hands of man, and that to it we may go and live a life free as air, and as happy as the day is long.

Well, I wanted to kill a wolf, and I tried the experiment, put a good sized pill in each of myoccasias, and for two weeks I trod the woods with my rifle in hand, but to no purpose, but no animal of sufficient interest in my labors to follow me home. It may have been because the weather continued very cold, the snow was dry and crisp, and I presume the scent was not very strong, or perhaps no varmint happened to cross my track when fresh. I became distrustful in the matter and gradually took longer tramps from camp without my gun until finally I became thoroughly convinced that the whole thing was a humbug, but I resolved to take the gun from myoccasias, in fact I had forgotten it altogether. It must have been three weeks or more, when having occasion to go down to the Point for our mail and a supply of provisions, that early in the evening of a bright moonlight night with an empty bag thrown over my shoulders I started on our blaz'd line for the settlement. I had proceeded on a moderate job nearly half the distance when my attention was attracted by a distant howl which I could not direct from my camp. I had heard cries occasionally all the evening, but they were such a common thing I had paid no attention to them, but somehow this last sound was of a different tone. It seemed to cut the crisp evening air like a knife, and there was a mournful warning ring to it. I stopped and listened a moment and it was answered on the hill to my right; again I went up and a reply from the hill to my left. I then started my poor humble servant and that a little more energy in my movements might be advantageous, and I commenced measuring off the ground as well as I conveniently could in the snow and follow the blazes; there was of course no path or road.

Now our line to the settlement ran across a lake of thought after crossing that would be able to tell if I was really the object of this internal curiosity. I reached and had nearly crossed on the ice when I looked back, and sure enough, there were two black bodies moving with that long tireless lunge peculiar to the wolf family on my track. They were soon joined by another, and as they threw up their noses and let out that terrible sound, they were beside us in a twinkling, and were bounding up and down the side of the hill, and in the race. I began to feel decidedly uncomfortable. Alas from camp or a settlement, with only a pocket knife as a weapon of defence, and

the point of that broken bow, I began to look for a tree, but of course the broken bow lay low in the neighborhood of the lake (it was surrounded by a tamarack swamp) the trees were all too small to afford me a safe resting place. But I swung the way I got over the ground through that swamp was marvellous to behold. When I got to higher ground the trees seemed all too large to be scaled up easily, and that infernal howling growing louder and nearer. Matters were growing desperate. A tree, a tree, my kingdom for a tree, that's the right kind. How eagerly in my rapid movements I scanned the many fanks but for a tree, a tree, a tree. (The next day on my return on the line I saw a number that would have answered the purpose well enough.) The howls came nearer and nearer, until I could hear the rush on the snow, the snarls and even the quick breaths of the devils when I sprang into an opening where the charcoal men had been at work the previous fall. One of the kilns had been broken, and with the accumulations of snow on its top presented a heap so fifteen or twenty feet in height. Up this I shinned with what little life there was in me, and just in time, as the pack burst out from the woods at my very heels. They paused at the foot of the mound. And what a diabolical looking set they were, sitting on their haunches with lolling tongues and panting sides, their terrible eyes glistening in the moonlight fastened on me, their snarls and even their howls, their heads were exposing their white tusks in an adaptation of the howl of them. But they were cowards and no mistake; as long as I faced them they were afraid to attack. I never before so realized the effect of the human eye on a beast. Had there been more of them I am sure I had not been here now to tell this tale. There were less than a dozen, and not enough to thoroughly surround my fort. Now add then two or three would make a spring up the steep on my eyes were turned, but as I would wheel around, shake my sides at them and yell with all my might, they would slide down tumbling over each other to the bottom again. This trick to be repeated over and over again all that long winter night. Now I believe I have a tolerable good ear for music and was at one time quite a devoted disciple of Terschpere, but the tones that night, though thrilling enough without doubt, seemed harsh and discordant, and the jig danced then and there was too impromptu for me. One would have a reputation desired under the circumstances. The moon rolled along in the heavens and passed down to rest. The wintry air grew colder and colder, but my audience maintained their ground; in fact they became if anything more enthusiastic and demonstrative, and as it grew darker towards morning, I feared that I should have to give up and roll down the mound, even if I succeeded in pulling myself down to the bottom. How I did hate them! Oh for my faithful double barrel; with what superlative joy I would have poured a broadside into these bloodthirsty demons. One especially I remember well, he was much larger than the others (perhaps of a different breed), of a dirty yellowish color and a very devil incarnate in appearance; a ragged, gawky, long legged fellow, the hair rough and hanging down in clumps from his sides through which the form of the animal could be seen; his eyes were red and one of his right ear was gone, probably been bitten off in some previous encounter, and he was lame in his off hind foot, perhaps had lost some toes in a trap. He was the biggest coward of the lot, he just sat on his haunches and licked his chops, protruding those glistening fangs as he snarled at the others when they came too near him, probably scolding them for not bringing him a rabbit once. What a coward! I would remember never to meet him again. It did come at last, and as the first streak of light crept up in the East one of the beauties with his tail between his legs and a sidelong look, slunk off into the woods. Then another followed, then another. The old devil was the last to leave, and as he limped off he looked back at me with those glowing red eyes, and seemed to say, in his baffled rage, "I let you go this time, but I will get you again. I will get you myself, you old scoundrel, I have a better prepared to entertain company, and a closer acquaintance. I waited some time after the last one had disappeared in the woods and it was quite light, and then still and sore, with feeble steps I pursued my way to the Point, where I arrived during the forenoon and told my story. "Wall," said an old hunter, "the snow hint bin deep cut, and we have had to go on our feet, but I think you got many a deer; guess they were kinder heavy, though hint of 'em; they jussly a man so; didn't you hear notin' but yer ter draw them on? No fresh blood but yer shoe packs?" "Whew! that confounded stinking assentida; and I told them about it. Well how they did laugh at me. That was it, they said undoubtedly. Yes, I had tried the experiment and it was a success, emphatically.

In my way back to the Point, I met a man with an empty bag in his hand. And though I have tried the thing several times since, always carrying my gun with me when away from camp, I have never met with like success in towing the varmints in. I leave it to others to judge from the above true statement of a genuine experience whether it was the assentida that night that put me in such peril of my life.

JACOBSTAFF.

For Forest and Stream.

THE BEAVER RIVER COUNTRY, N. Y.

LAST Summer, from the 9th of July to the 20th of August, I made, with my family, my headquarters at Penton & Hillman's, No. 4, Lewis county. This angler's home accommodates fifty people. It is pleasantly situated on a plateau surrounded at first by valleys, and beyond by long ranges of mountains, which are seen stretching to the north, east and south. Half a mile to the north is Beaver Lake, which is a mile and a quarter long, about one third of a mile wide and forty feet deep in its deepest part; and through which the Beaver River flows. Sunday Creek, Slough Brook and Alder Creek, all good trout streams, empty their pure waters into the lake, and are seen stretching in outlines in the distance, perpendicular, and a half a mile to the south of Penton's by road and trail is Francis' Lake, a pleasant sheet of water one and a half miles long, more noted for deer than for trout. The house is eighteen miles from the Ulster and Black River Railroad.

Fish Culture.

FLASHES FROM THE "BLUELIGHT."

FOURTH WEEK.

TWO weeks must be covered in this letter to bring my letters up to date, they have been busy ones; late hours in the laboratory have been necessary to enable the naturalists to classify and preserve the immense quantity of material that the Bluelight's dredging and trawling has, in eleven trips, brought in. Nearly every day has been utilized, for the weather has been fine and our time is growing short. Our investigations have covered considerable ground; extending our field of research by degrees, from six hour trips, we now count them from twelve to thirty-six hours' duration. To the westward as far as Saybrook, and in the brackish mouth of the Connecticut, and to the eastward some way beyond Watch Hill, and to the southward, we have worked in Gardner's Bay, Peconic Bay, and Block Island Roads, and along the northern coast of Long Island, and the deep waters of the Race, have been well overhauled. As in previous weeks, many additions have been made to the known fauna of southern New England. One champion haul took place on the 31st ult., about three miles to the southward of Watch Hill, where, in eighteen fathoms, we struck cold water, and our trawl came up so heavily loaded that it cost us all of our ingenuity to bring it safely on board. Over twelve hundred pounds of creatures were torn from their retreats—hardly a peck of dirt, but our deck was covered with skates, flounders, sponges, shell fish, and countless minor varieties; skates predominating. Among the flounders were one or two of a rare variety.

Two bushels of the "Pecten" (scallop) were included in the haul, and were eagerly bucketed. To say nothing of their value, in a scientific point of view, their very pretty shells were in demand for collection, and their contents for the table, as when nicely prepared we found them decidedly good, the meat white and firm, and with a slight gong of parsimony. We rated them as ahead of clams, though not up to oysters.

An interesting discovery was made in connection with the *Pecten*. This is a little fish, the lump sucker (*Liparis Linnaeus*), which is rare, and all that have ever been found have been from north of Cape Cod, their limit extending, I believe, even to the Arctic waters. Last year in Casco Bay, Professor Putnam found one or two attached by their suckers to the roots of the *Pecten*. Found numbers of this little fish, living at their case, within the shell of the *Pecten*, and swimming about in the liquor of the shell fish. They were each about three fourths of an inch in length, with large heads and tapering tails, somewhat like an ordinary river bullhead. On the belly of each there is a round disk, which constitutes an apparatus by which he clings to roots, etc., when free swimming. We found also, in the *Pecten*, shells of little crabs (*Pisosthera*), very like those found in the oyster, and in some of them the whole family of three creatures were living in apparent peace together.

The warm water of Peconic Bay furnished plenty of material, but nothing, I believe, that could not be expected to be found in that locality. With the temperature of the water reaching 71° and 72°, no northern fauna nor algae were to be expected, and none were found, although I believe that one or two species of the latter were added to the known list of the productions of the New England coast. Off the Connecticut River we brought up but little animal life—a few very young skates and a shell fish or two. But I think it very likely that our trawl did not reach the bottom, and instead slid along, supported more or less by the immense laminae, of which it brought up some to be expected, and none were found, although I believe that one or two species of the latter were added to the known list of the productions of the New England coast. Off the Connecticut River we brought up but little animal life—a few very young skates and a shell fish or two. But I think it very likely that our trawl did not reach the bottom, and instead slid along, supported more or less by the immense laminae, of which it brought up some to be expected, and none were found, although I believe that one or two species of the latter were added to the known list of the productions of the New England coast.

In the department especially assigned the fish investigations, under the charge of Professor Goode, not many very important acquisitions have been received. A fine specimen of the conger eel (*Conger Atlantica*) was brought in by a smack from Block Island, and a very rare hake of the *Urophycis* species was captured in our trawl at Gardner's Bay. Of this latter fish, but three or four have ever been captured.

The experiment of artificially impregnating the eggs of the sea bass has been twice repeated, the last time with some show of success, as on the second day after a number were found under the microscope to be thoroughly segmented, but unfortunately a larger proportion had died, and it is probable that their death and decay will destroy the heavy ones, as they are so fine that it is impossible to separate them.

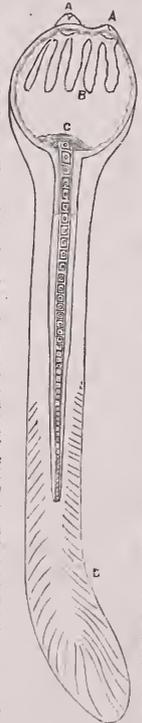

Blue fish are still scarce. About a hundred were taken in one of the pounds last week, but those who went trolling for them the next day, on the strength of the news, came home disappointed. I am assured, though, that "they will be here yet." I hope so. The fact is, that there is no good fishing in the immediate vicinity. A few sea bass, and shuckers, and flounders, etc. can be caught on the reefs, and mackerel when they will bite, but the chances of a paying result are not great enough to compensate for the day's work. Lobsters are plentiful, and larger than those we got last year in Maine, but still finer ones are occasionally brought in from Halifax. The magnificent climate, though, with which Noank is blessed—never hot, nor cold, nor chilly—more than a compensation for the loss of our sport, and shortly after we had a visit, and found the fish being rapidly transformed into oil and manure. From the wharf at which the vessel lies, an inclined railway, on which travels a box on wheels, reaches to the upper story of the mill. The box full takes 4,000, and a pair of oxen furnish the steam to drag them up, where they are first emptied into great troughs and boiled for about fifteen minutes, then, with pitchforks, transferred to the presses,

which were not unlike very old fashioned cheese presses, the weight being hung on to the long arm of a lever. From the press a dark fluid, four fifths water at first, but richer in oil as the pressure continues, flows through troughs to receptacles in the open air, where, being separated from the water, the oil is left to bleach and purify through the action of sunlight and showers. The refuse "scrap" is sold for manure. The quantity of oil from the fish varies with the season. In the spring they are lean and poor, and one to two gallons per thousand is obtained. Now the fish weigh a pound or more each, and furnish about five gallons to the thousand; in the fall they will give perhaps fifteen. It seems almost like killing the golden eagle, to work them up in the spring, when the oil from a thousand fish together will bring but thirty-six to seventy-two cents, for the price per gallon is the former figure. The oil is in demand to mix with linsed oil, to which, although a fish oil, it assimilates. The mill has the capacity to work up about fifty thousand fish per day. With a little new fashioned machinery, and the introduction of steam for power and rolling the fish, four times the work could be effected at less expense—which, however, would be heard on preservation of fish.

On the 30th we ran over to Gardner's Bay, and made a number of hauls in it. We found there the United States ship Constellation, the practice ship of the midshipmen from the Naval Academy, and after seeing the midshipmen "furl sails" in good style the first class were permitted by Captain Breece to come on board and take a little trip with us, and see for themselves how dredging was performed. No great addition was made to our stock of valuables, but a good deal of interest was exhibited in the combative propensities of hermit crabs, and a "Noank Naid" which came up in the trawl furnished considerable amusement.

Among our microscopic curiosities for this week we have added to the collection some specimens of the tadpole, from which the human race has developed! One of the professors attacks my name of "tadpole," and says that it is an error, and that the appearance of vertebrae in the tail is caused by cells, etc.; but they attack so many reasonable and popular views of things, and in some cases calling by such absurd names things with which we have been on friendly terms all of our lives, that I don't always feel inclined to open my mouth.

One of the professors says that a clam may be a "mya urtica," or that a little sea urchin may stagger through life in the character of a *strogonocentrotus strogonocentrotus*. I wish us, and see for themselves how dredging was performed. No great addition was made to our stock of valuables, but a good deal of interest was exhibited in the combative propensities of hermit crabs, and a "Noank Naid" which came up in the trawl furnished considerable amusement.

The principal point of interest about this *ascidian*, to the naturalist, lies in the central axis or chord of the tail; this in the larval form is composed of a series of cells, which resemble closely the aspect of the back bone in the embryo of all of the vertebrates, man included. A German naturalist, Kowalevsky, first called attention to this singular fact, and the subject was deemed worthy of a general and extensive and elaborate article, published, I believe, in the "Atlantic Monthly" at about the date of the death of that great naturalist. Considerable excitement was produced by a comparison drawn by Kowalevsky between the larva of the *ascidian* and the simplest known form of the vertebrate, the lancelet. The resemblance was so close and startling as to excite astonishment. Whether these resemblances justify the conclusion of many Darwinians that the *ascidian* is really an ancestral form of the fishes, and of all the vertebrates, is a question that cannot be hastily decided. I have suggested that we turn our little ancestor over to Goode to hatch in one of his hatching boxes, with the idea that perhaps by bringing the lights of science to assist Nature we may eventually run him up a bit higher in the scale and make a sure thing of it.

Smith's geological list of our party was had additions—Dr. Joseph Lindy of Philadelphia; Dr. J. B. Holder, of the Central Park Museum; Mr. Coll, of Hartford, and Professor Putnam, of Salem; but we have lost one of our most congenial associates, Mr. G. Saltonstall, of Harvard, who has started on an investigating tour among the *Salmio fontinalis* in northern Maine. Professor S. I. Smith has arrived, and has taken our young fiddler crabs under his charge; but in spite of his almost maternal solicitude they have all died. His microscope reveals that, small as they were—no bigger than a pin's point—they had become fairly covered with parasites, which had destroyed them. Smith proposes to introduce to his next family a gigantic crustacea of the shrimp family, which likes parasites, and

from its superior size—about an eighth of an inch long—will be able to protect the colony.

One of our late arrivals found a new route to Noank, by which he contrived to enjoy the scenery of three States, and travel from seven A. M. till five P. M., taking a carriage for the last few miles, when by direct railroad communication he might have come *via* New London in two hours. He will furnish a chart if desired. PRISCO.

WASTING SEED CORN.—A correspondent who recently visited Lake Ontario calls our attention to the great waste of seed there. He writes:—"Between Honey Island and the Jefferson county shore is a large pond net, and in addition to large hauls of lake fish the owners raise every morning about two hundred of the young shad which have hatched from the eggs that Seth Green placed in the lake near Rochester two years ago. The young fish are about six inches long, and I cannot discover any difference between them and the North River shad. I saw the net raised three times, but each time the fishermen took no pains to return the young fish, but shovelled them into their boats to die."

About 80,000 young shad were received at Elkhart, Indiana, a few days ago, by express, through Frank M. Clark, of Clarkston, Michigan, by order of Professor Spencer F. Baird, of Washington, superintendent of fish and fisheries. The fish were lot loose in the St. Joe River.

Six inch shad, the same that were set at liberty a year ago, in the creek at Ashtabula, Ohio, are now frequently hooked from the water by anglers.

FISH WAYS.

NEW YORK, August 6th, 1874.

ENTOR FOREST AND STREAM.—

At this stage of pisciculture, it seems to me that the fish-ladder question has become very important, now that so many streams have been stocked with anadromous fish. I think that every one who may have been in other countries or seen successful examples of fishways, should disseminate the knowledge gained through the public press. I, therefore, would like to say that there is a salmon ladder on the Tote-a-zouche River, near Bathurst, New Brunswick, which is a complete success. This stream had been obstructed by a mill-dam about 30 feet high, for twenty years or more, and salmon had almost ceased to frequent the scanty two or three miles of lower river left there; a few did continue to run up from this water this short distance, to the foot of the dam. The fishway (now about four years old, costing about \$20, and constructed of heavy beams and plank) sloping at about an angle of 45° into the pool below the dam, is about 6 feet wide, 4 feet deep, and the descent of water is broken, as usual, by barriers, thus:—

On the apron of the dam, at the head of this fish ladder, is a reception house, ten feet square, six feet deep, high enough to admit a man, and with a sliding barrel gate at the entrance and another at the upper end. The water is let into the fishway only at night, and on each morning, after coming the fish which may have ascended during the darkness, the miller lifts the gate and the salmon pop up up stream. Owing to the smallness of the river above, the inhabitants were, at first, able to kill many of the new comers; and so no salmon are allowed to run up until the September floods, which raise the upper stream and its pools so that the fish cannot be easily got at. Several hundred had passed up to 1872 when I first saw this ladder.

The plan of detaining the fish until the autumn floods, in the short distance below the dam, where they can be so easily protected by the local guardian, instead of scattering them for fifty miles up river to be killed by the settlers, in every pool where low water in summer may have caused them to congregate, is a good one, for small rivers especially.

Now, Mr. Editor, this is the history of only one successful fishway. There are others in Canada. What has become of those which, I am told, there was an appropriation made by the Legislature for the Troy and other dams? They will be needed for the California salmon which were put into the Hudson this spring, as soon as they can be completed, judging by the slow progress of everything connected with our Fishery Commissioners, except shad hatching and the bull-pout distribution.

Natural History.

THE MICHIGAN GRAYLING.

THE London Field, in its issue of July 16th, gives a most faithful reproduction of the Michigan grayling, (*Thymallus triolator*), as engraved by us last June. Descending on the appearance of the fish, the writer remarks:—

"The fish shows some qualifications which are very distinct from our grayling. The eye is much full, ronder and more prominent; in the British grayling this is lozenge-shaped and sloping back, a peculiarity which the artist could hardly fail to remark. The dorsal fin, though large in our grayling, is very large in the Michigan one. The anal fin, too, is much more extended and lengthy, and the ventral fins longer and more lance-head shaped. The spots, too, only extend to half way along the dorsal fin, whereas in ours they run the whole length of the fish; and the description of the colors shows them to be more brilliant, varied and marked. In fact, there is very little doubt that the Michigan grayling is not our grayling. But there is another grayling which it may claim a much closer relationship to, and that is the so-called Arctic grayling first discovered by Back in 1820."

Jackson Gillbanks, Esq., of Carlisle, England, to whom we sent a proof of the grayling, writes us, (see FOREST AND STREAM of July 9th.) "I have compared your wood cut with Yarrall, and other standard works, and find that your fish is somewhat slenderer than his, and has a larger fin in proportion, but not at all so different as to justify me in pronouncing them to be distinct varieties."

The Field, with its usual thorough acquaintance with such subjects, is inclined to give the *habitat* of the grayling

*CYSTERA GARNER.—a, a, Olfices. b, Branchiole. c, Chord. d, Fin.

—A sloop brought 10,000 bluefish into Newport the other day, caught off Nantucket.

—The bluefish have driven mackerel into Boston harbor, so that in some points there is fine sport in catching them. On Saturday one party caught 100 mackerel at Hall's wharf, at the end of Chelsea bridge.

—On Thursday a fine specimen of the tarpon (*Megalops (horseoides)*) was caught off Hog's Inlet, Rockaway, and was on Friday sent by Mr. Blackford to the Smithsonian Institution. Professor Baird's wish to have a cast of this remarkable fish added to the Smithsonian collection, can now be gratified. Perhaps the fish which we saw was a trifle smaller than the one described some time ago in the FOREST AND STREAM, but the specimen was perfect in every way, not having lost a scale.

—A striped bass two feet three inches in length and nineteen inches in circumference, was caught with a hook and line at Kingston, on the Hudson on the 7th.

—Good catches of striped bass are made off the Railroad bridge at Cohasset Narrows, Mass. Alexander and Henry Hathway will furnish bait and all necessary attendance at reasonable prices, also boats for blue and squeteague fishing, and will soon be able to furnish accommodations for the angler.

—A correspondent, "Tom," writes from Nonquitt Beach, Buzzard's Bay, Mass., Aug. 7th: "Our fishing here for large game is not very good at present. Blue fish, tautog &c., seem to have made a flank movement, and are now disputing in Vineyard Sound; however, they are easily reached from this place in a few minutes sail. Fishing parties are loud in their praise of this location as a rendezvous. A steamer makes three trips a day to and from New Bedford, seven miles distant, making a delightful sail of one hour down the glorious old Buzzard's Bay."

—The old dam above Shaw's tanneries, on Grand Lake Stream, being unsafe is being removed by the corporation to be replaced by a new one of stone.

—A party of four gentlemen from Providence, R. I., on their route through the entire chain of the Rangeley Lakes, stopped for a day's fishing on the Moosehucumgmic Lake and off Sandy Point and Bugle Cove, captured fifty-eight trout, which averaged one and a half pounds each. Among this lot was one of four pounds, two of two pounds, one of one and three quarters pounds, two of one and a half, one of one and a quarter pounds, and eleven of a pound each. Heavy showers have prevailed the entire first weeks of this month, and the thermometer has ranged from seventy to eighty degrees in the shade. Although it suddenly fell on the morning of the 2d inst into fifty-nine degrees, it has now returned to its former position.

—E. A. Meneely, Esq., President of the Mohawk Game Club, writing us from Wallingford, Vt., says:—"Yesterday I fished down a brook and caught forty-nine speckled heenties. I hear on all sides that ruffed grouse or partridge as they call them here, are very plenty."

—The latest favorite among the Virginia mountain resorts is the Mont View Hotel at Front Royal, a handsome, new house, just opened for visitors. The black bass fishing in the Shenandoah, near this place, is as fine as we have heard of, these fine fish seeming to prefer the pure water of this branch of the Potomac.

—The "trout" of Florida (32) have been caught with fly a hundred years ago. This fact we accidentally discovered last week while perusing an antiquated copy of Bartram, in print of 1764. Perhaps we ought not to claim that the device used was a genuine artificial fly, though it and the method of using it are as nearly akin to flies and fly-fishing as they can well be. Bartram says of these trout:—

"They are taken with a hook and line, but without any bait. Two people are in a little canoe, one sitting in the stern to steer, and the other near the bow, having a rod ten or twelve feet in length, to one end of which is tied a strong line, about twenty inches in length, to which is fastened three large hooks, back to back. These are fixed very securely, and tied with the white hair of a deer's tail, shreds of a red garter, and some parti-colored feathers, all which form a tuft or tassel nearly as large as one's fist, and entirely covers and conceals the hooks; that is called a "hoop." The he never ingeniously swings the bob backwards and forward, just above the surface and sometimes tips the water with it, when the unfortunate cheated trout instantly springs from under the reeds and seizes the exposed prey."

The "hoop" is in use at the South at this day.

—Lord Dufferin, Governor General of Canada, has just returned from the Nepigon River, where he spent several days. His Excellency is one of the most ardent sportsmen in the world, having made a yacht cruise to Spitzbergen, Iceland, and other points in high latitudes. His proclivities are constantly shown in his travels through Canadian wilds, and in his liberal patronage of field sports, he having given competitive prize medals to several different associations within the past year.

—We have seen allusion made to the mortality of fish in Washoe Lake. The Virginia City Enterprise, of Nevada, says that there is a windrow of dead fish nearly a mile long on the eastern shore of the lake. They are of all sizes. On the surface of the lake they are floating belly up everywhere, and it is believed that not one live fish remains, as the pelicans and gulls that have hitherto frequented the lake, have all left. Already a great stench arises. As there are no mills or deleterious substances near, and as the water is high and very pure, the mortality can be accounted for only by the supposition that there has been an eruption of deleterious gas from the bottom.

SPORT IN NEWFOUNDLAND.

HARBOR GRAVE, Newfoundland, July 20th, 1874.

EDITOR FOREST AND STREAM:— I know that you are always glad to hear about Newfoundland. During warm July we suppose that New York is up among the nineties (in the shade), speaking thermostatically. Well, I heard that the thermometer here in our beautiful little town of Harbor Grave, once reached so high as 83° in the shade. I can assure our American and other friends that it would be quite an enjoyable change for them to visit our cool country during the summer months, any time after the 29th of June, when the sun turns and draws the wind from south and west. Harbor Grave is surrounded with a large amount of beautiful scenery, many a hill and mead, many a pleasing grove, many a murmuring stream, made silvery under the rays of a July sun, do add a charm to the landscape. It's hard work traveling round the neck. Is it fair to call a pond 12 miles, or 50 miles long, a pond? I don't think so. We have our Ocean Pond, 12 miles long; St. George's Bay has Grand Pond, said to be 20 miles long, more or less, as lawyers would say. There are great trout in our ponds. Big Island Pond, ten miles northwest from this place, has splendid red trout. Of course men had to fight through mosquitoes, tippers and other flies, which seem to be well acquainted with the quality of our good blood, just as rats are said to know the best butter. Lady Lake is where the regattas are held. Banerman Lake is the source of water supply to the town, which is neat and clean, with some fine shops and business premises. We have a fine system of coastal steam north and south, and we offer fine scenery, recreation and good fishing to the tourist. Yours, C.

TAKE THE LADIES.

If married men would take kindly the suggestion herein given, and more frequently follow it, we doubt not that greater pleasure would be added to their own saunterings, while we are positively certain that they would contribute much to the enjoyment of those indulgent, patient bodies who so reluctantly permit their absence and so anxiously and lovingly await their return.—En.

NEW YORK, July 18th, 1874

EDITOR FOREST AND STREAM:— I have read your paper with a great deal of interest for nearly a year, and enjoyed very much the contributions from sportsmen who in the wilderness in different parts of the continent for their amusement and recreation; but I find them nearly all alike in two respects. Perhaps you can account for this I cannot. After a long tramp through the woods, or it may be a long pull or paddle in a boat, the weary sportsman cuts poles and bark and builds a hut. It seems to me the weary sportsman would find it just as easy to put up a tent (and certainly as comfortable), and if suddenly overtaken by darkness or a storm, making time an important item, he must feel very much like a fool rambling about in the dark after the material to build his hut, when he might in three minutes be housed under a tent.

I presume all your contributors are bachelors or widowers (or if a single one is a selfish lot, they never allude to the ladies. "Bill" did this, "I" did that; but what did the ladies accomplish? Were the ladies left at home to look after Biddy, while the lord of creation went off hunting or fishing to have a little merriment in the dusk after the material to build his hut, when he might in three minutes be housed under a tent.

By explaining these enigmas you will confer a favor on A BEXEDICT.

Yachting and Boating.

All communications from Secretaries and friends should be mailed not later than Monday in each week.

HIGH WATER. FOR THE WEEK.

Table with columns: Date, Boston, New York, Charleston. Rows for Aug. 13, 14, 15, 16, 17, 18, 19.

THE CORINTHIAN YACHT RACE.—The weather for the last two or three days had been so stormy that the Corinthian yacht race, open to all recognized yacht clubs, had to be postponed until August 10th. The schooner yachts in this race are handled entirely by amateurs, and no professional sailor allowed on board. The race took place off Newport, R. I., at 9 A. M., last Monday, and the course was from a stake-boat anchored off Fort Adams and Dumping Rocks to Block Island buoy and return. The start was a flying one, the five yachts entered crossing the line in the following order: Fearless, 11:56:10; Fearless, 11:59:10; Tempest, 11:59:50; Idler, 12:1:30; Foam, 12:13:20. They started on the port tack, made short stretches for the whitewashed rocks, Azalia leading Tempest and Fearless close together, and the Idler beautifully handled. The yachts now started out of the harbor, beating dead to windward, and making off for the Beaverfall light, the Idler closing up at the gap between her, the Tempest and the Fearless. Within a short distance of Port Judith, the Idler passed the Azalia, and was now leading the whole fleet. The yachts worked well out from Point Judith, and made for Block Island buoy, which was dead to windward, and rounded the buoy in the following order: Idler, Azalia, Tempest, Fearless, Foam. The schooners now squared away and made for Port Judith. The Idler was now increasing her lead every minute, and passed the Point a long distance ahead of the fleet, and arrived at the home stake-boat an easy winner at 6:32:45. The Azalia came in about 55 minutes afterwards. The following gentlemen composed the crew of the Idler: S. J. Colgate, captain; J. J. Alexandre, mate; Frederick Thomas, Jr. DeP. Foster, Grand Post; J. W. Beckman, Jr., W. Foulke, Jr., B. H. Fonke, William Greig, Henry Steers, M. Roosevelt, J. P. Roosevelt, J. B. Cner, W. Roosevelt, A. Roosevelt, J. P. Roosevelt, J. B. Cner, A. Remson, L. D. E. F. Woodruff.

We have received the following letter from our yachting editor, who was one of the crew of the Idler:

YACHT IDLER, OFF NEW YORK, August 9th.

The cruise of the New York Yacht Club has been most successful up to the present time. The first day's run from Glen Cove to New London was a pleasant one, but owing to the uncertainty in the direction and strength of the wind, there was no fair test of the relative speed of the yachts. The "Marie," of the schooners arriving with a

long lead in her class, was preceded some twenty minutes by the "Vision" sloop, which was the first vessel in.

On Friday, the 7th, a start was effected at nine o'clock, and with a splendid wind and all kites set, the run to Newport was accomplished in the shortest time on record, sailing in squadron. The "Marie" led the schooners until past Point Judith, when the larger vessels crowded up about her. The "Dauntless," which was unfortunate in her start, getting off the last of all, did herself great credit upon this occasion, and soon reached through the fleet, taking her place among the leading boats, where she and the Wanderer had a most exciting contest for the lead, the former, in addition to her kites, showing a large square sail, which she kept most effective, and the latter a spinnaker, which she did not go down until she was within a short distance of the lead. The Wanderer had the lead by about a ship's length, but in huffing around the north end of Goat Island, the "Dauntless" got the better of her, and let go her anchor a few seconds in advance. The little "Marie" had in the meantime taken in kites, and hauling her wind, passed in the south entrance, and was the first of the fleet to anchor. The Wanderer came in a short distance astern of her, and the balance of the fleet, which was crowded up about her.

Of the sloops the "Vision" was the first in, but was hard pressed by the "Vindex," which did not seem as good a start, and came to anchor one minute after her fleet antagonist. The new sloop "Wayward," Mr. Edgar Morris, showed great speed, and gave the "Qui Vive" a sound beating. The "Gracie" was unfortunate, carrying away her jib boom at the start, but although working under this disadvantage, secured a good place at the finish.

Newport harbor at present contains forty-one yachts, principally from the New York, Seawanhaka, and Eastern yacht clubs. Tuesday, the 11th, has been fixed for the regatta for Commodore Bennett's cups, and the Eastern yachts having been invited to contend, a splendid race is anticipated.

The decision upon the Corinthian race set for Saturday, the 8th, was unquestionably wise, one of it blew a gale of wind, and the sea outside Point Judith must have been enormous; the worst feature, however, was the blinding rain, which was almost as impenetrable to the sight as the densest fog. I will send you a full account of this race in time for the next issue of the FOREST AND STREAM, if too late for this week's paper.

K. NEWMAN.

—The New York Yacht Club squadron, accompanied by the fleet of the Eastern Yacht Club, sail for Vineyard Haven to-day. On the way there will be a scrub race for sloops for a set of colors for each class, the race to begin at Benion's Reef Lightship, and end at Oak Bluffs.

LYNN YACHT CLUB.—The first of a series of races under the auspices of the Lynn yacht club for three champion cups—one for each class—was sailed on Monday, August 3d, at Lynn, Massachusetts. Fourteen yachts entered—seven in the first class, six in the second class, and five in the third class. The start for first class was made at half past three P. M., immediately followed by the other classes. The course for first class was twelve miles, and for second and third classes nine miles. The winners were the yachts Haymaker, Fleeting, and Mabel. The regatta committee were Messrs. Q. A. Townes, Allen Hay, W. B. Phillips, John Moran, and J. W. Haines. The next regatta will take place on Tuesday, August 18th.

DORCHESTER YACHT CLUB.—The yachts of this club will start from Hull, Massachusetts, on their annual cruise Saturday, the 22d instant, the captains of the participating yachts reporting to Commodore W. H. Baugs, Jr., on board the yacht Wivern, at Hull, on Friday evening, 21st instant, to get under way at an early hour on the following morning. The direction of the cruise will be along the north shore of Massachusetts Bay, stopping at Gloucester, Pigeon Cove, Annisquam, and possibly going as far as the Isle of Shoals. The Eva, Wivern, Keipie, Elsie, and Starlight had on Monday signified their intention of participating in the cruise.

—The Isle of Shoals sailing regatta, to take place August 20th referred to in our last issue, promises to be a very successful affair. Nineteen yachts had, up to Monday, 10th instant, entered at Boston alone, with Commodore D. R. Beckford, No. 20 India street, Boston, and many more had signified their intention of entering to compete for "The Oceanic" prizes. Following is a list of the Boston entries:—

Table with columns: Rig, Yacht, Owner, Keel up or B, Club. Rows for Schooner, Sloop, Schooner, Sloop, Schooner, Sloop, Schooner.

—The Albany, New York, yacht club have gone on their annual cruise. The fleet consists of ten yachts, under the command of Captain Baker. The club have adopted a very fine uniform, consisting of blue suits, with a white duck cap. Their cruise extends to Newport, and will last two weeks. They participate in the yacht race at Newport.

—The Northwestern Regatta Association has made extraordinary strides this last two years. The principal object of the officers to extend boating as a pastime, and to elevate the standard of the amateur oarsman. The large number of clubs extending along the great water front from Detroit to Chicago, most of whom are members of the association, are uniting in their exertions in order to make the coming regatta a sailing one.

—The yacht Nellie arrived at Halifax, Nova Scotia, from Newfoundland, on the 6th, having on board the Rev. Geo. H. Hepworth, of New York, and friends.

A WEEKLY JOURNAL, DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE EDUCATION OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY Forest and Stream Publishing Company, 17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK, [POST OFFICE BOX 2833], 135 SOUTH 4TH STREET, PHILADELPHIA, COBURN BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside pages, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, AUGUST 13, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and confidence of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted is not lost.

Advertisements should be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Managing Editor. WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, August 14th.—Myrtle Park, Boston—Uden Park Association, Uden, N. Y.—Rochester Driving Park Association, Rochester, N. Y.—Hartford vs. Tinton B. C., Tinton, Mass.—Waseka Trotting meeting, Ill.—English Eleven vs. Eighteen at cricket, at the Oval, London—New York Yacht Club cruise.

SATURDAY, August 15th.—Saratoga races, Saratoga—Hartford vs. Picked Niae B. C., Martha's Vineyard—American vs. English at cricket, at Sheffield, Eng.—New York Yacht Club cruise—Practice day, Harlem boat clubs, Harlem, N. Y.

SUNDAY, August 17th.—Mental vs. Olympic Boat Club, Albany—Americans vs. English at cricket, at Sheffield, Eng.

TUESDAY, August 19th.—Hullfax Cricket Tournament, Halifax, N. S.—Saratoga races, Saratoga—Hamden Parks Association, Springfield, Mass.—Trotting meeting, Burton, Ohio—Trotting meeting, Grand Rapids, Mich.—Americans vs. English at cricket, Nottingham, Eng.—Lynn Yacht Club regatta, Lynn, Mass.

WEDNESDAY, August 19th.—Hullfax Cricket Tournament, Halifax, N. S.—Saratoga races, Saratoga—Hamden Park Association, Springfield, Mass.—Regatta at Worcester, Mass.—Trotting meeting, Burton, Ohio—Trotting meeting, Grand Rapids, Mich.—Trotting meeting, Elm, N. Y.—Trotting meeting, Wilkesbarre, Penn.—Americans vs. English at cricket, Nottingham, Eng.—Trotting meeting, Hornesville, N. Y.—Practice day cricket clubs, Hoboken—Trotting at Agricultural grounds, South Norwalk, Conn.

THURSDAY, August 20th.—Hullfax Cricket Tournament, Halifax, N. S.—Saratoga races, Saratoga—Hamden Park Association, Springfield, Mass.—Trotting meeting, Burton, Ohio—Trotting meeting, Grand Rapids, Mich.—Trotting meeting, Elm, N. Y.—Trotting meeting, Wilkesbarre, Penn.—Isle of Shoals Regatta, N. H.—Trotting at Agricultural grounds, South Norwalk, Conn.—Trotting meeting, Hornesville, N. Y.

INDEX.

The Index of our Second Volume is now nearly completed, and will doubtless be ready for distribution with our next issue. The amount of absolutely new ground covered by our one year's publication is really surprising. Some of the freshest material was contributed for our earlier numbers, when our circulation was very limited, and has therefore escaped general attention. We would advise a cursory review of the entire volume.

Since our paper was first printed, we have published the first full and authentic information with regard to the Island of Anticosti, the Nepigon country, the Salmon rivers of Newfoundland, the Game of Colorado, the Salmon of the Pacific Coast, the Geography of Newfoundland, the Zoology of the Northwest, Lake Okeechebe in Florida, the Colouage District of Canada, the Ichtye Fauna of Humboldt Bay, California, the Angora Goat Culture of Guadalupe, the Amerieau establishment in the Island of

Formosa, and the Upper Saguenay. We have first called attention to the presence of the American Anelovy, and we have printed the first photographs ever made of the Octopus and the Michigan Grayling, concerning which latter pretty much all that is known has been gathered through our correspondents. As politicians say, "this is glory enough for one year." Besides all this, we have disseminated a vast amount of information not generally known, so that our two volumes really comprise a cyclopaedia of useful knowledge that can scarcely be matched in this country. We bow before the approval of an appreciative constituency.

THE U. S. FISHERY COMMISSION.

WE trust our readers will set a proper estimate upon the valuable papers which we are printing in this journal under the department of Fish Culture, detailing the weekly operations of the United States Fishery Commission in Long Island Sound. These papers, it is proper to state, are prepared by Commander Beardslee, U. S. N., the officer in charge of the steamer "Blue Light," which the Government has placed at the disposal of the Commission, and who is assisted in his efforts by the scientific gentlemen on board, and notably by Prof. Verrill, of Yale College, and by Prof. Baird, Chief of the Commission, to whom our readers have always been indebted for contributions of a valuable character.

The importance of this work to science can scarcely be estimated, while at the same time its influence upon the industrial economy of the country must be sensibly felt for good. It is but the continuation, too, of the work begun on the coast of Massachusetts, then extended to Maine, and hereafter to embrace the entire coast line of the Atlantic to Florida. Not only are new marine species discovered, and the identity of others established, but the habits and breeding places of food fish are ascertained, and their habits so studied as to enable the men of science, by their mechanical appliances, to prevent waste and multiply numbers, thereby giving guaranty for years to come of a continuance of that fish food which it so recently seemed was about to disappear forever. Besides, by the study of sea temperatures and experiments with the ova and small fry of fishes, and the test of water of various degrees of purity and saltiness, the Commission are enabled to transplant, propagate and adapt the several varieties to new elements, so that they will thrive as vigorously as under their normal condition. To aid in the accomplishment of this great good, the United States appropriated last Spring the hardly magnificent sum of \$15,000, but what is lacking in money is more than made up by the enthusiasm of the scientific gentlemen of the expedition, who give gratuitously their time and labor to the cause. There are, perhaps, two dozen in the corps, and we doubt not that all, or nearly all, have contributed their largess or mite to the interesting material that is weekly prepared for our readers. This material is most of it new. It is furnished to us at first hand, before the savans have so tortured and befogged it with incomprehensible terms and Latinized names, as to render it simply as "clear as mud" to those who dwell any lower than the seventh heaven of human intellect. All the little parts, characteristics and performances of the numerous creatures that are brought to our notice, are made so interesting and intelligible, and are so interwoven with homely illustrations and plain instruction, as to be eagerly read by children and men of simple habits of study. These find that the "Professors," when stripped of the sombre robes and mysticism of their occult studies, and brought down to the plane of ordinary comprehension, are no "lunabugs," but very companionable fellows; and the consequence is that all the fishermen and coasters of Long Island Sound, and the dwellers around Nounk, become voluntary recruits and willing foragers to bring in new species and "queer critters," which, like the dreams and visions of the Persian kings, seek interpretation.

Two weeks ago, July 30th, we gave engravings in our paper of the egg and young of the skate, (the printer transposed the two, so that the embryonic egg assumed to be the living fish), and also an engraving of the full-grown fish dissected, showing the eggs in their natural position, and the use of those curious horns that pertain to the egg, and by which they cling to the ovaries and hold the egg firmly thereto. This, we are informed, is the only illustration of the kind extant, and is considered a great rarity and very valuable. Prof. Agassiz, in dissecting a skate in the presence of his class last year at Penikese, discovered the eggs in their natural position. He expressed the greatest surprise and gratification at the discovery, and announced to the students that this was a sight seldom vouchsafed to mortal eyes; that in all his experience he had seen but one case previously.

We have now ready for publication two equally curious subjects. One is a young squid (or, octopus, cephalopod, ink-fish, cuttle-fish, *calvera*, *atida*), just emerged from the egg. This we shall print next week. The other appears in our article of to-day, and represents the famous tadpole, from which the human race is facetiously said to be descended, its structure bearing close resemblance to the human anatomy, and the peculiar appearance of the cell work of its tail having caused him to be considered as the lowest of the vertebrates.

We take especial pride in forestalling the scientific book-makers in producing these rare and curious things, and owe, with our readers, a lasting obligation to those gentlemen of the Fishery Commission who have enabled us to do so.

THE PIGEON SHOOTING TOURNAMENT.

WE have been advised by the President of the Niagara Falls Shooting Club that said club will hold a pigeon shooting tournament at Niagara Falls on the 9th, 10th, 11th, and 12th of September, with money prizes of value from \$3,000 to \$5,000, classed in each shoot as one, two, three, four, and five money—ties in ten shot off for first, and so on through; then a grand "free for all," say \$2,000 in money, in the same way. Birds are ordered, coops are building, and committees are appointed on railroad reduction of rates, and all are vigorously preparing for the event. The International Hotel will reduce their rate one dollar, making it \$3.50 per day. Carriages and all other charges in and about the place will be materially reduced to rates that cannot fail to be satisfactory to all. By resolution, all the members are appointed a reception committee.

Under the auspices of this strong and very energetic club, the tournament cannot fail of complete success. Emulous of rival organizations throughout the State, it is determined not to be outdone at Syracuse, Oswego, or Watertown, and we have no doubt that more pigeons will be shot, better scores be made, bigger prizes be won, more money be spent, a larger assembly be present, and a better time generally be had, than at any other similar meeting hitherto held, or to come for the next half century. Certainly, the incidental surroundings of Niagara Falls are sufficient in themselves to make the tournament attractive. One thing, however, we do regret, and that is, that this club should have selected the day assigned for the meeting of the National Convention as the first day of its shoot. No side show of this kind is necessary to tempt the attendance of gentlemen who propose to meet for the sole object of devising the best method to protect and preserve our game. Not one serious, earnest delegate the more will be present in consequence of the tournament. The club might just as well, and with greater propriety, have postponed its festivities until the following day, without in the least degree jeopardizing its mechanical harmony or its prospects of success. We shall always oppose the mixing up of business with pleasure and the association of holiday pastimes with the proceedings of a deliberative body. We regard the action of the Niagara Falls club in bringing these two widely diverse and divergent objects into juxtaposition as impolitic in the extreme. Its direct tendency, as we know from conversation with gentlemen that might be named, is to alienate those persons whose intelligent co-operation and knowledge of the subject are most valuable, and really indispensable. There is not the slightest kinship or harmony between the destruction of pigeons at a trap and the legislating for the protection and propagation of game. We make no objection to the pastime of pigeon shooting, though not enthusiastic in that line of sport. We hope for the Niagara Falls tournament every possible success; but we wish the localities of the Convention and the Tournament were as wide apart and remote as their objects are divergent.

That the objects of the Convention have received the consideration of sportsmen at large, and that the call has a widespread approval, we doubt not. This is manifested in the haste of at least one Western State to respond, namely, Ohio. This State has appointed a delegation for the September meeting composed of Colonel C. W. Wooley, of Cincinnati; Hon. A. T. Brinsmade, of Cleveland; C. P. Brigham, of Toledo; Harvey H. Brown, of Cleveland, and C. A. Logan, of Cincinnati, each delegate being empowered to elect a sub-delegation of five.

We trust that other States will be as fully and as ably represented. It is important that the Convention should be full, for this can scarcely be regarded as anything else than a preliminary meeting to devise some basis for future action, and some general ground plan upon which to construct that legislative contrivance, so much desired, which shall essentially remedy the evils and objections that now attach to existing game laws. It is equally important, too, that the Convention should adjourn to a day sufficiently distant to ensure a full consideration of the subject and the receipt of snob schemes as wisdom or ingenuity may suggest and present.

ENGLISH GENTLEMEN HUNTING IN THE WEST.—Private advices from Denver inform us that the Earl of Dunraven is hunting in the neighborhood of Estes Park, and that lately the Earl had a contest with a mountain lion, which with the assistance of Dr. Kingsley, was handsomely despatched. The Earl of Dunraven will possibly later in the season push further West. English gentlemen on the plains just now may have an opportunity of witnessing quite warm work, and of acquiring that knowledge of Indian warfare which M. Le Comte de Paris states is the cradle, or the primary school of the American soldier. We should strongly advise that in certain regions of the far West, great precaution should be used. The Indian is no respecter of nationalities, and we should regret to hear that any gentleman from the other side had lost his scalp. Three years ago, a party of seven, two of them English gentlemen of rank and fortune, the party fortunately under command of a well known Indian fighter, had a gallant but rather hair breadth escape from the Apaches. It was a stand up fight for one day, and a running one for three days, and excessively "jolly" no doubt. The Indians were finally whipped off, but a very ugly scar, somewhat disarranging the part of the hair, will be a memento of adventure which a plucky English gentleman will carry with

him to his grave. We will repeat his modestly told account of the affair, as he related it. Said he—

"I couldn't tell exactly how I got it. Just think of the beggars bagging almost every horse we had. Two of us went in for reprisals, and wanted at least some of their ponies. They were pushing us hard, and two bucks (that is the approved phraseology) let their little horses ahead of them as a lure. They were bold, because they thought they had us. J. had a Westley Richards, and I had a Remington. The blackguards absolutely banded me. I wanted a horse to take home, so badly. We made a bold face, and pitched in to them. J. fired at a handsome fellow, and I think only grazed him, but I fancy I fetched the other, (that's the phraseology again I believe,) and I made for the pony, that was somehow tangled up in his lariat. I thought both of the Indians were down, and had my hand on the horse's head, but he didn't like me, and snorted, and kicked when the other red skin, wounded as he was, (for J. had only touched him), fired at me at almost point blank. I never knew I was hurt until I found a kind of warm cozy slobber-half of blood most blinding me. Poor devil of a savage, I did not have the heart to kill him, some body else did, but I got the little beast. I think killing those two young braves took the heart out of them as it did out of me, but they were the aggressors. Bestly practice, scalping, is it not? Well, sir, would you believe it, I lavished my affections on that Indian heifer, but it was lore's labor lost. I wanted to take him home, but at Omaha I swapped him off for a jack knife, (phraseology again, excuse it). That horse hated civilization, white men, and law and order. But I assure you, I would not have missed that little skramage on the *Cueche la poudre*, for a great deal, though having seen the pleasure of it once, I give you my word of honor, once in a life time a mess of that kind is quite sufficient. Scalping is bestly. You're one ought never to scalp."

THE PINNATED GROUSE IN ENGLAND.—Since printing our statement last week regarding the failure of the first attempt to plant pinnated grouse in England, we have received the following note from Mr. Valentine, who first instituted the experiment, to which we have lent what co-operation we could. We are glad to know that Mr. Valentine is determined not to give it up, and that he does not despair of eventual success.

JANESVILLE, WIS., August 7, 1874.

EDITH FOREST AND STREAM.—I have the pleasure to inform you of the 30th monthly result of our experiment with grouse eggs in England is at hand. I am very sorry they hatched so badly, but considering all things, it is not to be wondered at. The season was well advanced when the eggs were gathered and the weather was warm. There had been a hard rain storm a few days previous, which had soiled them badly, and I have since learned that they could have been packed better. The hatching of the three proves at least that the eggs can be shipped great distances and be hatched, and next year I shall try it again, and take more pains in packing. I shall now make arrangements for gathering a goodly quantity of eggs early next spring. Also for obtaining this fall some live birds of both pinnated and sharp-tailed varieties, which I propose sending to Mr. R. J. Price, North Wales. I can obtain any quantity of live birds. I propose to introduce these birds into England, and shall keep at it until I make a success of it. Yours truly, RICHARD VALENTINE.

P. S.—I have received several letters from commission merchants in England requesting shipments of eggs or birds to them. If you have any such inquiries, please say that I am not interesting myself in this matter for the purpose of making money. If any gentlemen in England, however, desire to obtain a lot of live birds, I will procure them for them, and if necessary accompany them in transit, and see them well cared for. Birds are reported plenty this season all through the West. We have more here than for several years past.

A RARE OPPORTUNITY.—We desire to call attention, through an advertisement that appears in our paper, to an opportunity seldom offered to sportsmen for the purchase of Canadian shooting and fishing leases, offering the very best facilities for sport in both branches. There are three of these leases. As to the reserve at Point Pelee, in Lake Erie, our readers have been repeatedly informed through our columns. The fishing can hardly be surpassed. The shooting on all three is among the best that Canada affords, and game can be multiplied indefinitely by protection. The leases run for twenty-one years, and, as they are for Ordnance Lands, will probably go at a low figure. This matter is really worthy the attention of our sportsmen, most of whom spend more time and money, annually, in search of desirable ranges than is required to purchase either one of these valuable tracts.

WISCONSIN STATE SPORTSMEN'S ASSOCIATION.—The prominent sportsmen of Wisconsin, who are interested in the preservation of fish and game, have called a convention at Portage City, August 18th, for the organization of a State Sportsmen's Association. All sportsmen are invited to attend, and contribute to the success of the enterprise, which we trust will be such a one as the State may well be proud of. Everything appears favorable for a large and successful gathering.

Messrs. G. & H. T. Anthony, photographers, of No. 591 Broadway, have published a series of views of objects of interest in Blooming Grove Park, including the Club House, Deer Park, Game-keeper's Lodge, &c. These beautiful scenes of hunting, shooting and fishing are now on sale at the Messrs. Anthony's gallery, and can also be purchased of the President of the Association, Edward R. Wilbur, Esq., No. 40 Fulton street.

TO ADVERTISERS.—We print but three pages of advertisements this week, having cleaned out every particle of dead wood and discontinued several yearly favors which have expired with the close of the volume. Should our patrons desire a renewal, they will oblige us by an early notification, as we shall keep the matter standing for a short time.

Sporting News from Abroad.

[FROM OUR SPECIAL CORRESPONDENT.]

THE English *Daily Telegraph* is again the laughing stock of the London press, for alas, the story of the fight between the man and the bull dog has turned out to be but a delusion and a snare, and not the dream of their special commissioner. I was wrong in attributing it to Mr. G. A. Sala, and I hasten to correct my error. The article in question was written by a Mr. Greenwood, and he is well known in London circles as the "Amateur Cusud," from a lucky hit he made a few years ago by disguising himself as a tramp and visiting a metropolitan workhouse, the description of what he saw there being published in a sensational letter in the *Times*.

As it may be imagined, his paper on the scene he witnessed at Hanley made a great noise, and the authorities in the town made every effort to discover the originators of this brutal diversion, but without the smallest success. The policemen knew nothing about it, and a liberal reward has failed to tempt any of the pitmen to disclose anything about it, though they have nothing to fear and every thing to gain by the disclosure. Lastly, the secretary of the society for the prevention of cruelty to animals has taken Mr. Greenwood down to the scene of the combat, but when there he failed to recognize the spot and could only point out the inn where he first met the dwarf who fought the dog. The landlord of the tavern denies this fact, and the public journals have arrived at no other conclusion than that the story is an entire fabrication.

To a sportsman, or rather to a sporting man, there are several glaring inconsistencies in the simple tale. The fighting dog of the pitman is not the bull dog, but the bull terrier. The bull dog is a quiet, good natured brute, with no mouth that can punish his antagonist. He can only hold on tight and allow himself to be cut to pieces joint by joint without a groan. But the bull terrier is a very different animal. Quick and active as a puma, brave as a game cock, and strong as a mastiff, he can use his level mouth and sharp teeth like a surgeon's knife, and open gashes which soon let out the life of the creature he attacks. This is the dog that the collier would have pitted against "Bummy, the dwarf." But "our special commissioner," evidently a Londoner, believes a bull dog to be the proper thing, and forgets all about the instinct of the breed which makes him "hold on," and so he represents him as biting and then letting go. The fact of the man being chained also looked suspicious and written for effect.

The amateur championship of the Thames was decided on Wednesday, the final heat being rowed between Mr. A. C. Dicker, of St. John's college, Cambridge, the holder of the sculls, and Mr. W. H. Eyre, of the Thames Rowing Club, and it resulted in the easy defeat of the latter. The river was very smooth, there being but a slight breeze, sufficient only to cool "the ented atmosphere," as the cockneys call it, and there were plenty of those who came to see and be seen. The umpire was a Mr. Brickwood, who in former days has held the palm himself, and was therefore well qualified to judge who should hold it now. At thirteen minutes past seven Mr. Searle gave them the word to go, and straightway the Cambridge man, getting to work at once, drove his light craft a quarter of a length ahead in the first three or four strokes, Mr. Eyre seeming stiff and slow to begin. At the steamboat pier Mr. Dicker led by half a length, and was sculling with great power, while his opponent pulled short and in bad form. A little farther on it was evident that there was only one man in the race, and when Mr. Dicker passed under Hammersmith Bridge in 10m. 38. he led by a clear five lengths, and his backers were shouting themselves black in the face. Opposite Biffen's Wharf the behindmost sculler spurred vigorously, but could not catch the casual, who, however, lost some ground by making a mistake in going too near the Middlesex shore. After this Mr. Dicker drew gradually away, and when the wished for goal was reached he had won by 100 yards in 25m. 45 2-58., the race being rowed out by Mr. Eyre, who had not the smallest chance.

The sale of Mr. Richard Garth, Q. C.'s, pointers and setters was very interesting to sportsmen, as the great celebrity, Drake, well known in field trials, where he had won a large quantity of important prizes, was to be put up without reserve. This fine old pointer, though seven years and upwards, has not lost his extraordinary powers, and is as good in the field as ever, though he has not lately appeared in public. He has been in his day most popular at the stud, and he boasts a long and excellent pedigree, tracing back to the Spanish breed. The peculiarity in Drake was "dropping" on his point instead of standing to birds, and since he introduced in this practice has become much adopted, as a dog is far steadier when "dropped" than when standing, though this steadiness is acquired by the loss of all "style," and there is no grand picture in the sportsman's foreground. Besides this, a "dropped" dog cannot be seen if the cover be at all high, as it often is, on the moors. The chief point in Drake's performances was his wonderful speed, which has never been surpassed. After much competition, he was knocked down to Mr. Floyd Price, of Bala, North Wales, at 150 guineas, and as Mr. Price owns Belle, the champion pointer bitch, he will now have as good a pair as any man in England, or perhaps the best. Mr. Garth's entire kennel sold for £685. Of the setters Rob, by Mr. Statter's celebrated Reb Roy, fetched thirty-seven guineas. Bloom, with two puppies, brought thirty-seven guineas, and Bess, by Pawke's Rap, £35.

Doll, a pointer bitch, sold for fifty-five guineas; Major, by Drake, went for sixty-seven guineas, and the average price for setters was £32, and for pointers £32, but some puppies brought down the average, and at auction pointers and setters seldom fetch large prices, as there is no opportunity for trying them in the field.

The *Field* has reproduced this week a copy of the engraving of the Michigan grayling, which appeared in *FOREST AND STREAM*, and I may venture to add that this paper is very much increasing in circulation among English readers. The article on the grayling identifies the Michigan fish with the Arctic grayling, but the writer is at a loss to account for its having got into its present waters, and it seems there is a way for accounting for the hair on the cocoon, but not for the milk inside. Mr. Francis Francis has been writing some interesting papers on salmon fishing, and he seems to have had much sport with the blue and yellow phantom minnows in Loch Tay and other lakes and streams. He says that a lady actually caught two fine fish in one day, whilst her husband had no sport for three weeks. So the vicissitudes of fishing seem precarious.

In the parish of Oddington a vixen has chosen for an accommodation hospital the pulpit of an old unused church, and her cubs are allowed to be unmolested in the strange place where they first saw the light. There seems to be an abundant supply of foxes, as I read that nine cubs were found in one litter last week at Devize's, but they fell into bad hands. Other hunting is still in full swing. Mr. Chertton's hounds met at New Bridge, on the river Taw, last week, and after an exciting hunt of two hours the otter, a fine old dog of twenty-five pounds, was broken up, but not until he had shown them fine sport, and led them a merry dance down the stream. On Saturday these same hounds met again, and I can well believe that there is no sport so thrilling as otter hunting, though you don't want horse-flesh, and have to get up very early in the morning. This time "the varmint" was killed in an old quarry pit, which had been improvised by Lord Fortescue as a shelter for fish. Perhaps no better compliment could be paid his lordship's judgment than the fact that this beast took up his quarters there, for it showed that the fish also frequented it. One of the spectators says it was a grand sight to see the waters of the still, black pool lying placidly in the midst of a wealth of yellow gorse and purple heather foam again, as the hounds drove through the water "to a gaze," and hunted the quarry fromholt toholt and strong-holt to stronghold. These rough hunts are exceedingly picturesque, and the Carlisle pack have often formed the subject of charming sketches by Landseer, Frederick Taylor, and other animal painters of "ton" and gentes.

DRSTONE, JR.

The Kennel.

THE SENSATION OF HYDROPHOBIA.

I was surprised to see appear, from a black cabinet, people who spoke to me; then enormously long rats ran along the furniture, always by the side. The illusion was such that at first I often changed my position to convince myself whether it was an illusion or a reality. Afterward falling stars appear at a moment when I least expected them, always from the internal to the external angle of the eye, which forced me instinctively to turn my head. Simultaneously I was seized with trembling of the skin and a feeling of unspeakable horror. In the place of darkness, or during the night, my room appeared illuminated as by a flash of lightning. At last, seeing that nothing would arrest the mysterious agent, I had recourse to the *daturn stramonium*, or thorn apple of Peru. A Catholic missionary had informed me of its wonderful efficacy fifteen years ago. I took a strong dose of it, four or five leaves, and commenced to write, although with some difficulty. Half an hour after the remedy had not taken effect, when suddenly a strong electric convulsion, like fireworks, or rather like a puff of steam, ran through all my limbs, from head to foot, producing in the entire surface of the skin a general trembling and sensation of heat, accompanied by a disposition to fly, and an indelible feeling of terror. It seemed to me as if I had fireworks in my eyes. I rebounded as if impelled by a spring. It seemed to me I was engaged in a deadly combat between the vital mortal principles, the latter of which endeavored to impose itself, tyrannically, like a demoralizing power, against which all the active forces reached with a superhuman energy. At the same moment I became delirious, and lost all consciousness.

The patient retains in the delirium the dominant idea of restraining himself, and of endeavoring to repossess his faculties. Nevertheless, in this state the convulsions became more frequent. They are always accompanied with the same sentiment of fear, and the necessity of reaction and flight. "The muscular force is prodigiously increased; he is without fatigue; the weight of the body is no impediment to the limbs; it seems only necessary to make the attempt to skim over the earth, as in certain dreams. The contraction of the muscles of the legs causes a sudden fall, when he becomes perfectly rigid. He realizes he has fallen, when he is restored to consciousness by the shock of the fall, and he arises quickly. The nervous excitement is such that he is very nearly insensible to pain. The figures of the most familiar persons appear furious, threatening and provoking; and contrary to the general sentiment of terror which one feels internally from convulsions, one is intrepid and ready to brave all exterior dangers. The paroxysms commenced at half past two in the afternoon. At ten o'clock in the evening the remedy began to take effect, and the next day only a great prostration is felt. The invalid attributed all the phenomena of the delirium to the gas produced in the organic tissues by the influence of the virus.—*Courrier Des États Unis*.

JUDGING ON THE SHOW BENCH.—NO. 4.

THE BULL-DOG.

Head wide between the ears; ears small, disposed to fall forward and set wide apart; eyes black, wide apart; fore-head prominent, making a deep "stop" or indentation between the nose and the forehead. The face as short as possible, deeply wrinkled; muzzle deep and broad; nose large, with open nostrils, lower jaw projecting; neck strong; shoulders broad; chest deep and wide; fore legs muscular and straight; hind legs straight, hocks scarcely bent at all; feet round; back short, loin not so well developed as in appearance as in other breeds, the immense width of shoulder making the other appearance off. Nothing is more hafter than the waspy and "cut-in-two-in-the-middle" appearance that some of the great cranks have, having the appearance of two distinct breeds put together. Hinchquarters well formed; tail going off fine at the point often twisted.

POINTS IN JUDGING.

Table with 2 columns: Part and Points. Head 30, Hind-quarters 10, Chest 15, Feet 5, Shoulders 15, Fore 5, Back 10, Tail 5. Total 100.

THE OTHER-HOUND.

The head should be at a mixture in appearance of the fox-hound with the rough-and-ready appearance of the real old large rough Scotch terrier breed of thirty years ago; but still at the same time ought to have a certain amount of dignity; I would go so far as to say the other-hound's head should have all the dignity of the blood-hound's; forehead long, with a crasling look in the jaw, so that he may lay hold of the loose skinned outer and retain his hold with almost his drooped; nostrils large; lips pendulous; neck strong, long, and muscular, with a certain amount of throatiness; chest deep, rather narrow, but well ribbed up, but a little laxity is allowed in the looseness of loin; shoulders powerful, slooping well back; arms and thighs strong and muscular; feet a little open and webbed between the toes; coat hard, wiry, and plenty of it, close and thick at bottom, but not over short, the stern should be moderately cropped but not so as to be termed flanged, and should get less towards the tip; colors black, white mixed with pale tan, or grey free from brown and buff; general appearance "harm-scaram," or "devil-may-care," giving the impression of a scamp neither afraid of land, rock, or water, but at home anywhere, and able to take his own part.

POINTS IN JUDGING.

Table with 2 columns: Part and Points. Head 25, Back 10, Neck 5, Loin 10, Legs 10, Hind-quarters 15, Feet 5, Stern 5, Shoulders 10, Coat 5. Total 100.

—Havriir's Gazette.

"Molhawk" seems determined to have at least some of the best blood of England and Ireland in his kennel. He is expecting by the next steamer from Liverpool a bitch called "Vivid," one of Mr. Maedona's kennel. "Vivid" is sister to "Music," winner of the puppy stakes at the Vaynol Field trials of 1873. She is by Plunket, Bromo, &c. "Vivid" is in whelp to the celebrated dog, "Ranger." We shall now have some of the progeny of the wonderful animal which has won nearly every field trial he ever was entered for. Plunket's get has been almost equally good on the show bench and in the open at field trials. This combined strain ought to produce great wonders.

We may expect a fine litter of puppies from Molhawk's Maedona's setter, Kirby, and Raymond-Lavaraek dogs, Pride of the Border. Also, Molhawk's pointer bitch, Naylor, presented him by Mr. Maedona, and Mr. Sum. Col's black pointer dog, "Phil."

BRAINED, Crow Wing county, Minn., August 10th, 1874. EDITOR FOREST AND STREAM:

For the benefit of your readers, I send you a copy of a prescription for the cure of distemper in dogs, given me by Mr. Hicks of Xenia, Ohio. Extent of holdovers, 1 grain nitre, 4 grains James powder, 1 grain lactate of ammonia, 1 drop conserve of roses, a sufficiency. Make into four pills, one every other day, to be given the dog at night. It is the best remedy I have ever used, is easy to give, and is a sure cure, if the animal is cared for in other respects, diet, &c. About two weeks ago I received from M. P. McKoon of Franklin, Del. county, N. Y., a very nice spotted spaniel pup, small, liver-colored, mixed with tan feet and eye spots—a thoroughbred undoubtedly—with which I expect to have sport among the ruffed grouse this fall. I notice McKoon advertises some more pups of the same breed in your paper. He knows where to do his advertising evidently, and any one who orders a pup from him may be confident that they will be fairly and squarely dealt with. Such, at least, has been the experience of yours truly. HAYLAND.

The Horse and Course.

The Buffalo Park Association closed its ninth annual meeting on August 7th, with the following events. The first race was a dash for the 2:31 class. Eleven horses were entered, ten of which started for a purse of \$4,000. Fleety Goldust won the race in three straight heats—time, 2:32 1/2, 2:20 1/2, 2:22 1/2. The second race was for a purse of \$7,500 for 2:20 horses. Red Clond won the three last heats in 2:18, 2:15 1/2, 2:21. The great event of the meeting was Goldsmith Maid's extraordinary performance of beating her unmatched time of 2:16. Goldsmith Maid, accompanied by running mate at her wheel, trotted the first heat in 2:18 1/2. In the second heat she made one skip, and came in under the wire in the wonderful time of 2:15 1/2. The excitement on the course was immense, the spectators on the stand rising en masse, cheering Budd Doble, her driver, as the fastest time ever made by a trotting horse in the world.

The Saratoga Racing Association held the first day of the second meeting on Saturday, August 8th. The heavy rain of the night before made the track heavy, and the time made by the winners was consequently indifferent. The first event was the Kentucky stakes. Chesapeake won in 1:45 1/2, with James A. second, and Willie Burke third. The second race was the fifth renewal of the summer handicap, a dash of two miles. There were seven entries. Survivor had a little the best of the start, but was soon overtaken by Lizzie Luess and the Zaidee filly, which to-

gether led, being several lengths ahead of Culpepper. Lizzie entered the home stretch three lengths ahead, the Zaidee next, Lizzie Luess came in first, Culpepper and Catsby following. Time, 3:39 1/2.

In the steeple chase handicap, George West, Bullet, Vesuvius, and Lobelia started. The race lay between West and Bullet, both of which jumped the last two hurdles together, and ran a neck and neck race up the home stretch. West was just able to win by a short head in 5:54. The rest nowhere.

The races continued at Saratoga on August 11th. The first race was the Kenner stakes, distance two miles, for three year olds, \$100 entrance, the association adding \$3,000. Out of the fifty-four nominations only four horses came to the post. Stampede won the race by three lengths; Acrobat second, and Reform third. Time, 3:43. The second race was a mile and a half dash. Fellowcraft came in first, Katie Peace second and Governor third. Time, 2:42 1/2. The third event was the selling race, and was won by Catsby, B. F. Carver second and London third. Time, 2:11 1/2.

The Utica Park Association held the first day of the meeting on August 11th. The city is full of strangers at the meeting on August 11th. The city is full of strangers at the meeting in splendid condition. It is understood that either Smuggler or Goldsmith Maid will trot against time for a special purse of \$5,000. The following horses are here and have been entered: Monarch, jr., winner of the 2:34 race at Cleveland and Buffalo; Thomas Jefferson, winner of the \$10,000 stallion race at Buffalo; Bodine, winner of the 2:34 race at Cleveland; Magnolia, winner of the 2:38 purse at Cleveland; Fleety Goldust, winner of the 2:31 purse at Buffalo; Nashville, jr., winner at Cleveland; Lucille Goldust, winner of the 2:39 race at Buffalo; Kansas Chief, winner at Cleveland; the bay gelding Castle Boy, Buzz, Kitty Wells, Berkshire Boy, Nellie, Vanity Fair, Thomas L. Young, George Judd, Grace, George B. Daniels, Hatters, Major Robert, Arthur Sport, Col. Stewart, Maloney, Brother Jonathan, George H. Mitchell, Sensation, Smuggler and Henry. In the pacing race for \$1,000, Copperbottom, Billy Hooper, Defiance and Sleepy Dave have been entered. We are indebted to Charles W. Hutchins, Esq., of the Utica Park Association for the kind courtesies extended to us. The opening race, purse of \$3,000, for horses that had never beaten 2:54, mile heats, best three in five, was won by March, jr., Reserve second; time, 2:27, 2:24, 2:24. The second race, same day, was for a purse of \$4,000, for horses that had never beaten 2:24. Bodine won in three straight heats, Thomas Jefferson second; time, 2:21 1/2, 2:21 1/2, 2:26 1/2.

The Board of Directors of the Rochester Driving Park Association will give a purse of \$1,000 to any horse that will beat Goldsmith Maid's time of 2:15 1/2 on their track during the meeting.

The above purse has been increased to \$6,000, and the horses entered for it are Goldsmith Maid, Judge Fullerton, American Girl and Henry.

At Montreal, on August 5th, the fifteen mile trotting race at Decker Park, between Quebec Boy and Girba was won by the latter in 47 minutes and 20 seconds.

Col. Richard Tenbroeck, the well known race-horse owner, was slain by Gen. Walker Winaker, at Gilman's Station near Louisville, Ky., on August 8th, and it is reported is mortally wounded. It will be remembered that Col. Tenbroeck took several horses to England some years ago. Among the number was Umpire, who ran fourth in the English Derby, also Prior and Princess, the latter winning the Zarovitch stakes.

Mr. C. H. Mosher, the driver of Joe Ripley, at Lowell, last week, had reached the half-mile pole, when one of the traces broke, but he carefully reached down and secured the end of the trace, keeping his horse down to work, acting in one of the skillful ways throughout the heat, and winning it in 2:37.

The Moonshot Park Association will hold an extra meeting on August 30th and the three following days. Appended are the particulars:

First day, Wednesday, August 26. First race—purse, \$250, for all ages; \$50 to the second horse. Dash, three-quarters of a mile.

Second race—Steward's Cup, \$500 in gold for three-year-olds. Mile heats, winners five pounds extra. Those beaten twice allowed five pounds. \$100 to the third horse.

Third race—Purse \$500. Purse \$50, \$75 to the second horse, \$25 the third horse. Mile heats over four hurdles. Horses to carry welter weights of 28 pounds. Three or more to start.

Second day, Thursday, August 27. First race—Selling race, purse \$500 for all ages, one and one-half miles, winner to be sold for \$1,000.

Second race—Purse \$500, for two-year-olds, one mile. Third race—Purse, \$1,300 for all ages, four mile heats, \$1,000 for the first, \$200 to the second, \$100 to the third horse.

Third day, Saturday, August 29. First race—Purse \$500 for all ages, mile heats, winners excluded, \$400 to the first, \$100 to the second horse.

Second race—Consolation purse, \$350. Dash of mile and a half for beaten horses.

Third race—Steeple chase, purse \$500, over the usual course \$400 for the first, \$75 to the second, \$25 to the third horse. Three or more to start. Entries to be made up by 4 P. M., August 26. It will be so that a heat race will be run each day, and in addition to the above a two-year-old stake has been opened, the date of which is not yet fixed.

CHASE OF A HORSE.—Recently, says the Detroit Free Press, as the engineer of the morning passenger train going west on the Detroit and Milwaukee Road had reached a point three miles beyond the Junction, he saw a horse on the track ahead. He "tooted" at the animal, but the horse waited until the locomotive was at his heels, and then turned and ran. The bell rang and the whistle screamed, but the horse kept the track for a full mile, and then leaped off and let the iron monster rush past him. He was there next morning to repeat the same operation, and continued it with the greatest regularity, until Wednesday morning, when he extended the race further than usual, being unusually good spirits. Coming to a cattle guard, he hesitated an instant before making the jump, and the cow catcher caught him. He was in the air making the leap when he was struck, and thrown as high as the smoke-stack, but came down in a pond of water, and was seen to jump up and gallop off as if unhurt.

Shot Gun and Rifle.

GAME IN SEASON FOR AUGUST.

Woodcock, phibola minor. Squirrels. Pinnated grouse, capidors capila. Snipe and Bay Birds.

Pinnated grouse, or "prairie chickens," are in season in Missouri, Illinois, Indiana, Wisconsin and Ohio, August 15th; Iowa, August 20th; in Maine New Hampshire, Massachusetts, New York, and Pennsylvania, September 1st, and in Connecticut and Kentucky, October 1st. In New Jersey there is no grouse shooting until 18th.

Details of pigeon shooting and scores of rifle matches, and other interesting matters, should be mailed so as to reach this office on Tuesday morning in each week.

A quail district which we know from observation to be good, is at Barnegat, New Jersey, via Treckerton Railroad, where we spent two days last week. We could hear the birds whistling in all directions, and permission can readily be obtained from most of the farmers to shoot over their ground. Here also a few English snipe are to be found, with curlew, yellow legs, bay snipe, willets, &c., in abundance a few days hence. We saw a flock of erlew numbering a hundred or so. In its season, Baruegat Bay is one of the best ducking points known on the coast, being filled with duck, geese, and brant, and there are innumerable good ponds and thoroughfares where they can be stooled. A flock of two hundred black ducks passed over the bay on Friday last. Selection can be made of a dozen experienced gunners, who are provided with yachts, snipe-boats, and decoys. From its accessibility Barnegat Bay ought to be a preferred resort of sportsmen from New York to Philadelphia. The Bay can be reached by Southern Railroad of New Jersey, or Pennsylvania Central R.R. Trenton.

Bay birds have made their appearance at Salem, Massachusetts, scattering in and small bunches.

A few friends have had some rare sport during the past month along the base of the Short Hills, which face the eastern slope of the Blue Ridge, in Loudoun county, Va., not far from Snicker's Gap, after woodcock, comparatively a new field, and very prolific. The oldest inhabitant (colored) in that section says the swamps are very little hunted except for the coons and opossums. A Mr. Walker of Washington City, bagged thirty cock in a half day's shooting. There promises to be fine sport in quail season; in that section the whole country is alive with them.

"Bellford" writes from Shelbyville, Tennessee, Aug. 10th, that quail are very abundant in that vicinity this season, there being no rain in June and July to drown the young ones.

The Buckeye Shooting Club of Warren, Ohio, held their tournament on August 6th and 7th. In the single-bird sweet-stake of five single rises at twenty-one yards, E. C. Hinsdale, of Syracuse, took the first prize, and E. H. Hudson of Syracuse the second. The regular match, ten single birds, twenty-one yards, was won by E. H. Hudson of Syracuse, prize, \$100; second, \$75, won by M. D. Phelps of Bristol, Ohio; third, \$50, by F. Wilson of Warren, Ohio; fourth, \$25, by J. S. Kennel of Warren, Ohio, and the fifth, \$10, by W. J. Fournier of Cleveland, Ohio. Hudson having made the best average during the tournament was awarded a prize of \$25. The last day was devoted to single and double sweepstake shooting.

We have received from E. B. Barnes Esq., the Secretary, a copy of the constitution and by-laws of the Tecumseh Sporting Club of Nebraska, organized last month, and to which we have referred in a previous issue. Last week, Saturday, this club had a grand mall hunt, nine members each side, in which "our side" secured 'em by 610 points to 345, the losing party paying for supper for all. In scoring, grouse counted 5 points and hawks 10.

The following note from J. H. Batty will be read with interest by his numerous friends:

FOOT BENTON, MONTANA, July, 1874.

EDITOR FOREST AND STREAM:

I arrived at St. Paul's after the survey had left, and followed on after them, and shall overtake them in a few days. Game is very plentiful out here, and I have secured a large number of skins. Cary will have to look out when he tries to join us, as the Sioux will "take in out of the wet" any single man found on the plains.

Mr. Fox of the New York Herald is trying to get with our party, but I don't think they will take him along. He wanted me to write for the Herald, but I told him I could not.

There is a great deal more material here for articles and sketches than in Colorado. The scouts tell me I will be among the buffalo in ten days, and you may guess how anxious I am to get a shot at them. I will write you again in a few days. J. H. B.

MASSACHUSETTS BIRD LAWS.—Chief of Police E. H. Savage of Boston, has caused to be printed in poster form and freely distributed the following extract from chapter 301, statute of 1870, as amended, concerning birds. This is very opportune, and a timely warning to all who are disposed to violate the laws.

"Whoever kills or takes any wild bird, (except as herein stated,) at any season of the year, or willfully disturbs or destroys their nests and eggs, shall forfeit for each offence dollars."

The following are exceptions: Marsh, shore and beach birds, such as plover and sandpipers, may be killed after 15th of July, till April 1st; black duck, summer duck, and teal, after September 1st; other fresh water ducks, geese, all sea ducks, birds of prey, crow blackbirds, crows, herons, bitterns, Wilson's snipe, black breast, red breast and chicken plover at any time of year, and a license can be obtained to shoot wild pigeons.

"Whoever, at any season of the year, takes, kills, or destroys any game birds, by means of traps, snares, nets, or springs, or shoots or kills any water fowl, by the use of any lottery, swivel or pivot gun, shall forfeit for every such offence, twenty-five dollars. Provided, that in the proper season, one may snare partridges on his own land for personal use."

"Whoever takes, kills, sells, buys, has in possession, or offers for sale, any woodcock, from January 1st, till July 4th, any partridges, from January 1st, till September 1st, any quail, from December 15th, till October 15, shall for every such offence, be liable to the same penalties."

"Possessor, by any person, of birds mentioned as protected in this Act, shall be prima facie evidence to convict under the same, and one half of all forfeitures shall be paid to the informant or prosecutor."

CONNECTICUT.

The following amended game law of Connecticut was approved July 25th, 1874—

SECTION 1. No person shall, with intent so to do, between the first day of January and the first day of July, and between the last day of July and the first day of October in any year, kill, destroy, take or capture any of the species of game called woodcock. No person shall, between the first day of January and the first day of October in any year, kill, destroy, take or capture any of that species of game called quail. No person shall, with intent so to do, take or destroy the nests or the eggs of any of the game birds in this section mentioned. Any person offending against any of the provisions of this section shall forfeit and pay for every woodcock, partridge or quail taken, killed or destroyed contrary to the provisions of this section, the sum of twenty-five dollars to any person who shall sue therefor and prosecute his suit to effect."

SEC. 2. No person shall, except on his own land, with intent so to do, take, capture, kill or destroy, by means of traps, snares, nets, or other similar devices, any of that species of game called woodcock, partridge or quail. Every person who shall violate any of the provisions of this section, shall forfeit and pay, for every woodcock, partridge or quail taken or captured contrary to the provisions of this section, the sum of twenty-five dollars to the person who shall sue therefor, and prosecute his suit to effect."

SEC. 3. Every person who shall sell, expose for sale or purchase any of the game birds mentioned in the first section of this act, taken contrary to the provisions of this act, shall forfeit and pay for every woodcock, quail or partridge so sold, exposed for sale or purchased, the sum of ten dollars to him who shall sue therefor, and prosecute his suit to effect."

ELKHORN, Wis., August 14th, 1874.

EDITOR FOREST AND STREAM:— In your issue of 30th ult., under heading of "Game in Season for August," I read "planned grouse are in season in Wisconsin Aug. 30th, in Iowa Aug. 23d, &c." You are certainly misinformed in regard to this State, and also, I think, in regard to Iowa. For several years past the chicken season opened here on the 20th, but our Legislature last winter, amended the game law in this particular, making the close season on the 15th of August, and the first day of October in any year. I enclose herewith a copy of the act.

It is the general understanding here, and I have recently been informed by citizen sportsmen of the Hawkeye State, that the chicken season opens in Iowa on the 15th of August, the same as here under our new law. I have not a copy of the Iowa game law, but think there is no doubt as to the fact.

There will be very little grouse or quail shooting in this section, owing to the destructive rain falls of about the 1st of June. GREENHEAD. — One copy of Iowa State law now before us, says August 22d. — Ed. F. & S.

MY FIRST ELK—Alec Americus.

EDITOR FOREST AND STREAM:— The following story was related to me not long since by Mr. James Goreline, a "Green Mountain boy," who emigrated to the Badger State about twenty years ago. I relate it nearly as it fell from his lips, though the droll humor is infallible in part:

"When I was a boy of fifteen I lived with my father at the foot of the Green Mountains, in Vermont. I had to travel a distance of two miles to school, and as I was walking home one night I was startled by a huge creature which sprang across the road a short distance, and bounded high into the air as soon as disappeared. 'My father I was not long in traversing the remaining distance home, when I breathlessly told my father of the animal I had seen, which he immediately pronounced to be an elk from the description I gave. I told him the direction which it had taken, and we bridled the horses, seized our guns, and were away at a run in pursuit of the fleeing beast. My father informed me during the ride that the elk, in all probability, was making its way to a small mountain knoll as Laurel Hill, where they usually feed during the winter on laurel leaves, which remained green and nutritious when all else was blighted with frost. Our calculations were made accordingly, and we urged our beasts to the utmost to reach the spot before his lordship and conceal ourselves close to a log pile, along which he must pass to reach the feeding ground. This ledge was not more than five feet in width and fifteen rods in length, with an almost perpendicular descent on either side for perhaps twenty feet. When we had almost reached the ledge my father spoke in an undertone and said: 'James, you follow along carefully to the foot of the ledge, and I will go to the top, so as to completely cut him off should he attempt to come back after he has started up the ascent.' I answered in the affirmative, and tethered my horse quite a distance back, then crept silently to the allotted place, where I was screened by a large rock. In a few minutes I heard a cracking of twigs beneath; saw the elk approaching, all unconscious of the near proximity of his would-be slayer. The critical moment had come, and I leveled my rifle with care and fired. At the report he remained and stood as if for an instant, then fell heavily and rolled from crest to edge down to the bottom of the abyss, where I soon followed him. My body fairly trembled with excitement and my eyes dilated with proud triumph as I gazed on his beautiful form and marked the immense breadth of antlers, and my eye of joy was full when my father patted me on the head and told me I had made a shot many old hunters might be proud of."

PARIS, KY., August 14th, 1874.

EDITOR FOREST AND STREAM:— A match was arranged here 16-day between L. Trotter of Lexington, Ky., and T. C. Woodford of Bourbon county, Ky., at ten double bird and 25, a single bird and 10, to be shot here at Lexington, on the 12th and 13th of August. Another match, between Trotter and L. C. South of Frankfort, for \$100 a side, to come off at Lexington on the 15th of September. The above named three are Kentucky's best. Yours, &c., Ky.

—In our notice last week of the pigeon tournament which is to take place at Chicago to-morrow, 14th instant, our types made us say that the prizes in the double bird shoot were \$40, \$30, \$20, \$10 and \$5. It should have been printed \$400, \$300, &c.; or ten times the amount.

—The Kleiman-Johnson pigeon matches are attracting considerable interest in Chicago. The gentlemen are pitted for a series of ten matches for \$25 a side, Johnson standing at 21 yards, and Kleiman at 25 yards. Three matches have now been shot off, in which, strange to say, the contestants have tied, each having killed 67 birds out of 75. The following are the details:

Table with 4 columns: Name, Strength, Killed, Match. Rows for W. T. Johnson, J. J. Kleiman, and J. J. Kleiman again.

The birds were fast and fine flyers; Johnson's clean 25 was brilliant, while Kleiman's 23 twice was a great success.

CAPTAIN BOGARDUS' CHALLENGE.

PHILADELPHIA, August 10, 1874.

EDITOR FOREST AND STREAM:— In the last number of your paper I find that Captain Bogardus offers to bet \$100 against \$500 that he can kill one hundred birds straight from a spring trap; three minutes be allowed to collect the birds.

Now let me ask the skillful shootist through your columns if any party accepting this proposition can leave the constructing of the trap to be used on the occasion, which will be an ordinary old fashioned spring trap. For, if so, the bet will be at once taken.

PORTLAND, August 4th, 1874.

EDITOR FOREST AND STREAM:— The anniversary shoot of the Maine Shooting Club of Portland, came off at Long Island, in Casco Bay, the 30th ult. Enclosed please find score. The day was very fine, and we had a grand time. The club chartered a steamer to take them to the island. We started about 7 o'clock, commenced shooting at 10:30 o'clock. At 1:30 P. M. we had dinner. In the afternoon we shot at gyros, did not keep score. At 3:30 P. M. the band commenced to play and we had dancing until 6:30 P. M., and then we started for home. When we went up the harbor we fired two or three salutes, and were answered by the yacht squadron that was at anchor in the harbor. Everything in the harbor sailed all. I send this summary of proceedings at request of the club. Yours truly, A. C. CRAS, Secretary.

There were twenty-four participants in the shooting matches, and the average of the scores was very good. — Ed.

ENGLISH PIGEON SHOOTING.

Scores made by the Hurlingham Club in England on July 26th. Optional 2d or 25 Sweepstakes, with cap value £20 added by the club, 7 birds each, 27 yards rise, 14, 48 lbs.

Table with 3 columns: Name, Birds shot at, Killed. Rows for Mr. W. S. Salting, Mr. E. Larking, Mr. J. Thynne, Mr. H. Lovett, and Mr. W. S. Salting.

The following are the scores made at the Optional Handicap Sweepstakes at Hurlingham, Eng., shot June 27th, 1874. An Optional Handicap Sweepstakes, at 6 birds each, for a double-barreled breach loader; usual conditions, 43 nbs.

Table with 3 columns: Name, Birds shot at, Killed. Rows for Mr. M. Novin, Mr. H. Lovett, and Mr. W. S. Salting.

A Twenty-nine Yards Optional 2d or 210 Sweepstakes, at 8 birds each, for a silver cup, those missing three to retire; usual conditions, 34 nbs.

Table with 3 columns: Name, Birds shot at, Killed. Rows for Mr. H. Lovett, Mr. W. S. Salting, Mr. C. H. Akroyd, Mr. Berkeley Lucy, M. Brinquent, Mr. W. S. Salting, and Mr. Thomas Lunt.

A Twenty-nine Yards Optional 2d and 210 cup, by killing eight in succession, with a central fire breach loader, by E. M. Reilly & Co. The International Cup, value \$40, at 6 birds each, all at 27 yards, added to a Sweepstakes of five nbs. each; usual conditions, 55 nbs.

Table with 3 columns: Name, Birds shot at, Killed. Rows for Capt. Francis Gist, Mons. Brinquent, Mr. Berkeley Lucy, Mr. Charlton Adams, Mr. Rock, and Mr. Morton Frewen.

—The new system of targets at Wimbledon seems to be quite successful. "After four days of severe trial," says the Volunteer Service Gazette, "so far as can be judged, the new targets and the new marking work very satisfactorily, and are very popular."

—A competition of a novel character took place in England lately, running and rifle shooting combined. Volunteers fully equipped in regimentals, with Snider rifle and sixty rounds of ball cartridge, had to run 800 yards, returning to a 400 yard firing, and in any position to fire three shots at a second-class target, the limit of the time in running and shooting to be 3 min. 30 sec. First prize was won by Lieutenant Halland with a score of seven, one centre and two outers. Time—3:23.

THE HENRY RIFLE.—We are in receipt of the following letter from Mr. A. Henry, the well known manufacturer of rifles in Scotland:—

EDINBURGH, Scotland, July 6th, 1874.

EDITOR FOREST AND STREAM:— The FOREST AND STREAM of 18th June has been forwarded to me by a friend in America, who at the same time calls my attention to the targets made by the new Springfield arm, diagram of which you publish. As the article in your military arm is, I understand, receiving a good deal of attention from the American Government, at present, and many of your readers are interested in the subject, I presume you will be glad to receive and publish any authentic information bearing on the question. I therefore beg to enclose diagram of a target made with a "Henry" barrel at Enfield, in 1869, which I think shows the least mean deviation recorded, and only about one-third of that made with the Springfield arm. The diagram you are at liberty to publish, with any remarks you may choose to make regarding it. This letter, however, is not intended for publication. I am, Sir, your obedient servant, ALEX. HENRY.

Enclosed in Mr. Henry's letter was a diagram of ten shots fired. We copy from the card diagram of ten shots fired from a "Henry barrel" No. 98, at the Royal Small Arms Factory, Enfield, 5th October 1869. "Circle four inches diameter, (the drawing was one eighth actual size). Range 500 yards; Henry barrel. Diameter of bore forty-five. Length of barrel 33 inches. Seven cuts and one turn in twenty-two inches. Ammunition, Boxer Henry Powder, eighty-five grains; Curtis & Harvey No. 6; Ball, Henry; weight 480 grains; fired from machine rest; elevation, 1° 45' 15"; wind calm; thermometer 66°; Barometer 30.21. Mean absolute deviation 0.17 in., or 2 inches."

A deviation of two inches is indeed very remarkable; of course we are to understand that the shots made were consecutive ones. The Springfield gun it must be remembered was fired from the shoulder with a rest from the muzzle of the barrel, while the Henry rifle was fired from a mechanical rest, or as we designate it here, from a fixed rest. The Henry gun may have been laid with the telescopic sights. The Springfield was fired with the common open military sight, and the targets printed by us were made in the regular course of experimental firing. Of course we by no means desire to disparage the fine shooting of the Henry rifle, but beg to state that the Springfield arm is a military arm pure et simple, and was tried in a military manner. In our ordinance memoranda XV. Page 372, we find the following:—

"Of the foreign arms fired for comparison, the Martin (English) was the only one whose sustained practice at 500 yards gave any pretensions to further trials, at longer ranges. Its accuracy at the various ranges is as follows:— For 500 yards mean deviation 9' 9" 800 yards mean deviation 10' 1" two misses to a target; 1,000 yards mean deviation 23' 7" five misses to a target." Mean deviation of the Springfield (see FOREST AND STREAM of June 18th) 32.6 barrel, 6.16, at 500 yards, 22 barrel 6.08.

PAPER SHELLS VS. METALLIC SHELLS.

A discussion has been going on of late as to the respective merits of paper and metal shells in breach loading shot guns. In behalf of the latter, I have seen it stated that they shoot stronger than the former, besides being equally safe.

Now I am neither a manufacturer of paper shells, nor the son of a manufacturer. Simply a sportsman, interested in securing the best ammunition; that which will give the best results with the greatest safety, I wish to state what I know by experience, and what I have arrived at by observation.

First, as regards the superior shooting of metallic shells: I have made numerous targets, using paper and metallic shells alternately, with the same charges, and found little or no difference in either pattern or penetration; what difference there was was invariably in favor of the paper shell. Mr. Joseph Morris of Springfield, who has performed about as many of his accurate experiments as any man in the country, probably will bear me out in this assertion. Second, for safety. If a paper shell explodes, it does so with the harmlessness of a fire-cracker. I have seen the experiment tried of exploding a paper shell laid upon a table, a bottle of wine depending on the result. The shot barely rolled out of the shell—not off the table. Mr. Shepleaf F. Knapp, and other members of the South Side Club, will bear me out in this.

Explosive a brass shell, on the contrary, and the shot will go through any body of reasonable thickness that happens to be before it, or the shell itself will go through any other body that happens to be behind it. In carrying loaded brass shells you are, to all intents and purposes, carrying an arsenal of loaded pistol barrels, capped, and with no protection over the tubes to guard against an accident of the kind.

Going a field, I, for my part, wish to fill my pockets when my shells are emptied, with game, and not with sounding brass and tinkling cymbals. As for economy, that argument is very poor indeed, where, in addition to the comparative inexpensiveness of the best paper shells and their convenience, we array the axiom that nothing is economical which involves the possibility of loss of life or limb in the use.

Mr. Milton H. Sanford was using a brass shell some years since at the Jerome Club grounds, but the shell and several of his fingers happened to go off at the same time; he has said none since. I suppose the manufacturers of brass shells would claim that he is "prejudiced against them."

I have before me a letter from Mr. M. J. Farr, Zessler in guns, &c., at Cleveland, Ohio. His clerk writes it for him, however, and apologizes for delay in writing, as his principal had the misfortune to lose his right eye, a few days previously, through the instrumentality of a brass shell. Now we should have a gun dealer in the market who may be accused of overlooking the safety of his customers, but he is not to be blamed. Let me sum it up for you in one word, almost: With a brass shell you have a muzzle loading brass barrel, to be used inside of a breach loading barrel. You are quite as much trouble in keeping this brass muzzle loaded clean as you had with the regulation muzzle loader, that is now so rapidly passing into disrepute. I do not know one good point that can be claimed for the brass shell, nor do I know a single good sportsman who either uses or advocates them. This may seem wild, but I write it meaningly, and in conclusion let me remind those who claim precedence for brass, that invention of breach loading guns began with metallic shells, and that these guns only came into successful use with the discovery that paper was possible for cartridge cases, as at present. I am, yours respectfully,

ONE WHO SHOOTS WITH BOTH EYES OPEN.

[We pay particular attention to our clever correspondent "who shoots with both eyes open." What he states has its weight. The writer of the communication, in addition to being a sportsman, as a literateur has distinguished merit. Perhaps the same objections found with metallic shells loaded with shot, would hold with metallic rifle shells. This same subject was dissected a found, some time ago, in the Field. We believe, however, metallic shells can be so constructed as to render premature discharges almost impossible.—Ed.]

SHELLS.

SHREWSBURY, August 4th, 1874.

EDITOR FOREST AND STREAM:

In answer to your correspondent Herbert, in regard to the difference in the sizes of the bore of metallic and paper shells, I will state my judgment was formed (and I see no reason to alter it) by careful measurement of the Starviant and Berdan shells, and Eley's green and blue shells, and judged the measurements by the table of the sizes of the bores of guns, as given in Greener's book on Modern Breech Loaders.

I have used the paper shells made by the E. M. Co. and find them good, but do not like the thin single anvil used in them. I believe it is not steady under the blow from a vertical striker, and think the same reason will apply to the complaint of mis-fire in the Starviant shell.

As to carrying loaded metal shells, surely no one can doubt the danger from an accidental discharge of one, as compared with paper ones if the cause is the thought not likely to occur does not lessen the danger, hence the reason of my protest: "Does it pay to take such chances?" I can join hands with Herbert in the desire of having sporting matters discussed. Sportemen, as a class, I am sorry to say, are not well posted in regard to sporting matters, and to prove I am not claim to be an exception, I will ask friend Herbert to give the particulars of the system of choke boring, as mentioned by him as being applied to the guns lately tested at Chicago. CUNCK CORP.

CREEDMOOR.—On Wednesday last, Aug. 5th, the sixth competition for selection of the riflemen to compete with the Irish team took place. The following will show the scoring made, including the shooting of Wednesday:—

Table with 2 columns: Name and Score. Lists names like Henry Fulton, F. S. Conlin, etc., with their scores.

The following are the scores made on Wednesday, fifteen shots at 800, fifteen at 900, and twenty at 1,000:—

Table with 5 columns: Name, 800 Yds., 900 Yds., 1000 Yds., Total. Lists names and their scores at different distances.

On Thursday, the 1st Battalion, Col. Webster, were at Creedmoor. The following are the eight best scores:

Table with 5 columns: Name, 200 Yards, 500 Yards, 800 Yards, 1000 Yards, Total. Lists names and their scores.

—There were two matches at Creedmoor, Long Island, on Saturday August 8th, the contest for the "long range badge," open only to members of the Amateur Rifle Club, and the Remington diamond badge, open to all members of the National Rifle Association. There were only eight entries for the first contest, but the shooting was the best that has ever occurred on the range. Some of the members of the Amateur Club state that the average of the six best scores made equals 80.5-6 per cent., or, in other words that the shooting shows a higher excellence of merit than that of the champion team at Wimbledon this year. Mr. L. L. Hepburn won the badge presented by the Amateur Rifle Club. The following is the score of the first six entries:—

Table with 5 columns: Name, 800 Yds., 900 Yds., 1000 Yds., Total. Lists names and their scores.

The fourth contest for the Remington diamond badge opened at three o'clock. There were fourteen entries, distance 800, 900, and 1,000 yards, two sighting and seven scoring shots, any position within the rules. The badge was won by Mr. A. V. Canfield, Jr., of the Twenty-second Regiment, by a score of seventy-three out of a possible eighty points. As will be seen by the scores, Mr. J. T. B. Collins also made a score of seventy-three; but, under the rules of the association, Mr. Canfield was declared the victor, as his score at the previous range exceeded that of Mr. Collins by two points. The badge was previously in possession of Capt. Bodine, and was won by a score of sixty-nine points. Mr. Collins, the second in the list, becomes the possessor of a "Whitworth" rifle. The following is the score of the first six entries:—

Table with 5 columns: Name, 500 Yds., 800 Yds., 1000 Yds., Total. Lists names and their scores.

—An Irish-American Rifle Club was organized last week for the purpose of promoting rifle practice. The rules and regulations adopted are similar to those of the National Rifle Association. The following officers were elected for the ensuing years:—Gen. F. F. Millen, President; Bethel Burton, the inventor of the Ward Burton rifle, Vice President; Adjt. W. H. Murphy, Secretary and Treasurer. The Executive Committee, in addition to the foregoing members, includes the following:—J. J. O'Kelly, Major P. M. Haverly, and Dr. McGuire.

Capt. Karl Klein with the separate Troop Cavalry and Lieut. Barlow with the Washington Grey Troop were at Creedmoor on Thursday, July 30th, and tried their skill at the range. This shooting is worthy of particular comment, as regulation military carbines were used, an arm, by the way, which when handled is capable of very excellent shooting, as may be seen by the scores. Ranges, of course,

were shortened to 100 and 800 yards. We are pleased to state that the order of the members of the two troops was excellent. The team of the troops made, with five shots at each range, 330, which is excellent. We append the scores of the first fifteen:—

Table with 5 columns: Name, 100 Yds., 800 Yds., Total, Points. Lists names like Sergeant Nagel, Bugler Specht, etc., with their scores.

The team of the Washington Greys did not make as high a score, but it must be remembered that many of the men are using their arms at the range for the first time. We append the scores of the best twelve:—

Table with 5 columns: Name, 100 Yards, 800 Yards, Total. Lists names like Corporal Trimmer, Private King, etc., with their scores.

OFFICE NATIONAL RIFLE ASSOCIATION, 98 Nassau street, New York.

EDITOR FOREST AND STREAM:

The twenty-ninth regular meeting of the Board of Directors National Rifle Association was held on Tuesday, August 4th, at the office of the association, at 2 o'clock P. M., General Alexander Shuler in the chair.

The Prize Committee reported and presented a badge for employees of the association.

On motion the matter was referred back to Prize Committee with power.

General Shuler offered the following resolution, which was adopted.

Resolved, That the Committee on Prizes, or a majority thereof, take immediate action in relation to badges for directors and life members.

On motion of the Secretary, the matter of straightening the boundary line of the Range at Creedmoor, on the side adjoining the Kissam estate, was referred to the Range Committee, with power.

Offered by the Secretary and adopted: Resolved, That a ticket office and shelter at the entrance to the Range be erected by the Range Committee at an expense not exceeding \$100.

Offered by the Secretary and adopted: Resolved, That the Range Committee be instructed to erect a shed and refreshment stand in rear of the 1,000 yards firing points, similar in construction to those already erected upon the Range.

On application from G. B. Shepherd, photographer, for permission to photograph apparatus upon the Range and photograph groups, scenes, &c., was referred to Range Committee.

H. A. GILDERSLEEVE, Secretary.

A. H. WESTON, Ass't. Sec.

Rational Bagtimes.

Secretaries and friends of Athletic, Base-Ball, Cricket and other outdoor Clubs will kindly mark their contributions not later than Monday in each week.

RULES FOR ARCHERY.

NUMBER THREE.

TARGETS.

TARGETS are generally made of straw rope, upon it is sewn the facing, a piece of canvas, having four bands next to that is of red or scarlet; then blue; black; then white; outside this last is the petticoat, of green, merely to make the edge of this ring distinct. The diameter is four feet, consequently each ring is four inches and eight-tenths in width.

The targets are usually, for gentlemen, placed at one hundred, eighty, and sixty yards distance from each other, and for ladies, at sixty and fifty yards. It is recommended that beginners should commence with the shortest distance, and increase it in proportion to their improvement.

Targets of different sizes may be bought ready-made, with iron stands for supporting them. The legs of these are bevelled off to a narrow edge, so as to present as small a surface as possible to the arrow; this gradually reduces the chances of their being struck.

Whatever the distance may be that you intend to shoot, you should always have two targets, one at each end, otherwise you will be tempted to shoot more than three arrows, which are quite enough at one time, before you go for them, or send a person to fetch them; whereas by having two targets, in addition to the exercise of walking from one target to the other, you give a relaxation to those muscles you have just exercised, by calling a different set into action. The centre of the gold should be four feet from the ground. The vic of the different circles is generally allowed to be, for the gold, 9; red, 7; blue, 5; black, 3; and white, 1.

Ladies' targets differ in no other respect than in being much smaller. The only objection to their shooting at targets four feet in diameter is, that at fifty yards, the distance generally shot by ladies, the targets would be soon worn out by constant piercing. Where this objection does not exist, we would recommend the large ones, as it is encouraging to beginners to get arrows into the target.

Where circumstances will admit of it, it is advisable to erect butts for the purpose of practice. These should be made of layers of turf. They may be made of any height within the archer's reach, and placed opposite each other

at any distance at which it is desirable to practice. A level meadow should be chosen, and it is better that the butts should face more to the north and south, than to the east and west, as the sun in the summer evenings will be shining low in the west, and thus in the eyes of the archer, when standing at the east butt. The shape of them is immaterial, the object being to receive such arrows as would after missing the target, light on the ground. The targets are suspended from a peg placed in the upper part of the front of the butt.

After practising at butts, the archer will find considerable difference in the appearance of targets when placed on stands; but this may easily be surmounted by a few hours' practice at them, which we would recommend particularly previous to any great occasion or exhibition. Ladies especially will be induced to shoot more frequently at butts than at common target stands, as the necessity of stooping for the arrows is in a great measure removed; independent of which there is a very considerable saving of time as well as expenditure for arrows, the expense of erecting butts not being equal to the prime cost of half a dozen arrows, and in the country where the use of butts would most probably be adopted, it is not always possible to procure arrows. As it is a great deal to be gained, we would recommend that targets or butts should be placed with the ground beyond sloping towards them; as in the summer, when the surface is dry and hard, arrows are very liable to glance along the ground for a considerable distance without sticking in where they alight.

THE GUARD.

In old times used to be formed of a piece of stout leather, which was buckled round the left arm, to prevent the string of the bow from hitting it. Now, the best sort of guard is made of patent leather, which draws on over the hand and requires neither buckles nor straps to keep it in place. Ladies' guards are still made of leather lined with silk and padded, and are buckled round the bow arm.

THE GLOVE.

Formerly this resembled a glove more than it does at present; it consists now of three little leather tubes, each sewn to the three ends of a piece of leather cut into three equal parts. As it is a great deal to be gained, we would recommend to save the fingers from being cut by the string. We are of opinion that the use of two fingers in drawing is preferable to that of three; two must divide the string more equally, and the loose is generally better. A person who draws with two fingers only, is seldom guilty of holding the bow when drawn to its greatest extent. The advocates for three fingers urge in his favor, that the use of the third finger gives a greater degree of strength. We do not deny this, but still recommend the first two fingers only to be used, and these kept in as straight a line as possible with the elbow.

Some beginners draw the string with the first two joints of the fingers bent, in order to keep the string from slipping off; when this is the case the fingers alone sustain all the strength, whereas if they are kept in nearly a straight line with the elbow, with the first joint as little bent as possible, the muscles of the body and arm may be advantageously exerted.

Beginners, as they commence drawing, will frequently find that the arrows will leave the bow, and after describing a segment of a circle, of which the string seems to be the centre, will fall on the ground to the left of the bow arm. This is caused by the fingers being put too far over the string, which makes a great curve, whereas, if the fingers are bent in the proper position for drawing the string, it has a tendency to twist towards the bow, and the neck of the arrow fitting the string participates in a like movement.

THE BELT.

Some means of carrying the arrows is necessary, and for this purpose a belt which buckles round the waist has been found convenient; from this is suspended a pouch, or tub, covered with leather, into which the points of the arrows are put; the part on which the feathers are, projecting outward, is less liable to injury.

THE TASSEL.

This is suspended from the belt, and its use is to remove any dirt from the point of the arrow. It is generally made of worsted.

THE GREASE BOX.

This is a little box suspended from the belt and contains a composition of suet, or any grease; the object of it is, to make the string slip more easily from the fingers, for which purpose a little may occasionally be put on the finger stall. It is, however, rarely used, and may be discarded. In an case of cover, generally painted green, is recommended for keeping such arrows in as are not required for immediate use; being very susceptible of injury, it is highly desirable to protect them in every possible way.

—Cricket is flourishing in England this year as it never has before. The London Telegraph, in a recent editorial on the game, says:—

"Cricket, whether deservedly or not, is certainly of all English games the most popular and universal; nor is its acknowledged supremacy owing to its being the only one of our great national games; and the result is that, whereas in the good old times everybody played cricket more or less 'indifferently well,' the game now needs not only a quick eye and a steady hand, but also considerable courage and nerve and very long and continuous practice. Yet, notwithstanding this process of 'specialization,' its old supremacy remains indisputable, and so far from showing any symptom of dying out, the game has, on the contrary,

definitely established itself—not, perhaps, in America, where "base ball" has nearly supplanted it, but in any rate in all the English colonies and even under the tropical skies of India, Ceylon and China.

—In the cricket match played at Lord's August 3 and 4, between the eleven of the Marylebone Club and twenty-two base ball players, resulted in the success of the Americans. When the first day's play in this match had terminated the English eleven had scored 88 runs, with the loss of twelve only, and no doubt they estimated upon getting nearly as many more for the loss of the remaining five wickets, which would have given them about 160 for their first inning's score; and being well aware that the majority of their opponents were novices at cricket they felt sure of disposing of them for 100 at most, if not half that number. So when on Tuesday the weather opened with a threatened rain storm, which made it probable that the game would not be played out, and that a draw would necessarily be the result of the contest, the eleven proposed to Harry Wright to decide the match by the result of the first innings, thereby insuring, as they thought, a victory for themselves, instead of an unsatisfactory draw. This, by the way, made all bets on the match depend upon the result of the first innings play, and, therefore, those who bet on the English side winning, lost. This arrangement being agreed to, the match went in to win, and, by improved play, they disposed of the remaining five wickets of the English eleven for 17 runs only, thereby limiting the total score to 105. The twenty-two then went to the bat, and when their tenth wicket fell they had scored 24, Spaulding playing in the style for 23, though it was his first season at cricket. They had four wickets to fall when their score reached one hundred and seven, the twenty-two winning the match by two runs, with four wickets to spare, greatly to the surprise of the English players, who had underrated the base ball players' ability at the bat.

—In August 7 and 8 the twenty-two played against the Princes eleven at Princes grounds, and in the first innings they not only disposed of the eleven for 21 runs only, but they ran up a score of 110, and putting the eleven out for 89 in their second innings, the Americans came in victors in one inning with 40 runs to spare. On August 8th they played the Richmond club eleven at the Old Deer Park Grounds at Richmond, and they disposed of the eleven for 103 runs, and when the first day's play ended they had scored 45, with the loss of five wickets.

—As a matter of future reference we give below a summary of the international cricket matches played in this country during 1879, 1880 and 1873, in which United States twenty-two of resident cricketers took part against English representatives. The statistics below are taken from Mr. Chadwick's American Cricket Manual, recently published:

In the match played at Hoboken, October 8, 4 and 5, 1859, between the English eleven and twenty-two of the United States, the eleven scored 156 in one inning to 38 and 54 by the United States twenty-two in two innings, the latter team including the best resident cricketers of New York.

In the match in Philadelphia by the same eleven against twenty-two of the United States, October 10 and 12, 1859, the eleven scored 126 in their first inning, against 94 by the twenty-two, the latter scoring 60 in their second, the eleven getting the required 29 to win, with the loss of three wickets.

In the match played at Rochester, October 21, 24 and 25, 1859, the eleven eleven scored 171 in one inning against 60 and 62 by the twenty-two. Harry Wright's 15 was the best score on the part of the twenty-two, and he took the most wickets. The English eleven included Hayward, Carpenter, Diver, Cuffyn, Locker, Grundy, Stephenson, John Lillywhite, Wiston, Jackson and Parr.

In the match played at Hudson City on September 16, 17 and 18, 1863, the English eleven scored 177 in one inning, against 61 and 88 by the United States twenty-two.

On September 28, 1868, the same eleven played a United States twenty-two in Boston, in which the eleven scored 109 to 39 in the first inning and 71 to 37 in the second, George Wright's 12 being the best score on the part of the twenty-two.

In the match played immediately afterwards, in Philadelphia, by the same eleven, the English scored 192 to the twenty-two's 88 in the first inning, and 36 with three wickets to fall—to 35 in the second inning, the twenty-two being all Philadelphia players.

In the match played at Germantown October 8 and 10, 1862, between the same eleven and twenty-two of New York and Philadelphia, the eleven scored 117 to 47 in the first inning, and 64 to 63 in the second, the eleven having 181 to 100.

On October 13 the same eleven defeated twenty-two of New York, Philadelphia and Boston by a score of 143 to 70 by the twenty-two, rain stopping the match. The eleven included Jupp, Charlwood, Rowbottom, Lillywhite, Freeman, Wilsber, Smith, Shaw, Pooley, Tarrant and Griffin.

In 1872 the "gentlemen's twelve" went to the United States, the eleven including W. G. Grace, Ottaway, Appleby, Hornaby, Hindaw, Lord Harris, Francis, F. Lubbock, A. Lubbock, Rose, Pickering and Fitzgerald. On September 22 and 24 this team played against a United States twenty-two and won by a score of 249 in one inning to 60 and 44 in two by the twenty-two, George Wright's 14 being the best score of the twenty-two, he also taking the most wickets.

On September 21, 23 and 24 the twelve played against a twenty-two of Philadelphia, scoring 105 to 68 in the first inning, and 84 with three wickets to fall—against 74 in the second.

On September 26, 1872, the last international match in this country took place in Boston, when the same twelve scored 51 in the first inning against 51 by the twenty-two. In Boston, the twenty-two scoring 43 in their second inning, the twelve scoring 22, with five wickets down, including Grace, bowled by Eastwood for 5 only—the game being "drawn," as there was not time to complete it. In this match four of the Red Stockings men played—George Wright taking the most wickets. This was the smallest score made by an English team in America.

—The Mutual base ball players had a game of cricket with the Chicago Cricket Club, and the ball tossers scored 41 and 45 to 44 and 43, the cricketers winning by 87 to 86, with four wickets to fall. Halford led the score of the Mutuals with 20, Malone's 13 being the best on the other side.

—The Toronto Cricket Club of Toronto, and the Peninsulars of Detroit, played a match game last week. During the game several of the players were hurt. In the first innings of the Peninsulars they made a total of 118, in the second innings 24, making the aggregate 142 runs. The Toronto's scored 56 in the first and 97 in the second innings, showing the Toronto's to be the winners by 12 runs.

The international cricket tournament will commence at Halifax, Nova Scotia, on the 18th instant. There will be four teams—Canada, England, America and Halifax. The English team is composed of officers of the army. The American team comes from Philadelphia.

—The Philadelphia twelve left town August 10th for Halifax, where they play next Monday.

—Two important results are likely to follow the tour of the American base ball players to England, results, too, beneficial alike to base ball and cricket; the one being a full recognition of the claim of base ball to the title of the American "national game," and the other a decided increase in the popularity of cricket in America, for we all of us take a fancy very soon to that in which we stand a chance of excelling, and the promise is that our returning base ball heroes will be able to play any cricket eleven our English resident cricketers can place in the field against them, and that, too, eleven vs. eleven, equal sides, base ball players vs. cricketers. Though the exhibition games of base ball played in England have thus far evidently been below the standard of the leading matches played here between professional experts, the English audiences have been greatly delighted with what they have seen of our game. The "splendid fielding of the Americans" elicited the highest praise from the English press and loud plaudits from the spectators. Thus far the record of the base ball games played in England up to the time of our going to press is as follows:—

July 30—Athletic vs. Boston, at Liverpool.....	14 to 11
July 31—Boston vs. Athletic, at Liverpool.....	23 to 18
Aug. 1—Athletic vs. Boston, at Liverpool.....	19 to 12
Aug. 2—Boston vs. Athletic, at Liverpool.....	34 to 7
Aug. 3—Boston vs. Athletic, at Liverpool.....	14 to 11
Aug. 4—Athletic vs. Boston, at Richmond.....	16 to 3
Aug. 5—Athletic vs. Boston, at Richmond.....	11 to 3
Aug. 10—Boston vs. Athletic, at Crystal Palace.....	17 to 8

These exhibits, interesting as they have proved to be, have, however, been thrown by the shadow of the success of the twenty-two in their matches at cricket, it being entirely unexpected both by the Americans, as well as English. The result, of course, has been to elicit a high respect for a game that admits of such skillful fielding. The London *Field* of July 25, in a lengthy and ably written article explanatory of "base ball," says:—"Base ball is a scientific game, and, interesting as they are, we are in the habit of judging hastily from the outward appearance of a man, possibly imagine it is, in fact, the cricket of the American continent." "In the cricket field," says the editor in question, "there is at times a wearisome monotony that is utterly unknown in base ball." "The theory is not unlike that of rowders, in that bases have to be run, but the details are in every way dissimilar." "To see the best goods led even, is a sight that ought to do a cricketer's heart good, the agility, dash, and the accuracy of turning and catching possessed by the Americans being wonderful."

—The New York Athletic Club will hold their annual fall games on the new club grounds at Mott Haven on September 26. The competitions are open to all amateurs in the United States and Dominion of Canada. The entries will close on September 19, and must be accompanied by a guarantee from some club or person known to W. E. Sinclair, Secretary of N. Y. A. C.

—The Putnam's of Troy, have reorganized, and would be pleased to play any amateur or professional clubs that may choose to visit them. The Nationals, of Washington, play there early in September at Troy, as do also the Philadelphia's, the B'nsh, of the Harvard club, is the captain of the Putnam's.

—On August 1st the new Cincinnati "Red Stockings" defeated the Milford nine at Milford by 12 to 4.

—On August 3d, the Loes of New Orleans defeated the Lone Stars by a score of 15 to 6, rather a different score from that of their last fine display.

In the match at Easton on the 7th of August between the Easton nine and the Nassau of Brooklyn, rain stopped the game at the close of the third innings, Eastons 6, Nassaus 8.

—On August 7th the Dauntless club, of Watertown, N. Y., defeated the Ogdensburgh nine by 19 to 0.

—On August 7th the Harvards defeated the Grafton club by 12 to 7.

—The Athletics of New York defeated the Stars of Newark by 20 to 14 on August 10th, at Brooklyn.

—The Nameless and Chelsea clubs played their first match on the Union grounds, Brooklyn, August 10th. Score, 11 to 8 in favor of Chelsea.

—The Hartfords whipped the Philadelphia's by 5 to 3 August 10th at Hartford. The "Putnam's" made 6 to 2 in the first innings, closely contested afterwards. Stearns pitched for Hartford.

—The Brooklyn amateur ten for the grand match on the Union grounds, August 17th, New York vs. Brooklyn, was selected on Monday night. It includes Grierson, Britt, Dodge, West, Dorschner, Kohler, Clanc, Rule, Dunn and Binck. The New York nine will be chosen from the Fly Aways, Arlington, Keystone, Waverly, and Silver Star nines.

—The best played professional match of August thus far was the Mutual and Chicago game, of August 8th, won by the Mutuals by 3 to 2.

—A very pretty played game took place at New Haven August 8, in which the Madison nine of New Haven defeated the Unions of Bridgeport by 7 to 0 only.

—The best game out West this season by local club nines was that played August 4th at Louisville between the Eagle nine and the Westerns, of Keokuk, score 5 to 8 only, in favor of Eagles.

—The best game at Prospect Park this season was that played August 4th—Nassaus 4, Keystone 1.

—The Baltimore base ball club defeated the Baltimore cricket club at Newburgh Park, August 6th, by a score of 94 to 70, in a full four innings game.

—The postponed game between the Wynkoop & Hallenbeck nine and the Harpers' Brothers nine will come off next Saturday afternoon at Prospect Park.

—The sports at St. Anne's, near Montreal, last week were in every respect remarkably successful. J. Anderson took the first prize in the running long jump, covering eighteen feet. McGillivray won the running high jump, clearing five feet three inches. In the boys' race—quarter of a mile, for lads under fourteen years, John McRobie won a ton before twelve years. For young men, for youngsters under ten years, McIntyre won, in the quarter of a mile hurdle race W. L. Allen came in first. There were several other races and aquatic sports. A novel feature in the day's programme was a canoe race, paddled by dorkies. The captain of the winning birch-bark is known as "Black Francis." The day's pleasure concluded with a dinner given by the President, B. Devlin Esq.

—President Grant's two sons, Ulysses Grant jr., and Jesse Grant, Lieutenant Harry Otis, and a son of Thomas Murphy, ex-collector of the port of New York, arrived at Pitting, Penn., August 9. They had been on a pedestrian pleasure tour through the Allegheny Mountains, and had walked all the way from Huntingdon, Penn., a distance of two hundred miles. This is another good example in the proper direction.

—The Nationals of Washington intend visiting New York the first week in September, playing the Baltimore and Philadelphia on the way. They will play the Mutuals and Atlantics in New York on the Union Grounds on successive days.

New Publications.

BOOKS RECEIVED.

OSGOOD'S MIDDLE STATES AND NEW ENGLAND. Two volumes. A handbook for travellers, with maps, plans, &c. Boston: Jas. H. Osgood & Co. 1874.

THE TRAINING HORSE OF AMERICA. By Hiram W. Woodruff. Philadelphia: Porter and Coates.

This new candidate for the favor of the general, and the lover of good horses and well trained animals in particular, comes to us at a fitting time, and in a garb every way adapted to the work. Who is there, all over America, that loves a good, spirited, well trained horse, and which exhibits the most interesting and useful qualities, and is generally or by reputation, H. W. Woodruff? Emphatically he was entitled to the well merited title he so long bore unquestioned, of the "great horse trainer and crack groom of America." In this book will be found the full particulars, the whole art of how to get the most out of a horse. We have often seen Hiram put a good steed over the course, and the mere recollection of the same stirs our blood anew. This is a well written, and very comprehensive treatise on horse and horse-manship in all its departments, and when we recommend it as a book which every man who owns a good horse should also own, we do not hesitate to give the endorsement of the FOREST AND STREAM to a book worth a place among their choicest sporting works.

HOW TO BECOME AN EXPERT SHOT. With Regulations of the National Rifle Association, with Blanks for Recording Matches. New York: Mercantile Publishing Co., No. 1 Park Place. 1874.

We greet with pleasure all accessions to our rifle literature, and the neat, handy volume under review we think will be found of the greatest use to our citizens, military or otherwise, who practice at rifle ranges. While giving most excellent advice to the marksman, may be found in connection with the allowances necessary for shooting, either personally or left, and all the minutiae necessary to make good shooting. A very necessary addition to the book is a complete copy of the regulations in force at Creedmoor, and there is also to be found blank pages with the targets to be used on the ground for recording the scoring made.

THE SPORTSMAN'S CLUB AFLOAT. By Harry Castlemon. Philadelphia: Porter & Coates.

This is one of the most readable books of the day for a seaside companion or a friend to take to the shady wood, the car, or at home; you will be pleased with this best of good conversationists. First he speaks freshly and quaintly. Well, we shall not tell you of what. Get the book and read it and you will then say you have had your money's worth in just the kind of reading for shore or woodland homes.

Popular Science Monthly for August. New York: D. Appleton & Co.

Another of these aids to scientific investigation and philosophy, the arts and hidden mysteries of our inner life, is received, and in it will be found much food for profound thought, and much instruction upon subjects not usually found, even in the highest class periodicals. To put in a literary point of view, little well known and established public favorite would be praise unneeded. We would therefore only call the attention of persons who may not have read or seen this monthly work that they should for once purchase the last number and read very carefully article No. 1, upon the discovery of oxygen gas, and thank old Dr. Priestly for his world wide benefit. No. 11, "The new Physics of Ice," is an illustrated paper, and gives a full and interesting history of this now great commercial staple of industry. Its history, in 1838, is like an old romance, and not like a dry commercial fact. The whole phenomena of freezing and what takes place, is well worth the price of this number. We would be gratified to notice all the leading articles and the miscellany also, but unwillingly close our notice of this number with an earnest recommendation of its high position and value to the student and general reader.

CORRECTION.—In a recent notice of "Under the Trees," a book published by Harper & Bros., we spoke of its author as the same person who wrote "Go to Fishing." This is an error, the author being S. I. Prime, instead of W. C. Prime who is the author of the latter book.

TO RESTORE THE DROWNING.—It may be of service to some of our readers to bear in mind the following standing directions of the Massachusetts Humane Society for the resuscitation of persons apparently drowned:—Convey the body to the nearest house with head raised. Strip and rub dry. Wrap in blankets. Inflate the lungs by blowing the nostrils with thumb and finger, and blowing into the mouth forcibly, and then pressing with hand on the chest. Again blow in the mouth and press on the chest, and so on, for ten minutes, or until breathing begins. Keep the body warm, extremities also. Continue rubbing—do not give up so long as there is any possible chance of success.

—The meteorological record for the month of July, kept by George F. Alden, Esq., Observer at New Smyrna, Florida, shows a maximum temperature of 92 degrees, a minimum temperature of 76 degrees, and an average noontide temperature of 85 degrees and 23 minutes, which is very equable weather, and by no means insufferable. Rain-fall for the month a little over 5 1/2 inches.

A WINE CARD.

Bubbling and sparkling, like the dew of morn;
Cold as the ice from whose embrace 'twas torn;
Brightest of amber, streaked with foamy foam;
Bring me some nectar! Bring me some nectar! See.

TROUT JERKS.

MR "JOLLYBOY," wearied of city ways,
Of his trout-tramp, in the rounds of trade;
And as he perspired, through summer days,
He thought of the country, and cooling shade,
Until the purpose grew strong in him
To do a bit of rural sport;
So at it he went, with accustomed vim,
And hence this most voracious report.

He had heard of the trout, and resolved to try
And whip a few of the mountain brooks;
For, says he to himself, "It's all in my eye,
This talk about skill in the use of hooks;
I ain't such a clumsy hob-de-hoy
As not to know how a nibble feels;
I used to catch 'shiners' when a boy,
And was some on catch, suckers and eels.

Then he hid away to a tackle vender,
Where an angling outfit he bought complete;
Some lines were stout and some were slender,
With hooks, and flies that could 'at his heat.
He bought a little of everything
That the dealer suggested might "come in play,"
From a bamboo rod to a "clearing ring,"
And a creel of a size to last all day.

He had wading boots to reach the thighs,
And boxes for various kinds of bait;
A pair of goggles to shade the eyes,
And tourist's books of the latest date.
His clothes were "the color of forest trees,"
(He had always heard that such were best);
His breeches buttoned below the knees,
And his coat had pockets in flaps and breast.

After four and twenty hours or more,
An old stage stopped with sudden lurch,
Where the landlord stood at his open door,
And villagers lounged about the porch.
The city man (wishing to seem *au fait*),
Thought the trout on the dinner table small,
And arranged for a lengthy trip next day—
"He'd show some fish to beat 'em all."

Then full of zeal, with nerves all steady,
He got his bran new tackle ready;
With eager eye, and careful tread, he
Essayed work pleasurable.
He plunged through holes and climbed o'er boulders,
He barked his shins and bumped his shoulders,
Unseen of critical beholders,
Guiltless of victims gory.

Thus, till the noon-tide hour drew nigh,
He faithfully the stream did try,
Mosquitoes bit, but trout were shy;
The prospect was most gloomy.
He stopped to lunch, and smoke, and muse,
Wished for thin coat and easy shoes,
And finally rubbed his latest brims,
And viewed his creel, so roony.

While waiting in this doleful plight,
A barefoot urchin hove in sight,
Jerking the trout from left and right,
"With sure manipulation,
His pole was a crooked alder thing,
Hook dangling from a bit of string,
(Careless he seemed at every fling,
In juvenile elation.

Spying the stranger where he sat,
"The urchin in the torn straw hat
Flipped over the brook to have a chat
And ask "What luck a-shin',"
He saw the gentleman's kinky line,
The shiny reel and rod so fine;
"Oh! golly!" says he, "if there was mine—
Just what I always was wishin'."

Well, they made a compact by the brook,
The would-be angler some lessons took,
The led got lines, with many a hook,
And a shiny, silver dollar.
Then they tramped the stream with song and shout,
By jerks alternate they "tranked" the trout—
A couple of Jollyboys, no doubt,
The teacher and the scholar.

T. W. A.

For Forest and Stream.
Sunday Pastimes in Havana.

The Sabbath a Holiday—Mass-Valle de Gallos—Bishop's Garden—Street Scenes—Grand Ball at the Captain General's.

AS in all Spanish countries, the Sabbath is a general holiday in Havana. The first sound that greeted us at early dawn was the clanking of the irons as the chain gang passed up the street from their hard beds at the Presidio. Our Coolie waiter brought us a cup of delicious coffee, which we sipped while making our toilet. As we had a round of sinful pastimes marked out for the day, including a cock-fight and a ball at the Captain General's, we concluded to compound for some of them by attending mass at the old cathedral where the ashes of Columbus repose. One by one the worshippers file in—chiefly females—with neatly attired slave girls bearing rugs in their arms, on which the Senoras devoutly kneel in front of the altar. Sombre-looking padres, attended by several juvenile and not sombre-looking incense bearers, officiate in the chancel, while a choir of eunuchs chaunt music of bewildering sweetness from away up under the stained arches in the gallery. A portly priest ascends a little pulpit on the right, and rehearses the service in pure Castilian, and then passes to a pulpit on the left and concludes the service in the same round, swelling, and sonorous dialect. Then the audience retires one by one; a venerable padre at the door condescending to show strangers the tomb of Columbus, and accepting with Christian humility and gratitude any consideration therefor which the recipients of his courtesy may choose to bestow. There is an interesting history connected with the transfer of the ashes of Columbus to Havana; but as I am recording Sunday pastimes, I must hurry on, and leave the "great Colón" in his ivy-crowned mausoleum.

Returning to our hotel, we find breakfast almost over, and with the dispatch for which our countrymen are noted, we do ample justice to the bill of fare, which embraced fish, beefsteak, corn cakes, oranges, plantains—fried and raw—Catalan wine, and coffee. After breakfast we took a quitrin for the "Valle de Gallos," or cock-pit. It is related in this connection—and with how much truth I cannot say—that the priests not long ago were in the habit of hurrying through with their morning service in order to get good seats at these great popular spectacles! An American friend, who kindly offered to act as a cicerone for our party, insisted on purchasing tickets of admission, which were twenty-five cents each. The place consists of a round, covered amphitheatre, with seats like those of a circus. Overhead, and commanding a full view of the entire arena, is a little gallery, occupied by the august judges. Adjoining this structure is another, almost its counterpart, where the negroes are engaged in the national diversion—a refreshing evidence that civil rights bills have not yet disturbed the social life of the "ever faithful isle," so-called. As these spectacles have been dignified as national pastimes among the Spanish people, I surveyed the crowd with some interest, but looked in vain for any considerable element save the lower classes; and, to the honor of the Cuban ladies, not a single female was present in the motley assemblage.

The chickens were brought in and weighed, and the ring was cleared of all save the trainers, who proudly beld the birds up for general inspection, and bantered the crowd for bets. The feathers had been clipped from their tails, wings, and necks, and I was told that they had been regularly trained and dieted for the contest with as scrupulous care as an athlete is prepared for a prize fight or a foot race. They are permitted to fight with their natural spurs, which is a commendable refinement on the American barbarism of murderous gaffs. As they were turned loose, they each alternately flapped their clipped wings with the most ludicrous *sang froid*, and fairly made the welkin ring with brave carols of defiance. Now the fight begins, and

it is so much like all other gallinaceous disputes that I need not rehearse its details. Blow after blow is struck with beak and spur, until one sinks staggering, blinded, and bloody under the superior prowess of the other. A truce is called, when aguadiente is squirted on their wounds from the mouths of their trainers, who also wipe them with the most delicate tenderness with the most spotless of white handkerchiefs. Meanwhile, the crowd is wild with excitement. The din of hundreds of voices produces such a jargon of noises that bets are made by the most ludicrous signs and gesticulations. I can compare it to nothing ever seen or heard save the New York goit room or stock board on a "field day" between the bulls and bears. At a given signal the birds again confront each other, and the conflict is renewed. Bets run high, and the confusion grows wilder and wilder as they struggle through the brief moments of the second round, when they are again cooled and refreshed by their trainers as before. Bets now grow less active, as the waning powers of the weaker bird have already almost decided the wager of battle. Bets are here and there taken at large odds on the faint hazard that a lucky stroke may yet turn the scale against the favorite. The third and last round is very brief—a well aimed thrust from the more vigorous chicken penetrating the breast of his plucky foe, and laying him dead in the arena. The whole contest lasted twenty minutes, and to me they seemed like almost as many hours, so dimly oppressive and disgusting were all the elements of the scene. The victor chieken was borne off in triumph, his trainer wiping the blood from his wounds, or affectionately *sucking them between his lips!* A few moments of confusion attend the settling of bets, in which the harsh tones of execrable Spanish and the jingle of gold and silver distract the disgusted ear, when another pair is brought into the ring, and another round of similar diversion gives zest to the occasion.

It is creditable to the Cubans that these spectacles are losing their attractions for the better classes, and are now chiefly patronized by the rabble. The youth of the island, however, retain a fondness for the excitement of the cock-pit, and a game chicken is quite essential to the happiness of a Creole boy, though he is taught to shun the vulgar accessories of these public contests.

"Valle de Gallos," like the "Corrida de Taurus," or place or bull baiting, is licensed by the government, and Sunday is, I was informed, the day fixed by law for the exhibitions. At any rate, custom has made that the popular day for their indulgence.

Having gratified our curiosity to see a cock-pit, our little party—which, I should have observed, consisted of a gentleman from New York, one from Portland, Maine, two from Wilmington, N. C., and the writer—straggled toward our hotel, that we might get a better view of the customs of the day than could be gained from the hooded confines of the quitrin.* Shops and stores were open; workmen were at their benches and tradesmen at their wares; donkeys were plodding along the narrow streets, almost hidden beneath the great loads of fodder, palms, or fruit piled upon their backs; carts, drawn by great oxen, with yokes attached to their horns, loaded with sugar or molasses, rolled lazily toward the wharf, and there was nothing but the almanac and our "inner consciousness" to remind us that it was the Sabbath. Little shows were open at almost every corner, and the peculiar strains of the hand organ invited visitors to see some great monotony or other device of strolling mountebanks who infest the city. As many of these are from the States, I should perhaps be a little blind to their insidious snares.

After dinner, weary of the sights and snags of the city, I take an omnibus for the "Cerro," a suburban resort three or four miles distant. Our party have some other diversion on foot, and I urge them in vain to join me. Here,

*A quitrin is a two-wheeled vehicle, like the old fashioned "one horse shay" of Holmes, with long shafts, and a curtain in front to keep off the sun.

—A Buffalo paper announces that by the recent burning of an ice house there, twenty thousand tons of ice were "reduced to ashes."

again, was presented a sensible distinction between the ruins in separate stages bearing a light flag, *"Gentele color,"* for Suburb and for the City. These stages, or edifices, are of American build, and convey passengers to the Carro, to Mariannu, Jesus del Monte, and other suburban villages—fare, 12¢ cents. We passed near Fort Atares, a beautiful conical elevation covered with grass, and with cannon yawning around its circular crest. This is near the Bay of Atares, and is memorable as the scene of the execution of Crispin and his faithful companion. As we rode along the hill, the man in the green coat, with his eye on every hand. Bright-eyed senoras are standing in the windows, which are protected by prison-like grates of iron, and here and there a smitten woman stands outside the grating, gazing in silent admiration at the prisoned beauties. I was surprised to learn that such conduct is not deemed impolite or offensive, but is a popular mode of paying homage to beauty. I have seen strangers stand with one foot on the hill, quiring, gazing at the senoras who occupied it, and who fanned themselves in complacent appreciation of the compliment. Great galleries, opening into broad court yards, reveal on one side the family horse, munching his fodder, and on the other, a few feet away, the family discussing their Sunday dinner. And seldom for a moment, in town or suburb, are we unable to see one or more soldiers—footprints, if you please, of the despotic ruler, who has been expelled from the Antilles." Soon beautiful country villas greet us, with their rich outlines of orange groves, and majestic palms marking their borders. Reaching the vicinity of the "Bishop's Garden," I leave the omnibus and make a short cut across an open field to survey that notable ruin. Clumps of bamboo fifty feet high grow along the borders of a bold stream, which flows in an artificial channel through the grounds. This garden was once the residence of Juan de Espada, a pretor of vast wealth, and was a place of great interest to residents as well as strangers. The hurricane of 1844 destroyed the mansion, tore up the trees, and broke many of the statues which ornamented its grounds, and now it is quite an unsightly ruin; but as such is still an object of interest to tourists. Long avenues of mango, almond, and palm trees open out from the crumbling old mansion on three sides, and away in the distance, almost always from the same side, are the broken statues of mythological characters and Spanish notabilities of the old time. Immense parks, where formerly wild animals, collected from every part of the world, were to be seen, are now grown up to tangled wastes, with here and there a green plaza, on which a few cattle were tethered to graze. The immense fountain is dry, and the great circular basins, in enduring cement, which once contained fish of almost every species, are now empty, and the basins are inhabited only by frogs. The flower garden, once the envy even of royalty, is grown to a tangled hedge, with here and there a plant of rarest beauty and fragrance, lingering to remind us of the past. I could not resist the inclination to gather a few of these souvenirs. This curiosity proved in several respects expensive and hazardous. The moat was deep, and half filled with mud, where I soon found myself stuck, and my companions, while the flowers I sought, like the apple of Tantalus, seemed to recede from my grasp as I pressed for them amid the tangled undergrowth. And when I had succeeded in gathering a few, and was scrambling for others, I put my hand within a few inches of what proved to be an immense snake, seven or eight feet long! I became suddenly disgusted with gardens and flowers, and hurried out into an old pathway that led back to the road, where I had hope to find a single rose, or a few flowers, to gather. I detected the notice of a villainous looking montero, who seemed to have some sort of charge of the grounds, and he commenced an assault on me with the most violent sounding gibberish, which my limited Spanish made wholly unintelligible. He mixed the word "dollar" with his interjections, and what between the villainous snake and his villainous aspect, I readily threw him a dollar to be of my importunity. Altho' then I had no more money, he insisted on presenting me with a bamboo cane, which he more than intimated was of priceless value, though the street peddlars in New York sell much better for a dime. I know that infernal montero has had many a laugh at the incident, but the pleasure of the wild adventure more than compensated me for the fright, the torn togery, and the pecuniary outlay, and he is welcome to his dollar and his laugh.

My interview with the snake and the man of canes had made me a little indifferent to other matters, and as I took leave of the garden I observed that the sun was just sinking behind the horizon. While I was waiting for a stage the blackness of darkness enveloped the whole face of Nature, and called to mind the old familiar lines of Rokeby—

"No pale gradations quench his ray,
No twilight hues his wrath avail,
With dusk like battle target red,
The meteor to his flaming bed,
Dreads the wild waves with bloody light,
Thyself to rest—and all is night."

It is but a moment from sunset to darkness in the tropics. On reaching the hotel I found my friends uneasy lest I had fallen a prey to some of the outlaws who infest the suburbs; and in spite of my most solemn asseverations they would not relax from my snake story.

After tea, which is a simple repast, consisting chiefly of fruits and *dolces*, we prepared for the grand banquet. At eight o'clock the American Consul called at Mrs. Brewer's for the Americans who through him had received invitations, and proceeded with them to the "Plaza dos Armas," the beautiful little square on which the Palace is located. It is a two-story structure, extending around a yellow square, and is exceedingly well in appearance. Until quite a few moments before the lower story was partly occupied by small shopkeepers. Passing the guard we proceeded up a long stairway to the reception rooms on the second floor. To the right and left on each stair blouoned a vase of exquisite flowers, of every hue, while along the banisters blazed a bright array of gas jets a few inches apart. The ceiling of this brilliant light, blazing array, such a wealth of floral beauty, and the red and gold gilded walls and a carpet of the most scarlet, was very striking. The ladies received checks for their shawls, etc., in the ante-room, but the gentlemen retained their hats, and dangled them in their hands the entire evening.

Space forbids any detailed description of the grand *fete*, suffice it to say that it was characterized by the press at the time as the most brilliant ever given in Havana, and was notable of the highest order for foreign consuls, dukes, marquises, and distinguished Americans, with their ladies,

made up an *élite* assemblage well calculated to impress an unworldling provincial from the States. After the formalities of presentation were over, the bands struck up, and "the joyous dance" began, and was presented with the most commendable perseverance by a large portion of the assemblage. Grave diplomatists gathered here and there to gossip of the political outlook, while circles of admirers gathered around such well-flowers as wearied of the dance, often standing many minutes without a word being uttered. Such is the polite mode of paying homage to the sex, referred to in another place, of the heat of the ladies, or of that other topic ever near to their hearts—their toilets—I must forbear to dilate. There were many of rare personal charms, and wardrobes which in taste, elegance, and cost, would have graced the richest European courts. The supper was bounteous, epicurean, regal, and was duly discussed from one to three o'clock, when the guests began to take their leave, and your correspondent sought his cool bed in the dream of his first and last Sunday's experience of pastimes among the Havanezes.

S. A. ATKINSON.

× ZOOLOGY OF THE NORTHWEST.

THE CERVIDÆ.

IN my last communication I confined the cervidæ of the Northwest to the elk and the smaller species of deer, but since that was written I have made a tour to portions of the country not previously visited, and have learned that our more northern forests and mountains are the resort of both the moose and caribou. The results of this tour apply specially to Idaho and Washington Territory, where they join the British line on the north, and in a more general sense to Montana and Dakota, but the precedence in numbers must be conceded to the latter and Idaho. In this enumeration I exclude Alaska, as the caribou is more abundant there than in any other section of the country, especially along the Peace and Yukon rivers in the enormous head of the Kootenay and Clear Alice Mountains in the extreme north. This region is occupied exclusively by the Kootenay, or long-knife tribe of Indians, and perhaps an occasional adventurous seeker after the golden treasure. There are no white settlers, so the hunter must be content with the companionship of a very soiled band of the "Sons of the Forest" if he would indulge his taste for the chase among the larger cervidæ. Should he be possessed of ample means, he can engage a party of Nez Perce braves to accompany him, and they will not only protect him from all bodily harm, but give him such lessons in hunting that he can truly boast of his experience ever after. This tribe has the reputation of being the most famous body of hunters in the west; and as for courage, that is proverbial, for during the annual buffalo hunt the warriors march from three to five hundred miles to reach the ground, and then capture not only more animals than their allies, but also defeat the Sioux in open battle. This, which I have said of these Indians, for the benefit of such hunters as may think of visiting the country for its wild, rugged and grand scenery and the splendid sporting it presents. My knowledge of the range of the large or woodland caribou, (*trungifer caribou*.) I obtained from the Chief of the non-treaty or roving Nez Perces, that is, those who will not stay on reservations and who live on their herds amid the trails of the chase. According to him it inhabits the dense coniferous forests of the Northern Mountains of Idaho, and extends to the sub-Arctic regions of British Columbia. The best time for hunting it, is early morning or evening, when herds go together for water or protection while grazing; for it is often assailed by a hungry bear, or a ravenous pack of those large gaunt wolves indigenous to wooded, alpine plateaus.

By keeping to the leeward of a herd, and also approaching to within good rifle range, many fall ensny victims to an ordinary adept in rifle practice. The Indians of Alaska and British Columbia kill large numbers with arrows, and still more by digging pitfalls along their watering runway. Being the largest animal in their forests, it forms their leading article of food, and its hide is used for making wakiups or wig-wams, while its bones are used for arrow tips, spoons and knives. The caribou is known to the hunters by the name of *moose*, but aside of this difference of name between the species of the west and that of Europe, I am inclined to think that the American is the largest, for an adult varies from six to six and a half feet from the nose to base of tail, and from three and a half to four feet in height. The face, which is quite long, ranges between twelve and fifteen inches from nose to ear; the ears will average five inches in length; and the vertical portion of the tail about four and a half inches. The color of the southern species changes considerably at certain seasons of the year, but in spring and in fall is always the most gaudy. Its general hue, then, is a brownish red, the tips being a light gray. The nose, ears and exterior surface of the legs are brownish; the neck inclined to be the whitest portion of the body. The belly and tail are white, and a whitish band extends around each hoof. It makes a fine, bold stony on a forest ground of an evening snow, and fulfills the ideal description of the Northern Idaho as it is given by the mountain hunters of that region, as it is given by Scott and other writers. To see a herd together is enough to make a follower of Diana indulge in rapturous exclamations of delight.

The moose, (*Alce Americanus*.) is found from Manitoba to the Upper Columbia River, between the parallels of forty-eight and sixty-five, hence it is a dweller in portions of Dakota and Idaho, and a few reach the northwesterly section of Washington Territory, beyond the Grand Coulee of the Columbia, or rather the headwaters of streams flowing into this river from the north, such as the Spokane and Yakima. The principal hunting, after this species is done by the Indians of the mountainous districts of Idaho, as the white men are too busily engaged in delving for gold to enjoy the luxury of the chase. The blackfoot of Montana is the last of the latter Territory that extends beyond the Yellowstone or National Park, I am unable to be very explicit as to the habitat of the animal in that region, or to what extent it is pursued. I learn from men of experience in such matters, that the western is somewhat larger than the east-

ern species, but has the same general form and characteristics. I have never seen but three of the animals: two of them I saw alive in Montana, and the other dead in a camp of the Lumai Indians, in the northwestern part of Washington Territory. This tribe asserts that the moose is found along the Cascade Range north of Mount Rainier; and was formerly quite numerous around the base of Mount Baker, the most northerly snow peak in the Territory. I am inclined to believe them, as they have a name for it entirely distinct from that applied to the elk. They also gave me another name in confirmation in natural history, and that was that the wild mountain moose inhabits the mountains of the Cascade Range, and that a white ptarmigan, (*Tetrao Albus*.) inhabits the same mountains.

These two described complete the Cervidæ of the Northwest, which gives us seven species west of the Rocky Mountains, and by including this range, eight, as the Virginia deer is found on the eastern border. These are the wood caribou, (*trungifer caribou*), moose, (*Alce Americanus*), elk, (*cervus Canadensis*), mule deer, (*cervus macrotis*), Columbia black-tailed, (*cervus Columbianus*), white-tailed, (*cervus Canadensis*), and the Virginia deer, (*c. Virginianus*) found in western Nebraska. This list does not include the hybrid of Whidby Island nor the white deer of Oregon and Washington Territory. By giving these a place we have seven species and two varieties of deer in the great basin interval between the Rocky Mountains on the east and the Pacific Ocean on the west, between the parallels of forty-two and fifty-five north latitude. This is the great animal belt of the country, and it must remain so for a long time, as the westward wave of immigration cannot inundate this extensive area for many years to come; it therefore presents the best field in the world for the keen sportsman, or, even enthusiastic angler. In reference to the white and spotted deer found in the northwest, I may add that there is little doubt of their being a distinct variety, if not species; but as we have names enough already, it would be better, I think, to classify them under the former term. During a recent visit to Whidby Island I learned much of these animals and found they were quite common, the spotted variety being, however, the most numerous. This is kept as a pet in several houses along Puget Sound, owing to its peculiar markings, but all that I saw differed from the white-tailed deer of the continent, and yet a large number found on Whidby Island are marked more loudly, the cheeks being generally reddish, the face white, the sides with alternate large patches of brownish red and white; belly and tail white; legs, below knee, chestnut tipped with white; muzzle black. Some differ from this description by being more or less tinted with various colors. No spot on earth can, I think, exhibit more variety of color than this island, and yet a large number belong to the hybrid. From my examinations I would be apt to classify it as a variety of the white-tailed deer, and thinking so, I have classified it as *cervus leucurus*, variety *varius*, and this has been adopted by the Museum of Natural History in Portland. It could be called by the latter specific name quite appropriately, but it seems somewhat cumbersome to elevate every variety to the rank of a species, and to have more than this island, and yet a large number belong to the hybrid. From my examinations I would be apt to classify it as a variety of the white-tailed deer, and thinking so, I have classified it as *cervus leucurus*, variety *varius*, and this has been adopted by the Museum of Natural History in Portland. conferences for camping out, cheap outfits, boats, tackle, tents, guides, excellent hotel accommodations, and gentlemanly and obliging amateur sportsmen, ever ready to help those seeking recreation. Here we have the great northern pickerel, frequently caught weighing thirty pounds. Thepike perch, the best of fish, excepting the trout family, weighing from three to twenty pounds, excellent all seasons. Trout Lake, thirty-five miles north of Brainerd, and all the lakes, reservoirs for the Prairie River, a tributary of the Mississippi River, are full of speckled beauties, the genuine *salmo fontinalis*. I have heard sportsmen from the far east recount their wonderful exploits in landing nine pound trout from lakes and rivers in Maine and the Provinces. Having whipped many a mountain brook in northern Pennsylvania and western New York, and never yet even pricking a hole in the trout, I am not at all backward to these records with much satisfaction. I take it all back now, and with proper humility beg pardon for any unjust suspicion I may have entertained that these gentlemen were trying to impose upon my credulity. Such trout do exist in this State, if not in Maine. The geological period in which the granite hills of Maine and New Hampshire were elevated, was coincident of the working of the same forces in the northern part of the St. Lawrence, and all the lakes, reservoirs and granite channels were at work here at the same time. And the rippling brooks rifting our granite ledges are filled with "mountain brook" trout, as in the east.

In the month of May last, a gentleman whose word is reliable, (but who never shot a deer with a birch-bark lance, en route from Aikin to Brainerd, assisted by a revolver and a "heavily loaded" double barreled shot gun, that would not harm a deer if "Taviland," your without correspondent, did manipulate it—see last number FOREST AND STREAM), caught out of a lake with an outlet into Prairie River, three *salmo fontinalis*, one weighing twenty pounds, one seventeen pounds, and one about four pounds, much to his surprise, as he had, like many others, doubted the existence of large trout in this region.

While at Gull Lake a few days since mist of the Howel the Gray visited with a party of the proportions of the trout from trout caught in these upper lakes. And upon further investigation numerous parties have seen and tasted the trout brought me by Indians, large silver-sided fellows, spotted enough to satisfy the most ardent longings of the yearning sportsman.

During next month a party of us will penetrate the wilds of Cass county. Equipped with all the delicacies of trout and game, with a party of the proportions of the trout from trout caught in these upper lakes. And upon further investigation numerous parties have seen and tasted the trout brought me by Indians, large silver-sided fellows, spotted enough to satisfy the most ardent longings of the yearning sportsman.

Brainerd, Minn., July 20th.

BASS FISHING IN ONTARIO.

For Forest and Stream.

I am convinced that the finest black bass fishing within easy access of New York city is to be found about the island that lies between Lake Ontario, a score or less of miles from where it merges into the St. Lawrence River. I have fished every nook in the Thousand Islands; have dragged my spoons in the clear water of Cayuga, Oneida and Champlain Lakes and have cast my flies into the famous rapids of the Oswego River—and with fine success too—but the memory of the sport around the islands in old Ontario overshadows everything else. I have just returned from there, and can describe my experiences, my enthusiasms will readily be pardoned.

We started from New York at six o'clock, evening, and following the Hudson River and Central road to Rome, N. Y., without change, our sleeping car was switched to the Ogdensburg road. An hour after daylight we found ourselves in the little village of Adams, in Southern Jefferson County. Thence by stage two hours' afterward we were at Henderson Bay, eight miles from the old town of Sackett's Harbor. Here our yacht was in readiness, and a fresh breeze quickly wafted us to Galloo Island, (the map-makers sometimes spell it Gallop.) twelve miles away.

While the boatman was transferring the luggage from the yacht to the shanty, the party tripped up on a little hill just back from the beach and took a look about. The blue line of the Canadian shore could just be discerned far to the left. Before us, fifteen miles away, was the very beginning of the St. Lawrence River, and we had to look past Fox and Grenadier Islands to see where it commenced. To the right were Stoney, Calf and Little Galloo Islands, while far away to the northwest could just be discerned the tree tops on the Duck Island. The islands mentioned from the very beginning of the famous Thousand Island series, and in point of geological formation and vegetable growth, are wholly unconnected. The base of the islands, however, is covered with many layers of fine white pebbles that have been cast up from the depths of transparent water. The islands are in part cultivated and have farm houses on them, at which may be purchased bread, butter, milk and other luxuries of camp life at prices that might astonish a city housekeeper. Butter twelve cents, milk four cents, and spring chickens, be it spoken with remorse, eight cents, not a pound, but a piece. Why this cheapness? I asked. "Twelve miles from land," was the response.

From the hillcock we could see the bass breaking on the shoal which lies a hundred yards from the eastern shore, and the beauties of the islands suddenly faded. Speedily we embarked in the two skiffs which had been towed hehither the yacht. I paddled, and my companion, with his eight-ounce rod and line, prepared to cast. He had not done there before as I had, for eight consecutive summers he it whispered confidentially and knew not what to expect, but as the shallow water began to show itself under the bow, he let his leader drop thirty feet ahead of the boat. Shall I ever forget that throw! A three pound black bass made the water boil before the flies were wet. "Sweet Christmas!" cried Ned as he took foothold for a fight. "That's the biggest bass I ever saw!" he cried, and the air sprang the beauty, twitching every muscle and fluttering every in and shaking his head to free the fly. But

Ned gave him no slack, and striking the water with a splash the noble fish darted away on a side tack toward the St. Lawrence, taking out line like mad. Soon Ned checked him and into the air again he went. He will soon tire out if he follows the iseties he has begun, and so he did—out I was passing the landing eye under the bow of the boat. "I've got one," burst from the occupants of the other boat. He is as large as ours, I should say, by the way Phil's split bamboo rod heeded; and so he was found to be ten minutes afterward when dropped in the boat's bottom. And so the fun went on. There seemed to be no end to the fish. We could see them sometimes a dozen at once in the clear water. Half an hour after sunset, having fished two rods only two and a half hours, we paddled to the shanty and there one by one, as usual, we landed the largest, a four-pounder; the smallest weighing a little less than two pounds.

This afternoon's sport was a fair sample of what I have enjoyed in these waters each summer for eight years. I have found the fish equally plenty at the head and foot of Stoney Island, at the foot of Little Galloo, at the head of Fox and the lower side of the Grenadier Islands. The Duck Islands is a number of places, the best of those named, but is considerably further out in the lake. They are very rarely visited and their shores are lined with bass. There is, however, little choice of water at the foot of the lake. Wherever a shoal makes out from the islands the bass congregate. These grounds are rarely visited, save by the inhabitants of the neighboring hamlets, and the fish secretly know the fear of the hook. Next to the Duck Islands, however, I have found bass thickest at the foot of Galloo. There is a small shoal, and pipe fishing in the little bays that indent the main shore, and often a muddle of fish taken there.

The black bass begins to bite in these waters about the first of June; July and August are the best months. They rise to flies in the shallow water very readily at times, and often in turn current he made to look at one. I have had them rise for an hour as fast as I could land them, and then cease as suddenly as they rose with the shift of the breeze. Fishing cannot therefore be depended on. I stand at the bow and have the boat man paddle along the edge of the shoals, and so that I can drop my flies over the shallow water near the shore. In this way I have taken eighty bass in an afternoon. The fish bite more readily, however, at the live minnow, which is here their natural bait. The shiners spawn in the summer months close to the beach and are easily taken with the split bamboo. I have taken one this morning, and one taken without raising the anchor, and those caught in this way generally average heavier than the fish that take the fly or trolling bait. There is a sunken wreck on the north side of Honey Island, about which the bass congregate. We let go the anchor over this old bulk and in an hour three hooks captured seventy-four bass. A gale drove us to cover, or I am afraid we might have wrecked the skiff. There is always good fishing over the wreck, and I know of a party of farmer's boys who caught two hundred and fifty bass there in an afternoon. For bait fishing I use a skiff troll rod, and let drop the anchor in about twelve feet of water.

Next to bait fishing the trolling hooks take the most fish. The boat is slowly rowed close to the shoals and a spoon is dragged eighty or a hundred feet. One of the mistakes of bass fishermen is to use a spoon of official bait. I know of a fish that would be in very deep water and for very large fish that I would use a spoon a bit broader on the shoulder than a five cent nickle. Yet I have seen men dragging the St. Lawrence with a spoon as large as a Bartlett pear. A bass spoon should not be larger on the shoulder than a nickle penny.

The most killing trolling apparatus for black bass is a gandy spoon at the end of a leader and about it four or five gandy flies. A spoon attracts many fish that do not strike it, as many fishermen who have seen game following their bait may remember, and the flies often offer a tempting mouthful; moreover, where fish are abundant, often more than one are taken at once. I have seen Prof. Appy, of Rochester, land four bass at once on such a trolling apparatus. The Professor, who is as fine a fisherman as he is musician, is very partial to a small gold-plated spoon for black bass.

The island above-named may be reached from any of the fishing villages along the Jefferson County shore. The distance is short from Cape Vincent, Sackett's Harbor, Three-Mile Bay, Chamout, or Henderson. The house fishermen at the latter place charge three, four or five dollars a day for their services, according to the kind and number of boats they wish to employ. The price is not so high as it would seem to be, for the price is three dollars. There are doubtless many as good men along the shore as Allen Stevens, but I know him to be a jewel of a boatman, and he understands the grounds perfectly, and owns a comfortable shanty on Galloo. His address is Henderson, New York. The expense of reaching Henderson Bay is \$5.40. There are no mosquitoes on the islands. The cost of camp or shanty life, including the party expenses, will depend on the length of the stay. Five dollars a day would be the boatman's charge for the yacht and two skiffs. In going this way the party can easily do the Thousand Islands also, by turning the yacht into the river and cruising down and back. I have always included this in my three-weeks' trip. The fishing, however, is far better in the lake.

WILD WOOD SKETCHES.

FROM NOTES BY THE ARTIST.

IT was my good fortune to have made one of a party of hunters in the wild woods of Canada. Any one not having seen these vast woodland regions can scarcely conceive the beauty and grandeur of the scene upon which he is about to enter. Owing to the dense foliage and green undergrowth in the summer months, it is with difficulty the eye penetrates the far off depth of these forests. In the winter, or hunting season, these woods present a far different view, widely extended views or vistas open to the sight. The season of the year in which we visited these woods is known as the Indian summer. The weather was mild yet bracing, and at night we found our camp fire was not at all unpleasant, but very cheery. Here we found in the middle of October no mosquitoes to annoy us, and no flies to vex and bite us. From the 1st of November, and during the approaching winter months, is the best of all times to visit the wild woods of Canada. One afternoon, about two o'clock, we entered the still

ness of these celebrated hunting grounds. The most profound silence reigned around, and not a sound awake the echoes of the old forest oaks; not even the shrill whistle of the woodpecker, or the chirp of the squirrel, was heard. We listened in vain for the sound of the woodman's axe, or the rustle of the settler's gun.

Arriving at our chosen camp ground after a two hours' tramp, and depositing our knapsacks, guns, rods, and camp stuff upon a very fine site near a large rock, sheltered with huge, overhanging boulders, we prepared to erect our camp. The site was quite picturesque, as from the door, or front of our camp, through the openings of the trees, lay in the quiet serenity of the evening hour the waters of that large and beautiful lake. There being no one party, it did not take very long to erect a comfortable, warm camp, and arrange our preparations for passing our first night in the wilds. Behold us, then, on the evening of our first night sitting around our camp fire, which seemed to burn with a brighter glow for being lighted in the deep wood's solitude. Soon the odor of our newly made coffee steamed forth gratefully upon our senses, and we all sat ready to punish the good things which Sambo, our good darkey servant, had in preparation for us. On our journey along the forest path one of our party had the good fortune to bag four pigeons, which, together with three grouse, killed by another, made the principal materials for our first supper. And a right good supper it was, for our fatigue gave to our viands as rich a flavor as the best of Westchestershire.

It is not uninteresting to the reader to take a peep within our camp. Each man was provided with a canvas covering of four yards square, made of a very light, compact, threaded duck. These squares had holes on every side, so that by uniting them all in one an impervious and goodly sized tent could be readily made. Many very pleasant nights have I spent beneath these coverings in the depths of the wildernesses of Maine, within the Canadian grounds, and beneath the deep, umbrageous hangings of the Adirondacks. Here, then, seated around our camp fire, or lying at full length upon our couch of fragrant hemlock boughs, were the assembled camp. At the extreme right, with his back to a large rock, which makes one side of our camp, you notice a young man about twenty-two years of age, though looking much younger—Frank Raynor, we will call him—an agreeable companion, full of life and vigor, and always ready to supply his neighbor with a pipe, or contribute to the general stock of amusement. His picturesque costume gives him all the contour of a good looking brigand. His scarlet vest, brown corduroy breeches, and long boots are all in keeping with the character, and his inseparable companion, "Bill," as he calls his long stemmed Dutch pipe, is always at his side. Careful of giving or taking offense, he is a capital huntsman, of whom we shall have occasion to speak hereafter. Beside him is Gordon Gordon, a young man with a dark olive countenance, sitting down at this writing. When Gordon stands up you will say he is every inch a man. Although young, he has seen much active life, and passed through many perilous adventures. His future history will be told more at length in these sketches. He was a true friend, trusty and reliable, and joined our party for the "sport of the day," as he calls his sport, in his mind. The short, thick-set young man, lying with his feet propped up, and the fire is William Hartshorn, by profession a sailor, and a New Yorker by birth. He is known to the party simply as Jack. Jack was ever on the alert for fun, frolic, and mischief. He was the life of the party; always ready, as he said, for a "steak or a lark," and he could eat with a keen relish either venison steak or boiled skink. Gardner is that man you see with "nanoo" in his hand. He is looking for some game even now, dark as it is. Hold, he is about to fire! Bang goes the gun, and look, he is going towards the lake, and is lost to sight through the trees. In a moment he returns, and brings into camp the result of his first shoot. Ha, ha! three very fine ducks—blue winged teal—a very good eating bird when fat, or when a man has a good snapp appetite, quickened by a long fast. "These ducks," he said, "were sitting near the water's edge, and as soon as I could make them out to be ducks I fired upon them; they are fat and juicy; they'll eat well for breakfast."

"The locality is a good one, is it not, for some sport for us to-morrow?" asked Gordon.

"Yes," replied Gardner, "though it is somewhat early for these birds to leave their favorite feeding fields, yet they should come in good numbers in a single night. I have at early morning often bagged from ten to twenty of them, and when they first approach a pond in the woods you will find them huddled closely together, sitting upon the mud near the water. You have only to approach them carefully, and you can bag large numbers. Their flight is rapid; they are sometimes shot on the wing, but not often. When these ducks alight among the tall sedge or weeds, or on the sand, they drop very much like a snipe or woodcock. Their principal food, which they much delight in, is cereals, vegetable food, and wild rice. They will fatten in a week, and if eaten at this period are very sweet and fat. They will also lose their fat in a week. When properly served, I love dearly to 'pick their bones.' They are considered good table birds."

The artist I shall only describe as a tall, black haired gentleman, possessing to a very great degree a keen love for field sports of every kind, a good dabbler in a good story, with a genial nature that quite readily adapted itself to almost any company.

Last mentioned, but not less in the consideration of the members of the camp, was Sambo, a shrewd, laughter-loving "colored pussen," with a large share of mother wit, and under his imperturbable blackness there was much good sense of heart and real goodness. Sambo was the son of a Guinea negro, who was stolen from his own home and purchased by a wealthy planter of southern Virginia, named Colonel Calvert. Sambo's mother was a sort of Creole by blood, who came from the coast of Sierra Leone, and, like the father of Sambo, was also a stolen negro. Sambo took all his redeemable qualities from his mother, who, he said, was much "liked by all de white gentles," and was a good natured fellow. He could do almost anything quickly and handily, and, as Gordon said, "was a 'darkey of value; a rare article to have about the camp.'"

Thus I have, in the capacity of artist to the expedition, given you a brief sketch of our camp in the Canadian woods, and an introduction to our party as they might have been seen within our tent upon the first evening of our sojourn.

[To be Continued.]

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

FLASHES FROM THE "BLUELIGHT."

FIFTH WEEK.

EVEN Noank, with its much praised climate, has not been proof against the bad weather, which for the week just passed has given us alternations of southerly blows, with fog and rough seas, and easterly gales and rain by the reservoir fall. Twelve inches of fresh water in our thirty-four hours falling from the clouds perceptibly increased the volume of the Mystic River, and much troubled the owners of cars full of sea bass and lobsters anchored near the wharves to await the sale of their contents. Sea has pined, and lobsters by the thousand succumbed to the unhealthy flood, and departed this life unhilled. Our sagacious captain, however, saved his car load. Forseeing the probable results, he towed them over to Ram Island, where in deeper water and stronger tides they survived the flood. In the laboratory the effects of the rain were equally disastrous—dying sponges, closed up and sick anemones, wilted hydroïds and diapaediated algae, gave plain evidence that when Nature established them in salt water, Nature knew best, and was not to be tampered with. The "Blue-light" brought in breakers (if I spell that word correctly, *harraca*—Spanish little barrel—I doubt its being understood) of sea water, but it went but a little way for it soon grew foul, and lost its life supporting power. Fortunately, though, the thorough system of lobbies adopted, by which each evening's or night's work clears away, classifies, and preserves the result of the day's dredging, as far as possible before rest is sought, saved us from serious losses. And there is no lack of work; our field is so rich that with but a few hour's work at sea enough is gathered for many more over the table.

To accompany the work of the "Blue-light" has made five trips in the six days. Upon one of the trips Prof. Alexander Agassiz accompanied us, and expressed himself as highly pleased with our appliances and methods of managing them. We landed him at the Pequot House, and a Noank Naiad, carried on shore by another of our guests for the day, created one sensation on the wharf, and as we showed off we could see that our friend was having considerable difficulty in making his way through the interested groups of fortunate people who spent the summer at the Pequot.

One day when it rained hard—that is to say, had a good dredging, but just about right to go fishing—with Chester I tried for black fish (*Antlog*), and in three hours caught about thirty nice ones, of from two to four pounds weight. Rock crabs, one half inch in diameter, was our bait, but lobsters and clams were equally effective, except that they attracted other fish—cunners, dog fish, and skates—and thus gave us trouble. The crab seemed to secure a greater proportion of the black fish bites. We fished Ram Island Lodge and the Sweepers.

No blue fish to speak of as yet.

A fine specimen of the tarpon was sent to Prof. Baird by Mr. S. Powell. It was caught in Newport on the 12th, the eard attached solid, but although received on the 13th, showed strong evidence of decay. It was a regal fish—great silver scales, and well proportioned, five feet seven inches in length. It was the handsomest fish I ever saw, except perhaps a big drum which I once caught on the coast of Africa, and told you about long ago.

In the laboratory every table has become interesting; each collector has, according to his specialty, added new and curious things to his stock. On one table, that of Mr. Trumbull, there lies in a large dish of salt water—or, rather, did fill the freshened water was supplanted by alcohol—perhaps the finest lot of eggs of the squid ever seen. The squid (*Loligo pedis*) deposited its eggs in July. They are in the form of transparent, gelatinous capsules, two to three inches in length, a half inch in diameter, and each containing a great number of little white specks, which are the eggs in various stages of development, some even to the embryonic state, and these, if examined through the microscope, are seen to possess more or less of the attributes and form of the more mature animal; they rapidly expand and contract, and their color changes, making a most beautiful sight. Hundreds of these capsules are united in one great cluster (the one we have is at least nine inches in diameter) like grapes. The little one, as seen still in the egg, shows plainly its large brown eyes, its mantle, and, projecting from its mouth, the yolk sac, upon which it lives by absorption. The squid is peculiar in this point, as in most fishes that have the yolk sac it is attached to, and absorbed through, the "amphiliens." When free from the egg, the little fellow swims freely about by means of its siphon, from which it ejects jets of water, and by the reaction darts to and fro. The figure accompanying is of one hatched naturally, its yolk sac nearly absorbed, and in size about equal to one of the smallest spots on its surface in the cut. The young of the squid furnishes food to many fishes, and is found even in the inert, and apparently helpless *Cyanois Arctica*, or Jelly Fish. Later in life, when six inches to a foot in length, it is more the complement, and while sought: eagerly by bluefish, bass, etc., it makes havoc with their young, and kills quantities of mackerel five to six inches in length.

Prof. Smith and Harger observed at Provincetown large numbers of squid capturing and devouring young mackerel which were in schools. The squid would dart rapidly backward into a school, run suddenly to the right or left, and seize a fish by the back of the neck, cutting out with their sharp beaks a triangular piece, the ends reaching to the spinal cord and almost instantly killing the fish. If unsuccessful in his attempts, and the school become frightened, the squid would drop to the bottom, the reddish-brown spots fade out, and lying low in the sand, to the color of which it had transformed itself, it would lie in wait for the dispersed school to return. The little mackerel seemed to know that their safety depended upon being in shallow water, and there, or when in the backward dart the squid touched the shore he would instantly pump vigorously with his siphon, and at every jet force himself farther and farther ashore.

There are many varieties of the squid, one, the *Architeuthis odax*, growing to great size. It is of this species that old sperm whalers tell most remarkable stories. The sperm whale is provided with immense teeth, and, unlike

the ordinary "night whale," who feeds principally on small crustacea, devours in large quantities the squid. When struck by the harpoon, and finally landed, he in his "fury," as his dying struggles are termed, frequently dis-

gorged from air cells in the stomach, and expelled two or three great morsels, still undigested, of the arms and bodies of squid, and from the taper of the arms, as known in smaller species, estimations are made that the fish from which the fragments were torn out have been from one to two hundred feet in length. And many an old New Bedford man will swear to squid three hundred feet across. These stories are undoubtedly exaggerations, as were those recently passed down to us of the Kraker found on the Norwegian coast, who, with his immense arms, dragged down great ships. The length of the arms does not increase in direct proportion with the body. Prof. Verrill has in his collection a portion of the body and all ten of the arms, and the beak of an immense squid, whose dimensions were—body, 8 feet; long arms, 24 feet in length. This specimen was captured at Little Bay, Newfoundland, last fall. He has also photographs and measurements of one of the arms of another squid, which was thrown over a boat in Cape Cod Bay, in which were two men fishing; the arm was cut off by the men with an axe, the part preserved measuring nineteen feet, and the whole length of arm estimated at forty-two feet. This individual has, I believe, already figured in the FOREST AND STREAM, the arm being now preserved in the museum at St. John. The beaks of the one in possession of Prof. Verrill resembles that of a parrot, is of a dark hue, hard, and over four inches broad at the base. The "devil fish" of Victor Hugo, by his description, is more closely allied to the octopus family, although considerable allowance would have to be made for imagination to class it with them.

Our trips this week have been three in the shallow waters of Fisher's Sound, one to the neighborhood of Block Island and Montauk, and one to the "Race" south of Fisher's Island. Many things of interest were obtained on each trip, but the best specimens were found on the last named, where we again struck the cold current, finding a bottom temperature of 55° in thirty-two fathoms of water. Off Montauk, in twenty fathoms, the bottom temperature was 63°, surface 66°.

Among the new additions made to the fauna are a beautiful tubularian (*Thamnoecidius spectabilis*), growing in large pink hoquet-like clusters on the bottom of a vessel hauled up for repairs, and *Mephye cærea*, a peculiar Arctic annelid, previously found on the coast of Maine, but originally in Greenland.

The meeting of the Association for the Advancement of Science, at Hartford, drew away a portion of our party for a few days, and some have left us altogether. Dr. Leidy, of Philadelphia, who has made most interesting researches in the formicaria; Prof. Eaton, of Yale, who has devoted his life to the study of the *Mephys*; Mr. Schuman, of the Smithsonian Institution, and Dr. Holder, of New York Central Park Museum, have left.

PISCO.

Natural History.

THE CRANES OF AMERICA.

BY DR. ELLIOTT COUES, U. S. A.

[Some of our correspondents having expressed a desire to be informed respecting the species of cranes of this country, we referred the matter to Dr. Coues, who sends us the following: Ed.]

THERE are but two well ascertained species of crane in North America. There may be a third, but I am not prepared to admit this without further evidence—the supposed third species being thus far only known by a single skin taken at Albuquerque, New Mexico. The two good species are the white or whooping crane, *Grus Americana*, and the brown or sandhill crane, *Grus canadensis*. They were formerly considered by Audubon and other distinguished ornithologists, to be the same species—the latter being supposed to be the young of the former. This is not so, for however closely the young of the whooping crane may resemble the adult of the sandhill crane, the two species are unmistakable when in perfect plumage. The young sandhill crane is ashly, much varied with rusty-red; it loses this last color early, becoming a nearly uniform ashly, and so remains during its whole life. The whooping crane, on the contrary, grows at least pure white, with black-tipped wings; it is also considerably larger than the other; its bill is thicker and deeper in the terminal part, and though both species grow bald with age, there is a difference in the contour of the naked part of the head. In the adult whooping crane, again, the inner wing-quills become enlarged, curled and flowing, to a much greater degree than is seen in the other species. These are the principal external characteristics; the anatomical features are still more strongly pronounced. Prominent among these is the astonishing length and complexity of the windpipe of the whooping crane—a conformation which results in the hoarse and far-resounding cry of the bird, to which it owes its name of "whooper." This anatomical peculiarity may be thus described, as shown in a fine preparation I have lately had an opportunity of examining—

The sternal keel is broad and tumid, and is entirely excavated. The greater part of the excavation is occupied by the singular duplications of the trachea, to be presently described. There are two anterior and a posterior—two large empty air cells in the lower part of the trachea, and two other air cells—one superior and one along the edge of the keel—filled with light, hony meshwork. Excepting these cancellated portions, the whole keel is hollow, and is occupied by the folds of the windpipe, as follows: Coming down the throat, the trachea enters the sternal keel at its anterior inferior apex, and runs along the lower edge of the keel, inside, almost to the very posterior angle; curving abruptly upward, it enters the fourth and fifth ribs, and runs along the top of the keel just under the body of the hone to the very front, where it appears; curving next downward, it re-enters the keel just alongside its original entrance, passes about a third way to the posterior end of the bone, then coils upward with a strong curve, folding on itself, to re-emerge from the bone close alongside its first entrance; and thence passes up to the bronchi with a strong curve. In fewer words, the trachea, entering the apex of the keel, traverses the whole contour of the keel in a long vertical coil, emerges at the front upper corner of the keel, enters again at the lower corner of the keel and makes a smaller vertical coil in the centre, emerging again where it went in. On looking at the object from the front, we see three parallel vertical coils, side by side; the middle one is the trachea coming down from the neck above; on the left hand is the bulge of the first great coil; on the right is the windpipe passing to the lungs after it had made its second coil inside. Measuring loosely, with a thread laid along the track of the folds, I find there are about twenty-eight inches of windpipe coiled away in the breast-bone—certainly over two feet—from upper larynx to the entrance is about twenty-two inches, and there are about eight inches more of the tube from the exit from the bone to the forks of the bronchi at the top of the trachea—fifty-eight inches. The whooping crane has a windpipe between four and five feet long—quite as long as the bird itself.

We may continue the subject with some observations on other points relating to the two species. The distribution of the whooping crane is somewhat peculiar. It is said to be found throughout the fur countries; but in the United States its dispersion is limited. I find no satisfactory evidence of its occurrence in New England, and according to the excellent records of the United States it is said to have bred in New Jersey in Alexander Wilson's time. It is noted in Florida and Texas. But its principal area of dispersion and migration in the United States is along the Mississippi Valley—using this term in a broad sense. I have myself only seen it alive in Dakota and Minnesota, where in the Summer of 1873, I observed it frequently, as I have, also, this present season, (June 1874) while ascending the Missouri River in the vicinity of Fort Stevenson; and I saw it a few days ago in the neighborhood of Brainerd, Minn. I have no doubt it breeds in this region. In New Mexico, Arizona and California, where I became accustomed to large numbers of sandhill cranes, I never recognized any white ones.

Regarding the sandhill crane, I find no indication of the occurrence of this species anywhere in the Eastern or Middle West, but east of the Mississippi and in the tributaries, excepting in Florida. There it is abundant, according to several observers. Dr. Bryant refers to its breeding, stating that two eggs are laid, from early in February until about the middle of April. I have met with it in various parts of the West, finding it breeding in northern Dakota, quite plentifully, on the broad prairie. Late in September and early in October numbers of this species and *G. americana* together were met east of the Mississippi, and I have appeared to journey chiefly by night. Often, as we lay encamped on the Mouse River, the stillness of midnight would be broken by the hoarse, rattling croaks of cranes coming overhead, the noise finally dying in the distance, to be succeeded by the shrill pipe of numberless waders, the honking of geese, and the whistle of the plovers of myriads of wild fowl that shot past, sounding to sleepy ears like the bustling sounds of a city.

We have accounts of the sandhill cranes from the whole extent of the Mississippi Valley (in the broad sense of the term), and of their breeding in Iowa and Minnesota, as well as in Dakota. In Alaska, Mr. Dall says, it is a common bird at St. Michael's and around the mouth of the Yukon, but less so in the interior, as at Nulato. The eggs, obtained June 17, on the Yukon River, are laid in a small depression on the sand, and are without any tint at all, and he adds that the fluth is a favorite pipe-stem with the Indians, who, also, are fond of domesticating the young; the birds eating up vermin and insects, as well as refuse scraps of food about the settlements. Further south on the Pacific coast, says Dr. Suckly, sandhill cranes are very abundant at Puget Sound, on the Nisqually plains, in autumn. They there commence to arrive from the summer breeding grounds about the 10th of November; they are quite plentiful. After this they disappear, probably retiring to warmer latitudes during the cold months. In the fall they are not found on all the prairies near Fort Steilacoom, but are not indifferent to choice or certain spots. These are generally old stubble-fields, or spots of ground that have been ploughed. They rise heavily and slowly from the ground, and are not so fast in flight as cranes, and do not ascend the desired elevation. When proceeding from one favorite resort to another, or when migrating, the flight is high, and not unfrequently their approach is heralded, before they are in sight, by their incessant whooping clamor. While feeding they are generally silent." To this account Dr. Cooper adds that the brown cranes are common summer residents in Washington Territory, "arriving in the Straits of Fuca in large numbers, and all dispersing to their favorite resorts in the interior prairies to build their nests, which are placed amid the tall fern on the highest and most open ground, where they can see the approach of danger. They frequent, at this season, the mountains to the height of 6,000 feet above the sea. The young are often reared from the nest by the Indians for food."

"In the autumn and winter," Dr. Newberry observes, "it is abundant on the prairies of California, and is always for sale in the markets of San Francisco, where it is highly esteemed as an article of food. In August we frequently saw them about the Klamath Lakes, and early in September, while in the Cascade Mountains, in Oregon, the cranes were a constant feature of the scenery of the beautiful but lonely mountain meadows in which we encamped. We found them always exceedingly shy and difficult of approach, but not unfrequently the files of their tall forms

stretching above the prairie grass, or their discordant and far-sounding screams suggested the presence of the human inhabitants of the region, whose territory was now for the first time invaded by the white man. The summer of 1874, these alone made the water no longer fit for the drinking of the valleys of California on the approach of winter. In Oregon they begin to move southward in October.

Thousands of sandhill cranes repair each year to the Colorado River Valley, flock succeeding flock along the course of the great stream, from their arrival in September until their departure the following spring. Taller than the wood ibises or the largest herons with which they are associated, the tall birds stand in the foreground of the scene of the shallow water now reflecting the shadow of their broad wings, then the clear blue sky exhibiting in outline their commanding forms. Such ponderous bodies, moving with slowly-beating wings, gives a great idea of momentum from mere weight—of force of motion without swiftness; for they plod along heavily, seeming to need every inch of their ample wings to sustain themselves. One would think they must soon alight, fatigued with such exertions, but the rapturous cries continue, and the birds fly on for miles along the tortuous stream, in Indian file, under some trusty leader, who croaks his hoarse orders, implicitly obeyed. Each bird keeps his place in the ranks; the advancing column now rises higher over some suspected spot, now falls along an open, sandy reach, swaying ineanwhile to the right or left. As it passes on, the individual birds are blended in the hazy distance, fill, just before lost to view, the line becomes like an immense serpent gliding mysteriously through the air. When about to alight, fearful lest the shadows of the woods harbor unseen danger, the cranes pass by the leafy intricacies where the ibises and other less suspicious birds feed, and choose a spot for the advantage it may offer of uninterrupted vision. By nature one of the most wary and discreet of birds, his experience has taught the crane to value this gift and put it to the best use. His vigilance is rarely relaxed, even when he is feeding. After almost every bending of his long neck to the ground, he rises, erect again, and at full length glances keenly on every side. He may resume his repast, but should so much as a speck be cannot account for appear he stands motionless, all attention. Now let the least sound or movement betray an unwelcome visitor—he lends his muscular thighs, spreads his ample wings, and springs heavily into the air, croaking distinctly and loudly to all his kind within the far-reaching sound of his voice.

The nesting and breeding habits of the two species of crane are very similar, and their eggs cannot be distinguished with certainty. Still, to judge from limited comparisons, those of the sandhill crane are narrower or less capacious than those of the other. I have examined eggs from the Arctic coast, Washington Territory, California, Utah, Iowa, Florida and Cuba. The whooper's eggs I have only seen from Great Slave Lake, though a set from Iowa are probably of this species. Cranes' eggs range from 3/4 to 4 inches in length, by 2 1/2 to 3 1/2 broad. The shell is much roughened with numerous elevations, like little warts, and is, moreover, punctate all over. The ground is a light brownish-drab; the markings are rather sparse, except at the great end; they are large irregular spots of a pale dull chocolate-brown, with still more obscure or nearly obsolete shell-marks.

On the Upper Missouri, June 10, 1874.

THE HISTORY OF A SALMON.—The curator of the Brighton, England, aquarium, writing in *Laud and Water*, tells the following story: Amongst the latest arrivals at Brighton aquarium is a salmon—a true *Salmo salar*. Although nearly fourteen months old, he is only two and a half inches long—not so big as a large trout. His history is a curious and eventful one. On the 14th of January, 1873, Mr. J. A. Youl (who in recognition of his efforts to stock the rivers of our Antipodean colonies with salmon and trout, has recently been honored by Her Majesty with the companionship of the order of St. Michael and St. George), sent out to New Zealand, in the ship Oberon, 12,000 salmon ova, packed with moss in 227 lead boxes. Each box measured ten inches by eight and four inches deep. To arrest the development of the young fish in the ova, during the long voyage, and to prevent their being hatched out before arriving at their destination, the boxes were surrounded by blocks of ice, which froze together in a solid mass in a chamber specially prepared for them. The Oberon arrived at Port Chalmers, Otago, on the 1st of May, and when the ice-house was opened it was found that of the twenty-five tons of ice put on board more than five tons, at the outside, had melted on the voyage. A large number of the ova were transhipped to Southland, from which about six hundred salmon were hatched; the remainder were taken to the province of Canterbury and from these only sixty young fish were obtained. Dangers incurred in the transhipment are supposed to account, in some measure, for the arrival at maturity of so small a proportion of the ova. Of a previous consignment of salmon ova eggs by the *Lionel Lincoln* in 1868, nearly ten per cent. were hatched. That he might ascertain whether the ova were properly fecundated, and compare the produce of those exposed to the vicissitudes of a sea voyage with those of others kept at home under similar conditions, Mr. Youl retained four boxes from the batch, and placed them in the vaults of Wedham Lake Ice Company, on the Straud, on the very same day that their consignment was landed at the ice-room at Otago. They were opened on the 2nd of May, after having 108 days in ice, and, as was afterwards learned, not one day after the arrival of the ship in New Zealand. The four boxes contained about 2,200 eggs. Of these Mr. Youl gave all but 170 to some friends, and in all, 600 fish were obtained from them. In the most successful experiment the youngsters were not "born in a hovel," but hatched in a pie dish, under the dripping of fat, from which fell eighty drops. They were per se hatched—an example of good work being done by a skillful and careful operator with inexpensive apparatus. From the 170 eggs which Mr. Youl transferred to his own troughs, 120 salmon were produced, the first of which made its appearance on the 15th of May. Of these he gave away seventy when they were ten months old, and of the fifty which he kept and hoped to rear to adult salmonhood, the lively little fellow which he has entrusted my charge at Brighton, is the sole survivor.

—On the 18th instant, Dr. J. L. Babcock, of Hallowell, Maine, and Mr. Thomas Saborn, of South Boston, were killed by lightning while fishing on East Wintthrop Pond, near Hallowell.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, (NEW YORK, AUG. 25, 1874.)

Animals received at Central Park Menagerie for the week ending August 15th, 1874:
Two Bear cubs, *Ursus Americanus*. Captured in New York. Presented by Wm. P. Letchworth.
One Iguana, *Iguana tuberculata*. Hab. West Indies. Presented by Mr. R. Bishop.
Two Turkey Bizzards, *Cathartes aura*. Presented by Mr. J. P. Idings.
One Derbyan Wallaby, *Ualmarvus desorvianus*. Hab. Australia. Bred in the Menagerie. W. A. CONKLIN.

Woodland, Lawn and Garden.

LET THE BIRDS LIVE.

"The thrush
And woodcock, or the kind, contending throng,
Superior heard, run through the sweetest length of notes."

LET the birds live! Boy or man, why do you so relentlessly pursue unto maiming or death every little beautiful creature in your garden? God made them to live, to make vocal with their clear, wild music this beautiful earth. He has given them to cheer with their early matin song the husbandman in the early spring time. At the opening of a bright day in May, how sweet, how fresh, is the rich and varied melody of the thrush and robin red-breast! The later, more diversified song of the bold-link as he rises from the waving green of the beautiful meadows of the Hudson; how well is its old familiar song remembered. The thrush is of great songster; he is a very talkative gentleman. He is often seen perched upon the highest branches of the maples at the field's border, or the tall elms by the roadside.

There is a sort of consciousness about the russet-coated fellow, which almost every one must have observed. He seems to know you are planting corn, and he tells you as plainly as he can in his own song words, to "put it in, cover it up, and be gone," saying just what one imagines he would say if he could talk like man. I recollect once a neighbor and friend of mine, who was planting corn by the roadside, took the oft-repeated lay of a talkative thrush, who had perched himself near by, to enforce a lesson of energy upon a tardy, though shrewd boy, who was dropping the corn in the hills. "Do you hear what that bird says?" said the farmer to the boy, whose name was Lang. "No," he said. "Well, he says drop faster, Lang, drop faster; put in the corn, be quick, be quick!" This practical lesson, so pleasantly enforced, not only quickened the physical energies of the boy, but awoke a new train of ideas in his mind, which, but for the bird, he might never have had. Upon coming into the field in the afternoon, the peculiar, pleasant smile of Langdon arrested the attention of his employer, who remarked: "What bird pleases you so much this afternoon?" "What the bird says this afternoon; he sings another tune now." "Well, what is it?" The boy quickly replied: "Joe, pay Lang half a dollar! Joe, pay Lang half a dollar!"

The corn was planted, and Lang had his half dollar; all parties were satisfied, and the bird was voted a pattern of industry. Should not such a bird be spared the fatal shot that is sent by the industry, who remains so long a portion of daily labor, he should live to sing the same old song; he is a valuable apprentice in the field of the orchardist; he is a worker, a destructive force that needs do apparatus to set it in motion; he is ever ready to act in obedience to his natural instincts.

In many of our field birds is seen a result of instinct that, to the uninitiated, seems almost wonderful in itself. I have seen one single pair of thrushes, which had made a nest in my garden, destroy upwards of three hundred of caterpillars of a single morning, or in the short period three hours. Now, if they would destroy such a number in the space of three hours, of a morning, is it unreasonable to suppose the same pair of birds, with the wants of a rising family to supply, would not, in the course of a single day, destroy six hundred caterpillars?

I think my estimate will be received as fair and reliable. Now, consider a pair of thrushes and golden robins, (Baltimore breed), as almost equal to one man at killing caterpillars per day; the birds are not afraid of killing the worm, while some farm laborers had much rather eat plum pudding within doors than kill these troublesome fellows with their fingers out of doors.

Therefore, we say, spare the birds in the garden. Who has not watched with awe and care the labor of one robin to take care of the little fledglings, who have just left the parental nest and are every morning hopping up and down the gravelled road, or near the fountain? Do you not hear their familiar "pip, pup, pip," as with wings drooping through helplessness, they utter their morning cry for food! I have seen one old male bird, in the space of a single hour, catch and give to its young fifteen or twenty large caterpillars.

The robin is one of the most industrious of our familiar birds; and as he is so great a friend to man, should find in man a generous protector, and we are pleased to know that our farmers, particularly in Massachusetts, are taking more effective measures for the protection of the birds.

It is high time that long-legged, half-grown boys and shiftless men had a better business than prying through grass lands, over gardens, and about houses, shooting every robin and blue bird, and every other innocuous little bird to be seen. Let our yeomanry unite in passing a law, with penalties annexed, against this practice of the wanton, useless sport, and it will cease. In the economy of nature, these little winged ones play a most important part, and are of the most incalculable benefit to the husbandman. Several other important reasons why birds should be protected and loved, instead of maimed and killed, or driven away, I may, perhaps, if this is well received, tell you in some future number.

OLLIFORD QUILL.

THE GRASSHOPPER PLAGUE IN MANTOBA.—These unwelcome intruders have been wafted in millions by a westerly wind from the plains of the Saskatchewan. They were first seen on the 13th ult., and since then have been steadily advancing, devouring the crops of the White Mud River settlements, and were, when the mail left, approaching the settlements on the Assiniboine. They are in large numbers between Poplar Point and Portage La Prairie, to

the west of Fort Garry and south of Lake Manitoba. They are also at the Boyne settlements to the southwest of Fort Garry, and on the line of route from Pembina northwards to Scratching River.

The calamity is all the more serious in its nature, inasmuch as a very large proportion of the inhabitants are new settlers, whose property is nearly wholly in their crops. Nor does the mischief end with the arrival of winter. The pests deposit their eggs in vast numbers, from which, on the return of summer, come forth countless millions of young, more ravenous even than their progenitors.

The Red River territory is unhappily only too familiar with these grasshopper visitations. The first record of their appearance is in 1828. They came late on that occasion, and the mischief done was only partial; the wheat being nearly ripe, mostly escaped. But the deposit of their ova insured worse consequences in the next year, when they destroyed everything, and without waiting to lay their eggs, departed. Fresh swarms, however, came, and for three successive seasons the unfortunate settlers saw their means of livelihood destroyed. From that time no less than thirty-three years passed without a recurrence of the grasshopper plague. In 1857 they visited the Assiniboine settlements, did a moderate amount of mischief, and left their ova to complete the work they had begun, in 1858. Then eight years passed, and in 1864 they reappeared. In this and the next year, however, the mischief was but partial, and did not assume so grave a character as in the case of their former visits. The grasshopper plague of 1867-8 will be long remembered. 1867 they came towards the end of the season, too late to produce any very disastrous results. But in 1868 the ova deposited in 1867 produced swarms exceeding in numbers anything previously known; a famine ensued, and the cry of distress from the Red River was heard not in vain in Canada and Great Britain. Since that time they have been on two occasions somewhat seriously troublesome, but not to an extent to attract much more than local attention.—*Toronto Globe*.

A NEW CEREAL.—An American exchange says:—"A new cereal has been grown in Oregon, and the people are puzzled as to whether it belongs to the wheat family, or more resembles rye, barley, or oats, opinions being very nearly equally divided. From seven to ten stalks grow from one root to the height of about four feet, and these stalks are thin and hard. The radicals are tough, and covered with heavy beard, each filament being five inches long. The grain is double the length of a kernel of wheat, and instead of being firm and compact, is hollow, the cavity containing glutinous matter. While the grain bears a closer resemblance to wheat than anything else, the straw looks like rye or barley. Its origin is somewhat peculiar, the first grain being taken from the stomach of a wild goose by a farmer in Stillamuck county, nearly three years ago. He was struck with its appearance, and planted it, and the succeeding season sowed the produce. He distributed a portion of the second crop among a few friends in different parts of the State, who this year raised small quantities. It will require another year to determine the value of the grain.

The above article has been forwarded to us from England, clipped from an English paper by Jackson Gillbanks, Esq., of London "*Laud and Water*," journal, who asks for additional information of this new cereal. Perhaps our correspondent, "Mortimer Kerry" can enlighten him.—[E.]

TALL CORN.—Last Friday Henry C. Kuoepfer of this city, had on exhibition in his store in 14 Jane street, some fodder corn which measured when standing ten feet and two inches from the ground to the tip of the spike.

The Kennel.

For Forest and Stream.
DOG AND GUN.—BY "IDSTONE."

THEY used to be inseparable as the horse and hound, and every man who shot had a ranging, pointing dog of some kind or other. It does not seem so many years ago that a clumsy keeper shot my favorite black and tan setter "Pilot," as he was pointing a covey of birds for us in some standing beans, and we returned home quite disconsolate, for we were staying with a choleric old game-keeper some twenty miles from my kennel. As for going on without dogs, no one suggested such an idea, and walking 'em up had not been invented, still less driving at birds over your head, as you stood in a pit dug that morning for your seclusion, and not impervious to the ants.

Every man who took out a game certificate, (on the chance of invitations few and far between), had something with four legs and a tail tied up in his stable yard, which the coachman was prepared to name "Master's Pointer," and to kick upon the slightest provocation. I can just remember the time when the pointer's tail was docked to five inches. As the unucky brute stood on his game, his "stem" looked like a hat peg, or a balliff's truncheon, or a stiff specimen of asparagus, or a child's ninepin, or anything but a dog's tail improved, aye, nearly improved out of existence.

It took these old Spanish pointers the best part of a morning to beat thirty acres of clover, and the antiquated flint gun was a couple of seconds making up its mind to go off. First, it had to flash in the pan, and then to communicate the fact that the hammer was down to the charge inside the barrel. You had to calculate all this, and consequently many birds, snipes, woodcocks, "rocketing pheasants," and mallards, got off free.

The pointer was crossed with the fox-hound long before the gun was improved by the invention of the percussion cap—an invention claimed by Joe Manton, Col. Hawker, and, I believe, Eg. the gunmaker, and claimed for a Dorset clergyman named Billy Butler.

The fox-hound cross succeeded, and there is no doubt

who are not accustomed to the use of the gun, or if they be, are too reckless to think of the effects of a careless shot. Sportmen are more careful, because they know the extreme danger. Whoever heard of a sportsman aiming a gun at another when it was supposed to be empty, or snapping a cap upon the tube for the purpose of having a little fun? Yet scores have been killed by this extremely foolhardy act, boys generally being the offenders. Another way in which accidents almost daily occur is as follows: A couple of rangers start out into the woods, one bearing the gun and the other on hand to act as game carrier. The boy who carries the gun will be ready for any game that may appear, and consequently raises one or more hammers of the gun, as the case may be, and perceiving a squirrel in the underbrush, both boys give chase, each striving to get ahead, when suddenly the trigger comes in contact with a limb and is discharged, but often with fatal effect. An instance came under my observation a few years ago, where a young man of eighteen or twenty loaded a gun for a younger lad and put in a terrible charge, "just to see it kick." The result was that when the boy fired the gun it burst, and mutilated his hand for life, and came within a fraction of killing him outright. Many more instances might be quoted, but I think this is sufficient to prove that nothing is so dangerous as a gun in the hands of a reckless boy. Yours truly, Ed.

THE CHICAGO PIGEON TOURNAMENT. BRANCH OFFICE OF FOREST AND STREAM, CHICAGO, August, 1874.

Perhaps in the long history of pigeon shooting no tournament was made with greater success than the one held last week at Dexter Park, Chicago. The shooting was on a par with the general excellence of the arrangements, and the managers, S. H. Turrill and Abner Price were complimented on all sides. The cash prize system seems also to have been a successful feature, as betting was almost strictly tabooed. The weather on the whole was favorable for the shooters, and the birds were good, strong fast flyers. All the shooting was H. and T. plunge traps, 21 yards, for single, and 18 yards for double birds. Ties to be shot off according to rules, at 20 and 31 yards rise. The regulation charge of shot was 1 1/2 ounces, measured by Dixon measure, No. 1106 or 1107. Charge of powder unlimited. The referee, at the request of any person engaged in the match, might examine the charge of any person challenged. Should it contain more than 1 1/2 ounce of shot, as above defined, the shooter to forfeit all his rights in the match.

The class shooting commenced on August 11th, ten single rises. Mr. Dow and Mr. Price acted as judges; Mr. Moore scored killed and missed; Mr. Stagg looked after the lads attending to the traps; Mr. Eggleston, finance committee; Mr. Clark, examiner of shells, and Mr. Farnsworth was the referee.

Table with columns: Name, Straight, Total. Rows include Win Chittenden, M. Johnson, J. H. Marshall, J. J. Hall, J. E. Hudson, John McClintock, J. B. Jaggart, D. Wilson, J. K. Richmond, W. T. Johnson, J. H. Marshall, T. J. Stagg, J. H. Marshall, J. J. Hall, J. E. Hudson, John McClintock, J. B. Jaggart, D. Wilson.

Table with columns: Name, Straight, Total. Rows include T. Stagg, John A. Rabell, John W. Phillips, John W. McDonald, J. K. P. Navel, G. P. Preadmore, J. H. Douglas, J. H. Sneyter, James Anderson, B. B. Morgan, T. H. Horn, C. S. Hinesfield, J. G. Cunn, H. H. Gilman, H. Hawkins, H. Sibley, J. H. Bennett, G. C. Sherman, C. C. Tallman, G. C. Plead, T. H. Horn, D. E. Eggleston, Daniel H. Bates, J. Ennis, S. P. Hopkins.

Table with columns: Name, Straight, Total. Rows include J. G. Cunn, H. H. Gilman, H. Hawkins, H. Sibley, J. H. Bennett, G. C. Sherman, C. C. Tallman, G. C. Plead, T. H. Horn, D. E. Eggleston, Daniel H. Bates, J. Ennis, S. P. Hopkins.

There were eleven ties killing ten straight birds. John Davidson and C. Felton divided the \$175 cash prize, killing all three birds each at 26 and 31 yards. Ties of nine—Twenty-three ties of nine birds each. John E. Long of Detroit, killing all his birds at 20 and 31 yards, was awarded the second prize of \$100 cash. Ties of eight—Fifteen ties of eight birds each. T. J. Stagg, killing all his birds at 20 and 31 yards, was awarded the third prize of \$75 cash. Ties of seven—Fifteen ties of seven birds each. Mr. Wilcox, after a hard battle with D. Bates and J. H. Long, succeeded in gaining the first prize of \$500 cash. Ties of six—Six ties of six birds each. Thomas Stagg won the fifth prize of \$15 cash.

Table with columns: Name, Straight, Total. Rows include C. Stenton, H. Hudson, Abner Price, J. H. Douglas, G. C. Moran, N. Doxey, Ed. Price, T. J. South, J. H. Marshall, J. J. Phillips, J. H. Sibley, J. H. Bennett, G. C. Sherman, C. C. Tallman, G. C. Plead, T. H. Horn, D. E. Eggleston, Daniel H. Bates, J. Ennis, S. P. Hopkins.

Table with columns: Name, Straight, Total. Rows include T. J. Abbott, J. Glenn, Jr., Tom Stagg, G. W. Baldwin, L. Horn, Joe Reeves, J. McCortick, E. Bates.

Table with columns: Name, Straight, Total. Rows include Jas. George, H. H. Steel, G. C. Sherman, T. Bestford, M. Hoffman, H. A. Hillecock.

Ties of ten—Five birds each at twenty-six and thirty-one yards. There were eleven ties of ten birds each. James Moore, of Toledo, having killed all his birds at both rises, was awarded the first prize of \$300 cash.

Ties of nine—There were seventeen ties of nine birds each. W. L. Horn, of Detroit, killed all his birds at both rises and received the second prize of \$100 cash.

Ties of eight, seven and six—There were fourteen ties of eight birds each. W. B. Wilcox, of Chicago, won the third prize of \$75. L. W. Colvert, of Beloit, Wis., won the fourth and W. F. Milligan, of Chicago, the fifth.

Table with columns: Name, Straight, Total. Rows include Ab. Price, H. H. Klemmman, L. Moran, C. Stenton, J. J. Klemmman, Joe Reeves, H. Hudson, J. J. Hall.

Table with columns: Name, Straight, Total. Rows include W. F. Johnson, F. J. Abney, J. P. Higgins, C. C. Tallman, W. Price, J. J. Johnston, C. A. Cable, L. B. Crooker.

Table with columns: Name, Straight, Total. Rows include G. H. Felton, J. R. McCortick, J. Glenn, Jr., H. S. Sherman, G. W. Baldwin, G. C. Sherman, L. Horn, J. F. Whiting.

Table with columns: Name, Straight, Total. Rows include T. Stagg, Alex Price, Geo Hill, J. J. Hall, G. W. Eggleston.

Ties of nine—There were fourteen ties of nine birds each. L. Moran, of Detroit, won the \$100 cash prize. Ties of eight, seven and six—John E. Long, of Detroit, won the third prize, cash \$75. J. J. Hall, of Saginaw, won the fourth prize, cash \$40. George Sherman, of Chicago, won the fifth prize, cash \$30.

Table with columns: Name, Straight, Total. Rows include H. N. Sherman, J. R. Klemmman, W. T. Johnson, W. B. Wilcox, Lon Horn, G. W. Baldwin, H. J. Edwards.

Ties of nine—There were fourteen ties of nine birds each. L. Moran, of Detroit, won the \$100 cash prize. Ties of eight, seven and six—John E. Long, of Detroit, won the third prize, cash \$75. J. J. Hall, of Saginaw, won the fourth prize, cash \$40. George Sherman, of Chicago, won the fifth prize, cash \$30.

One hundred dollars offered for the best score, was taken by J. J. Klemmman, he having killed five out of 30 single and 10 double-pair birds, and in the shooting off he killed 18 out of 30 single birds. Several scores were shot after the day's sport was finished. Our special correspondent in Chicago says: "This tournament speaks for itself. It was the most successful and best managed shoot that I ever attended, and this is the opinion of every sportsman on the ground. Many thanks are tendered to Mr. Turrill and Price, also their large corps of athletes, for attendance and courtesies. All went home perfectly satisfied and well pleased."

THE NIAGARA FALLS PIGEON TOURNAMENT.—The following is the programme of the tournament given next month under the auspices of the "Niagara Falls Shooting Club," on the week at which the National Convention holds its meeting. Two thousand pigeons have been ordered, and if these do not suffice, the boys will send for more. The members of the club seem to be unanimous in the purpose to give every one a good time at the lowest possible expense, and we think we can safely promise it for all except the pigeons. There is a \$1,000 money prize.

The shooting will be conducted according to the rules of the N. Y. State Sportsmen's Association, except in the matter of miss-fire, where the gun has been properly loaded, the shooter has another bird, and the charge of shot is limited to 1 1/2 ounces. The programme as arranged is as follows:—

Table with columns: Prize, Amount. Rows include First Day, September 9th, \$400-10 single birds each; Second Day, September 10th, purse \$500-10 single birds each; Third day, September 11th, purse \$600-10 single birds each.

In the above shows the entrance fees will be \$10, per cent to fill, and Captain A. H. Boatman, also Klamath, E. L. Thicker, J. E. Ward, and Mr. Chase, of Pontiac, Mich., are excluded. Fourth day, September 12th—purse \$1,000—20 single birds each—free for all:— First Prize, \$400; Second Prize, \$200; Third Prize, \$100; Fourth Prize, \$50. The entrance fees in this contest will be per cent—\$10 per cent. No betting will be allowed on the grounds. Shooting each day to begin at 10 A. M. Entries may be made previously with the officers of the Niagara Falls Shooting Club, as follows:—T. J. Murray, President, Wm. Pool, Secretary, J. M. Wither, Chairman of the Board of Direction, or on the ground, or by mail to the time specified for the meeting. Any other sportsman abroad who desires further information should address S. T. Murray, President N. Y. S. Club.

Answers To Correspondents.

H. W. F., Boston.—No more of Roosevelt's "Superior Fishing." Dr. G. L. H., Hartford, Conn.—Mr. Raymond has no Laverack pups for sale at present.

E. M., Boston.—Thanks for your compliment, and allusions to our journal and pledges of co-operation.

Subscriber.—The rifle range at "Creedmore" is a broad meadow or moor, so named from the farmer, A. M. Creed, who formerly owned it. Query.—Is there good fishing at Greenwood Lake, Monroe county? Ans. Yes; but we cannot tell how abundant the fish are.

H. L. M.—Will you please tell me where I can get, and what is the price of, Ruxton's "Life in the Far West"? Ans. Harper & Bros., printed in 1854; possibly out of print. Price, \$1.75.

Piscataqua.—Where is the best place to go in the country for small shooting and what? Ans. If you will start so far distant you wish to travel, wherever you prefer the West, we will gladly give time and place. Boy's Reading, Pa.—Where can I get Peabody's metallic no. 7 cartridges, No. 45? If that size is suitable for my gun, I will want 300 or 300? Ans. John P. Moore's Sons, 300 Broadway, N. Y.

Oscar.—Hatte Falls.—Can Spratt's dog biscuits be obtained in New York? If so, where, and at what price? Ans. John Kridler, Philadelphia, Pa. What is the most killing charge for a 28-inch bore, breech loader? 38 drachms powder and 1/2 shot.

A. P. W.—Which is the best place on the East River for blackfish, blue flounders, &c., during the months of August and September, and which months are best for the kinds named? Ans. See Fish Column in this week's paper.

J. A. B., Birmingham, Mich.—Can you inform me where I can get Spanish cedar for a boat, and the price. I want it about 5 inches wide, half an inch thick, and 18 feet long. If possible, put us in communication immediately? Ans. Mr. Ingersoll, boat builder, South-street, New York.

M. F. W., Backing Ridge, N. J.—A party of ten wishes to take a trip to camp out ten days or so, hunt and fish, &c. Where shall we go, not over 100 miles from New York? How is northeastern Pennsylvania for birds, deer and fish? Ans. See reply to L. E. Ted in this column this week.

Paip U. Subscriber.—Please inform me of the best flea exterminator to use upon cats. Paid Subscriber having tried carbolic acid soap, (dog soap) has killed two cats? Ans. You might try the remedy we gave in last week's correspondent's column, or else the Persian insect powder, which last blow in with a rubber injector.

Northern Pacific.—Can you inform me of the method adopted by your marketmen to transport small game from the West? I mean prairie fowls and the like? Ans. Perhaps the best method is to pack your birds in a box filled with ice, and then place this box in a large one filled with sawdust.

J. N. R., Philadelphia.—A party of ten are going to camp out, and would prefer going to Monroe or Pike counties in Pennsylvania? What portion of either would be the best? Ans. Westport Tavern, Bloomington, Pike county, Pa. 2d. What time would be the best for all shooting and fishing purposes? Ans. September, 2d. What kind of game is to be found? Ans. Ruffed grouse, deer, bear, and a few wild fowl later in the fall. What a guide is necessary, where to one be procured, and what would be charge for a month? Ans. There are two guides at the tavern.

Centre-Board.—Never knew of any effective preventive of sea sickness, but we have had the following remedy in our scrap book for some time, and it thinks it looks reasonable. Not being afflicted with sea-sickness we have never had occasion to test its efficacy. 1. While sitting avoid resting the feet upon the floor. 2. Be seated so that the roll of the ship shall not pitch you forward or backward, but from side to side. 3. Whenever the premonitory symptoms of sea-sickness occur, do not fix attention on any near object; omit reading or writing; go to meals regularly; eat sparingly; of plain food.

L. E. Ted, New York.—Can you tell me of any reliable guide in the Muncy or Bald Eagle ranges of the Alleghanes? Ans. Write to F. A. Maxfield, of Lovellton, Wyoming county, Pa. He knows every guide in the whole country. Would a party camping in that region stand a fair chance of finding game and fish enough to live on? Ans. Very fair indeed; good hunting ground at Muncy Creek and the Loyalsock, Mahoppy, &c. Col. Rickett keeps a sporting house at Long Pond, on the Delaware tumpike leading to Susquehanna river, and through to Dnshane, the best terminus of the Sullivan and Erie Railroad. Long Pond is the very heart of the wilderness, and can be easiest reached from New York by the Mahoppy by taking the early Valley Railroad to Mahoppy Station, and thence by stage and rail.

Wm. B. Leez, Kennet Square, Pa.—Which would be the best trapping ground adjacent to north shore of Lake Superior? Is there any steamship line running via the north shore of that lake, from Cleveland? Any Indians? Ans. There are several Hudson's Bay Posts, on North Shore of Lake Superior, but although the trappers are in immense numbers, they are very hard to get to, and the boats are of the most miserable and unsafe type, indicating best trapping ground, is Fort William, Red Rock post-office, Mr. McKenzie factor. Our opinion is that it would not pay to trap in that country, more especially as the employees of the Hudson's Bay Co. might regard an intruder as an interloper. But you can be better posted by addressing a letter to McKenzie, or to Robt. Crawford, Red Rock post-office, by the Hudson's Bay Co. mail, to the Hudson's Bay Co. of the best game and fur country. Steamers connect with Cleveland to go both by Duluth and by Buffalo. Indians not troublesome.

Gasket.—What would a new cat-rigged, centre-board boat or yacht cost with everything complete? Ans. A twenty-eight foot yacht might cost as high as \$750; a sixteen foot one, say \$250. Your best plan is to buy a good second-hand craft, which are often advertised at very low prices. The Magazine's object, on matter of boats, is to give general news? Ans. This depends upon what use you expect to place it in. A Barnegat boat is quite a different affair from a cat-boat. The latter are properly pleasure boats, and are often built very large, while the regulation Barnegat is only 12 feet. For full description of latter, see FOREST AND STREAM, vol. 3, No. 31, page 174. They are sometimes known as sneek-boats, from being used to approach wild fowl, though they are perhaps as frequently used for fishing. They are very crank, and in the hands of an inexperienced, very unsafe. One of the best of these boats that we ever saw can be bought for \$45 at Barnegat village of old San Perrine of long reputation as a builder of these craft, but now too old to make any more.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME BIRDS, AND OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK, (POST OFFICE BOX 2638.) 125 SOUTH THIRD STREET, PHILADELPHIA. COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 20 cents per line. Advertisements in double columns 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, AUGUST 20, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted. All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful information between gentlemen and women sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and commendation of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will render to no depraved tastes, nor permit the legitimate sports of land and water to those base naves which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Managing Editor. WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, AUGUST 21st.—Trotting meeting at Wilkesbarre, Penn.—Trotting meeting at Hornellsville, N. Y.—Trotting meeting at South Norwalk, Conn.—Trotting at St. Paul.—Americans vs. Irish at Dublin, cricket and base ball—Chatham vs. Chelsea base ball club, Capitoline grounds—Halfax Cricket Tournament, Nova Scotia.

SATURDAY, AUGUST 22nd.—Trotting meeting at St. Paul, Minn.—Trotting meeting at Potsdam, N. Y.—Running meeting at Saratoga, N. Y.—Americans vs. Irish at Dublin, cricket and base ball—Mutual vs. Atlantic base ball club, Union grounds—Crickets Tournament, Halifax, N. S.—Annual cricket Dorchester Yacht club, Mass.—Practice day Harlem boat club, Harlem, N. Y.

MONDAY, AUGUST 23rd.—Trotting meeting at Potsdam, N. Y.—Americans vs. Scotch at Glasgow, Scotland—Fly-away vs. Competing clubs at Adams, Base Ball Tournament—Four-sided races—Mutual vs. Olympic at Albany, N. Y.—Crickets Tournament, Halifax, Nova Scotia.

TUESDAY, AUGUST 25th.—Trotting meeting at Penn Yan, N. Y.—Trotting meeting at Earlville, Ill.—Trotting meeting at Hartford, Conn.—Trotting meeting at Gardner, Me.—Trotting meeting at Manchester, N. H.—Americans vs. Scotch at Glasgow—Chelsea vs. Keystone base ball, Capitoline grounds—Fly-away vs. St. Lawrence, Kingston, Canada—Crickets Tournament, Halifax, Nova Scotia—Deerfoot Trotting park, Brooklyn, N. Y.

WEDNESDAY, AUGUST 26th.—Trotting meeting at Penn Yan, N. Y.—Trotting meeting at Hartford, Conn.—Trotting meeting at Gardner, Me.—Trotting meeting at Manchester, N. H.—Fly-away vs. competing clubs at Oneida, N. Y.—Trotting meeting, Deerfoot Park, Brooklyn, N. Y.

THURSDAY, AUGUST 27th.—Trotting meeting at Penn Yan, N. Y.—Trotting meeting at Hartford, Conn.—Trotting meeting at Gardner, Me.—Trotting meeting at Manchester, N. H.—Fly-away vs. competing clubs at Oneida, N. Y.—Trotting meeting, Deerfoot Park, Brooklyn, N. Y.

OBITUARY.—Died, on Tuesday, August 18th, in Brooklyn, at the residence of her son-in-law, Charles Hallock, Esq., Editor of this Journal, after weeks of unremitting suffering borne without murmur, Mrs. Julia A. Wardell, relict of the late Oliver T. Wardell of New York, aged sixty-four years.

CANARIES.—Those of our readers who wish to procure these beautiful pets, are referred to the announcement of a large importation by Mr. Louis Ruhe, 95 Chatham street. The first shipment is expected to day, and consists of first-class German Hartz Mountain birds, and will be followed by weekly shipments during the season. Mr. Ruhe has an established reputation in his business, and offers liberal inducements to cash or prompt-paying customers.

"GO TO THE CITY."

IN the Manchester (Vermont) Mirror is a suggestion to farmers which we like. It advises them now, when work is slack, to "take a vacation, and run into town, just for a change."

We, who are confined to counting-rooms and offices, and to closely-walled premises in cities, need extra elbow-room and a change of scene; so we go to the country. The eye and the mind find relief in new objects and new colors, and the more vigorous the pursuit after these objects, within judicious physical effort, the more robust and elastic the body becomes, and the more cheerful the disposition. We add five pounds per month to our live weight, and gain mental nourishment and stimulus sufficient to sustain that pressure and strain without which the highest duties of life could not be performed.

Now, that which clothes the citizen with flesh and muscles, is only "wear and tear" to the countryman. The low of kine, the babbling of brooks, and the rustling of leaves become monotonous to the farmer; his eye grows tired with the vivid green of the fields, and he who is always sowing seed, and turning over, and covering, gets morbid and heavy with waiting for things to "turn up." Did not autumn bring crimson and golden relief, the man would die of ennui produced by droning sameness and plodding monotony. But, take that ambiguous season of the summer hour which farmers designate as being "between hay and grass," when green things have done growing and the harvest is ripening, and send him to town for a month to do nothing but see "the sights," and he will actually grow fat. Even late hours will not hurt him, nor a temporary indulgence of the stomach make him thin. By mingling with large numbers of his fellows and seeing their handicraft, he will gather enlarged ideas of himself and them, and increased respect for both, if they deserve it. A host of new objects will fill his mind, and vivify his thoughts, and enliven his labors when he comes to the ingathering of the harvest, whose increased garnerings will be then required to pay for these expensive indulgences, which no regrets can follow, simply because he had a "good time," and is happy in the remembrance thereof.

Yes; let us all have change! Let us make some arrangements by which we can leave both farm and merchandise at a fitting time and opportunity and go somewhere. It matters little where we go, or how we go, so that we only get the value of our money in rest, rejuvenation and sound condition. There is oftentimes a year's recreation in a single week of exercise that is untrammeled of business cares. Sympathy should not alone attach to the unfortunate cant-get-aways of cities, but we should have some grain of compassion for the countryman, whose weary round of toiling years is employed in making grain for himself. So mote it be.

BEYOND DEPTH.

THE twelve published deaths by drowning within the past week is not encouraging to bathers whose ambition reaches beyond six inches depth of still water. Some persons are never satisfied in what they do, until they get beyond their depth; never pausing until they put themselves in a position where they are obliged to "tread water." It is a delightful sensation to them to know that they can't touch bottom, but that they can, nevertheless, contrive to keep their heads above water by novel devices and constant exertion. Thus, they not only show to others their superior powers, but they feel astonished at them themselves, and are possibly more than astonished if they get safely to shore. There is pleasure in danger. They like to test the problem of chances, which those who have studied it most have ascertained to be about 40 per cent. against success. It must be this that invests the ambitious efforts of our surf bathers with such great charms or inducements. It cannot be that they go out into the surf and the undertow and the neighborhood of sharks just because they think that a "good wash" in the ocean is wholesome, or conducive to longevity. This is not the rational converse of the fact that those bathers generally die young who are "washed ashore" by the breakers. Neither can it be that they hope to change natural laws, and become fish. Men cannot be fish and swim, any more than fish can walk about on dry land. Men have tried to fly, too, and have generally broken their necks in the experiment. Birds, fish, and men are created differently, with different organs, different functions and different appliances for their several kinds of locomotion. Very likely, if men had feathers they could fly; but all the men we ever saw objected to feathers, especially if they were mixed with tar. So, also, as to fish, decent men dislike to be thought scaly, no matter how great their fondness for the briny deep. It is true that men can acquire the art of swimming quite beyond the usual gift of nature, and when so attained, it is a most valuable acquisition. But still, it is not wise for even the best swimmers to indulge temerity. Powers of skill and endurance have to be tested often enough by downright necessity, without being foolishly tampered with, to gratify vanity or excite the surprise and applause of other people. We seriously object to all attempts to swim extraordinary distances, at dangerous depths and in dangerous currents, and with means of rescue provided at hand in case of casualty; and we believe that the examples thus set, especially by young women, excite and provoke the emulation of many foolishly persons, who are certain to be drowned, when they might live to a good old age on dry land. This attempting to cross the English Channel,

this testing the undertow at Long Branch for thousand dollar purses, the swimming contests by men and women in the swift currents of our rivers, is all wrong and ought not to be encouraged. Yet one-half the world would wish to see Sam Patch leap water falls, or Blondins wheel their barrows on single wires two hundred feet above death, but possibly within one span of eternity, and gaily applaud, while the fools risk all.

By all means learn to swim, we say, it may save many lives from shipwreck or untoward accident; but swim discreetly, he not venturesome, for the bathers who cannot swim at all is safer than the one who swims but little, for he is almost sure to keep within bounds and not go beyond his depth. However, as more lives are likely to be saved by remedy than prevention, we herewith repeat the directions, which we printed last week, how to restore the apparently drowned. They emanate from the Massachusetts Humane Society:

"Convey the body to the nearest house with head raised Strip and rub dry. Wrap in blankets. Inflate the lungs by closing nostrils with thumb and finger, and blowing into the mouth forcibly, and then pressing with hand on the chest. Again blow in the mouth and press on the chest and so on, for ten minutes, or until breathing begins. Keep the body warm, extremities also. Continue rubbing; do not give up so long as there is any possible chance of success."

THE FROG BUSINESS.

LAST year, in Nature, Mr. St. George Mivart wrote a series of very remarkable papers on the Frog, which were indeed masterpieces of profound learning. We do not imagine that Mr. Smiley, of Watertown, ever read them; but for a thorough acquaintance with frogs as an alimentary article, and the modes of catching them and preparing them for market, we are willing to pit Mr. Smiley against the world.

The United States and Canada possess a mine of wealth in frogs, for the family of the *Rana* are gloriously represented. If we can brag of the biggest rivers and the biggest lakes, we may talk in an exaggerated way about our frogs; for what latrachsians can compare with our *Rana pipiens*, six to twelve inches long, and the northern bull frog (*Rana horvathensis*), somewhat smaller, and both famously musical?

"Would you listen to the croaking of the frogs, and when they chaunt a loud 'toe peening from the boges'?"

This is what Mr. Smiley told us:—"Frogs are caught entirely with hooks. You take three hooks, lash them together, and bait them with a bit of red flannel. You use a cane pole, and some three feet of line. You see your frog in the marsh, you dangle the red thing before him, and he goes for it, but he doesn't swallow it; he sees it ain't good to eat, but is kind of curious like, just as a bull has a fancy for red colors. He is fascinated somehow. Then you work your hooks under his jaw and yank him. Another way is to go out of nights and have a light on the boat. The frogs come to see the illumination, paddle around with their heads up, and you hook them. Irish Creek, that runs into Lake Ontario, in Canada, is the great stamping ground for frogs. When we get as many as five hundred frogs we pen them up, and then dress them afterwards as they are wanted. A man handy at dressing frogs can prepare for market as many as 250 an hour. We slip their skins off by means of a pair of pincers. Frog time begins in June, and lasts until cold weather. The biggest frog that ever was caught in the Canada region weighed three and a quarter pounds, and when dressed turned the scales at two and three eighths pounds. I could not say whether their voices increase with their size. At nights they are awful noisy, and no doubt this big one was a hoarse musician. The biggest ones come from Canada, and six or eight pounds is about the way they will run. A good catch will be about two hundred a day. I send regularly about eight hundred frogs into the New York market every week, but the demand is larger than the supply. We ship them one hundred pounds to a box, and they come to the city sweet and fresh, packed in ice, in about twelve hours. Don't eat them myself. It ain't prejudices, but you see handling so many of them destroys the appetite for that kind of food. Don't think a single person in the region where they are caught eats frogs. Where they are caught is one of the finest places for fish and game in the country. The exact spot is on the Canada side, opposite to Wolfe Island, in the St. Lawrence, where it runs out of Lake Ontario, and Kingston, Canada, is the headquarters for frogs. Cape Vincent, in Jefferson county, is a great place for fish. This spring that place sent off every week to market sixty tons of fish, made up of pike, bull heads, trout and white fish."

"Do you ever have a surplus of frogs?" we inquired. "Rarely, if ever," said Mr. Smiley. "How would it do to them?" we asked. "If France takes all our surplus quantity of lobsters, and contracts for them years ahead, we have no doubt she would be pleased to swallow all the frogs you could ship."

Having thus, as we think, got to the bottom of the frog business, we left our intelligent informant, revolving in our mind the feasibility of shipping cargoes of canned frogs to France and the rest of the world.

A NEW ARTICLE FOR PAPER.—Years ago the paper manufacturers of this country placed before the public a very cheap and very poor quality of paper, made chiefly from straw. These last efforts in paper making were made up into small bags for grocers' use, and were used for a short time only, as they proved quite unfit for use, not bearing the weight of a pound of sugar without tearing. The paper was made a stronger and better paper in constructing their nests, and the striated hornets a far more durable quality of paper. Now we learn from a friend at Chicago that certain enterprising manufacturers of paper in England are importing from this country a kind of hay for paper stock. This is the well known "slough hay," or prairie grass, grown in great abundance in many por-

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

Salmon, Salmo Salar. Salmon trout, Salmo conifinis. Trout, Salmo fontinalis. Miegobiontraying, Thymallus tricolor. Limb-locked salmon, Salmo gairdneri. Micropterus nigricans. Black bass, macropterus salmoides. Sea trout, Salmo trutta. Striped Bass, Morone saxatilis. Weakfish. Bluefish, Menidia menidia.

The display of fish on the market slabs is about as last week, in quantity and variety, but much briny area is forged in order to gather them in, and fishing for sport has become slack, and the fish "mighty uncertain." Our correspondent at Barnegat Bay, who keeps us thoroughly posted, writes on August 17th that success is varying. One day W. C. Rogers, of New York, caught seventy king fish and twenty weakfish off Forked River Point. On the mussel beds near Kinsey's, at the Inlet, is a favorite sheepshead ground, and fleets of skiffs and snag boats are always there. Half a dozen fish to a tide is a pretty fair catch, so that, if there are twenty boats, the total catch would reach 200. The best time for fishing is at high water slack, that is, from the first of the flood to the first of the ebb. A day or two ago young Willie Kinsey, son of J. W. Kinsey, the proprietor of the Inlet, only eleven years old, took a ten pounder with a rod and reel, which is a very creditable performance for any one. A few bluefish have been caught in the channel and at the "Entrance buoy," weakfish is the staple article at present. Soft crabs plenty, and "devilish crabs," too, for that matter, at Al K's. We cannot, in the present state of things, promise heavy catches to any visitor to Barnegat. We have a letter from a Peeks-kill gentleman who was down last week, who speaks of having most gratifying success catching weakfish for two consecutive days, over a hundred in all.

There is a natural rivalry between Waretown and Barnegat village, but as the places are but three miles apart, by the same railroad, both are equally accessible to good fishing points.

The fishing for striped bass in the East River has been good during the past week. Parties leave Col. Brown's at Ninety-second street and avenue A, where boats and bait are always to be had, for the best fishing grounds, viz., "King's Back," Flood Rock, Mile Rock, Holmes Rock, "Nigger Point," and the Rope Walk, Ward's Island; also the Long Island shore at Woolsey's Point and Lawrence's Eddy. The fish average three pounds each. Later in the season bass weighing thirty pounds are taken by trolling with squid at night in Hell Gate and vicinity.

Capt. Benjamin B. Church, of Cuttyhunk, recently caught a big bass, but while hauling it in a big shark seized it and took half. The portion saved weighed forty-two pounds.

At Alexandria Bay, on the St. Lawrence River, and throughout the Thousand Islands generally, fishermen and fish have congregated. At the Crossman House there were 175 people at one time, including the following notables, anglers, and "gentlemen in general":—Hon. John C. Breckinridge and wife of Kentucky; C. R. Breckinridge of New Orleans; Gen. M. McQuade and family of Utica; Mayor Hunter and family, Brooklyn; Marcellus Massey and family, New York; Fred S. Massey family, Brooklyn; Dewitt C. West and family of Lowellville. The Crossman House is already a favorite resort and seems to be well liked and patronized from basement to Mansard.

All the Erie railroad officers are either fishermen already, or are rapidly acquiring the rudiments. Secretary McDonough is now among the salmon and trout of Lower Canada. Cashier Thomson goes to Colorado in a few days, in search of an item for FOREST AND STREAM, astray in the Middle Park; Treasurer Shearman gets away wherever he can, and Superintendent Abbot is of course devoted to the "Abbey" and other flies.

Black bass fishing has not been good thus far this season in the vicinity of Niagara Falls. A letter from a member of the Niagara Falls Shooting Club, says:—

"I notice here that the grass on the bars that generally appears above water about July, is just beginning to show itself, a full month and more late. As the grass bars form eddies at the foot in which the bass delight to lie, we may have an full amount of sport yet, although a little late. The rock bass and perch fishing was fine this spring."

A letter from Moosehead Lake says that trouting there cannot now be surpassed. A. B. Farrar is now accommodating twenty or thirty anglers at his house at east outlet of Moosehead. He is an old surveyor and capital guide, and can be addressed at Greenville, Maine.

A few weeks ago Mr. Ostar Morse, of Amherst, Mass., took, with fly, eight trout in a stream at Shutesbury, twenty miles from Alburgh, weighing nineteen and three quarter pounds. How is that for fishing? The largest one was sold to a Boston gentleman for \$5.

It is not known, that near as St. John's is to Montreal, and large town as it is, the sport there is so good. Two of the leading people here have caught thirty pounds of fue fish between them in an evening, with the fly, which, as the Scotch guide expressed it, is "gentleman's fishing." A disciple of Mr. Isaac Walton, from Montreal, made as big a land trolling with a minnow. They consisted of rock bass, black bass, shad, &c., and some of them weighed over two pounds. To those who like "the gentle sport," St. John's is a nice easy distance from Montreal, not too near, not too far; there is an excellent English hotel there, and those who have pleasant associations with foreign climes will enjoy a stay in a thoroughly French family hotel, clean and airy, with good cooking and moderate charges.

FISHING IN THE SCHUYLKILL.

NORRISTOWN, Pa., August 10th, 1874.

EDITOR FOREST AND STREAM:—

Black bass fishing has commenced in the Schuylkill, and quite a number have been caught, ranging from 4 to 5 pounds in weight in the swift waters below Haverling, Catfish, Norristown, Conohochoking and Flat Rock Dams. The principal bait used is the live minnow (shiner), although worms, clams and cheese have been successfully used.

Mr. John Cope, of Norristown, one of those persistent fly-fishers who cannot be induced to use bait, has, on many occasions, used flies, and, I think, has been as successful as if he had used worms. He uses a minnow-like fly—large and gaudy—but does not think that the fish are particular as to any special color. On Thursday last he took, at Flat Rock Dam, four bass, averaging from 2 to 3 pounds, one rock fish (striped bass) 14 pounds, white perch, sun fish and chub—five kinds, all with fly. Last fall, at the same place, he took one bass that weighed over four pounds, and he also took a trout at one cast. The Conohochoking and Flat Rock Dams have, by far, been the best places; but we think that later in the season the others will be better than they have been.

Our river is now high, and muddy from the heavy rain of Saturday; but when it clears we look fine for fly fishing. The experiment of stocking our rivers with bass has proved a complete success, and there is some talk of stocking it with the delicious little white perch.

LAKE STERLING.

SUFFERN, N. Y., August 12th, 1874.

EDITOR FOREST AND STREAM:—

This beautiful lake, though comparatively unknown to the angler, is held in high esteem by those of the fraternity who have fished its waters. Nestling lovingly among the hills at the foot of the mountain's summit, surrounded by woodland and skirted by rock-bound shores; with its water pure and clear as crystal, reflecting the sunshine and the shadows, so lovely a nature can contemplate it and not call it beautiful. And so thought we—a party of six gentlemen—when a few days since we had the pleasure of spending a day on its waters. "Seeing is believing" is an old adage, and is true in this case, and so some of your readers may have a desire to spend a day or two at some lake easily accessible and so myself and friends don't belong to the "Nameless Creek" class of sportsmen, we don't object to making known the whereabouts of the lake. I think it is in Orange county, N. Y. State, and to reach it, take Erie Railroad to Sterling Junction, or in case the train doesn't stop there, go to Staatsburg, get off, walk back to the junction, and take cars per Suffern Mountain Railroad to Sterling Junction, the terminus of the road. The train makes but two trips daily, leaving the junction at 7:30 A. M. and 1 P. M. Enquire at the junction for the superintendent, John C. Missmar, (who, by the way, is both an angler and a gentleman) from whom it is necessary to obtain an order for the boat. The lake is but 500 yards distant from the miles. There are two boats, one large yawl, capable of carrying fifteen persons, and one small boat, which will safely carry six "light" weights. The fish were mostly taken by one pickerel and perch, and the former are taken weighing from 4 to 7 pounds each. There are two ways adopted for catching them, one by trolling, as I the other by "still" fishing, with live minnows for bait. Occasionally a brook also a lake trout (salmon) is caught. Speaking to Mr. Missmar on the subject, and expressing some doubts as to its truth, he replied:—"Both kinds of trout have been caught in the lake, and I have the best evidence of it, a pickerel taken from the lake was presented to me, and upon its being opened, a trout eight inches in length was found in its belly."

The most successful angler who, as yet, has fished there is a Mr. Miller from Newburgh, N. Y., who invariably catches a goodly number of large fish. In the month of July this gentleman, accompanied by his father and a few friends, set out on a party of weeks at the lake, with them three tents and camp outfit, and pitching their tents in a very dry and picturesque spot, they camped out, taking solid comfort and had a good time generally. When they left, tents and contents were left standing and with no one to guard them, it being Mr. Miller's purpose to soon renew the sport. It speaks well for the honesty of the place, when a body of men went to the lake, and left their tents in the open to no other end than this. And then the most! It is really worth one's while to visit them. Iron ore in endless quantity, and of a fine quality, has been mined in these mountains for over a century. But as I intended simply to locate the lake, I will not go any farther in describing the other attractions and points of interest, but will only add that the entire trip will prove satisfactory and of all the kind of all the who make it. As to the fishing, our experience was as follows: The sun showed itself for one-half an hour only the day we were there, and in that time Missmar caught a fine pickerel, "just to convince us," he said, "that there were fish in the lake." The rest of the day was stormy, and fishing was abandoned.

One of our party had a lame back; took medicine. Another a sore foot; took medicine. Another took medicine because he was wet, another because he was dry. Another, a philanthropist, in order to get his humanity to man, took some to keep us company. Three different prescriptions, taken for different ailments, and yet, no matter whose health was passed, it met with a cordial reception. And one, and one of us, who, being in robust health, did not want any doctor's stuff, went a fishing. Encouraged by some flies and worms, and a pickerel, he went to the lake, and finding a rod to his taste it was unjointed, old, crooked, and probably water-logged, he made fast his line and cast. Result about 25 trout, brook and lake. The brook trout looked like the old-fashioned sun fish, being short and fat, but being speckled, of course they were trout. The lake trout were golden yellow; but they were larger would have thought them perch. Somebody who could't see clearly, had the impudence to call them killies, and then our friend thought it time to stop. He has since gone to Greenwood Lake to have it cut; means to fish alone and catch what he pleases. Will expect a fishy report from him.

E. S. WASKNER.

TROUTING IN NORTHERN MICHIGAN.

MARQUETTE, L. S. Mich., August 16th, 1874.

EDITOR FOREST AND STREAM:—

As to the best trout streams in northern counties of Michigan, I will commence at a point about thirty miles above White Fish Point, the entrance to Lake Superior, which is five miles from Sable Point. The Marquette River is a large, and a great many of them. A beautiful lake 4 miles wide and 2 long lies about 4 miles from Grand Marais river, and is filled with black bass and pickerel. A party fishing here last week caught 14 bass in two hours, by trolling, the largest of which weighed 5 pounds. Pickerel are very large here also—as high as 20 pounds or more. This lake is about one mile south of Lake Superior, and requires boats to reach across an immense sandy beach to get to large of the dock in the bay. There are many small streams and lakes in the vicinity full of trout. An-trala Lake comes next, abounding in pickerel, with plenty of deer about. Next comes Langing White Fish Point, and then the Chocoy River. In this river, which is three miles from Marquette, I have taken trout weighing very large. Trout and deer are plenty. In Anas River, at the head of the bay, I have caught many trout of 8 and 9 pounds in weight. I have also caught them to large of the dock in the bay. There are many small streams and lakes in the vicinity full of trout. An-trala Lake comes next, abounding in pickerel, with plenty of deer about. Next comes Langing White Fish Point, and then the Chocoy River. In this river, which is three miles from Marquette, I have taken trout weighing very large. Trout and deer are plenty. In Anas River, at the head of the bay, I have caught many trout of 8 and 9 pounds in weight. I have also caught them to large of the dock in the bay. There are many small streams and lakes in the vicinity full of trout. An-trala Lake comes next, abounding in pickerel, with plenty of deer about. Next comes Langing White Fish Point, and then the Chocoy River. In this river, which is three miles from Marquette, I have taken trout weighing very large. Trout and deer are plenty. In Anas River, at the head of the bay, I have caught many trout of 8 and 9 pounds in weight. I have also caught them to large of the dock in the bay. There are many small streams and lakes in the vicinity full of trout. An-trala Lake comes next, abounding in pickerel, with plenty of deer about. There are many small streams and lakes in the vicinity full of trout. An-trala Lake comes next, abounding in pickerel, with plenty of deer about. Next comes Langing White Fish Point, and then the Chocoy River. In this river, which is three miles from Marquette, I have taken trout weighing very large. Trout and deer are plenty. In Anas River, at the head of the bay, I have caught many trout of 8 and 9 pounds in weight. I have also caught them to large of the dock in the bay. There are many small streams and lakes in the vicinity full of trout. An-trala Lake comes next, abounding in pickerel, with plenty of deer about. Next comes Langing White Fish Point, and then the Chocoy River. In this river, which is three miles from Marquette, I have taken trout weighing very large. Trout and deer are plenty. In Anas River, at the head of the bay, I have caught many trout of 8 and 9 pounds in weight. I have also caught them to large of the dock in the bay. There are many small streams and lakes in the vicinity full of trout. An-trala Lake comes next, abounding in pickerel, with plenty of deer about. In Anas River, at the head of the bay, I have caught many trout of 8 and 9 pounds in weight. I have also caught them to large of the dock

In the best down the harbor there occurred little change in position, the Vision, of the sloops, seeming to show a little more speed in the light wind, and the Wanderer slightly decreasing the distance between herself and the Magic.

All the yachts worked short stretches down the Narragansett shore. About 1:15 the Gracie took tacks with the fleet and stood to the southward. At 1:30 the Magic and Wanderer tacked to the southward of Point Judith, the Rambler at the time being well to the leeward, the three sloops, Vindex, Arrow and Vision, close together off the point.

The schooners now having a long leg to the southward, set their staysails and jib topsails, and succeeded in reaching the buoy with only one short board to the westward for about ten minutes. When the Gracie stood her about on her beam reach to the westward, the wisdom of course in breaking tack with her competitors, was plainly shown as she crossed their bows to windward fully two miles. The Rambler held her stretch to the southward for some time after the Magic and Wanderer tacked ship, and lee bowing the tide, gained considerably on them. This, in connection with the fact that the other schooners had gotten too far to the windward of their course, enabled her to round the buoy in the advance of the Wanderer and not far astern of the Magic.

The time of rounding was as follows:—

Table with columns: Name, H. M. S., Elapsed Time, Corrected Time. Rows include Gracie, Arrow, Vindex, Wanderer, Rambler.

Now came the run home off the wind, and this race was no exception to the rule that the run is always the most interesting part of a regatta.

The Magic increased her lead considerably, and the Rambler drew away from the Wanderer.

The Arrow sloop also passed the Wanderer and fell into position astern of the Rambler.

The following is the result of the race:—

Table with columns: Name, H. M. S., Elapsed Time, Corrected Time. Rows include Magic, Rambler, Wanderer, Gracie, Arrow, Vision, Vindex.

The Gracie wins the sloop prize and the Magic the one for schooners.

THE FLEET OF THE NEW YORK YACHT CLUB CRUISE.—The 13th of August was fixed for the run from Newport to Oak Bluffs, Martha's Vineyard, and the morning was ushered in with a strong breeze and a cloudy sky, giving promise of plenty of wind throughout the day.

The prizes were a set of cups for the victor in each class; the race open to yachts of the eastern clubs; no restrictions as to canvas, and course from Brenton's Reef Lightship to the anchorage at Oak's Bluff.

From the harbor to the rendezvous at the Lightship most of the schooners had wind enough to tie down a couple of reefs in their mainsails, and the only sloops that found it advisable to start in the breeze then blowing, the "Vindex" and "Coming," went out under the slightest possible sail.

As they neared the Lightship, however, the wind moderated, and the Dauntless set her main topsail. The Idler then set the example to the rest of the fleet by turning out her reefs, and by the time the fleet bore to in line leeward of the flagship, in obedience to her signal, every one was under full sail. The yachts reporting for business upon this occasion were the Wanderer, Josephine, Idler, Alarm, Foam, Vindex and Coming. At 12:47 the signal to start was given, and the sloops were the first to gather way, the Coming getting rather the better of the Vindex in starting, leading her a couple of lengths. The schooners were also off immediately, led by the Idler, who ran up her jib topsail as she paid off, and within a few seconds had it taken in for full sail, as her fore topsail was by the board. She then had to lie clear away the wreck, during which operation the rest of the fleet left her a couple of miles astern. At imminent risk to their sticks, the other schooners began to pile on sail, getting up jib topsails, gaff topsails and main top-mast stay sails. The Wanderer soon showed to the front of the schooners, and the Vindex was doing splendidly, hauling perceptibly upon her rival.

The fleet went accompanied by the "Alice" of the Brooklyn Yacht Club, and another schooner W. M. Van Name, both did well, the Van Name, however, gradually dropping astern of the yachts. Towards 2 o'clock the wind lighted up, and the Dauntless passed the Wanderer, who fell in line astern with the Foam and Alarm.

As they approached the entrance to Vineyard Haven it breezed up again and they had all they wanted, and the Vindex, the winning sloop, passed the "Restless," which was acting as stake-boat, with the wreck of her top-mast banging to leeward.

The time of arrival was as follows:—

Table with columns: Name, H. M. S., Elapsed Time. Rows include Dauntless, Foam, Wanderer, Alarm, Idler, Josephine.

Below is the time of the accompanying schooners:—

Table with columns: Name, H. M. S., Elapsed Time. Rows include Alice, Van Name.

It was a glorious race, and magnificently won by the Dauntless and Vindex in their respective classes.

THE CORINTHIAN RACE.—We regret that this race should have had no representations from the New York, Brooklyn, or Atlantic yacht clubs. It seemed to us an excellent opportunity for demonstrating that we have real live yachtsmen in our clubs. Boston entered four yachts, the Azalia, Tempest, Fearless and Foam, and every one of them appeared and sailed upon the day appointed. New York entered several schooners and not one sent in a list of their crews as required by the committee, for the Idler, the winning yacht, sailed under the colors of the Seawanhaka yacht club.

—The yacht Seth Green won the first prize at the regatta held at Charlotte neck Rochester. There were fifteen entries and the course of twelve miles was accomplished by the leading yacht, in one hour forty-five minutes and twelve seconds.

—Mr. Loubat, owner of the American schooner-yacht Enchantress, has issued a challenge to any member of any yacht club of Europe to sail a match with his vessel next July for a cup valued at 100 guineas over the Prince of Wales cup course.

—The Halifax yacht club, with characteristic courtesy, have made the American cricket deputation—now at the Halifax tournament—guests of their club. On Monday, they took the Americans on a cruise in Halifax harbor in the club yachts.

A YACHT WANTED.—The yacht Isabel, from Boston for Portland, went to pieces off Plum Island August 14th. Her passengers, B. R. Nims, C. L. Litchell and F. E. Puger, were taken by a party of haymakers and carried to a hotel in an exhausted condition.

QUINCY YACHT CLUB.—A new yacht club with this name has been formed by gentlemen of Quincy, Mass., with the following officers:—

Commodore, James H. Slade; Vice-commodore, H. A. Keith; Secretary and Treasurer, H. M. Federhen; Regatta Committee, H. M. Federhen, John Shaw, Jr., Marcus W. White, Chas. F. Pierce and Freeman Whitmarsh. The club numbers sixty-nine members, having thirty-seven yachts. The first regatta took place on Saturday last.

Four first-class yachts entered of 23 feet and upward, of which the sloop Vision, Captain E. Wooster, won, of second class, 18 feet to 23 feet, six entries, cat rig, Secret, Captain J. Bunney, won; third class, 14 feet to 23 feet, five entries, cat rig Dolly Yarden won; of fourth class, 14 feet and under, seven entries, cat rig Captain J. Clarke won: It will be seen that most of the craft belonged to the mosquito fleet, but all were sailed under the Corinthian plan. Next regatta, 20th August.

—Up to Monday of this week there were forty-one entries for the Isle of Shoals (Oceanic) regatta which takes place to-day, August 20, off the New Hampshire coast, and already referred to in two preceding numbers of this journal. Many more have signified their intention to enter. The Idler of the New York squadron, the Wivern, Wanderer, Eva, and Curlew of the Boston fleet, the Kittie Leslie, Mercury, Mabell, Starlight, and many other yachts arrived there on Monday, Tuesday and Wednesday. In our report of the regatta next week we shall give a complete list of yachts entered.

SOUTH BOSTON YACHT CLUB.—The deciding race of the championship for first and second prizes of the first class entered yachts of this club occurred Saturday afternoon last off their club house at City Point, South Boston, Mass., resulting as follows. Start, 8:10:—

Table with columns: Name, H. M. S., Elapsed Time. Rows include Fannie, Nisad Queen, Eva, Ripple, Posey.

—The race for the championship of the Delaware, between the yachts Willie Kleutz and a Dager, was sailed August 12th, at Chester, on the New Hampshire coast, and Gloucester, to Chester buoy and return, distance twenty-five miles. The Kleutz won, beating the Dager sixteen minutes, getting in two miles ahead. Time—6:25.

—The first-class yachts Cutburt, of Coburg, Ontario, and Cora, of Detroit, sailed on Lake St. Clair August 10th, for the Goodwin Cup. The race was fifteen miles to windward and return. The wind was variable. The Cutburt won in five hours and forty-two minutes. The Cora came in eighteen and a half minutes later.

SPRING LAKE REGATTA.—The regatta at Spring Lake, Michigan, on the 12th and 13th August proved a great success. We regret our inability personally to accept the Commodore's invitation to be present in the first race for double scull shells. Curtis and Yates came into position on signal, and soon afterwards, Williams and Aleock followed them, taking choice of position, and chose the north course. Both were off with a perfect start, Curtis and Yates rowing 35, and Aleock and Williams 34 strokes per minute. At 3:35 the mile buoy was passed, Curtis and Yates a trifle ahead.

On the return both crews came spinning along at 38 strokes to the minute, and within a few minutes of a mile of home both crews put on a splendid spurt, but too late for Aleock and Williams, Curtis and Yates coming in one length ahead, in 15:27.

The second race was for six-oared shells. Promptly at the signal the D. W. Buck, of Lansing, Michigan, started into position, her crew atfired in a tasty blue and white uniform, and a few minutes later the crews of the Detroit boats, Evids and the Russells, were in position. The Russells made the quickest start, but the Evids quickly drew ahead, passing the first mile in 8:15, the Russell second, and the Buck almost out of sight behind. The Russells turned the oar and a half mile, easy four seconds ahead. On the return the Russells and Evids hid themselves out for some strong work, and did it, coming in at 34 to 38 strokes, the Russells p-ssing the flag four lengths ahead, in 18:59. The Evids came in just before supper.

The third race was for barges, and was contested by the Farragut Boat club and Chicago barge Ada M. Boyden, four oars; average weight of crew, 135 pounds; and the Grand River club, of Lansing, entering the eight-oar barge Wm. A. Barnard, the weight of the crew averaging 150 pounds. The Boyden is called a barge by courtesy, being really a large bulk shell. At 5:11 both crews started, the Evids making the start. The Evids came in just before supper, the mile buoy three seconds ahead, and came back rowing 34 strokes per minute, leading by about four lengths, both crews working their best. The Lansing crew came in four lengths ahead, at a stroke of 33. Time—14:05. The Farragut was 21 seconds later, and was given the race in time allowance.

The fourth race was for junior single sculls. H. W. Pearson won the choice, and took the north shore; Williams second, Edelman third, Standish fourth, Wiley fifth. Pearson won in 15:45; Standish second, only half a length behind, the others struggling behind.

Probably 1,000 Chicagoans were in attendance, and large delegations from Detroit, Grand Rapids, and other cities and towns swelled the crowd to probably 8,000 or 10,000.

OUR YACHTS ABOARD.

—On July 25, two American yachts contended in the regatta held under the auspices of the Societe des Regates du Havre.

These vessels, the Enchantress, Mr. J. F. Loubat, and the Faustine, Mr. G. Peabody Russel, were here pitted against several well-known English yachts, among which were the Gwendolyn, Cetonia and Corinne, schooners, and the Florida, Hironalde and Gertrude, yawls. Also, Scapin and Mesange, French yawls.

The day was so hot that nothing could be determined accurately concerning the relative speed of the yachts, the English schooners seeming to hold the Enchantress off the wind, but dropping astern when the wind hauled forward of the beam. In one or two puffs, however, which gave the large vessels a momentary elance. The Enchantress showed more speed at reaching than any of her rivals.

The Faustine, although possibly in bad luck, never seemed to distinguish herself or get out of the race.

At the finish the Corinne, Florida and Cetonia in the order named preceded the Enchantress; the Faustine was third from last.

—On July 27, the same yachts again met for a chunuel race from Havre to Southsee. This race was under the auspices of the Yacht Club de France, and the Royal Albert yacht club of England. The day again was unsatisfactory, there being no wind until just at the finish. The Enchantress, which had been considerably astern of the leaders, coming up on them in the style after getting the breeze after finishing first, not sufficiently in advance, however, to win, the Corinne, schooner having the race fast enough on time, although she carried away both topmasts and main gaff. We hope some better luck, in the way of weather may happen to our yachts in their next encounters.

—The Saratoga rowing association will hold its second annual regatta on August 28, 29, 31. Entries for the same have been received as follows: Single scull shells for the championship of the State of New York, 7; for the double scull shells, 5; for the senior single scull shells, 13; for the pair-oared shells, 5; for the junior single scull shells, 12; for the four-oared shells, 12. The crews are from the following clubs: Of New York city—Atlanta, Athletic, and Gramer-y; of Bergeu Point, N. J.—The Argonauta; of Hoboken—Albany, Albany, of Toronto—Ontario; of Niagara—Albany, N. Y.—Beaverwick Mutual; of Buffalo, N. Y.—The Buffalo; of Norfolk, Va.—The Chesapeake; of Charleston, S. C.—Palmetto; of Chicago, Ill.—Chicago Scullers; of Allegheny city, Pa.—Duquesne; of Grand Haven, Mich.—Grand Haven; of Bath, Me.—Gleam; of Portland, Me.—Amateur; of Washington, D. C.—Potomac; of Greenpoint, L. I.—Seawanhaka; of Union Springs, N. Y.—Union Springs; of Savannah, Ga.—Ontario; of Cincinnati, Ohio—Washington; and the Saratoga Rowing Association. Mr. William Woods of New York has been appointed referee. All complaints against any entry must be filed with Commodore Brady previous to the 20th, accompanied by sworn affidavits. The racing is fixed to begin each day at 11 o'clock A. M.

—Sadler, the English champion has accepted Brown's challenge to row. The race is to come off on the River Bann, at Coleraine, Ireland, in October. Brown has ordered a new boat in England.

—The Halifax rowing club on August 17, agreed to accept the challenge of Ewen Morris, of Pittsburg, to row against Brown for \$2,000, provided the race can come off at Halifax on or about the 3d of September, Morris to be allowed \$150 for expenses.

—The Potomac crew, of Washington, have taken up their quarters on Saratoga Lake. They have possession of the boathouse where Yale was located at Myer's Cedar Bluff Hotel.

—The State Rowing Association of Louisiana persist in refusing to allow the St. John Rowing Club to compete for the championship because it is not a member of the State Association. Contests for the State championship should be open to all legitimate boat clubs within the State.

—Another new club has been formed in New Orleans. It has been named the Southern Boat Club, and has already a good list of members.

—The Beaverwykes of Albany will have entries for nearly all the races at Saratoga Lake.

—The Mutuals of Albany intend doing their rowing this season at Troy, under the auspices of the National Association.

—Our Galveston, Texas, yachting correspondent, encloses us the following note, accompanied by a detailed account of a regatta held there on the 7th. We have to curtail the report of the latter:—

—GALVESTON, TEXAS, August 12th, 1874.

EDWIN ROBERTS AND STRANGE.—Great boat club, doing well, having expended something like \$3,000, and with nearly a full list. The last race was of considerable interest, and the wharf was lined with people. The ladies show, by their presence, how much interest they invest, and doing, unannounced their sons, lovers cast easy glances, and the men and gentlemen of leisure change their green baubles upon their favorite crews. You have no doubt observed the crew which has always been so fortunate as to occupy a position in the losing boat, but luck will change some day, and the boys are yet hopeful that a crew will be found to pluck the laurels from the "Gipsy's" brow. On the 22d September next, over a thousand dollars will be given as prizes, open to several classes of boats, both rowing and sailing. The merchants have contributed liberally, and all will try to make the occasion one of Galveston's great days.

The assemblage on the 7th was larger than that which witnessed the last race. The ladies, especially, were out in great numbers. The distance rowed was one and a half miles—contests, the Jennie, Boyd and Gypsy, two races; weather clear and warm; gentle southerly breeze; water smooth; time, evening; prizes, Gold Medals cross to each member of the winning crew.

FIRST RACE.—JENNIE.—Messrs. T. K. Thompson; J. B. Van Lien, and Martin Ward.

GIPSY.—Four-oared boat, colors blue, John G. Hitchcock, bow; Wm. Bondes, No. 2; John Croft, No. 3; Frank Hitchcock, stroke, and Henry Lidstone, coxswain.

JENNIE.—Wm. Boyd, four-oared boat, colors red. A. L. DeMilly, bow; G. M. Van Lien, No. 2; R. P. Ball, No. 3; Leo Nichols, stroke, and G. M. Lidstone, coxswain.

SECOND RACE.—GIPSY.—Four-oared boat, colors white. Manned by M. Gregg, bow; Ed. Boyd, No. 2; L. L. Higgins, No. 3; John Boyd, stroke; Ben Otway, coxswain.

THIRD RACE.—Wm. Boat, four-oared boat, colors red. J. C. Wortham, bow;

Fred. Lewis, No. 3; H. Painter, No. 3; John N. Stowe, stroke; L. M. Waters, coxswain.

Crew—Jennie, four-oared boat, colors blue. James Hickey, row; Geo. H. Sawyer, No. 3; E. T. Matthews, No. 3; Jos. Labadie, stroke; A. H. Perry, coxswain.

Crew—Gypsy, four-oared boat, colors white. W. K. Hall, bow; H. Levine, No. 2; O. W. Manning, No. 3; Alex. Nichols, stroke; C. J. McRae, coxswain. Tonsley truly, J. L.

TWO DAYS IN A BIRCH CANOE.

EDWIN FORBES AND STRAHL—

In your entertaining and instructive essay on a canoeing, with patriotic regard, that your descriptions of that fascinating sport are limited to the glacial and modern civilized conditions of the continent of the Old World, so called, to the unmarked neglect of the original and aboriginal article, the "birchen bark" of jessy and fact. If this non-recognition of our only national craft is intentional, I must, for one, protest against the exaltation of an artificial, unsociable, ocean-power boat, over the fairily-light, graceful and every way convenient and picturesque bark of our sensitive predecessors. For five or six centuries nothing of civilized invention equaled the Indian bark in strength, lightness, roominess and beauty and as to safety, in the hands of skilled paddlers it is only surpassed by a Yankee whaleboat. Is there anything else? Yes, cheapness, and on this point, in these peckish times, the birchen canoe is something that appeals to the noblest instincts of our nature.

If you had but a kind of average luck it will last your life time and that of your heirs—it will inherit your canoeist's taste. And now to relate the experience of "Three Wise Men of Boston, who went to sea last week in the gallant bark "Millicent," a dainty little craft, 21 feet in length and 3 feet in width, and constructed of one unbroken piece of bark, as is the custom of our "Sagoyes." My two paddles, a set of oars, and a few articles, all in all, we sailed from South Boston Point on Friday evening, July 3d, partly with intent to escape the incursion of rural Goths and Vandals attending the glorious Fourth, and partly as a laudable voyage of exploration, to determine the geography of a mysterious stream called Motter Brook, which has the appearance, on maps, of running in two opposite directions, contrary to the law of nature and the peace and dignity of the Commonwealth.

So we sailed up the Neponset, paddle and pole doing good duty on the shallows of Dorchester Bay. Above the railroad bridge we passed to the admiring glances of the fish, as a sunfish has been properly described on paper, "a modern fish will buy a canoeist's whistle in phenomenon, with its splendid convolutions of purple and gold, like a glorified lobster salad." The Neponset must be a good river for fish, since nothing will persuade them to leave it. Perhaps they're not hungry. Perhaps they were asleep. Perhaps throwing rocks into the water made them "luzzy" for we only captured a miserable little brown trout, which, while it was in the water, we were not permitted to constructively recommend the liver as an article of diet. It isn't "filling enough for the price." After supper we found a camping ground, where we turned up our canoe in the approved Indian fashion and prepared for sleep. The way to camp under a canoe is by making it a shelter for the heads of the party, under which the pillows are improvised, pine sticks strewn on the ground make good beds for the bodies, and which are then covered with woollen coats, and a final container of army blanket covers the hardy campaigners. That is how we should have built our nest, if we had had any pine tops, rubber blankets, &c. In the absence of which we simply piled our baggage together, put on our overcoats, quarrelled for a third of a blanket apiece, and waded the drowsy night. We did not sleep well. Pleas to the gods were made, and several gallons of it began dripping on our bodies, and we sat up and smoked, and conversed about rheumatism and the overrating influence of civilization. Presently from the darkness and mist emerged a gloomy citizen of Milton Forest Mills, who inquired into our several biographies, and gave us a brief sketch of his own life and the life of his father, and glorified himself as the parent of a "great" infant of the period. But we must not be taken as a specimen of the rude backwoodsmen of this section, because he is constitutionally somnolent and unregenerate; the kind of man to go to sleep before we have reached the eleventh canto of your last poem, and wake up next day, or the day after, and tell you you spoiled it in the delivery.

The great advantage of camp-making is, that you rise early, at an advantage attainable only by sleeping on a sidewalk. We arose early, at 2 A. M., and walked about the shore and village for a couple of hours. Then we cooked our breakfast and paddled across the river to the foot of the falls, where we made our first camp. It was about 400 yards long, and with our light burden proved only a trifling affair. Subsequent camps were more difficult, and the party began to weigh more each time. Well, the scenery repaid all our toil. It was a still, shady day. The river was calm as a mummy, and the clattering azaleas, which stooped down to see their beauty in the passing stream, and like envious belles, only he-held the rival charms of the fragrant water lilies below, made a picture of beauty, simple enough no doubt, but as fresh and pure as the sweet of Whittier. And as we paddled along until we came to a secluded mill where we batted and swam, and told long, reminiscences of narrow escapes from drowning, and were simply and naturally virtuous and happy. Dinner at a friend's house in Milton had the disadvantage, to us, of being cooked by a civilized cook and served on a goodly cloth, but we overcame our repugnance and ate with gusto. The day was mer, but backed the tide, and we were in the neighborhood of insects, which gnawed our lives in the morning. At Hyde Park we ended the boldest of overgrown children, celebrating the day in the highly rational and Chinese manner of our fellow citizens, by firing at nothing and trusting in Providence to furnish a human target. Small children, too poor or too precocious for fire-arms, contented themselves by firing rocks at our craft, which was the natural Anglo-Saxon expression of interest in a novelty. Then we came to the entrance of Motter Brook, the river of mystery. We found out that it ran one way very decidedly, and that way was against us. It is a narrow, noisy, dark and dirty stream, infested by mills of most inconvenient access, and fences which you have to cross over or swim under, and which seem them for no other purpose than to obstruct navigation. There were five mill races, and as object than to obstruct navigation. There were five mill races, and as object than to obstruct navigation. There were five mill races, and as object than to obstruct navigation.

So we reached the Charles river, and so began our tribulations; for, after two hours' sail, when for the first time we hoisted canvas, and the little "Millicent" showed herself a gallant sailer, there came a mighty rain that drenched us sadly and almost drowned our enthusiasm for a life of primeval simplicity. On either side stretched a marshy plain, half a mile wide, which effected a complete barrier to the idea of landing, while for miles ahead the water hid its sinuous course. The sun came down, and the light and darkness rested upon the face of the waters, when the look-out on the fore-toasted thwart-piece signalled a light on the weather bow. (N. B. If Forest and Stream wants a nautical

writer of vigor and originality, I know an eligible party "as is open to offers.") It was a house. We landed. "We called for shelter in a barn, a well-known—anywhere out of the main river. The inhabitant refused, and, after a schlemiel of immaturity in his looks, he started away disconsolate he repented. He followed us, and showed us where to find a resting-place, explaining that he didn't own the premises he inhabited, and didn't feel authorized to give us shelter in the barn alluded to. So we beached our birch, and packed our knapsacks for a long haul. Half-way to the house refuge pointed out, we found a farmer's cottage and it had a barn. Politely told us we were not for the use of the latter. The same instinct told the hospitable farmer to offer us his house, which he did; but being bound to "rough it," we declined in favor of the barn. I'm not so certain but that we repented the heroic decision in the still waltzes of the night, when we awakened on our beds of hay to pick the hay seed out of our hair and ears and wipe off the man who would fall through the roof with the barn swallows kept keeningly commenting on our misery to each other all night.

Breakfast at 8 A. M. We didn't try for rising with the lark any longer, and it still rained dimly. But we were glad of the shelter of Mr. Lorton's barn, and as we pushed off half the little bridge at Newton, we wiped tears of gratitude, mingled with hay seed, from our overflowing eyes, and said with emotion: "Bully for Morton!"

Out the chawls, the various Chawls, with its choppy waves and nasty gogalls! With its various dams and its numerous shoals, and its swamps and rocks, and rapids and holes—it is an ugly piece of navigation; and if we hadn't begun that voyage as a pleasure trip, and if this letter was not intended to be a description of the same—an imitation which no amount of past misery or future punishment can make me savor from it—should be tempted to say that we didn't enjoy the ride, and the carries, and the pebbles in our boots, and the clamminess of our shirts, as much as we might.

At night we went ashore, built a fire, and had an hour of clear weather and still digestion. It was Sunday, and we have seen only taking the persons of our acquaintance, being drowned or struck by lightning, but that we were liable to be arrested and brought before some rural Shallow for our desecration of the days; but long impudently had passed as reckless, and we sailed along defiant of the noist atmosphere surrounding us. We now began counting the portages, and we soon counted the eighteenth and last. That's a rough, but unbroken, course of six or six miles brought to our gladdened eyes the familiar spires and chimneys of Boston, and we said we were content.

Perhaps I have not made out much of a case for my favorite one by this narrative, but it was not her fault that the navigation was uncertain and the weather disagreeable. And when we canvassed the opinions of the party afterward, when the rheumatism and the caugh began to fade out of our systems, and we were again a merry and contented party, and we had had a good time. And the same was entered upon our archives, or, as we had the dedicated result of our first canoe cruise.

Boston, July 11th, 1874. J. J. Roche.

The Horse and Course.

The Saratoga Racing Association held the third day of the summer meeting on August 13th. The first race was a sweepstakes for two year olds, \$100 entrance, with \$700 added. Distance, three quarters of a mile. King Bolt won, time, 1:17. The second race was for a purse of \$500, for three year olds. Distance, one mile and an eighth. D. McDaniel's Mudge won easily by three lengths; time, 1:57. The third race was for a purse of \$800. Distance, two miles and a quarter, Wanderer winning by five lengths; time, 4:03. The fourth day of the second summer meeting was held on August 15th. The weather was charming, the track in excellent condition, and the grand stand presented a beautiful appearance. The first race was a handicap for three year olds. Distance, nine furlongs for all ages, distance, two miles. There were four starters. George West was the favorite, and won a capital race; Daylight second, Mark Clark third.

Mr. Belmont matched his horse Gray Planet, five years old, and to carry 110 pounds, that he would run a mile inside of 1:43. After several postponements, owing to a heavy track, the race came off last Friday at Saratoga in the presence of a number of spectators, admission to the course being free. Gray Planet won easily, making the time 1:42.

On Tuesday, August 18th, the fifth day's attendance at Saratoga was large, and the track in excellent order. The first race was a sweepstakes for three year olds, \$100 entrance, for a mile and an eighth. The handicap for all ages, distance, two miles. There were four starters. George West was the favorite, and won a capital race; Daylight second, Mark Clark third.

The Rochester Democrat thus describes the unparalleled performance of Goldsmith Maid's second heat at her race against time, and open to all that took place at Rochester on August 13th:—

Second Heat.—The Maid being barred from the pools, Fullerton still sold for \$100 to \$75 for the field or American Girl. They got to the word, and started. The wind, which had been blowing quite fresh, went down, and it was evident that this was the heat in which the Maid was to beat her record, if she did it at all. At the quarter, passed in 32, the Maid was first by four lengths, and Fullerton second by as wide a gap. The positions did not change save that the Maid, going like a ghost, left the others further and further in spite of their efforts. The half was made in 0:57. At the third quarter in 1:30. The little Maid never left her feet even for an instant, and, going at a pace never before seen in any race, passed the wire in 2:14—the fastest on record, beating her Buffalo time by three fourths of a second. Deble used the whip on the backstretch, and again on the last quarter, but the Maid never skipped. Fullerton beat the Girl by two lengths. The moment the heat was ended the crowd began to cheer. Many in that vast crowd had stop watches,

and were already aware that the heat was the fastest on record. Cheer after cheer went up as the Maid was brought up to the stand and taken from her sulky, and when the time was announced from the stand the shout of approval and cheer of delight were the wildest ever heard on a race track. Budd Doble was called upon the stand and congratulated by the judges, while the throng followed the Maid favorite with their eyes till she disappeared from view.

The Earl Park Association will hold their fifth annual meeting on their grounds at Earlville, La. 15th annual, Illinois on August 25th and the three following days. Premiums to the amount of \$5,000 will be run and trotted for.

The Utica Park Association last week held perhaps the most successful meeting they ever had. President Wright's reception was given on the 13th at the Utica club house. The immense number of friends of the association were cordially welcomed by the general President, and Gilmore's hand discoursed many charming pieces during the evening. On Wednesday, August 12th, the race was for \$5,000 for horses that never before had won over \$1,000. The first colt to win the three last heats in 2:37, 2:35, 2:37. In the purse of \$1,500, for horses of the 2:45 class, Magnolia won the first heat, and Wellesby Boy the three last heats and race; time—2:33, 2:29, 2:26. On August 14th Kansas Chief took the first money in the race for the 2:30 class, Stewart Milouney second, Kittie Wells third; time—2:25, 2:24, 2:26. In the pacing race there were four entries and three starters for extra purses of \$1,000. Copperbottom won in three straight heats—2:25, 2:31, 2:26.

The Hampden Park races commenced at Springfield, Mass., on August 18th, and will continue to the 21st. The famous trotters Goldsmith Maid, Judge Fullerton, American Girl, Henry, Lulu, Smuggler, Fleety Goldsard, Red Cloud, Crown Prince, and others (in all about one hundred), are now on the grounds. In former years the meetings have been very successful, so much so that the premiums offered at this meeting amount to \$30,000.

The August meeting at Beacon Park closed on August 17th. The 2:45 race, postponed from Saturday, was concluded and won by Lady Wilcox in 2:37. The 2:30 class was won by the same horse in 2:29. In the race for all Commonwealth was the favorite, but was beaten by the gay gelding Comet.

New Publications.

Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our office is promptly acknowledged. Publishers will confer a favor by promptly advising us of any omission in this respect. Prices of books inserted when desired.

THE LOBSTER FISHERY. Extracts from the General Report of Mr. Whitcher, forwarded to the Minister of Marine and Fisheries, 1873. Ottawa: 1874.

We particularly recommend this most interesting pamphlet to the attention of our Eastern growers. Compiled in Mr. Whitcher's most clear and concise style, it shows how necessary it is to put some check on the indiscriminate destruction of lobsters. Some of the statistics of the lobster business are surprising. In Nova Scotia, last year, there were forty lobster factories, and in New Brunswick, twenty-four. The second annual crop of 20,000 tons of raw material was caught, which was valued at 20,000 tons of canned lobsters. The value of this, in 1873, was \$1,214,749, and \$180,000 worth was sold as live lobsters. The need of some timely precaution to preserve the lobster fishery induced the Provincial Government to adopt a regulation on this subject in July last. This regulation prohibits the catching of more than 14 pounds in February, 1874, certain pedlars were sent in from Nova Scotia and New Brunswick begging that the regulations regarding lobster fishing should be rescinded. One point advanced by the lobster canners was, that no fish should be taken in the interior of the United States the average of the catch did not weigh more than 14 pounds. To discredit this the lobster was weighed, and it is wonderful to find the size and weight of the lobster was found to decrease in exact proportion with the number of canning factories. Where they were not caught lobsters would weigh three pounds, and were the factories more in quantity, the lobsters would diminish to even under the prescribed weight. For instance: In New Brunswick, at Westborough, Albert, and St. John, where factories were not caught for many years, the lobsters weighed four pounds; but in Nova Scotia at Grayborough, where there were eight factories, lobsters barely weighed 14 pounds. A very interesting letter from Professor Balch, pertinent to the question, may be found in the report, in which he advocates, not only restriction as to size of lobsters, but that there should be a close period during the spawning season. We are pleased to notice that the Provincial Government has made the lobster fishery a matter of interest in regard to the lobster catch. That during July and August an person in the Province shall catch, kill, buy, or have in his possession soft shell lobsters, or female lobsters with eggs attached; nor shall lobsters of less size than nine inches in length from head to tail, exclusive of pedicel, be bought, sold, or caught; and that lobsters of that size, or less in size when caught, shall be liberated.

We regret to state that, in our own markets, baby lobsters are constantly on sale. It would be easy enough to find where they come from. Will some of our Boston friends look into the matter?—En.]

Maritime Monthly. A Magazine of Literature, Science and Art. No. 3, John N. B. H. L. Spencer, editor: The Maritime Monthly Club, Philadelphia.

The August number of this excellent magazine is on our table, with a most interesting table of contents. Its leading articles comprise "The Polar Expedition" by Rev. M. Harvey; "The Valley and River Plate" by Geo. J. Forster; "What was Her Fate?" a romance; "A Run through Italy" by James Whitman; "Josiah Garth," continued; "Travels and Adventures in the South" by J. Newton Wilson; "Scrapiana," and several general contributions. This periodical has strong claims on the people of Canada, and bears gratifying evidence of success.

Commodore J. G. Bennett gave a beautiful gold-lined cup, which was shot for at pigeons by members of the New York Yacht Club and their guests on the grounds of the Narragansett Gun Club, about four miles from Newport, R. I., Aug. 13. It was a handicap, shot in the English style—five traps, placed five yards apart, 80 yards boundary. There were twenty-seven competitors, and the winner was Schuyler Crosby, who killed ten out of eleven birds shot at. J. C. Van Buren won second money, and S. B. Post saved his stake. Referee, E. M. Neal; scorer, R. Forsyth.

Captain Bogardus states in answer to "Ortolan" and others as regards to his challenge, that he will furnish the trap, the other party to provide the pigeons and trap and handle them.

Rational Pastimes.

Secretaries and friends of Athletics, Base-Ball, Cricket and other out-door... kindly mail their contributions not later than Monday in each week.

The London Post in its column report of the base ball match at Lords, played August 3, in speaking of the temperate habits of the American players, says: "The two nines were fine athletic men. As with our cricketers, out-door exercise seemed to be more a matter of habit than of necessity, as is unfortunately too often not the case with our cricketers, they all were men who led an abstemious and moderate life."

Speaking of the fielding of the base ball players, the notice in the Post, says: "The admirable part of the play had all through been the fielding. Nothing hit up in the air escaped. The accuracy of the catching would have rejoiced the heart of old Clark, and made many a slow bowler envious of the pairs of hands. But the accuracy and skill of the catching was surpassed by the wonderful precision of throwing. A moment to look, a moment to get the proper equilibrium, and then the ball is hurled, 'sharp and low,' quite straight to the baseman's hands. No fumbling, no half-volleys, no wide throws. So accurate was it that the exclamation of many a cricketer present was—'With such throwing who would not be a wicket-keeper.'"

Of the lessons taught English cricketers by base ball, he says: "The lessons taught were, as we suspected first, the importance of cultivating fielding. Consider English cricketers throw and field as the Americans did we should see much less of mammoth scores, and matches would be far more interesting. Secondly, the advantage of losing no time. If the outside took the field with half the alacrity shown by the Americans during base ball, or when the time came for the batsman to be wicketed when the base ball was done, far fewer matches would be drawn, and far more men would be able to play. Lastly, the necessity of playing for the side. A man's hits tell in his own favor when the record is kept, but they help his colleagues as much as himself. In his fielding, too, he constantly keeps in mind the necessity of enabling others to distinguish themselves, and he knows that his own unaided efforts are useless unless he is well backed up. A man, for instance, who has caught a catch when a player is on base, hurls the ball at once to the baseman in hopes of getting two birds as it were with one stone. All the players play for the side, and not for themselves. Individual prowess is never in vogue. It is not until every one has done more for his fellows than himself. There can be no fear that cricket will be ousted by base ball. It has more variety and more phases. It is both harder work and greater idleness. But many men could find time for base ball who have no time for cricket, and in bringing under the notice of Englishmen a game so well adapted to many good points and the great advantage of being playable in three hours, they have conferred on us a benefit for which our thanks are due."

The same paper, speaking of the "new American game," in another place, says: "Base ball is an American modification, and, of course, an improvement of the old English game of rounders, as it is called in West Riding, touch-ball. The children in these districts play it without a bat or club; they strike the ball with the open hand, and have posts or staves at the corners of the playground, which correspond to the 'bases' of the American game. If the ball was caught by the baseman on the ground, or if he could hit the striker with it before he reached the 'touch,' he was out."

This shows how absurd it is to compare rounders with our manly game.

The victories scored by the two clubs now in England in their games with each other, are as follows:—

Table with columns for date, location, and score. Includes 'ATHLETIC VICTORIES' and 'BOSTON VICTORIES'.

The London Times' report of the cricket match of August 3, at Lords, first day's play, is as follows: "The game commenced at 12.25 by the M. C. C. sending in Messrs. A. Lubbock and Courtenay to the bowling of Harry Wright and the former a medium-paced round-arm bowler, while the latter has a fast underhand delivery, with a very low pitch. The underhand bowler soon disposed of two wickets, Courtenay and Round both having their leg-stumps upset, when the telegraph denoted two and eight respectively. Lucas then joined Lubbock, and the latter, the former being bowled out of the latter, the score was increased rapidly until the last named batsman had the misfortune to "play on," his runs all being obtained in that finished

style which invariably characterizes his batting—three for thirty-four. Mr. Bird lost the company of Mr. Lucas, who was easily caught at point—at forty-one for four wickets—and soon after Mr. V. E. Walker had come in luncheon took place. The meal having been discussed, base ball was played until 6 o'clock. On resuming cricket, so freely did the batsmen hit that the bowlers changed ends at 46 up, and Mr. V. E. Walker driving McBride for two 4's from two following balls, he at 58 gave way to George Wright. In spite of these changes the score still continued to increase rapidly, several short runs being loudly cheered by the spectators. In fact it was palpable that the American were quite tired out. At length, just before 7 o'clock, Mr. Walker had his leg ball taken, he having played a lively inning quite his own style:—

Table listing batsmen and their scores: Courtenay, McBride, Lubbock, Round, Lucas, Schafer, McBride, Bird, V. E. Walker, H. Wright, Byes, &c.

It will be seen that the twelve included five of the gentlemen's twelve who came out here in 1873 together with Mr. V. E. Walker and the noted wicket keeper, Mr. Round, a member of Parliament. So the Americans had a very strong team against them.

Table listing batsmen and their scores: C. Courtenay, H. Wright, A. Lubbock, J. Round, W. Amos, V. E. Walker, G. Bird, W. Walker, A. W. Anstruther, H. Wright, H. Wright, A. G. Spalding, W. Amos, R. C. Burns, C. Wright, R. S. Sutton, W. Fisher, A. J. Leonard, C. Wright, G. A. M'Vey, O. Kourne, H. Wright.

The Atlantics were badly whipped in Philadelphia August 17, by 24 to 16, they having lost the previous game in Brooklyn by 11 to 10 only.

Matthew's sickness prevented the Mutuals from playing in Philadelphia on Thursday, August 20.

In a game of ball between the Harper Bros., nine and the Wynkoop & Hallenbeck, at Prospect Park last Saturday, the score stood 15 to 14 in favor of the former. The Wynkoop & Hallenbeck nine are prepared to receive challenges from any nine in the printing or publishing business. Please address HARRY C. HALLENBECK, Captain, 118 Fulton street.

The grand match between representatives of ten of the leading amateur clubs of Brooklyn and New York, which took place August 17th, was in every way a great success. Next week we will give the full score, which we are now prevented from doing by an accident to our type.

Our Index to Volume III, is in type, but will not be ready for the mail in time for this issue. It will be sent next week.

Macdonald's Dogs.

THE FOLLOWING VALUABLE DOGS have been just received from the kennel of Mr. Macdonald, and are offered for sale. The blood, as will be seen, is the very best in England:—

Liver and white young pointer dog SEFTON, as handsome a pointer as was ever seen, thoroughly broken; 250. SEFTON is by Lord Sefton's dog Sam, or which he has retained his genes, out of Sam's out of Mr. Macdonald's Champion pointer bitch Miranda, by Cotter, our brother of General Pitt.

Handsome young pointer whole between 7 and 8 months old SPREE, unbroken; price 280. SPREE is by field trial winner Squire, out of Captain May's bitch.

Young setter bitch WOOLSACK, 5 months old, by Ranger, out of Mr. Garth, Q. C.'s field trial winner. Price 230.

NOTICE.—Until sold, SEFTON will be allowed a few bunches of pure blood at \$50 each. Address, BOWHAWK, 45 Park Row, New York.

For Sale.

FOX HOUND for Sale.—A large, strong, running dog, about four years old, color white, with black and tan spots, splendid hunter, has been used for both fox and pointer. Price—Fifty Dollars. Address Geo. E. Bruce, Maplowood, Mass.

August 20—21.

J. C. CONROY & CO.,

65 Fulton Street, New York.

Fish Hooks and Fishing Tackle.

World invite the attention of amateurs to their large stock of the goods, specially prepared for the work of fishing the Long Island Claws, the Adirondacks, Lake Superior, the Maine woods, and the Black Bass regions. Miscellaneous.

Ordnance Lands Sale, TORONTO.

PUBLIC NOTICE is hereby given that on THURSDAY the 8th day of September next, at Noon, will be sold at Toronto, by Mr. Orin Wardell, Auctioneer, the annual surplus of the Reserves on Lake Ontario, containing about 1,200 acres, and Turkey Point, containing about 500 acres, respectively. To be the proper preservation of the game and the protection of the timber thereon.

These lands to endure for a term of 25 years each, with power to the Department to re-assign possession, at any time, on giving one month's notice. On condition that the just rights of all squatters and Indians shall be respected, and reserving—all rights of fishery, or use as occupation of the lands to connection therewith, under authority of the Department of Marine and Fisheries.

The rent to be paid to this Department, semi-annually in advance, and good and sufficient security to be tendered, at the sale, for payment. If insufficient, the sale to be renewed at the time and place of sale. Further conditions, if considered necessary, will be declared at the time of sale.

Lessees to accept boundaries and quantities as shown on the Ordinance Plans. By Order, E. M. AKREDDITH, Deputy of the Minister of The Interior.

WILLIAM P. COFFIN, Commissioner of Ordnance and Admiralty Lands, Ottawa, 1st August, 1874.

Manufactory, Pioneer Works, Birmingham, England

Field, Cover and Trap Shooting. By Capt. A. H. Bogardus, Champion Wing Shot of America. A valuable book for all sportsmen. Containing practical hints and instructions for marksmen, &c., habits and habits of game birds, water fowls, &c. Large 12mo., cloth binding, 250 pp., \$2.00.

This rifle was submitted in competition with over one hundred different systems, American and European, to the Board of United States Officers, appointed by Act of Congress, 6th June, 1872, for the purpose of selecting the best rifle for the service, and of which Brig. Gen. A. H. Terry was President. It successfully passed through all the tests.

Resolved, That the adoption of magazine guns for the military service by all nations is only a question of time; that whenever an arm shall be devised which shall be as effective as a single breech-loader, as the best of the existing breech-loading arms, and shall at the same time possess a safe and easily manipulated magazine, every consideration of public policy will require its adoption.

Resolved, Further, That the experiments before the Board with the Ward-Birton Magazine System have so impressed the Board with the merits of this gun, that they consider it as more nearly fulfilling the conditions above specified than any other rifle tried by them of which they have any knowledge, and it does recommend that a number of magazine muskets be made on the plan for further trial in the field. (See Ordinance Report.)

We are now receiving orders for these guns, and due notice will be given in this paper when they are ready for delivery.

The following is our scale of prices: Special Magazine for three guns, carrying from 3 to 10 cartridges, 70 to 85 grs. of powder, 250 to 400 grs. of lead, 8 to 10 lbs. weight, from \$90 and upwards, according to finish. Special Long-range Magazine Rifle for Creedmoor shooting, 90 grs. of powder, 480 grs. of lead, carrying 3 to 8 cartridges, weight 10 lbs., from \$300 and upwards. Magazine guns for sporting and target shooting, 60 grs. powder, 350 grs. lead, from \$40 and upwards. Single Breech-Loader, Creedmoor shot, for long range, 90 grs. powder, 480 grs. lead, from \$50 and upwards. Single Breech-Loader for general use, 8 to 10 lbs., 60 grs. powder, 350 grs. lead, from \$30 and upwards. The calibre of all our rifles, unless otherwise ordered, will be .45-100. All communications should be addressed to W. G. BURTON, Care Ward & Co., 54 Wall St., N. Y.

PANAMA—Lovelier than the Bay of Naples; most magnificent views; the Ocean dimly seen in the distance; the Lighthouse; the islands dotting the bay, with their beautiful green carpets and grandly passing tall fir out of view; steamers likewise receding from the sight homeward bound; yachts dancing; the gaily decorated barges of the local clubs, conspicuous among which are the scarlet of the Tritons, the magenta of the victorious Argonauts, the blue of the Syoneses, and the less lively hue of the crews of all our races, and lesser crews. Do you want fishing? Here it is in its excellency. Old Robin's Reef can tell you that around her rocky coasts sport all the variety of fish to suit divers tastes, and in prolific supply. Yachts are in two hours loaded with the blue fish that are now so lively sought for in their waters. Health regains supremacy. The census lately taken shows New Jersey to rank first in the United States. The rate of increase of this county (Hudson) is 15 per cent., in New York less than 2 per cent., Brooklyn only 2 per cent. But twenty-three miles from Liberty street, and commanding eight cents, are homes and lots for sale for ever, by instalments, or terms to suit. Inquire for JOSEPH HALLOCK, Forest and Stream office, at Chatham street.

THE COMMODORE'S SIGNAL BOOK AND VADE MECUM, CONTAINING Chromo Chart OF ATLANTIC, PACIFIC AND COAST STEAM SHIP FLAGS, FUNNELS AND NIGHT SIGNALS; CHARTS OF GULL, LULL, LINDEN, LAMBER YACHT CLUB FLAGS; PRIVATE SIGNALS OF YACHTS; LISTS OF OFFICERS OF YACHT CLUBS FOR 1874; NAMES OF YACHTS; OWNERS; PILOT BOARDS; REGATTA DAYS; LIFE SAVING STATIONS; TIDE TABLES, &c., &c. Compiled from official sources, by THOMAS MANNING, 185 Fulton Street, N. Y.

And published under the auspices of the Cunard Steam Ship Co. and Broadway Yacht Club. The Commodore has the honor to announce to professional Mariners and Yachtmen that the above is now in press, and will shortly be published. Price \$2.50. The Tide Tables will receive the new districts. The Tide Tables will be very extensive. The Compilation has been carefully made, and is complete and accurate. The artistic and typographical work will be in the best style.

Customers remitting the price of the work, with name and address, either to the Compiler, to John Filmer, 282 Broadway, or to E. F. Mott, 107 Nassau street, New York, will have a copy forwarded as soon as published, unaltered free. \$1.25

FISHERIES.---MADE TO ORDER for the trade. Every variety of Net, Seine, Drift-net, &c. suited to Sea, Lake, Pond or River. AMERICAN NET AND TWINE CO., Boston. \$5-1m

Business Chance. THE MACHINERY, TOOLS, FIXTURES and Patent for the manufacture of the most perfect, simple and reliable BREECH-LOADING RIFLE in the market. Can be bought at a bargain, if applied for immediately. Sample gun may be seen at the office of FOREST AND STREAM, between 9 & 10 Chatham Street. The machinery is new, in perfect order, and capable of turning out 3,000 guns per annum.

Field, Cover and Trap Shooting. By Capt. A. H. Bogardus, Champion Wing Shot of America. A valuable book for all sportsmen. Containing practical hints and instructions for marksmen, &c., habits and habits of game birds, water fowls, &c. Large 12mo., cloth binding, 250 pp., \$2.00.

For Forest and Stream.

THE AGED AGRICULTURIST.

THE Aged agriculturist
Sits in the dusky gloom;
The reason why he's sitting there—
His chairs are all at home.

Though sitting in, or on, a gloom,
I cannot see the sense of;
To say he sat upon a fence
Would be more offensive.

And then, he has a stern look
I never saw before,
Besides a gun, which, like himself,
Is an old-fashioned bore.

I know his aged cuticle
So old, and grim, and stout,
Despite his "cold without."

"Oh! aged agriculturist!"
I modestly exclaim,
"May I traverse your fair domain
In search of lawful game?"

"They was a man," the Granger grim
Irrelevantly said—
"I'm kinder wifed' rec'rd for him,
I hope he isn't dead."

"Air you a city sporting man?
An' dew you know a know?
Don't pint yer gun around at me,
Or they will be a rena!"

"I've had experience before
Along of city chaps,
You want to cross my land, you do?
Wall, pe'aps you kin—pe'haps."

"Prehaps you'll tramp across my grain,
And pe'aps, again, you won't;
Prehaps you'll massacre my sheep—
Young man, I tell you, nos't."

"They was a man as travelled here,
His and his pooty pup—
He does not travel here no more,
His sporting days is up."

"He axed to shoot across my lands—
I know a city feller,
And driv the keows to ham, and put
The children in the cellar."

"And then I climb atop a tree,
And said I gness-ed he mount,
I didn't know my sheep and hen—
Was lying all about."

"I didn't know a city chap
Was so much of a fool,
I didn't know a city dog
Was meaner than a mule."

"I didn't know as hatch about
Some subjects as I do;
I've learned the valley of a dog
And of a donkey, too."

"Yes, you kin shoot across my land,
And sling your powder tree—
Mutton is twenty cents a pound
And terms is C. O. D."

"My wife and me air life-insured,
And Accidental, too;
I've spiled a man with this yer gun,
Not half as big as you."

The Granger wears a ghastly smile,
His eye is fixed and bright;
I do not like that smile's import,
That eye's unholy light.

I yearn no more for manly sport,
But rest in peace at home,
While he is sitting in, or on,
The said afore-said gloom.

They say he once had friends and home,
They say he once was wise,
They say he joined a sporting club—
Perhaps they're telling lies.

—When does a windlass make sailors mad? When it raises their rancour

For Forest and Stream.

Down the Au Sable.

AMONG THE GRAYLING.

BY THADDEUS NORRIS.

EVER since the American grayling has been known to anglers, my friend Mr. Daniel Fitzhugh has urged me to come out to Michigan and join him in a trip in pursuit of them. It was not until the last week of July just past, however, that I could find time to break away from the city of Brotherly Love and make a fair demonstration against them on the Au Sable. By appointment, I breakfasted with Daniel, the aforesaid, in Bay City on the 29th ult. The plan agreed on by correspondence was to drop down the river some six or eight miles further than Mr. Fitzhugh had explored it, and after having a surfeit of sport to return to Grayling (formerly called Crawford), the station where the railroad from Bay City crosses it. This plan would have involved two days' hard pushing against a strong, steady current. In the course of our conversation, Daniel remarked that at some future time, if he could find a congenial brother of the angle to accompany him, he intended to take a trip on the Au Sable that would require no such labor in returning. That he would put his boat in at Grayling and run the river as far down as Thompson's, which is seventy-five miles by land, and much more than double that distance by the stream. At Thompson's he would get teams and haul his boats overland twenty-five miles to Tawas City, on Saginaw Bay, where a steamer for Bay City touches every day.

Think, my dear Mr. Editor, how provocative this was to one who had not camped out or slept on spruce boughs for five long years. Would you, then and there, have done otherwise than earnestly advocate such a trip *instanter* in place of that originally proposed? Daniel *seconded* the amendment as soon as I moved it, and we were unanimous.

After our maternal meal we walked out, and on the street met Mr. Leonard, generally known as "Len" Jewell—not "Lem," as my ancient friend Seth Green hath it. Len is a brawny, broad-shouldered youth of sixty, six feet and an inch "in his stockings," and, as I found on our trip, a man of not over many words, but still cheerful and communicative, with a low-down, pleasant laugh, full of expedients when one's flies form an attachment to the tops of the many cedars jutting out at a low angle from the banks of the river, the best cook I ever met with in camp, and, as Seth truly says, "the boat goes where he wills it." Dan had assigned Len to me as pusher. He chinked in with our change of plan immediately, and proposed that we should go see John Sharp, who was to push Dan's boat. We found Johnny at his fish house, busily engaged in putting up an order for white fish, cramming in ice and nailing up boxes, destined for the interior, and yet he had time to remove the ice in a large chest and display at full length a lake trout of nearly four feet. After a while he laid down his hammer and saw, and said he was ready to talk on business. He jumped at our new plan for the trip. Johnny is a wiry young fellow of sixty-five. He and Len hunt, shoot, and fish with Dan and the rest of the Fitzhughs, and the ducks and deer they have laid low may be called "legion," besides a few "bar" and an occasional wolf or panther.

At half past two in the afternoon we were *en route* for Grayling, distant about ninety miles. This part of Michigan is an elevated, sandy plain, slightly rolling, and, except in marshy places, with a very thin soil, or no soil at all, on loose, coarse, white sand. The new railroad, running almost due north, was projected by the lumbermen, and within a year or two will cross some fine trout streams flowing northwest, north, and northeast. There are no trout in the grayling streams, as far as is known, except in Boardman's Creek. On our way we crossed the head of the south branch of the Au Sable, which rises in a shallow lake, is fed by swampy water, and consequently rather

warm. It has no grayling until within a few miles of its junction with the main stream, fifteen miles down from Grayling by land, and about thirty-five by water. Grayling is not far from the source of, and on, the main branch. The north branch comes in about twelve miles below the south branch, and of course from an opposite direction. It is well stocked with grayling, and about half the volume of the main stream. A dam for flooding the river to run logs, however, causes a discoloration of the water unfavorable to fly fishing, and after its waters unite with the main stream this provoking influence is still observed. Four miles west of Grayling is Portage Lake—abundantly stocked with large pickerel and black bass—one of the sources of the Manistee, and approachable by a good wagon road. It is the intention of Mr. Fitzhugh at some time to have his boat hauled to Portage Lake from Grayling, to descend the outlet into the Manistee, and explore it as far down as the crossing of the Indiana and Grand Rapids Railroad, returning thence with his boat by rail to Bay City. Mr. F. says that he has been told that grayling abound in the Manistee even more than in the Au Sable, but that the Hersey, where he first killed them, has been pretty well fished out. And yet we see by Mr. Ainsworth's letter to the Rochester *Democrat* that he killed nearly five hundred, during a sojourn of two weeks at Reed City, on that stream early in June. They were small, however, compared with our average catch in the Au Sable.

All the grayling streams, whether flowing east, west, or north, rise in the same elevated region of almost level, sandy country. The ascent from the lake shores from either quarter is so gradual as not to be perceptible to a traveller. Grayling is seven hundred feet higher than Bay City, and this inclination to the lake shore gives an average current of about three miles an hour to the Au Sable. The shores, especially near their sources, are but slightly elevated above the surface of the streams, which, of course, have in most places the appearance of being bank-full. Lower down there are now and then, at long distances apart, high sand bluffs abutting against the rivers. There is little or no water shed, and the rains falling on the sandy plains form small underground rivulets, which find their way to the rivers. The streams being replenished in this way with spring water, are always of a low temperature in summer, do not freeze over in winter, and are of very equable flow, not varying more than a foot in depth between high and low water even in the spring of the year.

We reached Grayling a little before sunset, and stayed all night at a new hotel, the only dwelling at the station, built mainly to accommodate the employees of the railroad. There came in the car with us a pleasure party, consisting of Mr. Mershon, his wife and children, and some lady friends of Bay City, to camp on the river a few days, fish, shoot pigeons, and have a good time. We passed their camp next day in descending the stream, and Dan hailed the ladies and held some conversation with them in the Chippewa language, which, I suspect, both lie and they improvised for the moment. They were joyous, although it was raining. The Au Sable at the station is small, with low and apparently swampy banks, much obstructed with alders and fallen cedars, and affording but small opportunity for a fly cast. An affluent of half its volume comes in a few miles below, after which there is ample room to swing one's line.

On inspecting Mr. Fitzhugh's boats, and questioning my friend Len, I found that they were eighteen feet long, the beam (a little forward of midship) three feet, sharp at both ends, flat bottomed, two feet six inches on the floor in the widest part, with a flare of three inches, making them, as just stated, three feet wide on top. There is a compartment, water tight from the other portions, extending from abeam two feet six inches forward, and the whole breadth of the boat. This is the "well," to keep the fish alive. It has three one inch holes in the bottom, and two on each side, to admit the water and keep up the circulation, the water being six or seven inches deep when the luggage and men are aboard, and will keep alive seventy or eighty fish,

The Horse and Course.

SARATOGA, August 20.—The number of people on the course and in and around the grand stand was never exceeded in any year. This is undoubtedly owing to the admirable management of its officers and the efficiency displayed by the jockeys. The first race was a purse of \$500; one mile and three quarters, winners at either meeting excluded. There were four starters. Reform, Dndlin, London and Red Dick. Reform won easily in 3:05 1/2, which is one second and a quarter quicker than the same distance was ever run before. The great event of the day was the four-mile race for a purse \$1,400, for which the starters were Followercraft, Wandercer and Katie Passes. M. A. Little's Followercraft won amid intense excitement, and in the shortest time on record, 7:19 1/2. The third race was a free handicap steeple chase for a purse of \$850. There were only two entries, Bullet and Vesuvius. Bullet won the race easily; Vesuvius failed to go over the course.

The extra days' racing at Saratoga on August 21st was for the benefit of the Saratoga Rowing Association. The first race was for a purse of \$500; distance three-quarters of a mile, which brought out the following starters: Fleming's Emily Fuller, Moore's "Ned," McDaniel's Mudge, Ayer's Erastus Corning, Wandercer and Katie Passes. Mudge was favorite in the pools, and won easily by two lengths, Dublin second, and Minnie Mae third. Time, 1:15 1/2. The second event was a selling race for a purse of \$600; distance one mile and a quarter. Five horses started. McDaniel's Red Dick filly; Walden's Mildew, Coffey's B. F. Carver, Donahue's Wizard and Cariboo. The race was won easily by Cariboo by two lengths. Red Dick filly second, Mildew third. Time, 2:11. The third race was a free handicap for a purse of \$850, of which \$150 to second horse; distance two miles. The starters were Davis' Faddeen, Donahue's Little Lucas and Botany Bay, McDaniel's Galway, Moore's London, and Stearn's Frank. Soon after the start Galway threw his rider, who was seriously injured by his fall. Botany Bay took the lead and won by half a length. Little Lucas went to the front, and won by half a length, Faddeen second, Botany Bay third. Time, 3:33 1/2.

The races at Saratoga on August 22nd embraced three events which ended the summer racing meeting. The managers of the association gave the entrance money of Saturday last to the public schools of the village, the funds to be especially devoted to the building of a gymnasium for the scholars. The first race was for a purse of \$500 for all ages; distance one mile and an eighth. Only three horses started. McDaniel's Mudge, Coffey's Carver, and Ayer's Erastus Corning. Corning got off first, but soon fell behind, Mudge going to the front, where she stayed to the finish, winning by ten lengths, Carver second, fifteen lengths ahead of Corning. Time, 1:57 1/2. The second race was a selling race, for a purse of \$600; distance one mile and three quarters. The starters were Donahue's Botany Bay, Desmond's Mollie Darling, and McDaniel's Galway. The three horses started well together, Botany Bay taking the lead and winning by a length. Mollie Darling second, five lengths in front of Galway. Time, 3:09. The third race was a hurdle handicap, mile heats, over four hurdles, for a purse of \$650. Four horses started. Lawrence & Lorillard's Bullet, Green's Daylight, Tully's Vesuvius and McDaniel's Julius Colt. Daylight was favorite before the first heat, which he won by half a length, Vesuvius second, and Julius Colt third. Time, 1:55 1/2. The second heat was won by Vesuvius by half a length, Julius Colt second, Bullet third. Time, 1:52 1/2. In the third heat Daylight and Vesuvius only started, Vesuvius winning the heat and the race by four lengths. Time, 1:54.

The Hampden Park races closed on August 21st. The meeting has been one of unqualified success, and terminated in an admirable and most satisfactory manner. There were two postponed races to finish—the 2:38 and the 2:26. H. C. Hill won the sixth heat of the former in 2:28 1/2; Nashville girl second. Bella, the winner of the fourth and fifth heats, the eighth heat and the race in 2:30. Nashville Girl took second money, H. C. Hill the third, and Mae the fourth.

Fred Hooper, the winner of the first heat in the 2:26 race, also won the fifth in 2:26, and the sixth in 2:24 1/2, giving him the race. T. L. Young gets second money, Miambro Gift the third.

Gloster won the 2:20 race, the last of the meeting, in the third, fourth and fifth heats. Cash, taking second money, 2:20 1/2, 2:19 1/2, 2:21, 2:23, 2:27.

Kansas City won the 2:31 race in the second, third and fourth heats, Fleety Goldstuck taking second money. Time, 2:25, 2:29, 2:27, 2:27.

The two mile hurdle race was won by Tabitha, Crow's Meat second, and Ned Hanlon distanced. Time, 4:51.

The Fairfield Conn Agricultural Society held their regular trotting meeting on their grounds near Norwalk, Conn. The premiums offered were \$3,000, and the attendance during the three days was excellent. The first day, August 19th, there was a race for a purse of \$500 for the three minute class, best three in five. L. Allen's b. m. Lark won in 2:19 1/2. The second race was for a purse of \$300 for 2:30 class. P. Mance's b. m. M. A. Whitney won in three straight heats. Time, 2:33 1/2, 2:30 1/2, 2:32 1/2. On August 20th the first race was for a purse of \$500 for 2:50 class. Walker's b. m. Bay Bird won the last three heats. Time, 2:45 1/2, 2:41, 2:41. The second race was for a purse of \$500 for 2:35 class. J. D. Gillitt's g. g. Messenger Boy won the three heats. Time, 2:37 1/2, 2:39 1/2, 3:03 1/2. On August 21st the first race was a purse of \$500 for 2:38 class. W. H. Nelson's Kitty won in three straight heats. Time, 2:26, 2:36 1/2, 2:33. Between the heats the pacer Copperbottom was matched against time to beat 2:25. He paced three heats as follows: 2:27, 2:23 1/2, 2:23 1/2.

EXERCISES IN THE SADDLE.

EDITOR FOREST AND STREAM.—Among the many suggestions to out-door enjoyment in your valuable paper, little reference seems to be made to that most exhilarating of all pleasures, horseback exercise. Summer will soon be past, and the cool air of autumn will be upon us with its refreshing and bright days, when this sport can be enjoyed. To a person of sedentary habits to whom an hour from business at the most is the best he can spare, nothing is more beneficial, lush horseback riding.

It stimulates every muscle in the body, the horse doing the work while the man takes the exercise, and the writer knows from personal experience that it is a great cure for that American malady—dyspepsia. The trout may refuse to bite, and the game to start, but upon the horse there is a certain pleasure beyond all contingencies. The rider is always everybody else, he goes faster than anybody else. He has for a time at least a kind of ideal, and not actual being, forgetting himself almost entirely while enjoying the exercise. At one moment he imagines himself a general at the head of an army, at another an emperor making a triumphant entry; now he is a knight returning from conquest, and now perhaps he leads a charge in battle, or he is riding a fierce race, and he springs in his saddle as if thousands of hands had lifted the result. Not that he actually believes all this, but only that he feels somewhat as if it were so, or might be so.

By all means ride a trotting horse, and leave to the exclusive right of the ladies the gallop. Take good company with you, for coming the "solitary horseman" is the poorest of all medicines, if you have only your hills to contemplate while riding. Don't ask the liverly man before you start if the horse you are about to mount is gentle, kind and don't shy, but spring into the saddle and lock out for him yourself, thereby forgetting for the brief hour all business and care.

Use as light a saddle and bridle as possible, for handling a horse with heavy harness is like landing a brook trout with a bass rod.

These few ideas are the result of only fifteen years experience, but I well know that is short in comparison with many of the array of contributors to your paper, but I can safely say, with that short observation, that horseback riding strictly adhered to (if only for an hour each day), will be productive of great physical good. F. S. S.

The National Association for the Promotion of the Interests of the American Trotting Turf, has appointed Mr. Vail their Secretary and Treasurer.

Very sorry to hear that John Harper, the owner of the wonderful horse Longellow and other celebrated racers, died at his residence near Midway, Ky., on August 19th. It is said he leaves a large fortune.

Rational Pastimes.

Secretaries and Friends of Athletic Base-Ball, Cricket and other out-door Clubs will kindly send their contributions not later than Monday in each week.

The international tourney at cricket was opened at Halifax, N. S., on August 18th by a match between the eleven of American and an eleven of the Canada. The latter won the toss and went to the wicket. Mr. Phillips and Mr. A. Power, of Ottawa, took the bat against the bowling of Mead. The inning continued until 4 o'clock, the Canadian making a total of 94, of which Phillips contributed 52. The Americans went in, and when time was called they had made 133, and five wickets down. The match was resumed the following day. The Americans concluded their first inning at 1 P. M., with a total of 191 runs. The Canadian team then went to the bat and scored 66, leaving the Americans the winners by one inning and 31 runs. On the 20th the American eleven began to play with the eleven of England, and at 1 o'clock play was stopped for the day, owing to the rain. The Americans, who went in first, had scored 184, with a loss of eight wickets. On the 21st the game was resumed at 11:30 A. M., the Americans closing their first inning with the following score:

Table with 2 columns: Player Name and Score. Includes names like Brewster, Gardner, Taylor, Newhall, Biddell, Singleton, Ashbridge, Reel, Lorge, Davies, Stubbins, Caldwell, Ballard, Magee, Ashbridge, Byles, and a Total score of 265.

The English team then went to the wicket, and at lunch (2 o'clock) four men were out (Mitchell, Dew, Banks and Reid) for a score of 50. After lunch the English team went again to the bat. The following is their score:

Table with 2 columns: Player Name and Score. Divided into First Inning and Second Inning. Includes names like Mitchell, Meade, Wald, Biddell, McCreedy, Barker, Newhall, McNeil, Hopkinson, Gardner, Hopkinson, Hubbard, Taylor, Carpenter, Singleton, Farmer, Wallace, and a Total score of 73.

This was a brilliant result for the American cricketers.

The Brooklyn Scottish games came off in Myrtle Avenue Park on August 20th. The following medals were awarded prizes as follows: Putting heavy stone—John Anderson, 35 feet 44 inches; standing jump—A. Rennie, 9 feet 7 inches; throwing heavy hammer—A. McKay, 87 feet, 6 inches; tossing the caber—A. McKay, 37 feet 11 1/2 inches; running jump—A. Rennie, 19 feet 11 inches; running high leap—A. Rennie, 5 feet and 6 inches; high and kick—a tie T. Munshell and A. Reid, 8 feet 7 inches each; short high leap—A. Reid, 3 feet 6 inches; hurdle race—E. Moore and S. Duke; broadsword dance—J. Kennedy; reels race—Alfred McAdam; egg race—M. E. Moore; heel dancing—James Atchison; throwing light hammer—A. McKay, 104 feet 9 inches; vanling with pole—Munshell, 9 feet 1 inch; putting light stone—John Anderson, 41 feet 10 inches; long race—A. Reid; Highland hind—James Atchison; standing high leap—A. Reid; three-legged race—E. Moore and S. Duke; sack race—E. B. Fleming; wheelbarrow race—Peter Reid; extra boys' race—A. D. Edgou.

The Boston team again defeated the Athletics at Dublin on August 24th by 13 to 7. This is the sixth victory in succession by the Bostonians in their English games with the Athletics.

The grand match between representatives of ten of the leading amateur clubs of Brooklyn and New York, which took place August 17th, was in every way a great success. The match was played under Mr. Chidwick's new rule of ten men and ten innings, and it was supervised under professional rules by Burdock of the Mutuals in fine style. The advantages of the improvement in the game were made plainly apparent, the additional facilities given for men plays by the second baseman being a feature of the ten man rule. The play on the New York side was a model display both in batting and fielding, and after the fourth innings the Brooklyn party played finely. The following is the full score of this contest:

Table with 2 columns: Club Name and Score. Includes New York and Brooklyn teams with individual player scores and a Total score of 239 to 151.

Runs earned—New York 6; Brooklyn 0. First base by errors—New York 3; Brooklyn 1. First base by wilds—New York 1; Brooklyn 2. Total wilds pitched—Fy Fallon, 19; by Brent, 30. Umpire, Mr. Burdock of the Mutual Club. Time of game, one hour and thirty minutes.

The championship record of the clubs now playing in the arena to date, is as follows:

Table with 3 columns: Club Name, Games won, Games lost, and Physical. Includes Mutuals, Philadelphia, Hartford, and Baltimore.

The following is the record of the victories of the Fly-away club, so far as heard from:

Table with 2 columns: Date and Score. Includes August 7 (Fly-away vs. Mataal), August 18 (Fly-away vs. Kn Klug), August 19 (Fly-away vs. Excelsior), and August 21 (Fly-away vs. Adams).

The English base ball nines who have learned the game cannot be tempted to play with the American clubs. There has been considerable practice among the cricket clubs, but still they do not wish to tackle either of the unions; officers of eighteen men and five even will not tempt them, and so to keep up with the advertised promises the boys have to work very hard.

The correspondent of the Boston Journal says in reference to the match at Princes: "Friday noon the Americans went to the bat, and ran up a score of 110 in about two hours. After lunch the Prince's Club took the field, and innings, which finished for 39 runs, and thus were beaten in one inning and 50 to spare—the whole performance on their part. The score is not worthy of being published, being mostly goose eggs. The odds should have been given the other way—odds given to American cricketers. A number of good cricketers were in attendance and were much irritated, although a few sought to excuse the conduct of the club by saying it was out of season, and the players were at country cricket matches, as if they had not known of this match for months. If Americans can cross the ocean to play, cannot they take an hour's ride to keep an engagement? Most of the expressions were of disgust, denouncing the conduct of the cricket club as disgraceful, and saying they would catch it in the papers. Although it was spoken of as very unfortunate in the Times and other leading dailies, the censure was very mild."

The same writer says: "Among other things that interest an American is the Skating Park. This is a large space, partly under cover, laid with very large marble tiles, and used for skating on parlor skates. Mr. Plimpton, well known in Boston, is here, and superintending the completion of a large rink for winter use. The English ladies, as a rule, are far ahead of the Americans at this exercise, some being remarkably expert and graceful. Although the members are so exclusive, most of them having titles, it is comparatively easy for an American to obtain an invitation to the private portion of the ground."

Land and Water, of August 8th, in its comments on base ball, says: "Of the game itself, as seen during the week in London, little can be said, except in praise. It is generally fancied that cricketers would be rather inclined to depreciate and sneer at the cricket world has been the first not only to welcome, but to applaud. To cricketers, indeed, baseball presents many lessons that might judiciously be accepted. In one respect alone the Americans have shown Englishmen what can be done in accuracy of throwing. Here you rarely find a cricketer who can be relied upon for consistent accuracy in returning the ball to the wicket keeper. It is returned somehow, and that somehow is enough. Sometimes at the head, and more often at the feet, it comes in at a very nice point, but still in a manner calculated to disturb the whole system of a wicket-keeper by the constant lunges, and often vain attempts to reach the ball in an impossible position. With the baseball players matters are altogether different."

Mr. Asa W. Smith, brother of Mr. Mark Smith, the actor, and an old and most highly esteemed member of the Union Base Ball Club of St. Louis, was drowned in the surf while bathing off Biddeford Poole, Maine, on the 31st ult. He was a thorough Southern gentleman, and tried his best to keep up the high status of base ball as a gentleman's game.

The match between the professionals and amateurs for the benefit of the Mills family at Brooklyn August 24, resulted in a one-sided and uninteresting match, the score standing at 14 for the Mutual nine to 1 run by the New York Amateur ten. The game yielded about a hundred dollars to the fund.

The Chicago nine defeated the Baltimores at Chicago on August 24th by a score of 4 to 3 only in a ten innings game—the best contest yet.

The Chelsea's of Boston were defeated by the King Philip nine on August 22 by 7 to 0.

On August 22 the Nameless nine defeated the Nassaus at Prospect Park by a score of 13 to 9. Nearly 3,000 people witnessed the contest.

sometimes attack as large an animal as a caribou, and often successfully. It is exceptional, for they are of a very cowardly nature, though immensely powerful for their size. Its most common prey is the hare, (*Lepus Canadensis*) which overrun the swamps throughout the country. I once had an opportunity of observing their manner of pursuit. I had been out hunting hares on snow-shoes to white away a morning, and in crossing a swamp on a point of the river I came upon a fresh track, and while slowly and carefully following it up so as not to disturb the hare before I could get within shooting distance, the track was suddenly joined by a lynx, which in passing across at right angles had seemingly made up his mind to pursue the same course I was following. I only hesitated to increase my charge of shot, determined to witness the denouement. A dozen rods further on, the hare had evidently become aware of the near presence of its implacable enemy and had made prodigious efforts to escape, as its immense leaps testified. The long regular strides of the lynx began to tell, and the hare in its terror must have turned to double and thereby ran into the danger it was trying to avoid. The lynx had made short work of it, for scarcely a vestige but a few hairs and the blood-stained snow were left to tell the tale. I followed the lynx for some time, but he had too much the start.

Very many lynx were captured during the winter in steel traps, baited with meat and drug. It is easy then to dispatch it with a gun, but approach it then too closely, for it maddened by pain is treacherous and wicked. One man at Cap Rouge, Bellefleur by name, had his arm so badly lacerated by one which he had caught in the above manner that it was found necessary to amputate it. He had approached it with an axe to dispatch it, when it sprang forward and fastened upon his arm. It was with the utmost difficulty that he tore himself from the fearful hold of the lynx.

Not unlike the fox, they will oftentimes gnaw their paw off to escape from the trap. This happened to one which my friend, Mr. John Neilson had captured, and singular to say, escaped him entirely, though he followed its track a day.

Col. Rhodes of Quebec, one of the finest sportsmen in Canada, once related to me, while a travelling companion of his from New York, several adventures and methods of taking the lynx, which he and his son had. He has had reproduced many of the scenes in a series of photographs gotten up at a considerable expense and outlay of time, representing sporting life in Canada.

G. M. FAIRCHILD, JR.

VARIETIES OF BASS.

INDIANAPOLIS, IND., August 20, 1874.

EDITOR FOREST AND STREAM.—

We have in the waters of this State a fish which I had always supposed to be the black bass. Messrs. Scott and Mitchell both recognize it as such, but Mr. Norris says it is not. Now the bass of the Potomac are called black bass, and it was stocked from Western streams and not from Northern lakes. Our fish rise to the fly and are game; their average weight is about two pounds, and although fishermen hereabout claim to have killed five and six pounds, I never saw a fish that exceeded four pounds weight but once. Any information on this point will be thankfully received. Yours, truly, ALEX. C. JAMISON.

Investigations by the best scientists have determined that there are but two distinguishable forms of black bass—the *Micropterus Salmoides*, or the small-mouthed bass, and the *M. nigricans*, or the larger mouthed variety. Both of these species occur naturally over a greater part of the United States, with the exception of New England and the Atlantic seaboard of the Middle States, although only one, the small mouthed, seems to have been originally an inhabitant of the hydrographic basin of the Ohio. The difference between them is so appreciable that the veriest tyro, seeing them side by side, must admit their distinction. It is not to be understood, however, that there are no variations from the standard type to be observed in the bass of these two groups in different localities, and it is not improbable that a careful criticism will reveal certain trifling peculiarities, which may serve to distinguish those belonging to a particular area.

As to this much vexed question of taking the fly, our abundant evidence proves that both of the varieties indicated above do rise to the fly in some localities, but not in others; that is, *Nigricans* will take the fly in one locality, lake or river, and not in another, and so also will *Salmoides*. We cannot tell why this is. Possibly, the food in one place makes the fish surface feeders, and in another keeps them at the bottom, though this conjecture would scarcely signify. It may be that difference in habit is caused by some variation from the standard type, as suggested.—[ED.]

BLIND SALMON OF THE GASPE (CANADA) RIVERS.

WASHINGTON, AUGUST 20th, 1874.

EDITOR FOREST AND STREAM:—

As some interest has been excited by an article upon the blind salmon of York River, copied quite extensively from *Landon Land and Water*, I hasten to add a word upon the matter. In company with my genial friend Lantz of Brooklyn, who will be recalled at once by scores of friendly anglers as the "tom who can't make a lobster salad," I had the pleasure of fishing the York last month through the kind invitation of Mr. Reynolds, accorded me as the friend of Fred Curtis, Esq. of Boston. Later I fished the Dartmouth, and a friend the St. John, so that my facilities for a knowledge of these rivers was good.

The blind salmon are not at all confined to the York, but found often in both the Dartmouth and at the mouth of the St. John. They are not often blind in both eyes, although sometimes found so. During our trip up to the "Narrowes," or highest accessible pools of the York, the head canoe man several times caught a salmon near enough to touch

his side with the setting pole. After the fish had taken position on the other side of the pool, instead of angling him on the reverse side, he was readily frightened to any other salmon would be. A large, fine male salmon was shown me, with one eye blinded by what was apparently a thin film or scab grown over its entire surface, while the other was slouching away. Upon a close examination the distinct white scar of the gill net was found crossing the first eye, while upon the last was a very recent antennal sharp cut, which extended from some little distance above the eye to a point directly underneath its centre. This salmon, which was, of course, "stone blind," was taken with a gaff a few miles above the nets, and his tail was split by the twine between the spines in several places, indicating the severe struggle he had in freeing himself. I presume most of your salmon angling readers have seen the salmon, when recently caught in the net, bracing himself with his tail against the twine, as if for a purpose of his own.

Many of the very large salmon, seen distinctly from the high banks of the upper pools of the York, have seen scars upon their heads. In the water this scar looks like a white cord passing across the head. If I remember, (without my notes) rather more than half the large ones we caught just above the falls of the Dartmouth, and some few small ones have these white scars where the twine has cut their positions.

Your present writer, as you well know, is neither a Naturalist nor a Piscicult, and much less a *Truismologist*, but yet ventures a common sense hypothesis, only stipulating that it shall not be found in *Bethune*.

These salmon, whether blind in one eye or in both, are usually of the largest size, for the reason that on one but the largest will the mesh of the net generally strike across one or both eyes. The smaller fish, of course, pass the head further through. Again, the larger the salmon the better the chance of his forcing himself out of the net and living, not to tell, but to show his tail, split by the twine, and his head scarred and eyes cut. It seems beyond a question that this blindness is *transmittive*, or the result of a wound. A sharp twine cut across the eye would, if not too deep, bring about, as a result of inflammation, an *epithelioma* condition, which would extend both sides of the cut over the entire conjunctiva, and would be of a slightly darker shade and somewhat opaque, especially after purulent effluvia. This hyper trophy would be permanent. These blind salmon starve to death finally in the rivers. When the main body of the fish, after the breaking up of the ice in the spring, go down to the sea, these are left behind. Several of my canoe men upon both rivers have seen one or two of these fish, and one of them the salmon ending down, about two months before any run up.

The number of blind fish increases yearly by reason of the better protection now afforded. Of course more fish go clear of the nets and poachers each year, and live to get large enough to have their eyes blinded. If you ask why these blind fish are more numerous on the Gaspe river, I can only give you the answer, in my opinion, that numerous in any stream as well protected, and in which the salmon average as large—provided, of course, a careful observer fished it. As regards the average of fish in the York, my score for one half day (six hours) fishing after 12 o'clock was five fish, averaging 23 pounds. As I remember, the average of all the fish taken by Lantz and myself was over twenty pounds. I took all sorts of temperature of pools and other matters, and will get at them and work them up for you before long.

Before closing, let me recommend to your angling readers the most killing fly yet tried. Its name does not transpire, but it is used by the Government overseer. One day last week, by the kindness of the friend of the stream, came up to our camp, "Fred Curtis," remarking that he was a pretty successful angler, and had taken a fine, large salmon just below. A look at his rod and line, which took by no manner of means have killed a three pound sea trout, suggested a suspicious smell of *small musc*. Upon going to the canoe we found a salmon weighing thirty-three pounds, with one eye blind, and by comparison with another fish, which I took in a deep fresh water cut. His tail was split into numerous pieces (not worn off at all), and a sharp cut, with the edges well defined all around, to represent where the fish had been hooked on the lower jaw. We complimented the overseer upon so skillfully playing his fish that the hook didn't even round and wear the edges of the orifice, and suggested that if he could only furnish flies in his own, that would make a "stone blind" salmon rise, his fortune was made. This fly was taken along with a few stabs of colorless feathers, its head covered with an undisturbed coating of rust; and in fact he had played his fish so skillfully that not even had the extreme end of his line been wetted. We were very glad that they had gaffed out the fish to save him the torture of hogging sensation; but to get credit with a *York* fish, the following, the line should have been wetted, a good fly put on, and in fact tackle taken along with which it would have been possible to kill a fish. A hook should have been worked around in the cut in the jaw, and the recently wounded eye should have been gaffed as if by accident. Oh! Mr. Overseer, as an angler you are *too thin*. A. G. WILKINSON.

THE CALIFORNIA QUAIL.—A party camping on the McClond River, in California, near where the U. S. Fishery Commission is at work, informs us in a private letter that quails are numerous in the woods round about, and by baiting them with rice they come so near the camp and become so tame that moving to and fro does not frighten them away. They come within fifty feet of where persons are sitting. It is very interesting to watch their movements.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, U. S. CITY, N. Y., Aug. 23, 1874.

- Animals received at Central Park Menagerie for the week ending August 22d, 1874:—
- One Corn-crake, *Oxy ardeus*. Hab. Europe. Presented by Mr. Jeremiah Singleton.
- Two Marsh Hawks, *Circus hudsonius*. Presented by Mr. John Nolan.
- Two Red shouldered Hawks, *Buteo lineatus*. Presented by Mr. Warren Deamond.
- One Barred Owl, *Syrnium nebulosum*. Presented by Dr. E. Sterling.
- One Silver Pheasant, *Euphonia nycthemera*. Presented by Mr. W. H. Sterling.

LAKE TICACA.—The *Scientific American* states that Lake Titicaca, on the crest of the Andes, is the highest large body of fresh water, and that the lake never freezes over. Two little steamers of 100 tons each do a trifling business. Steam is generated by kama, the only fuel of the country, for there are no trees within 150 miles. The steamers actually cost their weight in silver, for their transportation (in pieces) from the coast costs as much as the original price. A steamboat company has asked from Bolivia the exclusive right of navigating Titicaca and the Rio Desaguadero to Lago Pampa, with guarantee of six per cent. on the capital, and a share of all new mines discovered. Professor Orton, the latest traveller in the region, calls attention to the fact that Lake Titicaca is not so high as usually given in geographical works by about 300 feet. Its true altitude is 12,393 feet, and in the dry season it is four feet less. This fact has been revealed by the consecutive levelings made in building the Arequipa railway, just finished, which reaches from the Pacific to Lake Titicaca. Lake Titicaca is about the size of Ontario, shallow on the west and north, and deep on the east and south. On an island within it are the imposing ruins of the Temple of the Sun, and around it are monuments which attest the skill and magnificence of the Incas. There are also the remains of burial towers and palaces, which antedate the Incas, and are, therefore, pre-Incaic.

Woodland, Lawn and Garden.

SHEEP RAISING IN CALIFORNIA.

NEW YORK, August 20th, 1874.

EDITOR FOREST AND STREAM:—

If within the scope of your Journal, could you kindly inform me regarding sheep herding and raising in the State of California, say in the vicinity of San Diego? To what disease are the sheep most susceptible, and what are the remedies? What breeds are most desirable for that region, both as to quantity and quality of wool and for propagation? What size is a fair risk for a beginner of small capital and comparative inexperience? What outfit is necessary for a bachelor? Is destruction by dogs an item of risk, and if so, whatfulness is the preventive?

H. W. T.

To furnish our correspondent with all the information he desires upon the subject would involve much space. Briefly, the requisites are, a fair amount of capital, unlimited perseverance, and the capacity for finding happiness and enjoyment in comparative solitude and natural beauty. The first, to be sure of riding over a year or two in which experience must be bought, and the latter from the fact that, in this country, where fidelity can rarely be purchased, to have a thing well done you must do it yourself. There is a tract of country in the county of San Bernardino, in the neighborhood of the San Geronimo Pass, which, although directly on the line of the Southern Pacific Railroad, is, as yet, comparatively unsettled, and which would probably furnish the best and cheapest ranges to be found in that part of the State. Considerable Government land still remains, and our advice would be to select and pre-empt, if it could be found, a quarter section contiguous to some large tract, which might be undesirable for other than grazing purposes, or joining one of the old and still undivided Spanish grants, which could be rented reasonably. Should he be so fortunate as to find a piece with abundance of water, to which he could procure the proprietary right, other occupations could be added to that of sheep raising. Here, under the shadow of grand old Mount San Bernardino, he could build his little cabin, with a cool mountain stream trickling by his door. The nurseries of Los Angeles and San Bernardino would furnish him with fruit trees of every description, from the tropical orange and lemon to the home-like apple and pear; a little labor night and morning would soon bring him a bearing vineyard; he could luxuriate in green peas with his lamb by Christmas, and have strawberries all the year round. Coming home with his herd in the evening, and stowing them safely in corral for the night, he could smoke his pipe under his own vine and fig tree, and enjoy such sleep and health as no city man ever dreamed of. He could find use for his gun among the quail and rabbits, or the deer on the foot hills, or with his rod and the trout in the mountains.

Sheep are comparatively free from disease in California; sometimes a little mange, but easily cured. The Spanish merino is undoubtedly the best, or that with a cross of Cotswold. A flock of from three to five hundred ewes, such as could be picked up in Los Angeles or further north, with hired pure Spanish rams, would be the best to commence with. If successful, our correspondent could import his own rams from Ohio, and gradually "grade up." On a good range, with proper attention, the increase is wonderful. No danger from dogs to be apprehended, but in their place the coyote is the most destructive. They rarely attack, however, in the day time, and at night a good corral is the best defense.

THE POWER OF THE GRASSHOPPER.—A letter written from Nebraska to the *German-ton Telegraph*, on July 27th, describes the sweep of the grasshoppers over the country in a matter-of-fact way that gives our readers some conception of the horrible nature of the scourge and the immensity of the demonstration. He says:—

"The air has been filled with them for the last two weeks, having the appearance of a snow-storm, sometimes thick enough to form flaky-looking clouds. Very few in proportion to the number passing overhead: I should suppose not more than one out of a thousand, and yet enough to destroy all the green crops. Last September-day, (July 25th,) about three o'clock, P. M., I witnessed a scene that to me was awe-inspiring. The sky was nearly clear; a strong wind, almost a gale, was blowing from the north or a little east of north; we first noticed very black clouds coming up from the north, much like those that precede a hurricane. Not much notice was taken of it until the van came pretty well overhead, then we perceived it to be grasshoppers! A field-class was brought into requisition which defined them very distinctly. The cloud was so dense that it gave the landscape that peculiar twilight appearance, not unlike an approaching eclipse.

Its course was a little west of south. How far it extended east and west, I know not; it met the horizon either way. They could not have been going at a less rate than thirty or forty miles an hour, and it took them two hours to pass over. Then I felt their utter insignificance of all human efforts to cope with such a wonderful engine of destruction. Had they carried a banner inscribed 'Desolation!' 'Famine!' it could hardly have impressed me more solemnly than it did, or conveyed a more convincing evidence of their mission."

As the season progresses, we are learning by our successes and our failures, how to arrange our rustic baskets another year. The first thing is to have a sufficiency of mould earth, loam and sand, to be placed in the baskets in the proportion say of two parts of earth, two of loam and one of sand, with such drainage as will prevent the roots from standing water, however thoroughly the basket may be watered. A cementure for the centre, with a fine fuelis on the north, or in the shade, a scarlet geranium, an heliotrope, ivy and lobelia, will make a basket which, with proper care, will afford pleasure by its constant blossoming all the season. Again, a rich geranium in the centre,

petunias, periwinkle, coleus and ivy make a good selection. The two main points are not to crowd the basket, and to provide for a succession of flowers. The ivy bestows a gracefulness which nothing else seems to afford, with its rank growth. An occasional watering with liquid manure is an advantage. It is not any too early for amateurs to belink themselves of a writer's window gardening. Slips of Madeira vine, young callas, tradescantia, anemones, should be potted so that when wanted they will have commenced a vigorous growth. As for propagating by slips, at this time of year, only two things are to be cared for, and these are indispensable: plenty of water and complete shade. It may not be a rule applicable to all years, but our roses put out this spring, well mulched and not covered at all, have all grown well, and some have bloomed a second time. They will get a good coat of coarse stable manure this fall, and a trifle of shelter.—*Providence Journal.*

—There is a pond on Cape Cod which produces pink pond lilies, and it is the only place in the country where such a flower grows. The color is probably caused by some peculiarity of the water or soil, as, when the roots are transplanted to other ponds, white lilies are always produced.

—Vermin increase fast at this season. No fowls will thrive if kept in close, filthy quarters, where lice abound. A coat of hot lime-wash, with an ounce of carbolic acid dissolved in it, will free the roost from lice. Clear out all the droppings, and spread them evenly in the compost heap. As the old fowls get fat, wipe the stubbles and in the straw yard, they should be sold or used in the kitchen. A stewed fowl is more wholesome food than fried pork at this season. To give fowls the run of the barn is a wasteful practice.—*Germantown Telegraph.*

—The papers of Wayne County, New York, are bragging about a big hog which now weighs 1,100 pounds.

—The first cat introduced into New Hampshire were brought from Denmark in 1631 by Captain John Mason. They were of large size and of a yellow color. The breed remained pure and unmixed in some sections of Maine as late as 1820.

IVY POISON.

EDITOR FOREST AND STREAM:—

Seeing the different remedies for ivy poison, I thought I would send you my experience.

My oldest boy poisons very easily. The most likely time to "poison" is on a close, muggy, or damp day. Then the ivy exhalates its miasma, and it is held in the atmosphere, so that if a person is susceptible to its influences in passing by, he absorbs the poison, especially if he is warm and in a perspiration. It makes its appearance first generally on the hands, sometimes on the face, and looks then like a small water blister about the size of a pin's head. Often there will be several of these pustules. At this time one can stop the trouble at once, by making a mark or ring and the blister will cure itself in about half an hour, or an inch, is sufficient to have, but put all but the oint in a quill, as otherwise it will get on your hands and blisten them badly. If the poison has not been taken in time it will spread rapidly and increase its ugly appearance, and will become very painful. I always use a wash to blite the inflamed parts, which is a spoonful of washing soda in a glass of water. This is very soothing, and it increases the ability of the person. When it has commenced to run up the arm or leg you must at once make a ring around the limb, and above the sore an inch to two inches, as the poison runs under the skin, and if the ointive is put too close you will not have headed off the poison. It cannot pass the elastic mark, but has its fight out then, and there, making a larger blister, with thicker matter, but that is the end of it. I now use Pond's Extract of Henstead's very freely, and it is very healing. Always keep the parts covered with linen cloths, and soaked continually with the Pond's Extract. If any part of the body is rubbed by the sore had a new sore is made, which will run and spread the same as the first. By keeping the parts covered this will be avoided. When the poison simply swells the hand, and has a dry or scaly appearance, then the parts ought to be soaked with oxide of zinc and kept covered with linen. But the best thing I do now is to cover the parts with linen soaked or wet in Pond's Extract, which generally is sufficient. ALEX.

—Where box is used for edging and borders of beds, now is the time for clipping.

The Kennel.

TO THE SPORTSMEN OF AMERICA.

We publish the following letter from a well known writer on sporting matters, a member of the National Canine Society of England, and one of the judges at the coming Nottingham dog show. We are glad to see that distinguished a writer offers the same advice to Mr. Raymond concerning his kennel as we gave in our issue of July 23d, which has been copied and credited to us by some of our leading English cotemporaries:

EDITOR FOREST AND STREAM:—

Although some three thousand miles separate us, allow me to shake hands with you through the medium of FOREST AND STREAM. Though I do not know you personally (I hope I may), yet I believe the name of "Old Calabar" is pretty familiar to you; at least, the editor of FOREST AND STREAM assumes so. Well, so much the better. Sportsmen, somehow or other, always manage to get acquainted with one another and "pull out." I must say with you, and I am sure I shall.

You have now in your country the best breed of setters in the world—the "Raymond-Laveracks." Mr. Laverack is an old friend of mine, for we resided close to each other. Many a time and oft have I gone into the kennel to look at the dogs and kept covered with linen. But the first thing in possessing such an animal. Let him guard the blood as he would the apple of his eye, and do not be tempted to "let the blood loose" by crossing. He has now the means of breeding without going from his own kennel. Mr. Laverack has of course told him how to proceed, and if he has not I am sure he will. Mr. Raymond must not be tempted to put up with any old stock that he has chosen to put back on for breeding purposes. When the breed is established, then he may weed his kennel. I shall shortly, with permission of the editor of FOREST AND STREAM, write a paper on the kennelling and feeding of dogs, with other matters that may, perhaps, be interesting. In the meantime, if any of you want setters, or any other sporting dogs, let me know the editor will give you my address, and I'll get them for you, and the right sort. Do not buy animals from infatuated breeders that send out their passage money, and do no service to you when you have got them. Have the correct article, and then you will "win through." The produce of these dogs, if you have only common luck, will, in a very short time, repay their original cost ten times over. Tell your friend from me again, and try to sub-

scribe myself your friend and brother sportsman, "OLD CALABAR."
P. S.—For the information of Mr. Shipman, of Iowa, I may say I do not see the slightest possibility of an International Field Trial, at least not with Mr. Price or Macdonia. The latter is a St. Bernard man; he never writes but two letters of any very great note—Banger and Mosie—both are sold. Mr. Macdonia has disposed of all his dogs and retired from the canine world. Mr. Price, I am sure, will not accept, and the only two men I know likely to do so are Mr. Llewellyn and Mr. Whitehouse.

JUDGING ON THE SHOW BENCH.—NO. 5.

THE HULL TERRIER.

THE head should be long, running flat off the nose; ears erect; eyes inclined to be small, and black or brown in color; jaw long and powerful; cheeks flat; nose black; neck long; the shoulders sloping well back; chest deep, with a proportioned thickness; legs straight and muscular, with a good round on the hock; back short, well ribbed up; hindquarters full and muscular; stern firm, but not too long, and carried pretty straight; coat smooth and close; colors preferred are white, and white with brindle patch.

POINTS IN JUDGING.

Head.....	25	Loft.....	30
Neck.....	10	Legs.....	30
Shoulders.....	10	Feet.....	5
Chest.....	15	Stern.....	10-100

THE FOX-HOUND.

Head expressive, muscular, ears pendant; head a little wrinkled in chop; face rather long, with strong jaw; neck inclined to be long, set into shoulders strongly; the shoulders of great depth and strength, sloping back well, but not so fine and close at point of shoulder blades as a greyhound, as speed is not required so much as in the greyhound, but rather endurance. A model of a stud foxhound should measure round behind his shoulders thirty-one to thirty-two inches; the shoulders should be straight, and neither bowed out nor pressed into the chest; fore leg to continue straight to the foot, as if one bone, but of great substance, full of muscle; from the pasterns the foot must not turn out, but appear straight and round like; the back ought to be straight, wide all through; rigid-backed dogs considered not so pleasant to the eye; it should be well loined up, not short of ribs, but short in the flank; body average depth, hind quarters, where set into loins, powerful; thighs full of muscle; stern carried well up, but not as a squirrel's, not feathered; coat thick and smooth. There are different colors, the pie, black and tan, tan and white, and hazy grizzles.

POINTS IN JUDGING.

Head.....	15	Shoulder.....	15
Neck.....	10	Legs.....	30
Legs.....	10	Loft.....	30

—*Pascier's Gazette.*

DOGS ON THE SHOW BENCH.—The Queens County Agricultural Society, situated at Mineola, L. I., and adjoining the late purchase of Mr. A. T. Stewart at Garden City, will hold their annual exhibition of horses, cattle, &c., on October 7th, 8th, and 9th. There are also, we understand, several premiums to be awarded for sportsmen's dogs, such as the pointer, setter, cocker, and other breeds. This is the first society to take up with this new and interesting feature, and indicates, as we have repeatedly stated in this journal, that before many years have elapsed, the showing of sportsmen's dogs on the bench or in the kennel, and the running of pointers and setters at field trials, will draw together an assembly of field sportsmen that will astonish the inaugurator.

—The new apparatus for drowning dogs was tried at the Pound last week with success. It consists of an iron cage, large enough to hold thirty dogs, and is lowered into the water by a large crane attached to a derrick.

—A gentleman from Pittsburg, Penn., asks us the following question:

What are the requisite colors of the pure Gordon setter? Are they ever red? What dogs were they bred from originally?

Answer: The general opinion is the Gordon setter owes its origin to Irish blood, which in a measure is substantiated by the fact that red pups often make their appearance, even when bred from the most reliable strains, and there is no doubt that setters in general were originally manufactured from the spaniel; but whether the color of the Gordon is derived from the black spaniel or the Scotch colley, is a query that cannot now be easily answered. The curd in his coat could not have resulted from his taking the water. A curly coat is a great fault in the setter of any breed, and would be dead against one on the show bench.

—Augusta, Ga., August 19th, 1873.

EDITOR FOREST AND STREAM:—

I have derived so much gratification from a stray number of your entertaining paper, which came lately in my way, that I feel impelled to express that pleasure, and desire also to say something on a few matters appearing in or suggested by the paper. I see some mention made of springer, or field spaniels, and one correspondent writes of "a very fine springer spaniel pup, a small, liver-colored little chap, with tan feet and eye spots—a thoroughbred undoubtedly." In another place a springer is referred to as "a splendid retriever for duck." Now, what are the marks of a springer, and how does a springer differ from the cocker? I have a little bitch, full grown, weighing 20 or 25 pounds, of a dark, rich, chocolate brown on the head, back and stern; mottled like a thrush on the shoulders and flanks, with light tan spots over the eyes, and feet of a lighter tan; long, silky ears, and a tall feathered tail; a setter; fond of water and retrieves well, though altogether untrained. From the description can you say what kind of dog this is? You refer also to other hounds. Are there any in this country? TYNOS.

The "cocker" is considerably smaller than the springer, and is a light working, active dog, showing far more liveliness in his actions. He carries his tail low and works it more quickly than the "springer." They are generally of a rich liver color. From a description of your dog we should say she was a Norfolk spaniel springer, but do not understand the tan marks, unless some of her ancestors were Gordons, dwarf fox hounds, or beagles. There are no other hounds in America that we ever heard of.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

Land-locked Salmon, *Salmo gairdneri*. Salmon trout, *Salmo confluis*. Black Bass, *microperca salmoides*, *microperca nigriceps*. Striped Bass, *Morone chirocentrus*. Sea trout, *Salmo maculatus*. Bluefish, *Pomatomus saltatrix*. Weakfish.

Trouting is permitted in Maine and Canada until October first. Salmon fishing with fly is permitted in New Brunswick until September 15. Land-locked salmon and salmon trout in season till September 15th.

—With the 1st day of September, the angling season for trout practically ends. Common sense admits it; the interests of anglers demand it; and the domestic economy of the fish require it. We shall therefore strike off trout from our bulletin of fish in season. There are some localities, however, in which trout spawn late, and in Maine and Canada fishing is permitted by law until 1st of October. Generally, the sport has been abundant and well enjoyed, although the season was late and rainy in northern New York and the Eastern States, and the streams much swollen. Reports agree that trout are increasing in size and number throughout the country, and not diminishing. Some very large fish have been taken, though we have not heard of any weight sufficiently heavy to be regarded as fictitious by those who question the extreme limit to which the *Salmo fontinalis* attains. We also note with satisfaction less disposition on the part of anglers to gauge their success by numbers instead of size, and attribute the fact partly to the education anglers are acquiring through journals like the FOREST AND STREAM, and to the growing disfavor with which the capture of fingerlings is regarded. In a word, the tendency is everywhere conservative, and the increasing interest which is felt in the maintenance of our angling streams is evidenced by the constant organization of new clubs for their protection.

After the 15th of September, the salmon-bugger must put aside his rod. Indeed, indulgence is given to this date in the Province of New Brunswick only, fishing being forbidden in the rest of the Dominion after the 1st prox. Consequently, we chalk salmon from our bulletin.

The reports of our salmon fisheries from all localities where full protection is afforded is most gratifying, the run of fish being larger and more abundant. Famous catches have been made in Canada, especially in the rivers Restigouche and Miramichi, and on the Gaspé peninsula, in the York, Grand, Dartmouth, St. John, and Cascapeadiac rivers. American rods have been quite numerous at their several pools, and the Canadians seem to have no feeling toward American lessees except that of good fellowship and amity. We would consider it a great favor if our friends who have lately returned would furnish us with their scores. Their publication would interest those who are curious to compare notes, as well as the rest of the angling fraternity.

As to our own waters, we are looking to them with renewed hope, and doubtless shall have encouraging reports to offer at the end of next season. Land locked salmon have been abundant in the Maine waters, both at Sebce and the Schoodics. The fishing for these will continue until September 15th.

—Messrs. C. A. Robertson and W. F. Bunting, of St. John, with two friends from the States, had very fair success this season on the southwest branch of the Miramichi River, in New Brunswick. They made their first camp at Burnt Hill Brook on June 30th. Three of the party left on the 12th of July, but Mr. Bunting remained with his two guides until the 27th. Up to the time of his comrades' departure all had very fair success, Mr. Robertson killing five salmon in the afternoon, the largest of which weighed twenty-five pounds. It measured forty inches in length, and the guides asserted that it was the largest salmon that had ever been killed with the fly in that branch of the Miramichi. The first grilse was taken July 10th. After the 13th the run of fish improved, and Mr. Bunting had the sport all to himself, his score at the end of his visit footing up sixty-two salmon, weighing 750 pounds, and eighteen grilse, weighing fifty four pounds. This is said to be about as good a result as was ever shown by one fisherman within the same space of time on that river. The southwest has been well preserved the last two or three years, and although there is still much poaching it is rapidly becoming a splendid salmon stream, and the record of this year's sport is very fine. It is a noble river, as full of beautiful spots to the artist's eye as of pools for the fisherman's rod.

By the way, the gentleman who sends us these facts, and who was one of the party, thinks the Canadian Government might afford the river even a much more thorough protection than it now does, although admitting the gratifying improvement in that respect over past years. Since the year 1870 the river has been leased to several gentlemen, who take great interest in its preservation, and who have expended their time and means in staying the work of destruction. The presence of these lessees and their friends on the river during the fishing season, since the commencement of the time of the lease, has doubtless had a beneficial and salutary effect. It is impossible, however, for these gentlemen to prevent spearing and netting altogether, and the Government ought not to relinquish their own guardianship, which its own overseers are in duty bound to exercise. A letter in the St. John Globe, upon this very subject, says:—

It is notorious that under the very eyes of the officials unlawful nets are carried on with impunity. Fifty or sixty—more will be speared in one hour by two men in a single canoe. The work of destructive fish goes

Answers To Correspondents.

We shall endeavor in this department to impart and hope to receive such information as may be of service to amateur and professional sportsmen. We will cheerfully answer all reasonable questions that fall within the scope of this paper, designating localities for good trapping, fishing, and trapping, and giving advice and instructions as to outfit, in general, rookeries, distances, seasons, expenses, ranches, trails, camps, etc. We will not, however, discuss the merits of any particular outfit or give attention. Anonymous Communications not noticed.

A. C. S., Byers-Station, Ohio.—What size shot is most effective in shooting pigeons from traps? Ans. No. 8.

Shootist, Wheeling.—Will you please specify, if possible, where the tools and implements of archery can be purchased also rules regulating same? Ans. Peck & Saffler, 149 Nassau street, N. Y.

J. E. E., Elizabeth, N. J.—Can you tell from whom I can purchase a good Scotch terrier or dandie dionmont dog. We do not know. An advertisement at small cost would probably secure one.

Grassie, St. Louis.—Would an eight month old setter bitch be too old to begin to break? Ans. No; but it will require a good deal more patience and study of the disposition of the animal. However, 'tis never too late to mend."

S. L. Press.—What place do you consider best for trapping otter and beaver north of the Missouri and Ohio Rivers? Ans. The Blue Ridge Mountains where they cross the States of Virginia, West Virginia, North Carolina and Tennessee.

Lovellville, Ky.—Please let me know where one can buy Curtis & Harvey powder? What is the price per pound, and what is the best size for quail shooting? Ans. Curtis & Harvey powder is very scarce. The market price is \$1.10 per pound and the size No. 6.

Owensville, Mo., Baltimore.—Do you think a \$700 breech loader can be relied on as a good shooting gun? If not, at what price can a good one be purchased; also, what change is right for a breech loader 7 1/2 lbs. weight, 28-inch barrel, 14 gauge? Ans. You ought to get a very fair one for the price you mention. About 3 drachms of powder and 1 oz. of shot.

H. M., Pittsburg.—What is the most killing charge—Oranga powder and shot, for a pile-run No. 12 and 30-inch gun, for squirrels? Ans. 3 drachms and 1 oz. No. 7 shot. For quail? Ans. 3 drachms and 1 1/2 oz. No. 8. For duck? Ans. 3/4 and 1 1/2 oz. No. 8. Small I use Ely's wire outside, and shall I use shot concentrators? Ans. Yes; if you are an expert.

Blistered Feet.—The best remedy for blistered feet, as given to us by C. L. W., of Weston, Vermont, an old Mexican fur veteran, is to coat the inside of your socks (woolen are best) from the mules downward with common yellow bar soap, repeating the application for two or three days, by which time the feet will be hardened. It acts equally well as a preventive.

Thos. P. Caswell, Dresden, Minn.—A friend of mine has a superb pair of half breeds, male and female. Do you know anybody who would like to buy them? Ans. Write to Chas. Reiche, 55 Chatham street, or to Luis Riche, 48 Chatham street, New York. They deal in all kinds of animals. Personally we know of no one at present who wants bald eagles. Gold eagles are always in demand here.

C. G. G., Boston.—Can you inform a subscriber where he can procure a good setter dog about two years old, to be of good stock and well broken on quail, partridge, &c. Have looked over your paper hoping to find an advertisement of such a one, but in vain. Should prefer a Gordon, if possible? Ans. A short advertisement would get a more certain. You would have a great many answers, and we should be happy to give advice as to stock, &c.

A. FINESTOWN, Savannah, Ga.—Where can I get a map of the coast of Georgia—that is, one with the fisheries and islands definitely laid down, and plain enough for an amateur fisherman to find his way to the different islands and fishing grounds along the coast? Ans. Colman, 176 William street, prints a very fair map of the coast of Georgia, and will also send to you, on application, a set of Lettger Brothers, Berkman street, near Nassau, for Government survey charts of Osewab, Sapelo and St. Simons, provided they cover the territory you wish to visit. Price \$1.

A. H. WOOD, Palmett Post, N. Y.—Have *Zonotrichia albicollis* (ruffed grouse) while in a state of nature, ever been known to feed on one kind of cultivated grain? I have in my lifetime dissected a great many without finding the least trace of grain, notwithstanding a common notion to the contrary? Ans. Most assuredly they eat grain. We have seen them in great numbers feeding on corn, wheat, rye, and other grain, and especially buckwheat. Have never noticed grain in their stomachs. Famine-stricken grouse eat grain with avidity, we know, by having fed them when in confinement.

DOMAN, Missouri.—In our State there is a provision that netting or trapping shall not be done at any time, except on one's own land, or with the consent of the owner. This has been construed to mean that a person may, at any time, set a net on his own land, and give other persons access to it, so long as he does not intend to sell the netting or trapping to obtain? Ans. See Judge Daly's decision, printed in FOREST AND STREAM May 14, vol. 2, page 217. Law is founded on common sense. The intent of all well drawn laws is evident on their face. Quibbles and evasions that secure success may be sharp practice; they may be good logic, but they are not good law. Game is to be killed only in season, no matter where.

J. A. B., Birmingham, Mich.—The question at stake is who, when a dog were, did one own with a pistol best. Bogardus shoots pigeons from a trap? If you can give me the information regarding the same please do so, and also please tell us the greatest number killed out of 100 by any one? Ans. Bogardus never shot against any man who used a pistol at trap shooting. Captain Paul Travis shot against a man somewhere in Pennsylvania, who used an ordinary snipe gun, Travis standing ten yards from the trap and the person, 25, doing the shooting. He shot and killed three-five yards. This match was a tie. Captain Bogardus has killed 100 birds in succession from a spring trap, in the presence of two hundred persons.

W. Y. C., Washington, D. C.—I have a 12 gauge, 30-inch, 4 1/2 lb. gun. Is it large enough to use in shooting over fowls, and what is the proper charge for it in duck, partridge (quail), and woodcock shooting? Ans. For decoy shooting a 10 lb. would be preferable. For duck, four drachms of powder and 1 1/2 oz. No. 8 shot; quail, 3 drachms powder and 1 1/2 oz. No. 8 shot; woodcock, 2 1/2 drachms powder and 1 oz. No. 10 shot. Do not breach loaders get dirty or foul when using muzzle loaders, or does it depend on the powder I am using, for it fails after shooting once? Ans. It depends, of course, on the powder you use. Try Latin & Rand's or Hazard. What is the fare from here to Albert Lea, Minn., by what road, and could I find some sportsman there to show me the best place to set traps? Ans. About \$30. The nearest way is to go by LaCrosse, Wis., where you will find one or two sportsmen's clubs who would be glad to give you further information.

While hunting ducks around the Quade Reservoir a few years ago, my host, Mr. Mills, shot at one a long distance overhead, the only result being that a few feathers loosened. A party of men, neighbors of Mills', were at work on the road near by, and one of them asked Mills if the man hit. "Hit him?" "Yes, he hit him." "But he hit him?" "Yes," says another, "they flew so hard that they took the meat off with them."

Two large Newfoundland dogs, while fighting a few days since at Niagara Falls, rolled over a precipice and were both dashed to pieces on the rocks below.

appeared in millions along the New Jersey coast, scouring the inlets and bays, pillaging, devouring, extirpating everything finny that came in their path, and seizing so ravenously the bare, unbaited squid of the troller that single persons were able to capture upwards of 1,000 pounds per day! They swooped down upon the gathering shoals of estuary fish, and scattered them to the four quarters of the ocean, chopping up millions as they went, and mutilating without mercy. They threw their trenchant masses upon the migratory fishes as they worked to the northward, and drove the shad by hundreds high and dry upon the shore; themselves so intent in their pursuit that men and women waded into the surf and dragged them out with rakes and hoest. Scarcely any kinds of fish escaped except the bottom fish, and the great chunky sheephead, which securely cracked their claws on their feeding grounds while commotion went on above. Next the blue-liveried Belouins made a dash for the northern waters, and played havoc with the mackerel off the coast of Massachusetts, driving them seaward and ashore, and chopping up millions of other fish of all kinds, and swallowing their spawn and the young fry. Even the United States Fishery Commission, with their pond nets and trawls, testing the ocean depths several times daily, were scarcely able to obtain food enough for their mess table. Nothing but disgusting skate fish, no-lusks, and groveling flounders, that wriggled through the mud and weeds, rewarded their efforts. What wonder fishing has been slack, or that the market slabs have been recruited from far and wide to obtain their very remarkable assortments of food fish? Prof. Baird, in his late report, estimates that 100,000,000 bluefish range the waters along our coast; that they mutilate or devour twenty other fish per day; that they destroy spawn additional in quantity sufficient to make the aggregate destruction 12,000,000,000 per day. What they can do in the 150 days of their annual cycle of terror can be easily arrived at by an ordinary mathematician; but figures will only express it—the human mind cannot conceive it.

And now the choice fish that amuse the scientific angler are beginning to come again. How their depleted ranks are recruited so quickly we know not; whether they are filled by forced drafts upon the innumerable reserve, in order to work out their Creator's decree to "increase and multiply," or whether the number of the fish in the sea is really so vast that billions cannot be missed out of the great aggregate! There is a very fair run of weakfish from Barnegat to New York Bay, and along Long Island to Nantucket; striped bass make a good show at their habitual stamping grounds along the Rhode Island and Massachusetts coasts; sheephead and blackfish fill up the bill.

All along the piers in our harbor the gamins and ragamuffins are intent on catching "snapping mackerel," or the infant generation of those same predaceous bluefish—and when the biting slackens they fill in the interval by pitching stones and bits of coal at each other's lines, or tossing each other playfully off the dock. There is good sport in taking these voracious little fish with the lightest possible tackle, a rod and line, reel, diminutive float, with shrimp for bait.

Weakfish are running in the "Swash" down the Lower Bay, two to four pounders, and the catch from 50 to 100 per day each run.

On Saturday night last, fishing by moonlight, two members of the Jackson Club, Highlands, N. J., in two hours, off the Marl Dock, Shrewsbury River, captured, with rod and reel, eleven weakfish weighing thirty-nine pounds; largest fish, five pounds, plump. Soft crab used for bait and tide half ebb.

The fish in market this week, with their prices, are—Miramichi salmon, 40 cents; Hyanis bluefish, very abundant, 6 and 8 cents; sheephead, large supply, from Little Egg Harbor, 15 and 18 cents; Spanish mackerel, fair supply, 25 cents, and not so abundant this summer as last; live black-fish, 15 cents; pompano, a few, from the Chesapeake, 60 cents; striped bass, scarce, from Rhode Island, 25 cents; soft eels, Jersey and Long Island, very abundant at \$1 and \$1.25 per dozen; green turtle, liberal supply, 18 and 20 cents.

Mr. Eugene Blackford, of Fulton Market, received last Tuesday from New Dorp, Staten Island, a fine specimen of tapanin, which, at the request of Professor Baird, was forwarded to the Fish Commission at Noank for their study.

Bass fishing at Pasque Island, Buzzard's Bay, has been good this season, and it has been greatly enjoyed by the fishing club located there. The largest bass caught weighed fifty-two pounds, and another fifty pounds. Mr. Douaine caught five large ones in an hour on Tuesday.

While Gen. Abbott and his assistants were testing torpedoes in the bay near Willett's Point the other day, a school of porpoises passed over; the General just turned on the electrical current, and directly there was an explosion, a surge and eruption of the waves, and three dead porpoises, measuring eight feet long, floated upon the surface. Bystanders thought it was an accident, but the General says he did it on porpoise.

BARNEGAT INLET, AUGUST 21st, 1874.

EDITOR FOREST AND STREAM.—Since my last letter to large catch of fish. Weak fishing at the "Ea trace," and at what is known as the Red Bank, has given the fishermen some sport. A school of blackfish came in the inlet the other day, and those who were fortunate enough to throw on the squid at the right time were amply repaid. A party with Capt. John Kelly caught seventy-one, averaging two and one half pounds. Sheephead fishing has been better the last week than at any time before since the season came on. Dr. Bennett, of Barnegat, took twenty-one on Tuesday. Blackfish and trout has been caught every day at the inlet. Your humble servant went out with "Dad" Parker, the famous fisherman, and in one hour had a half bushel basket full of blackfish, sea bass, a few porgies, and half a dozen weakfish. Yours, &c., A. BAKER.

on even up to the time when the salmon are on the spawning grounds. If the attention of the Department of Marine and Fisheries was directed to this important matter, we believe that immediate steps would be taken to have the officers appointed for the protection of the river to perform their duty, and in event of their failing to do so, to discharge them and appoint others who will be more prompt and faithful.

The Miramichi river, will fair play and proper attention, is without doubt the finest salmon river in New Brunswick—perhaps in the Dominion. We are told that in years gone by the weight of a single fish taken in this river was as high as that of the best trout of Chesapeake. There is no reason why, with proper protection, it should not regain its old standard.

In the Jordan River, Charlevoix county, Michigan, our old friend S. C. Clarke lately captured a five pound grayling, which is double the weight we ever heard of. This statement is authentic in all respects. Mr. Clarke says of the Jordan—

It is a wild and beautiful river, with water as cold as ice, and if let alone in a few years it would offer a splendid fishing. I used very small fry flies; the water being extremely clear, could do nothing with bright flies, or large ones. It has been doubted by some whether the two species (trout and grayling) are found together, but I took them from the same hole with the same cast of flies. The Jordan has a sandy bottom, and the grayling are to be seen flying in schools on the sand bars, but they do not come to match present trout, and I spent that they are very shy. It is said by the resident fishermen and guides that the grayling spawn at the same time as the trout, i. e., in September, and they say they have taken them the last of August full of eggs. I think some of going to the An Sable, or the headwaters of the Muskogee, to try again for the grayling after these great heats have subsided.

How little those of us who have travelled most extensively, know of the wilderness richness of this great American domain! Gradually our correspondents open up its treasures to our view. Perhaps there is no region whose attractions are less widely known than that herein described by our contributor, Dr. I. H. Stearns. There is good fishing here in abundance, and plenty of woods, rocks and water:

"The counties of Adams, Juneau, and Sank, near the centre of Wisconsin, contain a tract with a collection of pinnacles, crags and cliffs, with hills, lakes and rivers untraversed anywhere in this country. This point may be reached by a few hours' ride from Milwaukee, and a dozen miles from Chicago. From Chicago, the tourist will take the Chicago and Northwestern Railroad for Adams' Station, or Kijihoun, sixteen miles beyond. From Milwaukee, you take the Mil. and St. Paul Railroad.

Running east and west is the Barrabo River, and there is a gorge 500 feet deep and half a mile wide, called the "Gorge of Wisconsin." No such scenery is found east of the Mississippi. Near the middle of this winding, cavernous canyon, with its rocky terraces and mysterious pinnacles, is situated "Devil's Lake," a sulphurous name, translated from the Indian cognomen, expressive of their superstition that this cavern was the abode of some mysterious goblin. Here is a good hotel, and a few days' fishing and boating, and climbing over the crags and cliffs, and with legendary events, to give variety and zest to the scene. You are a broken down stream through miles of superb scenery. Northwest is a flora wilderness, where startling rock forms stand out in bold relief, and inviting the camping out party to new discoveries which lie in unexplored recesses, all untraced by human steps, or milk creek. Wisconsin is most charming. About fifteen miles west of Adams' station you pass the divide and reach the streams running west, where brook trout can be found. In the streams running east you find pickered and bass. Above the lake, some fifteen miles, is Kijihoun, where you will find a little steamer to tow you above the rapids. Up this canon are some wild and romantic views. The valley is wide, with broken hills and with legendary events, to give variety and zest to the scene. Northwest is a flora wilderness, where startling rock forms stand out in bold relief, and inviting the camping out party to new discoveries which lie in unexplored recesses, all untraced by human steps, or milk creek. Wisconsin is most charming. About fifteen miles west of Adams' station you pass the divide and reach the streams running west, where brook trout can be found. In the streams running east you find pickered and bass. Above the lake, some fifteen miles, is Kijihoun, where you will find a little steamer to tow you above the rapids. Up this canon are some wild and romantic views. The valley is wide, with broken hills and with legendary events, to give variety and zest to the scene. You are a broken down stream through miles of superb scenery. A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND SPORT.

PUBLISHED BY

Forest and Stream Publishing Company,

17 CHATHAM STREET, CITY HALL SQUARE NEW YORK.
(Post Office Box 2832.)
125 SOUTH THIRD STREET, PHILADELPHIA.
COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty percent, for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, AUGUST 27, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this journal are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentleman sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base aims which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted in any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Managing Editor.
WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, August 28th.—Trotting meeting, Earlville, Ill.—Trotting meeting, Hartford, Conn.—Trotting meeting, Gardner, Me.—Trotting meeting, Manchester, N. H.—Trotting meeting, Warwick, N. Y.—Trotting meeting, Hazleton, Penn.—International regatta, Saratoga, N. Y.—Trotting meeting, Deerfoot Park, Brooklyn, N. Y.

SATURDAY, August 29th.—Concord vs. Nantuxet B. C., Prospect Park, Brooklyn—Fly-away vs. competing clubs, Oneida, N. Y.—International regatta, Saratoga, N. Y.—Long Branch race, Monmouth Park, N. J.—St. George cricket club, Hoboken, N. Y.—Practice day boat club, Harlem, N. Y.

MONDAY, August 31st.—Fly-away vs. Star B. C., Catekill, N. Y.—International regatta, Saratoga, N. Y.

TUESDAY, September 1st.—Trotting meetings at Syracuse, Bath, N. Y.; River Falls, Wis., Goshen Park, N. Y., Providence, R. I., Boston, Mass., Knoxville, Sycamore, and Macon, Ill.

WEDNESDAY, September 2d.—Trotting meetings at Syracuse, Bath, N. Y., River Falls, Wis., Goshen Park, N. Y., Providence, R. I., Boston, Mass., Knoxville, Sycamore, and Macon, Ill.—Provincial Rifle Association, Sussex, N. B., D. of C.—Match day, Hoboken cricket grounds, foot of Ninth street.

THURSDAY, September 3d.—Trotting meetings at Syracuse, Bath, N. Y., River Falls, Wis., Goshen Park, N. Y., Providence, R. I., Boston, Mass., Knoxville, Sycamore, and Macon, Ill.—New York Caledonian games, Lion Park, N. Y.—Regatta of amateur oarsmen, Lakeboat course, Troy, N. Y.

OUR FRONTIER OFFICERS.—Our readers are indebted to our army officers upon the frontier, for almost the entire fund of information which this journal has been enabled to furnish respecting our great Western Territories. Every post, almost, has furnished some contribution of absolute value, as to the flora and fauna, Indian life, and the habits of the wild characters one meets with on the Plains and among the Mountains. Such rugged annals of Frontier life, if written and compiled, would make a volume of far manlier literature than the namby pamby fictions of love and stilted heroism which constitute the mass of the world's reading. We have now on hand fully a dozen of them awaiting their honorable turn to be published in our columns, but still, our insatiable demand cries out for all it can get; and we trust that our generous friends will not lay down their pens under the impression that present repletion means everlasting safety; for we must eat to live, and no sooner has one meal been dispatched than we must provide for the next, no matter how well gorged we may feel for the nonce. Comrades, attention!

THE PROTECTION OF GAME.

A PLAN OF CO-OPERATIVE LAWS.

IN view of the approaching Convention at Niagara Falls, to devise some plan to provide by legislative enactment for the better protection of game, we deem it best to republish from the FOREST AND STREAM of February 19th the resolutions, touching this very subject, which were adopted at the meeting of the American Fish Culturists' Association, on the 11th day of the same month. A critical examination thereof by the Niagara Falls delegates may expedite the business of their Convention, and eliminate many of the apparent difficulties which seem to beset this long vexed subject. It is more than probable that the scheme for legislative co-operation which underlies these resolutions has never met the eye of those whom it was intended to reach; for the official report of the Fish Culturists' meeting lies buried in the unpublished proceedings of the convention, while the then limited circulation of this journal failed to give it wide-spread notice. That this scheme covers the ground practically and sagaciously, is evidenced by its endorsement by the eminent gentlemen composing that body, which included naturalists, fish culturists, anglers and sportsmen from both Canada and the United States, with Prof. Baird, chief U. S. Commissioner, W. F. White, Commissioner for the New Dominion, Mr. Wilnot, of Canada, Seth Green, and other practical men among the number. It would be unwise, then, for the delegates at Niagara to ignore the action and recommendation of that body; or, having the scheme presented to their examination, to give it cavalier treatment, the more especially that no other well-defined or outlined plan has ever been before the country.

Moreover, the light which this scheme throws upon a subject with regard to which most persons have but a vague idea—we mean the precise kind of a remedy to apply to existing evils and defects in the game laws—comes most opportunely, inasmuch as the Convention was called at a date so early (September 9th) that insufficient time has been allowed for a careful investigation and intelligent understanding of the subject. We are convinced that most, if not all, the gentlemen prominently connected with the issue of the call, now admit that it was premature and unseasonable. Many sportsmen are absent in the field, especially at the West, where goose shooting at present engages their attention; but the chief cause of regret is, that the suddenness of the call found the country not wholly prepared for the questions before the Convention.

Under these circumstances, we feel that we are doing good service by reviewing the ground already gone over, and showing what actual progress has been made by the few who have given the subject their thoughtful attention. We reprint, (as we have stated in the beginning of this article,) from our issue of February 19th.

[From our issue of February 19th.]

The editor of FOREST AND STREAM having been impressed with the idea that a more general plan of protection was necessary not only for fish but for birds and animals, took occasion at the meeting of the American Fish Culturists' Association to explain his views on this subject. It is an evident fact that but one general law, identical as to time of close seasons, can ever thoroughly protect the fish, birds or beasts of our country. It is perfectly possible to imagine a case where on a river of no great length it may be illegal to catch fish fifty miles from its source at certain times in one State, when 160 miles below in another State the catching of such fish would in no way infringe on the fish statutes of that State. Again, since we owe a great deal to the Canadian Fish Commissioners, it might frequently happen that rivers rising in the States and flowing into the Dominion might be deprotected of fish at one end, while the waters of the same Provinces, or that exactly the reverse might happen. A commercial question enters here into the subject which occasions no end of dispute and unfortunate consequences. Fish may be legally caught in one State at one particular season of the year, then snipped and exposed for sale in another State where the time for catching such fish may be against the laws, and it becomes a nice question to decide whether the seller or the purchaser of the fish is acting in contravention of the law. The editor thinks it perfectly possible, then, that laws should be enacted by the several legislatures, identical in character in regard to close time, within certain zones more or less extended. If the resolution adopted by the Association, as suggested by Mr. CHARLES HALLOCK, could have been made even more comprehensive as to detail, so as to include birds and animals, it would have even met his views more fully, but as the business of the convention was directed only towards the subject of fish, it was thought wiser to leave to the sportsmen's associations in the country the wider development of this idea, to wit, of the enforcement of a more general and co-operative system of game legislation.

The advantages of the proposed plan in regard to the naming of fish and the identification of species is a manifest one. If among the game birds hardly any two States in the Union can agree easily as to what is a quail, a pheasant or a partridge, the confusion is worse confounded as to fish. Men who are doubtless innocent, who would, if they knew better, aid the Fish Commissioners' in their arduous labors, violate the letter of the law from ignorance of the name of the fish.

Not a day passes but that the FOREST AND STREAM is in receipt of letters coming from Maine to California, all bearing on these subjects, communications written not only by sportsmen but by those who look into this subject of pisciculture in an economic sense, and it was principally from their suggestions that the preamble and resolutions adopted by the Association were advanced.

The following is the preamble and resolution offered and accepted by the Convention of the American Fish Cultur-

ists' Association, with Mr. Hallock's remarks on presenting them:

"I beg to bring to your notice a subject admitted to be of the greatest importance, though I doubt whether it comes fully within the scope of this association; but having heard one of your most distinguished members yesterday assert that, 'protection must go hand in hand with propagation, and that all efforts in breeding fish will be nullified by neglect to protect and guard the young fish from the injudicious legislation and wardenship.' I am encouraged to speak. We set the highest value upon provisions and penalties to prevent the use of nets, gill powder, *cochara indicus*, and other devices for the wholesale and indiscriminate catching of fish, and for the taking of gravid and spent fish and all unseasonable fishing whatsoever, and for the means devised to prevent poaching in private or public waters, and for all those wholesome restrictions intended to govern angling on leased and open rivers, lakes and streams. All these go far towards the consummation of the main object desired to be accomplished, but it is evident that the imperfect operation of the existing laws and the great loophole of escape for transgressors lies in the fact that game and fish taken in one State may be sold in the markets of another State with impunity.

What is needed, therefore, is such a co-operation of States as will procure a uniform game law which shall make it illegal to expose for sale in the markets of one State fish illegally taken in another State within the periods for which their taking is prohibited in such States. Some such measure is by universal consent acknowledged to be necessary, and we are pleased to observe that a draft of a bill with this object in view has been presented to the Legislature of Massachusetts by the Massachusetts Angling Association, of which Mr. E. P. Ordway is its very earnest and efficient President, and that the works and efforts of this society have been endorsed by the Fish Commissioners of Maine; and

WHEREAS, The Committee of the said Anglers' Association has, in a series of resolutions, invited the co-operation of their sister States, and urged the formation of similar associations for this purpose; therefore be it

Resolved, That it is the special province of the American Fish Culturists' Association, composed, as it is, of the State Fishery Commissioners, and the leading Fish Culturists of the country, to procure, by legislative enactment, within or outside of its own body, the formation of a similar society to that of Massachusetts, and for the like objects. Also, in view of the difficulty that has hitherto attended the identification of species by a confusion of local names whereby we are unable to distinguish by the vernacular a trout from a black bass, a pike from a pickerel, and a blue fish from a covey fish, it is of the utmost importance that a uniform nomenclature be adopted, and that to designate such species as may be named within and coming under the provisions of any amputary act, so that the same be known and recognized in all those States included within the limits of said act, and that the better to decide upon and establish such uniform nomenclature a Committee or Board of Reference be formed to be composed of delegates, one from each naturalist's and sportsman's association in each State, whose qualifications shall be defined and determined by a convention composed of one delegate from each naturalist's and sportsman's association in the States so co-operating, and the decision of which Board of Reference or Committee shall be final.

Following the heels of this resolution, we prepared a Comparative Table of Close Seasons, in all those States where game laws exist, which we published on the 12th of March with the following explanatory comments appended:

[From our issue of March 12th.]

Herewith is given a comparative table of Close Seasons for all kinds of Game and Fish in each State of the Union where protective laws exist, so that the reader can determine at a glance, without the trouble of hunting through a volume of codified laws, just what particular bird, animal, or fish is excepted, or prohibited from being caught or killed, at any given month in the year. Its usefulness and labor-saving character are apparent. He who examines carefully, however, cannot fail to see how strangely the laws conflict as respects the game of any given latitude, even in the States that are contiguous and homogeneous in their soil and fauna, and in the same season, and at several weeks in localities that lie within the same geographical zone and between the same parallels of latitude. It is apparent at once what opportunity is thus given to those who desire to evade the laws, either in the killing or selling of game, while to the well disposed and most earnest advocates of protection the jumble of heterogeneous and interminable legislation renders it almost impossible to keep in mind, or even determine, when and where any particular kind of game is in season or out of season. More than this, within the general law of individual States are hundreds of special provisions, excepting this pond and that stream, and this county and that township, so that there are prohibited districts, and close seasons within close seasons, that render the confusion worse confounded, and defeat the efforts of those who seek the general welfare. And at each session of every Legislature some well meaning and enthusiastic advocate of protection clamors for additional and more stringent measures, so that in the midst of too much legislation and too much protection we are likely to defeat the ends we strive for.

It is obvious that the only remedy lies in co-operative legislation, and in a simplified code. Nature has singularly defined her geographical belts, and designated the animal and vegetable life that dwells within them. As certainly are the boundaries of the range of the deer and the habitat of the trout defined as are the varieties of food upon which they feed. *Carus Virginianus* is not found north of a certain latitude, nor the *Salmo fontinalis* south of a certain latitude. The same is true of the ruffed and pinnated grouse, the quail, the turkey, the moose, and the antelope. What we need is one general enactment that shall apply to these geographical zones alike, in their range, their breadth and extent, or at least to extended sections of these zones. Game laws for Ohio need not be the same as for Maine, but the laws protecting game in Maine, Vermont, and New Hampshire should be precisely alike, as the laws for Ohio, Kentucky, and Illinois should be the same for those particular States. To the Pacific coast the law of the Atlantic would not apply, for its climate and seasons are different. Local laws might have to be made for the beaver and the big horn sheep, for their range is limited and fixed. For the nomadic buffalo, which ranges through many de-

groes of latitude, and whose periods of coming and going are as regular and well known as the rotation of the planets, special and peculiar legislation is required. Nevertheless, the general principle, as indicated can be easily applied. Under these provisions there would be no need of local or neighborhood laws, for the game being thoroughly protected throughout the whole State, the depleted and barren districts of one State would in time be replenished and restocked. Different laws for contiguous States are irrational, and as at present constituted, they are actually aiding to drive out and exterminate the game instead of preserving it. If September is a close season in one State, and October in the next adjoining, no end of trouble must result; witness the case of the Governor of Missouri, who, when shooting near the border, happened to cross the line into Kansas, and was very properly arrested for an infringement of the law of the latter. There should be no difference between the laws of Kansas and Missouri, for their climate and latitude and game are essentially the same.

We have now stated the facts and the necessities of the case. We propose a practical application of the remedy, premising (and taking the highest English authority as judges of the question) that "it is a known fact that all the best measures for the protection of game, the most judicious and most effective for the sportsmen, but for those who gain their subsistence by shooting and fishing, must always emanate from those who shoot and fish for their pleasure." Ordinarily, those who legislate, those who make the laws, are not practical sportsmen, or so well informed on the subject as to serve advantageously as scientific economists. It is proper, therefore, that the drafts of any bill or bills to be submitted to future legislative bodies should emanate from the sportsmen, naturalists, and fish culturists of the country, who make our game animals, their habits, their protection, their pursuit, and their propagation a constant and intelligent study. The remedy, then, and its application, lies in the co-operation of all the scientific and acclimating societies and sportsmen's clubs in the Union, and we are herewith encouraged by the Game Protective Society of New York, and the American Fish Culturists' Association of the United States (to both of which the scheme has been presented) to lay before all these clubs and associations the importance of calling at an early day a convention of sportsmen, naturalists, and culturists to select a board of arbitration or reference, which shall prepare a suitable draft of a law to be pressed for passage upon the legislatures of the respective States, this reference to be final, the legislature to sit as a committee of the whole, and the bill to be either rejected or accepted unconditionally. Legislators who have the interests of the country at heart would not be jealous of their prerogatives in such cases; indeed, they should be gratified to be relieved of the arduous labor and responsibility of so important a measure. We have received a great number of letters urging this movement for a general convention, details of which will soon be published, and we have no doubt that all clubs will readily fall in with it.

On April 19th we supplemented this article by the following brief remarks concerning special legislation for separate localities in the same State:

"They only confuse the conscientious sportsman who is anxious to conform to statutes, and at the same time operate actively to detect and punish general and summary statutes, by dividing the dispenser of penalties into two classes, and imposing their penalties. Any one can very reasonably plead ignorance of the law, when there is a petty enactment for every separate lake, pond, and stream in the State, and when even the freholder cannot tell what particular law governs his own private preserve. We trust to see some means soon adopted that will sweep this local legislation out of sight, and that a wholesome and uniform system of general and cooperative laws for all the States will be framed, adopted, observed, and universally extolled. If special restrictions are required to extend close time or secure total prohibition as to certain waters or districts, the duty should not be imposed upon the legislatures, but be assumed by those persons most immediately interested in the preservation and propagation desired, either through associations or individuals."

On May 7th we printed an extended legal opinion, prepared expressly for the FOREST AND STREAM by one of our most eminent jurists, defining the operations of game laws as governing trespass, and the rights of sportsmen and property-owners. This opinion covered one full page of this journal, and is too long for republication here. It is sufficient for our purpose to state that it gives a legal guaranty of the integrity and correct construction of our cooperative scheme in all its parts.

Having thus fortified ourselves that the scheme was sound, practicable, sufficiently comprehensive to meet the requirements of the case, we sought to obtain its endorsement by the New York City Society for the Protection of Game, a body which has been most efficient and remarkably successful in prosecuting offenders against the game laws—both those who killed and those who sold out of season. The scheme was submitted and endorsed, and resolutions seconding the call of the Fish Culturists' Association were referred to a proper committee, which reported as follows:

"The committee to which had been referred the resolutions offered by Mr. Charles Hallock in reference to a uniformity of the game laws, submitted the following report; that on the examination of this subject they note the varying laws that obtain in the several States, and that the variations in the legal times of killing game do not depend upon the periods when the animals have ceased breeding, or upon the different climates which advance or retard incubation, as much as they do upon the accidental selection by the legislatures of the law of some other State or Territory as a model. In some instances the breeding season of some fish has been made the open season. In other circumstances open seasons have been created for some birds, which should never be allowed to be killed, as for instance the brown thrush, in section 10 of the law of our own State. But particularly we note the objection that adjoining States in the same latitude, and affected by the same climate, and stocked by the same kinds of game, have different seasons in which they may be taken. The injury done by this is profound. It not only imperils the existence of the bird in the State where it is adequately protected,

but it renders nugatory, to a large degree, the proper law in the adjacent State, because most of these laws are enforced by prosecuting the vendors of the game, and if game killed according to law in one State is sold in another State where it is illegal, the vendor can plead that the game was killed in an adjoining State where the killing was lawful, and thus not only escape himself, but render convictions under the law so uncertain that few will undertake the risks of prosecuting. It oftentimes occurs that the breeding place of some game in one State, while the game in the autumn moves to other grounds, as in the case of woodcock, and a great temptation is thrown in the way of those who live near the breeding place, and know that in a few days the birds will move off where they will be killed, and they not allowed to participate in the chase.

The reasons seem even stronger when applied to fish in rivers that run through several States, as, for instance, the Connecticut, which is liable to be fished by the citizens of four different States, any one of which could prevent by their action the enjoyment of the fisheries by any of the others.

There are certain zones of climate where the birth and maturity of game are so nearly simultaneous that the same law could govern in all. Take, for instance, the quail in Pennsylvania, Ohio, New Jersey, Delaware, Maryland, Connecticut, Illinois, Indiana, Michigan, Wisconsin, and Minnesota. These birds are a single game bird of great market value and field pleasure.

Their incubating season vary very between Central New York and Maryland about two weeks, and in either place will be advanced or retarded that much of time by the character of the season. In none of these places, however, do any laws propose to open the season at the precise day when the birds are hatched. A reasonable margin of time is made, extending from October 1st to February 1st. In our own State the open season is from October 20th to January 1st. These States, on this subject, had their laws been uniform as to times, would be perpetually aiding each other; now they are the cause of stumbling and uncertainty. Another matter which is essential to a complete system of game laws is to have, in every kind of game as possible condensed into the same close season. Each State has not only varying times to commence shooting the same game, but also varying times to commence shooting the different varieties of game. Thus in our own State the shooting season for woodcock begins July 3d; for quail, the 20th of October; for partridge, the 1st of September; for starlings, the 1st of August. Country people do not carry these dates in their minds, and are liable to error; and those seeking to enforce cannot tell whether a sportsman in the earlier months is pursuing legal or illegal game, and there is a total absence of a fixed, definite time in the public mind when field sports begin.

The same irregularity in our laws exists in those of the other States. No greater step in advance in these matters could be made than by having a fixed, permanent day when all shooting might begin.

We cannot pass in silence one general omission existing in the laws of all the States. No provision exists protecting the migratory birds, and providing for the spring of the year. English snipe, plover, dowitcher, and the many varieties of birds that enliven our beaches, are wholly unprotected by law, and are killed and sold in the markets in April and May in large quantities. When the spring is late, and the birds are delayed in their passage, they are found full of eggs, and sometimes are forced to nest within the State.

The birds should be protected in every State, no matter where they are flying to, for they are the children of our common country, and are gladdening every part of it in their migrations. No rule is so good as the rule that no gun is to be fired at birds or animals in spring or summer. Every reason of health to the eater, of abundance of supply of the article eaten, of justice to the animal when breeding or preparing to breed, pleads for the fullest and most complete protection, and we have no hesitations, and therefore we submit the following plan and resolutions—

Whereas, The general sentiment of the country is in favor of the creation and immediate adoption of some system which will secure in the different States and in Canada greater uniformity, and consequently greater efficiency in the laws for the protection and preservation of game, and inasmuch as a plan for securing these objects through cooperative legislation of all the States was submitted to the American Fish Culturists' Association, and unanimously endorsed by it last February, and since then by other similar bodies in various parts of the country.

Resolved, That it is expedient and necessary to call a national convention at the earliest date consistent with a careful and general scrutiny of the scheme; and inasmuch as this body, the New York Society for the Protection of Game, has already discussed it in session and submitted it to legal gentleness of experience for examination and secured its approval, we do hereby recommend and advise that a circular letter be addressed to each and all the sportsmen's, acclimating societies, natural history societies, and fish culturists' associations throughout the country, wherever available, inviting an endorsement of the same, and requesting that a written notification of such endorsement, signed by their respective Presidents and Secretaries, be sent to the Secretary of this society, to be filed, and that the said letters shall express the choice of location and date of year at which the convention shall be held, and that it shall be found upon examination at the interval of six months that the favorable responses are sufficiently numerous and widespread to be regarded as representing the wish of the country, then a call shall emanate from this New York Society for the Protection of Game, designating such time and place for the meeting of the Convention as shall appear to be the wish of the majority of the societies responding. All of which is respectively agreed and resolved. William C. Barrett, Chas. E. Whitehead, Chas. Hallock, Committee.

May 11th, 1874. The report was adopted, and ordered to be printed.

In issuing this call, the New York City Society had no intention or desire to usurp any prerogative, but in the absence of any other movement, or any indication of one, was ready to take the initiative. It will be observed that the selection of time and place to hold the Convention, was to be left to the choice of the clubs responding to the call. In this way the sense of the country could readily be taken, and sufficient time be allowed in the interval to permit a

careful examination of the general subject of game protection, and of the proposed plan in detail. Just at this juncture, it was very properly and in the most friendly way, suggested by John B. Sage, Esq., one of the officers of the New York State Association, that in view of the approaching State Convention at Oswego, the call might with greater propriety emanate from that body, and thereby doubtless have the greater weight. The concession was made with alacrity; the resolutions, committee's report, and formal circular, were forwarded by mail to the President and Secretary of the State Association, and a delegate was sent to Oswego to submit the Scheme (as adopted by the Fish Culturists and endorsed by the City Society) to the consideration of the State Association, in order that the anticipated call might be projected upon its basis. Through inadvertence, and some informality in its credentials, the delegate was not admitted to the floor; the Scheme was not presented; and a call for a National Convention, emanating from an altogether different source, was instituted by parties cognizant of the earlier movement, and unanimously adopted by a Convention, nineteen-tenths of whose members were wholly ignorant of any such movement. Indeed, the officers themselves expressed their regret that no opportunity had been afforded to examine a Scheme which had been prepared under the auspices of so eminent a scientific body as the Fish Culturists' Association.

We have written it best to print this historical sketch, in order to bring the Scheme freshly before our readers and the delegates at Niagara Falls, and to inform the public as to what actual progress has been made toward securing a consummation of the great economic necessity of the period. It may be that other better plans will be presented. No doubt the one in question will bear amendment or revision. It is certainly rudimentary, and needs perfecting. It is the duty of the Convention to devise the best means for securing the Protection of Game, and a more effective legislation to govern close times and open seasons; and if this should command their favorable attention, the efforts of those who have worked it out and brought it to its present form will not have been in vain.

THE SHOOTING TOURNAMENT AT NIAGARA.—No doubt the roar of the great cataract at Niagara will drown the popping of the pigeon-shooters' guns next September 9th, so that the noise thereof will not disturb the deliberations of the Convention that meets to secure the protection of game. We hope it may. We trust also that the session of the delegates will in no way annoy the pigeon-shooters or distract their nerves. We look for good scores this day forthright, when the air is cool, and all the conditions of season, climate and locality are favorable thereto. Bad marksmanship brings no satisfactory return. In pigeon practice, the death of each bird ought to bring some compensating benefit to the contestants, either in rewards of merit, the pleasure of honorable emulation, or in improved accuracy. We never could bring ourselves to believe that pigeons were created for the express purpose of being shot from the trap, although they seem in this way to serve men best. They are of very little account in a pot-pie; while, living, they break down forests and defile the face of nature in the vicinity of their roosts. So long as it is more important that our citizens should become expert in the use of arms than that the lives of thousands of pigeons should be saved, so long shall we defend the practice of trap-shooting. It secures quickness of trigger, accuracy of aim, confidence in the field, readiness for emergency, and renders our people the worthy descendants of ancestors whose training amid wilderness experiences and hard to hand encounters with wild beasts enabled them to conquer a country and win an independence. It was in such a school as this that our forefathers were tried; in this they learned the art of arms. Pigeon shooting we regard as essential to the defence of our country through the education of our citizens to be marksmen, and until some contrivance shall be invented or discovered which shall serve equally well in the manual of instruction, we must be content to permit and endure trap-shooting, repugnant as it may be to our finer natures.

Through numerous letters from members of the Niagara Shooting Club, we learn that the preparations for entertaining their guests on a grand scale are progressing most satisfactorily, and we doubt not that the tournament will be one of the most "recherché" (is the word proper?) of any similar festival yet held in this country. The Club is one of the oldest we have, and one of the most influential. Possibly all its members are thoroughbred sportsmen and earnest conservators of game, who rejoice at the prospect that some good may accrue from the deliberations of those who meet to improve the game laws, and will in every way aid and abet their action; nevertheless, as we have already said, we should prefer that the Tournament had been called on some other day than that selected by the Convention.

DELEGATES.—Hon. A. L. Brinsmade and H. H. Brown, of Cleveland; J. C. O. Brigham, of Toledo; and Hon. T. A. Logan and Col. L. A. Harris, of Cincinnati; have been appointed delegates from Ohio to the National Convention at Niagara Falls.

Dr. W. H. Hudson, of Hartford; Hon. O. H. Platt, of West Meriden; R. O. Cheney, of Manchester; Dr. L. S. Laddington, of New Britain; and Judge L. E. Munson, of New Haven; have been appointed from Connecticut.

The New York City Society for the Protection of Game, Royal Phelps, President, has appointed Hon. Robert B. Roosevelt, Hon. Carson L. Brevoort, President of the Long Island Historical Society, and Charles Hallock, Editor of FOREST AND STREAM, with power to name the remainder of the delegation.

Sporting News from Abroad.

GOODWOOD RACES, CRICKET AND DOG SALES.

[FROM OUR SPECIAL ENGLISH CORRESPONDENT.]

THE London season has closed, the shutters are up and the lamps that have burnt so brightly in the temples of pleasure are fast being snuffed out one by one. The long list of theatres of last month is now a short one. The 30th of Ascot have passed away and now the Goodwood meeting has brought to a close a season rendered faster than usual by the visit of the Czar of all the Russias. It was a brilliant success, both in point of good racing and in attracting visitors. The Duke and Duchess of Richmond, on account of a recent death in the family, received their friends at Goodwood House, and it was given up to the Prince of Wales, and the Royal standard floated over its walls. There was no fear of that bane of trainers, "hard ground," and though the dreaded Aet had suppressed all bags, stools, parti-colored hats, cards, and other "instruments of gaming," nevertheless, I have a notion a good deal of money did change hands on the events of the day. The stakes proved a very mild affair, and the horses engaged were by some degrees worse than a moderate lot. Sir J. Astley's Scamp was the favorite, and won by a neck, but there was a good deal of the hood and blinker sort behind him, and amongst them Indian Ocean, a pater who always runs high up on the betting and never wins. The Cup proved a better race, and was productive of something more like good form and quality. Unfortunately three of the best performers had the fatal pen struck through their names, and the requiem sounded for Doard, King Lud and Flageolet. Doncaster, an ex-Derby winner, started at 2 to 1, and though he is accounted a bit of a rogue, the gallant son of Stockwell, the best of stallions, stayed the longest and pulled off the race by a head, the notorious Kaiser being "loeked to him" as the horses came into the straight. Organist, of Chester Cup repute, lamed himself, but he was outclassed throughout. Altogether the backers of horses had it pretty much their own way, and though people who know nothing about racing tell you the favorite never wins, the takers of odds, I imagine, got home pretty comfortably.

There was another sale of blood stock at Middle Park, Eltham, on Saturday, and some high prices were realized. Mr. W. Blinkern was a large purchaser from Mr. Walker's stud, giving 3,000 guineas for Vespasian, a well known race horse, 2,500 for Seclanion and her Vespasian filly, 1,300 for the Newminster mare, Pandore, with filly by Isosierucian, bred by Sir J. Hawley, and 750 for Penance and a Trumpeter colt. England's Beauty, a grand mare well worth £2,000 two years ago, fetched the fine amount of a "pony," £1,000. There are the vicissitudes of racing. A brown filly, by Blair Athol, sold for £2,000 to Mr. Gretton, and there was no bid for Vestminster, the winner of the Cambridgeshire in 1869. Apology, the winner in the Oaks, is still first favorite for the great St. Leger, and as mares generally do well at that season of the year, I shall expect her to beat the Derby Hero, George Frederick, named after the Prince of Wales's son, and successful, curiously enough on his youthful highness's birthday day.

Rugby and Marlborough, two large and important Public Schools, though neither so large nor so good in social position as Eton, Harrow and Winchester, played their annual match before a large assembly at "Lords" on Wednesday and Thursday last. Rugby is chiefly celebrated for football, the "Rugby game" being an ancient and original institution and peculiar to the school. It differs from all other football by the introduction of carrying the ball and "hacking," which means punishing your opponent's shins with a thick pair of boots, but those men who play it swear by it and utterly despise the milder rules of the more merciful association game. Rugby has won the majority of the cricket matches and this year her star was as usual on the ascendant, and the superior fielding of the Rugbians greatly aided them to gain the decided victory of five wickets. The highest score made was a Marlboro' innings of forty-one, and nothing very exciting happened throughout the match.

In "Yorkshire vs. Gloucester" Mr. W. G. Grace ran up the fine innings of 167, and though he is accounted the best bat and the worst bowler in England, he, nevertheless, succeeded in taking eleven of his adversaries' wickets, who were, of course, disposed of in a single innings.

Lately there was a real and excellent carrier-pigeon race from Exeter to London, the pigeons being liberated at six o'clock on Tuesday morning, the wind being south-westish and very moderate. The first bird presented at 100 High Holborn was Mr. Partridge of Paddington's red-checkered cock Lord Lyon's at 11:58, and took first prize, Mr. Smeed's dark-checked Comet being second at 1:34; Mr. Smeed also won the pigeon race from Bedford of fifty miles, the time being 1 7.

The American Base Ball players made their first appearance at Liverpool on the ground of the Cricket Club. It happened, unfortunately, that there was a counter attraction in the shape of a cricket match between the I Zingari and the gentlemen of Lancashire, but still the attendance was greatly in excess of anything known on the Liverpool ground, and a very favorable impression was produced in favor of the game. Everywhere the visitors seem to have a hearty welcome, Mr. Pullman granting them free use of his sleeping cars and the Midland Railway Company generously placing a special train at their disposal from Man-

chester on stopping at Matlock for two hours en route. Of course the game was not at first understood, though the good hits and catches were at once appreciated. For a short time before the game the spectators were treated to an exhibition of skill in throwing and catching the ball. The height and distance to which the ball was thrown seemed even to the most experienced of our cricketers little short of marvellous, and no less wonderful were some of the catches, where the ball thrown fast, a short range seemed to have the velocity of a bullet. The quickness of hand and eye was the subject of general remark.

There was another large sale of pointers and setters at Aldridge's, but the drafts, the Rhiwisi kennels, did not go off as well as was expected, though Citadel, a pointer of Mr. Garth's strain, went to Mr. Hemming for £25. The best of Mr. George Moore's pointers didn't go for more than fifteen guineas, and altogether the quality of dogs sold was inferior and the number of purchasers small.

LD-TOXNE, JR.

August 12th.—The announcement that two of the best American teams would make their debut at Ford's in the national game of baseball, hitherto unknown on this side of the Atlantic, excited a lively interest among the athletic element of the metropolis. Cricket had, however, been so long established that its devotees felt but little uneasy at the idea of the American pastime supplanting it altogether, though they can now have but little doubt that their favorite pursuit during the summer months has met with a serious rival. Everybody is loud in the praise of the pluck and energy of the strangers in travelling so many miles to introduce this novel sport, and all thoroughly understand that it is not a mere speculation of Mr. Burman's or any other entrepreneur, but a genuine attempt to show us in England that the Americans have a national game, and can play at it well. The Marylebone club, in recognition of the good will shown by the Americans towards them when they were cricketing in the States, placed their ground at their disposal, and gave them every facility and convenience. The day was warm and bright, possibly too bright for difficult catches, and the attendance was large, 5,000 being the reputed number of the spectators during one period of the game. Of course it was some time before the rules were understood and appreciated, but our game of rounders is an unscientific kind of baseball, and though the notions of chaff and corking, which are peculiar to the former, were obliterated, yet the recollection of it served to render the mysteries of pitcher, striker and longstop more intelligible.

The proceedings commenced with cricket, but at four o'clock the ground was cleared and the bases marked out with small bags of sand a foot square, lines being whitened from one to the other. The Boston team wore their white flannels, red stockings, bands and caps, whilst the Athletics were resplendent in blue. To an unprofessional eye it was of course difficult to catch the varying points of the game, but from the way in which Barnes and H. Wright played for Boston and got runs, it seemed that the Athletics were off their play, and in fact their fielding was not up to the Boston form, the latter men stopping "hot ones," and returning them with a rapidity that made more than one habitué of Lord's open his eyes. The precision of throwing was marvellous, and better fingers unheard of. The distance between the bases was thirty yards, so that to effect a run, a player had to travel one hundred and twenty yards at a top speed. I believe I am right in stating that in America about five acres is required, so that the players must have scarcely had room enough at Lord's. It was all through a most one-sided affair, the chief cause being the fact that the Athletic pitcher, McBride was "out of sorts," and this led to his side being "whitewashed" three times in succession. Amongst the Bostonians, Spalding and McKey fairly divided the batting honors. Bateson disappointed his party, and Anson was perhaps their best man. A brilliant catch at short stop was made by George Wright, and fairly brought down the house with immense applause. The following is the score:

Table with columns: ATHLETICS, B, R, PO, A, BOSTONS, R, B, PO, A. Rows include players like McMullen, McKey, Anson, McBride, Munnah, Batten, Sutton, Clapp, Gedney, and a Total row.

RUSS MADE IN EACH INNING. Athletics: 3 0 0 3 1 1 0 1-7. Bostons: 3 7 4 0 5 0 5 0-24. Bases by errors, Bostons, 9; Athletics, 1; Runs earned, Athletics, 8; Bostons, 11. Umpire, Mr. Thomas Beales, of the Boston Club. Duration of game, two hours and ten minutes.

The spectators at "Prince's" on Thursday were neither so large in number nor so enthusiastic as those at "Lord's." Unhappily for the Athletics, they were deprived of the services of McBride, who felt indisposed, Kent of the Boston team taking his place as substitute. At 4:30 the Athletics commenced batting, and the game proceeded literally even for about an hour. After five innings each, the Athletics were one in advance, but after the fifth their opponents forged ahead, owing to the indifferent pitching of McMullen, the passing of two balls by Clapp, and a mistake made by Gedney at left field. Barnes made amends for his bad fielding by making a good hit, which realized three bases and let home G. Wright. In this innings Anson made the finest catch of the day, and was made catcher in place of Clapp. The Athletics rallied in their eighth innings, and obtained five runs, but failed to score

in the ninth, the game being now virtually over, and the Bostons two to the good. The following is the score:

Table with columns: ATHLETICS, B, R, PO, A, BOSTONS, R, B, PO, A. Rows include players like McMullen, McKey, Anson, Clapp, Munnah, Batten, Sutton, Clapp, Gedney, and a Total row.

RUSS MADE IN EACH INNING. Athletics: 1 1 1 0 3 3 0 5-11. Bostons: 0 0 2 0 0 1 1 4 3 0 1-24.

Runs earned, Athletics, 5; Bostons, 5; Bases on errors, Bostons, 5; Athletics, 4; Home runs, Kent, 1; Schafer, 1; double play, Schafer and O'Rourke. Umpire, D. F. Houston, of the Athletic Club. Duration of game, one hour and 20 minutes.

"The Field" is rather severe on the game, and contrasts it very unfavorably with cricket. The editor says:

"In our own individual opinion it has so many inherent defects that it has not the slightest pretensions to be considered superior to, even if it is equal with, our juvenile amusement 'rounders,' on the basis of which it has been modeled."

The other sporting papers are all loud in their encomiums as to the American fielding, catching, &c., but they mostly damn with faint praise the game itself. The Standard, one of the best daily papers, says the play is well worth seeing, if it be only to note how far superior the throwing and fielding of the Americans at their national game is to ours at cricket. Anyhow, I think that base ball has had a fair trial, and whether the seeds sown will ripen into fruit, the next season will tell us.

The Cricket match between the twelve of the Marylebone Club and the eighteen of the Americans was declared drawn. The M. C. C. made 105 in three innings, there being some good batting, but small scores. McBride bowled two of their best men for "duck eggs" with fast underhand, and Messrs. Anston, Hill, Lambcock, Rose and Appleby met the same fate, with dreary blank scores, at the hands of Mr. G. Wright. The Americans were tired by their exertions at base ball, and seemed puzzled by Rose's slows and Pickering's underhands. The rain fell at one time somewhat heavily, and under the circumstances the score of 107 which they realized was a very creditable one. Their batting was described by the press as not very scientific, although the fielding is everywhere admired. The Canterbury cricket week of course brought many visitors to this ancient city, which boasts one of the finest cathedrals in England, celebrated for its connection with the martyred Thomas A. Becket. The great match of the day was Kent and Gloucester vs. England, the All England eleven counting in its cause Jupp, Pooley, Lillywhite, Slaw, Morley, and other famous names amongst the professionals, and their opponents having two out of the three Graces; Lord Harris from the Oxford eleven, Messrs. Thornton, Yardley, and the Hon. F. Bennett. The respective scores were Kent and Gloucestershire, 231 first innings; 247 second innings. All England 201 first innings; 223 second innings. The match was a close one, and an extraordinary catch by Lord Harris alone pulled it out of the fire, as Mr. Mitchell and Greenwood, two of the All-Englanders, in the second and last innings, had got their eye in, and were playing magnificently. Oseroff, another of their men, was playing well, but playing forward to a sharp ball of Captain Fellows, he fell and dislocated his thumb, and of course retired hurt. Mr. W. G. Grace, for the counters, made the high scores of 94 and 121. In another match of Kent vs. Marylebone, Mr. Grace made 123, the respective totals being Kent (both innings) 168 and 144, Marylebone, 368. There were twelve men on each side.

The grouse prospects are truly alarming, as in many districts it is to be feared that birds are as scarce as pretty women, and in Yorkshire the accounts are very dismal. Next week will, however, relieve our suspense. The crop of partridges seems to promise well, though it is difficult to tell for certain till the corn is all out. The young p heasant which I have seen look healthy and strong.

LD-STONE, JR.

WISCONSIN CONVENTION.

CHICAGO OFFICE. FOREST AND STREAM, Aug. 20th 1874.

The meeting of the Wisconsin State Association for the Protection of Game was held in the Court House at Portage City, on the 18th instant.

The meeting was called to order by A. B. Turner, of Portage City State Register. Mr. R. H. Strong, of Barraboo, occupied the chair. P. W. Woodward, of Eau Claire, Secretary.

It was moved and carried that a committee of three be appointed to draft constitution and by-laws. W. W. Cornish, A. J. Turner, and Col. R. M. Strong, committee.

Mr. Turner moved that I. G. True of Forest and Stream, and T. C. Banks of American Sportsman, be invited to participate in the convention. Carried.

Motion was made and carried that the Association adopt the constitution and by-laws of the New York State Association, as those they would act under, with proper changes of names, &c.

Motion was made and carried, that the first annual meeting be called and held on the first Tuesday in February, 1875, at Madison, Wis., during the session of the Legislature. After considerable argument and many suggestions in regard to the best method for the preservation of fish and game, and the future success of the State Association, the election of general officers was called for. Col. Strong nominated Mr. Strong, of Barraboo, a resident of the State for forty years, as first President of the Association. It was unanimously carried. The same good feeling, and

unanimity existed in respect to the following officers elected:—F. W. Woodward, Eau Claire, 1st Vice President; L. M. Wyatt, Fond du Lac, 2d Vice President; Myron T. Bailey, Madison, Recording Secretary; A. J. Turner, Portage City, Cor. Secretary; W. W. Corning, Portage City, Treasurer.

Executive Committee.—A. J. Aikins, Milwaukee; P. S. Ellis, Green Bay; H. B. Harstang, Oshkosh; Jas. Hogan, La Crosse; R. M. Strong, Barraboo. The call for a meeting of the National Association at Niagara Falls was then read, and the following gentlemen were invited to attend it.—A. V. H. Carpenter, Milwaukee, Gen'l. Pass. Agt. Mil. & St. Paul R. R., G. W. James, Eau Claire, F. B. Goodell, Montello, W. W. Webb, La Crosse, W. J. Young, Westford, R. O. Dommis, Portage City, F. F. Farnham, Columbus, Henry Harstang, Madison, Wm. L. Uley, Racine, H. N. Sherman, Beloit, A. R. Barrows, Chippewa Falls, W. D. Merritt, Prairie du Chien, A. G. S. Holmes, Green Bay, B. G. Paddock, Ironton, S. D. Burehard, Beaver Dam.

After passing a resolution offered by Mr. A. B. Turner, recommending the FOREST AND STREAM, of New York, as the official publication of the Western, Central, and Field and Stream, of Chicago, to the Sportsmen of Wisconsin, as worthy of their cordial support, the Association adjourned with the avowed purpose of making it an institution worthy of the game hunting and fishing States of the Union.

In this connection let me incidentally mention the facilities of the Chicago, Milwaukee & St. Paul Railway, for the sportsman and the tourist. They can find any amount of game and fish in season at almost any station along its line, in Wisconsin and Iowa.

GOODIE.

Shot Gun and Rifle.

GAME IN SEASON FOR SEPTEMBER.

- Moose, Ales Alutias, Caribou, Tatarian Rangofer, Red Deer, Carvers Virginianus, Wild Turkey, Michigan gallinula, Quail, Ouzel Virginia, Woodcock, Sceloporus virgatus, Painted Grouse, Tetrao Gryllus, Woodcock, Patter, Red Grouse, Sandpiper, Virginia, Esquimaux Curlew, Francolinus, Wild Duck, Wild Duck.

Under the head of "Game, and in season" we can only specify in general terms the several varieties, because the laws of States vary so much that we are unable to particularize we could do less than publish the laws of each State, and state the kind of game in season. As we could require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of the respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

—Our reports from along shore are not very encouraging to sportsmen. Willets and other bay birds are scarcer than they were ten days ago.

—There is good shooting now at Rye Beach, New Hampshire, for yellow legs, plover, snipe, etc.

—Reed birds are likely to be abundant on the Delaware River the coming September, as some of the energetic sportsmen of the vicinity have been employing men to patrol the river in skiffs and arrest all persons caught shooting these birds before September.

—The Hones Point Club, of Cleveland, Ohio, has one of the finest ducking grounds on Lake Erie, and as the ducking season commences on 1st September, prox., the members are on the books for a grand shoot. The rendezvous is only a hundred miles from Cleveland, and ducks are reported as more plentiful now than for ten years past. If any of our readers would like to accept the hospitalities of the club on the 20th inst. they can drop us a line, and we will facilitate their wishes by giving them a letter of introduction to the officers, who herewith tender them an invitation. Our Western sportsmen send us frequent evidence of their liberality in tendering our Eastern sportsmen privileges of this sort, and we owe them handsome acknowledgements on our own and our readers' behalf.

—"Chicken" shooting is now all the rage out West, and the shooters are sending home big bags daily. We have advices from several of our correspondents as to quantity shot, but not sufficiently explicit in designating localities to serve our readers by publishing. As an evidence, however, of what can be done, and to inform our Eastern readers who are unacquainted with the manner of prairie shooting, we print the following very interesting letter from a young man who made his maiden effort at this branch of sport last week. His letter is dated:—

SEALE PLAIN, IOWA, August 17th, 1874.

EDITOR FOREST AND STREAM:—On party consisted of one team and spring wagon, a single rig and small demerol wagon, our best camp outfit, three dogs, and five hunters. We started about nine o'clock and at noon were ten miles north twelve miles; we had near a grove, fed horses, dogs, and men, and took a good rest. We had reached the ground where we were to commence, and as the cool of the evening approached two of us took the teams to the place where we were to fix the tent, while the others hunted within a distance of two miles. I went with the teams, and after getting ready for the night took my gun and dog, and with a half hour's hunting I shot for a little while. As it began to grow dark, we all returned to camp, three with fourteen birds, and I with none.

The programme was to finish morning and evening, change quarters in the middle of the day, and to be home Saturday night. The days, of course, were all more or less alike, but birds were not so plenty as we had hoped to find, and when Saturday morning dawned we found it sprinkling a little, and did not start so early as usual; but after breakfast made preparations for our drive home. Having stayed in camp the morning previous, it was decided that I should hunt, and leaving two to break camp, I started in the direction the teams would take, two on one side of the road, and I alone on the other. This being the cream of all my sport, I will give it more than a line. I had hardly come more than 100 yards from camp when a wild covey left the stubble, but marking down these in a single I went for them, and soon had them in my pocket. I then walked over a mile without a sign, and began to get discouraged, when I struck the field of what had been cut with a header, and "Count" being trailing. This gave me courage, and as soon as he pointed two birds got up, which inspired me as they landed. With scarcely time to

change shells, two more started and as soon stopped, and in this manner more were added to my load, without a single bird leaving that I had been shot at, or getting up out of range. Satisfying ourselves we had the entire family, "Count" and I started for the creek, as he was getting warm, and just as he neared the edge of the field he again pointed, and on coming to him I flew from the grass, dropped, and at the crack of the gun the cover rose and another fall. As they sailed off I counted nine of the family that had escaped harm, and I presumed for good; but keeping pretty well together they alighted in some grass a quarter of a mile off, and near the edge of a stubble. With my eyes on the spot, I took a lie close, but did not get close enough before one of the coveys was out for him, and flew from the grass, dropped, and at the crack of the gun. Then "Count" began doing as pretty work as a dog ever could do by getting the balance of the eight up, and had I done as well as he, would have wiped them all out; but the sport was too good to take too much care, and one escaped unharmed by my carelessness, at which I much regretted. Having raised them all, and finding my coat growing heavy with the weight of twenty-nine almost half grown birds (out of twenty-two shot), I loaded the baggy that was to eight, and soon was taken to the rest of the crowd, who had bawled just six. Believing we had just struck the place, we held a consultation, and decided that one should take the single rig, birds, and what traps we could dispense with, and go home, while the rest hunted in the evening; and soon the owner of the small rig was started homeward with his load and fifty-two birds. We then sought a convenient place for camping, which we found within a few rods of where my last covey first started, and on the bank of the creek. When the proper time came we started for birds, and brought fa. We all then worked in preparing for the night, and by eleven o'clock were soundly sleeping. Every morning we had been stirring at peep o'clock, and now (Sunday) we could by no means be so dressed, and after resting our guns and dishes, packed everything in good shape, and then took a refreshing bath in the creek, after which we fed our horses and started for home, where we arrived at six o'clock on Sunday evening. The total number of birds killed was 148, and although I remained in camp an entire night, seventy-one of them fell from my gun. Not a single wild spotted, although ninety-two were brought to town.

—One of our Lawrence, Kansas, correspondents says:—All places on earth for duck, goose, snipe, and prairie chicken shooting, the Mississippi River, from Dubuque to St. Paul, must be the best. Two of us one afternoon, in two and a half hour, made a bag of nine mallards, weighing twenty-seven and a half pounds. They were selected on the wing, and every bird shot brought in.

—Georgia is a good place to hunt woodcock. An August correspondent writes, August 19th:—

At this time, it seems, you have woodcock shooting. We would, too, if just at this time there was not a rattlesnake, copperhead, or cottonmouth necessary—so called from its ugly mouth being white as cotton—under foot for every one who goes to make his only one to shoot with again one barrel of which points up and one down. When the first drives the snake family into the ground the corks suffer.

—Ten thousand people are annually punished in England for violating the game laws, and there is a cry for reform.

—The Earl of Dunluven has bought six thousand acres of Estes Park, Colorado, and purposes "improving" it by keeping the game and fish from too rapid destruction, and by erecting buildings for tourists.

—The Woodside Shooting Association, of Woodsville, Long Island, will shoot for the Cameron challenge cup next week. All matches for the cup to be shot for as fifteen single rises each, 11 and T ground traps. Any member holding the cup for one year against all contestants to become his personal property. Entries in the above match must be made to the Secretary, W. T. Cameron, Esq., prior to Monday, September 7th. There will be a grand sweepstake shot for after the shooting for the cup has been decided.

—The Portsmouth, New Hampshire, Sportsman's Club is arranging for a grand pigeon shooting tournament to take place at the Nottingham Park in that city, beginning September 2. All sportsmen's clubs are invited to participate, and Bogardus, the championship shot of the United States, will be present and give exhibitions, as will other crack shots. Several sweepstakes and matches will be shot, and the members of the Portsmouth Club will shoot for an elegant gold prize medal offered by M. Eldredge, Esq., of this city.

—The Grand National Schutzen Festival closed at Baltimore on the 24th, after a most successful session of eight days. The prizes were distributed. The third, fourth and fifth prizes, for which there was a tie, were distributed respectively to George Schilling of Baltimore, Rudolph Hensch of Washington, and Adolph Strecker of St. Paul, Minn. During the festival the receipts for entrance fees, &c., have been \$31,000, and the value of the prizes distributed \$25,000. There has been used at target firing 3,000 pounds of lead, and 2,000 pounds of powder, 89,829 shots being fired. Baron von Scholzer, the German Minister at Washington, was present.

—James Ward defeated Ira A. Paine in a match at 50 double pigeons for \$1,000 a side, at the Buffalo (N. Y.) Driving Park Thursday afternoon, Aug. 13, the Canadian killing 88 to Paine's 86. The latter out-scored his antagonist in shooting at singles.

—James Ward, of Toronto, who intends going to England in October, issues the following challenge in answer to Capt. Bogardus:—

I will make a match to shoot against Capt. Bogardus for the championship of America and \$600 a side, each, to shoot at 100 birds—40 single marsh blackbirds, ground quail, 21 yards rise, 50 yards fall; 30 single wild geese, ground quail, 21 yards rise, 50 yards fall; and 15 pair double wild pigeons—18 yards rise, 100 yards boundary, from plunge traps. I will furnish half the pigeons and all the blackbirds for the match, free. The match to be shot at Buffalo on Monday, September 14th, if acceptable. The match to be governed by the Canadian rules for pigeon shooting. Game money to be divided. John Sidway to act as referee, and H. H. Klemmman, Bogardus and myself to name the ground. Let Capt. Bogardus send all the money to Wilkes Spark of the Times, half forfeit, and I will immediately cover it.

—Captain Bogardus, in reply to Ward's letter, states that he will accept his challenge just as he proposes it, and if he (Ward) will increase the stakes to \$500 a side it will suit the Captain better.

THE CHICAGO PIGEON SWEEPSTAKES.

BRANCH OFFICE, FOREST AND STREAM, CHICAGO, Ill., August, 1874.

The following are the scores complete of the Sweepstakes on the last day of the Chicago Pigeon Tournament, August 13th:—

Table with columns for names, scores, and totals. Includes names like Sherman, J. J. Klemmman, J. E. Long, Don Keston, etc.

John C. Long, Abner Price, and H. H. Klemmman having killed entire single birds in succession, were awarded \$38 75 each.

Ten single birds, 21 yards rise, 80 yards boundary; best four scores to win; \$10 in the pool, \$25 to each winner.

Table with columns for names, scores, and totals. Includes names like J. E. Long, Don Keston, J. J. Klemmman, etc.

John McCormick, H. H. Klemmman, \$25 each, killing all the birds. John E. Long and Geo. Pedmore killed 9 and 8 birds each in 26 and 31 days, taking the remaining \$25.

Ten pairs each, \$10 entrance, and draw back for each bird killed, the balance left in the pool to be divided among the highest scorers.

Table with columns for names, scores, and totals. Includes names like Pedmore, J. J. Klemmman, J. E. Long, etc.

Nineteen dollars left in the pool. Price and Mason take each a third, and the ties on 9 divided the other one-third.

Class shooting on three double rises, \$5 entrance, in three prizes, viz: \$25, \$20 and \$10.

Table with columns for names, scores, and totals. Includes names like Chittenden, A. Price, Don Keston, etc.

John Davidson and H. J. Edwards divided first prize, H. H. Klemmman and John Davidson second prize, Abner Price third prize.

\$10 entrance, four prizes, \$25, \$20, \$10 and \$5 each, in three prizes, viz: 18 yards, 10 yards, 10 yards, 10 yards.

Table with columns for names, scores, and totals. Includes names like Elston, J. J. Klemmman, J. E. Long, etc.

Sweeps, \$10 entrance, 10 birds, best 3 to win, 18 yards rise, 80 yards boundary.

Table with columns for names, scores, and totals. Includes names like Long, Abner Price, Pedmore, etc.

Edron Forest and Stream.—The Edron Gun Club of Brooklyn shot their first summer match at pigeons last week at the half-mile track. There were eight members, 15 birds each, usual conditions and rules. The following is the score:

Table with columns for names, scores, and totals. Includes names like A. Kist, Don Keston, etc.

SECOND SHOOT FOR BIRDS, 5 PAIR AND 1 SINGLE.

Table with columns for names, scores, and totals. Includes names like Kenney, J. J. Klemmman, etc.

After this, Kidd—commonly called Bogardus—challenged both Woodford and Trotter to shoot for \$100 a side, to come off any time in two days.

The next was a shoot for the birds, between Ferguson, Russell and Kerr. This resulted in a tie between Russell and Ferguson.

THIRD SHOOT FOR BIRDS, 3 PAIR.

Table with columns for names, scores, and totals. Includes names like Ferguson, Kerr, etc.

The next was a shoot for \$5 a side, between Kidd and Baggs.

FOURTH SHOOT FOR BIRDS, 1 PAIR AND 1 SINGLE.

Table with columns for names, scores, and totals. Includes names like Kidd, Trotter, etc.

The next was a shoot for \$5 a side, except a beautiful repast at the beautiful home of the president of the Nurood Club of Dourban.

—The series of matches at Creedmoor next month will embrace Ireland vs. United States, Canada vs. Ireland, and the United States vs. Canada. A very interesting triangular contest is looked for.

UNBROOK.—There were two rifle matches on Saturday. The most important was that for the Amateur Rifle Club long range badge. The distances were 800, 900, and 1,000 yards; any position within the rules; five shots at each range. There were but nine entries, but this number included some of the best marksmen in the club. Mr. L. L. Hepburn won the badge on a score of 54, out of a possible 60. It was previously held by A. V. Canfield, Jr., who won it on a score of 45 points. Gen. Dakin also made a score of 54, which resulted in a "tie" with Mr. Hepburn. The latter was declared the winner, as his score at the 1,000 yards range exceeded that of Gen. Dakin by one point. The following is a list of the scores:

Name	Yards	Score	Total
L. L. Hepburn	800	43 4 4	19
	900	3 4 4	18
	1000	3 5 4	17-54
General T. S. Dakin	800	4 4 4	19
	900	4 3 4	19
	1000	2 4 4	16-61
J. S. Conlin	800	4 4 4	19
	900	3 3 3	16
	1000	3 4 4	16-50
F. S. Gardner	800	3 2 4	16
	900	3 4 4	18
	1000	3 3 3	17-47
E. H. Sniford	800	3 3 3	16
	900	3 4 4	18
	1000	3 4 0	13-47
A. V. Canfield, Jr.	800	3 3 3	16
	900	3 3 3	15
	1000	3 2 2	13-47
L. Geiger	800	3 2 3	15
	900	3 3 3	16
	1000	3 3 3	16-46
Lieutenant H. Fulton	800	4 1 0	16
	900	3 2 3	14
	1000	3 2 0	11-46
A. T. B. Collins	800	3 2 3	17
	900	3 3 3	18
	1000	4 2 0	13-44
G. W. Yale	800	4 4 4	20
	900	4 4 4	20
	1000	3 2 4	16-43

With regard to this shooting, Col. Wingate writes to **FOREST AND STREAM**:

"The paucity of competitors at long range Saturday was caused by rain, not for the reasons assigned by the papers. Fulton's bad score was caused by a bull's eye and centre on wrong target, which scored as misses. The Irish score, Elcho Shield, averaged 3.33 a shot, or a score of fifty in fifteen shots. This, you will see, is already equalled by several of the team. The fall of the team, however, is where we are weak. I fear Americans are betting too strong on us, and we wish the public to understand the difficulties we have to contend against.

The other match was the eighth competition for the *Turf, Field and Fava* "challenge" badge. Distance, 200 yards; position, standing; two sighting and five scoring shots, open to all members of the National Rifle Association. There were forty entries. The shooting was only fair, the highest score being only seventeen. This was one point better than the score that won the badge at the seventh competition. Mr. Madison was the winner for the second time, and should be so fortunate as to win it at the next competition. He will become absolute possessor of it. Messrs. L. C. Bruce, W. F. Edmonston, Gen. F. J. Miller, F. W. Linton, J. T. B. Collins, F. McMillan, John Beattie, and Sergeant Collins scored 15 each; J. L. Price, A. V. Canfield, Jr., Gen. T. S. Dakin, J. O'Kelly, Col. G. W. Wingate, Leon Backer, J. W. Condy, E. S. Gardner, P. M. Brasher, and A. J. Hennion scored 14 each; Sergt. Turner and H. P. Carrington scored 13, and the others 12 and under.

A number of improvements have recently been made on the range. A high picket fence surrounds the field; refreshment stands have been erected at 200 and 500 yards and in rear of the 1,000 yards firing point and a ticket-office is in process of construction at the entrance to the grounds. A new set of number boards are to be erected behind the targets on which the figures are to be made more distinct, and thus lessen the possibility of accidents by firing at the wrong targets. It is expected that the Fall meeting will be largely attended.

This will take place during the last week in September. The day is not yet fixed, but will be named as soon as the President hears from the Irish team.

The Executive Committee have decided upon the following matches:

- First**—Judd Match, 200 yards, standing; seven shots any military rifle; open to all members of the National Rifle Association.
 - Second**—Sportsman's Match, same distance and number of shots; weapon, any rifle under the rules; open to all comers.
 - Third**—First Division Match, 300 and 500 yards, five shots each distance; weapon, State Issued rifle; to be competed for by teams of twelve from each regiment in the First Division, National Guard State of New York.
 - Fourth**—Second Division Match, same conditions; open to teams from the Second Division.
 - Fifth**—New York State Match, same conditions as the Division matches; open to teams of twelve from all regiments in the National Guard. In case two or more regiments from one of the divisions of the National Guard (outside the limits of the First and Second Divisions) shall participate in this match, the one making the highest score will receive the prize offered by the State to this division.
 - Sixth**—New Jersey Match, 300 and 500 yards, five shots each distance; open to teams of twelve from each regiment of New Jersey, N. G.; weapon, such as shall be designated by the Governor of the State.
 - Seventh**—Army and Navy Journal Match, 500 yards, seven shots; open to teams of twelve from any military organization in the United States, including the regular forces.
 - Eighth**—The Gating Match, 500 yards, seven shots; open to teams of twelve from each regiment of the National Guard of the State.
 - Ninth**—All Comers' Match, 500 and 800 yards, seven shots each distance; open to all comers; any military rifle.
 - Tenth**—Consolation Match, 500 yards, seven shots; open to unsuccessful competitors; any military rifle.
 - Eleventh**—Bennett Long-range Championship, 800, 900 and 1000 yards fifteen shots each distance; any rifle within the rules; open to all comers.
- The particulars of any prize list cannot be announced as yet, further than that for the Bennett Championship the prizes will be: First prize, silver trophy, costing \$350, to become the absolute property of the winner; second prize, cash, \$100; four prizes of \$50 each, \$200; four prizes

of \$30 each, \$120; four prizes of \$20 each, \$80; ten prizes of \$10 each, \$100; ten prizes of \$5 each, \$50, making a total of \$1,000.

For the other matches there will be the Gating gun, presented by the Gating Gun Company; the State and division prizes, presented by the State; the *Army and Navy Journal* trophy, presented by W. C. and F. P. Church; eleven silver-mounted rifles, presented by Remington & Co.; a cup presented by Hon. Nathaniel Niles, another by General Woodward, a long range rifle presented by the Sharpe Manufacturing Company. In addition there will be a number of cups, medals, badges, &c., presented by the Association, and quite a number of other prizes by various parties, to the Association. The first day of the match will be devoted to firing at 200 yards and the matches limited to the National Guard disposed of during the first two days.

The team selected to shoot against the Irish Eight has agreed to practice together over Wednesday and Saturday, firing fifteen shots at 800, 900, and 1,000 yards, besides their private practice. The Amateur Rifle Club will provide each one of the team with 500 rounds of ammunition, and will also pay for their transportation. Messrs. Remington & Son have offered to supply, without charge, whatever cartridges may be required by those of the team who shall use their rifle, which will considerably reduce the expenses of the club. It is probable that Col. Gildersleeve will accept the management of the team, in which case another member will be added to the team to shoot in his place. Col. Wingate was expected to take this duty, but business engagements will prevent.

As the following names have been sent over by Mayor Leech for entrance in the all-comers' match of the National Rifle Association, it is safe to presume that their team will be selected from them: J. Bagwell, J. B. Hamilton, P. Walker, E. Johnson, W. Waterhouse, J. K. Millner, H. H. Foster, J. Wilson, J. Rigby, and J. Doyle.

THE MONTREAL RIFLE MATCH.

[From our own Correspondent.]

MONTREAL, AUGUST 17th, 1874.

EDITOR FOREST AND STREAM:—As your paper takes much interest in rifle shooting, I will give you a summary of the winning scores at our Provincial rifle matches just concluded:

No. 1, an opening match, commonly called "Bridges' Challenge Cup and Snider Championship Match," which was shot for 200, 500 and 600 yards, five shots each range, was won by a score of 51 points, second score 50, lowest winning score of 33, prizes 13.

No. 2 match—Seven shots at 500 yards, three highest scores 27 each, four or five 25; lowest winning score 23, prizes 29 points.
No. 3 match—Seven shots at 600 yards, highest score made by Colonel Gildersleeve, A. R. A. 29; next 21; lowest winning score, 20 prizes, 30 points.

No. 4—Battalion match, squads of five men, seven shots each at 200 and 600 yards; winning score, 215; highest individual score made by "one-eyed Joe" Ferguson, 39 points.

No. 5 match—Sixteen shots at 500 yards; three highest scores full score, 28 each; numerous 27's; 25 lowest prize score.

No. 6 match—Five shots each at 500 and 600 yards; winning score, 34; Yale second, 33; Gildersleeve sixth, with 32; lowest prize score, 20, prizes 27. Wind very troublesome and strong.

No. 7 match—Standing at 300 yards, seven shots; winning score, 24, second 23, lowest prize score, 21; 20 prizes, 29 points.
No. 8 match—7 shots 500 yards, Snider; 7 shots, 300 yards, small bore; winning score, 28 points, Fulton, A. R. C.; second 26 points, Canfield, A. R. C.; lowest prize score, 25 points.

No. 9 match—seven shots each, 500 and 600 yards each, Snider; seven shots each, 800 and 900 yards, small bore. Won by Bell, of Toronto, with 55 out of possible 56 points. Fulton, second prize, 47; 20 prizes.

No. 10 match—fifteen shots at 1,000 yards. Won by Snider, 49; Mitchell, 48; lowest winning score 39. The men complained that the wind was very light and unstable, causing many unaccountable misses.

No. 11 match—Consolation, 5 shots each at 200 and 600 yards, Snider rifle. Won by 36 points; 28 misses; lowest prize score, 37 points.

I have given you above a tolerably accurate summary of the shooting. The first seven matches were all in military weapons, A. R. and 10 small bore. We had the pleasure of a visit from several of the Amateur Rifle Club of New York, amongst whom were Colonels Gildersleeve and Wingate, Messrs. Fulton, Yale, Canfield, and one or two others. Colonel Gildersleeve shot brilliantly and thoroughly steadily, being also up to every match he fired in with the military weapon. Mr. Yale also distinguished himself by winning the second prize in No. 6 match, with a score of 33 in ten shots at 500 and 600 yards. Mr. Fulton shot remarkably well in No. 8 and 9, making 19 bullseyes and 2 centres in 21 shots at 800 and 900 yards, winning first prize in No. 8 and second in No. 9. Mr. Canfield also won a prize in No. 8 match, the second, with 26 points out of a possible 28. Colonel Gildersleeve, I believe, won four prizes, and have been well up in No. 9 had the weather, who was shooting the same method as the Colonel, discovered that the Colonel required four minutes less elevation than him, causing Gildersleeve to pass his shot over the target at 800 yards. As it was, he made the creditable score of 47 with a miss. In the standing match a good joke occurred. Wingate, Fulton and Gildersleeve were chasing Esdall, who had no intention of shooting for target, and backing their scores for 50 cent pieces against him. He entered to shoot against Gildersleeve, and the score was—G. 4 4 3 3 3-21-E. 4 4 3 4 3-23, which took the second prize match to everybody's amusement. At the conclusion of the small bore championship match, a rumor was talked about the ground that a man called Field, from Michigan, who called himself one of the A. R. C., but was not acknowledged by them) wanted to back himself to shoot at 200 yards, standing, for \$100, within any one on the ground. Captain Esdall, who was not shooting, but had come to see the finish of the match, took him up for \$10, and the result was—Esdall, 3 3 3 4 3-21; Snider, Field, 2 2 3 3 3-17; Remington. I believe Field shot afterwards against two others, whom he beat easily with a very small score. Shooting from the shoulder at 500 yards in a breeze was no easy work, and the Captain had to work his shoulder back to good luck for making so far a score as centres from the shoulder at so long a range. The management of the matches was very fair, and no complaints were heard, except from invertebrate grumblers, whom nothing can satisfy. We were all delighted to meet the members of the A. R. C., and our only regret was that there was not more of them.

Hoping this will give you some idea of the Irish eight, and my word for it they will certainly do so if you have many men like these who favored us with a visit. I am, yours truly,

The foregoing came one day too late for publication in our last week's issue.—Ed.

The American Institute Fair will be formally opened to the public on Wednesday, the 9th day of September, and will continue until the 14th of November.

—In response to requests from several of our inland subscribers, we have briefly prepared a list of the kinds of yachts mostly used in this country. Yachts may be jelled by steam and sail. Leaving the classification of the steamers to a steam department, we will turn our attention to the sailing vessels, which may be subdivided in the first place into centre-board or keel, and we would state that yachts may be either the one or the other, irrespective of rig, as in our country it seems no yacht is too small to be a keel-boat, or too large to be a centre-board boat. We have already described Whitehall boats and canoes in these columns, so passing by them to the next smallest type, we generally find them of the cat-boar rig; this is simply a boat with one sail, the mast stepped to the very bows; these yachts range in size from fourteen to twenty-five feet in length, and are occasionally longer. Another rig for boats of about the same dimensions is the sloop, in which case the mast is stepped further aft, the yacht receives a bowsprit and a head sail, called a jib. We next come to another class of sloops, ranging thirty-three and thirty-five feet in length, which, as is the case with all the kinds noticed to this time, are open boats, but are dignified with a topmast, a sail set above the mainsail, called a gaff topsail, and another jib, set from the end of the bowsprit to the top masthead, called a jib topsail. From this size up, the sloops generally have cabins, but the rig remains nearly the same. Some sloops having a flying jib-boom, which is a spar extending out beyond the bowsprit; from the end of this spar to the lower masthead is set the flying jib, the jib topsail in this case setting between the end of the flying jib-boom and the topmast head. Sloops of this kind range up to about seventy feet in length, seldom larger.

The schooner yacht is a vessel with two masts, the forward one, which is called the foremast, has a foresail fore-gaff topsail and head-sails corresponding to the rig of the large sloops; the main mast has a main sail and main gaff topsail, and between the two masts a triangular sail, shaped like a jib somewhat, setting between the foremast and main top mast heads; this is called a main top mast stay sail. These are the plain sails; for racing there are vario s balloon sails and kites. The schooner rig is used in vessels from sixty to one hundred and thirty feet in length. There are some yachts even larger than this. As some future time we may be able to give a more detailed description of the various kinds of yachts.

The **RIVERSIDE YACHT CLUB** of Yonkers has now on its roll twenty names and a fleet of four sloops, as follows: *Belle*, owned by Col. T. F. Morris; *Flying Cloud*, Wm. P. Snull, Palisade Mountain House; *Proie*, Henry Weed, New York; and *Ripple*, Frank Post, Yonkers. The officers of the club are: Col. Thos. F. Morris, commodore; Wm. F. Small, vice commodore; Wm. H. Swann, secretary; W. R. Ware, treasurer; Frank Post, measurer; Dr. F. S. Grant, fleet surgeon. On the 22d instant it started on a cruise, ending with a regatta at Red Bank, New Jersey.

The **ISLES of Shoals Regatta**, sailed on the 20th instant, was fully as successful as the large number of entries promised. Out of the sixty-seven yachts which had signified their intention of competing upon this occasion, forty-four actually appeared upon the scene in racing trim and ready for the affair. The prizes, the gift of Mr. John R. Poor, amounting to something over \$400 in value, were awarded in the following order: The first prize for the best class sailed on silver punch bowl and handle, of elegant design and workmanship, was designated for the fastest boat in the class, which comprises sloops and schooners measuring thirty-eight feet and upward on the water line. The second prize for this class is a large, powerful marine glass, to be awarded to the successful yacht of a different size.

The second class includes centre-board and keel sloops and schooners measuring twenty-five feet and less than thirty-eight feet. The first prize being a pair of elegant silver napkin rings of special design, and the second an aneroid barometer.

The third class includes centre-board and keel boats measuring twenty feet and less than twenty-five feet. The first prize, a silver pitcher, and the second an aneroid barometer. The first prize was awarded in the same manner as the first prize in other classes, and the second prize to be awarded to the second boat, irrespective of rig.

Promptly at 12:30 the preparatory signal gun was fired, and ten minutes later the lowering of the signal of the Boston Yacht Club gave notice to the first class to start. All the yachts covered the line within the required time of fifteen minutes, and, after a lapse of five minutes more, the signals for starting the second class were given. In the meantime their work, and the spectacle of forty four racing yachts presented to the crowds on the accompanying steamers and on the shore well repaid them for their enterprise in coming.

The breeze was from the S. S. W. and moderate at times, however, inclining to be fluky, and diminishing perceptibly towards the close of the race. On account of the most interesting features of this regatta was the presence of the celebrated schooner America, and from her performance after hauling on the wind, it is doubtful whether she has lost much of her old form, or in fact whether we have a schooner in the country who is her equal to windward in a seaway. The breeze was entirely too light for her to save her allowance of thirty-five minutes from her best little ad-

Sportsmen's Goods.

SCHUYLER, HARTLEY & GRAHAM, 19 Maiden Lane, 20 & 22 John street, N. Y. BREECH LOADING GUNS A SPECIALTY.

We would call the attention of the public to our large assortment of

Breech-Loading Shot Guns, Manufactured by the following celebrated makers: Messrs. W. & C. SCOTT & SONS (winners at the International Gun Trial of 1879); P. WEBLEY & SON, W. GREENER, WESTLEY RICHARDS, J. HOLLIS & SONS, and other makers.

A full line of fine Pistols and Rifles constantly on hand. DIXON'S & HAWKLEY'S SHOOTING TACKLE. To insure good shooting from Breech-loading Guns, we would recommend the use of the

STURTEVANT BRASS SHOT SHELLS, manufactured by the Union Metallic Cartridge Co., Bridgeport, Conn. These shells are the cheapest and best in the market, can be easily re-capped with ordinary caps, without the use of the implements necessary to priming all other styles of shells. HUSSEY'S PATENT GYRO PIGEON AND TRAP, WITH GASE, AND 100 BIRDS.

Black's Patent Cartridge Vest. This Vest affords the best arrangement yet in carrying cartridges, and is so constructed that the weight is scarcely felt. Car carried with the vest, which is the best arrangement when brass as when carrying head up the vest, and in force the vest had shooting is the best in the market. Price \$7.50.

AGENTS FOR THE Union Metallic Cartridge Company's Ammunition, WARRANTED THE BEST IN THE MARKET. SEND FOR CIRCULAR.

GRAND PIGEON Shooting Tournament!

Under the auspices of the Toronto Gun Club, AND THE Junior Gun Club, OF TORONTO, ONTARIO, CANADA.

The subscribers beg most respectfully to announce to all the sporting-men of America that they will hold a Pigeon Shooting Tournament!

At the Toronto Riding and Driving Park, Toronto, Ontario, Canada, commencing

On Tuesday, September 22d,

\$1,000 will be Given in Prizes.

\$500 Open to Amateurs Only.

\$500 Handicap, Open to All.

Bar Messrs. J. Ward, Paine, Bogardus and Close. Each of the two prizes will be divided as follows:

Table with 2 columns: Prize amount and description. 1. \$150.00, 2. \$50.00, 3. \$25.00, 4. \$10.00, 5. \$5.00, 6. \$2.50, 7. \$1.25, 8. \$0.625.

Entrance fee, \$5 to each purse. Entries to be made with the Secretary on or before Monday evening Sept. 24, 1874.

The Tournaments to be governed by the Toronto Gun Club rules, excepting as mentioned in the regulations. H. and F. ground traps—any size gun—14 oz. shot—20 entries to all.

Shooters may take one or more chances in each purse, but not to run one purse.

Any one not a shooter may take a chance in each purse, and nominate a friend to shoot his chance for him. Such shooter only allowed to shoot for one friend in each purse.

The Amateur match to commence the Tournament. Twenty pigeons to be sent in for each chance, and to shoot at 15.

The Canadian Grand Provincial Fair will be held on the 9th day, and within 300 yards of the Tournament.

The Toronto street fair carry on within 100 yards of the entrance to the Riding Park.

A dinner will be provided on the grounds every day during the tournament.

Pools will be sold and signs drawn at Mr. Joseph Taylor's Dog and Duck Saloon, Colborne street.

The highest price paid for pigeons by the secretary. N. B.—All communications and pigeons must be sent to the Secretary, who will furnish rules and all further information.

JAMES CHAPMAN, Sec. and Treas. 227 and 227 1/2 Young Street.

Toronto, Aug. 1, 1874.

REMINGTON'S

Long Range, Breech Loading TARGET RIFLE.

Weight, 10 Pounds. Length of Barrel, 34 inches. Calibre, 44-100 Inches.

Fine Walnut Oil Finished Checked Pistol Grip Stock. Orthoptic, "Vernier," State Sig Hts. Graduated up to 1,100 Yards.

By a careful examination of the records (see this paper May 21st to July 20 inclusive.) it will be seen that the above Rifle stands over 22 PER CENT. ahead up to date, in the average of all the Long Range matches that have taken place this year, and winner nine out of twelve FIRST PRIZES, including the "Remington Diamond," "Amateur Club" and "Amateur Club Long Range" badges—having made the highest score ever made at Creedmoor. Send for illustrated treatise on Rifle Shooting, just out, for particulars concerning the above Rifles. Sent free.

JOSEPH C. GRUBB & CO., 712 Market St., Philadelphia.

AGENTS FOR THE SALE OF THE CELEBRATED CENTRAL-FIRE BREECH-LOADING GUNS

MADE BY James Purdey, No. 314 1/2 Oxford Street, London.

Desire to inform Dealers and Sportsmen who may wish to purchase these Guns, unsurpassed for Finish, Durability and Power, that they have a supply of 10 and 12 bore, and will import special guns to order at short notice. They have also in store the largest and finest assortment in the United States of Breech-Loaders made by E. M. KELLY & Co., WESTLEY RICHARDS, W. & C. SCOTT & SON, W. W. GREENER, F. WALKER & SON, and other well known English makers, besides those of American makers. An extensive assortment of everything pertaining to the use of Breech-Loaders. Also, Hussey's Patent Gyro Pigeon and Trap, a perfect substitute for live pigeons in shooting matches. SEND FOR PRICE LIST.

Hegeman's Patent Portable Folding Boat.

For use as LIFE-BOATS, LIGHTERS, Dingies, Dories, on board Steamers, Yachts and other Vessels.

These safe and perfectly portable boats will admit of the roughest usage. A very light, strong and durable frame of ash or other tough wood, with canvas cover, and can be folded in one-eighths space, for transportation, and carried in a

light buggy wagon, on horse-back, or by single person, and can be unfolded ready for use, in three minutes time. Boat neatly folded, packed and shipped by express anywhere at same rate of freight as ordinary goods.

Above cuts show the boat folded and unfolded.

JOHN HEGEMAN, Ballston Spa, Saratoga Co., N. Y.

Reduction in Price. J. & W. TOLLEY'S

BREECH LOADING GUNS.

CELEBRATED Manufactory, Pioneer Works, Birmingham, Eng.

These guns are built with every improvement for American sport, and are the cheapest guns of guaranteed quality and shooting powers sold in the United States.

They are made in six qualities, each gun being handled with one of the under mentioned names, which denotes its quality:

Table with 2 columns: Gun name and price. Pioneer, \$65 Gold. Mansard, \$90. National, \$140. Challenge, \$180. Paragon, \$225.

Any one of the above may be selected with confidence, as no gun bears our name which we cannot thoroughly guarantee in every respect.

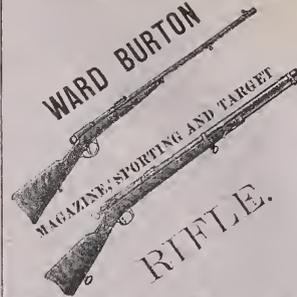

N. B.—Send for reduced illustrated descriptive price list.

BRANCH HOUSE, 29 Maiden Lane, Corner Nassau street, New York.

WILBUR & HASTINGS, MANUFACTURING STATIONERS,

Printers, Lithographers, 40 PULTON STREET, NEW YORK

ORDERS BY MAIL WILL RECEIVE PROMPT ATTENTION.

This arm was submitted in comparison with over one hundred different systems, American and European, to the Board of United States Officers appointed by Act of Congress, 6th June, 1873, for the purpose of selecting the best arm for the service, and of which Brig. Gen. A. H. Terry was President. It successfully passed through all the tests.

The following is the report of the Board: "Resolved, That the adoption of magazine guns for the military service by all nations is only a question of time; that whenever an arm shall be devised which shall be as effective as a single breech-loader, as the best of the existing breech-loading arms, and shall at the same time possess a safe and easily manipulated magazine, every consideration of public policy will require its adoption."

Resolved, further, That the experiments before the Board with the Ward-Burton Magazine Rifle have so impressed the Board with the merits of this gun, that they consider it as more nearly fulfilling the conditions above specified, than any other tried by them, of which they possess any knowledge, and it does recommend that a number of magazine muskets be made on the plan for further trial in the field." (See Ordinance Report.)

We are now receiving orders for these guns, and due notice will be given in this paper when they are ready for delivery.

The following is our scale of prices: Special Magazine for large game, carrying from 6 to 8 cartridges, 70 to 85 grs. of powder, \$50 to \$60 grs. lead, 8 to 10 lbs. weight, from \$60 and upwards, according to finish. Special Long-range Magazine Rifle for Creedmoor shooting, 40 grs. of powder, 480 grs. of lead, carrying 3 to 8 cartridges, weighing 10 lbs., from \$100 and upward. Magazine gun for general use, carrying 8 to 9 cartridges, 40 grs. powder, 350 grs. lead, from \$40 and upward. Single Breech-Loader, Creedmoor shooting, for long range, 90 grs. powder, 450 grs. lead, from \$50 and upward. Single Breech-Loader for general use, 8 to 7 lbs., 60 grs. powder, 350 grs. lead, from \$30 and upward. The calibre of all our rifles, unless otherwise ordered, will be 42-100.

Terms, Five Dollars a Year. |
Ten Cents a Copy. |

NEW YORK, THURSDAY, SEPT. 3, 1874.

Volume 3, Number 4.
17 Chatham St. (City Hall Squ.)

For Forest and Stream.
THE WHIPPOORWILL.

THE white fog drifts along the meadow,
And the gleam
Of the western sky is fading
From the ripples that were crimson
On the stream.

The thousand tiny voices of the breeze
Fill the air,
And the m-m-is of the wood thrush,
Floating softly down the mountain,
Seems a prayer.

Where twilight shadows gather 'neath the cedars
On the hill—
Where the robin lately warbled,
And the sparrow sang his vesper,
All is still.

But the whippoorwill complaining in the valley
Far below,
With its voice so wild and restless
Wakes memories forgotten
Long ago.

Till the thoughts of former joys and former sorrows
Come again,
And they fall upon the spirit
With the gentle measured cadence
Of the rain.

P. C. B.

The old crew, although employed in boat duty, were soon shipped, and Buffalo in his skin coat, which seemed more than ever like his natural epidermis, and Moukay, still as active as one of his namesakes, were soon to the fore, and as ready to carry shot and provision bags as of old. Aho, the cook, routed out the Low-ta and took charge of the enlinary department himself, and the only discontented one of the party was the hoy Akow, who, having taken unto himself a wife after the manner of the Celestials, was obliged to leave her before the itonycmoon was half over. The dogs, Bob and Nellie, although not in as good condition as I should have liked, were shipped in their accustomed comfortable compartment forward. I doubt if a finer breed of dogs for such an expedition as ours, than these kangaroo hounds could be found. Nellie was born in Australia and came to me *en cients*. Bob was the only one of the litter I succeeded in raising, but he grew to be double the size of his mother. The latter showed plainly her mingled stag and greyhound breeding, but Bob, from his immense size and strength, seemed to have some mastiff blood in him.

The Jessie having no windlass, the tackles are laid along the deck and straps made ready for fluting. Enough of the mainsail is hoisted to give her headway against the current, and the chain rattles in over the bow; with the helm down she quickly comes to the wind, the foresail is hoisted and both sails trimmed as flat as Chinese rig will allow. A parting salute is fired from the swivel gun to our friends on the land and we start on our first tack down the river.

The wind, as usual, was blowing up the stream, but the strong current helped us to fore reach to such an extent, that the second tack carried us clear of the pagoda which stands at the commencement of the wall surrounding Kiu Kiang. This wall being perhaps four or five miles on its river face, would give the impression that Kiu Kiang was a very large city, whereas the contrary is the case, and it is always a mystery to the barbarian, why the Chinese should have gone to the trouble and expense of "fencing in" so much land, where there is no prospect of its ever being built upon. The only solution is, that these were "rings" in those days as well as ours, and that contractors waxed fat upon the spoils of the people. In walking through the ruined and deserted streets of the city I have frequently flushed pheasants among the desolated gardens, which remain as monuments of the invasion of the Taeping Rebels.

Before sunset the Great Orphan, that huge rock standing like a sentinal at the entrance to the lake, was in full view; passing it, we saw in under the shelter of the southern bank, and anchored for the night abreast of a group of picturesque Confucian Temples.

There are undoubtedly yachts with more pretentious cabins and more elegant adornments, but I doubt if for solid and substantial comfort, anything approaching the same size, ever excelled that of the Jessie. At least we four thought so, as in slippers and easy coats we stretched ourselves on the well-cushioned transoms, and watched the preparations for dinner. A swinging lamp shed a soft light through the cabin showing the guns hanging in their places overhead, and the two pairs of crossed swords suspended against the bulkhead. Akow, having resigned himself to the inevitable, and recovered his equanimity, was setting the table with his accustomed "neatness and dispatch." Occasionally the fragrant fumes of the mulligan-tawney were wafted to us, and the huge York ham on the sideboard was destined to lose its fair proportions at an early stage of the cruise. And after all these good things were disposed of, came the fragrant manillas, not such trash as are sold with you under that name, but genuine *cont. subord. titles*. You cannot smoke Havana cigars in this climate, even if they would stand the voyage, which they will not; they appear to have some effect upon the nerves which any number of manillas will not. And then the quiet rubber of short whist, with modest "quarter" points, and perhaps a dollar on the odd game, at which no one would ever lose enough to disturb their slumbers. And the refreshing night's rest afterwards, through which the

only sounds to be heard, are the softened beats of the tom-tom from a distant temple where some Buddhist priest kept watch and ward over his gilded idols.

Awakening early on the following morning, while breakfast was being prepared, we landed and made the acquaintance of the priests who were domiciled in the monastery on the heights, and found them, as is almost invariably the case, very sociable and jolly. Their establishment, being devoted to the worship of Confucius, was without any of the immense gilded statues of the three-faced Buddha; and in their place the walls were hung with inscriptions taken from the writings of their favorite philosopher and sage. Nevertheless in many little shrines or altars, before which burned candles or incense sticks, were miniature representations of domestic josses, whose presence were supposed to counteract the evil influences of bad spirits, and I doubt not that after our departure additional offerings were made to propitiate these tutelary saints.

In the last of the series of buildings, which were connected by well kept gardens, we found ourselves on the very edge of the overhanging rock and obtained a magnificent view of both river and lake. In front rose the Orphan with its curved temple roofs peering from amongst the dense foliage with which its summit was crowned. Directly beneath us lay the Jessie, quietly at her anchor, her white sides glistening in the first rays of the morning sun. And we could see Akon heading onto the signal halyards the flag that was to announce that breakfast was ready. A brisk walk down the hill, a few strokes of the oar, and the dingy was once more alongside, and giving the Lon-ta orders to get under way, we sat down to the matutinal repast of freshly caught fish and curry.

A nice breeze carried us luck over a portion of the ground we had travelled in the evening, but before reaching the western shore, we jibed over and hauling on the wind stood up the main channel of the lake. When abreast of the Orphan we found the base of it quite dry, something of very rare occurrence and to be attributed only to the unusually low stage of water in the Yang Tze, which had drained the Poyang of a greater portion of its volume. Such an opportunity of exploring this wonderful freak of nature was not to be lost, so the Jessie was rounded to, leeboards hauled up, and the boat allowed to drift against the steep bank of sand which formed this side of the channel. Jumping ashore, a few minutes walk brought us to the rock, but all our efforts to find a place by which to ascend its precipitous sides were unavailing. That it was inhabited the temples which we had seen from the main land as well as the noise of the tom-tom's heard during the night before, testified; but how the inhabitants of this solitary rock ever escaped from it, was beyond our ken. The rock was five hundred yards or more in length by about half that width, and its height we judged to be about two hundred and fifty feet. Looking up its perpendicular and moss grown sides, we could see branches of trees projecting over the top, and hundreds of cormorants, disturbed by the noise of our guns fired to produce an echo, wheeled and circled high over head. By the water marks on the rock we could see that the spot where we stood must have been twenty-five or thirty feet under water during the spring freshets, when the snows of the far western mountains in Sze-Chuen and Thibet had swollen the grand old Yang Tze to its summer height. Now we found the base of this lonely orrery perforated and honey-combed by the action of the water, and in places worn into little caverns connecting with each other, in which were piles of delicate and minute sea shells, and carpets of the softest white sand. They seemed to be fit abodes for nuns and maidens and in the oppressing solitude of the place we almost expected to come across some fair one with looking glass and comb.

Returning to the Jessie we were soon under way again, but before passing the rock we gave it a parting salute from the swivel gun, and sent the screaming cormorants once more from their lofty crys. But even all the noise produced no other sign of life. As the distance increased the

For Forest and Stream.
A Day on the Poyang Lake.

OF all hot places in China, or elsewhere, this side of Hades, Kiu Kiang, in summer at least, can probably carry off the palm. The foreign settlement, adjoining the Chinese City, is built directly on the bank of the river, and as it faces the west, is fully exposed through three-fourths of the day to the glare of the sun. Even now, in autumn, the heat is sufficiently intense to make agreeable the use of a *punkah* over the table at tiffin, and to render anything like shooting almost out of the question.

The Yang Tze at this point 600 miles from its mouth, is at least a mile wide, and looking across it, nothing is visible but a dreary expanse of flat and marsh, broken only by an occasional fisherman's hut, or the white walls of a mandarin "squeeze" station or district Custom House. But these are small flats, for all their wastes of meadow grass and reeds, afford some shooting as fine as the most enthusiastic sportsman could desire. I doubt if another spot could be named, where in both spring and fall, jack snipe could be found in greater abundance; while in winter the many canals and pools which intersect them, are the haunts of myriads of teal and wild fowl of every description.

For many weeks the Jessie had been riding quietly at her buoy in front of the bund, "like a painted ship upon a painted ocean;" the only signs of life on board being the smoke which twice a day arose from the tallfun, as the *Corbis* prepared his rations of rice and dried fish. But a change was at hand. The new monsoon, which had now commenced to blow from the N. E., increased in intensity from day to day as it gathered strength to overcome the corching S. W. winds which had prevailed during the summer. With each day the thermometer indicated a lower temperature, until we almost fancied we felt the fresh breezes of old ocean, borne to us on the bosom of his mightiest son; and the exultant exiles who were doomed to pass this period of their existence in smelling tea, threw off their summer garments of white linen and pith helmets, and appeared once more in tweed suits and wide-awakes. A party was soon formed to visit the Poyang Lake, which debouches into the Yang Tze some eighteen miles below Kiu Kiang; for the double purpose of seeing some of this unexplored classic ground, and if possible, killing some of the wild birds which were said to haunt the eastern base of the Lu-shaw Mountains. Messrs. Portman & Mason and Crose & Blackwell, whose *deltatasson* have penetrated even to the antipodes, were put under contribution and the Jessie duly provisioned for a fortnight's cruise.

temples came in view, but, even with our glasses, we could not distinguish a living being. I am inclined to think that its inhabitants, if they are not, indeed, "spooks," must be criminals, who, for fearful crimes, have been banished to this desolate spot.

We were now fairly in the lake, the length of which had been reported to us to be about one hundred and fifty miles, and approaching a *terra incognita*, which, as yet, had been known to the people of a European. Being without a chart, and without our usual reliable information regarding the depth of water, we kept a man in the bows with a light bamboo sounding rod constantly going, the only danger in taking the ground being to the rudder, which projected many feet below the bottom of the boat and was hoisted and lowered by means of a small windlass attached to it. This, with the lee-boards, acted as centre-board and keel, when going to windward, and when before the wind it was only necessary to hook up both to make the boat steer easy. In fact, the whole Chinese rig is admirably adapted for this inland navigation. The light cotton sails stretched on bamboos, reef themselves by simply lowering away the desired distance, and as the bamboos lying upon one another keep the sail in place, reef points and earings are dispensed with. When by the *ah-ah*, by means of *gill-gangs* the bamboos are trimmed out until their ends are under the mast, making the sail set much better than one would imagine, and it going free it is only necessary to slack up these gangs and the sail, coming partly amid-ships, brings the strain more directly on the mast. Instead of most hoops a lacing is used, which can be tightened or slackened at pleasure.

At the upper end of the Poyang Lake, are located the Poteries, which are celebrated throughout the Empire for the beautiful ware they produce. From here came the immense vases gilded with dragons and wonderful figures of Celestial ladies and gentlemen, which sometimes come to this country. We were strongly desirous of reaching this point, although our native friends had tried to dissuade us from making the attempt, representing the difficulties as being almost insurmountable. The men engaged in the poteries, they said, fought almost a race by themselves, and were implacable to their foreigner. But all this was a matter for future consideration, our present destination was a point some forty miles up the lake where we propose a landing, and making our way to the White Deer Grove, a spot noted as well for its beautiful surroundings as the classic associations connected with it. On the way to it, or returning, we should skirt the foot of the Lushan Mountains and pass over the ground where we were assured we should find only a few pheasants, but probably fall in with the wild pigs which were the game we were after. A large custom house station, distinguished by two tall mandarin poles, in the boxes of which some crows had made their nests, was now abreast of us, and seemed to be the last connecting link with the country we were leaving behind. A few surly looking officials came out to the water gate and stared at us as we passed. Their gun boat was lying at the jetty and they looked as though they would have liked only too well to send it after the insolent barbarians who dared to pass without paying tribute. The Jessie herself, however, had no time to spare for the rowing, the boarding, piking along the hills and the bright six-pounder forward, so say nothing of the various double guns and rifles scattered carelessly about the deck. So the "squeezers" contented themselves with looking at us, and the old flag, which was being carried for the first time into these distant waters, floated itself in their faces with perfect impunity.

By noon, the wind had moderated somewhat, but we were making good time and thoroughly enjoying the situation. The delightful *ahoe pag* *nicote* of those happy days can hardly be described. Attired in the comfortable *ahanton* of *nygymnas* and sleeping jackets, we lolled on deck the entire day, going slow only for tiffin or an occasional sherry and biters. Once in a while the Louisa, who was steering, would call our attention to a flock of ducks ahead of us, or a large pelican floating lazily in the water, and taking our gun we would sit in the shadow of the forest until the boat gradually came within range, and the startled birds, saluted with a volley, would take wing. Several teal were killed in this manner, and a pelican measuring over five feet from tip to tip was wing-brought and brought on board. His majesty, however, attempting to take charge of the deck was knocked on the head and handed over to the crew, who pronounced him very good show-chow and made it up to the mast to be made into some savory compound for their evening's repast.

Striking the western shore of the lake we gradually lost sight of the river and found ourselves surrounded on every side by rolling hills coming down the water's edge and covered with thick undergrowth and scattered cedars. The absence of villages, and anything like cultivation, was very apparent and to be accounted for by the fact that we had a comparatively recent date. The bulk of the country was in the hands of the Taeping Rebels. However, as the sun was sinking behind the high peaks of the Lushan range we desisted ahead of us, over a jutting promontory, the pair of *joss* poles which always mark the presence of a custom house or mandarin's yanuan, and rounding the point we found a lovely little bay, on the shores of which nestled a picturesque village. In the white walls and blue roofs, we could see the white and blue tiles, were glistening in the last rays of the setting sun, and the entire population were gathered on the bank to look at the strange craft and her crew. Small footed women on their pig-rotters, came hobbling down and peered at us from behind the sheltering backs of their firmer footed sisters, and the usual crowd of maugy and wolfish curs barked in chorus. In deference to the nerves of the more tender portion of the population, we abstained from firing, but the dogs were lowered by the run, and as the chains rattled over the bow the Jessie swung to her anchor, and in ten minutes everything was sung for the night.

The following day opened bright and beautiful, and after an early breakfast the dingy was brought into requisition and made two trips, before the whole cavalcade of barbarians, dogs and coolies were landed and formed in marching order. While going through the village, Bob and Nellie were kept in hand in order that the natives should not take too much occasion to fear for the lives of the half-pink children with which the streets were thronged. Buffalo had the leash, and with my short Jacob's rifle over his shoulder, was almost overcome with pride. Monkey, carrying the spare shot and show-chow, although rather more heavily loaded, was quite jubilant. C. and myself led the way and Nick and H. brought up the rear with the coolies. In this order our little procession passed through

the streets of Tsing-poo, and reaching the first bluff, paused before plunging into the *terra incognita* beyond. At our feet lay the village, stretched along the lake, with a ripple disturbing the still surface of the water. The Jessie, looking as saucy as ever, was evidently still an object of curiosity to the unemployed portion of the community, as we could see numbers of them squatted on their haunches and watching the operations of the men on board. A few long narrow junks, their sides brightly oiled or varnished, were under way, and, receiving on board their cargoes of coarse China tea and paper, which seemed to be the chief products of this district. No idea of the dimensions of the lake could be obtained from this point, so irregular is its shape, and so many little promontories, all covered with bright, green shrubbery, were jutting into it from every direction. In no other part of China have I seen such wild country or any that promised better for sport. The cover every where on the hill sides was very thick and seemed a delight for pheasants, while in nearly every valley, certainly in those containing any trace of habitation, was a port covered with the broad leaves of the lotus plant, and partly hidden by the dense growth of bamboo on the banks. A Chiuanan's miles so much resemble an Irishman's, and the instructions we had received in Tsing-poo for finding the groto were of such an uncertain nature, that I decided to go, and we had a very preparation for camping all night, if necessary. This "H" was the distance given us, but the route we should take in going by the foothills of the Lushan, and the detours incident upon the pursuit of game would undoubtedly make it much greater. Three Chinese "H" are equal to one of our miles, but John is no more a judge of distance than he is of time. Facing the mountains again, we resumed our march along the little footpath which formed the means of communication between Tsing-poo and the only village we should meet in our journey. Bob and Nellie were loosed, and bounded on before us, delighted at regaining their freedom, but reaching a particularly promising piece of cover, they were again called in, and leaving the path we formed in skirring order on the hill side. We looked now for the setters who were safely housed in the kennels at Kiu Kiang, if only for the pleasure of seeing them work in the clumps of bamboo in the hollow, which, without dogs, it was impossible to dislodge them. Even with their assistance it is doubtful if we could have recovered many, as the thick ears, almost touching one another, rendered the brakes impenetrable. On the flinders of the lotus ponds, however, an occasional snipe was flushed and added to the bag.

Resuming the path the dogs were again given their liberty and scampered out of sight ahead of us. In a few minutes divided fields and a low level of the millet, or here and there a little patch of buckwheat, indicated that we were approaching the half-way village, and as we turned a corner of the road the houses came in sight. To our surprise, and somewhat to our consternation, we found the whole population of the place turned out to receive us. At least a hundred men and women were approaching, armed with sticks, hoes, flails and everything which the shape of the weapon, which they were using, and the way in which they were taking tin pans and kettles, and all joined at the top of their lungs in the discordant din. Matters began to look serious, and it was not until Bob and Nellie came trotting back to us as if to ask the cause of all the disturbance, and we saw our coolies drop their loads and fairly roll on the ground in paroxysms of laughter, that we recognized in the shouts of the villagers the dread cry of "The shape of the dog taken for tigers." After all, the mistake was not such an unnatural one. The dogs were not only totally unlike their own wretched beasts, but Bob's huddled sides, and his immense stature, gave him some faint resemblance to the tigers which we had heard were sometimes found in these mountains. I have seen a leopard brought into Kiu Kiang, and his flesh still raw and bloody, cut into small pieces and sold to the people as manure to the mandarin "braves" and his people with courage. The province of Shantung at the north and the country about Amony, are noted for tigers—the real old Bengal sort; and within my own recollection a magnificent specimen, after killing a native, was shot in the presence of an English resident in the paddy fields of the Tai-ti Creek, not three miles from Canton.

Explanations having been made, and the matter restored, and we were received with the civility I have always met with from the country people everywhere, except in the neighborhood of Canton. It seems strange that there, where foreigners have been the longest in intercourse with them, and where they have received the strongest proofs of their incapacity for coping with the detested barbarians, the people should still be insulting and inimical. True, the brave and more advanced, respecting the usual and arguement of the southern provinces, respecting the usual and arguement of the lesson received in 1858 would have taught them good manners. At the north, or in the Yang Tze provinces, as far as foreigners usually penetrate, the people, unless incited by the soldiery, are universally civil. Sometimes a devil would salute us with the cry of "Yang-qui-tsi," (foreign devil) but I doubt if they knew of any other name by which to call us.

Leaving the village and the chiu-chins of its Celestial inhabitants behind, an hour or two of brisk walking brought us to the brow of a hill, from which we looked down upon one of the loveliest spots I have ever seen. It could not have been more than forty or fifty acres in extent—an almost circular amphitheatre, three sides of which were covered with pines and other trees; and on the fourth, the noble old Lushan hills, which had been our landmark all the day, sloped for 5,000 feet to the sea. The usual and arguement of the valley was a rather extensive and ludicrously ornamented building, with an open courtyard—half temple, half yanuan. There were no idols about it, but on the walls of the different apartments were tables inscribed with extracts from the five books and four classes, and in the courtyard slingsh gold fish swam in tanks shaded by the broad leaves of the lotus plant. Near the houses were a lotus pond, and crossing this we discovered the far-famed groto, at the entrance to which was a life-size plaster cast of a white deer. The legend of the place is, that the cave or groto was once the home of

a celebrated writer or philosopher belonging to the sect of Taoists or Rationalists. Retiring to this spot for that quiet contemplation of virtue which is supposed to result in the spiritual perfection and fit the devotee for return to the bosom of supreme Reason, he was fed and his material wants supplied by a white deer, who with a little basket tied to her neck, would go to the neighboring village and return with a supply of food. Being met by a party of hunters one day, she was shot, and returning to the philosopher with the arrow in her side, expired at his feet. The legend is so true, that the old man, who died and died, and his admirers and scholars erected the building and statue.

We found a number of well-dressed and superior-looking Chiuanen on the premises, many of them wearing the scarf of the successful candidate for literary honors, who were probably preparing for the last grand effort at Peking. They treated us with the coldest politeness, amounting almost to indifference, which was remarkable, considering that many of them had never beheld a foreigner. Nevertheless, they were gentlemen, and as different in appearance from the ordinary native as black is from white. Their mode of life appeared ascetic, and the only petticoats to be seen were worn by the men.

Willingly would we have lingered longer in this enchanting spot, but the day was waning and a long journey still lay before us. Following the path up the side of the mountain, we found ourselves in a narrow defile and our rapidly ascending grade, which carried us to a series of low hills, covered in places with small scrub cedars, and again with tangled masses of jungle, which in the hollows between the hills, were also impenetrable swamps. Here was the ground which we had been informed contained the haunts of the wild pigs and sometimes larger and more dangerous game. It suggested to me to divide our forces and then to take two positions below, the hills, with the coolies and dogs, should make a detour to one of the hills above us, and beat the cover as well as was practicable, in our direction.

It fell to the lot of McK, and myself to remain below, so separating from my companion, I took up my station directly opposite a jungle covered hill, on the side of another covered with cedars, which, while screening me sufficiently, afforded a good view of the hill above us, and in the hollow which we expected the game to approach. McK placed himself in a similar position some few hundred yards on my left. For a while we could hear the noise made by the beating party as their footsteps cracked on the dry underbrush, and then all was still. I lighted my pipe and enjoyed a smoke while admiring the bold grandeur of the mountains; but time passed very slowly and the silence was so oppressive that I fancied I could hear the beating of my own heart. Sometimes I was on the point of calling to McK, but restrained myself. He afterwards admitted that he was in the same frame of mind. At last—it had seemed hours—we heard a shout a long distance in front, and then another half hour's silence. This time it was broken by Nellie's familiar whimper, echoed by Bob's deep bass, and we knew that game of some kind was aloft. Nearer and nearer the sounds approached, and we could hear the shouts of the coolies and the dogs on, and prevented the game from turning towards the mountains. Looking across the little hollow in front of me I could see the bushes shaken as though by some beast forcing a passage through, and soon an old sow, black as night, and followed by some half dozen little porkers, broke cover.

Whether she heard the clinking of the gun locks as I cocked both barrels, I know not, but she was preparing to look back at us as we were followed by the coolies, went off in the direction of Nellik. Presently I heard the report of his gun, succeeded by a most infernal squealing. Either in his excitement he had missed the sow, or his gun scattering the bushes had struck one of the pigs. Hearing him calling my name I ran over to the spot and found that the sow had turned and was standing alongside of a pig who had apparently been his companion. The old sow looked at the coolies and was evidently preparing for a charge, when, her attention being directed by my appearance, McK, managed to get a broadside shot, and at twenty yards distance planted the whole charge of his second barrel directly behind her forehead. She dropped like a log, and after a few convulsive struggles, gave up the ghost. I gave the little fellow his quietus, but the rest of the brood had scattered and we were unable to shoot underbrush, and the dogs, to where we could hear, and encircling the backs we found them standing outside of a small thicket in which a boar had taken refuge. The coolies were on the other side throwing in stones, but as they did not work with much enthusiasm, McK, and H. went around to their side. We had not waited many minutes before there was a great rustling and crashing in the bushes, and the brood, closely followed by the dogs, broke cover directly in front of us.

"Forth from the thicket rushed another boar. So large he seemed the tyrant of the woods. With all his dreadful bristles raised it up high. They seem a great deal of spurs upon his back. Following he came at me where I was posted, Whining his huge long tusks and gaping wide, he looked at me, and then at me."

Olway's lions apply very aptly to the great iron pig beast that came at us, with the foam dropping in clots from his tusks, as the dogs worried and harassed him and then usually avoided his furious charges. The boar, now quite infuriated, repeatedly charged C. and myself, but before reaching our position Bob and Nellie were on his flanks and foree him to stand at bay. I did not dare to shoot for fear of hitting the dogs, but at length, as they were impatient to begin the cover, we fired together, and at least a dozen neshot striking him brought him to his knees. It was with great difficulty we called off the dogs, who were every instant in danger of being ripped up by the furious lunge he made with his tusks, and with a second barrel gave him the *coup de grace*. The proper thing under such circumstances would have been to have turned and ward with a *zouave* shot, and administered the death wound, but unfortunately we had neither hunting knives or swords, and however well such a thing may look in the *Illustrated London News*, I, for one, must confess to a preference for a more respectful distance and gunpowder and lead in place of cold steel.

The coolies now coming up with the information that the two more pigs had gone off up the hill side, I took the Jacob's rifle and went up to the top of the hill, and then, when they had taken, Bob at the word jumped into the brush, and in a moment was lost to sight. I followed him until I reached a more open piece of ground on the steep hillside, where were scattered a number of cedars, and then

waited for something to turn up. It was not long before I heard Bob on the hill above and to the right of me, and presently an immense roar, the largest I had ever seen, came galloping along the side of the hill above where I stood. Batching sight of me, he stopped and looked so much like chiding that I meditated a scuffle up the nearest tree. Bob appearing on the scene, however, brought him to bay, and as he turned to face the dog, his broadside being toward me, I planted a shell directly behind his forehead, which brought him rolling down the hill almost to my feet. The effect of the shell was wonderful. Although it must have exploded the moment it struck him, the full evidence of its destructive powers was apparent. Some of the pieces had penetrated the skin on the opposite side and the organs in their course were utterly destroyed. Death must have been instantaneous.

It was now nearly night and time we were thinking of returning to the lake, or making preparations for camping where we were. It was decided, however, that we should push on to the half-way village, and then, if it was not too late, we could get chairs and be carried to the Jessie; while the coolies could remain all night and return with bamboo men enough to bring the game into Tsing-poo. With our united weight we bent down some saplings, and after dressing the pigs tied the sow and boars to them and let them spring back. The little porker the man spun on a pole and volunteered to carry to the boat. It was quite dark when we reached the half-way village, but there were procured some rickety bamboo sedan chairs, and stout bearers, who, starting off with their usual dog trot, by nine o'clock had landed us on the shore of the lake. Hailing the Jessie a coolie sculled the dingy ashore and Master Aho had soon prepared us a bountiful supper.

Going on shore the next day at noon, we formed part of the crowd which had assembled to receive the triumphal procession headed by the King, which was brought about in the result of our previous day's sport. Most of the meat was distributed among the villagers, and in an hour the Jessie was again under weigh, and the white walls of Tsing-poo rapidly fading in the distance.

New York, 1874. Wm. M. TILSTON.

For Forest and Stream.
TRIBULATIONS OF A TRAMP IN THE ADIRONDACKS.

HAVING just returned from a two weeks' trip to the John Brown Tract, I herewith submit the following report. Eight of us started from New York on the evening of July 24th, arriving in Albany at five o'clock the next morning. We there took the 6:45 A. M. train, arriving in Utica at eleven o'clock, and Bannville at two o'clock. Ed. Arnold was to meet us here with a team, and take us to the lakes; but no Arnold could be found, so we had to walk.

Shortly after supper Arnold put in an appearance, and said we should go to Moose River that night. It was now nine o'clock, and we were still waiting, having walked from the hotel to the depot just seventeen times. Well, we finally got started at ten o'clock, and arrived at Moose River at half past two on the morning of the 25th, after having the most of the night and day known to the experience of any of the party; stopped at Lawrence's Hotel the remainder of the night, turned out at seven o'clock in the morning, and during the next three hours succeeded in getting our breakfast, and getting our luggage over the river and securely packed on the backs of horses.

One of the party had complained several times about the weight of his luggage, and we had all complimented him on such a heavy load. He had occasion to open his bundle next morning, and in it discovered three bricks, which some one in New York had placed there before he started. He begged us not to let his friends know that he had brought them three hundred miles before finding them, but the joke was too good to keep. At ten o'clock we started on our twelve and a half mile walk through the woods to Arnold's. We had a fine trail, but it was very rough, rough even, and expected to find the hardest travelling we had ever seen; but our idea of it was like Nicholson's pavement compared to the reality. It was up mountains, down valleys, over rocks, stumps, and tall trees, through mud and sloughs a yard deep, with mosquitoes and punkies by millions. At the end of five miles I was nearly played out, and if I could have been placed back at Moose River nothing would have tempted me to make the rough. The rest of the party were equally as used up, but not so in condition as myself. This, remember, was at the end of only the fifth mile, and we had seven and a half more before us. I made up my mind that this was not only my first, but would be my last trip to the Adirondacks. I thought the only fortunate man in the original party was C., who stayed at home. But what could I do? I was in the wilderness, five miles from the nearest village, and I had been here from anywhere else, and the horses with the rest of the party were a long distance ahead. By the way, I would like to mention right here that the miles in this part of the country measure twenty thousand feet each. I was bound to go through or "bust," so I trudged along behind, the others occasionally waiting for me, and finally N. decided to remain with me the rest of the day. He seemed to enjoy my journey very much, but complained that he had drunk so much water that it made him feel a little bad. He said several times that he could actually hear it jolting as he walked, but after listening and puzzling over it for some time, he happened to put his hand into the pocket of his brother's coat, which he was carrying, and pulled out a bottle about half full of some dark liquid, which explained the sound which we had been listening to, and at the same time he discovered that the rest of the party had been drinking hadn't made him feel bad at all. He also learned from the label that the bottle contained some kind of medicine for pains, cramps, etc., the dose being fourteen drops in a gill of water, and was exactly what I needed, so we pushed on again with the understanding that I should take a dose at the first place where we could find any water; but not a drop of drinking water could we find during the entire remainder of the journey, and it was just as well that we did not, for when we arrived at Arnold's we learned that the bottle contained "oil of tar."

On arriving at the house I spread myself at full length on the floor, completely exhausted. I rested an hour, and then ate a dinner of bear steak, brook trout, etc., and felt better, and at six o'clock went to bed and slept soundly until the next morning.

July 27th. A rainy day before us, but we procured additional provisions, boats, cooking utensils, jack and guide,

and started for the lakes. After a pull of four and a half miles up the river we arrived at the "Forge," where we had to "carry" our boats and luggage a quarter of a mile. As it was raining very hard, we waited an hour, but seeing no prospect of fair weather, and being anxious to get located in camp as soon as possible, we decided to start for Seventh Lake, and run the chances of getting wet, and the chances were good, for we did get thoroughly drenched, and yet we were happy. We went as far as Sam Dunakin's camp on Fourth Lake (or Dam Sanguin's, as it is sometimes called, where we arrived at three o'clock. Sam got up a splendid dinner, which we ate with a good order, being hungry as wolves. The storm had been increasing all the time, and we waited until it was too late to proceed further, and then decided to remain all night—and a jolly night it was.

The next morning, July 28th, we found the storm still raging, but we determined to go into camp that day anyhow, so after taking breakfast we packed our traps into the boats once more, and again proceeded on our journey, the rain pouring in torrents, and filling our boats half full of water before we had gone two miles; so we concluded to give it up once more, and went for Jack Shepherd's camp, near the head of Fourth Lake, which we found vacant, and a notice on the door saying, "Gone to Queer Lake." We at once took possession, and the first thing we did was to build a fire and hang ourselves up to dry. Shortly after our arrival, one of Shepherd's guides came in from Queer Lake and gave us a cordial welcome, telling us to make ourselves comfortable until the storm was over. We did make ourselves comfortable the rest of that day, and all night.

The next morning, July 29th, we found the storm still raging as hard as ever, but having learned of a vacant camp on the other side of the lake we decided to locate there, and give up our Seventh Lake idea. Therefore, after breakfast we packed our traps into the boats once more, and proceeded to "Camp Providence," which we found to be a lovely place, and all hands were delighted. An hour's work put it in perfect order, and we commenced camp life on our own hook for the first time. We tried fishing in various directions during the day, but did not meet with much success on account of the storm. In the evening we sat by an immense fire, which we kept burning at the expense of the tent, and only laid out our bedding stories until ten o'clock, when we spread our blankets on the ground, which had been liberally covered with hemlock boughs, and turned in for our first night's sleep in an open tent.

On the morning of July 30th we had a little pleasant weather for the first time, but it turned out to be a cold, cloudy day, with rain mixed in occasionally. Did a large amount of fishing and hunting today, but did not get out much fish or game. Two of the party with a guide, went off on a deer hunt, to a small lake called "Hell Gate," about fourteen miles from camp, and a deer hunt it was for those two. When they got there the boat which had been always kept on the lake was nowhere to be found, and after hunting two hours for it they gave up in disgust, and started for camp, where they arrived at one o'clock in the evening, completely drenched, and having saved and twenty-five quills without firing a gun or casting a fly.

July 31st.—Another cold, rainy day, and the wind blowing a perfect gale, making the lake so rough that it was impossible for us to use the boats, or do anything else but loaf around camp and complain about this confounded weather. All hands discouraged, and beginning to show homesickness; getting tired of fried pork and lard, and longing for something better to eat today, the largest of which we less than eight inches long, and although it hurts my feelings to do so, I am compelled to acknowledge that we have caught more trout than on any previous day, or all previous days put together. If this weather and luck holds on much longer we shall pack up our traps and go—somewhere; I don't know where, but the party seem willing to get anywhere to get out of this forsaken country, and to get on to fish and game. Post boys will go back to Arnold's, where we can get good square meals and a place to sleep, where the rain will not soak our blankets during the night. If it were not for being laughed at by our friends, we should be willing to start for home to-morrow morning.

August 1st.—Another cold, rainy day, and the wind still blowing like a hurricane. We made some down in top boots during the latter part of last night, causing a stream of water to flow through our camp large enough to propel a saw mill. Our bark covered tent will shed water pretty well in ordinary showers, but afforded very little shelter last night. We were completely drenched, and although I supposed my gun was in a dry place, I found both barrels half full of water. Another loading day before us, and more fried pork and lard. We amused ourselves the greater portion of the day by inventing adjectives suitable to our opinion of this weather, but did not succeed in getting anything strong enough to satisfy us. Probably a more thoroughly disgusted party never visited the Adirondacks. We roll ourselves in wet blankets to-night, with the understanding that if it rains to-morrow morning we will pack up our traps and start for Arnold's.

August 2d.—Still raining. Well, all right, we don't care if it rains all day long. The lakes and streams are so high now that there will be no fishing before it is time for us to go home, so it makes but little difference to us. We ate a breakfast of fried pork and corn caks, packed our traps into the boats, laid bare to Camp Providence, and started down the lake, and in less than an hour the sun came from behind the clouds and laughed at us, but it did not tempt us to start on our journey. We proceeded on our course as fast as rough water and a strong head wind would permit. We went ashore at the head of Third Lake to pick some berries, which were very plenty, and after getting our fill some one proposed that we should visit the top of Bald Mountain, and it was no sooner proposed than we were on the way. It was a big climb, but the scenery from the top was so beautiful and mountains and valleys in every direction as far as the eye can reach. Once more on the lakes, and the sun still shining, but the wind is blowing so hard that our progress is very slow. Arrived at the "Forge" at three o'clock, and after working pretty hard succeeded in getting our boats and luggage over the "carry," and safely packed and hunched into the boats, and returned to camp. As this is a carry, it didn't turn out a single thing, except a pair of guns, two fishing poles, three canes from the top of Bald Mountain, a pair of gloves, a coat, and a rubber blanket. Found the river six feet higher than usual at this sea-

son, and higher than ever known before in the summer. Arrived at Arnold's at five o'clock awful hungry. We had eaten nothing but berries since morning, and after a meal of wild rice, etc., we were once more happy. A fresh party came in late in the evening, and learning that we had just left the lakes were very anxious to find out all we knew about the fishing there. We could have written it all with a piece of chalk on a three-cent piece, but not wishing to hurt their feelings so soon after their tiresome walk from Moose River, we made things appear as bright as possible. They were surprised to learn that it would not be so hard to start up in a canoe as they had heard of in a twelve pound salmon. They seemed to have an idea that the boats were about the size of whale boats. A healthy line they would have with whale boats on a three mile "carry." One of the party was dressed in black broadcloth pants, light shoes, white vest, linen duster, silk hat, and an umbrella.

During the next few days we had lovely weather, and enjoyed ourselves very well indeed. Arnold gave us all we wanted to eat, and that was a great point, as we had ferocious appetites. About an hour after each meal we would commence reckoning the time we would have to wait before the next meal would be ready. Game was plenty, and during the last two or three days of our stay fishing was fair, but not what would be called good. We remained until August 7th, when we started for home. Some of us preferred to walk, the latter hunting the horses' time by half an hour. Although the road (?) was in a frightful condition on account of the late storm, we were in a much better condition than when we went in, and did not mind the journey at all. Went as far as Boonville that day, and took the first train in the morning, stopping six hours in Albany, and arriving in New York on the morning of August 8th.

Notwithstanding our many difficulties, and the extremely unfavorable weather, we all enjoyed the trip, and shall be ready to repeat it next year. Every man gained flesh, and came back with splendid health and a ferocious appetite. I should certainly go to the John Brown Tract for two or three weeks' recreation in preference to any other place. It is hard work to get there, but the hard work is exactly what is needed by persons who live in a city and have but little exercise. I should not mind the journey much easier if I were going in from Moose River on horseback. The additional expense is not much. My luggage would be very light. In addition to the heavy woolen clothing, underclothing, and stout boots that would be worn, I should carry simply a rubber coat and cap, pair of shoes, three pairs of socks, a yard of mosquito netting, a bottle of "oil of tar," and fishing tackle. Something else: Everything else that is needed can be obtained there as cheaply as in New York. I should not "camp out," but should board, either at Sam Dunakin's or Jack Shepherd's camps, on Fourth Lake, or at Ed. Arnold's, on the river below the lakes. At either of these places first class board can be obtained for about \$6 a week, which is about as cheap as "camping out," and when night comes you can sleep on a good bed under a mosquito canopy. The fishing and hunting in the immediate vicinity of these places is first class under decent circumstances, although the foregoing report will hardly verify that statement, but it must be remembered that we did not get a chance to try on account of the unfavorable weather. We learned, however, from several sources, after leaving the lakes, that the parties who remained were catching plenty of speckled and salmon trout. The boats and good guides can be obtained at any of the places. The guides all appear to be tip top fellows, very willing and accommodating, ready to go anywhere, or do anything at any and all times, and seem to have no inclination to "beat" their customers. I can with confidence recommend as guides the Arnolds, Nick, Weston, Sam Dunakin, Jack Shepherd, and George Ballard. There are many others who are no doubt equally as good, but these are the only ones with whom I became personally acquainted. They are whole stout men, about a mile or two distance out of their usual haunts, and in favor. I. H. WALKER.

New York, August 10th, 1874.

SPRUCE BEER.—Allow an ounce of hops and a tablespoon of ginger to a gallon of water. When well boiled strain it, and put in a pint of molasses and one ounce or less of the essence of ginger. Let it stand in a teacup or glass, put it in a clean, light glass (a jug will do), and let it ferment for a day or two, then bottle it for use—you will find it quite good after three days. The essence of spruce can be obtained at any drug store.

TO TAKE GREASE OUT OF BOARDS AND STONE.—Make a strong ley of pearl-ash and soft water, and as much unslacked lime as it will take it up; stir 'em up together, and let it settle a few minutes; bottle it, and stop close; have ready some water to lower it as used, and scour the part with it. If the liquid should be long on the boards it will draw out the color of them. Do it, therefore, with care and expedition.

—A new kind of elastic material called Balata gum, grown in the English Guiana, is coming into use. It takes a place between gutta percha and India rubber. It exudes from a tree called the *Seguio mullerii*. One curious property it has is that when fresh it may be used as a substitute for milk. About 10,000 pounds of this substance have been sent to England. Mr. Melville first discovered the useful qualities of Balata gum in 1860.

—By the English Betting Act, frequently alluded to in our foreign papers, which went into operation on July 31st, persons are now liable to penalties of £30, or to imprisonment for a term not exceeding two months, who cause any advertisement to be published, or any letters, circulars, telegrams, &c., to be sent or exhibited giving information or advice with respect to bets or wagers in the United Kingdom or Scotland. The act also applies to those who may induce persons to apply to any house or other place for information or advice, or who may invite people to make or take any share in such bets or wagers.

—To clear a room of mosquitoes, take of gum camphor a piece of about one-third the size of an egg, and evaporate it by placing it in a tin vessel and holding it over a lamp or candle, making sure that it does not ignite. The smoke will soon fill the room and expel the mosquitoes.

—When a bull-dog misses its mark, is it proper to say it is lead astray?

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

FLASHES FROM THE "BLUELIGHT."

SEVENTH WEEK.

I WILL begin my letter by giving you the final results of our experiments in acclustoming young shad to salt water, and will briefly connect this week's work with the condition of affairs at noon on the 22d ult., when I last wrote.

All fish taken from hatching boxes at five A. M. on the 15th, one taken from the hatchery. All fish arrived at Noon at half past eleven A. M. on the 15th. First salt water put in at nine P. M. on the 15th.

No. 1 became entirely salt at six P. M. on the 17th in forty-five hours; fish began dying at nine A. M. on the 18th; all dead at six P. M. on the 18th, having lived fifteen hours in fresh water, forty-five hours in water being gradually salted, and twenty-four hours in entirely salt water; altogether eighty-five hours (three days and thirteen hours) from hatching boxes.

No. 2 became entirely salt at three P. M. on the 19th (ninety hours); began dying at nine P. M. on the 19th; died rapidly during the 20th, 21st, and 22d, and at nine A. M. on the 22d nearly all were dead (a very few lived six hours longer), having lived sixteen hours in fresh water, ninety hours in a mixture more or less salt, and sixty-six hours in entirely salt water, altogether 172 hours (seven days and four hours) from hatching boxes.

No. 3 became one third salt and two thirds fresh at three A. M. on the 17th (thirty hours); fish lived well and lively till the 20th, when they began dying, and continued to die, but at slower rate than in No. 2, until three P. M. on the 22d, when, having been 156 hours in one third salt and two thirds fresh water, about seven eighths had died. The remainder died gradually until six P. M. on the 25th, when but a dozen had been left, but they had outlived, by many hours any fresh shad ever treated in such manner. Their record is—in fresh water sixteen hours; in water more or less salt thirty hours; one third salt, as a batch, 156 hours (eight days and ten hours), and a few survived fifty-one hours longer, reaching to ten days and ten hours from hatching boxes. All but sixteen hours of which they were in water more or less salt. This was our best experiment.

No. 4 became half salt and half fresh in forty-eight hours (nine P. M. on the 17th). The fish, as a batch, did better than in either of the other jars, very few dying until nine A. M. on the 22d, when they began to settle, and were all dead on the 23d at six A. M., their record being—fresh water, sixteen hours; water more or less salt, forty-eight hours; water half salt and half fresh, 129 hours; altogether, eight days and one hour from boxes.

No. 5—Temperature test. For four days the water was kept ordinarily at from 66° to 68° and 70°, but on the 20th the temperature of the air ran up to 79°, and the water in the jars to 77°. This excess of heat produced great mortality.

Jan No. 5—Temperature test, fresh water kept at 64°; the fish began dying noticeably on the 22d, and were all dead at three A. M. on the 23d, having lived seven days and twenty-one hours from hatching boxes.

No. 6—Temperature test, kept at 64°; some of the fish held out till nine P. M. on the 23d; eight days and fifteen hours from boxes.

No. 7—Same test as above, with similar results.

No. 8—After having been kept in fresh water at 64° for six days, and appearing lively, were placed in an ice chest, and suddenly reduced to 50°, killing all in seven hours.

No. 9 and 10—Natural temperature; fresh water, changed every six hours, and all died at three P. M. on the 23d, having lived eight days and twelve hours from boxes.

A few fish were taken from jar 9 when weak and barely used up. They were placed in a jar with a small quantity of road-side gravel. They began to work around among it, and revived considerably, outliving those left in No. 9 jar by several hours. This seems to point to a conclusion that, in addition to the experiment of very slowly adding the salt, some means must be devised by which, at the same time, food can be supplied to them. Various fresh waters were tried during this course of experiments on smaller numbers, and it was found that water from cisterns, ponds, or that had run through old sliver logs, was bad for them, killing them in a day. The jars being kept shaded, a few fish from each were tried in small two quart glass jars, placed in the window, and exposed to the light; in each case this proved injurious, and the fish died soon. The singular result of these experiments is that young shad have been kept longer in salt water than they ever have before been in fresh, and it is highly probable that starvation killed them eventually.

Messrs. Griswold and Vealley have cleaned up their jars and cans, and started back. Mr. G. will, through the fall, continue a set of experiments suggested by the present.

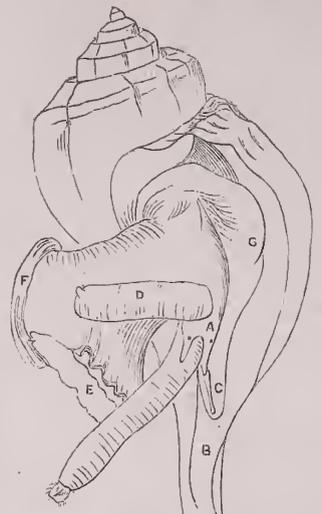

In the laboratory a series of interesting experiments have been carried on by Prof. Verrill, Hyatt, and Rice, to ascertain the action of various forms of poison upon the lower forms of animal life. The primary object has been to discover, if possible, some method of killing an animal while in certain stages of expansion, so that specimens of the animals, as they present themselves, and are drawn, may be retained. It has been found a very difficult operation. A bit of living coral shows each little orifice crowned with a small daisy-like polyp, restlessly waving in the water.

The aumonic thrusts forth from its leather, sack-like body petal-like antenae, which, of various colors, produces a similitude to the flower from which it is named.

Mollusks crawl out—or nearly out—from their shells, and, as in the case of the common periwinkle, develop most curious organs; in the end of the long proboscis are hidden sharp, strong, file-like teeth, with which he rasps his way through the strongest shells, and this proboscis is, in a state of quiet, withdrawn into the body; between the two ledgers on which are situated its eyes the great foot, with which he drags himself along, is generally withdrawn from sight. Many shells possess curious organs; even the common clam is a subject of study.

sents a great difficulty. Only when undisturbed will they expand and show their beauties. At a touch or jar they contract and hide their peculiarities. Therefore the attempt is made to kill them suddenly while expanded. The

THE PERIWINKLE.

most virulent poisons have been tried. Prof. Rice experimented with the *Gastropods*, casting them into strong alcohol, prussic acid, woorara. The first killed them, but they gradually shrank back in their shells as they died. With prussic acid and cocaine they died quickly, but with few cases of any remains of expansion, they acting in fact but little more effectively than did stale water. Hydrate of chloral and chloroform seemed to kill them most rapidly, but their contraction was as complete as in alcohol. Picric acid acted quickly, but not enough so as to prevent contraction. This acid has been found the most effectual of any substance with which to kill and preserve jelly fish. Treating them with alcohol has been found inefficient. Osmic acid has been highly commended by some European writers as a material for killing and hardening these delicate creatures before immersing them in alcohol for preservation, but the experiments made with it here are not satisfactory for it badly discolours them. Prof. Verrill has found that even the most delicate ones can be nicely preserved by first immersing them for half an hour in a strong solution of picric acid, then transferring them to alcohol of about sixty per cent. The same method has been found to be successful with hydroids, aumonies, sponges, and various other soft bodied creatures. The little coral polyp, though, draws back and disappears too quickly. For killing many kinds of animals a solution of chloral hydrate has been found successful, even when they have resisted the action of poisons more virulent to higher forms. In this, most soft bodied animals die quickly, and many kinds, such as the soft nemertean worms, annelids, etc., die in a fully expanded position, displaying all of their organs, the specimens being transferred to alcohol when dead. One creature has beaten the whole corps so far. He seems to be impervious to poison. This is a large, soft larva of a fly (*Eristalis*), found living in pools of dirty sea water near high water mark, burying their bodies in the decaying vegetable matter and mud at the bottom, and stretching their long, slender, tapering tails up to the surface for air, their breathing apparatus being at the extreme end of the tail, which can be extended from one to four inches at will. Although apparently quite soft and tender, this creature is covered with a coat of mail impervious to all poisons. The strongest alcohol was but a bath to them, in which they swam for hours unharmed. Entirely seemed to kill them in about an hour, but on being taken out and placed in sea water they would come to life again. Strong carbolic acid simply annoyed them, and eleven hours soaking in strong hydrate of chloral but made them less lively. Several specimens were placed in a strong solution of picric acid. They enjoyed it for thirty-six hours, then contrived to crawl out of the dish and escape. Prussic acid, cyanide of potassium, and other deadly poisons had no effect on them, and even in a concentrated solution of caustic potash they lived for thirty-five minutes.

The periwinkles and other shell fish have to be caught when partially expanded by a string fastened around the expanded part quickly, and hung up by the string, the weight of their shell and body gradually draws them out.

The "Bluelight," during the week, made her usual quota of trips. Our cruising ground, though, has been somewhat limited by the continued northeasterly winds, which have roughened up the Sound too much for our work. Along the southern shore of Connecticut, and of some of the larger islands we have, however, found smoother waters, and two good pulls in the Race brought up bags full of pebbles and gravel, from forty fathoms down, but very poorly filled with animal life.

The Cygnet, our working yacht, has worked diligently in the adjacent bays, seining for small fish, setting trawls, etc., for larger ones. The trawls, as usual, brought skates and flounders, but in one day four blue fish had hung themselves for our inspection—an advance guard, perhaps, for the next day the Race was full of them, and the trollers were well rewarded.

Our anticipations as to finding here the young of many species has been realized, and in the fish house are arranged jars of many sorts; some, such as the young cod, not before found in this locality. And besides, we have young bluefish, lake, alewives, cunners, butog, skate, flounders, and a curious fish, the lump fish (*Cyclopterus lum-*

pus), a beautifully marked fish. This one is of a reddish brown, with blue and green tints and silvery streaks, when grown to perhaps two feet in length. They resemble, when floating on the surface, as they usually do, lumps of greenish ice, their translucent bodies permitting a play of light. Prof. Gill and Putnam have about five hundred pickled skates from our work, and about two barrels full from Maine, and are making careful investigations into certain differences to decide questions as to species.

A fine tarpon, four feet nine inches in length, and weighing fifty-five pounds, was sent to Prof. Baird by Mr. Blackford, of Fulton Market, and is in the hands of the taxidermist. It was caught somewhere off Long Island. Our trawling and dredging has not been so productive of new results, as usual, but the weather has been so much more to ground already thoroughly explored. In fact the vicinity is nearly exhausted, and our summer's work near to a close. Our party is breaking up by degrees, and in another week we will have finished, and in another month will be left with but the memory of the Commission, and we feel and hope that the remembrance will be mutually pleasant.

S. S.—August 20th. P. M.—Worked "Race" faithfully all day; good breeze from S.S.W.; two lines of most small bluefish and two bonitos. Crossed to and from Fisher's Island a dozen times. Another boat got seven.

PISCOC.

SALMON BREEDING ON THE PACIFIC COAST.

UNITED STATES FISH COMMISSION, McCLUOD RIVER, CAL., August 20th, 1874.

EDITOR FOREST AND STREAM.—The enterprise of procuring salmon spawn with which to stock the Eastern rivers is being carried out, under the charge of Livingston Stone, U. S. Deputy Fish Commissioner, upon the McCluod River, in Northern California. Notwithstanding the disadvantage arising from the distance of the camp from settlements, the work is progressing in a very satisfactory manner. The river is a rapid one, and very cold, being formed from melting snow upon Mount Shasta. A trap has been built, however, 120 feet in length, and extending across the river, by means of which the salmon, as they are going up stream, are secured in barrels, from which they are taken as they are used. The arrangements for maturing the eggs are, this year, quite extensive. There are 800 running feet of hatching troughs, one foot wide, and the trays of wire netting for holding the eggs covers a surface of two thousand square feet. The troughs are supplied with constantly running water by a large water wheel, which raises 15,000 gallons of water every hour. Some males have been caught which are already ripe, and probably the work of taking eggs will commence the first week in September. The preparatory work, which has occupied ten white men and several Indians for more than a month, is now nearly completed. The camp household consists of ten white men, a Chinese cook, and one or two regular Indian servants. Indians from neighboring ranches work daily. The weather is remarkably cool and enjoyable this year, at this season, and life at the McCluod River Camp is thought very pleasant by every one here. As the fish of the rivers in this vicinity have been very little studied, specimens are collected for the Smithsonian Institute, especially of the salmon, trout, and wyddercock in the different stages of their development. The salmon are very abundant this year, and there is reason to expect great success in this expedition of the Fish Commission. M. S. P.

FISH AT THE ROCHESTER STATE FAIR.—Mr. Geddes, superintendent of the fair, is making active preparation for an exhibition of Mr. Seth Green's fish, which will illustrate all the most brilliant results of fish culture. From the *Rochester Advertiser* we take the following: "A tent forty feet in diameter, will be placed in the open space opposite the club house, and this will entirely be devoted to the interesting display. Six feet from the outer line of the tent there will be a circular row of aquariums, and these will be filled with salmon from one to four years of age, salmon trout in the same stages of growth, brook trout from one to ten years old, the latter from the ponds of A. S. Collins, together with the grayings, and finally all the common kinds of fish, besides some that are exceedingly rare. The game fish, save the grayling, have all been raised from the egg, and will, therefore, show to even the most uninitiated observer what has been done by Seth Green and the fish commissioners of the State. Besides the aquariums there will be globes containing fish, hanging all about the large tent, which will thus furnish as beautiful a spectacle as will be found on the grounds during the fair. Mr. Green in this instance is preparing for an exhibition which, for novelty, beauty and interest will be something never before witnessed."

The fair will commence on the 14th of September, and continue until the 18th. Location on the grounds of the Rochester driving park."

SALMON IN THE AFFLUENTS OF LAKE HURON.—We have the following from Mr. D. H. Fitzhugh, of Bay City, Michigan, to his friend, our correspondent, Mr. Thaddeus Norris:—

I had a veritable *salmo retar* sent to me alive from the An Sable last Wednesday one of the places in the stream a year ago. I took you "American Angler" and traced him out line for the aid for dot-fuzer marks all correct, and everything that could identify him to perfection. A nice line of red spots along his lateral line, a forked tail according to plate, with small scales. It was exactly six inches long; a little longer than your life-size plate. I measured him in ice and saw dust and sent him by express, Professor Baird, under whose auspices three thousand fry were put in the river at Grayling last year. The little fellow was taken with a fly near the bridge at Grayling.

The *Scientific Manufacturer* of Chicago and Detroit contains a description of an improvement in a fish hatching apparatus, the invention of the Hon. N. W. Clark, of Oakland county, Michigan. The egg traps are so arranged as to be readily moved from place to place, and can be washed in various currents of water. This invention facilitates labor in every way, and insures a very large yield of fish. The cost of hatching some 1,500,000 white fish by this patent only amounted to some \$391, and the same expense would have brought to maturity two or three times as many eggs, with an exceedingly small per centage of loss. It should be remembered that white fish eggs are among the most difficult ova to hatch.

The death of Dr. J. H. Stack, of Bloomsburg, N. J., one of the Fish Commissioners of that State, is announced. We have no particulars, and trust that the report is unfounded.

Natural History.

TAMING ZEBRAS.

IN the last Bulletin of the Paris Society of Acclimatization, there is to be found a most interesting article, from the pen of M. Saint-Yves Menard, on the successful taming of a number of zebras. The specimens thus broken to harness were Burchell's Zebras, known in Africa under the name of Danws and Pechis. Before the Prussian war, several zebras had been partially tamed, but during the siege were probably eaten. In 1872 seven young dauws were bought by the Society. At first, these animals were exceedingly wicked, biting, kicking, and allowing no familiarity. When put together in a large stall, it was dangerous to enter, as they used their hoofs, and were terrible biters. In order to halt them, the beasts were lassoed. After a great deal of trouble, all the animals were haltered to the same manger, only divided from one another by hanging partitions. It was an ugly business to go near them even then. On the approach of a groom, they would all commence kicking and plunging together. The introduction of horses among them was the first step which brought a good result. After a while the zebras could be ordered and fed. To groom them gave a great deal of trouble, but in time this was satisfactorily accomplished. Kindness and gentleness to the beasts were the only methods employed. In about six months, the first attempt to put the dauws in harness was tried. Just then a celebrated French horse tamer offered his services to break three of the zebras to draw a wagon. Basing his theory of zebra taming on the severe method employed with horses, the man used a certain amount of severity, and signally failed. The dauws were returned to the Society, cowed, but not broken, and in wretched condition. The work had to be recommenced. In time the animals became obedient, and at present are found to be most servicable beasts. Their gait is not rapid, but sustained. At present the dauws are found to be quite useful. They are not only quite steady under a heavy load, but work smartly, and stand considerable fatigue, doing all the ordinary hauling for the garden. One serious drawback, however, still exists, and that is that the zebras have to be caged and tied up whenever shoeing them is necessary. M. Saint-Yves Menard draws from these attempts to bring the zebras into use, the following conclusions:

- 1st. That the dauws can be domesticated.
- 2d. That the only method to be employed is to treat him kindly.
- 3d. That they can be usefully employed as draft animals.
- 4th. That the animals have a certain merit for endurance and vigor; although not fast, they seem to occupy a position between the ass and the horse, as to temper and character.
- 5th. That in placing Burchell's zebra among domestic animals, his usefulness would be about the same as that of the ass.

THE BIRDS OF NEWFOUNDLAND.

THE ornithology of Newfoundland has, as yet, received scant attention from naturalists, so that it is impossible to make out anything approaching to a complete list of its avi-fauna. It is greatly to be wished that some enthusiastic ornithologist would visit this island with the view of making a complete study of the subject. The only one who has done so, to any extent, is Henry Reeks, Esq., F. L. S., of Thurston, Andover, England, who spent the greater part of ten years in Western Newfoundland, and engaged in the examination of its ornithology. Unfortunately he met with an accident which kept him in the house for several months, so that he was unable to accomplish as much as he might otherwise have done; still his "notes," which appeared some years ago in the *Zoologist*, are very valuable and furnish the only information on the subject which is reliable. To these "notes," I am largely indebted for the following facts regarding a few of the more important of the birds found in Newfoundland.

Hawks.—Of the hawk species, Mr. Reeks reckons up eleven varieties, which are to be found here. The osprey, or fish hawk, is the most of these, and is common in the thinly settled districts of the island. It is a summer migrant, coming in May and retiring in the early part of October. It builds in trees in the extensive woods, either on the coast or some inland lake. The eggs can scarcely be distinguished from European specimens, and both Wilson and Audubon reckon the European and American osprey of the same species. "Often," says Mr. Reeks, "on a calm summer's evening, as I lay on the grass smoking my pipe, have I watched two or three pairs of these birds fishing in the harbor. Suddenly the slow circling which is stopped—the quick eye discerns its prey near the water's surface an almost vertical position; the wings for a moment vibrate rapidly, as if to give their owner impetus, and then, with almost unerring aim, like an arrow from a bow, the osprey drops into the water. In a few seconds he reappears, and rising a few feet from the water, the rapid vibration of wings is again observable, but this time only to drive the claws more firmly into the sides of his tiny morsel, with which he slowly sails away to some high tree in the woods, where, probably, is a nest—

"Itself a burden for the tallest tree."

The Bald Eagle.—The bald or white-headed eagle is called in the vernacular of Newfoundland "the Crepe." It is also a summer migrant to Newfoundland, and disappears in the fall. Its nest is usually found near the top of a tall pine tree, and generally contains but two eggs. This handsome bird is gradually decreasing as settlement advances, though it is still tolerably common.

The other members of the hawk species, enumerated by Mr. Reeks, are the pigeon hawk, a beautiful bird, closely resembling the merlin, which feeds chiefly on small birds; the Greenland falcon, called by our settlers the "White Hawk;" the American sparrow hawk and goshawk; the black hawk or buzzard; the sharpshinned hawk; the red-tailed hawk and the American hen-hunter. The whole of them are summer migrants.

Owls.—Of owls we have a considerable variety. The great horned owl visits this island for the purpose of nidification, and is not very uncommon, especially late in the summer, when the young leave their nests. Our settlers call this the "Cat Owl," and its nest is said to be usually on the ground, on a tassel of grass. The American barn owl is rare in Newfoundland; but the screech owl, a summer migrant, is tolerably common. The long-eared and short-eared owl, the barred and sparrow owl, are common; the snowy owl or "White Owl" of our settlers, remains throughout the year. Its chief prey is the polar hare and the ptarmigan, which retire to the highlands as the snow partially disappears. The snowy owl is a bold, rapacious bird and not easily driven from its slaughter-prey. When feasting on an elder duck he has sometimes been knocked over with stones and apparently killed before it would relinquish its hold of the duck. "During my residence in Newfoundland," says Mr. Reeks, "I heard several amusing anecdotes of the snowy owl, one or two of which I shall relate. William Youngs, of Codroy, having continually had the bait stolen from one of his fox-traps, determined to watch the trap and shoot the robber. For this purpose he selected a fine white gun, a white swan-skin ruff, and a white handkerchief tied round his cap, he secreted himself in a small bush, about twenty yards from his trap, fully determined to shoot the first comer; but his determination proved fruitless; for a large, white owl—probably the thief—seeing something white sticking up through the centre of the bush, and evidently sticking it up for a fine plump, willow-branch, instantly made a 'snap,' and at the same time sending its claws almost to the man's brains, suddenly disappeared with the cap and white handkerchief. The man was so startled for the moment that he was unable to shoot at the bird. The snowy owl is a frequent attendant—although generally unnoticed—of the sportsman, and generally succeeds in carrying off a grouse or duck before the retriever gets to it. On one occasion some men were waiting in the 'meads' for a grouse, and at the wild goose, when one of them, named James Carter, left his 'game' and had a chat with his neighbor, incautiously leaving his new white swan-skin cuffs and gun behind him. He had scarcely left his 'game' when an unseen enemy, in the shape of a fine snowy owl, pounced in and succeeded in getting clear off again with both of the white cuffs. A fine adult bird of this species entered my host's house, via the chimney, and fought so valiantly for its life that the man had to kill it with a 'new'—a piece of iron fastened to a wooden handle about four feet long, and used for throwing codfish from the boats. A good many snowy owls are annually caught in the fox-traps of the settlers; and when very fat, which they frequently are, are considered good eating by many."

Hawk Owl.—This is the only other species of owl here is the hawk owl, which is very common, and is generally found in the neighborhood of houses, being often taken in pigeons, &c., remaining throughout the year, but not so abundant in the depth of winter as at other seasons. It is in the habit of perching on the bare and dead top of high firs, from which it commands a good view of the immediate neighborhood, and suddenly drops upon any unfortunate object in the shape of food that may happen to pass within a convenient distance.

Woodpecker.—Six species of woodpeckers are found in Newfoundland. Of these the finest is the black-backed three-toed woodpecker, which is tolerably common throughout the year; and often when the snow-flakes darken the air, no other sign of animal life is noticeable than the "woodpecker tapping" in search of the larvae of several fine species of siren, which abound in the dense forests. The banded three-toed woodpecker is also resident throughout the year; but the black woodpecker, or "great black woodpecker" of our settlers, is only a summer migrant. The flicker, called here the "English Woodpecker," is pretty common, and has a peculiar note which bears a fancied resemblance to that of the green woodpecker—hence the name bestowed on it by our settlers.

Swifts.—Mr. Reeks enumerates two species of swifts—the American chimney swallow and the American night hawk—both summer migrants. The bedded kingfisher, he says, is tolerably common during the summer months, and like the British species of kingfisher, builds in banks, often at a considerable depth, and lays five or six white eggs. Six species of the tyrant fly-catchers visit Newfoundland in summer, and disappear when the first snow falls. The bee martin, the pewee, wood pewee, green-crested fly-catcher and yellow-bellied fly-catcher belong to this class, and are all summer migrants.

Plover and Curlew.—These birds are peculiarly fine in Newfoundland, especially the latter, which is pronounced by aptures to be the most delicate table bird anywhere to be found. The history of our curlews is rather curious. They are bred on the bleak coasts of storm-beaten Labrador, where they feed mostly on shrimps, and are so fishy as to be almost unclean. During August, when the wild berries begin to ripen, they fly to the bleak coasts and bays of Newfoundland, and feed solely on fruit. Their droppings are then a rich purple, while their feathers are often stained with berry-juice; and they become so fat, sweet and tender that they sometimes burst when they fall. When in this condition the curlew are delicious. When the winter approaches these birds fly to South America, where they winter—chiefly, I believe, in Brazil—the longest flight of any migratory birds known. A few of them rest for a short time at the Bermudas, and some visit the West India Islands; and they have been seen, it is said, perching on the huge rafts of tangled sea-weed that are found after a storm in the Saragosa Sea. There can be no doubt that these were the flocks of land birds seen by Columbus during his first memorable voyage in these latitudes. In the spring they do not approach Newfoundland, but make their way up to Labrador through the States, probably following the spring as the snow line gradually retreats northward.

(To be continued.)

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
NEW YORK, AUG. 30, 1874.

Animals received at Central Park Menagerie for the week ending August 29th, 1874:
One *Rhinoceros*, *Rhinoceros unicornis*. *Ind.* India. Height, 5 feet 4 inches; length, 11 feet; girth, 11 feet 8 inches; weight, about 5,000 lbs.
Two *Baccharis Canadensis*, *Baccharis Canadensis*. *Ind.* Pacific Coast Asia.
One *Swamp Sparrow Hawk*, *Accipiter striatus*. *Ind.* Pacific Coast Asia.
One *Crane*, *Grus Americanus*. *Ind.* Pacific Coast Asia.
Two *Curlews*, *Gras alcedor*.

W. A. CONKLIN.

Woodland, Lawn and Garden.

ANSWERS TO CORRESPONDENTS.

AOA-PANTS, (natural order *Hernero calidensis*).—This is one of the most valuable of the African lilies, combining the most graceful foliage of large leaved plants with the most magnificent flowers. This variety is the one our correspondent Johnson, of Westfield, makes the subject of inquiry. This rare African bulb, planted in rich, loamy soil, produces the very choicest of blossoms, and we have planted it with very fine and pleasing effect in the centre of a circle of gladioli of either the *Pomona* or *Grandevonia* variety. Try this style of planting for a year, and you will find that for the centre compartment of your garden you have a splendid and beautiful finish. In the pot culture of these bulbs use a large pot or large pail for each plant. Use good, strong, rich loam and dung. During the summer months, when in pots, give abundance of water and liquid cow manure twice each week. In the winter protect from severe frost, and give water very sparingly. If you follow the above directions we will guarantee you a splendid bloom. O. Q.

M. THOMAS, Wisconsin.—We are in receipt of your box and inquiry of the 8th ult., and "what is the enclosed insect?" This curious little insect is called *Phymata erosa*, and is one of the few friends to the gardener that, like certain kinds of birds, should ever find a welcome about the gardens of the fruit grower. The *Phymata* is a great lover of the insect called the *Aphides*, which infests in swarms our best shade trees, and is very destructive. They have a great love for the linden tree, and I have seen them many times upon my own lindens, and made a careful study of them. The *Phymata erosa* very perseveringly pursues the *Aphides*, and greedily devours them. I carefully placed a leaf containing a number of both the *Aphides* and *Phymata* under a microscope for examination. The latter insect would grasp the former in its embrace, hold it fast, and then extend a little lance-shaped tube, with which, after piercing the *Aphides*, it sucked all the life out of it, leaving only a skin. They feed in the same manner on all other insects some others. I regard it as the friend and not the enemy of the gardener. As yet I have found no satisfactory solution of your other question; as soon as found will communicate. We have before us three letters making similar inquiries. O. Q.

ELLEN MARY, Mt. Clair, N. J.—The leaves you send are from a plant called the "honey-flower" (*Melilotus*), a native of the Cape of Good Hope. It is profusely cultivated in England, but is not considered so valuable here. It may be grown in the open air, but requires protection from frost. It produces abundantly large spikes of a brownish red color. The soil should be light. O. Q.

LOAFERS IN THE GARDEN—DO NOT SCARE THE BIRDS.

Casting my eyes out upon my garden at this writing, I can see three pairs of industrious, happy-winged workers, all busy protecting my fine large cherries, which are just beginning to show their waxy sides to the morning sun. Are not my feathered servants busy this fine day? Says one at my side, "you will have no cherries if you thus allow the birds to depredate at will upon them; see that old fellow of a robin; he picks out the choicest of fruit and bears it away." Truly, he does that, and I am pleased to let him carry away his wages. Those three pairs of birds, in fact, eat quite a quantity of cherries, but what then is the matter with you? Do not you know in order that the birds should have their dues. You would be surprised to know how great a work of destruction, these six robins alone perform in a single morning. Make these winged co-laborers your friends, do not drive the birds away from your gardens; rather encourage and protect them. Drive away long-legged loafers, who are knocking down your trees, breaking up your enclosures, under the pretext of hunting for their food, and thus, in a vengeance, every little unfortunate bird that falls in their way. Turn about and hunt them out of your grounds; there is too much of this garden loafing permitted, for it is a nuisance that breaks in not only upon our week day occupations, but destroys even our Sunday's quiet. If any class of men deserve the special attention of our gentlemanly shooting-club, these are the ones who prowl around gardens just in the times when the birds are making their nests, and hatching out their young. We are very happy to know that such fellows fare pretty roughly at the bauds of our game-protecting associations, and in the vicinity of Boston, Roxbury and Arlington they are most severely dealt with. We feel it to be our duty to protect the birds from these "hunters," and to become in our turn the "hunters" of these garden loafers. OLLIVER'S QUILL.

PROCESSION OF THE PEARS.—From the Divide, between this city and Gold Hill, is to be had a magnificent panoramic view of the mountain scenery, lying far to the southward. At the distance of from forty to sixty miles in that direction rise the grand, massive peaks of the Sierras, standing stately and clearly defined against the blue sky beyond. These peaks are particularly striking at the present time, because they are being robed from head to foot in white and glittering snow. Viewed from our standpoint on the Divide, they look like an army of giants marching up from the desert wilds of Arizona, in meandering array. Far away the tail of the procession is seen to sweep miles on miles to the eastward, while again, above the heads of the giants forming this curve, is dimly seen through the haze a hint of headland still more distant, near-swinging back the present time, because they are being robed from head to foot in white and glittering snow. Viewed from our standpoint on the Divide, they look like an army of giants marching up from the desert wilds of Arizona, in meandering array. Far away the tail of the procession is seen to sweep miles on miles to the eastward, while again, above the heads of the giants forming this curve, is dimly seen through the haze a hint of headland still more distant, near-swinging back the present time, because they are being robed from head to foot in white and glittering snow. The Kennel.

FOX HOUND KENNELS.

We are glad to hear that the members of the Toronto Hunt Club have at last determined to build a model kennel for their hounds. We thought, after the repeated urging in this journal and also by our friend Col. Skinner, of the Turf, Field and Farm, that New York might have been the first to establish a Fox Hunting Club, with a kennel house that would have vied with the very latest improvements. At present it seems an impossibility to find one hundred gentlemen willing to put down one hundred dollars apiece as a nucleus to form and start the New York Hunt Club. We have here at our very doors everything in our favor for the promotion of a Fox Hunting Club; men, horses, hounds and money. Where could there be found a better run than in many parts of Long Island? Gentlemen could start in the morning, have a good day's sport and be home in New York by six in the evening. The answer to all this is simply: We are drivers and not riders. The Toronto Sporting Gazette says:

The new location for the kennels of the Toronto Hunt Club, is on Bloor street, a little west of Bathurst street, the situation being admirably well suited to the purpose. The site of the lot is 75 feet by 275, about half an acre as it should have been. On the place is building a very pretty gnathic lodge for the huntsman and spacious kennels for the pack. The internal arrangement of the kennels is very good, and are such as to lead to improved health amongst the dogs. A house for cooking the canine diet, a stable for one or two horses and a large range shed for the horses of members of the Club are being erected, the whole enclosed with a well-fenced park for the dogs. The whole affair when completed will be a pleasant trying place, and the arrangements are likely to reflect credit upon the architect, David Roberts, Esq., of this city.

One of the best authorities on the kennel is Mr. Vyner, who says:—

The lodging-rooms of a kennel, if built in a proper manner, should always have other rooms over them, as they will then be much warmer in winter, and may be kept much cooler in summer. If the kennels are only buildings without rooms or lofts over them, they should be carried up as high as they conveniently can, and not slated nor tiled, but thatched nearly. This plan has been found fault with as harboring vermin, but if the roof is properly plastered in the inside, there will be no mice nor ticks; and if built a reasonable height from the ground, and defended by pieces of sheet-iron at the corners, rats and mice will not be able to climb up. The plaster should be put only on the roof, as walls plastered are very crack, to harbor ticks; the articles should be all carefully swept, as the masons term it, and well pointed inside.

One of the reasons that should be occupied by the boiler or feeder as his sleeping apartment, as hounds ought never to be left carelessly alone, without some one close at hand, and within hearing, for one single moment, or they may quarrel and worry each other. If the lodging-rooms are lofty, (about the height of eleven feet) and well-ventilated, there will have rooms over them, they will be sufficiently cool in summer; and during the time that hounds are in the kennel, they had much better be upon their beds, than lying out, as is the custom in some establishments, under the shade of trees, on the damp ground.

The young hounds' kennel should be as far from the other hounds' lodging-rooms as the arrangement of the structure will allow; and at the far end of the grass-court should be an hospital for such puppies as may be distempored, so contrived as to be remote from the other lodging-rooms, but at the same time within an easy distance of the boiling-house, whence, by an outside door, the feeder can constantly pass to attend to the sick hounds, without disturbing the healthy ones. The boiling-house should be so contrived as to be warmed by the chimney of the boiling-house, but it must at the same time be well ventilated by two windows, to which shutters must be attached.

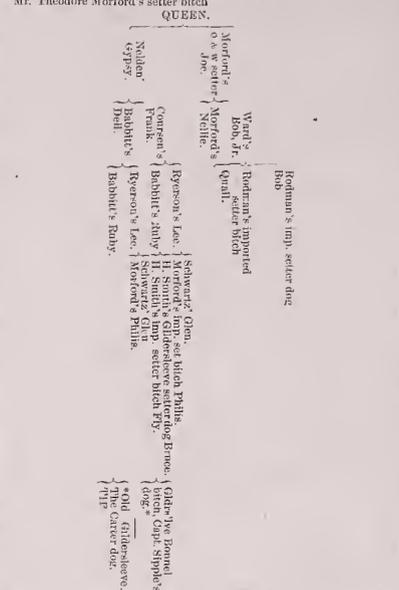

If hounds are to be walked out, either for inspection or for exercise after feeding, or on rest days, they should be taken into the paddock, which should be also kept entirely for that purpose. If horses are turned out, their dung is always in the way, as most hounds will, even directly level than by turning those which have been fed back amongst those which are waiting. The door through which they are drawn in should be divided in the middle; the upper part being left open during the time of feeding renders the operation much less difficult to the feeder. The feeding-room should be always separate from the boiling-house, the size be never so large, even in a temporary brick building, kennel, as the heat of the furnaces will cause the puddings to ferment, to say nothing of other inconveniences. Hounds seldom look clean in their coats when the boiling-house is in the centre of the building, on account of the soot falling continually upon them when in the court-yard.

If the floors of the lodging-rooms are not made of large slabs of stone, they should be laid with bricks cemented and not common bricks, as these are in cement, and not in mortar, and will render the place not only drier, but much sweeter; and if the whole of the building were composed of bricks instead of stone, I have no hesitation in saying that it would be less likely to become damp in any weather. By attending to these hints, even in case the architect had only some old out-buildings or barns to convert to the purpose, a good kennel may be built and properly arranged, provided the one great essential be obtained, and that is, a healthy situation. A kennel may be complete in every other respect; it may, to all appearance, be warm in winter and cool in summer, and replete with every sort of convenience; but the one thing may be wanting, namely, health. Of hounds—kennel-houses, or shoulder-lameness, as it is sometimes called; but whether that is a proper name remains to be proved, as no one has ever satisfactorily defined it, nor given positive proof whether the grief be situated in the shoulders, or loins, or spine. The cause also of the disease was never clearly developed for many years.

MR. THEO. MORFORD'S BREED OF ORANGE AND WHITE SETTERS.

EDITOR FOREST AND STREAM.— I was glad to see when I sent you the pedigree of the Gilderleeve setter which you published in the FOREST AND STREAM some months ago, that this breed had been successfully inter-bred and crossed with Mr. Theo. Morford's celebrated orange and white setters at Newton, Sussex county, N. J. On looking over the pedigree of his dogs, I find that one of the most noted of the Gilderleeves was bred to a equally a fine bitch, which makes a part of the regular line in Mr. Morford's stock. This was the serving of the bitch Fly of the Gilderleeve setter brace, both belonging to Mr. Horace Smith of Philadelphia. I have no doubt the excellence of the Morford breed is owing greatly to this blood; they certainly closely re-

semble the Gilderleeves in having the characteristic orange and white color, with dark eyes, nose and lips. Mr Morford now has a puppy six months old, which, on first being taken into the field, and without being handled at all in the yard, took to quattering his ground systematically, and standing staunchly the first game he came upon. I was present and witnessed his performances, and have never seen so young a puppy work in the manner he did. I add below the pedigree of a very beautiful bitch of Mr. Morford's in which the Gilderleeve can be traced. Joe, the setter that was lately sold for \$500, is of imported stock, and was used as a stud dog. Mr. Theodore Morford's setter bitch QUEEN.

P. S.—As to the opinion that the Gordon setter owes its origin to Irish blood, and which, in a measure, is substantiated by the fact that red pups frequently make their appearance, even when bred from the most reliable strains, I agree with you, but in regard to the source from whence comes the predominant black and tan color of the breed, I believe for the purpose of procuring superior nose, and brought about this shade of coat. We do know that Lord Gordon bred the Webster setters (which he presented to our great statesman) with one-eight or one-sixteenth part of hound blood in them, and they plainly showed the black and tan of the fox hounds. Why should the gaining of Scotch Goid blood be looked for to improve a breed of setters? And it is not reasonable that spaniel blood was wished. Certainly the Gordon has less wae in his coat than any other class of setters, and is in every respect less spaniel-like in appearance. I see in the Gordon every indication that hound blood was once resorted to by their breeder for some supposed benefit that would be derived (probably none) therefrom. Hono.

JUDGING ON THE SHOW BENCH.—NO. 6.

THE ENGLISH TERRIER.

HEAD long, sharp, and narrow; ears, when cut, erect, but when natural to be fine in texture and lie flat to the face; eyes black or dark brown, bright and sharp; neck fine but muscular; shoulders well set back; chest deep; body round; back moderately long; loins short, well ribbed; legs fine, but full of muscle; feet round; stern fine, but not long.

POINTS IN JUDGING. Head, 25 Legs, 10 Neck, 10 Feet, 5 Shoulders, 10 Coat, 5 Chest, 10 Loin, 25 Total, 100

THE BLACK AND TAN TERRIER.

Head flat, long, and narrow; ears erect if cut, if natural, fine and pendent, free from tan; eyes small and black; jaw long; cheeks finely cut, no pendulous lip; neck fine, well tucked up under the throat; shoulders well set back; chest deep; body well barralled; loins broad; back not too long; hind-quarters well proportioned; fore-legs straight, hind-legs not straight and silky, but nice full stifles; stern fine, carried pretty level; all in proportion, color is a great point in this breed—body or main color a nice rich glossy black, tan a rich mahogany. The dog should be pencilled with dark color on each toe, and the thumb-mark on each fore-leg. A tan spot above each eye; a small tan spot on each cheek; jaws beautifully tanned; no tan on outside of hips or loeks, and only just so much tan on the vent of the stern when pulled down covers the tail.

POINTS IN JUDGING. Head, 15 Back, 10 Neck, 10 Fore-quarters, 10 Legs, 10 Stern, 5 Color, 20 Total, 100

THE HARRIER.

The harrier's head is something of the stamp of the fox-hound's head, only a little lighter; rather a long neck, deep in shoulder; chest deep; fore-legs straight and muscular, with the cat-like formation of foot; back straight, well ribbed up, with short flank, strong across the loin; still and well-bent stifles; stern carried well up. The usual colors are blended blues, black, tan and white, and blue mottles. There are several heights admissible, from eighteen inches up to the height of a fox-hound, judged by the best combination of the essential characteristics.

POINTS IN JUDGING. Head, 15 Back, 10 Neck, 10 Fore-quarters, 10 Legs, 10 Stern, 5 Color, 20 Total, 100

—Fletcher's Gazette.

“JOSEPH’S” ANSWER TO “OBSERVER.”

EDITOR FOREST AND STREAM.— Sir, Louis, Mo., August 10th, 1874. This friend “Joseph,” by thy courtesy, presents his compliments to “Observer” and begs to remark that, in his opinion, his Western friends fully realize their task when proposing to test their dogs with those that may come from any country across the big water. As a rule, we are more discreet than to match rabbit chasers against well trained and properly handled dogs, and as for contrasting them in the field to trainers while testing their merits, Joseph doubts if any Western sportsman has space inside his skull thersway to imitate such an idea. No, no, friend “Observer,” do not worry thyself about us of the West. We will not bring shame to thy check or discredit on ourselves in any trial we may take part in where dogs are concerned. We have among us many good ones, and Joseph himself, with his small kennel, does not acknowledge his second to many, come from where they may. He has had them care fully, and from blue Dan in his detage, to Chioe, with her blue breast and black body, they are a comely lot, and Joseph is proud of them. He sought last year to mix their blood with a Gordon, but small boys and arsenic interfered to prevent the consummation. Young Gordon died from that extra feed, and small boys do not grow much finer; that neighbor, the nation of the broad came to Joseph from Jersey, fell into his hands by accident. He does not know their pedigree, but they are high-headed, low-sterned lads and lassies, and have blue blood in their veins. Joseph regrets that correspondents will continue to tell us why quail do not rise to their scent, without arriving at a conclusion. He does not wish to know how it is himself, and on occasion act accordingly. Quail are wise birds, and sometimes fool their enemies badly, are full of strategy, and practice it successfully, scent or no scent. Such is the opinion of thy friend and constant reader, JOSEPH JONES.

DOGS POINTING A TORTOISE.

EDITOR FOREST AND STREAM.— One day this week three of us were out, and a fine young pointer, after trailing carefully for a hundred yards, came to a point on a small tortoise. During the day another dog pointed two more. Yesterday I went out again, and my dog struck a trail, which, from his actions, I thought—and I believe the dog thought—to be that of an old cock grouse. The trail was followed carefully for at least sixty rods, and for the last twenty rods with extreme caution, keeping to windward, crawling flat on its belly, with its nose just even with the top of the stubble and facing toward the trail to catch the first scent of the bird. At last he pointed, only for a moment, when, with a sniff of disgust and a shake of the look at me, he bounded away and began bawling as usual. In less than an hour the same thing was repeated in another stubble. In both cases he had been trailing a land tortoise. O. H. H.

National Halltimes.

Secretaries and Friends of Athletic, Base-Ball, Cricket and other outdoor Clubs will kindly mail their contributions not later than Monday in each week.

—The Montreal club reached Hoboken August 31, and there engaged in a game of cricket with the St. George club of this city. The attendance was unusually large for a cricket match in this vicinity, over a hundred people being present. The Montrealers played a poor show at the bat, Hardman and Gordon alone scoring double plays, and they were weak in bowling and missed chances after chance for catches. The score of the first innings play practically decided the match.

Table with 2 columns: MONTREAL and ST. GEORGE. Lists names of players and their scores in various categories like Batted, Caught, Run out, etc.

FALL OF WICKETS.

Table with 2 columns: Montreal and St. George. Lists wicket counts for various players like Cashman, Hardman, etc.

In the second inning, the Montreal eleven was disposed of for 83, of which Hardman made 14, Gordon, J. Starke, S and Campbell, Savage and Hussey 7 each, the others not scoring average figures. Cashman and Gibbs led in bowling. The Montreal players left town on September 1st for Boston.

—The Halifax tourney has proved to be the most successful affair of the kind known in the annals of cricket on the American Continent. In every respect was it well managed, and the arrangements and the general result reflect the highest credit upon the committee of management, while the originators of the tourney and the Mayor of Halifax have great reason to be proud of the brilliant success attending the cricket fête. The event to us, has of course been the victories and honors obtained by our representative American team, who as a native American eleven of the crickety city of America, defeated not only an All Canada eleven, but a very strong English representative eleven, by scores decisive of the superiority of our young countrymen. They not only won the games they played but also the prize for the best cricket team at the tourney. Our reports of the contest failed to reach us in time for this issue.

—Mr. Henry Chadwick, the well known cricket and base ball writer, while in the act of passing Greenwich street on his way to Hoboken to report the cricket watch, accidentally slipped on a piece of banana peel and fell in front of a wheel of a passing cart. The edge of the wheel struck his head, stunning him and cutting a deep gash, from which the blood oozed until he fainted. He was carried into Hull & Ruckel's drug store, No. 218 Greenwich street where he was carefully attended, and his wound dressed.

—The Detroit Peninsulars polished off an eleven from Sarnia and Port Edward, Ont., on August 29th, to the tune of 249 to 28, the amount of leather hunting engaged in by the Canadian being enormous. Culvert led the Detroit score with 49, Heigho contributing 34, Ridgley 30, and Grasswath, Millwood and Peters over 20 each, only two of the eleven failing to score double figures.

—A cricket club has lately been started on a substantial footing, at Grand Rapids, Michigan. It numbers already some thirty-five members, and a great deal of local interest is felt in the success of the club.

Answers To Correspondents.

We shall endeavor in this department to impart and hope to receive such information as may be of service to amateur and professional sportsmen. We will cheerfully answer all reasonable questions that fall within the scope of this paper, describing localities for good hunting, fishing and trapping, and giving advice and instructions as to outfit, in plants, routes, distances, seasons, expenses, remedies, traps, jackets, poles, etc. The questions of the sportsman's craft will receive attention. Anonymous communications not noticed.

F. G. Wall street, N. Y.—Refer you to number 10, vol. 1 of FOREST AND STREAM.

J. H. T. E. B. Chittenden, N. Y.—We cannot furnish colored plates such as you wish.

BEAVER, Bald Mountain.—Can send you hotb books. Report of N. R. A., 25 cents. Lake Superior Guide, \$1.

J. A. N. Syracuse.—Will shortly send you a circular giving full information. Write us about it in about three weeks.

CHRISTON, R. I.—About J. M. Bryant's writings were purely scientific. Mr. Blackford, of Fulton Market, would probably buy frogs. Write to him.

E. S. P. Corning, N. Y.—Which gun will do the most accurate shooting, the best breech loader, or the best muzzle loader? Ans. The breech loader.

M. B. Green Bay, Wis.—1st. Can furnish all bulk numbers; 2d. E. L. Blackford and Middleton & Carman, all of Fulton Market; perfectly reliable.

CHOKER, Boston.—When a very large frog is caught, both hind and fore-quarters can be used. The spine, in dressing, connects the fore and hind legs.

L. A. W. Winchester, Va.—Price of Fowler's Hard Rubber Belt is \$3.00 to \$4.50, according to size. Ribs from \$3.50 upward, according to quality. Can get a good one for \$15.00.

A. O. M., New York.—Where is one of the best places for deer shooting in the United States? Ans. Ridgway, Elk county, Penn. Write to H. B. Grant at the above address; fare about \$7.50.

OBBA.—Is there any black bass fishing in the vicinity of White Plains, N. Y. or Ky. Don't know of any, if you continue to go to the Harlem and run in Salisbury, Conn., you will find good bass fishing at Twin Lakes.

FLEAS.—A correspondent, A. H. Fowler, Esq., advises the use of common field plaster to extirpate fleas, to be used freely on the premises and on the animals infested with them. It never fails to clear out a dog yard or dog kennel.

J. R. B., Philadelphia.—One-fourth of the weight of the ball in powder is a fair rate; your ball weighs 200 grains. Say 49 grains Hazard's powder. F. W. K. K. fills, will answer your query. Covering the ball with powder is like giving a wild measure by the ayoughful.

SOLOMAN WILSON, Fort Wayne, Ind.—A friend brought a gun from Europe a few days ago for his own use. On his arrival in New York the Custom House officer made him day duty. Had he a right to do so? Ans. Yes; the law compels him to take duty or to be discharged. A gun must have been in use one year to pass free.

L. B. C., Erie Railroad.—Is the Sprocket hook a good bass hook, in what respect does it differ from others? Can it be used as it is obtained? Ans. Yes, it will answer your purpose. Covering the ball with powder is like giving a wild measure by the ayoughful.

A. C. Clark & Co. It would take too much space to describe the difference between the Sprocket, Kirby, Limerick and others. We send sample that you may see for yourself.

S. M. L., Garrettsville, Ohio.—Dreadnought is still hardly steel, but a certain portion of its temper has been increased and is still used for the use of the rifle. The steel is not tempered. A method need be known to all workers in iron. Could not give you any special rule to work by. Its toughness, and the facility with which it can be worked renders it most available for gun barrels.

SUBSCRIBER, Philadelphia.—Third class target, for 300 yard shooting—height, 6 feet; breadth, 4 feet; bullseye 8 inches square; centre, 2 feet by 2 feet. Second-class target, up to 500 yards—6 feet square; bullseye 3 feet square; centre, 4 feet by 4 feet. First-class target, 600 yards—12 feet by 12 feet broad; bullseye 3 feet square; centre, 6 feet square. Send for No. 10, vol. 1, for full details, with cuts.

CANADA, Somerville.—1st. Starting from Ottawa about the last of September, what feathered game would we be likely to find? Ans. Ruffed grouse, spruce partridge, a few English snipe. 2d. Is there any better region for choosing one in Canada as can be got to from Boston? Ans. In this respect we have no better region than the Adirondacks. 3d. Would there be any better time? Ans. The time you mention (the last of September) is best.

BLACK BASS Philadelphia.—Will you tell me whether there are any black bass in the Delaware River, and if so where is the nearest locality to Philadelphia, and what are the best baits? Ans. You will probably find and fish below the city. The best bait is a minnow. The best time is in the evening, but the fish are not so plentiful as in the morning. The best time is in the evening, but the fish are not so plentiful as in the morning.

MUZZLE LOADER.—Never over-load your gun until it kicks. Use a clean weapon and a tight-fitting wad. Shot should be used in proportion to the powder, weight, and bore of the gun. An over-burdened gun will not shoot as well as one that is not. Do not mix large and small shot together, the large ones cause the small ones to scatter when discharged. Use a tight-fitting, Elv's central fire cap. When ducking and shooting from a boat a loading rod may be found useful. Two wads on the powder will often make a gun shoot stronger.

PISCATOR.—An obliging correspondent has sent us the solution of your question. He says: "In relation to the fishing ground off Fire Island, it is about thirty to thirty-four miles off shore, and about four to six miles long, having from twelve to sixteen fathoms on the bank; the bottom is hard gravel, with small stones. There are plenty of eed, and I have known a few halibut to be taken. The ground is known to many of our western (New) fishermen. I have no doubt that in the spring many halibut can be taken there. It is the path of the European packers and land is just in sight from the ground. The course is S. by W. from Fire Island, and it is found by the lead."

NEW YORKER.—I am intending to visit Florida this winter, any from November till June, and think of Palatka as headquarters. Will you give me information of game and fish, a general account of the country for the fish, also if you think it a good location as regards game, &c. I do not wish to touch too much, as I should have my family with me. Ans. Palatka an excellent place for family; two good hotels and good sports. Enterprise is a better locality for game, with an excellent hotel but no village. Melville, across the lake, contains 1,800 people. Black bass (or trout), wild turkeys, deer and bear can be found by travelling north six hours from either place.

J. W. Philadelphia.—I have 10-bore, Scott, and intend going West next month, and would like to know the proper load for the different kinds of game, such as duck, prairie chicken, partridge, woodcock, and snipe (English), number of powder and shot, best brands? Do not mind of our sportsmen use finer shot, and a general account of the country for the fish, also if you think it a good location as regards game, &c. I do not wish to touch too much, as I should have my family with me. Ans. Palatka an excellent place for family; two good hotels and good sports. Enterprise is a better locality for game, with an excellent hotel but no village. Melville, across the lake, contains 1,800 people. Black bass (or trout), wild turkeys, deer and bear can be found by travelling north six hours from either place.

J. W. Philadelphia.—I have 10-bore, Scott, and intend going West next month, and would like to know the proper load for the different kinds of game, such as duck, prairie chicken, partridge, woodcock, and snipe (English), number of powder and shot, best brands? Do not mind of our sportsmen use finer shot, and a general account of the country for the fish, also if you think it a good location as regards game, &c. I do not wish to touch too much, as I should have my family with me. Ans. Palatka an excellent place for family; two good hotels and good sports. Enterprise is a better locality for game, with an excellent hotel but no village. Melville, across the lake, contains 1,800 people. Black bass (or trout), wild turkeys, deer and bear can be found by travelling north six hours from either place.

The visit of the Chelsea club of Boston to Brooklyn, introduced to our metropolitan audiences a very gentlemanly club of ball tossers from the Hub, who, by their creditable deportment and skillful play made a most favorable impression. The scores of the three games they played were as follows:—

Table with 10 columns: Concord, Chelsea, and scores for runs, hits, errors, and total.

First base by errors—Concord, 3; Chelsea, 7. Runs earned—Concord 5; Chelsea, 6. Total wides pitched—19 by Boston. By Base. Umpire—Mr. Higham of the Mutual Club. Time of game, 1:30.

Chelsea. 0 2 0 4 0 0 3 12— Arlington. 1 0 0 1 0 0 2 5— Umpire—Mr. Ferguson of the Athletics.

First base by errors—Chelsea, 7; Arlington, 3. Runs earned—Chelsea 6; Arlington, 0. Wides pitched—By Egan, 17; by Times, 14. Time of game, 1:30.

Chelsea (N. Y.). 3 0 0 0 1 0 0 2 4— Chelsea (Mass.). 4 0 0 2 0 0 0 0 6— First base by errors—Chelsea (N. Y.), 7; Chelsea (Mass.), 2. Runs earned—Chelsea (N. Y.), 6; Chelsea (Mass.), 0. Total wides pitched—By Eble, 10; by Egan, 17.

Umpire—Mr. Wilson of the Concord Club. Time of game, 1:30.

The Concord defeated the Nameless nine at Prospect Park on August 29, in the presence of some two or three thousand deeply interested spectators. The score stood at 10 to 7 at the close of the eighth innings, when the game was called on account of approaching darkness.

At Elmira, on the 30th, a fine game was played between the Actives, of Elmira, and the Crickets, of Binghamton. Won by the Actives. Score, 10 to 5. L. White, of the Boston Red Stockings, played with the Actives. Duration of the game two hours.

At the tournament at Irvington last week, the Star nine of Newark, defeated the Madison nine by 20 to 13; the Analysis of Brooklyn, 10 to 7; the Reliance of Brooklyn by 23 to 14 and the Channel of Paterson by 20 to 10.

On August 9, the Baltimore were "Chicagoed" by the White Stockings in Chicago by a score of 4 to 0. They had previously been defeated by the 3 and 2, all three being closely contested and well played games.

The Fly Always are flying away with trophies in the western part of the State. Their latest triumphs included a "Chicago" for the Ontario Nationals by 30 to 0.

The young Fly Always defeated the Excelsiors at Greenpoint August 28, by the small score of 6 to 0 in a full game.

The Staten Island club started on their Western and Canada tour on August 20. They play 14 games while away, and return on September 15.

The Pacific and Modoc clubs, of Philadelphia, played a fine game together August 27, the Pacific's winning by 7 to 6.

The Fly Always defeated the Nassaus, of Brooklyn, in the Oneda Tournament, August 31, by 12 to 8.

THE WEATHER.—The weather, during this summer season, has been all that could be desired, in any summer latitude, and we doubt if we cannot challenge comparison with any Southern port in the United States. During the month of June, which is our hottest month in this latitude, we have always the hottest and most oppressive weather. We had about ten days of such weather, in which the thermometer ranged, in the shade, from 82 to 87 degrees. The month of July was cool, almost mild—the thermometer never ranging above 75 or 80 degrees at midday. During the present month, August, up to our date, the most fastidious grumbler could not complain. The weather has been all that could be desired. Cool breezes during the night from the West and Southwest, and, during the day, from the East and Southeast, at an average temperature of 80 degrees, at midday. The highest range of the thermometer, as indicated in three separate places in the city, was seen at midday—some preferring to push out their thermometers into the glare of the sun and to run them up to 96 degrees, for notoriety. During the entire summer, we have slept without a pavilion, and all we found necessary was a palmetto fan to keep off an occasional mosquito during the night.—St. Augustine (Fla.) Press.

New Publications.

Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our editorial rooms will be promptly acknowledged and our best services will render a favorably advertising us of any occasion in this respect. Prices of books inserted when desired.

The Popular Science Monthly for September. N. Y. D. Appleton & Co. The opening paper will be found valuable to all who are interested in the wonderful natural history of the human race. Leaving entirely out of question or quotation the absurdities of the Darwinian system, the learned Professor De Quatrefages speaks, first of man as contained in his species, and then, in a most judicious manner, to point first inherited by the earliest known man, the neandertal, and the Indians. Passing onward to a very interesting statement of man as an intelligent and an intellectual being, capable of doing wonderful works, he introduces to us the study of the great and general questions relative to the history and origin of man.

CANARIES.—Those of our readers who wish to procure these beautiful birds are referred to the announcement of a large importation by Mr. Louis Lube, of Chatham street. The first shipment arrived last week, and consists of first-class German Hartz Mountain birds, and will be followed by weekly shipments during the season. Mr. Lube has an established reputation in his business, and offers liberal inducements to cash or prompt-paying customers.

A Des Moines paper refers in the following flattering terms to Bond's sectional boat:—

Mr. E. J. Ingross, President of the Hawkeye Insurance Co., has recently received from St. Louis, one of Bond's improved section boats. It is made of iron, is 16 feet in length with 30 inch beam and weighs but 80 pounds. In an instant it can be taken apart, when it forms two small but serviceable boats. Altogether it is the daintiest model of a boat ever launched in Des Moines waters, and if report be true, is the best.

These boats are built by W. E. Bond, Cleveland, Ohio—prices lately reduced.

The poets speak soothingly of childhood's tears and women's tears, but why do they not speak in like manner about farmers' tears?

The Chicago cricket club paid a visit to the St. George club at St. Louis last week, and tried conclusions with them on their own field, and though nominally defeated they in reality achieved a victory, for when "time" was called and stumps were drawn the Chicago eleven had but two runs to get to win with eight wickets still to fall. As it was, however, the contest had to be decided by the score of the last ten innings play, and then gave the game to St. Louis, as was shown by the appended score:—

Table with 3 columns: First Innings, Second Innings, and Total. Rows include R. A. Rae, C. Darling, P. Danbels, etc.

First Innings—How the Wickets Fell. St. George, 10; Chicago, 7.

Second Innings. St. George, 1; Chicago, 14.

BOWLING ANALYSIS. Balls, Runs, Maidens, Wickets, Wides.

Chicago—Wright, 54; J. A. Bowen, 53; St. George—Mordant, 75; Wright, 54; Bowen, 49; Mordant, 54; Webb, 54.

After the game the Chicago club was entertained at Southern, and the St. George club, by a grand complimentary banquet, furnished in the best style of that house.

The banquet occupied the attention of those present, about sixty in number, fully an hour, at the end of which time Mr. Ben. Williams was chosen chairman, and speeches, songs and toasts followed.

As the American players are now on their return home a grand reception is being talked of as among the events of the coming month. The two clubs will have quite an ovation in Philadelphia, as also in Boston, in both of which cities "reception games" will be played immediately upon their arrival. But nothing has as yet been arranged for giving the metropolitan assemblage, and a tourney is now in progress of arrangement calculated to fill up the gap of time.

The programme is that, after the games in Philadelphia and Boston, that the Boston and Athletic clubs come to New York, and first playing a reception championship match together on one day, that on the two following days they play championship matches with the New York nine.

The Liverpool Courier, of August 13, says:—"This popular American game, lately introduced into this country by the Boston and Philadelphia players, is likely to become as popular here as in America. On Saturday a base ball match was played on the ground of the Everton Cricket Club, sides being chosen by the president (Mr. S. Campbell) and on the 14th of the month. After a very exciting game, the presidents side won by three."

The fewest games played in any month of the professional season marked August's record, as will be seen below.

August 11—Mutual vs. Chicago, at Chicago, 6 to 2.

August 15—Chicago vs. Mutual, at Chicago, 6 to 8.

August 18—Mutual vs. Chicago, at Chicago, 8 to 10.

August 20—Hartford vs. Philadelphia, at Hartford (12 innings), 6 to 5.

August 11—Philadelphia vs. Hartford, at Boston, 28 to 10.

August 17—Philadelphia vs. Atlantic at Philadelphia, 14 to 16.

August 34—Chicago vs. Baltimore, at Baltimore (ten innings), 13 to 6.

August 26—Philadelphia vs. Atlantic at Philadelphia, 23 to 1.

August 29—Chicago vs. Baltimore, at Chicago, 4 to 3.

August 30—Chicago vs. Baltimore, at Chicago, 4 to 0.

August 31—Mutual vs. Atlantic, at Baltimore, 7 to 3.

But for four muller matches the average would have been the best on record. In the majority of the games the score of the winning nine did not exceed six runs.

The games for the whip pennant show the clubs occupying the following positions up to September 1:—

Table with 4 columns: Club, Games won, Games lost, Played.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PRACTICE AND THE PROPAGATION OF FORESTRY, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
125 SOUTH THIRD STREET, PHILADELPHIA,
COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscribers and Ten Dollars will receive a copy of Hallcock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, SEPTEMBER 3, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with full name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and confidence of the portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will wander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the deterioration of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, September 12th.—Regatta of the National Association of Amateur Oarsmen, Lawrence Centre, Troy, N. Y.—Trotting meetings at Syracuse, N. Y., Providence, R. I., Boston, Mass., Knoxville, Syracuse, and Macon, Ill., and Middlebury, Vt.

SATURDAY, September 13th.—Yacht race, New Rochelle harbor, N. Y.—Practice day boat clubs, Harlem, N. Y.—Trotting meeting Prospect Park, Brooklyn, N. Y., and Macon, Ill.

MONDAY, September 15th.—Trotting meetings at Aurora, Ill., Davenport, Iowa, and St. Joseph, Mo.

TUESDAY, September 16th.—Trotting meetings at Eau Claire, Wis., Wobouville, Conn., Kingston and Clyde, N. Y., Reading, Pa., Boston, Mass., St. Paul, Minn., and Davenport, Iowa.—Raining meeting, Buffalo, N. Y.

WEDNESDAY, September 17th.—Seneca Lake regatta, Watkins, N. Y.—Convention of Sportsmen, Niagara Falls, N. Y.—March day, cricket clubs, Hoboken, N. J.—Trotting meetings at Prospect Park, N. Y., Aurora, Ill., Davenport, Iowa, St. Joseph, Mo., Wobouville, Conn., Kingston and Clyde, N. Y., Reading, Pa., Boston, Mass., and St. Paul, Minn.—Running meeting Buffalo, N. Y.

THURSDAY, September 18th.—Seneca Lake regatta, Watkins, N. Y.—Convention of Sportsmen, Niagara Falls, N. Y.—Trotting meetings at Wobouville, Conn., Kingston and Clyde, N. Y., Reading, Pa., Boston, Mass., St. Paul, Minn., Eau, N. Y.—Running meetings at Prospect Park, Brooklyn, and Buffalo, N. Y.

We take great pleasure in announcing that the veteran field sportsman, Horace Smith, Esq., so well known to most of our friends who love the dog and the gun, will take charge of our Philadelphia office and interests.

THE INTERNATIONAL REGATTA AT SARATOGA.—This important event was concluded on August 31st, and for full details we refer the reader to our boating columns. The four-oared scull race was made specially interesting from the fact that the South was represented by two crews, one from Charleston, the other from Savannah. The whole regatta was a most extraordinary success, reflecting great credit on the Saratoga Rowing Association, and on Mr. Conking, the President. Commodore Brady's efforts and untiring energy are also not to be forgotten. In giving James O'Neil's time in the extra single sculls as wonderfully fast, it must be taken into consideration that rowing in dead water may give certain advantages. A straight away race may be the best for making excellent time, but turning races are far more interesting than those on a straightaway course, as they allow the spectators to see the start and the finish.

COD FISHING—FROM FULTON MARKET TO NANTUCKET SHOALS.

It was not exactly a case of mental use up; but those peculiar drawers in the brain, in which are stored away for ready reference certain facts and fancies, which drawers ought to have sprung out of the intellectual cabinet when only a finger was put on the handles, refused to work, and grated on their slides. Even when they were wrenched open, after no end of strain, absolutely nothing was found in the receptacles. The mental digging for FOREST AND STREAM, though not in stony or sandy soil, had, perhaps, from over delving, dulled the spade edge, and the hack ached and the arms were tired. In fact, a holiday—a perfect relaxation from all work—was a necessity. The question was, How or where should we take our two weeks' faring? Nothing is more enjoyable than absolute contrast. From a purely literary and sedentary life, a physical and active existence was what we were yearning for. We wanted to sail in somewhere in our shirt sleeves, wear old clothes, go unshaven, and, enjoying God's pure air, suck in unainted breezes, and wash off the ink stains from our fingers and brain.

"The very best thing you can do," said Mr. Blackford, of Fulton Market, "is to take a trip in our smack, the Wallace Blackford, Captain Michael Redmond, and go to Nantucket Shoals and back, and catch cod for market. The smack lies at Greenport, and will sail to-morrow. You can take a sound steamer, or the railroad, and catch her."

The proposition was hailed with delight, the offer instantly accepted, and next day we were at Greenport, Long Island, and on board the smack were duly enrolled as an amateur cod fisherman.

Now there are smacks and smacks—some antique and dilapidated, others fresh and pretty. The gayest, sauciest, trimmest of them all is the Blackford. Of some forty-six tons measurement, with a neatly fitted cabin, she is as handsome in model as a yacht, and carries two rakish masts, with topmasts, and is altogether the pride of the market. Soon we went out along the Sound, caught a fog off *Pinto Jada* (Point Judith), made New Bedford next day, where we shipped some fifteen tons of ice, and then off again, sighting Gay's Head. Next day an eight knot breeze took us to Nantucket. Here we turned a day, taking some forty bushels of sea clams for bait, and adding to our number a Nantucket fisherman; then off we started with a rattling breeze for Nantucket Shoals.

Now look at your maps, and off to the eastward of the island of Nantucket you will see Sankaty light. On your charts, about 69° 30' by 41° 00' you will find all kinds of shoals and rips. Look a little further, and you will discover that the currents are indicated as running in all directions. It is a locality dreaded by the coasters. Sometimes drifted in by a fog, some loggy drogher stumbles in here, and the skipper, seeing the malicious lines of sharp surges that race across the seas, as the tides tear over the shoals, gets bewildered, and scuttles out again, if he can, into smoother water, to use a sailor's expression, "as fast as a scalded hog." Just here, some twenty-five to forty miles east of Sankaty light, are the cod fishing grounds. There is Deep Rip and the Cod Bank and the Rose and Crown, and lots of other shoals.

Cod are fished for and brought to the New York market all the year round. The harvest never ceases. From December to May our fishermen find cod off the shores of Sandy Hook as far as Cape May; then from June to September they are caught off Nantucket; in October and November they take cod off Bass' Rip and Old Man's Shoals, nearer to Nantucket. The gadsens seem to love cold water. In summer they seek deeper water; in winter shallower beds. Off on Nantucket shoals it is always deep sea fishing, from twenty fathoms to sometimes almost forty fathoms. Off Sandy Hook cod are caught by trawling in shallow water. Trawls are long lines anchored and buoyed with shorter lines *gassed* to them, sometimes as many as 500 hooks being on a trawl. Trawling is done in boats, the smack picking up the men. It does not matter much whether you catch your fish by trawling or by deep sea fishing, the work is hard either way.

Our captain, sailing over rips and surges, instinctively finds a good place for fish. The lines areas much as forty-five fathoms long, each provided with a sniker of some two and a half pounds, to which are attached by a snood or gause two No. 12 hooks. The vessel is so maneuvered as to be carried broadside by the tide. The wind, if it blows favorably, holds her back so as to retard her movement. Alongside of each man is a basket of clams. The first mystery of cod fishing, the rudimentary part, is to be an expert clam opener. You take a round bladed knife, gash through the clam, and with a peculiar scrape, at one motion drop the meat on the deck and sling the shells overboard. During the time it takes your sinker to plumb the depths you ought to be able to open some half dozen clams, for if the fish are in the humor of biting you will want every one of them. Over, then, went our line, thrown clear of the rail, and we jerked and drew on the bottom, when there came a tug. We jumped and drew on the line. There was a wriggle some 150 feet below, and hand over hand we went for that fish. Our excitement was intense. We pulled something to the surface—a horrid creature, which gaped at us over the rail. The crew laugh, and cry "a purp, a purp!" The brute feels ice cold as we disengage him from the hook. Our captain tells us to beware of two claw-like appendages which protrude from the dorsal fins of this ugly fish, which might hurt us

if he struck us. We have caught a dog fish. We tear the hook from his grizzly nose, toss him overboard, rebait our hooks, and over goes the line a second time. While our sinker goes down we look around. Some half dozen fish are already flopping on the deck, and every man, Jack of the crew, cook and all, have their lines taut, and the cords in full tension are singing merrily over the thwarts. Now comes on our line a more lusty, honest pull. We yank away, (the captain's expression) and haul and tug. Now this pulling on a stiff cord, not more than the sixth of an inch in diameter, calls into play peculiar muscles you have never exactly exercised before. Give you a two inch rope, and tug on that, and the hand, arm, and usual muscles are exerted, but gripping so small a thing as a fishing line with the ends of the fingers is quite a different kind of business. If you had been a violin player, using your left hand on the strings, perhaps your digits might have been strengthened. Your three fingers on each hand, it is true, are protected by India rubber finger stalls, called cods (Query—whether the expression *collaring* to anything is not a fisherman's expression?), but still the line cuts. You pull away, all nervous and excited, and land on deck, with a flutter, your first cod. Confound it, he has gorged the hook! For a twenty pound fish to gorge his hook is a shameful proceeding. You pull at that hook, but it won't come. The captain shows you how to extirpate it. You cut a slit below the fish's jaw, slip your fingers, through the wound down the gullet, turn the hook backwards, pass the loop of the line through the cut, and out slips the line.

Just in the middle of the craft a temporary bin has been erected, and now, as the fish are caught, they are slung into this receptacle, and fish are fast being heaped up there. No sooner is our line down than we feel a bite and jerk, and up she comes. It is a second dog fish, and we are forthwith dabbed with the honorable title of "Champion dog fisherman." Captain Redmond explains to us that we are fishing too near the bottom. We catch after that cod after cod. Now suppose you took a fish line with forty pounds attached to it, and let it go of its own weight off a spire 200 feet high, and then haul it up as fast as you could some twenty times, and you would commence to think it was a heavy job. Our fingers were exactly of that opinion.

We buckle, however, down to the work, and stick to it, when *volens volens* we have to give it up from sheer exhaustion. The fish are coming up all around. Jack, Tom, Ste, George, a gentleman from Syracuse, and the captain are working away on codfish, but our own fingers, cut to the bone, are too sore for work. The fishing continues until flood tide sets in, and the drift of the vessel becomes too rapid. By this time the bin is overflowing with cod and haddock. The fishermen call the latter Dickey. Now there is a fine old Catholic legend telling how St. Peter, when he took the tribute money from the fish, marked the haddock with two spots back of the shoulders. Devil-may-care Jack has a different yarn. "You see, sir," said Jack, "old Nick went a fishing and caught a haddock. 'Blay now good,' Dickey, said old Fire and Brimstone, 'I've got you good.' 'Devil a bit of it,' said the fish, as Belzebub clapped his claws on him, for you see a haddock is slimy, and he slipped through his crooked fingers. 'I'll mark you, though, Dickey,' said old Satan, and for sure he did. Just where he touched Dickey he burnt his back with his red hot fingers."

We had caught some fine pollacks—the salmon of the sea—and they really bear quite a resemblance in shape to the salmonidae. Some strange fish had also been dragged up. Huge sea toads and skates, and a ling of a pale yellow color, and an ugly brute of a sea catfish. This fish was the very personification of anger and spite. Showing his sharp fangs, fully an inch long, he bit and snapped like a wolf. A poor, inoffensive cod near him he peuced on, and shook and worried as would have done an animal.

We had caught some 350 cod fish on the tide. The very smallest would weigh two pounds, the largest forty pounds. Now all hands drew in their gear and commenced to dress the fish. For market purposes the very small fish are left with their heads on, but these were few. The greater proportion of the fish had to have their heads cut off, and all had to be disemboweled. Three men decapitate and clean rapidly, while two of the hands wash and scrub the fish. This task finished, the fish go below to be iced. One of the ice houses is emptied, the ice is broken up, and layers of fish and ice are stored snugly away. Next the decks are tidied, innumerable buckets of water and brooms are brought into play, until not a bit of blood or slime, or a scale is seen on deck, and so ends our first day's fish. We must catch some 2,200 fish before we will be ready to trim sails for Fulton Market, and 2,200 fish means—for the captain has said the fish are running very large—fully eight tons of fish to be hauled up over the smack's side from a depth of water not less than from 150 to 200 feet.

(To be Concluded in our Next.)

MEMBERS of our National Rifle Association are warm in the acknowledgment of the many courtesies afforded them by the Quebec Rifle Association. Not only was there a spirit of fair play about the whole proceedings, but the officers and men of the Provincial Rifle Clubs, seemed to vie with one another, in their endeavors to show every attention to our representatives. We assure our Canadian friends how fully we appreciate these favors, and we trust to be able when they visit us at our fall meeting, to extend to them the same hearty welcome.

—Those who wish to bind the second volume of FOREST AND STREAM, will find a title page with the present issue.

THE YOUNG SHAD FOR GERMANY.

IN our issue of August 6th, we announced the departure of Fred Mather, Esq., our distinguished fishculturist, per steamer Donau for Bremen, having in charge some 100,000 young shad. At the time we wrote that the chances against carrying the fish alive on their journey were very great. On Saturday we received the following from Mr. Mather:—

ON BOARD STEAMER "DONAU," OFF SOUTHAMPTON, ENGLAND, AUGUST 15, 1874.

EDITOR FOREST AND STREAM:—

I regret to say that our mission has not been successful; nor fish died a night of starvation. Mr. Anderson and myself have done all that could be done under the circumstances; were with them night and day; gave them Crona water every hour the first six days, and every half hour the remaining four. Out of 100,000 fish we had lost but 10,000 at the close of the ninth day. FRED. MATHER.

Though this most novel experiment of transporting young fish has not been successful, we are by no means willing to consider it as conclusive. We believe that it will be found perfectly possible to carry young fish on a sea voyage of a moderate duration, and that before a year has elapsed Mr. Mather will accomplish this feat. Let any one read Mr. Livingston Stone's most interesting account of the first transportation of the fish across our continent, and he will appreciate the many difficulties which encompass these experiments in fish culture. We are certain that Mr. Mather, whose powers of practical observation are of the keenest character, has already discovered where the plans were at fault, and that he will try another trip, and with better chances of success. It is necessary for us to state that Mr. Mather was by no means sanguine of his ability to keep the fish alive, and that he told us, to use his own words, that "there were ten thousand chances against him, and but two or three in his favor."

We trust to have from Mr. Mather an account of his experience, and how his novel nursery was managed, which doubtless will be interesting, not only to our readers, but to fish-culturists all over the world. In a novel experiment of this character, difficulties in the way met but as incentives to overcome them, and we again repeat that we believe before very long FOREST AND STREAM will publish an account of how the young shad traveled all alive from New York to Bremen.

OUR INDIAN GALLERY

WE are indebted to an officer at Fort Sill, whose correspondence frequently graces our columns, for a series of very fine photographic pictures of the various Comanche, Apache, and Kiowa braves, whose names are not unknown to our readers. The pictures are exceedingly interesting from the notices of the chiefs written on the back of them. We pick up a picture at random. We see a noble warlike head with an iron mouth, betokening decision, with a deep furrow on the brow, the eyes, however, with something of a latent glare in them. Take it in a Lavater sense and it is the portrait of an aristocrat, so proud and defiant is it. Turn to the back, and we read the following: "Santanta, sentenced to be hung for various massacres in Texas, but eventually released. Is here now at Fort Sill sick, all his prestige gone, and amounts to literally nothing." The picture of "Big Tree," Santanta's comrade, shows more gentleness. The features are a trifle sleepy, but to us there is much more of the hidden devil in them. Big Tree is now a simple brave of the Dangerous Eagle Band of Kiowas. His incarceration seems to have broken his spirit. Mohvny's picture is a startling one. It represents the features of a savage of some fifty years old. The mouth is grim, the forehead is broad enough, but low, and there is no end of guile, lure, and wickedness about the face. The legend on the back reads: "This chief means business and war in earnest. Is one of the ablest of the Comanche Indians. All his people are now hostile." White Horse's head also illustrates our gallery. The face is pitted with smallpox, and is empty to a degree. White Horse led the party of Kiowas who murdered the Lee family in '73, and, says our informant, "he is as precocious a scoundrel as goes unhung, yet now professes to be friendly." The most superb head of all is that of Big Bow, chief of the Kiowas. With a more lofty brow than Indians generally possess, the whole contour of the head is grand, the eyes are thoughtful, and there is even a certain amount of benignity about the features. But all signs as to physiognomy fail when you look at an Indian picture, for the endorsement reads as follows: "Big Bow, for years a bad character, is now here and will manage to sneak out of present difficulties. He led the party committing the Howard Wells massacre in 1872." Various pictures of Indian girls also adorn our gallery. Mademoiselle Lone Wolf, with aquiline Jewish features is absolutely pretty, and her pose on a buffalo robe, with head bent on a beautifully rounded arm, is as good as that of a Grecian statue. Arrapahoo and Comanche girls have, however, generally to our eyes few redeeming personal traits. Though graceful in their movements, with small hands and feet, their features are ugly and stolid, and as to the married and overworked Indian women, the homeliest creature in the world is a squaw.

—A note from our Editor-in-Chief dated Toronto, Aug. 28th, states that he would leave for Muskoka on the 29th. C. S. Rust, Esq., Fulton, N. Y., and W. E. Williams, of the Fulton Times left for Muskoka on the 27th. Four gentlemen who had just returned report plenty of game. He acknowledges the courteous attentions received at the Rossin House.

POOR CHILDREN'S PICNICS. THEIR CONCLUSION.—On Saturday August 29th, took place the twelfth and last of the Poor Children's Picnics. At a cost of \$3,874, 23,356 children were given a pleasant jaunt on the water, and amply fed, cared for, and provided with amusements. This happily concluded the third season of these picnics, where over 65,000 children have been entertained. From some personal experience in the business, for a business it is, we are very sure that few can imagine how arduous a task it is to care for such a host of little ones. The success achieved by G. F. Williams Esq., the manager of these Poor Children's Picnics, has been akin to the marvellous. Sixty five thousand children! Can the reader even imagine what an army of little ones—what a host of children—these figures represent? To feed them alone is a troublesome task, but to care for their safety, is the all important thing. It is safe to say, that if an equal number of adults had to be moved about and cared for, more or less accidents to life and limb would have occurred. It is then, we repeat, akin to miracles, how Mr. Williams should have so far carried through this enterprise, and never hurt or lost a child. This wonderful result, is due entirely to the admirable administrative qualities of the manager, and his ceaseless care and watchfulness. A balance of \$693 remains now on hand for next season, and Mr. Williams intends to keep open the subscription in order that next year the funds in hand may be ample for this most excellent charity.

SHIPPING GAME OUT OF SEASON.

NEWCASTLE, ONTARIO, AUGUST 20, 1874.

EDITOR FOREST AND STREAM:—

In view of the Convention to be held at Niagara Falls next month, allow me, through your columns, to suggest to the delegates the necessity of some legislation to prevent the shipment east by express of immense numbers of grouse and quail during the close season. I have, myself, seen barrels of prairie chickens and quails opened at the grouse shops in the city of Toronto as late as the 1st of April, every one of which had evidently been caught in a trap. The increasing scarcity of game on the prairie is not to be wondered at when I tell you I have counted as many as thirty P. C. traps around one field in the State of Iowa. Hoping some action may be taken by the Convention in this very important matter.

I remain, yours truly,

SPOUTSMAN.

"Sportsman's" correspondence has our special attention. We trust the Convention will do all in their power to suppress trapping. It is in regard to selling birds out of season where the Press can be of use. This year we directed particular notice to pinnated grouse exposed for sale in England during our close seasons. We trust our friends in Canada, this coming spring, will give us names and addresses of all vendors of game who are disposing of our birds out of season.—ED.]

Sporting News from Abroad.

THE TWELFTH OF AUGUST.

[FROM OUR SPECIAL ENGLISH CORRESPONDENT.]

YEARS ago the 1st of September was the red letter day in the sportsman's almanac; but however much the modern generation esteem partridge shooting, it nevertheless holds a very secondary place in comparison with the more fashionable pursuit on the Scottish moors. As regularly as the swallows seek warmer climes, so do the tired barristers of Lincoln's Inn, the jaded merchants, the blood men of pleasure, statesmen and jurists, army men and *ultra-entrepreneurs*, Peers and Commoners, with long accounts at the bank, seek new health and vigor in the fresh air of moor and mountain. Were the night express from Euston on the eve of the 12th to run off the line, and indulge in one of those smashes of rolling stock and passengers' ribs, which are the result of nobody's carelessness, and often traceable to an extra glass of gin and water, I more than expect that the speeches in the House next session would be most of them maiden ones, and whilst the extirpation of betting and the early closing of public houses remained unadvocated, many a church would lack its brilliant sermons, and shovel hats and ecclesiastical gaiters be found amongst a debris of breech loaders and pointers.

It is, however, now two years since Lord Walsingham killed on the Binchester moors 423 brace, or 846 head of grouse, to his own gun or guns, for of course there was always a second one ready cocked and loaded for him when he had killed right and left. This unprecedented season saw enormous bags on other moors. The Marquis of Ripon, at Studley Royal, brought home 2,240 head in one day, and ere the sun set at Wemmergill almost as many had fallen, and 700 of them to Mr. Millbank's aim, whilst finally, 2,036 head were shot at Bromhill, in the West Riding by Mr. Rimginton Wilson and his friends. This was rather an improvement on Colonel Hawker's time, when a typical day's sport realized some forty birds all told, and the cripples picked up. The extraordinary record of 1873 furnished many writers with arguments in favor of grouse driving, then just come into vogue, and it was insisted on by more than cockneys in the Strand that Sancho and Don were the origin of the disease, and that by shooting over dogs the old birds were allowed to escape, whilst the young ones fell. This gratifying theory was supported by the fact that old cocks and barren hens are the first to fly over the ambushed sportsman, when packs of grouse are driven, and as far heavier bags were made, and there was more shooting, the Londoners who cared nothing about a dog's instinct caught at this method of ensuring plenty of sport, and discarded setters and took to driving. The disastrous consequences of this theory are, I think, now becoming apparent, and whilst there are not enough birds left to stock a moor for the next season, we can't eat our cake and

have it too, though owing to the fables of the lessors of t ground—

"Hope springs eternal in the human breast;
Man never is, but always to be blest."

With an ominous and singular unanimity the reports, when candid and unbiased, prophesied scanty packs and a bad breeding season. Grouse disease had been general; the hatching season has been scarcely unfavorable; but somehow or other the habitats of the dark fleshed game are low and far between, and ruefully the wealthy lessees are looking at their check books and their "bags." As luxury and effeminate habits aid Rouse low, so have breech loaders, driving, and other sybaritic devices for making shooting free from fatigue and exercise, ruined sport in the land of brown heath and shaggy wood. The moors have left the hands of the lairds of the highlands, who, bold and active mountaineers, were born sportsmen and cared not for a pastime as tame as pigeon shooting, now fallen to the tender mercies of the dandies of Bond street, whose long purses enable them to stand behind a screen in patent leather boots, and whose idea of sport is to see themselves in print, as having killed so many hundred brace of grouse. A shooting box in the north is now a sort of Capuan villa, on a small scale. A friend of mine more gifted with retorts than energy, would go mad with *ennui* if he hadn't his French chef, a billiard table, a wallet, *Mot et Chandon*, Habanus and Parisian novels. You are expected to play unlimited loo, smoke big regalias and "pot the red and cannon" till at least three o'clock in the morning, and then outdo the steady old fellows who have scored peacefully rolled up in their plaid for at least ten hours, whilst you wake up with a headache only dispelled by a bath, and some loo and soda water. As a writer says in the *Field*, you can—if driving is the order of the day—sit down at your stand until your man tells you to look out, and then you ride from stand to stand on a pony and fire away without soiling Douglass's Athol brogues, or using more exertion than is required in lifting a gun to the shoulder. Of course some amount of practice is required to hit birds who fly as fast down wind as an average swallow or an ordinary kingfisher, but you need know no more about sport than a London rat catcher. My own idea about driving grouse is this: It is as tame as shooting at glass bottles. I would rather shoot over poodles or Persian kittens than go in for such artificial sport.

The best bags read thus:—

Aboyne—The Marquis of Huntley and two other guns, on the moor of Dannet, sixty-five brace grouse, two snipe, one plover, and two rabbits.

Chichester, Bala, North Wales—Mr. Lloyd Price and friends seventy brace of grouse; seventeen and a half brace killed over Beau and Mallard, the field trial pointers, and ten and a half over Grecian Bend and Light. Mr. Price's old Drake, purchased at Mr. Garri's sale for 150 guineas, knowing the birds were wild, went low in the heather, always working for the wind, and more birds were killed to him than other dog.

On the Yorkshire moors two guns killed eight and a half brace on the Calderthorpe ground, and on Penhill thirty-nine brace fell to ten guns.

The Honorable Thomas and Charles Fitzwilliam killed forty-five brace, the Rev. H. Russell twenty and a half brace, and at Edward Byer's bag of twenty-six and a half brace, and several others of twenty brace, were about the best made.

The Earl of Stair, Honorable North Dalrymple, and another gun killed seventy-four brace, and the best shooting in Scotland seems to have been in Banfshire, Argyleshire, and Wigtonshire. The Duke of Roxburgh has decided to give his moors a rest in consequence of the badness of the season, and his example is followed by many of the leading sportsmen.

The *Fiddis* says the only good bag was that made by Mr. W. Canlie Brooks, M. P., Admiral Farquharson, Mr. Thompson, Rt. Hon. W. P. Adam, and Mr. Davidson, which amounted to 133 brace of grouse and twenty-two variations. On the Melgus moors Messrs. Noble and Baytum made a bag of eighty-seven and a half brace of grouse and over 100 hares, which was better in proportion to the guns.

The American base ball players at Richmond had rather stormy weather to contend against, but nevertheless there was a large assembly of people. The Athletics won a quick game. The runs scored were:—

Athletics..... 8 0 0 2 0 0 1 0-1
Boston..... 0 0 0 0 0 0 1 2-3
Runs earned—Athletics, 4; Boston, 2. Home runs—Gedney, 1; Beals, 1. Double play—George Wright and Kent. Base on errors—Athletics, 7 times; Boston, 6 times. Time of game, 1 hour 25 minutes.

At the Crystal Palace the weather was bad, and hence spectators few, and the ground being slippery the game was not up to its usual form. At the "Oval" cricket ground the Boston had it all their own way. It has been asserted in the *Times* that base ball is an old English game but like pall mall has subsided of late years; but there is not much proof of this, and I am inclined to doubt it.

IBSTONE, Jn.

—The Irish team will sail on the 5th of September, and will be composed of the following gentlemen:—James Miller, John Rigby, Edmund Johnson, James Wilson, Dr. Hamilton, Capt. Walter, H. Forsier, W. Waterhouse, J. Doyle, and J. Kelly.

Any of our subscribers who have a copy of this paper of February 13, 1874, which they do not wish to preserve, will confer a special favor by forwarding it to this office.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

Land-locked Salmon, Salmo gairdneri. Salmon trout, Salmo confinis. Black Bass, Micropterus salmoides. Micropterus nigricans. Striped Bass, Morone chirocentrus. Sea-trout, Salmo inermis. Bluefish, Menidia menidia.

Trotting is permitted in Maine and Canada until October first. Salmon fishing with fly is permitted in New Brunswick until September 15th. Land-locked salmon and salmon trout in season till September 15th.

FISH IN THE MARKET.—There is somewhat of a scarcity of sea fish, rather expressed by an advance in price, though the slabs seem overflowing. Spanish mackerel are by no means in large quantity, and worth fifty cents a pound, coming from the east end of Long Island. It looks as if the fish was now over, though they will keep off and on until October; prices may be increased. Blue fish in good supply, worth eight cents a pound, they have been as low as six. They are coming from Ilyauis and Martha's Vineyard, Nantucket, and perhaps escorted President Grant and the City of Peking. We may expect the blue fish to keep on coming until about November. The New Jersey throng of fish ought to make in, say about the middle of this month. The average weight is about three pounds. We saw some fine fellows, which when dressed turned the scales at eight pounds. The true mackerel are plentiful from Boston, worth fifteen cents, though small, fat and delicate. Sheephead from Little Egg Harbor are in moderate stock, worth twenty cents. Striped bass quite scarce, and really none fresh on the market—a hungry squad of shanks off Pasque Island said to be the cause. Salmon in small supply, principally from the Miramichi, fetching forty-five cents a pound. It is not pleasant to look at them, as some of the fish seemed ripe with their eggs. King fish in their pretty coats of silver and russet hardly plenty, worth twenty-five cents. Pompanos abundant at thirty-five cents. Salmon trout and white fish from Lake Erie just shipped from Buffalo are bringing eighteen cents. The South now is sending in some of her fish, notably the handsome red snapper, which comes out of the brilliant waters around Key West, all aglow with its crimson fins. Soft crabs—huge fellows—fast and tempting, the nicest we have seen, worth for the best \$1 50. The New Jersey lobsters we have so much praised, have gone to grief or to salad; there are now no more of them, at least for the present. Smaller ones, whose habitat is Fisher's Island, near Noank, are now in market. Epicures declare these lobsters to be the finest as to flavor which come to us. Haddock scarce—worth twenty cents. Cod—the famous old fish scarce—in moderate quantity, worth eight cents, from Nantucket Shoals.

The best fishing ground in Pennsylvania, as we learn (inferentially) from the Germantown Telegraph, is at the Schuylkill Falls. That paper says: "The water on this side of the river is as black as ink, and on the other side it has all the colors of the rainbow. We have never passed along without seeing a man and boys fishing." The only difficulty seems to be that there are no fish there, and yet, as we have remarked, the fishing could hardly be better.

The Norristown Herald, of Thursday says: "Twenty black bass, weighing thirty-nine pounds, were caught by a gentleman at Pawling's dam, on Saturday last. Among them were some splendid fish, six of the largest weighing seventeen pounds. The same place has since been visited by sportsmen, nearly all of whom failed to catch even a single fish."

Mr. A. B. Harrower, who is in the habit of "casting his lines in pleasant places," says:—

The fish in the Richelieu River, P. Q., Canada, are pike, black bass, rock bass, shad, whitefish, perch, pickerel, (dore) and an occasional muskallonge. I have seen fine, very fine, has taken at St. John's with a minnow, and have taken some very large strings of fish, trolling with a spoon above the rapids. The pleasant spot to fish on the Richelieu, however, is at Chambly, at the foot of the rapids. The "Bassin" affords fine hooking, and there is a good one for the orthography. A Frenchman—that is, he gets a good table. I can state from my own experience that bass do take a fly; at least in certain waters.

An expert angler who fished a Canadian river last month thus describes how he captured a fine fish in the dark, and the difficulties he had to contend with. He writes:—

I killed a splendid salmon at dusk this evening. He weighed twenty pounds. Having fished some ten or fifteen minutes, and darkness coming on, I made a final cast previous to retiring up. My fly was seized, by what I supposed to be a grise or large trout, under water. Soon, however, from the fish's movements I felt assured that I had an unusually large salmon, and governed my tactics accordingly. He made for the foot of the run, and I followed him, kept by one Lalline, (never saw it written so am not sure about the orthography.) A Frenchman—that is, he gets a good table. I can state from my own experience that bass do take a fly; at least in certain waters.

I can state from my own experience that bass do take a fly; at least in certain waters.

River, I saw a fisherman catch a large string of weak fish and perch near the mouth of the river. Another fisherman caught about thirty pike in the river here. In my next I expect to report some good catches of striped bass.

BLACK BASS.

DAVENPORT, Iowa, August 10th, 1874.

By recent communications in your valuable paper the writer observes that with many it is still a mooted question whether the black bass can be taken with a fly. Permit me to add my testimony in the affirmative, if the question be regarded in any respect an open one.

The writer, with a young friend who has not attained his majority, and who never fished with a fly—Mr. George French, of this city—visited a chosen spot not a mile distant, on the Mississippi, and enjoyed rare sport among the bass. He took as I have intimated, his first lesson from me, arranged his rod, and attached his gandy fly, with yellow body and drake wings, and dragged it upon the rippling current, when almost instantly he had a black bass. I think in course of an hour he landed safely eleven, one of which weighed five pounds, and three or four others from three to four pounds. I caught a number, the largest three and a half pounds. These fish I speak of were well-fed, no guess from size. It was also seen, and reported by Mr. Gray, a noted fisherman of this place, and a Scotch gamester who can catch and cast a fly with any of Sir Isaac's disciples, and we have had glorious sport together in talking bass and other fish with the fly. Upon one occasion, at Rock River, near Milan, a famous fishing place, the writer, with a snowy red-winged fly and light body, caught a four pound bass, and immediately after a four pound salmon, about pike price. Now, conceding this latter fish I am much inclined to go off at a tangent; but if this article be taking, will reserve my disposition to salmon for another.

In fishing with the fly here for black bass we take other fish—pike perch, as I have intimated—whose misonior is white salmon, also white or striped bass and croppies. Parson a word or two respecting the latter fish. I am familiar with the striped bass of the East; ours are very like but do not attain the same growth, the largest I have seen of taken weighing four pounds. They are in the table fish, esteemed equal to the black bass. The croppies you have not in Eastern waters. I think they would be worth planting. Ask Seth Green, the father of fishculture. I have caught them largest about three pounds. They are plenty; have seen sixteen taken in six minutes. They are a better game fish than the smelt, and I have known old fishermen who regarded them equal, if not superior, to any fresh water fish. I myself will take both trout all the time. The interesting feature, however, about the croppie is that it, with the others named, will leap to the fly.

Now, as the writer is an old, white-headed fisherman, he desires to add a few words for the benefit of others in the same vocation. If you fish for black bass with the minnow or bait, let me tell you the best. It is the croppie, called on the river streams croppies, or on Western streams known as hell-crawlers or crawlers. They are under the rocks in the bass streams. I think, at all seasons of the year, the natural food of the bass, and for this reason they love the tumbling waters where the rocks abound. Now, this croppie comes out of the water about April or May, takes to deep ledges on islands or river shores, under stones and timber, becomes very shy, and only in a confined space is captured but for bait. While the croppie is in its first stage, a black, net crawler, as you can see in Peimery's Zoology, it is the best bait for bass. I have heard and believe that a fisherman took fourteen black bass with a single specimen. In Rock River I discovered this insect late in Sept. and caught more black bass with it than I could carry. I am satisfied they continue to be the best of the year round, and constitute the principal food of the black bass. I have not had time to make a course of several miles among grassy flats, and for a still further distance a more desolate way, if possible, among a thick margin of siders. With the probable view of making the greatest possible display, it takes more turns and twists to the square mile than almost any other stream, ten minutes' rowing frequently bringing you back within fifty feet of where you started. Here, in the water, the croppie crawls, and you see several miles away from the knots she has tied in the course, has beaten a trout hole in the curve of each bend, which is well populated by the "speckled beauties" so dear to the heart of all sportsmen. When the water is up, as it was during the first part of August, a boat can go all over the meadows, the trout running farther up, the distance to the fishing grounds being thereby rendered shorter, and the trout more numerous. In winter, and its upper waters seem to be all spawning beds, which account for the abundance of the trout. Nearly all those fishing averaged sixty to seventy trout a day, the largest running from a pound to a pound and a half, and from that down, and when the number of visitors is considered, there seems to be but little exaggeration in the remark made by the writer of the above article, that three tons of trout had been taken out of Salmon River this year. They seem to be taken here with a fly than with bait, the favorites being a red rib, brown hackle, and a gray fly. Montreal flies and white millers are also used with success.

Now deer come into Round Pond, Wolf Pond, and the other sheets of water in the neighborhood, and tracks of them were also visible. My party, who are to be found in the woods, there is a good, although unpretentious, hotel at the dam, kept by R. J. Cunningham (better known as "Roe"), where guides and boats can be obtained. The house is beautifully clean and the fare good. Visitors should take the H. R. R. to Malone or Ogdensburg and Lake Champlain Railroad. From there a team can be hired for the State Dam. G. W. W.

J. H. BERRYVILLE.

TROUTING NEAR MALONE

EDITOR FOREST AND STREAM:

Among the numerous resorts of sportsmen there are few more easily accessible, or which afford better sport than the Salmon River, above what is known as the "State Dam." Here, within thirteen miles of Malone, is a stream which, notwithstanding its frequent visitors, affords an inexhaustible quantity of trout. The pond raised by the dam varies greatly in size. Generally it is only about a quarter of a mile in length, and above this the river streams are more or less confined to narrow, among grassy flats, and for a still further distance a more desolate way, if possible, among a thick margin of siders. With the probable view of making the greatest possible display, it takes more turns and twists to the square mile than almost any other stream, ten minutes' rowing frequently bringing you back within fifty feet of where you started. Here, in the water, the croppie crawls, and you see several miles away from the knots she has tied in the course, has beaten a trout hole in the curve of each bend, which is well populated by the "speckled beauties" so dear to the heart of all sportsmen. When the water is up, as it was during the first part of August, a boat can go all over the meadows, the trout running farther up, the distance to the fishing grounds being thereby rendered shorter, and the trout more numerous. In winter, and its upper waters seem to be all spawning beds, which account for the abundance of the trout. Nearly all those fishing averaged sixty to seventy trout a day, the largest running from a pound to a pound and a half, and from that down, and when the number of visitors is considered, there seems to be but little exaggeration in the remark made by the writer of the above article, that three tons of trout had been taken out of Salmon River this year. They seem to be taken here with a fly than with bait, the favorites being a red rib, brown hackle, and a gray fly. Montreal flies and white millers are also used with success.

Many deer come into Round Pond, Wolf Pond, and the other sheets of water in the neighborhood, and tracks of them were also visible. My party, who are to be found in the woods, there is a good, although unpretentious, hotel at the dam, kept by R. J. Cunningham (better known as "Roe"), where guides and boats can be obtained. The house is beautifully clean and the fare good. Visitors should take the H. R. R. to Malone or Ogdensburg and Lake Champlain Railroad. From there a team can be hired for the State Dam. G. W. W.

CAUGHT.—A few days since, while one of the operatives at the Wamsutta Mills, New Bedford, Mass., was walking upon the shore near the mills, he discovered a wild duck, apparently wounded, on the shore. On approaching it he found a quohog hanging to one of its feet. The poor creature had accidentally got its feet into it while running upon the shore. It was promptly released.

A correspondent informs us that he has found oil of sassafras a perfect protection against mosquitoes. It is entirely harmless to the skin, has very little odor, and if rubbed on in the evening will last all night. Care should be taken to rub over all the surface, as the pests will discover any spot which the oil has not touched.

A Wisconsin correspondent reports pike, pickerel and black bass biting freely in Lake Koshkonong.

Shot Gun and Rifle.

GAME IN SEASON FOR SEPTEMBER.

Moose, Alces Aluticus. Snipe and Bay Birds. Elk or Wapiti, Cervus Canadensis. Caribou, Tremarctos Amoenus. Hares, brown and grey. Red Deer, Cervus Virginianus. Wild Turkey, Meleagris gallopavo. Squirrels, red, black and grey. Woodcock, Scolopax rusticicola. Quail, G. Virginia. Ruffed Grouse, Tetrao umbellus. Pinnated Grouse, Tetrao Capivo. Esquimaux Curlew, Numenius borealis. Curlew, Numenius Argus. Golden Plover, Charadrius. Quail, G. Virginia. Gull, Larus. Willets. Gadwall, Larus. Red or Rice birds, Dolichonyx orizivorus. Rail, Rallus Virginianus. Wild Duck.

Under the head of "Game, and a new season," we can only specify in general terms the several varieties, because the laws of States vary so much that we are unable to particularize, we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designing game laws are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

GAME IN MARKET.—Woodcock still scarce; about 300 brace coming into market a week. Birds in nice order, are worth \$1 75 a pair. Connecticut, Rhode Island, and New Jersey are sending a few birds, but the bulk are from the West. Some miffed grouse in the market—said to come from Indiana and Iowa—worth \$1 50 a pair. Not in very good order, nor prime birds. Prairie chickens—but few yet—worth \$1 25 a pair—rather serawny birds. Reed birds—the first we have seen—worth \$1 a dozen. As yet they have but a skin of fat on them. In a week or so they will be lumps of insouciance. Curlew few—Snipe scarce, but grass plover in moderate quantity and plump—worth \$1 00 a pair.

—Though there seems to be as yet somewhat of a depression in general business, the fall trade coming in but slowly, gun makers are doing a fair business. Chicken-shooting in the West consumes an enormous amount of ammunition, and orders for guns are being rapidly sent in. The Messrs. Remington have found it impossible to keep up with the demand for their new breech-loaders. At present their facilities allow them to turn out some ten guns a day. Very shortly with enlarged facilities they trust to be able to make as many as 300 of their breech-loaders every week.

—James K. Polk, of New York, nephew of the late President of the United States; Landon Ketchum and four other gentlemen of Westport, Conn., went rail shooting on August 26th, four miles above the New York and New Haven Railroad bridge, at Stratford, Conn. They returned in the evening, having bagged 600 birds. They report vast quantities of all kinds of game in that region, and say sportsmen may go there assured of meeting with success. The season for rail generally begins in September, but this year the birds have appeared earlier. Rail shooting is also reported good at the Lazaretto, Chester, Mareus and Port Penn, Pa.

—Snipe and other bay birds are reported scarce around Barnaget during the last few days.

—The region around Lake Koshkonong, Wis., is a very attractive one for sportsmen. Our attentive friend A. M. Valentine, Esq., writing from Janesville August 29th, says:—

I have just returned from a prospecting trip to Lake Koshkonong. Mallard, teal and wood ducks are very plentiful there now, and shooting is good and will be when the close season ends, Sept. 1st. We shall have a splendid season back and forth, and as soon as we get a cold storm to start the ducks from the north. The snipe shooting at Lake Koshkonong has surpassed. Parties intending to visit Koshkonong should write to Joseph Mackroes, Fort Atkinson, Wis., naming day they will arrive there, and he will meet them at the station, which is on C. & N. W. R. R., 112 miles north of Chicago, and five miles from best shooting ground on the lake. It is a beautiful place, and the best. Mackroes will exhibit us plenty to eat and a good place to sleep and take pains to put them on good shooting ground.

—Our valued correspondent "Gaiyou" sends the following account of a wonderful shot in the dark, as a "trump" for the report of the remarkable shot reported in FOREST AND STREAM, and corrected by "Old Smokey." If it is doubted he offers to send "sworn statement," with signature of John Smith, J. P., until attached:—

Mr. B. of the vicinity of Cornish, one dark and rainy night, was much disturbed by the howling of a small pack of wolves. They finally came within three or four hundred yards of the house and set up most terrific yells. Mr. B. had an old Enfield rifle, picked up on the bloody field of Sinoich, which he loaded, and going to the door ascertained the direction from whence the howling came. The report of a gun, and a yell of triumph, echoed through the darkness, and then all was silent. He heard the wolves no more that night, and next morning, happening to pass over the spot where they had been heard, he found an immense dog-wolf—"with the foam of his gasping lying white on the turf"—shot square through behind the shoulder.

—One who has enjoyed its quiet comforts, endorses very cordially the "Model Farm House" at Georgeville, P. Q., Canada. The owner is N. A. Beach, and his rates of board are moderate.

SPORTS EXTRAORDINARY.—During this week two young men went down one evening to Comancho bank. There they killed forty curlews, of the brown and white wing variety, and among them several of the pink curlew. They then proceeded to the mouth of Bar creek, where they lay in ambush, and killed twenty more, including sea-shore snipe and other delicate sea birds. James Bickler killed a buck, one day this week, near St. Augustine, which weighed over 200 pounds. Hunters report that there never were so many deer near the city. Good for visitors during the coming season. They also report an extraordinary number of quail hatched behind the hills of the North beach, and around and about St. Augustine.—St. Augustine (Fla.) Press, Aug. 20.

The Gloucester Co. Game Protective Association of Swedesboro, N. J., have elected James D. Gibbs, President of the association, as a delegate to the National Sportsmen's Convention to be held September 9th, 1874.

A match has been made between Capt. Bogardus and Wm. Carson, of Philadelphia, in that city on the 23d. Mr. Bogardus shoots from five traps. English rules; 30 yards; Carson shoots from one trap, same distance.

PENN. YAN, N. Y., August 24th, 1874. EDITOR FOREST AND STREAM:— On the 19th of August a trap shoot came off at Branchport, Yates county, N. Y., eight miles from Penn Yan. Five birds were shot at, 21 yards, 80 yards boundary.

Table with 3 columns: Name, Score, Total. Lists names like A. Amidon, H. Pratt, P. E. Strong, A. Wadley, J. Gilbert, and their scores for 30 and 80 yard shots.

They then went back to 31 yards, and under the rules made and retro, shot at more pigeons. Mr. Strong being victorious, killing ten birds in succession. None of the others killed more than two. Strong used a heavy Greener field piece, a ten-pounder, which was decidedly murderous at both range and butt.

BYER'S STATION, JACKSON COUNTY, OHIO, August 24th, 1874. EDITOR FOREST AND STREAM:— I send you enclosed score of a pigeon match shot at Portsmouth, Ohio, on the 15th inst.:

Table with 3 columns: Name, Score, Total. Lists names like Wm. Martin, James Bannon, E. W. Davis, P. Stowe, G. Stewart, Tom Klumey, James Godd, A. Lawson, Tom Noel, S. H. Graham and their scores for 200 and 500 yard shots.

Very truly, H. C. SHENKNER.

INOPERATIVE GAME LAWS.

ELIZABETH, N. J., August 18, 1874.

EDITOR FOREST AND STREAM:— In reply to your enquiry as to my knowledge of good localities for quail shooting in this State, I regret to say I know of none to recommend. Prior to the winter of '72 and '73 I considered the lands situated in the County of Rockland, State of New York, in the vicinity of Suffern, (easterly as far as Moseley,) and the northern portion of Bergen Co., N. J., known as the Ramapo Valley, and the beautiful, splendid park and game lands of the State of New Jersey, and the lands of the State of New Jersey, (crusted,) and extreme cold, destroyed many birds; some froze, others starved, and the greater part of the remainder were wantonly killed by those who should have protected them. The poor little half-starved, nearly frozen quails sought shelter and took refuge under the bar racks and in the barns, and were baited, trapped, killed, and eaten by the farmers and their boys. When the quail season of the law is coming on game, knowing that it was close season, they just needlessly killed them. Nothing was done about it. Right here I imagine hearing you indignantly exclaim: "Why the d—l, then, I know you would swear, didn't you prosecute them?" Well, Mr. Editor, sit down, keep cool, and I'll present the facts of the case. It is known to you that I, although residing in Suffern, do not reside there, but live in this city, and have done so for the last four years. Well, I heard of this act of barbarity and endeavored to make a case.

At once I was persuaded to let the matter drop, and that by the portmen of the place. The farmers, with few exceptions, had always permitted respectable sportsmen to shoot over their grounds, and should I move in the matter it would arouse the animosity of the clan, and they would fight by all future sports. "Once get a Jersey Dutchman mad, and he will fight to the death," is an old saying, and not without some truth in it. So finding the sentiment strongly against law, and together with the fact that I could not depend on a single witness, and would be left with nothing but hearsay, which would not be evidence, the matter was allowed to pass by, although not without the indignity of the law being there has been a scarcity of quail in the locality. Last fall, on a certain farm, there were several flocks of birds, and, having an invitation from the owner to come and shoot them, I went November 1st only to find two birds and a few scattering birds. Was informed that I had waited too long, that the pot hunters, (what a contemptible, despicable set they are!) had preceded me, and that they had been shooting them on the 8th, a bird, or two at a time, since the middle of October, every day. The birds, unduly excited, he had tried to prevent it, but before he could get to them they were gone.

Another reason why there are so few quails found after November 1st in that portion of the State, is, on account of the ignorance of wily sportsmen of the State boundaries, which privies the necessity for prompt legislation which will protect the quail from the State of New Jersey. You know, the quail shooting begins October 20th in the State of New Jersey, and not until November 1st in New Jersey. A sportsman, being a stranger, starts out in New York, intending to confine himself to its domain; what is his surprise to learn that he is a poacher—a transgressor of law—in fact, that he is killing birds in New Jersey.

Many such scenes have I witnessed, and I couldn't doubt the sincerity of the parties when expressing their injured regrets. An unseasoned and unknown dividing line, with laws dissimilar, except as to penalties. How many have suffered unjustly through them? Do your level best, Mr. Editor, to accomplish not only the repeal of the old laws, (game,) and the passage of a general law, but to prohibit forever the killing of any bird, or the spring and summer. Pot hunters are not only exterminating hunting woodcock, in the corn, but who, in reality, are killing every quail they flush; aye, even more, they are actually hunting quails, and so it will be up to the last light of the woodcock, where we, poor devils, who respect and observe the laws will find feathers of quail long since shot, but no birds.

But the pot hunters, we are cursed with a still more lethal set of hounds—the market men, who trap and snare birds for a living, and who formerly took ten birds with their snares to every one shot by a sportsman. You have seen these devices, haven't you? A pathway cleared by brushing away the leaves for the distance of say twenty feet in length, and a foot in width—a few grains of corn sprinkled here and there on it, a small brass funnel, or a tin snail, walks up it, picks up the corn, and the rest of the path a stick driven firmly in the ground with notches cut therein; a strong, elastic hickory sapling ten down, its end fixed by a strong piece of cord, attached to which is a stick and a piece of brass wire—the little stick or bar fitting nicely in the notches; the wire suspended and in the form of a noose. That is the device, and now comes the partridge, he sees the path, walks up it, picks up the corn, and the rest of the path, "takes a look at the fence, the corn is too attractive, can't wait to go around, won't fly over, pokes his head through the wire noose, pushes his breast firmly against it, out goes the bar from the notches, up springs the sapling and the poor bird is snared. Sometimes in mid air they hang dead, and again, if they are heavy, and the sapling light, they are often found on the ground, leading the ground alive, but not so constantly hooked. And so the birds are snared and taken by hunters. This year my family are at Suffern and I spend the Sabbath with them, and if the birds don't have a better shot for long life than here, it will be because they fell at the sharp crack of a shot gun. As to shooting quail out of season this year in that part of the world, I

think I will be utterly impossible to do it without getting shot in return. It is now an eye for an eye and a tooth for a tooth, for the motto with the people there now is taken from scripture, (and you being of the church-going kind like myself, will like it.) "He who kills thee" came out of season, and many kinds of new traps, and also he killed the birds—Selah. You remember the passage, don't you? It was one of the "Duncan's" favorites.

Now I find I've written you a "treasonous" long letter and have given you the answer to your question, and though it is not satisfactory to you or to me, still, it is the truth.

There will be the usual more game this year than last, and I think and believe that the usual more partridge shooting will be fair. Partridge are very plentiful; never saw more than now, and you can find them anywhere in the Ramapo Mountains.

Yours respectfully, E. S. WANMAKER.

PROTECTION OF GAME.

The contributor who sends the following communication prefaces it with a subscription to FOREST AND STREAM, and this very flattering remark: "I have not taken of contributed to a sporting paper since the extinction of the old Spirit of the Times under Porter and Richards."—Ed.

PORTER CENTRE, CONN., August 24th, 1874.

EDITOR FOREST AND STREAM:— In pursuance of a call for a National Sportsmen's Convention, to be held at Niagara Falls on the 9th of September, a meeting was held at Hartford, Conn., on the 18th inst., and five delegates were appointed, with power to appoint five more, to attend with themselves and represent the State of Connecticut. Under these circumstances it seems to me if any sportsmen are interested in the preservation of game now is the proper time for them to express their views on this matter. Being a resident of Connecticut, and an old and ardent sportsman, I have long felt that our game laws are defective, and have a tendency more to the destruction of game than to its preservation. In the first place there should be uniformity, at least between all the New England States. The shooting or otherwise taking of either ruffed grouse, quail or woodcock, should commence alike in each of the States. As I would suggest that day to be the first day of October in each year. Then prohibit trapping or snaring, except for a proprietor's own table on their own grounds, with no power to transmit the same right to others, even on his own premises. Then make the penalty large enough and possession proof that the person in whose possession game is illegally found caused its death, unless they can satisfactorily prove to the contrary, and make the offender for poaching or snaring award one-half the penalty to the complainant that prosecutes to effect; also, if possible, empower every freeman with the right to search all persons where there is just ground for suspicion that said person has game in his or her possession illegally taken. When such laws are enacted alike in all our sister States, as well as our own, we may then justly look for an increase, instead of a diminution, of game. As the laws have been severely two States have laws alike. The summer shooting of woodcock has ever called the pot hunter into the field, with the exorbitant prices paid by keepers of hotels and other fashionable resorts for summer birds; when they are nearly worthless for the table and make no sport for the real sportsman, but a rich harvest for the pot hunter, who makes no scruple in buying and selling both half-fledged partridges or set birds, because he can sell them at great prices, to be eaten under the cognomen of *oaks*. Now, if there is no way to stop this indiscriminate slaughter, the rising generation must look to some distant sporting fields for that enjoyment that, with judicious legislation, they might find near their own doors. When I note the small amount of game here now, in comparison with the abundance of every kind of game in the past years, and even the grouse, which will soon share the fate that the pineated grouse or prairie chicken has already in the Eastern and Middle States, unless some more effective laws are enacted for their preservation. When I saw the call for a National Convention I felt that it was the first step in the right direction towards the preservation of the game in this country. For myself, the hindrance of age, according to the custom of our country, has not prevented my participation in the pleasures of the field. But while I feel I shall always feel an interest in the success of them, and am not so selfish as to wish to deprive the coming generation of that enjoyment I so dearly prize.

Now, sir, I have conversed with many prominent sportsmen on this subject, and feel I do not stand alone in this matter. I shall look forward to the doing of it in connection with your suggestions, and can but hope they will not only act in unison, but wisely. Respectfully yours, ETHAN ALLEN.

PROTECTION OF ENGLISH SNIPE.

PIERMONT, N. Y., August 22d, 1874.

EDITOR FOREST AND STREAM:— I wish through your valuable journal, to call the attention of the National Sportsmen's Convention to the protection of the English or Western snipe (*Scolopax Wilsona*). This bird, so well known to sportsmen, inhabits the entire temperate regions of North America, breeding from Pennsylvania to Labrador, and in intermediate districts. It is a fact well known that this game bird, is becoming scarce and scarce every year, even the many of New York City are poorly supplied with them. Fifteen or twenty years ago they were plentiful at Big Piece, Pike Brook, and other localities near New York. Now they are scarcely to be found, so relentless has been the slaughter in the spring. I hardly think there is one delegate to the Convention that can boast of having a good day's snipe shooting in Pennsylvania, New Jersey, New York, Ohio, Michigan, or any of the New England States.

Do not the snipe require protection in the spring? It may be advanced that they breed so far to the north that it makes no difference whether they are killed or not. If not killed on their way north to breed, would they not be more plentiful in the fall, when they return from their breeding grounds? That they breed in the spring is generally supposed, or would it not persecute the following places where they have been killed and the dates of killing show. They must tarry for the purpose of incubation. Bergen, N. Y., May 20th, 1865; Spencerport, Monroe county, N. Y., July 28th, 1864; Piermont, N. Y., May 24th, 1864. They formerly bred in the town of Macedon, Wayne county, N. Y. Those killed near Spencerport were the immature of the male sex, and were every year, even the many of New York City are poorly supplied with them. Fifteen or twenty years ago they were plentiful at Big Piece, Pike Brook, and other localities near New York. Now they are scarcely to be found, so relentless has been the slaughter in the spring. I hardly think there is one delegate to the Convention that can boast of having a good day's snipe shooting in Pennsylvania, New Jersey, New York, Ohio, Michigan, or any of the New England States.

MAN-EATING TIGERS IN INDIA.—The Times of India has the following:—"A man-eating tiger is roaming in the vicinity of Hazareebagh. It is estimated that during the last six months he has killed two hundred Hindus." This shows that the government is doing nothing, and requires a kick. Hazareebagh is a spot of all others in India where, with little or no trouble, the animal's death should be a question of hours rather than days, or, as it appears to have been, weeks and months.

[Where are those wonderful Express rifles?—Ed.]

Several interesting communications for this department are laid over till next week.

CREEDMOOR.—On Tuesday August 25th, the contest for the Gildersleeve medal, presented by the able Secretary of the National Rifle Association took place. This prize was open to the members of the Twenty-second Regiment. There were also a subscription badge to be shot for. For the Gildersleeve badge, five shots each at 200 and 500 yards, gave the following result:—

Table with 5 columns: Name, 200 yds, Total, 500 yds, Total. Lists names like Private Dolan, Co. D., Sergeant J. H. Wood, Co. D., Sergeant A. Wood, Co. D., Private Doerle, Co. E., Captain Horsfall, Co. D., Sergeant Reddy, Co. D., Private Smith, Co. D., Private Carson, Co. D.

To Mr. Dolan was awarded the medal, which was to be won three times to give possession. The wind blowing briskly somewhat interfered with accurate shooting.

The subscription badge was shot for, with ten shots each at 200 and 500 yards. The following are the six best scores:—

Table with 3 columns: Name, 200 Yards, Total, 500 Yards, Total. Lists names like Sergeant Freeman, Co. F., Private Becker, Co. F., Sergeant Barry, Co. A., Captain Van Buren, Co. D., Sergeant Wagner, Co. F., Private Knox, Co. B.

As Sergt. Freeman had won the badge twice before, it now becomes his property. A competition for places in the team for the match open to the several regiments at the approaching fall meeting, then took place. Private Dolan taking the lead. We append the seven best scores:—

Table with 5 columns: Name, 200 Yards, Total, 500 Yards, Total, Grand Total. Lists names like Private Dolan, Co. D., Sergeant A. Wood, Co. D., Captain Smith, Co. D., Sergeant J. H. Wood, Co. D., Captain Van Buren, Co. D., Private Smith, Co. D., Sergeant Reddy, Co. D.

On Wednesday August 26th, the selected team held their first day's practice. As it was a preliminary meeting, though shooting was carried on, it was not thought worth while to report scores. The regulations requiring members of the National Rifle Association to wear their badges while practicing on the range, will hereafter be rigidly enforced. The fact that the badges had not been issued to life members prevented its enforcement heretofore. It will also be necessary for members of the regimental team to become members before they will be allowed to practice for the match open to the National Guard at the fall meeting. The latter were permitted by the committee to practice free last year for the purpose of producing an interest in rifle practice, but as all of the regiments have now visited the range, and derived some benefit from its privileges, it is considered unfair by the directors to allow them the gratuitous use of the range hereafter.

On the 27th, the Fifty-fifth Regiment, under command of Col. Gilson took place. Rifle practice was not as general as it should have been in the regiment, though the order of the men left nothing to be desired. We give the five best scores, the general shooting being below the average:—

Table with 5 columns: Name, 200 Yards, Total, 500 Yards, Total, Grand Total. Lists names like Captain Friesleben, Co. D., Private Speil, Co. G., Lieutenant Brer, Co. A., Private Heiblich, Co. E.

On Saturday August 29th, the second "coaching" of the team took place. We give below the thirteen best scores:—

Table with 5 columns: Name, 200 Yards, Total, 500 Yards, Total, Grand Total. Lists names like General T. S. Dakin, H. Fulton, J. Boulton, L. J. Collins, G. W. Yale, A. Anderson, J. T. H. Collins, L. M. Ballard, B. E. Valentine, J. E. Hensley, A. V. Cantfield, F. S. Gardner, John Backner.

General Dakin's score 149, is a fair one, especially at 800 yards, 52 in a possible 60. The total score possible in the 30 shots being 180.

—On Monday August 31st, the Third Regiment of Cavalry, Col. Dudke, were at Creedmoor. Arms used were carbines, five shots at 100 and 200 yards. We append the best ten scores made:—

Table with 5 columns: Name, 100 Yards, Total, 200 Yards, Total, Grand Total. Lists names like Capt. Flettanck, Co. K, Privt. Schroeder, Co. K, Corp. Dill, Co. F, Privt. Kencher, Co. I, Sergt. Kley, Co. G.

Two competitions of the Provincial Rifle Association were closed at Halifax on the 25th, the association's challenge gold medal being won by Sergts. Harnes and Osgwell, and the challenge cup by Sergt. Harri. At Halifax on the 27th, Sergt. Corbin of the Sixty-third Halifax rifles won the silver medal. The battalion match was won by the Seventy-eighth, Col. Chester.

All members of the National Rifle Association in future when shooting at Creedmoor, must exhibit their cards. This rule is imperative, and will be enforced. Members of teams are required to exhibit their cards before practicing on the range.

HAMILTON, CANADA, AUGUST 31, 1914.

EDITOR FOREST AND STREAM:

On July 29th a match came off between the Toronto City Club and the Victoria Yacht Club...

Mr. Mason's average was 8.66, the average of the winning team being 7.11. The shooting of the losing club was also very high...

The following are the total scores:

Victoria..... 614 Toronto..... 594

It is doubtful whether a match will or will not be arranged to come off at Crendon between a Canadian team and the Irishman...

Yachting and Boating.

All sailing instructions from Sea-stares and Friskies should be mailed not later than Monday to each week.

HIGH WATER, FOR THE WEEK.

Table with columns: Date, Boston, New York, Chesapeake. Rows for Sept. 3, 4, 5, 6, 7, 8, 9.

The Brooklyn Yacht Club held a regular meeting at their rooms on the 26th ult., upon which occasion the day for the fall regatta was fixed for the 24th of September.

The Bennett Challenge Cup, to be sailed for over the course of the New York Yacht Club, has now gone into the possession of Mr. William Langley of the schooner yacht Comet.

On the yachting programme for the fall we have several fine races promised. The Bennett Challenge Cup won twice by the Humber in contest with the Madeline over the course from Sandy Hook to Brenton's Reef and return.

The regatta of the Skaneateles Yacht Club, sailed last week, was a well contested race, sailed in a stormy breeze and was won easily by Mr. H. L. Roosevelt's yacht the Jaun.

The regatta, under the auspices of the Riverside Yacht Club, open to yachts from other clubs, was sailed on the Neversink River on Friday, August 28th.

The Ton's River Yacht Club held their second regatta on Tuesday, 25th. Five prizes were contested for, viz: The challenge cup, now held by the Oscar Robinson; a silver pitcher, a tea urn, a butter dish, and a set of jewelry.

The second regatta of the Haverhill Yacht Club came off Saturday afternoon, August 29th, and was witnessed by a large crowd of spectators who lined the shore on both sides of the river.

The Second Great International Regatta, under the management and auspices of that deservedly celebrated Association, the Sailing and Boating Association, took place on the beautiful course in the world, certainly where there is a large number of entries, the charming lake of Saratoga, on August the 28th, 29th, and 31st.

swinging the stroke, turning the stake boat a couple of lengths ahead of all the rest. This led he kept up successfully through the race, and came in an easy winner by six lengths.

The next race was the double sculls, one mile and return. There were three entries, G. W. Lathrop, of the Beaverwycks; Ewing and Hughes, of the Mutuels; and Yates and Curtis represented the New York Athletic Club.

On August 29th, the first race for the single-crew championship, distance two miles; there were eight starters, viz., Wm. B. Curtis, New York Athletic Club; Edward Blake, of the Atlantas; Francis E. Yates, of the Athletics; Fred Hardy, of the Chesapeake; James Wilson, of the Beaverwycks; Deane T. Boy, of the Carolina Independents; Fred H. Ewing, of the Toronto Athletic; and Joseph H. Girvin, of the Beaverwycks.

The second race was the pair-oared shell race for the challenge cup, presented by Frank Leslie; distance three miles, with one turn: Four crews started, but the Vernon crew of Savannah went a quarter of a mile only to save their entrance.

On August 31st, the last day of the regatta, the day was warm, the water calm, and the spectators enthusiastic. There were three races, junior single sculls, extra single sculls, and the great four-oared race.

The next was the grand four-oared race of three miles, with a turn for the Saratoga challenge cup and four presentation cups, for which the following representative men of the thirteen clubs entered.

Table with columns: Name, Position, Age, Weight, Weight. Lists names like Wm. B. Gibson, Harry H. Allen, Harry M. Howell, W. K. Williams, etc.

Table with columns: Name, Position, Age, Weight, Weight. Lists names like C. W. Baldy, H. H. Head, J. H. Greene, etc.

Table with columns: Name, Position, Age, Weight, Weight. Lists names like H. B. Ball, W. M. S. Lescoe, H. N. Parker, etc.

Table with columns: Name, Position, Age, Weight, Weight. Lists names like H. S. Frank, Frank Jones, A. J. McQuinn, etc.

The thirteen boats having all been drawn into line, and waiting the signal, Commodore Brady raised his arm gently, and at the report of the pistol, fifty-two oars were dipped instantaneously. The magnificence of this sight to all rowing men and friends of muscular development, was exhilarating in the extreme.

The Atlantas now held away, and it was observed that the bow of their boat was under water, and filling rapidly; two of the men jumped out, followed by the other two, all clinging to the boat, which afterwards sunk.

The Palmetto was seventh, Vernon eighth, Gramercy ninth, Atlantic tenth, Duquesne eleventh, Argonaut twelfth, Atlanta swamped.

Commodore Benj. F. Brady officiated as starter and referee, and Fred J. Englehard and Richard G. Neville were the accompanying judges, John Stout and P. J. Sweeney acting as judges at the finish.

The Palisade Boat Club, of Yonkers, N. Y., held the second annual regatta on the Hudson river, on August 28th. The program was for a senior single sculls distance two miles, for which there were three entries: H. G. Jackson, Isaiah Frazer, and Andrew Moffat.

The Watkins and Seneca Lake Rowing Regatta Association will hold their first series of sailing and rowing races on Seneca Lake, on the 9th, 10th and 11th of September. The program for the senior single sculls distance two miles, in cash value to \$2,000, as follows: Six oar shells, \$250; four oar shells, \$400; double and pair oared shells, \$250; senior single sculls, \$225; junior single sculls, \$125.

The regatta at Galveston, Texas, on the 22d, was a most spirited and successful affair. There were two races for sailing vessels and four for rowing boats. The Florence, E. H. Norris, was the winner in the race for first-class boats; the Lily in the second class.

The Horse and Course.

The Monmouth Park Racing Association held their first day of the extra meeting on their beautiful grounds, on August 26. The weather was cool and pleasant, and the track in the best condition. The first race was a dash for three-quarters of a mile, for a purse of \$300. Electric was the winner. Warmister won by a length, Quills second and Minnie Mac third. Time, 1:17. The second race was for the three-year-olds, mile heats, the prize being the Steward cup, \$500 in gold. Six horses started. I. Coffee's b. f. Ida Wells, won two heats and race. Time, 1:47, 1:47. The third and last race was a hurdle race, mile heats, over four hurdles, for \$500. The starters were Vesuvius, Bullet, Lincstone and Harry Booth. Bullet won two heats and race.

On August 27, the attendance on the course was much larger than the previous day. The first was a selling race for all ages, for a purse of \$500, distance 1 1/2 miles. Six horses started; Banatynce's Stockwood won Electric, Hitchcock's Quills, Withers's Minnet, Gaffney's Wizard and Chamberlain's Mary Constant. The race was won by Quills, Stockwood fourth, Mary Constant third, Wizard fourth, Minnet fifth, with Electric bringing up the rear. Time, 2:48. The second race was for a purse of \$500, for two-year-olds, distance one mile. The starters were: Hans Reynold's Anita, Withers's Castnet, Gaffney's Baymaster and Chamberlain's Scramble. Baymaster won by 4 lengths, Anita second, Castnet third, Scramble fourth. Time, 1:43. The third event was a mile heat race, best 3 in 5, substituted for the four mile heat race, which did not fill. Five horses started: Davis's Fadladeen, Gaffney's Jack Frost, Withers's Andubon, Hitchcock's Lutetia and Ayer's Erastus coming. The first heat was won by Fadladeen, by three lengths, Jack Frost second, Erastus Corning third, Lutetia and Andubon were distanced. Jack Frost won the three last heats and race. Time, 1:46, 1:49, 1:53.

The Monmouth Park Association closed the extra summer meeting on August 29. The first race was for a purse of \$500, for all ages, mile heats, winners excluded; \$400 to second horse. Six horses started. The first heat was won by Andubon, Century second, Donahue's Julius cot third, Marmion, Erastus Corning, and Mollie Darling coming in in the order named. Time, 1:46. The second heat was won by Julius cot, Andubon second, Marmion third. Time, 1:49. The third and deciding heat was won by the Julius cot by a length, beating Andubon. Time, 1:50.

The Consolation Purse, for horses beaten at this meeting, winners excluded, for a purse of \$850, one mile and a half, had six starters; Stockwood, Limestone, Mary Constant, Wizard, Andubon, and Coffee's b. f. Carver. The race after three-quarters of a mile was continued to Stockwood and b. f. Carver, and the finish up the homestretch was one of the most exciting ever witnessed. So closely were the horses lapped as they went under the string that the judges decided it a dead heat. Time, 2:43. Mary Constant being third, a head in front of Limestone, and Andubon and Wizard beaten off. In the distance, the Julius cot, a fine and obstinately contested race from start to finish was won by Carver by a length and a half in 2:42.

The steeple chase for a purse of \$500, of which the winner took \$400, had four runners: Electric, Vesuvius, Blind Tom, and Tabitha. Electric led the field twice around the course, with Vesuvius in Tibitha within striking distance all the horses jumping in splendid style. On the third circuit Tibitha rushed to the front, and speedily opened such a wide gap that her winning seemed almost a certainty, but making a mistake in the course she lost a great deal of ground, and let in Vesuvius and Electric, the pair, in an exciting contest. Tibitha won the Middle of Vesuvius won a splendid race by a length and a half from Electric; Blind Tom, who broke down in the race, being third, beaten fully fifty yards. Time, 5:23.

The Prospect Park Fair Ground Association will have three trotting and one running meetings this fall. The running meeting is to take place on the 5th, 9th, and 10th of September, and although these dates conflict with the Buffalo meeting, there are so many horses in training in this vicinity that the sport at Prospect will not be interfered with by lack of material.

Le Journal du Trot tells us, that last month the officers of the 8th and 3d Hnsars engaged in a peculiar hunt. A horse was taken, horns were tied to his head, and after being allowed a certain period of grace, twenty-four of the officers followed the horse upon his land and made it over. Beside and in the military riders, but no joke for the affrighted animal. It may be considered as a French mod feation of the paper chase. Where is the gallic Mr. Bergh?

M. Cuson, Boat Builder.

All description of rowing, sailing, steam yachts and motor boats and all kinds of boats and masts and rigging in the most complete manner. PAMRAPO—Loveller than the Bay of Naples; most magnificent views; the Ocean dimly seen in the distance; the Lighthouse; the Islands and the Bay, with their blue green coves; ships grandly passing till far out of view; steamers likewise receding from the sight bound foreward; yachts dandling; the gayly decorated barges of the boat clubs, conspicuous among which are the scarlet of the Tritons, the magnificence of the Victorious Argonauts, the blue of the Saxonics, and the no less lively hues of the Cleareouts, the Onelias, and lesser crews. Do you want fishing? Here it is in its excellency. Old Robin's Roost can tell you that around her rocky sides sport all the variety of fish to suit diverse tastes, and in prolific supply, foreward, are in two hours' toiled with the dirt fish that are now so lively trolled for in these waters. Health giving, supreme. The census lately taken shows New Jersey rank first in the United States. The rate of increase of this country (Hudson) is 15 per cent., in New York less than 2 per cent., in Brooklyn 5 per cent. But two third miles from Liberty street, and communication eight cents. Houses and lots for sale for cash, by installment, or on time. Apply to J. JOSEPH HALLOCK, Forest and Stream office, 17 Chatham street.

MEAD'S PATENT SAFETY EXPLOSIVE BULLET, METALLIC CARTRIDGES. Calibre—22, 32, 38, 44, 46, 50, &c. Also, BROWN SHELLS for 12 and 16 gauge Shot Guns. JOHN P. MOORE'S SONS, GUN DEALERS, 800 Broadway, New York.

Send for Circular, describing effect on 2 1/2 Bears.

This gun was submitted in competition with over one hundred different systems, American and European, to the Board of United States Officers appointed by Act of Congress, 6th June, 1872, for the purpose of selecting the best gun for the service, and for which Irish, Gen. A. H. Terry was President. It successfully passed through all the tests.

The following is the report of the Board: "Resolved, That the adoption of magazine guns for the military service by all nations is only a question of time; that whenever an arm shall be devised which shall be as effective as a single breech-loader, as the best of the existing breech-loading arms, and shall at the same time possess a safe and easily manipulated magazine, every consideration of public policy will require its adoption.

Resolved, further, That the experiments before the Board with the Ward-Burton Magazine System have so impressed the Board with the merits of this gun, that they consider it as more nearly fulfilling the conditions above specified than any other tried by them, or of which they have any knowledge, and it does recommend that a number of magazine muskets be made on the plan for further trial in the field." (See Ordnance Report.) We are now receiving orders for these guns, and due notices will be given in this paper when they are ready for delivery.

The following is our scale of prices: Special Magazine for large game, carrying from 3 to 6 cartridges, 70 to 85 grs. powder, \$50 to 40 grs. lead, \$10 to 10 lbs. weight, from \$50 and upwards, according to finish. Special Magazine Magazine Rifle for Creedmoor shooting, 90 grs. of powder, 180 grs. of lead, carrying 3 to 8 cartridges, weighing 10 lbs., from \$100 and upwards. Magazine guns for general use, carrying 2 to 4 cartridges, 40 grs. powder, 85 grs. lead, from \$40 and upwards. Single Breech-Loader, Creedmoor shooting, for long range, 80 grs. powder, 45 grs. lead, from \$20 and upwards. Single Breech-Loader, for general use, 6 to 7 lbs., 60 grs. powder, 35 grs. lead, from \$30 and upwards. The calibre of all our rifles, unless otherwise ordered, will be .40-100. All communications should be addressed to

W. G. BURTON, Care Ward & Co., 54 Wall St., N. Y.

It is manufactured from the best Virginia and North Carolina Leaf. It is particularly adapted to Meerschaum and Cigarette smoking—does not bite or make the tongue sore—is therefore unlike any other tobacco in these respects.

Vienna Medal Awarded. W. S. KIMBALL & CO., Manufacturers, ROCHESTER, N. Y.

THE COMMODORE'S SIGNAL BOOK

AND VADE MECUM, CONTAINING Chromo Chart OF ATLANTIC, PACIFIC AND COAST STEAM SHIP FLAGS, FUNNELS AND NIGHT SIGNALS; CHARTS OF ALL THE UNITED STATES YACHT CLUB FLAGS; PRIVATE SIGNALS OF YACHT CLUBS; LISTS OF OFFICERS OF YACHT CLUBS; LIST OF YACHT OWNERS; BIG DIMENSIONS; REGATTA DAYS; LIFE SAVING STATIONS; TIDE TABLES, &c. &c. Compiled from authentic sources, by THOMAS MANNING, 125 Union Street, N. Y.

And published under the auspices of the United States Yacht Club, and Brooklyn Yacht Club. The Price, \$2.50. The Signal Service is the new directory. The Tide Tables are very extensive. The Compilation has been carefully made, and is complete and accurate. The artistic and typographical work is in the best style.

Subscribers remitting the price of the work, with name and address, either to Thomas Manning, 125 Union Street, or to Forest and Stream Publishing Co., New York, will receive it promptly as published, mailed free. 312

BY THE RIVER.

Selected.

BY the bank of a beautiful river,
Where the rim of the waters was white,
And the grasses so tall were a-shiver
In the gloom of the fast falling night;
Where the shadows of the hills were reflected
In the heart of the hurrying stream,
And the rays of the sun were deflected,
We woke from our passionate dream.

And the clouds like great ships on the ocean,
Spread their sails in the freshening breeze,
And the moon like a bescon in motion,
Sailed away with them over the trees.
And the song which the boatman sang gladly,
Keeping time to the noise of his oar,
Came faintly, pulsating, and sadly,
Like an echo from Lethæan shore.

But her lips were as scarlet as ever,
And I yearned for one amorous kiss,
While her eyes were more eloquent never,
And her smile had its quantum of bliss;
But my pride whispered to me of duty,
And I silenced the words on my tongue,
And I turned my gaze away from her beauty—
Was it foolish? Ah, well, I was young.

Had she sorrowed for words that were spoken,
Had she made but the slightest advance;
Had she given me some sign or a token,
That our meeting was more than a chance;
Had she given me the ribbon that bound her;
Had she given me one glance from her eyes,
Or a thread of the gold floating around her,
Might we not have known brighter skies?

But the boatman's song died in the distance,
And the yellow mists closed in the scene,
And I offered no sign of resistance,
When she tripped away over the green;
Though I knew she would not have resented
Had I held her in my fond embrace,
And I knew she would there have relented,
Had I kissed but her beautiful face.

And in this way a romance was ended,
And in this way a life was o'ercast,
And in this way an old love was rendered,
And my heart became part of the past.
But still the old time will come o'er me,
As I sit in the shadow of years,
And the scene will rise up before me
Like a mirage of beauty in tears.

Sports in California.

NO. V.—WILD GOOSE SHOOTING BY MOONLIGHT.

I WAS sitting quietly in my quarters one evening, enjoying the warmth and brilliancy of a crackling wood fire, and reading, by the light of my "student lamp," some papers lately received from the East. The night was chilly, though the moon was bright and the sky clear; for though it never becomes cold at Humboldt Bay, a very trifling variation is noticeable, the body becoming sensitive to any change, however slight, in consequence of the evenness of the temperature. My setter Jack was lazily snoozing by the fire, while in dreams he no doubt roved fancy free through the fields and woods in pursuit of his natural and favorite calling, as was evinced by an occasional yelp of delight or growl of anger, according to the nature of the game he was mentally pursuing. Whenever the dog would growl my old gray "Thomas puss," Dan, who claimed as his particular domain the corner of the hearth furthest from the door, would spring up, and with arched back and enlarged tail exhibit his sympathy, for they were fast friends; but seeing no antagonist, and only old Jack stretched out sound asleep, would quietly settle down again, and with half closed eyes resume his musing. Ever and anon my eyes would stray to the corner where rested my faithful double barrel gun and tried old rod, and thoughts of bygone pleasures, in which they had done well their part, would flit across my brain. Somewhat fa-

gued by the labors of a busy day, I was gradually subsiding into the *dolce far niente*, which good news from a far-away home and those I dearly loved, lately received—a good dinner, comfortably eaten (no mean luxury of the frontier)—the soothing influence of the "peaceful pipe," glowing with well ignited "Lone Jack" (not an inappropriate name just then)—combined with a bright fire and the presence of faithful brute friends—inspires, when a quick step sounded on the porch, and the door flew open as the Quartermaster entered. Jack bounced up with a joyful bark to greet the intruder, who was a well known friend, while Dan opened his eyes widely, but seeing who it was closed them again and resumed his meditations.

"Don't you want to go goose shooting, Doctor?" exclaimed the Quartermaster. "The tide will be down in an hour, and this bright night the geese will be flying in clouds. I saw them at sundown across the bay by the thousand. We will have fine sport."

"Sit down, Captain, and don't make such an awful rumpus. What do you want to disturb a man for, this cold night? Take a pipe and toast your heels before this fire. Don't you know it's cold to-night? I've been hard at work all day, and am tired. Sit down, man, and enjoy the goods the gods have bestowed upon you, and let the poor persecuted geese alone."

"You be hanged, Doctor, you're lazy. Tired! I should like to know what you have done to make you tired? You havn't elopped off anybody's limb, that I know of, and since you and Dr. — (one of the physicians of the town) yearly killed that poor fellow the other day, I know you can't get any one to come within a mile of your scalpel. So don't be nonsensical, but get into your old boots and come along."

"Why don't you go for Capt. T., or some one else, and let me alone? Don't you know that I won't be out of the garrison five minutes before "somebody's darling" will have the eroup, or the colic, or something, and the poor mother will be frightened into hysterics, and when they find I am away there will be the old Harry" to pay?"

"Nonsense! Leave word where they can find you. We will not go far. Don't be so obstinate. You know you only want to be coaxed. The ladies spoil you doctors, and you are getting to be almost as bad as a miss in her teens. So get your traps in shape while I order the horses."

"Well, if I must, I must, I suppose, so sit down and let me hear what you propose."

So we discussed the matter over an amicable pipe, and the npsot of it was that we determined to go out on the flats beyond Humboldt Point, about a mile distant, and try and get some shots as the geese flew over on their way to the places of drinking. These places were springs along the shores of the bay, uncovered by the falling tide, or little brooks which emptied into the bay, and which, when the tide was down, ran far out over the flats, tiny streams of pure fresh water. Thither the geese were accustomed to repair by night, and we determined to waylay them en route.

While the Quartermaster was having the horses brought round and getting his "implements," I indulged my shooting toggery and "old boots." Leaving Jack behind, much to his disgust, in a few moments we were riding rapidly along the beach on our way to the Point, keeping a bright lookout for the quicksands, the location of which we well knew. There were but few of these along the bay shore, and in other places they are both numerous and dangerous, and not a few horses and mules, and in some instances, I believe, men also, have perished miserably in them.

Shortly after my arrival at Humboldt Bay, I was one day riding at a lard gallop along the smooth beach or shore of this bay, ever dreaming of there being any danger. I rode a very powerful chestnut sorrel horse, somewhat famous in that part of the country for strength and endurance. Suddenly, my horse, in his stride, leaped clear of the solid beach, and sank half way up his side in a quicksand. As he was a very courageous and strong animal, his efforts were tremendous, and in almost less time

than it takes me to tell it he had struggled through, and stood with wildly glaring eyes and heaving flanks upon the solid ground. Fortunately, this quicksand was not deep, but I shudder to think what might have been my fate had I struck a larger, deeper, and more dangerous one. I should have lost my horse, if not my own life also. When my horse got through, which took scarcely a minute, he was white with foam, and he had not "turned a hair" before. This will give some idea of his struggles.

Our ride was a short but lovely one, for the moon was nearly full, and the air pure and bracing. The moonlight nights in California are, I think, peculiarly beautiful. The air is so pure and clear the moon shines with a brightness unequalled elsewhere. Talk of the moonlight of the Orient, it cannot compare with it. In California the grandeur of the forests, lit up by the moonbeams, struggling through the tops of the gigantic redwoods, can only be appreciated by being seen. "The dim aisles of the forest" are there reality, and the colossal trunks, with their lofty heads, strikingly remind one of the huge columns and carved capitals of a great cathedral. The "subdued ecclesiastical light" there is perfection. Many a night have I ridden through these forests when the entire party has been hushed with the holy awe that pervaded the "temple of the woods." When we came out upon the hills bounded by the ocean, with the flood of soft moonlight pouring down, and every blade of grass glittering with diamond dew drops, with the ceaseless boom of the mighty Pacific at our feet, the white capped waves dancing and glancing over the dark waters, and the perfection of the spot marred only by our presence, everyone halted as if spellbound. I tell you, comrade, neither Egypt's shrines nor Holy Land ever saw fairer sight or brighter moonlight, or that which filled the soul and impressed the mind with a greater sense of man's littleness, and the power and munificence of our Maker.

Soon we arrived at our destination, although we had passed on our way to induce L., a brother of the rod and gun, who lived on a small rancho about half a mile from the Post, to accompany us. Fastening our horses securely, each man hunted out from a ruined shanty near (one of the relics of the suburbs of "Humboldt City") a piece of board some ten feet long to lay on the flat, so that we could sit down, and thus be less exposed to the keen vision of the game, and lead them to consider us some stump or log left by the tide, and also to keep us from sinking in the soft mud in which we floundered, ankle deep, at every step. Walking out as far as the consistence of the flat would allow, we placed our boards about thirty yards apart, and sat down to wait patiently for the geese. Soon they began to fly over in its little flocks of half a dozen or more. As they came up they appeared double their real size, white as snow, and beautiful beyond compare—flying quite low, often within thirty feet, and giving us good easy shots.

"Mark," called out the Captain, who was on the extreme right. As he spoke, up came a flock of three or four. Aiming at the middle one, I let drive my left barrel, and down came a fine gander, stone dead, almost at my feet. At the shot the flapping and honking of the survivors was tremendous. Quickly I fired my right barrel, and down came another, in anything but "easy spirals," wing tipped, and off he ran over the flat toward the water.

"Catch him, Doctor," sang out L., and at the word I laid my gun on the board and made for him. Talk about the slow and awkward gait of a goose. That one was a born racer, and it was all I could do to reach him before he got to where the mud was too soft to bear me up. He struck at me fiercely with his uninjured wing, and bit most viciously, but I soon had him safely laid by his companion.

Loading carefully, I sat down on my board, with due patience, when soon another and larger flock coming up gave us all a chance, and we rendered a fair account of them, the Captain and myself getting one each, and L., who had the heaviest gun, two.

But what boots it to tell of misses made or points scored.

For more than an hour we shot with varied success, until finally, as we all fired into a large flock, a tremendous explosion, followed by a smothered exclamation, caused us to drop our guns and rush to L, who was struggling fruitlessly in the mud, uttering meanwhile anything but gentle ejaculations. Picking him up, we found he was a turtle hawk, a large slender bird, and a most useful member of the extent of his injuries, though his size had more than doubled from his founder. His gun, after much searching, we found ten feet off, sunk deep in the mud, and fished it up. It appeared that one of the barrels had sometime before snapped, and he had pricked some powder into the core. Moonlight not being favorable for such an operation, he had not noticed that considerable powder had collected around the base of the core, and when, soon after, he had fired at the geese, both barrels had gone off at once. As they were heavily loaded, the recoil was so great as to knock him head over heels into the mud.

After a hearty laugh, as the tide was rising fast, and the geese seemed to fly higher, we gathered our birds and started for our horses. Our bag numbered nineteen, which was quite as much as we desired to "pack" home. Unfortunately, we had light game, and no shot heavier than No. 3, and more than once we heard the shot rattle against the breasts and wings of the geese, but apparently produced no other effect. We thus lost many, and I have no doubt but that with an eighteen pound double gun of number eight gauge, and BBB shot, we could have bagged forty or fifty in the two hours we remained on the flats.

Our ride home was slow, though it seemed too short in relation to discuss the shots or misses we had made. All sportsmen have experienced the delights of such converse, so I need not repeat it here. Leaving a fair share of the game with L, whose numerous tow-headed "olive plants" we knew would appreciate it, we passed on, arriving at our quarters in the "wee sma' hours," where, after seeing our horses well cared for, and hanging up our game, we sought our beds, and the calm, dreamless sleep of the tired sportsman soon wrapped us in its embrace.

Many times, after a day's hunt, did we enjoy this sport, and varied was our fortune. The geese were there in untold thousands during the season, for we caught them on their migration. Our success during daylight was not super-excellent, for the marshes were wide and difficult to traverse, and the game very wary and shy; but by moonlight, with a carefully planned campaign, we almost invariably met with success.

For the pleasure of this sport I need not dilate. None but a sportsman can appreciate or understand the ecstatic enjoyment one feels when the huge birds fall at his feet while shooting wild geese by moonlight. MONTH.

For Forest and Stream.

IN NEW BRUNSWICK WILDS FOR CARIBBOO.

BY ULTIMUS.

I LEFT Princeton in the month of November, (I remember it was the 18th), some years ago, with an old hunter of the Millicote tribe, "Gabriel Sis" by name, to explore for caribboo the barrens and forests in the vicinity of the Newcastle Stream, some thirty miles from the city. I have named, and will not forget, the direct line towards the present headquarters of the Intercolonial Railway; in fact, our hunting country was on what then was called the Petticoat Road. After a very long drive we arrived late in the afternoon at our destination. It was not a very long distance we had to travel, only, as well as I remember, about a hundred yards or so, and we were at home at the camp—"the Governor's" camp, as it was called—a "strong lean-to" of split spruce sticks, built for the occupation, a year or two before, of Hon. Gabriel's Representative governing the Province.

Our first day's hunt, viz., Tuesday's, was a farce. We ploughed through bogs skinned with ice, for we were not blessed with a continuance of the lovely weather that inaugurated our start; a severe frost had set in, and the tramping was most villainous. I say it was a farce, because the breaking of our feet could be distinctly heard for a considerable distance, and of course intimated our approach to the "quarry" we were in quest of; so, empty-handed we returned to our rustic domicile, wet, tired and hungry. I was aroused the following morning by an ejaculation of surprise from the Indian, who was standing looking out at the side of the camp. "Come here and see 'What was the matter?' he said. "Come here and see 'snow.'" There were strong indications when he bid down the night before, of a slight fall; but I was perfectly astonished at finding that, in something like twelve hours, over two feet lay on the ground.

We breakfasted at daylight, and wearing snow shoes, we commenced hunting in earnest. Not far from our camp we came upon tracks of a caribboo—but not very alluring to follow, as the animal was trotting, and might not stop to feed for a score of miles; however, we made the attempt and set off in his track. I think it must have been after we had travelled two-thirds of that distance that we came to the conclusion that it was of no use, and gave him up. He had no intention of resting; but I most decidedly had, and carried it out, too. As the snow was very light, and had not time, as yet, to be packed, it was very heavy work getting along, and I was uncommonly glad to see my "home," particularly as being unaccustomed to that mode of travelling, my feet were terribly galled by the snow-shoe straps. Refreshed and fed, the following morning (Friday) we again sallied forth, and breaking fresh ground, soon had the pleasure of meeting new "signs" of a small herd that only a short time previously had passed. The country they led us through was a most difficult one to traverse. It was a burnt district, and the dead trees lay thickly every where, catching up our snow-shoes, and causing us to go such "croppers." I made a "header," sending my gun flying out of my hand about ten feet in advance. I thought it good fun at first; but when I had a couple of hours of it, it became like the mule tumbling down through the Doctor's tin, in one of Mark Twain's stories—"monotonous." When one falls in an Indian's society, he never helps you to rise—never offers to assist in any way; but usually contemplates your fall, with his back to a tree, calmly smoking. This was aggravating in the extreme to me; and at last, after a founder in the snow of longer duration than before, I shouted out my intention of not going one step further, at the top of my voice to the Indian, who was

some yards in advance. I had no sooner thus delivered myself than, with a rush through a thicket only about a hundred yards away, or less, the herd started, and we had a passing glimpse of them for a second, and they were gone on the "wings of the wind." So much for impatience and ill-humor. Had I only kept quiet a little longer, and refrained from giving my loud yell of disgust, it is possible we might have had more success; however, the deed was done, and there was no getting back.

Sadly we returned; I was sorry for my mistake; but, throwing all the blame possible upon the guide, and accusing him of taking me through a bad piece of country, which made him indirectly the cause of the failure, seemed a relief, and I did it. From the direction the animals had taken, the Indian told me that evening that he thought he knew a "barren" where they would most likely "bring up" to feed, and he proposed making a direct line to it in the morning. I learned it was about four miles away, and comparatively easy of access, and further, it was about our last chance; so I placed myself again at my copper-colored companion's service, and followed manfully in his footsteps. I had an opportunity that day of being convinced that Mr. "Gabe" was lazily disposed at times, he did, after all, understand something of hunting caribboo, and he was, as he usually was, fully ready to do his share. The edge of the barren referred to above, when, to my surprise and delight, we saw upon the opposite side our startled friends of the day before, peacefully strolling around and feeding. Exciting moment! I shall be lucky enough to secure one of those majestic bucks with horns that seem to be too exaggerated for their daily heads to wear. The wind is favorable, blowing from them to us, a light snow fall is falling—everything is in our favor. We wait until they have slowly turned the angle of a belt of stunted spruce in the middle of the barren, so that we shall be hidden from their sight, and then hasten, with this intervening, to cut off their retreat at the farther end. Carefully we creep; the Indian forbids even a whisper; we avoid twigs that may snap, and take every precaution against the slightest noise. We are nearing the point where they will emerge, where we stand. Now, "make ready," to my amazement, two caribboo, who were not of the party previously seen, coming directly towards us. "Gabe! Gabe! (I cannot help speaking now,) 'ts! look!' "Keep still! do not move even your head!" he says, after noticing what excites me so much. Motionless we remain, until quite unconscious of the intimate proximity of human beings with "murderous thoughts intent," they slowly come abreast of where we stand. Now, "make ready!" from the Indian, and all eager to obey, I pull from off my gun his India rubber cover a little too roughly, and the rattling, for it is stiff with damp and cold, reaches the ears of the foremost animal. He turns and faces me, making my shot more difficult; but a hasty and steady aim is taken, and the bullet speeds on its way. Except a shiver, as I think, at the report, he does not move, so my second barrel is emptied at him. Alas! a clean miss! But what is this? The strugglers, and then headforemost tumbles. In a second the Indian has fired at No. 3; but the bullet passes him harmlessly. "Oh! I don't miss this time," I say, in an earnest tone, and again his smooth bore is presented. There is a flash, and a dull thud falls upon our ears after the report. Hoory! both down! and over we rush to our victims.

Imagine two people more joyous than we, reader, if you can. We carried the heads to camp that night, and returned with straps and with rod-rods next day to haul out the carcasses to the main road, where the sleigh to convey us home was to meet us. What a long day's labor we had, to be sure! The way we managed was this: We cut off all the lower part of the legs, (from the knees and houghs down) so as not to obstruct us more than necessary, and fastening one end of a thong to the fore-leg and neck of each caribboo, we dragged them all that weary four miles without taboggans, and on their hides, out of the woods. It took us about six hours, and was to me the hardest work I have ever had. They were stowed on our conveyance at last, with our goods and chattels, and back we came to the Indian village opposite Fredericton without any mishap whatever. We were the first to cross that season. My hearty congratulations met with a cold reception. I was loudly and intently scanned by my friends, after my absence of a week in the wilds of the Newcastle Stream.

For Forest and Stream.

"UNCLE BILL AND THE SWANS."

BY HOMO.

ALMOST every ducking point on our coast has its famed fowler among the number of bachelors who follow shooting and fishing for a livelihood; he it is who is the shot, and best acquainted with the effect certain winds will have upon the flight of ducks. Among the lesser lights his opinion is law, and few of his companions would think of launching their shot, until he has told them they had their mark. We found him, Sam Wells, or whoever might be the oracle, had to say about it.

We had been at Little Creek, Delaware, for two or three days, having great sport with the quail, and at the same time, fully prepared to take a crack at the ducks when the hour should come for Uncle Bill, (whom we had engaged), to speak. Passing by the old man's house one morning early, on our way to a spot where they were holding a few woodcock, we found him standing before his door intently scanning the distant bay. We hailed him and asked him when the promised day would come.

"Well I wish we end go to-day; but I can't, and bein' as I sent you no word, I see you're going a birdin'." "Why in the deuce didn't you let us know, Bill, and why can't you go?" we asked.

"You see, somehow, I broke the lock of my gun yesterday, and I've got to enter to Lober by Bob Smith to have her fixed." "Now to-day is an alford good one for duck, and to-morrow 'll be too; its hein' blowin' a gale out there'n the bay and they've bein' draw to the ponds to feed, and will use 'em for a spell. Mighty! but I wish I had my gun."

"Now, Bill," I replied, "I'll tell you what to do: go up to the house, get your bear gun and the ducks to go; we will all go to-morrow, and I have no doubt you will have your own to-night."

"Much oblige! Much oblige! I'll do that, and take good care of her, too."

Uncle Bill was out all day, and in the evening came up to see us, bringing with him six pair of wildgeese as a present.

"Thank you for the gun," said he, "she's a good chunk of a piece. I killed thirty ducks with her, but she's too short; she'll do for shore birds and the like, but never go a duckin' with a thirty-two inch barrel; it's not the thing for long shots; mine's thirty-eight."

"But, Bill, if she is only thirty-two inches, you seem to have shot right well with her; thirty ducks is not a bad day is it?" we asked.

"No! no! it's a good day; but I see I'll have to tell you all about it. Darn it! I'm just as much disappointed as if my old gun had busted. Why, you see, I took little Dave in the skiff with me and went to Big Pond, set out the stools, made a good blind and had luck all the forenoon, for the duck flew well. Near to one o'clock, says little Dave, 'Snap, what's them big birds comin' this way?' I was of the opinion that they were 'the geese.' I looked out on the bay and what should I see but fore of the alrdest big birds I ever seed. I knowed they wer't geese, for they didn't honk, and was white; there was no use talkin' to 'em, for I didn't know how—besides, they was a headin' right to me. Now, I've bein' on this bay high on to thirty year and never before saw such a sight; but I knowed they was swan, for I'd seen two on the Chesapeake when I was a boy. I was of the opinion that they was a pair of little right over my head, and I gave 'em both barrels, and, by thunder! I mont as well have throwed peas at 'em; they kept right on, and not a feather. One of 'em looked down, winked and hollered: 'Go home Bill and get your own gun.' It's a fact; Dave heard it, too."

For Forest and Stream.

GAME IN MONTANA.

IN this far off portion of our country we are blessed with sights that the inhabitants of the East seldom witness; we are treated almost daily to some novelty that even our wildest joyhood dreamers did not venture upon. In sports, to enumerate the kind of game we are constantly meeting with; therefore it will be necessary for me to give them some idea where all this sport is to be had. Fort Belknap is situated above the two forks on the Milk River, 250 miles from Fort Buford, 170 miles from Fort Peck, 240 miles from the city of Helena, 100 miles from Fort Benton at the head of navigation on the Missouri River, a trip occupying nearly a month; then a day's ride will bring them into a country not attractive from surroundings, for the sportsman desolate from the monotony of the prairie; for the equestrian these difficulties of reaching the game they are in search of will only add zest to the chase. I would advise as a precautionary measure that they supply them selves with *vires* of late pattern to cover any deficiency of scalp in case they should be obliged to encounter a war party of Indians. After reaching this portion of the country they will find it filled with game of the kinds mentioned.

The immense prairie fires of the last few weeks have driven most of the game far North; still buffalo occasionally stray within sight of the fort, and are easily approached. I am promised much excitement later in the season when the buffalo return, by having a chance to run them; but having full faith in the great art of equestrianism, I am far from believing my ride will equal that of the famous John Gilpin, for the horses one in the excitement of the chase give little heed to the meekish rider; and here I would advise those who have any designs upon the buffalo, with a limited education as to horsemanship, to provide themselves with a cushion, sweet oil, and Centaur liniment—valuable remedies they will find after a long ride of fifty or sixty miles. The art of hunting buffalo, as practiced by the Assinibole Indians, is somewhat exciting. When a large herd are discovered near the camp the Indians are harangued and notified when the start to kill them will be made; preparations are at once commenced; no man is allowed to go until all are ready. The order of starting is as follows: Soldiers in front, followed by the hunters, squaws; and men who dress the meat, to the rear. The advance is made, and the herd surrounded. The commences to fly, and as they endeavor to pass through the gaps they are slaughtered in great numbers—if in the winter the robes, in the summer they do not kill more than they require for subsistence, and employ the ordinary means in killing them.

Deer are easily approached and this summer they are in abundance, although no more are killed than is actually necessary. We are dependent to a great extent on wild meat for food. The government will not supply fresh or salt meat, except bacon, and bacon straight is not the most desirable food in the world. Uncle Sam is good to those near at home, but on the frontier he says, take care of yourselves. As the season advances I may be able to give you some personal experiences of interest. As yet no opportunities for hunting have been sign, in account of the danger of going too far from the post, hostile Indians being on the war path, and a white man stands but a poor chance of his life if he meets them. The Indians belonging here have not as yet been induced to join the general movement, which, if we may believe the papers we receive, is on foot. They are peaceful and quiet and we have every reason to believe that they will remain so. To the sportsman, would say, if you desire to be obtained in this country, you will find fancy patterns find little favor in the eyes of the frontiersman. The Henry repeating rifle is most desirable for general use, from the rapidity with which it can be used in case of an Indian attack. For pistols Colt's Navy, or Smith & Wesson's 44 or 36 calibre are considered the best. A pistol 38 calibre, such as I have, is laughed at.

Enjoyments aside, the occasional arrival of a scout connected with the boundary survey is a positive excitement, and when the boundary survey is a positive excitement, and when

the mall arrive, say once in two weeks, all work is suspended for the time being. With the arrival of the Indians from their summer hunt there will be more activity and life, and time will pass more pleasantly; however, we do not complain, but enjoy ourselves to the best of our ability.

For Bkknop, M. T., August 7th, 1874.

THE ICHTHY FAUNA OF THE NORTH-WEST COAST

THE FRESH WATER SPECIES OF ALASKA.

IN previous communications I referred to the principal species of fish frequenting the waters of Oregon, Washington Territory and Northern California; so this one is to present a list of those inhabiting the waters of British Columbia and Alaska; yet it must be understood that several of them belong also to the more southern clime, especially the salmon, cod, halibut, white-fish, enclachon and others. As fish that are useless to man are interesting only to scientists, I have omitted to name in this article to those possessing economic and commercial value. After reaching the spawning grounds myriads die from exhaustion, and in several cases they travel over one thousand miles from the sea to accomplish their blind instinct. From the first of June to the middle of August the Sitkine and Yukon Rivers are fairly alive with the countless numbers heaving to the headwaters, among the mountain gorges. If not so far from the coast, they make excellent material for fishing abroad; but the business of the Indians, and the hands of the Indians, and as they have but little knowledge of commerce, the natural result is, that an industry which should employ thousands of men and be worth millions of dollars, remains undeveloped. The Alouks, and other littoral tribes live almost entirely on this fish, and they must consume at least from five to ten millions per annum. Excluding the large quantity which they destroy, or allow to go to waste, and the quantity which they give away, a general idea of the abundance of the salmon. The Russians catch a few thousand barrels, which they ship to China and the Sandwich Islands, realizing from ten to fifteen dollars per barrel for them. As the cost of transportation, barrels and catching does not exceed, at the utmost, over five or six dollars per barrel, it is evident that the industry can be made a financial success, if presented with vigor and discrimination. The first stream to visit Alaska, is the chief or king salmon, the *onchorhynchus ornatus* of Pallas, which occupies the same position north that the *salmo gairdneri* does in Oregon; in fact I presume that with the exception of size and a few minor differences, both belong to the same species. The former is said to often reach a weight of one hundred pounds, its average being from twenty to sixty pounds. The Tinnel tribes of the Yukon River, to whom it is known as *Kee-back*, say that it commences running about the first of June and continues for six weeks, its average daily journey amidst the strong current being about thirty miles per diem, though it is often less. The more northern the grounds of this species, the better its flavor, and the dearer its market price; in fact you must ask for the *best Yukon* if you desire to test the delicacy of the preceding fish. When under Russian rule the Governor had several hundred barrels caught specially for the table of the Czar and forwarded to him as an annual present. Two other species are also found in these waters, the *O. hypocidius* and *O. proteus*, of Pallas, and the *not-goo-goo* and *noog-lag-oh*, respectively, of the Yukons or Tinnels. These are allied to the *salmo proteus* and *onchorhynchus*, or *confluens* of the more southern regions. Like these, they are deemed inferior to the preceding both in flesh and size, and their average weight ranges only between ten and forty pounds. Large numbers are caught by the Indians in weirs and seines made of vegetable fibre, and are dried for winter use. The salmon or mountain trout, (*salmo alpinus*—Linn.) is very abundant in the northern portion of Alaska, and is apparently a constant resident, as it is found in the streams at all seasons. It is a species of the *trutta*, mingled with purple, olive and scarlet; its flesh is very rich and its weight ranges from seven to fifteen pounds. This is the *salmo spectabilis* of Oregon and Washington Territory, and like that it furnishes excellent fly-fishing. The *O. sanganianus*, or red fish, the *O. hypocidius*, or dog salmon, and the *salmo parviflavus* or black salmon, of Pallas, arrive in the rivers between August and October, and run for a month or more. They are not so highly esteemed as their congeners, their flesh not being deemed very palatable. The English names they derive from looks and the color of their flesh; so the reader can find among the southern varieties, previously mentioned, the prototypes of these species.

A sucker found here, which is called *crusoke* by the Russians, (*catostomus borea*), is quite common, and for its northern habitat, quite a large average, from four to seven pounds. A species of the *trutta*, called *trutta* by the Tinnels, frequents the shallow streams and ponds, and is caught in large numbers by the aborigines who scoop them out with their hands, paddles and grass baskets. The flesh is insipid but sweet, and for this flavor a few tribes like it. If one were to give an English cognomen he would be apt to call it a black bullhead or sculpin. A small dace, also found with it, is very generally a baited hook. The *pike* (*esox*) is very abundant in the ponds and lakes of the almost arctic regions of Alaska. It resembles its eastern congener, is of little use as an article of food or sport, and it is, therefore, but severely alone, except the comparatively limited numbers caught in seines for the purpose of feeding the sledge dogs. The burbot, eel pout, or tosh, (*lotus maculatus*), swarms in the lakes and rivers, and being quite scarce in the ponds, is sold for fifty pounds, it forms quite an extensive article of food, when broiled, it is quite delicate, the flesh being hard and compact. The liver is considered the best portion, as it is permeated by a sweet, rich oil, which is often extracted for the purposes of the *codine*. The skin, which is translucent when prepared, is used quite frequently for window glass. The muskellunge, which the female, often carries to gill bladders, while the male has but one. The latter will compare with any of her order in fecundity,

for she is full of roe in the spawning season, from October to January. This she bears in two sacs near the vent, which are connected by an opening with the oloas. Though slow in movement and apparently dull, this species destroys large numbers of white-fish, and others of less importance. The grayling, (*Thymallus*) is very abundant, so offers excellent advantages to sportsmen who care more for the pleasure of catching it than the pleasures of the palate, for, in my estimation, its gastronomic qualities are rather limited. It comes in very well when better fish cannot be procured, but for itself it is a sort of cross between an *almo* and the *chupa* of Puget Sound. It is a beauty, however, in looks, and will compare with any in the western waters, except the sapphire perch, and it excels this in gorgeness of fins. It has a broad tail with a pinkish ground streaked with a purplish crimson; the abdominal region is a dull yellowish, rather bright coppery lustre; sides a dark pinkish yellow. The dorsal fin is its most conspicuous ornament, being very long and of a grayish color, spotted with bright crimson. The abdominal fins are streaked with four lateral lines of light pink, which add much delicacy to the colors above. Of the white-fish, there are several varieties or prototypes, the largest portion being allied to the southern varieties, the greatest difference being in their numbers. I know of only two species in Oregon, the *Coregonus Willistonii* of the Des Chutes and other streams, and the *homolopomus Truobrigitii* of the Columbia River. In Alaska we have the *Urolo-**nalutskii* of the Russians—a small, bony and comparatively useless fish; the *marsoi*, or white-fish of the Russians, a highly edible variety, which weighs between two and four pounds, and has firm, succulent flesh. It is readily recognized by its small head and fins. The hump-backed species, the *corallii* of the Russians and *Ko-kak-ah* of the Yukons, is quite abundant but bony and insipid. The *coregonus nansu*, or round fish—the Russian *Krug*, and Yukon *hatsen*—with its long, subfusiform body and lean muzzle, is a denizen of several streams, and is often caught for food; the *coregonus mukson*, or broad white-fish, the *leh-lyeh* of the Yukons, with its large scales, broad body, short head and weight of thirty pounds, is readily distinguished from the others, and as it is excellent for the table, large numbers are caught at all seasons by the Indians. The largest of this genus is the great white-fish, (*Uciorhynchus leuciscus*), which excels its congeners not only in size but flavor. It is very abundant in the Sitkine and Yukon Rivers—and is found in all the streams throughout the year. It measures between two and four feet in length, and its weight varies from twenty to forty or fifty pounds. It is full of eggs from October to the first of January, so is in the best condition from May to August. It has a fine outline, being slender and long; and its color is bright silvery above, somewhat darker beneath. Despite the abundance of this fish and its excellent edible qualities, it is not used as an article of commerce. It certainly seems plausible to suppose that its size and numerical strength would make it well worthy of attention, by a successful enterprise if the limited fishing grounds of Lake Superior can be worked with profit.

The profession of salmon and white-fish in Alaska should make that region the supply depot of the world, for they are certainly abundant enough to feed the peoples who use fish as a portion of their diet. All required to prosecute the business is a comparatively small capital, and whoever is first in length and weight of fish, or whoever has the greatest wealth will be utilized by those whose means will be ample enough to enable them to monopolize the largest share.

The species enumerated, and the brook trout, (*S. albatulus*), are the only fishes frequenting the fresh waters of Alaska that have much interest for mankind in general. In my next letter I shall glance at the marine species, their commercial value and geographical distribution.

MONTGOMERY KEENEY.

For Forest and Stream.
HAND TO HAND WITH A PANTHER.

IN the extreme northern end of Allnany township, Berks county, on the Blue Mountains, a struggle between a man and a panther took place on Wednesday evening, which was indeed a desperate battle. I herewith present an account which I have secured, and believe to be true in all respects. People travelling over the mountains in the night have reported that a strange animal had been seen, and on occasion it had been heard, but very little interest was placed in these statements. Calves, sheep, and litters of pigs mysteriously disappeared from some of the farmers in the vicinity, and none there knew what caused their disappearance; but this fact is now revealed. Reports of this animal being seen on the mountains came to the ears of Mr. Pfeiffer, an old hunter and trapper, who, it is said, had passed forty years of his life on the mountains, and who had been successful in killing the animal, which proved to be unsuccessful. A small hunting party was thought to be a necessity to procure the animal, and was instantly organized. The party consisted of two Englishmen, also old mountaineers, and Mr. Pfeiffer, who left for the mountains at two o'clock, each one going in a different direction, and having agreed to meet at the "big tree"—a memorable tree on the mountains—about the miles from the starting place. Two of the party arrived at the tree within half an hour of each other, but not so the first, Mr. Thomas Anson, one of the Englishmen. Nothing was seen or heard of Anson, and the sun had gone down behind the hills, and the forest and woods were becoming gloomy with the return of dusk.

It appears from the statement of Anson that he was wending his way slowly and cautiously through a dense forest, and when about one hundred yards from the point of meeting he concluded to pass up another ravine, which was overhung with a dense growth of shrubs and undergrowth. When directly under a small snag, and walking along with his head bent towards the ground, peeping amongst other snags under a low vine, with his body doubled, he suddenly heard a crash overhead, and the next second he felt the claws of the animal sink into his neck. This was accompanied with fierce growls, and quick work was before him; but in another moment all was action, and by a dexterous movement Anson swung around his hands and seized the animal in his vice-like grip by the neck, and staggered back towards the clearing, when the creature shook off the hunter's grasp and made an attempt to bite him again in the neck. The poor man, however, was not to be thus vanquished. He now made a dash, and with a terrible velocity swung it around and buried it deep into the side of the animal. The brute gave a long howl

from the effects of the pain, and amidst the excitement man and beast rolled over together on the ground, and in doing this Anson received three bites on the shoulders. Now were moments of terrible suspense. The growls of the animal attracted the attention of the remaining two of the party, who came running towards the spot at a terrible speed through the bushes and undergrowth, where they found the man and the animal lying on the ground for dear life. Anson once more plunged his knife into the animal's body, and in a few minutes more it rolled over in its own blood and died.

The hunters examined the monster, and think it to be a panther, or catamount, of the mammoth species. The weight was 146 pounds, length 4 feet 5½ inches, not counting the length of the tail, which was over two feet, the height 2 feet 8 inches, and the animal powerfully built and knil. The color was a deep brownish black on the back, and a shade lighter on the belly and portions of its legs. Its teeth were long and sharp, and the age of the brute was thought to be about seven or eight years. The tail at the end was very bushy. In triumph was the prize which had caused so much labor and pain carried home by the party, skinned, and the hide will now be sent to the States. Anson and his companions are all well, he is bome with him, and will preserve it, as he well can, as a relic of his battle with an unknown animal on the Blue Mountains. The report of this capture and fight created great excitement and rejoicing in the county, and all congratulated the bold hunter and trapper with his miraculous escape from death. It is still unknown where the animal came from. Catamounts of the smaller species abound on these mountains, but this is one of the largest animals killed on them.

Hamburg, Berks county, Penn., August 10th, 1874.

FORT COLLINS AND COLORADO.

Our valued correspondent, Wu. O. Collins contributes the following to the Highland (Cal.) News, in reference to a region full of attractions to our sportsmen:—

"In your paper of July 23d, in a notice of Fort Collins, Colorado Territory, you say, 'we believe Fort Collins was named in memory of Lt. Caspar Collins, the lamented son of our townsmen, Col. Wu. O. Collins,' &c.

Permit me to say, that "Fort Caspar" is the post named after my son. It is situated on the North Platte River, in Wyoming territory, about 15 miles west of Fort Laramie. It had but previously known as Plate Bridge, but in 1854, after the death of Lt. Collins, who was killed in the vicinity while leading a desperate charge against a large body of Indians, the name was changed to Fort Caspar, which it still bears.

Fort Collins is situated in Colorado territory, on Cache la Poudre River, a tributary of the South Platte, more than 200 miles from Fort Caspar, and my name was given to it by the Commanding General, when first laid out in 1862.

The location proving unsuitable, I was ordered in 1864 to select another site, and did so, some four or five miles distant, laying out a four-company post, with a reservation four miles square, which was approved by the War Department, the previous name being retained.

Knowing its location and surroundings, I am not surprised that, when no longer needed as a military post, and the country around it was surveyed and brought to market, it should be selected as a fit place for a future city, and make the rapid progress it seems to have done. The reservation and its vicinity possess singular advantages for a permanent town and community. The foot is on a beautiful promontory, projecting towards and overlooking the broad and fertile valley of the river, along which the reservation fronts for four miles. It is on the same mineral region geologically as that which lies directly west of the plains at Denver, and extends into New Mexico. This mountain country, occupying the west half of Colorado, and drained by the tributaries of the South Platte and Arkansas rivers on the east, and those of the Colorado and Green rivers on the west, in its extent and great and regular water supply, is well adapted for a permanent town on the Rocky Mountains. Its mineral wealth is boundless, and will not be fully explored or possessed for centuries.

Cache la Poudre River is a clear, swift, never-falling stream, abounding in trout and other fish; the soil in its valley and the adjacent plains is good and easily irrigated; indeed there is probably no body of land in Eastern Colorado equal to it in the country of the Colorado. It is fertile, abundant, and taking all things into consideration, do not know my place in Colorado more inviting for a permanent home.

Fort Collins has been selected as the site for the State Agricultural College, and the country about it is rapidly settling. As a business centre, Denver is and will continue to be the metropolis of Colorado. Its early settlement, and the general control of the commercial and mining interests of the territory, but I see no reason why Fort Collins should not stand in the next rank of towns now springing up here. Many of my former comrades and acquaintances have located there, and from a personal knowledge of a vast extent of the central Rocky Mountain country, I think they have chosen wisely, and I can honestly advise any of my friends who intend to visit the New West to take a look at the Cache la Poudre valley.

Wm. O. COLLINS.

Hillsboro, July 28, 1874.

—Quite an interesting pamphlet, written by Mr. Fredel, has been read before the French Academie de Medecine in regard to the bites of the viper. One fact mentioned is the method used by the Hindus, which method of treatment has come somewhat into vogue to prevent hydrophobia in India. When a native bitten by a snake, his companions take swift action to drive the sufferer about for hours, making him move along briskly by means of blows. Mr. Labrousse, who prescuted the work to the notice of the academy, stated that at the Jardin des Plantes, when the attacks were bitten by snakes, they were dosed with brandy and forced to take the most violent exercise, and with good results. This treatment has a good deal of sound reason about it.

—Jeremiah Comfort is the successful propagator of amberless fine brook trout at Honey Valley, Montgomery county, Pennsylvania. Comfort always attends success.

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

FLASHES FROM THE "BLUELIGHT."

EIGHTH WEEK.

As the summer left us, the "Bluelight" extinguished her lights at the wharf and rested from her summer's work. A little time borrowed from the autumn this last week and a few more days in the one coming, and we will have finished. This will be my last letter from Noank, and it is with sincere regret that I say it. To most of us the little place, with its glorious climate, its kindly people and pretty scenery, has endeared itself. We have not been fat birds for them to pluck, nor strangers to be taken in, metaphorically, for literally they have taken us in and made for us pleasant homes, when we from previous experience but expected what we could get for money, not love. We all regret somewhat, the thoroughness of our work, that has so completely explored the adjacent waters, that there is nothing left—no new world to conquer, nor worm to classify; so next year we must seek a new field, and may we be as lucky.

The last day of summer found us busy with a new trawl that Prof. Baird had just imported from England. Our old one consists of a big bag net hung to a twelve foot beam, which keeps its mouth extended; this beam is fastened to iron runners, and a row of leads in the foot rope to keep the mouth open, and drags the bottom as we give her "three bells, with a close trawl." The new one, used extensively in England in the sole and turbot fishery, is called the "otter trawl," because the net is suspended from wooden runners, iron shod, called "otters"—why, I don't know. It has a spread of forty-two feet, and being without the heavy beam, for which a row of eorks is substituted, tows much lighter than the old one. The "otters" are slung like a kite, and although close together when the net is lowered overboard, they offer but little resistance, and soon spread the mouth to its utmost extent, and it ought to give big results. It will, when we grow skillful in its use, and learn just how fast to drag it, so as to keep it open, and not off the bottom. Our tries so far on the Watch Hill pecten bed have not been very successful; not so much as with the old trawl, as to quantity, but we captured a few fish that ordinarily are too faint to be taken—hikes and sea robbers.

On this trip we were favored with the company of Mr. Blackford of New York, and family. He is a good friend of FOREST AND STREAM, and of the Fish Commission, and places both in his debt; you for items, and us for rare and curious fish which he frequently sends us. One he brought this time—a beautiful silver-sided fish that I have seen in Bartados, never elsewhere, and I thought it peculiar to the West Indies, as applied at once to my friend's Goode, who is "up" in fish, to tell me something about this stranger, and he kindly gave me this information:—

THE LEATHER JACKET.—The fish taken at Gravesend and brought to Noank by Mr. Blackford, is one of the most interesting of late additions to the fauna of our coast. It is known in the British West Indies as the "Leather Jacket" and the "Skijack," and the former name being the most applicable, descriptive, and easy to remember, I have adopted the latter, but should like to see the name applied to several other species, it seems proper that we should call it by that name. The species was first described by Linnaeus in the "Systema Naturæ" as *Gasterosteus occidentalis*, subsequently by Lacepede as *Lichtia quoyana* and by Curvier and Valenciennes as *Chirocentrus calianus*. Of course the name of Linnaeus has priority, and Professor Gill having found it in the fishes of the Gulf of California, he applied to it the name of *Oligoplites occidentalis* Linnaeus. Gill. The "Leather Jacket" attains the length of two feet or more. Nothing is known of its habits, but it is probable that they resemble those of the bluefish, and that the "Leather Jackets" roam the tropical waters in schools, feeding upon smaller fishes, and sporting and leaping at the surface. The species has been seen on the South American coast from Florida in the West Indies to Santa Domingo, Puerto Gabo, Jamaica, and Cuba. In the United States National Museum are some taken at Key West by Dr. Simpson. So Mr. Blackford has the honor of having added another new species to the fauna of the north-east coast of North America.

We tried our new trawl, and began to learn it, for we did better and better each time, but the evening came and we ran back to Stoughton and saw our guests safely on board the New York steamer, then we had a little more work on a new experiment. We had never tried night work, and it might be that among the odd fish at the bottom there were some more apt to be caught out late than early; so lighting our green, red and white lights, the "Bluelight" started again to see what we could turn up. An hours' steaming brought us to the grounds where we knew that unless we caught on the wreck of the ill-fated Moks we could draw well in a day. We brought up here, then the tide and lowered us into the darkness. All of our lanterns and all we had borrowed, hung around the ridge rope, and I had no doubt but that from a distance we resembled Fourth of July. But we dreaded approaching vessels, and from our ten-knot reputation feared they might try to cross our stern, and that was the way we were going. Nothing troubled us. We hauled in our trawl in due time, and we got skates, flounders, pectens, and snappers. Our day's results, and two more tries produced the same. Then we went home.

The stormy weather of the preceding week had paved the way for calm and smooth seas in this, and we made the most of it. Two thirty-six hour trips to the southward and eastward of Block Island gave us a good knowledge of the reefs and banks in that vicinity. We scraped acquaintance with Cox's edge, Sharp ledge, Crab ledge, and others, and while the professors dug up and bottled up their specimens of fish food forward, we all did as much for the food fish, and nearly a barrel full of fine fifteen-pound specimens of the cod family are now "making" on our wharf, destined for future bales.

Block Island is quite a harem. There is a village, New Shoreham, of sixteen hundred inhabitants, and on the bluff are numerous comfortable hotels, the "Ocean View House," which I should judge must be a pleasant resort in summer. It is well kept and clean. We found there two gentlemen fishermen, who had come blue fishing, but a dead calm in the morning was not conducive to that sport. So we took them out in the Bluelight, and saved their time, besides saving one of them an expensive course of medical treatment to get clear of a large quantity of bile—the Bluelight

did it. One of them, from New York, whose name I will not mention after the above remark, captured the day we arrived, a twelve pound bluefish, and on a squid of his own invention. It was nothing more nor less than a long shanked hook, with a dolls' flannel petticoat on it. I send you one he left with me, but want it next year.

We trolled from the Bluelight, fishing ten knots. I had one of Andrew Clerk's best, and it was better than anything else to be got around here; but the petticoat beat it; and he had two strikes to my one from bonito; which, by the way, we find one of the best table fish we get. It is better than blue fish, when fresh, and I wonder at its cheap price in New York markets.

The laboratory is a dismal place this week, and I don't care to write of all that I find going on packing up, and instead of a pleasant microscopic view of a dissected worm, or a lively glimpse of a squirming animal in picric acid, we see only bottles in brown paper wrappers, and learned professors bending all of their energies in the direction of getting another package in an already full box.

From the first I have intended in this, my last letter, to make a summary of our summer's work (no pun intended), but the first of the month evening that am not in the humor, and I would make this letter a bore to myself. If it is to your readers, they have the advantage of me—they can skip it. A long obituary is in bad taste, so I will close. Piscico.

OYSTER CULTURE.—A correspondent of the Montreal Witness called on Mr. Whitnott to urge the introduction of oyster culture in the Provinces of New Brunswick, Nova Scotia and Prince Edwards Island. The writer says:— "Could the proprietors of oyster beds in New Brunswick, Nova Scotia, etc., be induced to study the question of laying down beds and breeding the bivalve in a proper manner, and to give them the same attention as their neighbors in New York and Baltimore, it would, doubtless, in three or four years, prove greatly to their advantage and to the provinces in general.

THE GRAYLING IN MAINE.

NEW YORK, September 1st, 1874.

EDITOR FOREST AND STREAM.—I am a resident in the west branch of the Penobscot River, below the Ripogenus Carry, the *Thymallus tricolor* (grayling) is found, intermingled with the speckled trout (*salmo fontinalis*). A fish like your engraving, with the apparent distinguishing dorsal fin and characteristics, runs to the fly. A considerable number, perhaps a dozen, were caught, averaging a half pound. The writer is familiar with the salmon in all its stages of growth, but being ignorant, at the time, of the shape form and markings of the grayling and its habits, regarded the fish as *sub generic* to those waters. I have by this mail forwarded to Sam Cole, my guide, of Moosehead Lake, a copy of the FOREST AND STREAM, and will write him for further details, and if possible will procure a specimen.

—We see and hear allusions made from time to time to the project of restocking the Connecticut river with salmon and shad, and intend to keep these columns open to all reliable information upon the subject. This matter, as well as the general one of the preservation of fish and game in the State, is one in which we take a lively interest. We should be glad, if possible, to get at the facts in regard to the fishery at Holyoke, and to keep posted in regard to the fish that have been deposited in the waters above. The success of this undertaking depends upon careful observation of facts. The theory that shad remain at sea until full grown, which has been held, must now be given up. The hook and line with which young shad (one, two and three years old), have been caught at Holyoke this season, by fishermen, tells the story. When shad were taken only in a 43 by 51 inch seine, of course the young shad would pass through and their presence in the rivers be unnoticed. The experience of fishermen this season has been that more young shad are taken than old. We are told that Fred Mather has placed about 2,000,000 in the river at Bellows Falls, above the dam, mostly taken within the last few weeks. We hope that the Fish Commissioners are doing their work properly, and that the young shad, especially, have been placed where they will live for, some day, we want to catch a 15 pound salmon in Vermont with a fly rod. But, as we said before, the whole business requires a careful watching, as its success depends upon the patient observation of facts.—Rutland Herald.

Natural History.

POSSIBLY A NEW BIRD FROM OREGON.

On August 1st a party of gentlemen ascended Mount Hood, and after a hard struggle, scaled the summit. When arriving, however, at just that point where vegetation almost ceases, and there is nothing to be found in the rocks and sand but some bunch grass and a few stunted bushes, Mr. D. E. Warner, of Portland, Oregon, shot and captured a very remarkable and rare bird. This new ornithological specimen is said to be only found in the mountainous regions of Oregon. Mr. C. Koop, the taxidermist and naturalist of Portland, has very kindly sent us a full description of the bird—

- Length of bill, 14 inches.
Length of head, 14 inches.
Length of neck, 13 inches.
Length of back, 5 inches.
Length of tail, 4 inches.
From tip of bill to tip of tail, 14 inches.
Wings, outstretched, 18 inches.
Around head and across eyes, 3 1/2 inches.
Around neck, 4 1/2 inches.
Around tarsus tip, 1 1/2 inches.
Three frontal and one lateral toe, large nails, wings shorter than tail, fourth primary longes.

Fourth primary, 1 inches; third primary, 11 inches; second primary, 1 inch; first primary, 2 1/2 inches. The bird has an ash-colored head, neck and breast; wings very dark blue; coverts white tipped; tail white, except the two centre, and the one-half of the adjoining feathers, which are a dark indigo-blue; bill and feet black; head large; eyes prominent; iris yellowish; green cross bill; under bill turns to the right. Six years ago Mr. Roop informs us that he obtained three specimens of this bird far up on the extreme heights of the cascade. Mr Roop is desirous of having the bird if novel, given a name.

A FIELD DAY IN THE INSECT WORLD.

SEVERAL members of the "Sandwich Naturalists' Association," a recently organized society for popularizing the study of the natural world, spent half day recreating, and in searching for entomological specimens for a museum of natural history, which it is proposed to organize in connection with the association. The valley of Little Rock Creek, in Kendall County, was selected as the theatre of operations; a bright little stream, fed by numerous cool springs, which some day near at hand will be stocked with speckled trout (*salmo fontinalis*). Armed with paper and pencils, and with the outfit of a naturalist, not omitting chloroform—the party was divided into groups and at once set upon the task of collecting. Let me say at this point never capture even a bug and thrust it into a vial alive, but humanely use chloroform and thus put an end to its ephemeral existence. Remember what the poet says:—

"The man who needlessly sets foot upon a worm," etc.

The true naturalist, like the true sportsman, prompted by humanity, will not inflict unnecessary pain even upon the smallest insect—the minutest of the tiny objects of this division of the animal kingdom.

A more general diffusion of the natural sciences—more especially those which relate to organized beings, far down in the scale of animated nature—will tend to enlarge and exalt our views regarding those tiny creatures, the important place they occupy in the scale of being—their relationship to man—vital and psychological—and of all the vast chain of being which fragments God began—beast, fish, bird and insect, which no eye can see, of glass can fully comprehend—a microcosm of strange groupings—enough for the grandest intellect to study and ponder over in the little brief period called human life.

Pardon this digression, and I will proceed to say that our rambles and communion with nature were in all respects such as tended to unbend, for the time at least, our minds and thoughts from business pursuits, and the caring cares of life.

Our half day's doings were amply remunerative. We were enriched by the capture of a large number of arachnid, one species of which closely resemble Her Majesty's *Raf's Spider* of England, (*Dolomedes fimbriatus*), which, if not identical, is, at least, a near relative. It is an inch long, of chocolate-brown and orange color. It is a remarkable spider, and an extremely early one in the autumn. Its employment of catching grass-hoppers, which avocation it seemed to enjoy, without the outlay of much labor. Its habitat is marshy land or bogs, which were overgrown with *Eupatorium perfoliatum*, or the Hoosier's puke-weed, to which the weeds were attached. We also obtained several of the *Bufo Americanus*, specimens of *Rana*ids, frogs; and *Alydids*, tree toads. There were several species of *Lepidoptera Coleoptera*, and *Formica*, both wasps and hornets, captured. Of reptiles three specimens were captured; one *Eutania Scutaria*, water garter snake, and two of the *Dutania Striata*, striped snakes, and a singular but beautiful spider, which we can find no name for. The spider is three-eighths of an inch in length, in shape is hastate, the abdomen terminating in two long spines, while near the union of the head with the body, there are two more short spines, the lower of which is anterior and the upper posterior to the head, and the lateral ones are equidistant from those of the head and the posterior spines first described. The spinneret is below centrally located and extends downward different from those of any other species, and is one-sixteenth of an inch in length. One of the same variety caught has eight spines, and this feature is very likely a mark of distinction of sex. The back is yellow, dotted with red spots, while the under part is variegated in color fulvous mixed with chocolate color—a very curious arachnid, indeed! Who can tell its name? TELA ARENARIA.

Sandwich, Ill., August 24, 1874.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, NEW YORK, Sept. 6, 1874.

Animals received at Central Park Menagerie for the week ending September 7th, 1874:

- Two Hooper Swans, *Cygnus Heros*. Hab. Europe.
Two Snow Geese, *Anser hyperboreus*. Hab. N. America.
Three Hoopoes, *Upupa Episcopus*. Hab. Southern United States.
Four Mandarin Ducks, *Aix galericulata*. Hab. China.
Four Passerine Parrakeets, *Ptilinopus passerina*. Hab. S. America.
Three Turquoise Parrakeets, *Euphonia pulchella*. Hab. New South Wales.
One black Spider Monkey, *Ateles lester*. Hab. Bolivia.

W. A. CONKLIN.

A BIRD NOT TO BE IMPOSED UPON.

KEY WEST, Fla., August 22d, 1874.

EDITOR FOREST AND STREAM:—In your number of August 18th reference is made to the habit of the "cow hunting" of depositing her eggs in the nests of other birds. I can corroborate the statements of "Fred Beverly" and "R. S. W." as some things I spent much of my time in the collection of bird's eggs, and frequently noticed this trait. The cow hunting does not confine herself to the nest of any particular variety, but seems quite indifferent as to the foster mother of her young. This deposit of the eggs is not the worst feature of the case, however, as I have seen cases, and indeed think them usual, where the young of the cow hunting, being as usual three larger than the legitimate young, have thrown the latter from the nest, usurping the whole, and leaving the proper young to perish on the ground. Sometimes, however, and it is of this that I intended to write, a bird is found that is not so to be imposed upon. At one time while pursuing my search for nests, I was struck by the extreme height of a nest belonging to what is known in New York State at least, as it was in that State the discovery was made—as the "summer yellow bird." On examination I discovered that the nest proper had but the usual depth, while the bottom was at least two and a half inches thick. On removing that which proved to be the upper bottom of the nest, I discovered an egg of the cow hunting, nicely enclosed and covered; again removing a second bottom, a second egg was discovered, and still again under this a third egg. The conclusion was obvious. The yellow bird, having built its nest in the usual way, an egg of the cow hunting was deposited. The speckled yellow bird, not to be imposed upon, rather than to build an entirely new nest, built a fresh bottom over this, only to have a second egg deposited by the same or second cow hunting. Again was the operation repeated, and a third egg was deposited by the cow hunting, while the nest was being enlarged, and the walls of the nest built higher, only, also, to be sacrificed to the curiosity of the owner. Whether or not the hunting bird in each case visited the nest before the proprietor had deposited her own eggs, I do not know, but none of the eggs of the latter were walked in.

I think the above case will be admitted as something remarkable.

SIEMAS PATT

Rational Pastimes.

Secretaries and Friends of Athletic, Base-Ball, Cricket and other outdoor sports will kindly note their contributions not later than Monday in each week.

THE CALEDONIAN CLUB GAME.—Fully fifteen thousand people were assembled at Lion Park, on Eighth Avenue and One Hundred and Tenth street, New York, on Thursday, September 2d, on the occasion of the eighteenth annual celebration of Scottish games by the New York Caledonian Club. The committee of arrangements consisted of Chief Henry G. Thomson; Second Chief, James L. McEwen; Third Chief, Kenneth MacKenzie; and Clausen Andrew P. Dykes and Charles G. Nicholson, who left nothing undone to secure the success of the affair. A large tent was erected on the outside of the ring for the accommodation of the invited guests who, although their name was legion, were all welcomed with true Scottish hospitality. The judges were Mr. Henry Bernermyer, of the New York Athletic Club, Captain Bruce and Messrs. Crury, Russell and Gibb. The prizes offered consisted of sums of money, and the medal of the club to the highest score made by a club member. The contests included entries from the Montreal, Boston, Bridgeport, New Haven, Schenectady, and Chicago Caledonian Clubs. Among the leading winners were Andrew Rennie, who figured so conspicuously as a winner at the tournament at Burnham's Hippodrome some months ago, and who took the first prize in the standing jump, three-legged race, and running high leap, besides two second prizes; John Harvey, of Montreal, who won both the short and long races; George Goldie, who took the prize for "tossing the caber," and Alexander McKay, who distanced his competitors in the throwing of the light hammer with a first-class throw of 102 feet and three feet in the club, and the grounds between 7 and 8 P. M., and in the evening held a reunion at their rooms in the city, where the prizes were delivered.

SUMMARY.

Putting the Heavy Stone.—John Anderson, 55 feet 7 inches; Alex. McKay, 35 feet 5 inches; Wm. Robertson, 30 feet 2 inches. Standing Jump.—Andrew Rennie, 9 feet 6 inches; George Goldie, 9 feet 4 inches; J. A. Fullerton, 8 feet 11 inches; Andrew Rennie, 18 feet 5 inches; Walter Brown, 18 feet 1 inch. One Hundred Yard Race.—James Harvey, Montreal, 1; Andrew Rennie, 2; A. G. Reid, 3. Running High Leap.—John Harvey, 1; Andrew Rennie, 2; A. G. Reid, 3. Running High Jump.—A. McKay, 86 feet 4 inches; John Anderson, 84 feet 11 inches; J. A. Fullerton, 83 feet 10 inches. Standing High Leap.—George Goldie, 4 feet 7 inches; Andrew Christian, 4 feet 6 inches; J. A. Fullerton, 4 feet 5 inches; John Curdair, 4 feet 3 inches; Messrs. McKay, Robertson, and Reid, 4 feet 4 inches. Broadsword Dance.—L. D. Robertson, first prize; A. Nevins, second prize; James West, third prize. Throwing Fifty Pound Weight.—J. A. Fullerton, 21 feet 8 inches; Alex. McKay, 20 feet 11 inches; George Goldie, 20 feet 3 inches. Long Race.—James Harvey, 1; A. G. Reid, 2; Walter Brown, 3.—Time, 28 seconds. Tossing the Caber.—George Goldie, 38 feet 6 inches; J. A. Fullerton, 35 feet 10 inches; Robert Williamson, 33 feet 6 inches. Three Legged Race for All Comers.—Reid and Gray, 1; McKay and Robertson, 2; Sharp and Rutherford, 3. Three Legged Race, Caledonian Club.—Rennie and Robertson, 1; Fraser and McKay, 2; Dykes and Edington, 3. Hitch and Kick.—G. T. Ansell, 8 feet 1 inch; A. C. Reid, 5 feet 11 inches; William Floyd, 5 feet 6 inches. Boys Race, 230 Yards.—T. Grasscock, 1; M. Baxter, 2; C. Inglis, 3. Tossing with Pole.—William Robertson, 9 feet 9 inches; George Goldie, 8 feet 11 inches; James McKay, 8 feet 10 inches. One Mile Walk.—A. J. Henderson, 1; T. McEwen, 2; William Forsyth, 3. Time not taken. Special Race, One Mile.—Members of Caledonian clubs.—James Robertson, 1; Caledonian Club, 1; J. Dowdell, 2; William Parker, 3.—Time, 5 minutes and 22 seconds. Running High Leap.—Andrew Rennie, 5 feet 4 inches; William Robertson, 5 feet 3 inches; James McKay, 5 feet 2 inches. Three Legged Race, eight Hurdles.—A. C. Reid, 1; William Brown, 2; James Edington, 3. Boys Hurdle Race.—George Grasscock, 1; Thomas Grasscock, 2. Sock Race over eight Hurdles.—Thomas Buchanan, 1; D. B. Fleming, 2; J. Dowdell, 3. Sack Race.—Walter Brown, 12 feet 8 inches; John Sharp, 42 feet 2 inches; Thomas Buchanan, 38 feet 10 inches. Putting the Light Stone.—John Anderson, 43 feet 2 inches; Wm. Robertson, 42 feet 4 inches; A. Fullerton, 40 feet 10 inches. Tossing the Ring.—A. Niven, first prize; John Nicholson, second prize; James West, third prize. Special Prize.—Three of the best dressed members in Highland costume.—Messrs. Simpson, Thomson, and George McKay.

A game of cricket was played Saturday at Cambridge, between the 1st eleven of the Bostons and the Albion Club of Needham. The first inning of the Bostons scored 70 and that of the Albions 68. The second inning of the Bostons footed up 113, and it was so late an hour when the Albions went to the bat that by the time they had counted up 70 darkness came on, and the game was called, they having but six men out.

The Montreal Club after their whipping here went to Boston and lost a game with the Bostons by five wickets, and at Salem lost another by one wicket.

The Berling cricket club, of Berling, Ont., defeated the Guelph club, August 18th, at the former place by 68 to 61. Jeffrey's 15 was the best score on the winning side.

The Halifax journey of 1874 will long be remembered by all who participated in it with great pleasure. The Halifax Times, of August 23, in a closing article on the subject, says:

"The game proved entirely successful. All the men came up to time as they had promised, and all the matches came off. With our American cousins it was, to use an original classic quotation, a case of 'venimus, vidimus, vicimus.'" They carried off the champion cup, their gallant captain won the highest average batting cup, and the bowling cup falls to one of their bowlers. And this they accomplished by the stroke of luck, no fortunate fluke in any instance, for such things do sometimes occur in cricket, but all through undoubted skill, and a thorough mastery of the noble game.

In congratulating them on their well-earned laurels, we are reminded that there are others to be congratulated. In particular do we render our congratulations and our thanks to Capt. Wallace, the former for the complete success which has crowned his efforts, and the latter for the kindly courtesy he at all times extended to the press. We have undergone a revolution in cricket; during the past two weeks. Our old idols have been shattered, and new ones erected on the vacant pedestals. America has usurped the position of England, as queen of cricket, and to American cricketers we shall look up with envious admiration, until a band of well-trained men from our own country encounters an American team of their own ground, and satisfactorily distasteful it. Then shall we return to our old

allegiance, and this we fervently hope will come to pass at no very distant date.

Appended we give a summary of the four matches:

Table with 2 columns: Match Name, Score. America—first inning, 191 runs. Canada—first inning, 64 runs. Canada—second inning, 69 runs. Result: America won by 11 runs and 51 runs; highest individual scores for America, R. S. Newhall, 79, D. S. Newhall, 35 (not out); R. N. Caldwell, 18.

Table with 2 columns: Match Name, Score. America—first inning, 205 runs. Canada—first inning, 117 runs. Canada—second inning, 65-200 runs. Result: America won by 11 runs and 5 runs; highest individual scores for America, F. H. Brewster, C. A. Newhall, and R. S. Newhall 29 each; D. S. Newhall, 29.

Table with 2 columns: Match Name, Score. England—first inning, 138 runs. England—second inning, 80-247 runs. Canada—first inning, 162-305 runs. Canada—second inning, 103-246 runs. Result: England won by 4 wickets; highest individual scores for England, Lieut. Mitchell, 99; Capt. Wallace, 88; Lieut. Davies (not out); 29. Highest individual scores for Canada, Rev. T. D. Phillips, 29 and 18; J. Gorham, 32.

Table with 2 columns: Match Name, Score. Halifax—first inning, 239 runs. Halifax—second inning, 138-337 runs. All comers—first inning, 211 runs. All comers—second inning, 152-305 runs. Result: Halifax won by 5 wickets; highest individual score for Halifax, Capt. Wallace, 68; Kearney, 45; Lieut. Davies, 29. In first inning; highest individual score for Halifax, Capt. Wallace, 24; Lieut. Turner, 29; C. E. H., 29.

Table with 2 columns: Match Name, Score. England—first inning, 138 runs. England—second inning, 80-247 runs. Canada—first inning, 162-305 runs. Canada—second inning, 103-246 runs. Result: England won by 4 wickets; highest individual scores for England, Lieut. Mitchell, 99; Capt. Wallace, 88; Lieut. Davies (not out); 29. Highest individual scores for Canada, Rev. T. D. Phillips, 29 and 18; J. Gorham, 32.

On September 2d, the Staten Island nine were defeated by the Red Stockings of St. Louis at the latter city. The day before, the Island team had defeated the Eagles at Louisville by a score of 8 to 7.

The Tim Wilds and Tim Murphy played a ball match at Staten Island Tuesday, September 1st—the Wilds winning by a score of 58 to 32.

The members of the Nassau boat club made a trip to Tompkinsville on Saturday last to have a friendly game of ball with the Staten Island base ball and cricket club. Much to the surprise of all, including the visiting club, the boatmen beat the batsmen by the score of 29 to 5. At the end of the sixth inning, the Staten Islanders thought it looked like rain, and concluded that they had better go home. The following is the score:

Table with 2 columns: Player Name, Score. Nassau Boat Club: Power, 4; F. Brown, 4; H. Brown, 4; C. O. 34; Reynolds, 1; Blood, 4; F. Bacon, 2d; Parker, 2; Floyd Jones, 2. Staten Island B. B. and C. Club: 1 Herts, 1; 2 B. 1; 3 B. 1; 4 B. 1; 5 B. 1; 6 B. 1; 7 B. 1; 8 B. 1; 9 B. 1; 10 B. 1; 11 B. 1; 12 B. 1; 13 B. 1; 14 B. 1; 15 B. 1; 16 B. 1; 17 B. 1; 18 B. 1; 19 B. 1; 20 B. 1; 21 B. 1; 22 B. 1; 23 B. 1; 24 B. 1; 25 B. 1; 26 B. 1; 27 B. 1; 28 B. 1; 29 B. 1; 30 B. 1; 31 B. 1; 32 B. 1; 33 B. 1; 34 B. 1; 35 B. 1; 36 B. 1; 37 B. 1; 38 B. 1; 39 B. 1; 40 B. 1; 41 B. 1; 42 B. 1; 43 B. 1; 44 B. 1; 45 B. 1; 46 B. 1; 47 B. 1; 48 B. 1; 49 B. 1; 50 B. 1; 51 B. 1; 52 B. 1; 53 B. 1; 54 B. 1; 55 B. 1; 56 B. 1; 57 B. 1; 58 B. 1; 59 B. 1; 60 B. 1; 61 B. 1; 62 B. 1; 63 B. 1; 64 B. 1; 65 B. 1; 66 B. 1; 67 B. 1; 68 B. 1; 69 B. 1; 70 B. 1; 71 B. 1; 72 B. 1; 73 B. 1; 74 B. 1; 75 B. 1; 76 B. 1; 77 B. 1; 78 B. 1; 79 B. 1; 80 B. 1; 81 B. 1; 82 B. 1; 83 B. 1; 84 B. 1; 85 B. 1; 86 B. 1; 87 B. 1; 88 B. 1; 89 B. 1; 90 B. 1; 91 B. 1; 92 B. 1; 93 B. 1; 94 B. 1; 95 B. 1; 96 B. 1; 97 B. 1; 98 B. 1; 99 B. 1; 100 B. 1; 101 B. 1; 102 B. 1; 103 B. 1; 104 B. 1; 105 B. 1; 106 B. 1; 107 B. 1; 108 B. 1; 109 B. 1; 110 B. 1; 111 B. 1; 112 B. 1; 113 B. 1; 114 B. 1; 115 B. 1; 116 B. 1; 117 B. 1; 118 B. 1; 119 B. 1; 120 B. 1; 121 B. 1; 122 B. 1; 123 B. 1; 124 B. 1; 125 B. 1; 126 B. 1; 127 B. 1; 128 B. 1; 129 B. 1; 130 B. 1; 131 B. 1; 132 B. 1; 133 B. 1; 134 B. 1; 135 B. 1; 136 B. 1; 137 B. 1; 138 B. 1; 139 B. 1; 140 B. 1; 141 B. 1; 142 B. 1; 143 B. 1; 144 B. 1; 145 B. 1; 146 B. 1; 147 B. 1; 148 B. 1; 149 B. 1; 150 B. 1; 151 B. 1; 152 B. 1; 153 B. 1; 154 B. 1; 155 B. 1; 156 B. 1; 157 B. 1; 158 B. 1; 159 B. 1; 160 B. 1; 161 B. 1; 162 B. 1; 163 B. 1; 164 B. 1; 165 B. 1; 166 B. 1; 167 B. 1; 168 B. 1; 169 B. 1; 170 B. 1; 171 B. 1; 172 B. 1; 173 B. 1; 174 B. 1; 175 B. 1; 176 B. 1; 177 B. 1; 178 B. 1; 179 B. 1; 180 B. 1; 181 B. 1; 182 B. 1; 183 B. 1; 184 B. 1; 185 B. 1; 186 B. 1; 187 B. 1; 188 B. 1; 189 B. 1; 190 B. 1; 191 B. 1; 192 B. 1; 193 B. 1; 194 B. 1; 195 B. 1; 196 B. 1; 197 B. 1; 198 B. 1; 199 B. 1; 200 B. 1; 201 B. 1; 202 B. 1; 203 B. 1; 204 B. 1; 205 B. 1; 206 B. 1; 207 B. 1; 208 B. 1; 209 B. 1; 210 B. 1; 211 B. 1; 212 B. 1; 213 B. 1; 214 B. 1; 215 B. 1; 216 B. 1; 217 B. 1; 218 B. 1; 219 B. 1; 220 B. 1; 221 B. 1; 222 B. 1; 223 B. 1; 224 B. 1; 225 B. 1; 226 B. 1; 227 B. 1; 228 B. 1; 229 B. 1; 230 B. 1; 231 B. 1; 232 B. 1; 233 B. 1; 234 B. 1; 235 B. 1; 236 B. 1; 237 B. 1; 238 B. 1; 239 B. 1; 240 B. 1; 241 B. 1; 242 B. 1; 243 B. 1; 244 B. 1; 245 B. 1; 246 B. 1; 247 B. 1; 248 B. 1; 249 B. 1; 250 B. 1; 251 B. 1; 252 B. 1; 253 B. 1; A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCLINATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

17 ORATHAM STREET, (CITY HALL SQUARE) NEW YORK, [Post Office Box 2323.] 125 SOUTH THIRD STREET, PHILADELPHIA. COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tackle," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 15 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 20 cents per line. Special insertions in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 30 per cent.; over six months, 50 per cent.

NEW YORK, THURSDAY, SEPTEMBER 10, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded. Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to meet and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will wander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisements of a business nature of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the delinquency of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Managing Editor. WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, September 11th.—National Sportsmen's convention, Niagara Falls, N. Y.—Seneca Lake regatta, Watkins, N. Y.—Trouting meetings at Reading, Pa., Boston, Mass., St. Paul, Minn., and Etna, N. Y.

SATURDAY, September 12th.—National Sportsmen's convention, Niagara Falls, N. Y.—Practice day, boat clubs, Harlem, N. Y.—Practice day, cricket and base ball clubs, Ninth street, Hoboken, N. J.

MONDAY, September 14th.—Trouting meetings at Kansas City, Mo., and Waverly Station, N. J.—Chicago vs. Boston B. C. at Boston—Athletic vs. Hartford, at Hartford.

TUESDAY, September 15th.—Cricket stallion race, Myrtle Park, Medford, Mass.—Trouting meetings at Mankato, Wis., Jamestown, N. Y., Pittsburg, Pa., Troy, N. Y., Des Moines, Iowa, Cleveland, Ohio, White Plains, N. Y., South Norwalk, Conn., Keeno, N. H., Burlington, Vt., Lancaster, Pa., Graham Village, N. Y., Peoria, Ill., Providence, R. I., Lawrence, Mass., and Norristown, Pa.

WEDNESDAY, September 16th.—Bowling regatta, Lake Sebago, Portland, Me.—Trouting meetings at Mankato, Wis., Jamestown, N. Y., Pittsburg, Pa., Troy, N. Y., Des Moines, Iowa, Cleveland, Ohio, White Plains, N. Y., South Norwalk, Conn., Keeno, N. H., Burlington, Vt., Lancaster, Pa., Graham Village, N. Y., Peoria, Ill., Providence, R. I., Lawrence, Mass., and Norristown, Pa.

THURSDAY, September 17th.—Trouting meetings at Florence, Ky., Mankato, Wis., Jamestown, N. Y., Pittsburg, Penn., Troy, N. Y., Des Moines, Iowa, Cleveland, Ohio, White Plains, N. Y., South Norwalk, Conn., Keeno, N. H., Burlington, Vt., Lancaster, Pa., Graham Village, N. Y., Peoria, Ill., Providence, R. I., Lawrence, Mass., and Norristown, Pennsylvania.

THE NATIONAL SPORTSMEN'S CONVENTION AT NIAGARA FALLS.

AS we are going to press the National Sportsmen's Convention is holding its meeting. It would be out of place did we anticipate the results. Let us sincerely trust that the convention will be the first to give proper and due attention to the great question of the preservation of game.

It is fitting that such a reunion should be one where acquaintance is made between all the various sportsmen in our wide section of country. But men have different tastes. The question of prowess or skill with a particular weapon is of course an important one. But giving this all weight, we are forced to consider pigeon shooting but in an unimportant light, and every way subordinate to the great object of the convention. It may be the fire works, the band of music, the excitement, the sensation, which tends to draw a portion of the audience. But certain men

in this good country of ours, as they follow the grouse in the prairies of the West, or track the deer over the mountains of the East, or who whip the floods of the North for trout or salmon, think less of their skill with gun and rod than of the future of the game. They ponder over thoughts of this kind: The beneficent Creator has peopled this world of ours with creatures which we are killing for our sport, pleasure, or profit. Shall we lavishly squander all this multitude of life He has given us? Are we to be selfish enough to slay and destroy ruthlessly, without let or hindrance, all that comes before us? Shall we not care for those who may come after us, in ten or twenty years? When age has stiffened our limbs, and our eyes are dimmed, so that then we must place in our children's hands the guns and rods which now delight us, and in our chimney corner must listen to the stories of field and flood told us by younger, fresher men, will there be that abundance of game we now see around us?

As far as the eastern and northern hunting grounds go, and even for a certain distance beyond the Mississippi, our game is becoming limited. We have arrived at that particular crisis, when we may expect to see, with each succeeding year, a diminishing quantity of game. Even the era of the perfect extinction of certain birds, beasts and fishes, can almost be foretold.

It behooves us, then, to make special and careful laws for the preservation of our game. So far such ordinances as have been passed were necessarily, from the spasmodic character of the Legislature, made without system or judgment.

We have advanced certain suggestions for a system of general game laws, founded on a perfectly rational and geographical plan, and endorsed by naturalists and the leading sportsmen of the country. We believe that if these laws are framed and carried out, by their means the game of the whole country will be preserved, and that litigation and trespass will cease. We have stated our points, clearly and fairly. Our object is to care for game, not only for to-day but for to-morrow and for all time. These laws have nothing capricious about them. While Nature is the same, while the identical birds, animals or fish dwell in certain geographical zones, we want the laws to be the same. The whole plan is simplicity itself, and is as easy of comprehension as it must be to carry out.

TYNDALL AND MATERIALISM.

IT is from the German *Vorstellungen Kraft*, or the ability to understand oneself, or from molecules, nodules, or conservative energy, that we are to seize the grand, the ever impenetrable secret of our being, past, present and yet to come? Professor Tyndall's inaugural address before the British Association for the advancement of science, powerfully as it is written, leaves us just in the same doubt as when Lucretius, Democritus, Epicurus, Socrates, Plato or Aristotle first grappled with human thought. Few men will understand the force of this paper, the strongest, strangest and most powerful production of the century. Many appreciating but half of the spirit of the address, will sneer at it and loose their tempers. A majority of people of timid temperament, to reverse somewhat Tyndall's own expression, "except if the choice be forced upon them, stagnation before communion; the stillness of the swamp, to the leap in the torrent," and refuse the mental effort necessary to work over the debatable ground, even deeming it irreverent to think over such subjects. If Mr. Tyndall pays a merited compliment to Professor Huxley's wonderful clear *openure* of Darwin's speculations, immense credit is due to himself for his lucid analysis of the theory of "selection," for it has never been before so sharply defined.

But after all, what does it amount to? Can the human mind ever discriminate between the self working molecules, independent of themselves, knowing no master, and the creative power which runs parallel with them? Can an apostle of this materialism in ages yet to come, count on more than a handful of followers? He who credits Tyndall with irreverence, takes up a weapon which recoils on himself. How grandly the greatest thinker of the age speaks of that innate reverence, which some (not all) men, possess. "There is," he says, "that deep set feeling, which since the earliest dawn of history, and probably for ages prior to all history, incorporated itself into the religions of the world. You who have escaped from these religions in the high-and-dry light of the understanding may deride them, but in so doing you deride accidents of form merely, and fail to touch the immovable basis of the religious sentiment in the emotional nature of man."

For ourselves, our mind refuses to accept the idea of molecular action independent of itself, and materialistic. We see in it the action and guidance of an immortal Creator, whom we reverence. No ostentatious song of triumph marks Tyndall's discourse. Its conclusion has a saddening strain in it, when he says: "And if, still unsatisfied, the human mind, with the yearning of a pilgrim for his distant home, will turn to the mystery from which has emerged, seeking so to fashion it as to give unity to thought and faith, so long as this is done, not only without intolerance or bigotry of any kind, but with the enlightened recognition that ultimate fixity of conception is here unattainable, and that each succeeding age must be held free to fashion the mystery in accordance with its own needs—then, in opposition to all the restrictions of Materialism, I would affirm this to be a field for the noblest exercise of what, in contrast with knowing faculties, may be called the creative faculties of man. Here, however, I must quit a theme too

great for me to handle, but which will be handled by the loftiest minds ages after you and I, like streaks of morning cloud, shall have melted into the infinite azure of the past."

DOUGHT SETTERS TO RETRIEVE?

From the programme of the Tennessee State Sportsmen's Association which lies before us, we quote:—

We return our thanks to the editor of the FOREST AND STREAM, whose valuable paper has given us great assistance in getting up our rules and scale of points. In one thing we have differed from him, *viz.* in not giving points for retrieving; and we will endeavor to show, briefly, one or two of our principal reasons for so doing. Having gone thoroughly into the matter, and discussed all the points, for and against, we decided as we have.

First: As two or three of our (thought to be) best dogs would have been withdrawn from the Field Trial, being non-retrievers, if we had allowed points for retrieving; and as the principal use of Field Trials is to find out our best dogs, and to breed to them for the purpose of improving the breeds of pointers and setters, we considered that the withdrawal of all non-retrievers would be a great blow to the chief object to be gained by Field Trials.

Second: It was considered that nine out of ten dogs would gain their points for retrieving too easily, and the result, though, perhaps, a better dog at all points than the winner, might lose the prize through failing to retrieve well, perhaps, no other dog in the field would have been able to do had it been his right to retrieve.

Third: And (this we think of great importance) we considered that it would, if taken as a precedent, create great dissension among the minority (certainly, we think) of sporting men, by ruling out a better dog at all points than the winner, might lose the prize through failing to retrieve well, perhaps, no other dog in the field would have been able to do had it been his right to retrieve. Fourth: And (this we think of great importance) we considered that it would, if taken as a precedent, create great dissension among the minority (certainly, we think) of sporting men, by ruling out a better dog at all points than the winner, might lose the prize through failing to retrieve well, perhaps, no other dog in the field would have been able to do had it been his right to retrieve. Fifth: And (this we think of great importance) we considered that it would, if taken as a precedent, create great dissension among the minority (certainly, we think) of sporting men, by ruling out a better dog at all points than the winner, might lose the prize through failing to retrieve well, perhaps, no other dog in the field would have been able to do had it been his right to retrieve. Sixth: And (this we think of great importance) we considered that it would, if taken as a precedent, create great dissension among the minority (certainly, we think) of sporting men, by ruling out a better dog at all points than the winner, might lose the prize through failing to retrieve well, perhaps, no other dog in the field would have been able to do had it been his right to retrieve. Seventh: And (this we think of great importance) we considered that it would, if taken as a precedent, create great dissension among the minority (certainly, we think) of sporting men, by ruling out a better dog at all points than the winner, might lose the prize through failing to retrieve well, perhaps, no other dog in the field would have been able to do had it been his right to retrieve. Eighth: And (this we think of great importance) we considered that it would, if taken as a precedent, create great dissension among the minority (certainly, we think) of sporting men, by ruling out a better dog at all points than the winner, might lose the prize through failing to retrieve well, perhaps, no other dog in the field would have been able to do had it been his right to retrieve. Ninth: And (this we think of great importance) we considered that it would, if taken as a precedent, create great dissension among the minority (certainly, we think) of sporting men, by ruling out a better dog at all points than the winner, might lose the prize through failing to retrieve well, perhaps, no other dog in the field would have been able to do had it been his right to retrieve. Tenth: And (this we think of great importance) we considered that it would, if taken as a precedent, create great dissension among the minority (certainly, we think) of sporting men, by ruling out a better dog at all points than the winner, might lose the prize through failing to retrieve well, perhaps, no other dog in the field would have been able to do had it been his right to retrieve.

Before giving the points in FOREST AND STREAM for field trials to suit American-bred setters, and allowing for retrieving as a special mark of merit, we wrote to some fifty practical field sportsmen, occupying the best positions in the several clubs in the United States, as regards the mode and style in which a setter should be hunted, and personally called on the most influential field sportsmen in New York and Brooklyn, requesting them to answer the following questions: Is it necessary for the setters to retrieve? Ans. Certainly, we want a dog that will save us the trouble of picking up and walking long distances after our dead birds. Would you buy a setter that did not retrieve? Ans. No; unless it was a young dog that could be taught to fetch.

The International field trial would never have ended as it did, if the English sportsman would have conceded points to our American-bred setters for retrieving. What is the object of destroying one of the greatest characteristics in the setter? The ancestors of this animal were retrieving spaniels, and it was their first propensity to fetch and carry. In England most of the gentlemen who patronize field trials state that the birds should not come in too close contact with the dog's nose, as it injures the scent. Suppose it does, which we are inclined to disbelieve. To talk plainly, the majority of our sportsmen do not wish to be bothered, nor have they the time, inclination or estate to keep a large kennel of dogs. As we have stated before in these columns, that what is required in our country for the field sportsman is a good all round dog, an animal that will be staunch on ruffed grouse, woodcock, quail and snipe; not that he would be particularly grand on either game, but his action, ranging and nose should be fair, and give help, amusement, and a medium bag to the shooter. When gentlemen talk of pedigree, blood, performance, grand high-headed action in the field, it is a very different kind of animal to the ordinary sportsman's dog (we should all wish to own this style of setter, but how few there are.) This dog on account of his rarity and great value, is only to be found in the hands of the careful breeder, and is usually kept wholly and solely as a stud dog or brood bitch. We should advise the breeder not to handle his breeders to retrieve, but when the progeny have been sold, it is the business of the field sportsman to train, break, and develop his retrieving qualities. The yearling of the above description should be thoroughly broken in on one long season's shooting. How many setters could be sold to-day, however well trained and broken, if they were deficient in retrieving?

The pointer we should never teach to retrieve as a rule, nor have we in these columns altered the English points for pointers at field trials.

Pointers as a general rule are or ought to be used for open field shooting only, as their delicate organization, (thin skin, slight coat, and having no hair between their toes, prevents them retrieving successfully through scrub oaks, thicket cover, swamps and water. Nine times out of ten a shooter will tell his pointer to charge after he has just fetched a snipe or cock out of a heavy watery swamp, to the contrary notwithstanding; the dog having comparatively little clothing will take cold. It is true that a high-bled pointer will go anywhere, but not without ill effects to his person, such as drawing blood and otherwise materially injuring his physique. We think it is quite sufficient for the pointer to stand his dead bird. Pointers do not make as good retrievers as setters for the reasons stated above, and moreover if most of the celebrated retrieving pointers be traced back one or two generations, it will very likely be found that the grand dam or grand sire was a setter, which will account for this inherent retrieving propensity.

In our next issue will be given a full and accurate account of the National Sportsmen's Convention, held at Niagara Falls on the 9th of September and following days.

CODFISH. FROM FULTON MARKET TO NANTUCKET SHOALS AND BACK.

[CONCLUSION.]

IF the daily consumption of fish in New York is estimated to be 200,000 pounds, it is some satisfaction for us to know that our catch of cod on the Blackford represents a small percentage of the quantity required, especially as Captain Redmond assures us that the fish are running large, though he tells us that when packed in ice there will be shrinkage of fully a third in the weight of the cod; so we have still plenty of work before us.

All our fish having been put away, and the decks of the vessel having been made as clean and neat as a housewife's dresser, we take supper and prepare to turn in. Our fare is excellent. The sea gives a huge appetite. There is a hearty welcome. If the conversation is not exactly Chatterfieldian, it has at least an honest Rabelaisian smack about it. Supper over, gears are mended, new hooks are gansed, and then Jack—great, big, lusty Jack—tells yarns on yarns with an exuberance of spirits, and a lavish amount of exaggeration. Then he sings, and we hear old nautical songs of seventy-five years ago: how the "Night-ingle" went to sea in the British channel, and never was heard of again, and how the Press gang carried off poor Jack, and left a disconsolate maiden to deplore his loss. Then we all turn in and sleep the sleep of the tired and the blest. We are at anchor, and though we roll about much and pitch no little, the writer and amateur cod fisherman knowing not what sea-sickness is, sleeps without waking until four o'clock next morning, when the voice of the skipper rouses all hands. We heave up the anchor and fishing recommences. Having struck deep soundings, we try our luck and catch very large fish. We now have an opportunity of examining the catch more critically. We readily appreciate two varieties of cod. The smaller are the muscle cod, distinguishable by their dusky brown color, while the shoal cod are larger fish, and are of a russet color, with distinct yellow spots, something the shade of human freckles. We catch now some of the largest cods on the trip; some will weigh fully fifty pounds. When a large one is pulled up now and then, the hold on the fish being slight, a gaff is used to bring the fish on deck. Now I see Jack has something to say which he can barely pull in. Captain Redmond sees it and goes to his aid, and tells us from the nature of the pull it is a halibut. The fish is humored, and the line is kept taut on him all the time. Gradually the fish is brought to the surface—he is gaffed, and a handsome seventy-five pound halibut flops on the deck. We look at it critically, and are struck by the parasites, the sea lice, that run round in circles on the white side of the fish. We are delighted at the catch, ichthyologically, because it is the first live halibut we have seen, and are pleased commercially, because a halibut is worth certainly eighteen cents a pound, while all a cod will bring is five cents, for we are fishing for business. It is a queer feeling, but not an unsatisfactory one to know that we are hauling up twenty-five cents or one dollar at every haul from thirty fathoms below. Halibut are caught in deeper water, however, than we are now fishing in, and earlier in the season. We ask Captain Redmond about the size of the very largest codfish he has ever heard of. He says he has no reason to doubt the fact of the Goliath of cods having been caught off Cape Cod, which, when dressed, weighed 112 pounds. We notice the food disgorged by the cod, consisting of crabs, star fish and a small narrow fish the men call "stripers." Some of the cod throw up squids. One of the crew takes a squid cast up by a defunct cod and catches a half dozen fresh fish with it. We observe that many of the middle-sized fish, those of from eight to twelve pounds, show scars and traces of recent contests. Some of the wounds are fresh, others are so old as to be almost obliterated. A fish must have wonderful plastic or recuperative powers, and has perhaps the power of growing fresh scales, just as human beings remake the epidermis. The question arises, "With what other fish had the cod been quarreling?" In some fish we notice that the bladders expanding suddenly—the pressure of the deep water having been removed—choke the fish. It strikes us, too, that wherever we move our fishing grounds haddock are caught more plentifully for a while. Then the cod come in, and we catch no more haddocks. We do our best to strike a balance between the cod and haddock, and think the latter are in about the proportion of ten per cent. We watch the movements of each particular fisherman and make up our mind that after Captain Redmond, Clark, the Nantucket man, is the most expert of all the crew. We recall old Oppian's lines descriptive of the model fisherman—

"First be the fisher's limbs compact and sound,
With solid flesh and well-braced sinews bound;
Let due proportion every part command,
Nor leaness shrink too much, nor fat distend."

We do not mean to say that our Nantucket fisherman follows exactly Oppian's *signalement*, but his movements are worth noticing. His action is automatic. Overboard goes his gear, and while the lead sinks he opens his half dozen claims. Then he clutches the line with his left hand, secures a little, feels the nibble, gives the jerk, fastens the fish, brings in the line swiftly hand over hand, nubboks the fish, slings him in the bin, rebats, and so over and over again, with a kind of military one, two, three motion, and never moves an inch out of his tracks. Frequently two fish come on deck. Notwithstanding sore fingers, we go for cod once more, catch a dozen or so fine fish, interspersed with an occasional dog fish, then we give it up, with an elegant blister on the index finger of the right

hand, and a cushion-like puffy swelling of the ligatures on the back of the left hand. We are not singular in this respect. Our companion from Syracuse, though game, gives up cod-fishing for that day, after a noble struggle. Captain Redmond, imperturbable, keeps on pulling in the cod, remarking, however, that "his hands will be sure to be sore and stiff before he is through with the fish."

While we fish, the mist thickens, and we are in a bank of fog. Foggy weather is a constant element on the banks. All the winds coming from the south bring fogs, though the northerly breezes disperse them. We hear yelling in the distance, and presently the noise coming from a spirited performance on a tin pan. Evidently there are other fishermen in the neighborhood; one loves to have company on the high seas. By and by the fog drifts, and we see some four fishing crafts around us, all hard at work. Just as Captain Redmond is about telling us who they are, and where from, the fog curtain drops once more, and we cannot see a boat's length before us. Twice on the second day we fill the fish bin three quarters full, and then cease fishing for the day. We plunge our hand into the belly of a fish, just eviscerated, while almost alive, and are amazed to find how cold it is, and we regret not having a thermometer with us. As the entrails and livers are thrown overboard flocks of gulls swoop into the water after them, and chatter, squawk and quarrel over the food, and drive off the stormy petrels. Strange sea-weeds float past the craft; one kind particularly attracts our attention. It is shaped like an elongated oak leaf, and is russet in color, but what is curious about it is, that it is ornamented with bosses placed at regular intervals. Now and then we pull up from the depths below those strange organisms called sea-potatoes, or man-heads, so well described by the wise men at Noank, and our correspondent "Piscoc." Sometimes we find this curious growth of the seas inside the cod.

We fish with very good luck for three days, until we catch some 2,200 fish. When the fishing is very lively we call up the cook, who gives his valuable aid. Now a cook on a fishing craft, to nautical and fisherman qualities, must combine the highest culinary attributes. While we eat dinner he must steer. At some stage of their lives all fishermen are cooks on snacks.

At last all our four ice-houses are full, and we leave up anchor once more, and with a cracking breeze make for old Sankaty Light and Nantucket, where we come to outside of the bell which booms on the bar, and land our Nantucket haul.

It is worth while to mention here the thorough discipline and attention to all details which are found on a smack like the Blackford. The captains of all of the fishing crafts have to be thorough seamen, and to be acquainted with every nook and corner of the coast, and the hands have to be fully up to the mark. Sails are frequently trimmed, and every square foot of canvas made to do its work when occasion requires it. The craft we sail on is the fastest of the New York fleet, of which Messrs. H. C. Rogers & Co. own a little flotilla of at least a dozen, and these gentlemen pride themselves on the sailing qualities of the Blackford. We easily overhauled anything that sails, save the high flying yachts. Sometimes a knot or so made in a day's sail makes two cents or more difference to the advantage of the skipper in the price of his load.

Wages on the snacks are \$30 a month for the ordinary hands, \$45 for the mate and \$40 for the cook. What with interest on the cost of the vessel and wages and incidental expenses, such as of ice, bait, &c., it must cost to run the Blackford fully \$450 a month. The duration of a trip to Nantucket shoals and back being somewhat over two weeks, the margin of profit, even with cod at five cents a pound, when commissions for selling are considered, is not large. When off Sandy Hook in the winter, cruises are longer, occupying three weeks. The fish then caught are put in the wells and brought alive to market. For this purpose the Blackford has a well running across her at midships from side to side. The sides of the vessel being bored with holes allows the water free entrance and exit.

From Nantucket bar we take an eight knot breeze at sundown; by day break next day make the Little Gull Island, and by ten o'clock are through Plum Gut. Then comes a dead calm on the sound, and we float along in a lazy lotus-eating style for fifty hours, until in the evening, just off Glen Cove, comes a pleasant breeze. We hoist all sail, tackle everything, pass sloops, schooners and brigs, nor does a rain storm stop us at Hell Gate, which Captain Redmond gets through as neatly as if it was a straight and easy channel. By eleven o'clock we drop anchor off the slip of Fulton market, and in a half hour more are snugly moored stern and stern in our berth ready for market. We bid our gallant Captain good-bye just as old Trinity strikes midnight, and leave the Wallace Blackford with regret, for we have had two weeks of the purest enjoyment, and have made some kind friends. When returning now to the city for our day's work we always cast a longing look into the Fulton ferry slip to see if our dashing little schooner is back again. When we found her gone one morning, once more for the shoals, it seemed to us that something was wanting, so much had a fortnight's of cod-fishing with Captain Michael Redmond endeared the Blackford to us. Codfish may be very prosaic things, but in pleasant company there is nothing more enjoyable. We trust some of our readers next season will try the pleasures of a trip from Fulton Market to Nantucket shoals and back after cod.

—The New York State Agricultural Society will hold the thirty-fourth annual Cattle Show and Fair at Rochester on September 15th, 16th, 17th, and 18th. We thank James Geddes, Esq., for courtesies.

DEATH OF DR. J. H. SLACK.

IN the last number of our paper we reproduced what had come to us as a painful rumor—the report of the death of Dr. Slack. It is with regret that we announce his demise. Dr. Slack died at Bloomsbury, N. J., on Thursday, August 27th.

Conspicuous by attainments enriched by travel, Dr. Slack was among the first to seize on the general natural facts which underlie the science of pisciculture, and, when it was almost unknown in the United States, labored long and diligently to introduce it into this country. Gifted with literary talents, and a scientific knowledge of the highest order, numerous contributions from his pen have enriched contemporaneous journals. At the time of his death Dr. Slack filled the important position of Fish Commissioner of the State of New Jersey. One who admired and appreciated Dr. Slack writes to us thus feelingly about him:—

Dr. John Hamilton Slack, aged about thirty-eight or thirty-nine years, died at his residence, Troutdale, near Bloomsbury, N. J., on the 27th ult., of pneumonia. Even in boyhood he evinced a love for mechanics and the sciences, constructing a small steamboat when quite a lad (the boiler being a coal scuttle), and ran it on a mill pond near his mother's country residence in the vicinity of Bordentown. He graduated with honor at the Pennsylvania University, and commenced the study of medicine in which he excelled as a student in anatomy and chemistry. In the latter science he afterwards, when not over thirty, became professor in one of the Philadelphia medical colleges. A knowledge of any subject to which he turned his attention came to him as if by intuition. When not over twenty he was a composer of music, and his variations on "Dionis Sweet Home," and some of his waltzes, are still extant and popular. He was a good amateur printer, a good mechanic, especially on little work, a fair photographer, and a good prestidigitator, giving exhibitions during the war for the benefit of the soldier hospitals. His knowledge of its minutiae was extensive and varied. His specialty as a mammalogist was that of the *Quadrumanus*, and his collection of monkey's skulls was one of the largest private ones of the kind in the country. He was a man of restless activity, never appearing to need repose, and his labors at the Philadelphia Academy of Natural Sciences, when scarcely out of his minority, were wonderful. He was a master of various important zoological communities, and he made a comprehensive catalogue of the museum, which no other member would undertake, delighting in organizing and arranging in any way. He was the first librarian of the Philadelphia College of Physicians. He was a good linguist, both in ancient and modern languages, was a connoisseur and collector of old books, and before he was twenty-five had been an observing traveler in Europe and Africa, spending more than a year in Turkey, Egypt and the Holy Land. His first abroad was to study monkeys at Paris, which occupied nearly a year. Since 1867 he has lived at Troutdale, being engaged in pisciculture, or "lichty-ottery," as he called it, disliking the sound of the Latin appellation for this science. During the winter of 1873-4 he rendered important service as assistant United States Fish Commissioner, catching some half a million of California salmon eggs at his establishment, and distributing the fry among the waters of the Middle and adjoining Southern States. The Doctor was given to controversy, verbal and in newspapers, but his amiability, originally, and his eccentricities precluded the possibility of any man becoming his enemy. His death comes as a great shock to all who knew him, and all regret that so brilliant a mind should have gone out when the time of life appears to be but half run. He was formally announced at a meeting of the Philadelphia Academy of Natural Sciences on the evening of the 1st of the present month, and resolutions of regret and condolence with his family were passed. N.

—We call particular attention to the Fismen Shooting Tournament, to commence at Toronto on Tuesday September the 22d, under the auspices of the Toronto Gun Club and the Junior Gun Club. Over \$1,000 will be given in prizes. The attractions will be numerous, the Canadian Grand Provincial Fair being held at Toronto on the same day.

Sporting News from Abroad.

THE EVE OF ST. PARTRIDGE.

[FROM OUR SPECIAL ENGLISH CORRESPONDENT.]

THE sportsmen in the North have had to put up with cold and stormy weather, small bags and wild grouse. The ravages of disease and the bad effects of driving birds are almost universally apparent. I notice, however, on the Castle Carr moors near Halifax, that there was a pleasing exception to this distressing rule, and had it not been for the wet and boisterous weather, no doubt 400 brace would have been killed on the first and consequently best day. As it was, a party of fourteen guns, including Lord Lilford, Lieut-Col. Sir H. Edwards, Col. Egerton Leigh and Sir Henry Wilmot, bagged 287½ brace, and in the first five days the total amount killed was 905 brace, notwithstanding wind, rain and fog. Black cock shooting began on the 20th, but I have not heard that any extraordinary number have been killed. They are of course much scarcer than grouse, and the hens or heath pullets lie closer, though an old black cock is a very crafty customer to deal with, and taxes both dogs and sportsmen to the utmost. In the South of England, on the heath country, I have seen a considerable number of these moor game killed, and undoubtedly we should have the grouse there too if we only had enough of the Scotch heather, on which they feed. The Dorsetshire heath is far prettier and of a richer purple color, but though I go into raptures about it when I am sketching in water-colors, yet I would willingly exchange it for its more sober tinted rival, when I am behind the pointers. But after all the whiskey and driving, kilts and tartans, gillies and scenery of the moors, give me a day amongst English turpins and partridges, and I shall be better pleased than if I had shot my gun red hot in the North.

We have had out the team twice a week for the last months, besides giving them three drilling in the spring, and though we don't enter them at field trials and pull them in the papers, I know that they can find birds, stand to them and go at a rattling pace, and more I don't require. To please me a dog must be fast and tame tolerably wide. I don't like a "pothunter's companion," who is afraid to gallop for fear of putting up his game. I would rather see

a dog dash right into the covey and put it up any day, if he at once recognises his mistake and drops, then creep up to it and then be uncertain. But my setters seldom put up their birds, for they are not deficient in nose, and unless the scent is very bad I can kill as much to them as to a slow team. The first thing to do in breaking a dog, be it setter or pointer, is to make him drop to hand, and turn to whistle, and if he will do this he is more than half broken, and I will make him "back," "point" and drop to shot and wing in two days if he has a drop of blue blood in his veins. But whilst the dog is the "right sort," the breaker must also have patience and perseverance, and with these two qualities, provided his brains are superior to batter pudding, he can, as Lord Minto's keeper did, train a pig to find birds. To break a retriever is not so difficult as to break a setter, though it depends a good deal on the individual dog's temperament. I saw an ingenious plan the other day for teaching a dog how to dive, which ought to have been patented, and I'm not sure that it wouldn't have paid better than an atmospheric churn or a cucumber slicer. The old plan of weighting a cork till it floats in mid water, has its good points, but very often a dog that has been taught to fetch sticks and corks will most annoyingly bring sticks and stones when sent for a bird. This invention was a very simple one, and consisted of a swan's wing, (any large wing would do,) stretched out straight and stiffened, the feathers at the end only being left, and a small weight in the shape of a piece of old iron being attached where the wing was cut off from the body. A cord was fastened to this piece of iron, and one end of the cord held in the keeper's hand. Taking the wing by the tip, he swung it round his head and threw it from him the whole length of the string out into the lake, upon the edge of which they were standing. The weight caused the wing to float perpendicularly, its white tip just appearing above the water. We went in a dog who was mad for the water, but had no notion of diving. He at once made for the swan's wing, which was some thirty yards out, evidently thinking he had nothing to do but to fetch it. When he got within snapping distance, Galtou, the keeper, pulled the string, which of course caused the wing to go beneath the water. "Sailor" plunged his nose in after it up to the eyes, sneezed plaintively and wondered where it had gone to. Suddenly it appeared again just in front of him, as we relaxed the string. He wildly plunged at it and missed it as before, and next moment it was sailing along a yard in front of him. The dog's blood was up, and jumping at it, and missing it again, he evidently saw it below him and dashing right under he followed it up too quick even for us, and brought it to shore with great triumph. He had previously shown no inclination to dive, though always taking well to water.

There is an article in this week's *Field*, written by "Idstone," descriptive of the proper setter for America. [We will reproduce it.—Ed.] Though, as he says, it is not the particular breed of setter, but the individual dog which will suit. With regard to retrieving setters he says:—"It is a common opinion—indeed it is my opinion—that you imperil the staunchness of a dog upon his point, if you let him roam a running bird, overtake and retrieve it, though a good deal depends upon the man himself, and unless the sportsman is thoroughly at heart a lover of the dog, he is very much tempted to 'He on' his dog, directly he has shot or crippled a bird, and to do so is ruin to the dog." "Idstone" also says the American setter should, for cover shooting, have a good deal of white about him, so as to be easily distinguishable, but he does not speak very favorably about using setters in cover, though acknowledging that the American sportsmen who do shoot over them in cover are second to none. My own idea is that nothing is allowable in cover but good spaniels or even some broken-haired terriers, if spaniels are not to be got. A setter passes an immense amount of game in cover, his coat and skin are ill adapted to stand the thorn, and he is too long on the leg to creep under briars and rout out setting game. Besides all this, if he gets a point you lose him, and his high ranging and turn of speed do not serve him. He must go slow and can't "go for the wind."

As far as partridges are concerned I think we shall have plenty of them, as I have seen coveys of 12, 16 and 20, and the young birds are strong and healthy. The use of the machine for cutting corn is undoubtedly very injurious to ground game, as the barley and wheat being cut from the outside and a ring being thus formed, the unfortunate hares and rabbits have no chance to escape, and are mobbed with sticks by the farmers and laborers. It frequently happens, too, that the partridges have their nests in the grass which is laid up for hay, and being "mown out" where the grass is, many eggs are broken and destroyed.

George Frederick, the Derby winner, still holds his own as first favorite for the St. Leger, but I fancy the mare Apology will pull off the great event, as mares run better in the autumn than in the spring. It is rumored that the Duke of Richmond is to be prosecuted "for allowing betting on the Goodwood course," under the new act for its suppression. This is indeed a farce, as the Duke and Captain Valentine did all they knew to prevent ready money transactions taking place.

Horses are now so extremely dear in England that I think it well worth the attention of horse-owners in other countries, with a view to shipping horses for England. We have a confused notion here that in some parts of the American continent, magnificent mustangs with all the breeding of a thoroughbred can be caught on the prairies or purchased at the all round price of a dollar a head, ready broken. If this be so, and is not the creation of novelists, I seriously think

that it would pay well to export a few, at all events it is worth trying by some of your wealthy speculators. I can tell them where to dispose of them, and indeed, it is impossible to get a hack of any sort under seventy or eighty pounds, and the same sum is given for cart horses, whilst a park action ladies' horse is worth 150 guineas, and a pair of carriage horses at least £300. You can't buy a pony under £25, whilst a year or two ago eight sovereigns would produce a good one.

[Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that we are unable to particularize where we could do no less than publish three entire sections devoted to the kinds of game in question. This would require a great amount of our space. In designing game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, one attends to assist them will only create confusion.]

GAME IN MARKET.—No change in woodcock; coming in scattering from various localities. Birds seen in fair order. About an even quantity of young and old birds. In demand at \$1 75 a brace. Ruffed grouse (market partridge) said to come from Iowa, but we did not look at the express receipts. Not very prime birds, selling at \$1 75 the pair. Pinnated grouse (prairie chicken), very fair birds now on sale, and plentiful; worth \$1 00 the brace. Reed birds poor in condition, and the rails look starved. Bay birds poor. Game generally not in very lively demand as yet.

—Mr. J. Dolcibus, Secretary of the Excelsior Sporting Club of Brooklyn, was one of a party of three members of that club, who recently made a trip to Sullivan and Wyoming counties, Pa. He reports deer plenty in the mountains; bears and wild cats were occasionally seen, and squirrels were abundant. Trout fishing was rather poor. He recommends Jerry Hunzinger as a reliable guide. Beard can also be obtained at \$4 per week.

—Several flocks of bay snipe and curlew were on Burgett meadows last week, and on Tuesday several sportsmen report good bags. Captain Joseph Predmore killed thirty king rails or "mud hens" on the marshes of the inlet. Black duck are swarming to the bay by hundreds.

—Our friend and co-worker, "Oilpod Quill," who is as ready with the gun as with the pen, reports bagging a number of marsh larks, and two dozen upland plover last week in the marsh shores of Scituate.

REPORTS OF PINNATED GROUSE.

—From correspondence received during the week we collate the following:

CHICAGO, September 5th.—Pinnated grouse in this vicinity are very scarce; a shooter for every bird almost. More plentiful in other portions of the State.

LEROY, ILL.—"Grouse shooting has not been good here so far this season, on account of the dry weather—there is no shelter in the stubble for grouse, and they are only in the stubble early in the morning, and quite late in the evening. We have no good shooters among us, and can give you no good scores to east your optic upon; however, we are soon to organize a shooting club, and you shall hear from us. Quails are plenty. There is thought to be five to one of last season."

IOWA.—Large quantities of pinnated grouse are being killed; the birds are fine and in good condition. The law prohibiting the shipment of more than one dozen grouse per man, per day, proves a great benefit. S. H. Terrill, of Chicago, who has just returned from central Iowa, reports extraordinary success in quantity and quality.

WISCONSIN.—Game is reported rather scarce. Ruffed grouse and quail can be shot on and after the 15th of September until January 1st. We hear of no large bags at present, except from two sportsmen from your city, who killed 122 birds to two guns, over two brace of pointers.

MINNESOTA.—Prairie chickens (pinnated grouse), are very abundant, and in fine condition; no disease of any kind has been noticed among the birds. Sportsmen from all parts of the United States, and not a few from England, are having grand sport. Some large bags were made in the neighborhood of Albert, Lea, and Brainerd counties.

—The Kennicott Club of Chicago are represented at the national convention, Niagara Falls, which is now in session, by the following gentlemen: Abner Price, J. J. Kleinman, H. W. Baldwin, J. H. Whitman, T. J. Higgins, J. F. Whiting, George C. Sherman.

—Our kind friend and correspondent, F. D., of Cedar Rapids, complains that the dry weather has somewhat interfered with chicken shooting, making the hunting party too thirsty. However, one party of six, at Maynard, shot in four days, 400; another party, at Green's, killed 290 birds, but the weather, being too warm, the dogs gave out for want of water. To show how dearth of water affects dogs, F. D. says: "O be afternoon I was at Washington, in this State, with a blue and white setter bitch, two years old, with a splendid nose, when I found a sough of three ears, with three or four inches of water. I knew there

were chickens there, for a covey of nineteen was flushed by the dog of a gentleman who was shooting with me. The fact was that the dog did not know that they were there, because he could not scent them, and yet he was as true a dog as a man ever owned. It was no use to scold. I knew there was water there, so down to it we went; it was only one hundred yards from where we stood. The chickens when flushed would go clean out of sight, down to the slough. We went there, but could not get a shot at one. Kicking around in the grass, I caught two birds with my own hands. We rested there forty minutes, dipped our handkerchiefs in water, and sopped it on our dogs, and cooled them off. After that the fun commenced. We only left after we had shot fifty-three chickens. So you can see how the heat affects dogs. Pointers do better here, but our shooting is principally duck shooting, or net shooting.

—An ardent sportsman at Peoria, Ill., just on the eve of preparing for chicken shooting, having read the commination of "One Who Shoots with His Eyes Open," in regard to paper or metallic shells, writes us as follows:

"A paper shell does all the work for me that a metallic shell has done. I was prejudiced against paper and used metallic only, but found some who not. I found, too, when loaded, as they were burdened very careful, and if a Black's vest, that the wad that was on the shot was not there, and if you didn't find the wad near the mouth of the shell you could find it out entirely and the shot with it. I found also quite frequently that when discharging one of my barrels the other metallic shell would look after, and I was convinced that it wanted attention by hearing the shot rattling along the barrel as I walked along, all of which things are very unpleasant when you have your pocket at home or in camp. The paper shell does away with all this annoyance, besides displaces a great deal of unnecessary swearing and dog ponding. The improvement, and the only one I think the paper shell needs, is a finishing iron down (without loss of strength) in some way, so that a No. 10 shell will take a No. 8 wad, at least so long as gun says—and I am not an exception, I guess, among your numerous weekly penmen."

[We shall be glad to hear from P. C. W. again, and learn how the chickens are in Fulton.—Ed.]

PINNATED GROUSE VS. RUFFED GROUSE.—A correspondent in Philadelphia asks us the reason "why less shot should be used for pinnated grouse shooting than for ruffed grouse?" We answer: Pinnated grouse (prairie chicken) at the beginning of the season, say August 20th, are mostly in packs, and in many instances are not full grown, and unable as it were to take care of themselves. In a week or so when the pack or brood disperse, each seeking its own livelihood, they are stronger on the wing, but never even in their most natural climate and soil, have they the power to propel themselves through the air at anything like the speed of the ruffed grouse; besides pinnated grouse shooting is almost invariably in the open.

Ruffed grouse is the most powerful and different game bird to shoot and kill known to our field sportsmen, as they are nearly always shot in close, thick covers, and they must be killed in order to be bagged.

The theory of using large shot for field shooting, like the illusion of using fine powder, is exploded and a thing of the past. The great secret in shooting and killing game is to throw a fair size shot according to the strength, size, and rapidity of flight of the bird, with terrific velocity. The chances of killing one, if you use No. 8 shot, taking the average of shot manufactured in the United States, as the St. Louis shot have nearly 100 more pellets to the ounce in No. 7 and 8 than the New York shot, would be as 423 is to 295. Some years ago we loaded with 3's for geese shooting, with but poor success; now we charge the gun with single 1's, and think No. 1 is large enough. Formerly duck shooters used 3's, now 5's and 6's are common. For ruffed grouse, at the beginning of the season No. 8 is used, in November, No. 7, with half a drachm more powder, making four drachms. Pinnated grouse when in packs, No. 8, when wild, the wind blowing and later in the season, No. 7. Quail, No. 8; July woodcock, No. 10; fall woodcock, No. 9; spring English snipe, No. 10; fall English snipe, No. 9.

—We had the pleasure of a visit from Mr. P. G. Sandford, who showed us a magnificent breech loader, a *chef d'œuvre* from the hands of W. C. Scott & Sons. Bore 10, length of barrels, fine laminated, 20 inches. Mouldings of locks in superb style. The heel plate of the gun was of horn, chequered, as all guns should be made. We have rarely seen a finer gun, nor one more beautifully balanced. An amateur gentleman shot of New Jersey, killed thirty-six pigeons in succession, on Wednesday last, with this gun.

—Sportsmen in Nova Scotia must bear in mind, says the *Antwerp Gazette* of N. S., that an act was passed at the last session of the local legislature "for the preservation of useful birds and animals," also that the Game and Inland Fishery Protection Company has arranged to prevent infringements. The act requires that during three years commencing Sept. 1, 1873, no person shall kill moose or hare, or expose for sale, a moose or any part thereof; and that between the first of January and first of October no person shall take, kill, sell, buy or have any woodcock, super, blue-winged duck or teal; and that no woodcock shall be killed before sunrise or after sunset.

CREEDMOON.—The usual amount of practice took place at Creedmoon during the last week. "The American team had two good days' work, in which very fair shooting was done. The coaching on Saturday last was excellent. We have not thought it necessary in all cases to append the scores. Our motives are not to be imputed to any desire of "holding back our hand." In some cases, some of our leading shots, desirous of testing certain experiments, may have made poor scores, which to outsiders may have seemed as if some of our best marksmen were deteriorating.

OFFICE NATIONAL RIFLE ASSOCIATION, 50 NASSAU ST. N. Y. NEW YORK, SEPTEMBER 18, 1874.

EDITOR FOREST AND STREAM:

The Board of Directors of the National Rifle Association held their regular monthly meeting, Col. Church in the chair.

There were present General Sibley, McMahon, Melhous, and Knox, Col. Church, Wingate, and Gildersleeve, and Lieut. Story and Capt. Cascy.

The minutes of last meeting were read and approved. Treasurer's report submitted, and on motion referred to Finance Committee.

Range Committee reported much progress in the improvements upon the range.

Prize Committee reported progress, and submitted badges made for employees, which badges, on motion, were adopted, and employees directed to wear same.

Offered by Col. Wingate—Seconded and carried:

Resolved, That the annual annual meeting of the N. R. A. be held at Creedmoor, J. I., on September 29th, 1874, instead of September 22, as heretofore appointed.

The Committee on Programme submitted a programme, which was approved and adopted, and the Secretary was directed to have the same printed and distributed in such numbers and manner as his judgment might direct.

On motion, the chairman of Programme Committee was directed to confer with Adjutant-General Rathbone and obtain his approval of said programme. It was then—

Resolved, That the general charge for the admission of persons not members of the Association to the range at Creedmoor, on and after September 30th, 1874, be twenty-five cents each, except on the day of the International match, when the admission should be fifty cents to each person not a member of the Association.

On motion the Range Committee were authorized to employ such additional assistance upon the range as in their judgment might be necessary. Seconded and carried.

Col. Wingate offered the following:

Resolved, That this Board most respectfully request General Alexander Shaler to act as executive officer at the annual prize meeting in September, and assume all the duties appertaining thereto; that if request Gen. John B. Woodard to act as staff clerk officer, and that if request Gen. E. S. Moulthrop to assume the charge of the Finance Department. Seconded and carried.

Offered by the Secretary—Seconded and carried:

Resolved, That in the matches by regimental teams, where teams are required to use the arm with which the regiment they represent is equipped, said arm shall be used in the condition in which it was issued to the rights, and that the use of no arm be permitted that has had its lock in any way tampered with, by filing or otherwise.

The above is the principal business transacted, which I respectfully submit for your examination.

HENRY A. GILDERSLEEVE, Sec'y N. R. A.

—Col. Wingate has received a letter from H. R. Foster, Honorary Secretary of the Irish Rifle Association, giving the names of the following ladies and gentlemen forming the party who will accompany the Irish team on the steamer Scotia, which was to leave Queenstown on the 5th:

Major A. Bienenhuesel, Lieut. Captain of the team, Mr. J. K. Miller, Mr. John Kirby, S. M., Mr. S. Wilson, Edward Johnson, Captain P. Walker, J. B. Hamilton, M. D. & J. A. Doyle, F. P. C. Oxford H. H. Foster, Honorary Secretary Irish Rifle Association, John J. Kelly, John J. Bagnall, Mr. Waterhouse, the Right Honorable the Lord Mayor of Dublin, M. P., Colonel the Viscount Massereene and Ferrard, Alderman Manning, Miss Manning, the Viscountess Massereene and Ferrard, the Countess Lady Moyne of Dublin (Miss Brooks), Miss Hamilton, Mrs. W. Waterhouse, Miss Kelly, Mrs. Rose Kelly, Miss L. Southwick, Edward Burke Kelly, Captain McAlmullen.

ONTARIO RIFLE ASSOCIATION.—On the 1st this excellent Association held their annual match, Lord Dufferin taking the first shot, when he made at 200 yards a creditable centre. The All Corners match was the first on the programme. Ranges 200, 500 and 600 yards; five shots; won by Private Bell, with a total score of 51.

On the 2d the ladies' challenge cup was won by the Dufferin Rifle Club with a score of 151. Col. Mitchell made 19 points, five shots at 500 yards, of aggregate scores at 300 and 600 yards. D. Sutherland was the winner—score 35, at 300 yards. Private Sharon won with a score of 19, for the battalion match, winning the merchant's trophy; the Thirteenth Battalion made 809 points. The Twenty-second Brigade won the Tait cup—245 points. Gnaner Crowe with 83, Capt. White 37, Major Cotton 40, were the winners of the District matches. Matches not yet concluded.

Yachting and Boating.

All communications from Secretaries and friends should be mailed not later than Monday in each week.

HIGH WATER FOR THE WEEK.

Date.	Boston.	New York.	Charleston.
Sept. 10.....	11 28	H. M. 8 30	H. M. 7 28
Sept. 11.....	11 28	H. M. 8 30	H. M. 7 28

Sept. 13.....	11 28	H. M. 8 30	H. M. 7 28
Sept. 14.....	11 28	H. M. 8 30	H. M. 7 28
Sept. 15.....	11 28	H. M. 8 30	H. M. 7 28
Sept. 16.....	11 28	H. M. 8 30	H. M. 7 28

—The full regatta of the Williamsburgh Yacht Club took place on Tuesday last, the course being from the anchorage off the club house at Greenpoint to and around Stepping Stones buoy and return, a distance of about twenty-four miles. The yachts, which finally took their position in line for the start, were as follows:

Name.	Owner.	First Class.	Feet.	Decks.
Melvina.....	Abajah Barker.	40	04	
Viola.....	Schmidt & Martin.	37	08	
Janet.....	Wm. B. Rogers.	34	01	
Evieken Allen.....	Wm. Allen.	34	01	
SECOND CLASS.				
Kate.....	Berard Silverman.	33	06	
Sorceress.....	Wm. B. Rogers.	32	04	
Alohaan.....	G. Rowing.	31	02	
THIRD CLASS.				
Favorita.....	Wm. Smith.	31	00	
Nettie.....	Wm. B. Rogers.	28	04	
FOURTH CLASS.				
John L. Linsler.	Andrew J. Brush.	21	08	
Edison.....	Wm. B. Rogers.	20	04	
Rosina.....	Wm. B. Rogers.	19	10	
Contrary.....	Wm. B. Rogers.	16	10	

The allowance of time for yachts of all classes was a minute and a half to the foot. The prizes were a champion

penant for the first yacht in, regardless of class, a piece of plate for the winner in each class on time allowance.

At 10:37 the preparatory signal was fired, and five minutes later the smallest class started. The other classes followed, according to size, after intervals of five minutes. The wind was blowing a good whole sail breeze from the N. N. E., and the tide was the last quarter of the flood. All the yachts were permitted to slip their cables, most of them, coasting on the starboard tack, stood out into the strength of the tide, and then flattened at. The yachts outed themselves with plain sail, with the exception of the Kate and the Allen; the latter, however, did not carry her topsail long, as her peak halliards parted soon after starting. As the committee steamer overhauled the different classes, the Janet was seen to be leading the Melvina and the Viola, and her lead was increased by the stupidity of a tug boat which put the Melvina about. At the east end of Blackwell's Island the next class appeared, the Sorceress leading, but hard pressed by the Kate, who had the Callahan some little distance astern. As the next class was neared, the Orient was seen to be leading the Favorita and Nettie. Steaming along after the little ones, they were overtaken almost at the Brothers, the Lanthier being closely followed by the Contrary and the Pidgeon. The three halliards of the Lanthier parting just here, she was left a long distance astern before they were again roused off. Going for the buoy off Fort Schuyler, the yachts were able to start sheets a little, and show some light sails; after passing, however, they were once more punned hard on a wind. The Orient now led the whole fleet, followed by the Contrary and the Favorita, the rest some distance astern. Rounding the Stepping Stones buoy, the yachts were timed as follows:

Name.	H. M. S.	H. M. S.
Orient.....	12 38	12 30
Favorita.....	12 47	12 40
Melvina.....	12 50	12 50
Nettie.....	12 57	12 52
Janet.....	12 57	12 54
Kate.....	12 58	12 54

The run home was enlivened by the close work between the Orient and the Favorita, sometimes one leading and then the other; eventually, however, the Orient obtained the lead, finishing the winner of the champagne pennant and the prize for her own class. The following is a summary of the race:

Name.	Start.	Finish.	Corrected Time.
Melvina.....	10 57 00	3 10 24	3 52 30
Janet.....	10 57 00	3 11 00	3 51 00
Viola.....	10 57 00	3 10 55	3 51 55
Evieken Allen.....	10 57 00	3 10 50	3 50 50
SECOND CLASS.			
Sorceress.....	3 07 00	6 02 00	6 02 00
Kate.....	3 07 00	6 03 00	6 03 00
Alohaan.....	3 07 00	6 03 00	6 03 00
THIRD CLASS.			
Orient.....	3 48 00	6 57 00	6 57 00
Favorita.....	3 48 00	6 58 00	6 58 00
Nettie.....	3 48 00	6 58 00	6 58 00
FOURTH CLASS.			
Pidgeon.....	3 54 00	7 04 00	7 04 00
Lanthier.....	3 54 00	7 04 00	7 04 00
Keelson.....	3 54 00	7 04 00	7 04 00
Contrary.....	3 54 00	7 04 00	7 04 00

The prizes for the first, third and fourth classes were awarded to the Melvina, Sorceress and Pidgeon respectively.

—The Scawanhaka Yacht Club have another regatta on Saturday next, the 12th instant, the prizes for the successful yachts upon this occasion being presented by the ladies of Oyster Bay, and consist of a set of silk signals for the winner in each class. This regatta is partially Corinthian, the club regulations compelling the owner or some member of the club to steer each competing yacht. We hope to see other clubs fall into the wake of the Scawanhaka in this matter of Corinthian sailing.

The yachts X. Buekkie, and John N. Lanthier, both of the Williamsburgh Yacht Club, have a race on hand for two hundred dollars a side, to be sailed on the 15th inst., from the club house, at Greenpoint, to and around the buoy off the Stepping Stones and return—Time allowance according to the rules of the Williamsburgh Yacht Club.

—The Ariel, Commodore Swan, and the Idler, Rear Commodore Colgate, have just returned from their cruise along the coast of Maine.

—The schooner yacht Meta has had her sail area somewhat reduced. It is reported that she is to sail a match with the schooner Comet this fall.

—The regatta at New Rochelle on Sep. 6th, presented a lively scene. Six prizes were offered to sloop and cat-rigged boats of all dimensions, to sail from a point in Echo Bay, about ten miles to windward and return. Sixteen entries were made, composing six classes. The Brooklyn won the first prize for sloops. The Grace won the first top-rigged boats. In the second class of cat-rigged boats the Auuc won the race by 3:32. In regard to the race by cat-rigged boats of the third class the judges were unable to decide the result, and the Captains of the boats agreed to sail over again on Saturday next. In the fourth class of cat-rigged boats the Luin was the winner by 1:05.

The committee of arrangements consisted of John B. Davison, John H. Harmer, E. A. Polhamus, Jr., Frank E. Walsh, and James W. Muller. The judges appointed were George W. Davison, Thomas Fisher, J. W. Todd.

—The Central Hudson Yacht Club have decided to sail their second regatta on the 15th inst. The course will be the usual one.

—The autumn regatta of the Eastern Yacht Club was sailed off Beverly shore Saturday, September 5th. There were two classes of schooners and two of sloops. The prizes were—For schooners, \$125 in each class; for sloops, \$75 in each class. The prizes, on time allowance, were awarded to the Halcyon in the first class, Fearless in the second class, and to the Gauntlet in the second class of sloops. In the first class of sloops no prize was awarded, as the Coming alone sailed in that class, and one of the rules of the club is that at least two yachts must cross the line on the start. The prize for quickest time was not awarded, as it fell to the Halcyon, which took one prize on time allowance.

—“Pisco” sends us the following report of a lively regatta which took place on the 6th at Oakland Beach near Providence, R. I.: The course was ten miles dead to windward and return. First prize, \$500 second, \$200, was won by the silver cup. The silver cup was won by New London, the Carrie and the three Noak boats Watson, Allie and Quickstep, were entered; also six others from Pro-

Guns had been changed in some few instances, or trials made with new sights. We beg to state that the aim of the team is perfect, and whether they win or lose, they at least must be given the credit of having been patient and industrious in their practice. On Saturday, September 6th, the team had their second day's practice of the week, when quite good shooting was done. The weather was fair, sky overcast, and wind not strong enough to affect shooting at the extreme ranges. We append the scores:

Name.	Yards.	Total.
G. W. Yale.....	500	961
H. Bodine.....	500	862
J. T. Gardner.....	500	849
H. S. Gildersleeve.....	500	847
General T. S. Dakin.....	500	845
A. Anderson.....	500	841
L. M. Ballou.....	500	839
J. T. B. Collins.....	500	836
J. S. Collins.....	500	834
E. H. Sanford.....	500	832
E. Barker.....	500	828
H. Fulton.....	500	826
A. V. Davis.....	500	818

On Wednesday the score made was two points better—1,153. The scores made by Messrs. Yale, Bodine and Gardner are excellent.

—The second contest by rank and file of the Twelfth Regiment for the Gildersleeve medal, came off on September 1st. Distances 200 and 500 yards; five shots at each range. We give the five best scores:

Name.	200 Yards.	500 Yards.	Total.
Private Smith, Co. D.....	4 33 2 3	14 2 4 3 3	16 30
Sergeant Wood, Co. D.....	3 32 2 2	12 4 3 3 2	15 10
Private Doerle, Co. E.....	3 32 2 2	12 3 3 3 2	13 10
Private Moran, Co. D.....	3 22 2 2	11 3 2 2 2	12 10
Private Carson, Co. D.....	3 22 2 2	11 3 2 2 2	12 10

The Twelfth Regiment team tried their hands with the following result:

Names.	200 yds.	Total.
Captain Smith, Co. D.....	3 22 2 2	13 3 4 4 4
Private Doerle, Co. E.....	3 4 2 2 2	15 4 3 3 4 4
Private Smith, Co. D.....	3 4 2 2 2	14 2 4 3 3 4
Sergeant Wood, Co. D.....	3 4 2 2 2	14 2 3 3 2 4
Adjutant Murphy.....	3 3 2 2 3	14 2 3 2 2 4
Private Banta, Co. D.....	3 2 2 2 2	12 2 2 4 3 3
Private Carson, Co. D.....	3 2 2 2 2	11 3 2 3 2 3
Capt. Van Rensselaer, Co. E.....	3 2 2 2 2	14 2 3 2 3 3
Private Doerle, Co. E.....	3 2 2 2 2	11 2 3 3 3 3
Private Moran, Co. D.....	3 2 2 2 2	11 2 3 3 3 3
Private Moran, Co. D.....	3 2 2 2 2	11 2 3 3 3 3

On the same day the Seventy-ninth Regiment Rifle Club shot for the Ross medal. We give the five best scores:

Name.	200 Yards.	500 Yards.	Total.
Private Keller.....	20	22	42
Private Edmondstone.....	21	21	42
Private Robertson.....	18	25	43
Captain Heros.....	18	25	43
Sergeant Cameron.....	18	19	37

The team of the Twenty-second Regiment also held their practice on the 1st. We give the four best scores:

Name.	200 Yards.	500 Yards.	Total.
Private Euelch, Co. A.....	3 23 2 3	15 3 4 4 4	18 30
Private Henderson, Co. I.....	3 23 2 3	15 3 3 3 3 3	18 30
Private Yale, Co. D.....	3 23 2 3	15 4 3 3 2 3	18 30
Private McAvey, Co. D.....	3 23 2 3	14 3 4 3 2 4	18 30

On the 3d of September the Forty-seventh Regiment of Brooklyn were at Creedmoor. Order was not quite up to the average, and the shooting so poor, save with the four leading shots, as to be hardly worth recording.

FALL PROGRAMME OF THE NATIONAL RIFLE ASSOCIATION.

A meeting of the leading military authorities was held at the Hotel Brunswick on Thursday evening to decide upon various points in the programme of the National Rifle Association upon which an interchange of opinion was desired. Present, General Stonehouse, the Assistant Adjutant General, General Morris, the Inspector-General of rifle regiments, General Knox, the Commissary General, together with General McMahon and Colonels Wingate and Gildersleeve, representing the Association. The main object of the meeting was to decide whether it was judicious, in order to prevent the maintenance of permanent "teams" by regiments, to require the regiment winning the State prize to be represented by a different team the year following their winning it, as had been contemplated, and whether, if this was the case, sufficient notice had been given to the Twenty-second regiment, the winners last year, to prevent injustice, if now enforced. After considerable discussion, it was decided that, although the Twenty-second had a second team actually selected, yet as they claimed that the rule if enforced this year would operate unjustly toward them, it was best not to insert it in the programme, but to let the team which had been contemplated, and whether. It was also decided that all teams must be composed of regularly enlisted members of their respective regiments who were such prior to June 1st, 1874; also that the rifles used by the National Guard must be used as issued, without filing the sights in any way or affixing others of new pattern. The ammunition used in the National Guard matches will be issued, in the firing points on behalf of the State, in reply to questions from competitors. General Knox stated that he intended to issue for that match Union Metallic Company's cartridges, but had none of that description now on hand to issue for practice.

TENNESSEE SPORTSMEN'S ASSOCIATION.—The State Sportsmen's Association of Tennessee will hold a grand pigeon shoot, a bench show of dogs, and for the first time in America will inaugurate a series of Field Trials for pointers and setters. This gathering of sportsmen will take place at the Agricultural Fair Grounds, Memphis, on October 7, 8, 9 and 10. The Field Trials will take place on the 8th. We will publish the programme next week.

vidence, Newport, Bristol and Gloucester, whose names I did not learn. The day was good and the Watson, sailed by her young skipper, Rob. Palmer, came in eight minutes ahead and took first prize, the Carrie, beaten several minutes by the Watson, got No. 2, and the Quickest No. 8. The Watson came home a short time since with the Grotton pennant, which she won from the crack Grotton boats Annie and Bessie, and holds the Noank pennant from week to week, as a sure thing. So I was not mistaken when I first came, in admiring the Noank boat.

—The seventh annual regatta of the Boston Yacht club will take place Saturday, Sept. 13, starting from the club house at City Point.

—The Genesee Yacht Club held their second annual regatta at Rochester, N. Y., on September, 6th. There was a fine breeze during the greater part of the race except on coming home, when nearly all were becalmed for a few minutes. The Seth Green took the first prize, the actual running time being 1h. 54m. 2s. The Aldine took the second prize—Time, 1h. 55m. 24s. The Rebecca third, in 2h. 3m. 5h. Rambler fourth in 2h. 17m. 25s.; Fleetwing fifth, in 2h. 17m. 17s.

—At Geneva Lake, Wis., on the 31st inst., the yacht Nellie, J. S. Ramsey, won the Sheridan silver cup valued at \$150. There were six competitors. Gen. Sheridan was present. This cup is to be competed for annually. The race was over a double triangular course of sixteen miles. Time, 3:23:45.

J. MADISON, WIS., August 31st, 1874.

SIXFOUR FOREST AND STREAM.

The regatta on Lake Mendota, on Thursday, August 27th, was decidedly a success. The feature of interest was the yacht Minnie, brought to participate in the race from Lake St. Croix by Commodore Baldwin of the St. Croix Yacht Club, and "she came, saw, and conquered." The wind was fresh from the S. W., a little too much for top sails, though the Jessie carried her flying jibs, and after the start, the water was often promptly at two o'clock, and ten minutes afterwards came the flying start. The latter passed the buoy first, followed by the Lady of the Lake, Magic, Gracie, Eclipse, Reckless, Minnie, and Jessie. On turning the second stake the Lady got foul of the Eclipse and was disabled. The course was twice round a triangle of six miles.

On passing the first stake, the Minnie was first, but six minutes difference between the first and last boats, but the Gracie here gave up the race, her captain, I suppose, concluding he was in the company of two "heavy swells." The personal contests at different parts of the race afforded some very fine sailing. The Reckless (schooner) did not hold her own before the wind, but when she got it abeam did some "clever" sailing, and after the first round, her crew, before reaching the third buoy on the second round, broke herudder and had to get home as well as she could. The Minnie won the first prize, 2:50, in 2:41:34; the Eclipse taking the second, 2:55, in 2:34:15; then came the Lady in 2:44:55; Magic, 2:45:21; Jessie, 2:47:11; and Reckless (disabled) 2:57:28. This is the first visit we have had from a neighboring club for some time, but I hope hereafter we shall have at least an annual regatta, at which we shall have a representation from all the clubs in the State. We have unrivalled facilities, and our citizens are ready to offer prizes worth competing for.

In giving you an account of the catching of the monster sturgeon I said it was struck through the base of its dorsal fin. I should have said one of its anal fins.

—On the 1st inst. the regatta arranged by the Royal Canadian Yacht Club in honor of His Excellency the Governor General, was sailed. The course was thirty-two miles in length, and embraced plenty of distance to windward. The prizes competed for upon this occasion were the Prince of Wales cup and the Governor General's silver cup, presented by the Governor General. The following yachts started: Oriole, Brunette, Cora, Lady Standly, Ripple, Riel, and Gorilla. The weather was all that could be desired, a steady breeze blowing throughout, and the race a most exciting one, the Oriole schooner of 95 tons, eventually winning. The Lady Standly was unfortunate, being compelled to retire from the race shortly after the start, by the parting of her fore-stay.

—The Friendship Boat Club of New York held their third annual regatta at Pleasant Valley on the Hudson River on September 2d, and the day was the same as that of the Hudson River Amateur Rowing Association, and known as the Pleasant River course. The weather and the water was all that could be desired. There were four events to be decided, three single scull races, and one four oared shell. For the first race which was three miles, the prize was the championship belt, presented by Mr. Thos. Conolly. There were five entries, James McCartney (blue), James McCabe (blue and white), Philip S. Biglin (blue), Augustus Schneider (blue), Thomas J. Allen (red). McCabe's scull in his boat gave way, thus losing him the race. McCartney came in the winner in 24m. 27s., Schneider, two seconds later, with Biglin third and Allen last. The second race was for junior sculls, for which there were five entries, Charles Hartli (blue), P. McSorley (blue and white), Augustus Adams (white and blue), John Hanon (green and white), James Smith, (green and red). Mr. Dennis Leary, the President of the club, started the men. After the first mile Hartli drew out and the race was won by Adams easily in 26m. 45s., Smith second, Hatton third. The third race was for third class sculls, the course being short of a mile and the entries, William Dittma, William Murray, Albert Sauer and Peter P. Moore. The scull off was a good one and the race well contested. Dittma won in 30m. 15s., Sauer second, and Moore third. The great treat of the day, was four-oared shells, the entries were Augustus Schneider, Philip S. Biglin, William Hurley, William H. Hughes; James Smith, substitute; color red. Thomas J. Allen, M. J. Murray, James McCartney, Philip Christie; Augustus Adams, substitute; color, white. At five o'clock they started, and for the first mile the reds kept the lead. One of the river boats passing at the time rolled some heavy machinery overboard, and the boat, being well filled and sunk, the oarsmen being picked up by a small boat which put out from the shore. The whites then turned the stakeboat and rowed easily home, passing the finishing line in 25m. 5s. Mr. James Cosgrove of the Friendship Club, and Mr. Henry Brown, of the Gramercy, acted as judges, with Mr. Thomas Conolly as referee.

—The National Amateur Rowing Association held the first day of the regatta on September 2d, near Troy, N. Y. There was a large concourse of spectators, but the wind and water materially inhibited against the success of the crews. The four-oared and single scull races were the first trial tests each, and single scull and pair-oared in the first trial over the Lanrate course, starting at Lansingburg and finishing at the Laureate boat house. The first contest was a race between four-oared shells, the Waltham-Sums, of Saginaw; Argonauts, of Bergen Point, N.

J., and Gramercy, of New York, for the first heat. At 2:30 P. M. the heat was rowed in a readiness, with the wind came up rather strong, which ruffled the water. At 2:35 P. M. the word was given, the crews getting away well together. The Argonauts at once took the lead, followed by the Gramercys and the Waltham-Sums, and referred this advantage to the finish, winning the heat by three lengths—Time, 9:36. The two other crews the referee decided a dead heat. In the second heat the contestants were the Beaverwycks of Albany (the champion four), and the Atlanta four, of New York. The heat was finely contested, as the water was vastly better for rowing. The Beaverwycks won the heat with ease, by six lengths, in 8:56. The first heat of the single sculls Roach of the Gramercy Club, and Myers of the Cedar Bluff Club, of Saratoga, were the contestants, Roach winning the heat easily in 10:19, Myers rowing the distance in 10:32. The second heat had to be postponed on account of the storm until the next day, September 4th.

On September 4th the morning was lovely and cool, the water was fairly smooth, and the gathering of spectators along the shores was immense. The first event was the second heat for single sculls. Frank E. Yates and W. A. Eustis of the New York Athletic Club contested. Yates got away first, and was never caught by Curtis, winning the heat in 10m. 23s. The next event was the first and final heat of the pair-oared race. The entries were Withers and Bainbridge of the Atlanta Club, and Smith and Eldred of the Argonauts. The Atlantics were as usual first to get away, but did not retain the lead long, as the Argonauts dashed ahead, pulling a powerful stroke, and coming in the victors by a length in 9m. 41s. The final heat for the single sculls was rowed at four o'clock, giving the other crews time to rest. Roach of the Gramercys and Yates of the New York Athletic Club got off evenly. The more powerful weight and strength of Yates gave him a decided advantage on this course, although Roach rowed evenly and mechanically, and only lost the race by one boat's length. Yates' time 10:16.

For the double scull race there were three entries, Mosely and Hughes, Mutual Club of Albany, Girvin and Lathrop, Beaverwyck's, Yates and Curtis, New York Athletic Club. The referee started the crews beautifully, the Mutuals pulling a quick stroke, which they failed in keeping up, as they were soon passed by the Beaverwycks and the Argonauts. Yates and Curtis put on a little extra steam and eventually won the race easily by three lengths from the Beaverwycks; the Mutuals several lengths astern.—Time of the winners, 9m. 57s. The final heat of the four-oared race was the great excitement of the regatta, as both clubs, the Beaverwycks of Albany, and the Argonauts of Bergen Point, had shown extraordinary form. Both crews took the water together, the Argonauts pulling a steady stroke, which they maintained for the first mile, and here their steering was very bad, as they kept too much to the eastern shore. In the meantime the Beaverwycks had kept a clear straight course, and the struggle between these rival crews was terrific—nothing of the kind has ever been witnessed on any water. The spurring of the crews was an extraordinary sight, and will long be remembered by the large number of spectators who lined the shores. Finally the Beaverwycks, owing to their advantage in height and weight, being always employed in heavy manual labor, veered slowly ahead, winning the great race by only six feet in 8m. 45s. The timekeepers were W. H. Orlop, Ulysses Boat Club; G. W. Tucker, of Philadelphia; L. L. Spring, of New York, and the referee whose arduous duties were no sinecure, were ably administered by Frank Bacon of the Nassau Club of New York.

—The Argonauts of Bergen Point have challenged the victorious Beaverwycks of Albany to row a four-oared three mile race on the Kill von Kull.

—A shell race on the Raritan River came off at New Brunswick, N. J., on September 5th, one mile and return, with two entries, M. B. Neilson and R. B. Culbert. The start was made at six P. M., with Culbert leading, but at the half mile stroke he was passed by Neilson, who retained the lead until the finish. Neilson's time was 15m. 57s., and Culbert's 16m. 36s.

—Our attentive Philadelphia correspondent "Sculls" sends us the following:—There were two races for singles and one for pair-ours, Saturday, 5th. The first was for the champion belt of the Schuylkill Navy, between John Larus, Jr., the holder and Mat. Schmidt, who has held it once or twice before. The race was 3 miles, with one turn, from Rockland up to the Falls and back. Larus made a good start and led all the way up around the stake-boats and half way back, when he weakened and Max, with a splendid stroke, made him the winner in 22:19, six lengths ahead of Larus. At the call from the judges' boat, the following scullers came into line:—James Mings, Vesper, Frank Henderson, Pennsylvania, F. M. Hartley, Pennsylvania, C. E. H. Brelsford, Malta, Brelsford and Hartley withdrew, Mings came home in 22:32, with Henderson close after. The last race was between two pair-oared shells of the Union. This race was one and one-half miles straight over the water course, and was won by Madira, stroke, and Gullingham, bow. Their opponents, Ewing and Bright, were unequally matched, and in spite of a good lead at the start, Ewing pulled the bow off his course, and at the white fences were falling behind, when Bright broke his outrigger and withdrew, the other pulling lone alone. No time kept.

There is an air of activity on the river that is very encouraging. The College club of the University of Pennsylvania have a new house under way, and will go to it in a month. At the Naval Board meeting, Messrs. Parker, Fairman and Krumbhaar were appointed a committee to conduct the fall regatta of the Schuylkill navy, which will take place on the 26th. The races will be for the champion flags of each class, and special flags for each winning crew.

—The Emerald Boat Club of Portland, Me, will hold a grand international regatta on Lake Sebago, Wednesday, September 16th, and is open to the United States and British provinces. There will be races for four-oared shells, (professional), prizes \$450; double scull, prizes \$100; single scull (first class), prizes \$300; single scull, prizes \$50, (amateur); and a four-oared shell, the winner will be 24 miles to a stake boat and return. In the double and single races, the distance will be 14 miles to a stake boat and return. Entries must be made on or before September 12th to Peter O'Connor, 14 Public street, Portland, Me. Crews will notify R. H. Parker, 80 Middle street.

—The Halifax Rowing Club held a meeting on August 31st, and decided that George Brown accept the challenge of Morris of Bristol, for the row to come off on the Kennebec River, St. John, September 23. St. John people are willing to give Morris \$500 if he rows there, as he offered to go for that sum, and the race, doubtless, will take place. No correspondence has yet been received from Sadler.

The Horse and Course.

—The Prospect Park Association held the first day of the running meeting on their grounds near Brooklyn, N. Y. The track was in fair order, the attendance limited and the weather cool and pleasant. The first race was a sweepstakes for two-year-olds, entrance \$50; distance five furlongs, only two horses coming to the post, Nannie McD. and I Know. The latter colt was beaten by four lengths after a close struggle—Time, 1:19. The second race was for a purse of \$500 for all ages, mile heat. There were four entries, Fadladden, Audubon, Carriboe, and Mate. Mate won the race, making excellent time, the first heat being run in 1:43 and the second in 1:43. The third race was a dash of two miles for a purse of \$500 for three-year-olds. There were four starters, Lava, Botany Bay, Erastus Corning, Luitlis H. Lava. Lava was behind Botany Bay for the first and three quarters and then came away and won easily in 3:48.

—The Mystic Park Races, Boston, Mass., on September 2d were tended by an immense concourse of spectators. The special prize of \$2,500 offered for Goldsmith Maid to beat her previous record of 2:44 was undoubtedly a great inducement to a vast number of persons to see her perform.

The first race was for horses of 2:38 class. There were seven starters, Ben Mace's James Howell, Jr., being the favorite. Bella won the first heat, but the next three were taken by James Howell, Jr., 2:44, 2:47, 2:29. The second race was for horses that had never beaten 2:28, for which there were nine starters. Lucille Goldust was the favorite. Lucille Goldust won the race, after losing the third heat, which was won by Smuggler in 3:22.

The great excitement, however, was when Goldsmith Maid appeared on the tract, she to have three trials. The Maid trotted the first in 2:19, going easily all the way round, accompanied by racing horse attached to a buggy, and driven by James Golden. The second trial was made under the most favorable auspices. The track had been scraped close in to the pole. There was absolutely no wind from any direction. Budd Doble nodded for the word the first time he came down. The Maid trotted the first quarter in 33 seconds and the half mile in 1:06, lifting her head once just before she reached there. The last half mile was trotted without the least show of breath, and she made her best recorded time, 2:14, and did the cheers of the assembled thousands.

On September 3d the races were continued in presence of a large crowd of spectators. The first race was for three minute horses, and had seven starters, viz., Essex, Lady Van Cleef, Falmouth Boy, Unknown, Cataract, Wellesley Boy, and Empson. The first was won by Falmouth Boy, but the next three were won in the easiest manner possible by the favorite, Wellesley Boy. The second race was for 2:26 horses, and the starters were Mambrino Gift, H. W. Genuet, Commonwealth, Fred Hooper, Lady Banker, and Joker. Mambrino Gift went off and outtrotted Hooper and the others from the start, winning in three straight heats. The double-team race was the first of the card, and after five teams entered but two started, viz., Tom Carpenter's bay gelding Joe Clark and chestnut mare Mollie Morris, and D. B. Goff's brown mare Lady Woods and bay mare Carrie. It was almost a walk over for Carpenter's team.

—The Mystic Park Fall Meeting closed at Boston, Mass., on September 4th. The weather was very pleasant, barring an east wind, which was rather cool at times. The first race was for 2:31 horses, had six starters, Dan Mace drawing Vanity fair after scoring twice. Plecty Goldust was the favorite and Kansas Chief the second choice. The first heat was won by the latter, but after a very contest on the home stretch with Plecty Goldust—time, 2:26. The second race was considered the great event of the meeting. It was for a purse of \$5,000, for horses that have never beaten 2:20. Of the eight entries four appeared, viz.,—Camors, Red Cloud, Gloster and Nettie. The first two heats were won by Red Cloud, beating Camors, who was exciting in his first heat and third in the second. The first heat was in 2:19 and the second in 2:20. The third heat was very exciting, Gloster won by half a length in 2:22, and finally won the race in 2:04, 2:24, 2:22.

—At Mystic Park, Boston, Mass., on September 7th, the well known trotters, Goldsmith Maid, Judge Fullerton and American Girl, contested for a purse of \$3,500. The first two heats were won by the Maid with the utmost ease, the battle being between Fullerton and the Girl for second place. They kept well together, but on the home stretch Fullerton beat her out. In the third heat Goldsmith Maid acted badly immediately after getting the word. Fullerton at once taking a good lead, but as soon as the Maid leveled herself she passed the Judge, who was also crowded somewhat by American Girl, but managed to keep second place.

—We have read about two hundred and fifty methods, or rather references to the way "scratches" in horses should be treated. But there is no danger of the scratches if horses are treated properly. Dirty stalls, and long standing in mud, and especially in clay stalls, and a neglect to wash daily the feet of the animal, arc what produce this disease, sometimes leading to "quarter crack" and greatly diminishing his usefulness. But there is one remedy, in any cause, the scratches do come, among the many curatives is a thick paste of gunpowder, well pulverized, two parts, and common salt one part, diluted in strong vinegar, and rub two or three times daily, first thoroughly washing with castile soap and water.—Germaniston Telegraph.

—The horse Red Cloud has been sold for \$42,000. So they say.

—There is an all-rail route between New York and Halifax, Nova Scotia, over which it was promised the transit would be made in forty-six hours, but we seldom receive our exchanges within four days' time, and generally it takes a week.

Miscellaneous. SPORTING BOOKS.

HIRAM WOODRUFF'S—THE TROTTING HORSE OF AMERICA. New edition (the 18th), with nearly 100 pages of entirely new matter by Chas. J. Foster...

Miscellaneous. N. Y. Safety Steam Power Co.

Office: 30 COURTLAND ST. BUILDERS OF STEAM ENGINES AND BOILERS

Steam Launches & Yachts. And their Machinery a Specialty, also Machinery for TUGS, LIGHTERS AND STEAMERS.

FOR BOTTOMS OF YACHTS, BOATS, &c.

CRYLON PLUMBAGO, OR BLACK LEAD—perfectly pure, prepared expressly for above use. Order by mail will receive prompt attention. New York Black Lead Works, No. 173 West 31st St., N.Y.

J. B. McHARG & CO., ROME, N. Y.

MANUFACTURERS OF Split Bamboo, Lance Wood, and Ash Fly Rods, Salmon, Bass, Trout, Trunk and Perch Rods, with or without McHarg's Patent Reel Pato. Sole Importers of McHarg's Silver, Brass and Pearl Spinning Bait of Silver, description, and manufacturers of Fishing Tackle in all its Varieties, including all styles of Bass, Salmon and Trout Flies.

PANRAGO—Lovelier than the Bay of Naples; most magnificent views; the Ocean dimly seen in the distance; the Lighthouse; the Islands dotting the bay with their beautiful green carpets; ships grandly passing till far out of view; steamers likewise reeving from the right hand forward; yachts dancing the gaily decorated barges of the boat clubs, conspicuous among which are the scarlet of the Tritons, the magenta of the victorious Argonauts, the blue of the Eponones, and the too less lively hues of the Clearences, the Onidas, and Josses crews. Do you want fishing? Here it is in its excellency. Old Hookers can tell you that around their rocky sides sport all the variety of fish to suit divers tastes, and in prolific supply. Yachts in two hours load the bay with the blue bait that are now so lively trolled for in these waters. Health reigns supreme. The census lately taken shows New Jersey to rank first in the Union. The rate of increase of this county (Hudson) is 15 per cent. New York, less than 10 per cent., Brooklyn only 5 per cent. But twenty-three miles from Liberty street, and communication eight cents. Horses and teams for sale for cash, by instalments, or terms to suit. Inquire for JOSEPH HALLOCK, Forest and Stream office, 17 Cintham street.

Fur, Fin, and Feather, GAME LAWS FOR 1874

OF ALL THE STATES AND CANADA, besides a vast fund of news-information on Hunting and Fishing. Price 50 cents. For sale by Gunsmiths, Fishing Tackle dealers, and News Agents everywhere. Mailed on receipt of price by CHARLES H. FULTON, Publisher, 51 Warren street, N. Y. Usual discount to the trade.

HOME! HOME! HOME!!!

At Fishing, six miles from New York; 103 traps daily from 6 A. M. to 12 A. M.; 1 day's early commutation ticket free. (Fare 8c by package tickets.) For sale, a French silver rod, 10 ft. long, with brick, gas, water, marble mantle; good closets; sewer connections, with double plot of ground, gutted and flagged. Price \$4,000.

Miscellaneous.

Public Notice is hereby given that on TUESDAY the 8th day of September next, at Noon will be sold at Toronto, by Mr. Oren Wardell, Auctioneer, the annual deposit of the Reserves on Lake Erie, at Pointe Pelee, containing about 4,200 acres, and Turkey Point, containing about 500 acres, and Turkey Point, containing about 698 acres, respectively, to be sold, containing or held by the Department of Marine and Fisheries.

These leases to endure for a term of 21 years each, with power to the Department to renew or prolong, at any time, on giving one month's notice.

On condition that the just rights of all squatters and Indians shall be respected, and reservations and rights of fishery or use and occupation of the shores in connection therewith, under authority of the Department of Marine and Fisheries.

The rent to be paid to this Department, semi-annually in advance, and good and sufficient security to be tendered, at the sale, for payment. If insufficient, the rent to be renewed at the time and place of sale.

Further conditions, if considered necessary, will be declared at the time of sale.

Lessees to accept boundaries and quantities as shown on the Ordinance plans.

By Order, E. A. MEREDITH, Deputy of the Minister of the Interior.

WILLIAM P. O'NEILL, Comptroller of Ordnance and Admiralty Lands. Ottawa, 1st August, 1891.

We would call the attention of the public to our 1872 assortment of

Breech-Loading Shot Guns, Manufactured by the following celebrated makers: Messrs. W. & C. SCOTT & SONS (winners at the International Gun Trial of 1872); P. WHELEY & SON, W. W. GREENE, WESTLEY RICHARDS, J. HOLLIS & SONS, and other makers.

A full line of fine PISTOLS AND RIFLES CONSTANTLY ON HAND. HAZARD & HAWKLEY'S SHOOTING TACKLE. For more good shooting from Breech-loading Guns, we would recommend the use of the

STURTEVANT BRASS SHOT SIBELS, manufactured by the Union Metallic Cartridge Co., Chicopee, Conn. These shells are the cheapest and best in the market, can be easily re-capped with ordinary caps, without the use of the implements necessary in printing all other styles of shells. BUSSEY'S PATENT GYRO PIGEON AND TRAP, WITH CASE, AND 100 BIRDS.

Black's Patent Cartridge Vest. This Vest affords the most convenient yet in carrying cartridges, so evenly distributed that the weight is evenly carried. The shells can be carried with the vest, which is of great importance when hunting, as when carrying head up the weight of the shot often presses the vest forward, when bad shooting is the result. In ordering send measurement around the chest. Price \$7.50.

AGENTS FOR THE Union Metallic Cartridge Company's Ammunition, WARRANTED THE BEST IN THE MARKET. SEND FOR CIRCULAR.

MEAD'S PATENT SAFETY EXPLOSIVE BULLET METALLIC CARTRIDGES. Calibre--22, 32, 38, 44, 46, 50, &c. Also, BOMB-SIBELS for 12 and 15 gauge Shot Guns. JOHN P. MOORE'S GUN DEALERS, 300 Broadway, New York. Send for Circular, describing effect on 400 Birds.

REMINGTON'S Long Range Breech Loading TARGET RIFLE.

Fine Walnut Oil Finished Cheeked Pistol Grip Stock. Orthoptic, "Vernier" Scale Sights. Graduated up to 1,100 Yards.

Weight, 10 Pounds. Length of Barrel, 34 inches. Calibre, .44-100 Inches.

By a careful examination of the records (see this paper May 21st to July 30 inclusive), it will be seen that the above Rifle stands over 22 PER CENT. ahead up to date, in the average of all the Long Range matches that have taken place this year, and winner Nine out of Twelve FIRST PRIZES, including the "Remington Diamond," "Amateur Club" and "Amateur Club Long Range" badges--having made the highest score ever made at Creedmoor. Send for illustrated treatise on Rifle Shooting, just out, for particulars concerning the above Rifle. Sent free.

AGENTS FOR THE SALE OF THE

CELEBRATED CENTRAL-FIRE BREECH-LOADING GUNS

MADE BY James Purdey, No. 314 1/2 Oxford Street, London.

Desire to inform Dealers and Sportsmen who may wish to purchase these Guns, unassisted for Finish, Durability and Power, that they have a supply of 10 and 12 bore, and will import special guns to order at short notice. They have also in store the largest and finest assortment in the United States of Breech-Loaders made by E. M. REILLY & Co., WESTLEY RICHARDS, W. & C. SCOTT & SONS, W. W. GREENE, P. WHELEY & SONS, and other well known English makers, besides those of American makers. An extensive assortment of everything pertaining to the use of Breech-Loaders. Also, Bussey's Patent Gyro Pigeon and Trap, a perfect substitute for live pigeons in shooting matches. SEND FOR PRICE LIST. July 23

Hegeman's Patent Portable Folding Boat.

FOR use as LIFE-BOATS, LIGHTERS, Dingies, Dories, on board Steamers, Yachts and other Vessels.

These safe and perfectly portable boats will admit of the roughest usage. A very light, strong and durable frame of ash or other tough wood, with canvas cover, and can be folded in one-eighth space, for transportation, and carried in a light heavy wagon, on horseback, or by single person, and can be unfolded ready for use, in three minutes. Boats neatly fitted, packed and shipped by express anywhere at same rate of freight as ordinary goods. JOHN HEGEMAN, Ballston Spa, Saratoga Co., N. Y.

Reduction in Price. J. & W. TOLLEY'S BREECH LOADING GUNS, Manufactory, Pioneer Works, Birmingham, Eng.

These guns are built with every improvement for American sport, and are the cheapest guns of guaranteed quality and shooting powers sold in the United States. They are made in six qualities, each gun being branded with one of the under mentioned names, which denotes its quality: Pioneer, \$65 Gold. Volley, 90 " Standard, 113 " National, 140 " Challenge, 180 " Paragon, 225 " Any one of the above may be selected with confidence, as no gun bears our name which we cannot thoroughly guarantee in every respect. N. B. - Send for reduced illustrated descriptive price list.

BRANCH HOUSE, 29 Maiden Lane, Corner Nassau street, New York.

HAVANA LOTTERY. Important Notice. For the coming drawings, commencing January 8th, we have reduced the price of tickets as follows: Wholes \$20, \$10, \$5, 1-5 \$4, 1-10 \$2, 1-20 \$1

AMERICAN WILD FOWL SHOOTING--BY J. W. LONG. A practical treatise on the habits, habits and methods of shooting, also specific explanations for building traps, blinds and decoys, the training of water retrievers, and other valuable miscellaneous information, by a professional duck shooter. Price, 325 pages, cloth, illustrated, \$2.50. (Note--Orders received at Forest and Stream office, and book furnished when purchased, about Sept. 25th.)

This arm was submitted in competition with over one hundred different systems, American and European, to the Board of United States Officers, appointed by Act of Congress, 6th June, 1874, for the purpose of selecting the best arm for the service, and of which Brig. Gen. A. H. Terry was President. It successfully passed through all the tests.

The following is the report of the Board: "Resolved, That the adoption of magazine guns for the military service by all nations is only a question of time; that whenever an arm shall be devised which shall be as effective as a single breech-loader, as the best of the existing breech-loading arms, and shall at the same time possess a safe and easily manipulated magazine, every consideration of public policy will require its adoption.

Resolved, Further, That the experiments before the Board with the Ward-Burton Magazine System have so impressed the Board with the merits of this gun, that they consider it as more nearly fulfilling the conditions above specified than any other tried by them or of which they have any knowledge, and it does recommend that a number of rifle muskets be made on the plan for further trial in the field." (See Ordinance Report.) We are now receiving orders for these guns, and due notice will be given in this paper when they are ready for delivery.

The following is our scale of prices: Special Magazine for large game, firing from 3 to 8 cartridges, 70 to 85 grs. powder, 350 to 400 grs. of lead, 8 to 10 lbs. weight, from \$80 and upward, according to finish. Special Long Range Magazine Rifle for Creedmoor shooting, 80 grs. of powder, 450 grs. of lead, carrying 5 to 8 cartridges, weighing 10 lbs., from \$100 and upward. Magazine gun for general use, carrying 3 to 5 cartridges, 60 grs. powder, 350 grs. lead from \$40 and upward. Single Breech-Loader, Creedmoor shooting, for long range, 90 grs. powder, 350 grs. lead, from \$50 and upward. Single Breech-Loader for general use, 5 to 7 lbs., 60 grs. powder, 350 grs. lead, from \$30 and upward. The calibre of all our rifles, unless otherwise ordered, will be .45-100. In all communications should be addressed to W. G. BURTON, Care Ward & Co., 54 Wall St., N. Y.

REPORT MENO EXHIBIT FAIR

It is manufactured from the best Virginia and North Carolina Leaf. It is particularly adapted to Meer-schaum and Cigarette smoking--does not bite or make the tongue sore--is therefore unlike any other tobacco in these respects.

THE SEA BOY'S FAREWELL.

WAIT, wait, ye winds till I repeat
A parting signal to the fleet
Whose station is at home,
Then waft, the sea boy's simple prayer,
And let it oft be whispered there,
While in far climes I roan.

Farewell to father, revered bulk!
In spite of metal, spite of bulk,
His cable soon may slip
But while the parting tear is moist,
The flag of gratitude I'll hoist,
In duty to the ship.

Farewell to mother, first-class she,
Who launched me on life's stormy sea,
And rigged me fore and aft.
May providence her timbers spare,
And keep the hull in good repair,
To tow the smaller craft.

Farewell to sister, lovely yacht!
But whether she'll be manned or not
I can not now foresee;
May some good ship a tender prove,
Well found in stores, in truth and love,
And take her under lee.

Farewell to Tom, the jolly boat.
And all the little craft about,
In home's delightful bay,
Till they arrive at sailing age,
May wisdom give the weather gauge,
And guide them on their way.

Farewell to all on life's wide main,
Perhaps we ne'er shall meet again,
Thro' stress and stormy weather,
Till summoned by the board above,
We'll harbor in the port of love,
And all be moored together.

For Forest and Stream.

The Ichthyofauna of the North-West Coast.

THE MARINE SPECIES OF ALASKA.

THE saltwater fishes, useful to man, found in Alaska from the fifty-fourth to the sixty-seventh parallels, will equal in number and edible qualities those found in any portion of the world, and as a general rule, exceed them in size; and for these reasons the Northwest Coast must become in time the great fish commissariat of the Western Pacific nations and several of the Orient. As the region has many attractions for the successful prosecution of the fisheries I shall glance at them according as they present themselves, and they will prove sufficiently logical in results to form a corollary. Of the various species of fish frequenting the Alaska waters only a few have received their technical cognomen, and several remain unrecognized, so that in classifying them one meets with some difficulty in trying to be specifically distinct in nomenclature, or in reconciling them with others mentioned by early scientists under a different name. To commence with the less useful, we find in profusion two species of the pleurocentrids, the *platessus stellatus*, or spiny flounder, and the *p. quadriverticillatus*, or common flounder; and with these I may mention a fish similar in many ways, the *rufo Cooperi*, or skate. The globe fish, (*caemicrotremus orbis*), sun fish, (*orthogoriscus analis*), several species of sculpin, and the capelin, (*mallosus edosus*), are also abundant, but are not used except by the littoral Indians, and they capture them only when pressed by hunger in the winter. Seaman in his explorations of the Northwest Coast states that the mullet thrives the more northern waters near Behring's Straits and Kotzebue Sound, replacing the salmon beyond the sixty-seventh parallel. It is not known around Sitka, so we must conclude that it prefers the more arctic regions. The smelt—*osmerus*, or *argenteus pretiosa*—is a denizen of the coast from Cape Lopatka to the most southerly point; but notwithstanding its numerical strength, it is not em-

ployed in commerce. The anchovy, (*engraulis mordax*), is found along the lower coast in great profusion.

The eulachon, (*thaleichthys pacificus*), is nearly a constant resident of the waters, and is caught in large numbers by the Indians, they prizing it highly, as it furnishes them with food, light and oil. Its specific characteristics having been given in a previous article I deem it unnecessary to refer to it at length in the present; sufficient to say that it has a strong affinity to the smelt. During their spawning season the ocean seems in a state of ebullition, so dense are they when preparing to enter the streams. They are then caught in thousands by the aborigines, who smoke them for winter use. This fishing possesses a keen interest for the romantic paleface, as the first fish caught is the centre of much ceremony from its captors. It is the originator of a dance in which all the dusky Masanillos unite, and after that exercise come speeches, songs, more dances, and a glorious feast of the entire funny race found in the vicinity of the festal grounds. Ere being devoured, the adipose *thaleichthys* is addressed as king, and ample excuses are made to his piscatorial highness for the necessity which enforces upon them the destruction of himself and his kindred; and this rather jolly, though grave, ceremony being finished, the fishing commences in earnest and is prosecuted with vigor for about a month, when it closes, owing to the disappearance of all but a few stragglers. When going on a canoe journey, the Hydahs, Makahs, Bella Coolas and other tribes, take large quantities of this species with them, and when they want a light they place its tail in the fire for a few moments, then withdraw it as the whole body will afterwards burn with a slow but bright flame. With these extemporized candles they light their wigwags, or engage in night fishing.

The *chupea* family is well represented, there being some four or five species, which are allied to their Atlantic congeners, though different in color and minor anatomical outlines. The inferior saltwater basins contain myriads of them in June and July; and they extend in apparently the same density from the Ochotsk and Behring Seas to the southern coast of Oregon. The natives fish for them by placing their canoes amongst a school and hurling them in with paddles containing rows of nails. While the season lasts it is a busy one, for great are its results. This fish could be used to excellent advantage as bait in fishing for cod; or if cured, it would meet a ready sale in the markets of California. Myriads can be trapped in weirs or hauled with seines; more indeed than could receive the attention deserved to render them equal to the best smoked or salted varieties of Scotch herring.

The tom-cod—the *gadus gracilis* of Tilesius—is very abundant and far superior to its Atlantic prototype, (*g. polymorphus*), in size and flavor. As it bites at a hook readily the aborigines capture large numbers late in the autumn with a hook made of walrus ivory; this being kept in motion constantly attracts the *gadus*, which bites at it though no bait is used; and the consequence is that the lines are pulled in about as rapidly as a man can attend to them, for this species goes at the business with most commendable vigor and promptitude.

The halibut, (*hippoglossus vulgaris*), ranges from Oregon to the Aleutian Isles, and up to the ice line of Behring Sea, and westward to the Ochotsk. The specimens caught weigh from one to four hundred pounds, and some are said to exceed even the latter weight. The Russians paid a slight attention to this fish formerly, but they do nothing with it at present, if we exclude the few caught for the table. The Alaska variety is deemed superior to its eastern kindred in firmness and delicacy of flesh, and as will be seen excels it also in ponderosity.

Of all the fish in these waters, the best for commerce, exclusive of the salmon, is the true cod—*gadus macrocephalus* of Tilesius; *marlin procerus* of Girard—which is found in countless numbers from the coast of Washington Territory to the southern limits of the ice floes of the Behring Sea, or about the sixtieth parallel, and from Norton Sound to the Coast of Asia. The best species are found in the

deepest water, say from twenty to fifty fathoms, hence those caught along the banks of Alaska are superior to those of the Ochotsk Sea. The best grounds known at present are those off the peninsula of Kamschatka in about latitude 53° north. The fish arrive here about the last of June, then spread over all the deep, muddy banks of the Kurile Straits, Gulf of Alaska, Shmngin Islands, and other localities, preferring, as a general rule, those banks where the water ranges between fifteen and forty fathoms in depth. Of all places the latter lands seem to be the most favored, as the marine plateaus near them are covered with a soft, oozy mud so well fitted for the home of the cod. Several vessels have been fitted out in San Francisco within the last few years for the purpose of engaging in this fishing, and all have done remarkably well. The hands working on shares have cleared an average of \$100 per month; whilst the vessels not only paid for their construction but also yielded handsome returns on the capital invested.

These grounds are much superior to those of Newfoundland, for the reason that storms are very rare in summer, and that vessels can easily run into a shelter in case of necessity. The shore is also well adapted to dressing the fish; or if a better one is desired a run of a few days will take them to Puget Sound, where they can find the best dressing grounds on the continent. Vessels leaving San Francisco in March can commence fishing late in June or early in July and continue until September. They should make only one trip, but if a second is rendered imperative, owing to receiving a cargo earlier than expected, they can enter Washington Territory and there rest, so that they will only lose a few days at the utmost. The Alents, who are excellent pilots and good fishermen, and have a "sea eye" equal to the best old sailor, can be employed at a trifling sum per week, so that any person possessed of a small capital can enter this business with assurances of success. The natives capture large numbers with a hook made of spruce, having barbs of bone, their line being composed of the gigantic kelp, (*macrocystes*), which often averages two hundred feet in length, and the catch they often sell to white men. The salted fish sells in the California markets at from six to twenty cents per pound, so that the industry must yield handsome returns. In 1870 some thirty vessels left San Francisco for these grounds, remained absent four months and returned with about ten million pounds of salted fish, valued at over \$150,000. This sum alone is sufficient to show the profits accruing, and what a fortune could be realised by developing the industry to its fullest capacity. MORIMER KERRY.

For Forest and Stream.

THE COMANCHE INDIANS.

NUMBER TWO.

IN my last I stated that a few more details in regard to dress and arms must be given before coming to customs, habits and traditions, which are more interesting. The shield used by warriors is twenty inches in diameter, made of skin taken from the neck of a bull buffalo, or account of its thickness and toughness. This is made hard by heating, and cannot be penetrated by arrows, or even pistol balls at a distance. The shield is carried on the left arm, and fastened with loops; it is decorated with colored eagle feathers, and such scalps as the possessor may have taken; it is also painted in different colors with odd devices.

The lance is of willow or cottonwood, light, and about eight feet in length, including the spear, which is usually made of an old sword blade, knife, or piece of iron filed down and sharpened.

The bow, the main stay and reliance of a Comanche, before possessing firearms, is made of "Bois d'arc"—the osage orange—is light, very tough and springy (to coin a word). The arrows are made of swamp dog wood, the sprouts of which are cut green; they need not be straight. A buck will take a crooked stick and soon straighten it by biting it from end to end. The head is made of iron, usu-

Fish Culture.

UNITED STATES FISH HATCHING IN CALIFORNIA.

SOME weeks ago we acknowledged the receipt from Livingston Stone, Esq., Deputy U. S. Fish Commissioner, of some photographs of the Government Hatching Establishment on the McLeod River, in Shasta county. This establishment comprises two comfortable houses fifty feet long, with kitchen, offices, bunks, &c., which occupy a rocky shelf hanging over the very bank of the river, in the middle of a double curve of the stream, where it forms a letter S. All these have been erected since the 3d of July, during the summer just past, together with corrals or pounds, troughs, tanks, filters, and other necessary appliances for carrying on the operations of the establishment, which, without them, were greatly limited during the first two years at this station. The force at present employed in this service comprises: Livingston Stone, Chief; John G. Woodhury, Foreman; Marshall L. Perrin, Secretary; Waldo Hubbard, Richard Hubbard, E. C. Forbes, Oliver Anderson, John P. Williams, Assistants to the Chief; E. Conklin, Photographer; Myron Green, Chief Fisherman—ten persons in all, together with a Chinese cook, and numerous Pitt River Indians, who assist in hauling seines, corralling fish, pulling boats, and other incidental labor.

The McLeod River rises in Mount Shasta, and flows through deep and rocky canyons for seventy-five miles or more, emptying into the Pitt River, a tributary of the Sacramento, 185 miles above Sacramento, and some twenty miles from the Sacramento River on the east. It is never wider than 160 yards, and often narrows, as it rushes and foams through rocky passes, to thirty yards, and even less. Its waters are cold as ice, formed from melting snows, and fed by the coolest springs of the deepest and longest gorges of the mountain ranges which it penetrates; they are clear as crystal, and a person standing on the banks can distinguish every pebble upon the bottom in the mid channel for an eighth of a mile above, and see every fish that sports in their depths. Its waters so temper the atmosphere that the heat of a scorching summer noonday is scarcely felt as you rest upon the verdure covered banks. Wherever known, its wild and romantic scenery and its surpassing loveliness have won for it the verdict of purest and most beautiful of California's rivers. This river is still in possession of the Indians, and almost free from white men, although two settlers have obtained a foothold far up the river, since the advent of the Fish Commission. Up to that time, two years and a half ago, the Indians persistently fought off or murdered all intending settlers or miners, regarding the river as exclusively their own. They had been the last of the California tribes to yield to the white man's sway, and the hardest to subjugate. "At one time," says Mr. Stone, "a party of miners came down across the Sacramento hills to their river to look for gold, but they were waited on in the morning by three Chiefs and three hundred warriors, and summarily escorted out of the country. This sort of thing was repeated several times. Still later a party of two Americans and eleven Chiuamen came up from the Sacramento River to dig for gold, and camped a short distance above the present location of our camp, but before morning the McCloud Indians murdered every one of them, not leaving one to tell the story.

"A year ago Mr. Crooks came to the river and settled a mile or two above us, but the Indians murdered him as late as last September, while I was there.

"When we came to the river to erect our house and hatching works, a large number of Indians assembled on the opposite bank and spent the whole afternoon endeavoring by threats and furious gesticulations to drive us away, and afterwards several of them waited on me and told me in their dialect of which I had learned a little, that this was their river and their land, and these were their salmon, and that I was stealing the land and salmon; that they had never stolen anything from the white man nor taken his land, and that I ought to go away. Some of them went so far as to give out threats about my being killed. When I thought of the fate of all my predecessors on the McCloud, I did sometimes feel slight misgivings, but I adopted a firm and conciliatory policy with them which worked so satisfactorily that I am now perfectly satisfied that none of us are in any danger there. I ought also to add that they stand in too much fear of the white man to do any open injury."

Mr. Stone has now mastered their language, knows every man by name, never passes one without pleasant greeting, trusts them with many valuables and has not yet been deceived. Once having a large sum of money about him and having reason to anticipate an attack from white men, he called an Indian and gave him the treasure, while he laid down and slept. The next day the dusky custodian returned every cent. One of the party sold an Indian a vest; the redskin followed him six miles on foot to restore a gold chain carelessly left in the pocket.

As has been intimated, an immense amount of work has been done the past summer. From a very comprehensive sketch printed in the Sacramento Record we have been enabled to cull the following facts of interest:—

With incredible labor they built two stone piers in the

stream, and from there to either shore; and from pier to pier, where the river is about two hundred feet wide, they sunk a fence to the bottom, and extending a foot or more above the water. This fence resembles a rack, and is made of willow poles lashed to cross pieces. The poles are so close together as to prevent the salmon passing through them, and hence below it they gather in thousands, leaping against the barrier in vain attempts to pass. The fence is made in sections, and on the 1st of November, when the break ceases up, comes the fence too, to be packed away and saved for next year. At the northern end of the fence is an acre of river bottom, graveled and level. Here a huge undershot wheel has been set in the bank, moving regularly and slowly with the current. On the shore side the periphery of the wheel is mounted with buckets, which dip into the clear waters, come up full, and empty 6,000 gallons per hour into a flume. This flume leads to the hatching trough. On the opposite shore, at the end of the fence, two corrals, so-called, have been built, made by fencing off some of the river edge where the current is lighter. The only entrance to these corrals is through a long funnel made of poles, and narrowing, so the salmon may barely get through at the inner end, and there the poles are sharp and pointed. The fish finding the fence impassable, work along its front until reaching this funnel. Once in this pool they are driven through a gate to the second corral, and here securely kept.

But all fish are not taken in corrals. Mr. Stone cannot trust for his supply of eggs to these alone. The greater portion are captured below the fence in seines at night, and then the services of the Indians are most useful in pulling at the ropes. A full ton are taken at a haul, and the Professor and his men and Indians are in the midst of the struggling salmon, knee deep in the icy stream. The red skins shout and laugh and dance. The cry "Mahalla!" "Mahalla!" is incessant, and now and then, as a huge fellow is disentangled from the net, the cry is "buck!" "buck!" "The fish with the gracefully shaped jaws and broad bodies are the females, "mahallas," and are carried rapidly to a floating crib near by and east in, where they flounder in shallow water in vain endeavor to escape. The crooked jawed, narrow bodied and heavy fish are the "bucks," or males, and about one in five of these are taken to the crib also, while the remaining four fall to the Indians.

The hardest work, however, is done by day. Following down the flume from the water wheel and you enter a tent nearly 100 feet long and 50 wide. The water pours into a large wooden reservoir, and soon we come to the hatching process. On one side are the men busy making trays, and hard work it is. These trays are light frames one by two feet, stretched across each of which is a sheet of wire cloth or screen cloth, treated with asphalt, to prevent fungus or slime gathering upon the wood, which would destroy the eggs. Of these trays, over 500 have already been made, and 500 more are yet to be constructed. Leading from the reservoir mentioned and running the whole length of the tent by gentle declination, made by dropping sections slightly, are eight long troughs of heavy boards just wide enough to admit the trays lengthwise. These troughs made by the party are also back with asphalt. Each trough is divided by partitions into lengths to suit the length of the trays. In each compartment so made, four trays will rest, one on top the other. Thus we have troughs enough to hold 1,120 trays at a time. Each tray will hold 6,000 salmon eggs. This gives a total, when all are filled, of 6,720,000. About five per cent are lost, leaving 6,384,000 reliable eggs, every one of which will produce a fish. These eggs are obtained by stripping the female salmon, and impregnating them with the milt of the males. The eggs procured number about 500 to every pound weight of the yielding salmon. They are always rinsed in the trough compartment with carefully filtered water from the reservoir. After lying two days upon the trays, over and through which the water passes continually, the egg becomes opaque, and a film extends over the yolk. This opaque spot is the germ of fish life. Now it is the trays must be watched. Daily, nightly they must be lifted out and examined. Whenever an egg turns white it is dying or dead, and is picked out. If left in the tray it would throw out a vegetable growth of little arms and destroy every egg within reach. For seventeen days the eggs remain in the troughs, and then two bright, black little spots are seen; these are the infant eyes of the future salmon. Now comes the packing. The boxes in which they are packed are all two feet square and a foot deep. The eggs are packed with first a layer of moss at the bottom of the box, and then a layer of eggs, and then another layer of eggs, and so on to the top. Midway, in the interior of each box, there is a thin wooden partition to break the force of the superincumbent mass of moss and eggs. We pack about 75,000 in a box. When the box is filled the cover is screwed down and packed with another one of the same size in a crate three inches and a half larger on all sides than the combined bulk of the two boxes inclosed, this intervening space being filled with hay to protect the eggs from sudden changes of temperature. On the top of the crates is a rack for ice. The only suitable moss that can be obtained is found at the headwaters of the Sacramento, seventy miles away! When the embryo are packed they have to make a journey of 3,000 miles to the eastern waters for which they are intended. The first shipment is now ready, and the rest will follow rapidly until the spawning season ends. Really, that is September 21st, but as California is peculiar in many things, so in this, salmon run up

the stream every month in the year here, and spawning goes on all the time. About the first of November Mr. Stone will break camp, pack up his works and secure them. He will then go down the coast, perhaps as far as San Diego, and, under orders from Washington, inquire into the entire salmon and trout family of the coast, and present the result of his labors in a full report.

No eggs are fully hatched, either at the California establishment, or at the one at the Penobscot River under charge of C. G. Atkins, these being the distributing stations from which they are sent to the various minor stations in the States, at which they are fully hatched. The hatching time depends on the temperature of the water, and may be from one month to six months. In California about one month suffices to produce the perfect fish, which at the age of two months is able to look out for itself in our rivers and bays. The station on the Penobscot is maintained to supply salmon for the cold waters of the northern streams, and that upon the McLeod River to supply fish for the warmer waters of the south of the Union. There is also a noted difference between the salmon at the two stations. That of California is known as the *salmo gairdneri*; that of the Penobscot as the *salmo salar*. The former is marked only by dark and gray spots with silver, while the Maine salmon presents a variety of beautiful colors. The California salmon has a hooked or eagle beak upper jaw, with no knob or projection upon the lower jaw. The salmon at the east presents the contrary features. As to their flesh there is but little difference, though the eastern salmon is now in most favor.

The McLeod River was selected because it is the chief salmon-breeding stream in California; its waters are perfectly pure, and the means of speedy transportation ample; it is free from white men, and has no mining, mills, etc., to drive the salmon away. Within a few years the American and Feather rivers have been entirely depleted of these fish, and now California's supply of salmon depends wholly on this stream. The barriers, corrals, &c. of the Commission will not break up the run of salmon, because myriads of fish go up the river both before and after he takes spawn, and the six million eggs he takes will not be missed. Salmon enter the mouth of the McLeod in March in large schools, and in May are still more plentiful, but not very large. In August the run up stream begins, and then comes the spawning, the fish seeking the far upper waters to deposit the ova. The Sacramento salmon is an active and powerful fighter. It may be caught by hook and line in salt or brackish waters and also in fresh waters of the upper tributaries. "Salmon Roe" is the best bait for angling for the fish, but they will often take the artificial fly. A short time after spawning in the McLeod River, the parent salmon become black, smooth, the scales are absorbed into the body, and they become diseased and die. Their bodies float to the shores in thousands, and then it is the bears come down from the mountains to eat the dead fish, and all the Indians go hunting bear. Preparations are already on foot on the McLeod for the bear hunts of September.

Besides salmon hatching, Mr. Stone and his party have other work still to do. They every day prepare specimens for the Smithsonian Institute Museum at Washington, putting up in alcohol varieties of salmon and all possible attainable varieties of brook, lake, river and mountain trout. Some are skinned, others preserved entire. Over four hundred specimens have already been obtained, and some one hundred gallons of alcohol used in their preservation. When finished it will be the only complete museum collection of California fish.

EASTERN TROUT IN CALIFORNIA.—Some two years ago the California Fish Commissioners procured from the East varieties of river and brook trout, and placed them in the north fork of the American River, where, before, there were no fish. We now learn from Mr. B. B. Redding—one of the Commissioners who recently visited the river where they were deposited, in order to ascertain how the fish had prospered, and whether they had remained in those waters or had gone below the falls—that he found the trout very plenty, biting freely at the hook and much grown. He took several and identified them as the eastern fish. He returned all he caught to the river. The spawning season for this fish is at hand, and he believes the head waters of the river will be thoroughly stocked with these trout.

SCOUNDRELS.—Mr. Hess, of the firm of Perkins & Hess, of Grand Rapids, Michigan, has called at our Chicago office to express their misgivings that Fish Culture will not pay as an industry, inasmuch as an appropriation of some 200 salmon were nearly destroyed in his hatching house last week by some scoundrels who poisoned them.

—The semi-annual meeting of the Illinois State Fish Culturists' Association will be held at Peoria during the State Fair, to-day. Different native breeds of food fish will be exhibited, and also trout from the fish farms at Elgin. Several very fine aquaria will be shown.

—The State Fish House at Anamosa, Iowa, will be completed by the end of this month. The spring which will supply the hatching troughs is almost inexhaustible. Mr. B. F. Shaw, who is in charge, has been notified by Professor Baird to be in readiness to receive 250,000 California salmon early next month. Mr. Shaw will certainly raise white fish at Anamosa. We wish the Iowa Fish Commissioners full success, and believe that their labors will in due time produce the best of results.

Natural History.

THE OREGON BIRD.—In our last number we described a peculiar bird, whose characteristic traits were sent to us by Mr. Roop, of Portland. Professor Baird and Mr. Ridgway have kindly given us the following information in regard to it: "The description of the bird coming from Mount Hood, Oregon, answers very well to that of Clark's crow (*Picicorvus Columbianus*), a species common in the Rocky Mountain region and westward. This bird, however, has an elongated, slightly curved bill, with nothing of the scissors shape about it. If the bills cross, as we infer from the term, it is probably an accidental malformation, such as is not unfrequently occurs in long-billed birds, and such as is permanently present in the so-called cross-bills." [We have requested Mr. Roop to send us a stuffed bird.—Ed.]

—An occasional correspondent who signs himself "Veteran," mentions having recently killed a black snake which contained in its stomach five little woodcock, apparently only a few days old and just swallowed, and assumes that these snakes are among the most destructive of pot-hunters. We have little doubt in our minds that scarcity in certain localities is often due almost wholly to the cause here named.

—There is something delicious about the way the bees behave in Los Angeles. All you have to do at breakfast time, in an old house, is to procure a gimlet, bore into the ceiling, and hold your cup or your slice of bread under the hole, and the honey drops out in an endless stream. Of course the garrets are not of much account as enjoyable locations. When they tear down a house at Los Angeles, the bulk of wax alone, pays for the demolition, and goes a good way to build the new house.

PRESERVING THE VITALITY OF EGGS.

WHITEFIELD HOUSE, MEAL GATE,
CARLYLE, ENGLAND, Aug. 25th, 1874.

EDITOR FOREST AND STREAM:—The failure in hatching eggs of a hardy game bird, lately sent in great numbers from America to England, plainly suggests the inquiry "Have they been packed and treated in the best manner?" I have given this matter great attention lately, and beg to offer a few remarks thereon. Our London Journal of *Horiculture* is also our best authority on poultry subjects. I take it, and see several letters in best month's number giving suggestions how eggs may be preserved quite fresh for a very long time. Our writer states that he has kept eggs perfectly fresh from August till the following March, by using thin boards or shelves perforated by circular holes, in which the eggs are placed with the small end down. This causes the yolk to swim always in its proper position, and not to adhere to the side. Strange to say, but it is an undeniable fact, that twenty or thirty years ago all our servants had ten times more skill in domestic economy than at the present day. They could brew first-rate ale, pickle, and manufacture capons, and bring up poultry with marvellous success. We have now to do all these things ourselves, if done at all, and wait on our servants. I saw lately in an old lumber room the remains of a board as above described, which my mother said was in constant use fifty years ago in all well managed households.

They down a great number of eggs in salt, or hard, every summer, which keeps them quite good for eating for many months; but whether the vital property is preserved thereby I do not pretend to say. I believe that turning the eggs every day is the grand secret.

"Oo Caddemass begin to"

is a trio old couplet with some who tell me that they lay every second or third day for a week or so, before inclined to sit. These eggs are marked with a cross of ink or soot, so as to distinguish the different sides, and if not turned every day not one will hatch. I observe that all our domestic poultry and pheasants turn their eggs themselves when sitting, and seldom miss one. Some guests of mine, who would not follow it at first, construed themselves of the fact by marking a lot of hard-boiled eggs in a nest, which was in the shrubbery close under a window, and we could see her go off and on. Mr. H. Barr, of Berkshire, a most excellent authority in such matters, writes me to-night, and among other things says: "I omitted to answer a question of yours in a former letter, relative to the carriage of American eggs. I think the eggs should be packed in tin boxes, and packed tight, so as to be safe, but not too tight, and in each box or basket should be turned on one side or topsy-turvy every day. This is all important. If this is not attended to it is of no good attempting to transport them."

I quite agree with my much esteemed friend, and I think nothing could be better than packing them in so he suggests—in shallow boxes. What could be better than coarse ribbles, i. e. stones, which are light and dry, and are better than any other material that they might be had for use with netting, coarse open sacking, or some such contrivance, so as to keep them from shifting, and then you could invert the thing once. A lot of these could stand on the top of each other like shelves. This would save the immense labor of turning each individual egg between finger and thumb, and there would not be the liability of missing some or losing them untillable. That they can be brought over successfully, if well managed, I have no doubt whatever. JACKSON GILLIBANKS.

MORE ABOUT SHARKS.

PHILADELPHIA, Pa., August 25th, 1874.

EDITOR FOREST AND STREAM:—In a late issue of your paper I observed the article "As to Sharks," and as I have no reason to doubt the veracity of Professor Baird's statement, I am obliged to confess that I have, through want of pick, missed that, or I must console myself with the belief that there must be a great difference between the flesh of the blue shark and that of the brown and ground species. Eight years of my life I spent at sea, and during that time I made the acquaintance of quite a number of sharks of almost all ages, sizes and species, but only on two occasions have I thought of tasting the flesh, and in neither of the cases did I get the length of actual taste. Many a time I have heard old sailors state their conviction as to shark being "a mighty hard morsel to swallow," and some would say that "skunk could not smell such morsure." I felt a great curiosity on the subject, and determined that when I could get a chance at a young one I would try how it tasted. The chance came at last, and an extract from my journal will show my experience on the subject:

Saturday, June 9th, 1868.—Just when I was going in to dinner the boatwain came to ask for a piece of raw pork, saying he wanted to catch a young shark that was knocking about the bows. I went forward and found that there were two young sharks, and that they would have nothing to do with the bait. I got the grubs and went out on the merrigale, and when I got a chance at a net I let drive at him—and made a lively miss. A sailor named Sinton next took the grubs, and struck one and got him on board, and then I got a slip at the other one, and some how or other I actually struck him and got him on board too. Half an hour

later a fellow about ten feet long was seen crawling about the same place. The harpoon was got out in his honor, and Sinton sent it through him, but when he healed him up he kicked and struggled to such an outrageous fashion that the harpoon tore away the flesh, and he fell back into the water a gone shark, and as it was a dead salmon we could see his blood flowing in the cockpit. The two young ruffians in the meantime were cut up and prepared for the frying pan and led to soak till to-morrow. I have tasted a good many kinds of fishes, but never yet brown shark, or any other kind of shark for that matter, but I think if all goes right I will have a piece to-morrow to see how it tastes.

Sabbath, June 10th.—My mention as regards the piece of shark I was to eat to-day is now made of stick. The water in which the flesh was soaking was changed three times since yesterday afternoon, and yet by this morning it smelled so awfully that it was quite perceptible from any part of the deck, and the cook emphatically declared that he would not cook any such stuff, and he would not let any of his pans be used for such a purpose, for he never would be able to get the smell away, and nobody made any objection what so ever, so that I was left all night aboard. On account of the solemnity of the occasion, and also because I had doubts as to whether our Hindoo would cook such an unorthodox kind of meat, I officiated as chef de cuisine, and proceeded to make shank so stew, but oh, gracious! whenever the meat began to get into the stew pan I felt sure that I was to quit a perfume that was far from agreeable, and which in a short time got so intolerable that I seized the pan, carried it a short distance and dumped the contents. I observed that Muckern had a severe scrubbing at that useful utensil during the course of the afternoon, and no doubt he blessed the Sahib for taking liberties with his dishes."

My second attempt at shark eating was at Annesley Bay, in Abyssinia, at the time of the British expedition against King Theodoros. Our captain and three officers of the Fort's 5th Regiment made me a shooting party and I was invited to accompany them. We sailed about twelve miles up the bay and camped out for three days, and during that time I made my second attempt at shark eating.

Friday, 25th February, 1868.—When the tide had gone out to-day I saw a fish of some kind floundering about in one of the shallow pools. I took up the fish and examined it with my eye, and found it was a young ground shark about eighteen inches long. When I first waded into the pool the young wretch made direct for me, but afterwards turned round and tried to make off. However, I grabbed him by the tail, and in spite of some desperate attempts he made to bite my hand, I brought him up to the tent. I remembered the time when I once before tried to eat shark (and shank), and concluded to try this one, as it was a different kind and possibly might not smell. The other young sharks, I remember, were kept in soak for a night, so I decided to cook this one while fresh. On account of the solemnity of the occasion, and also because I had doubts as to whether our Hindoo would cook such an unorthodox kind of meat, I officiated as chef de cuisine, and proceeded to make shank so stew, but oh, gracious! whenever the meat began to get into the stew pan I felt sure that I was to quit a perfume that was far from agreeable, and which in a short time got so intolerable that I seized the pan, carried it a short distance and dumped the contents. I observed that Muckern had a severe scrubbing at that useful utensil during the course of the afternoon, and no doubt he blessed the Sahib for taking liberties with his dishes."

My second attempt at shark eating was at Annesley Bay, in Abyssinia, at the time of the British expedition against King Theodoros. Our captain and three officers of the Fort's 5th Regiment made me a shooting party and I was invited to accompany them. We sailed about twelve miles up the bay and camped out for three days, and during that time I made my second attempt at shark eating.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
NEW YORK, Sept. 13, 1874.

Animals received at Central Park Menagerie for the week ending September 12th, 1874:
Six Prairie Dogs, *Cynomys ludovicianus*. Presented by Philadelphia Zoological Society.
One Canada Rabbit, *Lepus canadensis*.
One White Featlow, *Pero cristatus*.
One small Alligator. Presented by Master Conde R. Thorne.
W. A. CONKLIN.

Woodland, Lawn and Garden.

THE AUTUMN LEAVES.—The log continued drouth in many sections of the country has so dried the sap in the shade and forest trees, that their leaves are withering, turning brown, and falling prematurely. Many trees have already shed half their foliage, and it seems as though all would be stripped and bare long before their usual period; so that we are likely this year to miss the radiant glowing tints that make the American autumn gorgeous. We experienced a rapid transition from winter to summer. Spring was omitted, and now, if we are to pass directly from summer to winter, how shall we endure the elimination of both the vernal and autumnal seasons? In lieu of the crowning glory that makes the October forests resplendent, we shall have only the serene and yellow leaf to remind us, indeed, that "the melancholy days have come."

—Our Waretown correspondent, "A Brick," says he has found pink pond lilies in Ocean County, New Jersey. They were usually of larger size than those of a white color, which he attributes to the peculiar richness of the soil.

ANSWERS TO CORRESPONDENTS.

ANNIE C. AVERY, Mt. St. Vincent.—For information in general as to the cultivation of outdoor or "garden ferns," we refer you to an article on ferns to be found in No. 20, Vol. II, of FOREST AND STREAM. Please read carefully the portion commencing "The fern so readily adapts itself," etc., to the end, and if you would add anything to this you will be able to do so easily, as everything relating to this beautiful and hardly decorative plant for the parlor is suggestive from the very beginning. We like the plan of making steps, rising one above the other, or galleries, little arches, etc., all of which can be easily made with small bits of granite quartz and jasper, felspar, or such other geological specimens as you may have or can procure. Ferns of small size should always be chosen. There are many beautiful sorts to be had at a small cost, and which any greenhouse will furnish. Ask for hardy and self hardy ferns.
O. Q.

MARY MANSFIELD.—The leaf you send "of a curious plant found growing wild in the woods," is the *Passiflora*, or passion flower. How it came to be found in the woods I can only conjecture; most probably the seeds were sown by the birds, who plant many seeds, both of flowers and fruits. The *Passiflora* are truly beautiful plants for cultivation—both curious and interesting. The flowers are sometimes produced in great profusion, and during a succession of several weeks. Under glass they will bloom many weeks, and in summer or autumn out of doors.

They are a beautiful plant for training about doors and windows. I have one now in bloom at this writing, running over a portion of my front door, that is the admiration of all who behold it. The one best adapted for indoors is the *Clara gillibanci*, and for out of doors the *P. caerulea*.
O. Q.

EMERSON, Charlestown.—The insect you sent for recognition is an old and well known enemy of the garden. He is king among "saw flies," the female *Clandius difformis*. He has an apparatus at the extremity of the body, which, revealed under the microscope, presents the appearance of a genuine saw, hence the local name in many places of "saw fly." This insect is one sixth of an inch in length, with a black and shining body, and dirty, yellowish white legs. Having once seen him you will never forget him. These flies are fond of rose leaves. They work about seventeen days, and then remain in a pupa state three weeks, when they again make their appearance in the shape of perfect insects, ready to vex the soul of the most patient gardener.
O. Q.

BREWSTER, Pennsylvania.—The "animal insect, you call him," is one of the August pests, and he is called the *Tettigonia*, or familiarly known in Massachusetts as the "leaf hopper of the vine." This insect is found in wet and damp locations, as well as in dry gardens, and is a bad customer to deal with. The *Tettigonia* are often found upon the leaf of the grape vine, and their bite is blight. They go there to bite, kill, and destroy, and they will kill the fruit on the vine if you do not kill them. There is one species of this insect found in grass lands which leave a deposit called "frogs' spittle." You have only to examine this to trace them out. The *Tettigonia* is one tenth of an inch long, and if you catch one and place him under your microscope you will see him in all his glowing straw colors, nicely striped with red. You can find no better means of expelling him than the application, with a pair of bellows (prepared for the occasion), of equal parts of flour sulphur and dry air slacked lime.
O. Q.

WILD PLUMS OF KANSAS.

We copy the following article from "The Garden," a weekly London journal:

[Some time ago it was stated that a traveller in Central America, while passing over the sandy plains of Kansas, met with dense thickets of small plum trees, not larger than our gooseberry bushes, bearing fruit of immense size and of a peculiarly fine flavor. Several inquiries for information respecting these plums, not having met with any response, our occasional contributor, Mr. Jackson Gillbanks, of Cumberland, who takes so active a part in all branches of natural history, wrote to America, through the FOREST AND STREAM journal, to ascertain whether or not such plums existed, as small bushes bearing large and delicious fruit would be a grand acquisition to both our gardens and orchard houses. This has produced the following interesting letter on the subject from Mr. Ed. Thompson, of Kansas.]

"LAURENCE, KANSAS, U. S. A., July 8, 1874.
"Dear Sir—Your letter, relative to the wild plums of the plains of Kansas, has again directed my attention to them. The head waters of the Kansas river and many streams emptying into the Platte, abound in wild plums of many varieties and colors; where the soil is fertile and water plentiful, the trees grow to the height of from 6 to 10 feet, and the fruit of many kinds is large and pleasant to the taste. There is one variety of white plum quite as large and of as good flavor as Bolman's Washington, a kind generally cultivated and much valued in the Eastern States. Another kind resembles the St. Catherine in size and color. Among the sand hills of the Arkansas, the trees do not reach the size that they do further north, being in fact mere bushes 3 and 4 feet high, growing in dense clumps or thickets. The fruit, however, appears to be equally large and luscious, and during the early fall my men have frequently brought baskets into camp, which were exceedingly palatable, either raw or cooked. In the fall of 1872, after we had experienced severe frosts upon the head waters of the Republican, on our way into settlements upon the north fork of the Solomon, we found a deep arroyo, with a spring, whose sides were covered with these trees, the bearing, their sheltered position having apparently delayed the fruitage and protected them from frost. I shall be this year south of the Arkansas river, in the extreme southwestern part of this State, and if the Indian's untutored mind does not suggest his raising my hair (scalping), I will make further observations upon this subject, the result of which I shall be happy to communicate.
(Signed)
EDWARD D. THOMPSON."

To Jackson Gillbanks:
A local paper asks:

"The labors of Mr. Gillbanks in natural history and nearly every branch of science, seems well known and appreciated in America, and we learn that several parties there have offered to send him some plants of these desirable fruits, which he intends to present to the Royal Gardens at Kew, so as to have the best treatment."

[Mr. Gillbanks begs us to thank Mr. Thompson for the information conveyed.—Ed.]

RANDOLPH, N. Y., Sept. 14, 1874.

EDITOR FOREST AND STREAM:—Enclosed find a common grasshopper, (*Gryllus viridissimus*) that has upon its body small insects, that when put under the microscope look to be three inches long, and half an inch wide, with three pairs of legs, of a bright red color, and half all over its body. My object in sending it is to enquire: 1st. What are they? 2d. Is it common for grasshoppers to have them? I noticed hundreds of grasshoppers with a little clump of from ten to twenty of these little insects under the wings, where they attach themselves to the body, giving the grasshopper a beautiful appearance as they jump and fly. I noticed many with the wings partly and entirely gone. I suppose the little parasites or insects feed upon the wings, and perhaps eat and kill the grasshoppers. Am I correct?
Years very truly,
HENRY THOMAS.

Secretary Trout Grove Fishery.
P. S.—Since writing the above an old farmer says: "They are flies that have destroyed the grasshoppers for two years before this."
H. T.

[The presence of these parasites has been noticed in other localities; wherever they are found they make mortal havoc with the grasshoppers. If western people would acclimate a few billions of them, the grasshopper plague would afflict them no more.—Ed.]

—A man without resolution is like a man exempt from evil—he has no (will) of his own.

Kentucky at twenty-five double and fifty single birds for a prize of \$200. The third day the prizes will be \$300 and \$200 for ten double birds and twelve single. Parties desirous of further information will address Gus Jarboe, Lock Box No. 8, Lexington, Ky.

SPORTING ITEMS FROM MINNESOTA.

LAKE CITY, Minn., August 31st, 1874.

EDITOR FOREST AND STREAM:

We have now had fifteen days of chicken shooting, and are able to make a partial report. The season was opened here in good earnest; every dog and gun out. The day was hot, but every man made a big bag. The enthusiasts lasted only for a few days, until it was found necessary to go some fifteen miles from town to find plenty of birds. The largest bag reported was made by a friend, viz: thirty-seven birds, after three o'clock in the afternoon.

Our sportsmen speak very highly of the dogs, and wonder why the Eastern sportsmen are importing dogs from England. Certain it is, that right here we have some splendid dogs of our own breeding. We may be selfish, but nevertheless we believe that they are not surpassed in the wide world. We have a strain of English pointers, which are the largest and best nested dogs I ever shot over, and my experience with dogs runs back eighteen years. I send you the photograph of one of these dogs, owned by Mr. Dilly of this place. I have one of this dog's pups, only five months old, which is now about the size of pointers a year old. He is already perfectly wary broken, even to retrieving. I shall try him first on quail in October. There have been many sportsmen here and at Frontenac from abroad, and a good number still remain. St. Louis is best represented. Among Eastern sportsmen I may mention E. P. Hoffman, Esq., of Philadelphia, an old Andromedon sportsman. Though a stranger, we made him welcome, and put him on the track of both trout and birds. He is one of our oldest sportsmen, and a gentleman of the first water. He paid a flying visit to Rosh River, and was the first and prettiest stream he ever saw, but did not say a fish to any extent. He has moved on west to find chickens more plenty. Mr. Joe Jefferson, the renowned "Rip Van Winkle," is at Frontenac, and has favored us with several calls. He is having glorious sport. If there ever was a true, genial, and refined sportsman, Mr. Jefferson is certainly one. May his calls be oftener and his stays longer.

The trout season closes to-morrow, and although I cannot report the exact number or weight for our streams, yet I may say the number taken from the streams emptying into Lake Pepin has been very great. The largest trout taken was by your correspondent, and weighed two pounds ten ounces. We shall make an effort to obtain a law to rest Rosh River two weeks in the fall, and protect streams by ever saw, but did not say a fish to any extent. He has moved on west to find chickens more plenty. Mr. Joe Jefferson, the renowned "Rip Van Winkle," is at Frontenac, and has favored us with several calls. He is having glorious sport. If there ever was a true, genial, and refined sportsman, Mr. Jefferson is certainly one. May his calls be oftener and his stays longer.

CHIEFDOWN.—On Tuesday September 8th three competition matches took place. The Irish Rifle Club recently organized, held its first match. Perhaps some day this native club will contest for the palm of victory with the regular Irish team. Then when Greek meet Greek will come the tug of war. The first match of the club led off by Mr. Burton shows very good practice. We give the scores. Distance 200 yards, ten shots:—

Table with 4 columns: Name, Score, Total, and Points. Lists scores for various individuals and teams in rifle matches.

Mr. B. Burton carried off the club badge, with the very excellent score of 82 in a possible 40. The Seventy-ninth Rifle Club then shot for the Bruce medal, where Mr. Edmundstone made the best score of 48 in a possible 56. We give the seven best scores:—

Table with 4 columns: Name, Score, Total, and Points. Lists scores for various individuals in rifle matches.

On the same day the rank and file of the Twelfth held their contest for the Gildersleeve Badge. Shooting nothing to brag of, most of the contestants slipping up on the 200 yard range. We give some of the scores:—

Table with 4 columns: Name, Score, Total, and Points. Lists scores for various individuals in rifle matches.

The team practice of the Twelfth Regiment then followed. We append the scores:—

Table with 4 columns: Names, 300 Yds., Total, 500 Yds., Total, and Points. Lists scores for various teams in rifle matches.

Various members of the Brooklyn National Guards tried their hands. We give the best scores:—

Table with 4 columns: Name, 300 Yds., Total, 500 Yds., Total, and Points. Lists scores for various individuals in rifle matches.

On Wednesday the 9th, the members of the Amateur

Rifle Club had their practice, preparatory to the final selection of the American team to compete with the Irishmen on the 26th inst. Wind was good at start, but later in the day was gusty and uncertain. Total of points made by the eight best, 1,130, in a possible 1,440. We append the scores of the eight best:—

Table with 4 columns: Name, Yards, Score, Total. Lists scores for various individuals in rifle matches.

On Thursday the 10th, the Twenty-third Regiment of Brooklyn, Col. Ward in command, had their day's practice. The very best order was kept. A handsome gold badge was the prize awarded to the marksman, and in addition the "Kellogg badge" was to be shot for. Corp. Stearns won the 1st prize, Priv. Dibble the second prize. We give the ten best scores:—

Table with 4 columns: Name, 300 Yards, Total, 500 Yards, Total, and Points. Lists scores for various individuals in rifle matches.

The Kellogg badge, a very handsome one, was presented to the Regiment by Mr. S. I. Kellogg, San Francisco, a former member of the command.

The following table will show the average and best individual scores of the various regiments of infantry and cavalry. Highest possible score 480. Team composed of twelve men:—

Table with 4 columns: Regiment, Team Score, Average, Best Individual Score. Lists scores for various regiments.

On Saturday, "the team" had their practice. The following are the scores:—

Table with 4 columns: Name, Yards, Total. Lists scores for various individuals in rifle matches.

It may be interesting just here to compare the scores made by the Irish team, when they won the Elcho shield, with the performances of the best eight at Creedmore on Saturday:—

Table with 4 columns: Name, Yards, Total. Lists scores for various individuals in rifle matches.

The Press Rifle Match.—We are pleased to notice that the N. R. A. will have a Press match at the fall meeting at Creedmore, open to representatives from any regular newspaper or periodical, each contestant to be a bona fide employe thereof. The weapon to be used may be any military rifle, distance 500 yards, each contestant to be allowed seven shots. No entrance fee will be charged, and the following prizes will be awarded in the order named: First, a gold badge, \$50; second a fishing tackle outfit, to be selected by the winner, (presented by Peck & Snyder); \$25; third, fine gold and silver mounted pearl-handled revolver, in case, (presented by T. B. Fish & Co.); \$20; fourth, a silver badge, \$12; fifth, a gold pen, holder and

case, \$10; sixth, a silver badge, \$8; seventh, a silver badge, \$6; eighth, a silver badge, \$6; ninth, gold pen and holder, \$5; tenth, gold pen, \$5.

We think that General Hawley, of Connecticut, will distinguish himself in this match.

Answers To Correspondents.

Read Ins, Hamden, Conn.—Will answer in our next.

L. S. R.—In your next paper please give me the address of some good party to send game for sale in your city? Ans. A. E. Robbins, Fulton Market, New York City, are one of our principal firms that deal in game.

AMATEUR.—What is the best covering for rans-hoods when fishy fastened with thread and wax, to make them water tight? Ans. Rosin, extra perch, and linseed oil, dissolve and mix. See answers vol. 2, page 407.

H. N. T., Woodside.—Where can I find good reed bird shooting with-in fifty or seventy-five miles of New York City, the size, shot, also the proper charge, and the best time to go? Ans. Chester, Pa., or Hackensack marshes; No. 10 shot, 2/3 drachms of powder. Ball are in season now.

SUBSCRIBER.—I have a setter pup five months old 1st of October; wish to know if it will be safe to take him into the brush this fall, or not until shooting season next fall, when he will be nearly a year and a half old? Ans. By all means take him out, and that in the company of an old dog, if possible.

BENTLEY, Bath.—Can Gley's paper cartridge, No. 12, be reloaded; if so, where can I procure the instrument, and what? Ans. Hardly pays to use a paper cartridge a second time, providing it does not break you can put in another primer. The machine costs about \$1.50, and can be procured at any gunsmith.

TWIN LAKES.—How far from Salisbury, Conn., is it necessary to go to find good bass fishing, and the name of some house (where decent fare and clean beds can be had) to put up at? Ans. Go to Chapinville or Ashley Falls Station, on the Harlem Railroad. We recommend the Cooper, which is the best in the fishing region. Rate room, \$2.50. See advertisement in FOREST AND STREAM.

QUAKER CITY.—In the Des Moines River, Iowa, there is found a silvery, rarely, if ever, exceeding three inches in length, back gray, sides alternately striped with black and silver; belly, hood, back, the latter sometimes white and changes again to red in a few minutes, the color extending to the lower jaw, and tinging the lower part of the tail. What is the name of this fish? Ans. It is a species of the genus, but we do not know its name. Paper has been sent us regarding it.

F. R. B.—We have two ponds and a fine stream empty under our control, which we wish to stock with land-locked salmon. Can you tell us where and for what price we can get them? Ans. Send to the State Hatching House at Sebuc Lake, Maine. We put fifty black bass into one of our ponds last autumn, will they be of any harm to the salmon? Ans. The black bass will destroy the salmon.

G. R. B., Maplewood.—A friend of mine has a spaniel dog which he thinks a great deal of, and uses him for hunting grouse. In running down him one day in the woods the dog ran against a stump and struck his head so hard as to knock him over, and in about two or three weeks after the dog became stone blind. Is it possible to restore his sight do you think? His eyes look perfectly natural, except that in certain lights they seem to look glassy, but there is no film over them that can be seen. We should like you to try from Bentley as the only hope.

MUSKOGA.—Do you know if the Muskoga River, in Ontario, really abounds in large size speckled trout, as reported, and if so where would be the best place to get guide, boat, provisions, &c.? Ans. Take Northern Railroad from Toronto to its terminus at Washago, thence stage and steamboat to Bracebridge, where you can get guides, wagons, boats and provisions. For trout take south branch of Muskoga, no trout in north branch. If you can get a boat from Bracebridge as the only hope.

more. Trading Lakes and Gravelly Rapids are the best objective points. At some points trout will average a pound; at others not more than three ounces. We give our information from personal observation.

READER OF FOREST AND STREAM.—Are breech loading guns of German manufacture reliable? Ans. Very few come to this market. The Germans are noted as makers of gun barrels, and export them in large quantities. The breech loaders are low in price, and there is much to be said for one or two exceptions. What is the action in unloading the barrels the best? Ans. The gun that will show the least displacement between the breech and breech block after a season's shooting. There are so many styles of action that it is a matter of fancy. Are rebounding locks preferable to others? Are they ordinarily as sure? Ans. Rebounding locks are much used by a very few sportsmen. They save some trouble, and being a novelty, are fashionable.

MARK RIGHT.—1. What do you consider the nearest point to New York City at which the following requirements are obtainable—a good farm, healthy location, good upland—what of Orange County?—shooting, respectable neighbors, church and school opportunities? Ans. The back of Peekskill, N. Y. 2. Are you willing to state your choice of the two who have best shot, so far, at Creedmore and Saturday? It is a matter of opinion. 3. I want a good dog, setter preferred, of moderate size, steady and sner noise. Now, would you, if a business man, attempt to break a pup? Ans. No, it is a business of itself. 4. For a useful breed loafing shot gun, would you use your light summer gun of 7 1/2 pounds, or buy a cheaper and heavier one? Ans. For a general gun, the weight should be about 8 1/2 pounds, and cost \$100 and upwards. There would be no risk in loading with buckshot. 5. What is the safest reservoir for gun powder while loading shells? Ans. Any kind of crockery ware.

G. W. H., Philadelphia.—The person who discussed with you the subject of rifle shooting at 1,000 yards is in error. Perhaps those marksmen now practicing Creedmore in order to become eligible as members of the American team, are the best riflemen we have for long ranges in the United States. We do not think there are any men in the United States who can beat them, so far, their accuracy of shooting (see to-day's) paper is not up to that of the Irish team. For 300 yards, snap shots, American riflemen are quite as good as any marksmen in the world, and perhaps better. The assertion that there were out West "hundreds" of men who could strike a bill-bye (three inches in diameter) at 1,000 yards, is ridiculous. A man, at a thousand yards, looks hardly bigger than a cap. In fact, if you had them, would it be possible to see a three-inch bill-bye, either at 500 or 1,000 yards? Nothing is looser than the general ideas of distances. A noted rifleman of Creedmore told us yesterday, that to find, outside of Creedmore, a range of 1,000 yards, save on the sea beach, was almost impossible, and that to shoot over a clear ground of 500 yards was even hard to find. Practical gunmakers and rifle manufacturers, who had brought to Creedmore, are somewhat astonished at what a thousand yards really is.

DORCHESTER YACHT CLUB.—The fifth regatta of this club, and the fourth for champion prizes, will take place to-morrow, September 18th, off Commercial Point, Boston. The contestants are the yachts Bristol, Maud, and Water Witch, and the prize a silver cup.

The sixth and final regatta of the season occurs on Saturday, the 20th, for first, second, and third-class centre boards, keel schooners and sloops, over course No. 2, and for fourth-class centre-boards over course No. 3. First prize will be \$15. Judges W. A. Gilbert, Coolidge, Barnard, and N. Wales.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
125 SOUTH THIRD STREET, PHILADELPHIA,
COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tackle," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, SEPTEMBER 17, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted. All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their innovations and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and commendation of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will endeavor to do accurate, fast, and correct the legitimate sports of land and water to those whose uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the deterioration of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week. If possible, CHARLES HALLOCK, Managing Editor.
WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, September 18th.—Trotting meetings at Chatham Village, N. Y., Peoria, Ill., Providence, R. I., Lawrence, Mass., Waverly Station, N. J., Norristown, Pa., Florence, Ky.—Dorchester Yacht Club.

SATURDAY, September 19th.—Practice day host clubs, Harlem, N. Y.—Trotting meetings Waverly Station, N. J., Norristown, Pa., Florence, Ky.—Dorchester Yacht Club regatta—Philadelphia vs. Boston B. B. C. at Boston, Mass.

MONDAY, September 21st.—Trotting meetings at Fleetwood, N. Y., and Sacramento, Cal.—Philadelphia vs. Boston B. B. C. at Boston—Athletic vs. Chicago.

TUESDAY, September 22nd.—Trotting meetings at Harford, Conn., America, N. Y., Haverhill, Mass.—23rd to 24th—Porsmouth, Ohio, Potsdam, N. Y., Prospect Park, 25th, Brooklyn, White Marsh, Pa., Albany, N. Y., Eau Claire, Wis., Ambler Park, Pa., Folsom, Cal., 36th, Mordeco, Conn., 25th Monongahela City, Pa., Cuba, N. Y., Tippecanoe City, Ohio, Middletown, Del., Sharon, Pa., Lockport, N. Y., 25th—Philadelphia vs. Mutual B. B. C.

WEDNESDAY, September 23rd.—Match day, cricket clubs, Hoboken.—Trotting meetings same as on Tuesday.

THURSDAY, September 24th.—Brooklyn Yacht Club regatta.—Trotting meetings same as on Tuesday and Wednesday.

AMERICAN AND ENGLISH RIFLES.

THE late discussions in England in regard to the Martini-Henry rifle, relate not as much to the accuracy of the arm, as the violence of the recoil and the variability of the trigger. Of course the latter point, being a simple mechanical difficulty, could be readily controlled; as to the recoil, that is another matter. The *Volunteer Service Gazette* states, "as regards the recoil, the more we search the Blue Book the more strongly we adhere to our opinion, that some evidence very much more weighty than a few rifle-men, however experienced at the last Wimbledon meeting, is needed to rebut the extraordinary strong testimony on the other side, on which the small arms committee relied in recommending the rifle."

We think by comparison, then, we have every reason to be satisfied with our own breech loading arms. The new model Springfield, as an army gun, has proved its accuracy, and even as may have been seen at Creedmoor, as a purely military arm, has asserted its claims as a target weapon. Our Remingtons, Sharps and Ward-Bartons, now used all over the country, subjected to constant and various usage, fill perfectly the places demanded of

them as arms of great accuracy and simple mechanism. Without undue arrogance on our part, we are inclined to think that our breech loading rifles, are, in every way, quite the equals of the English weapons, and in some respects, even surpass them. We do not mean to decry our muzzle loaders. As we have before expressed ourselves, it is a matter to be regretted that our manufacturers of muzzle loading rifles have shown such apathy in regard to their interests. There are no methods, therefore, by which comparisons can be made between the best English rifles, (muzzle loaders,) such as the Rigby and Metford, and those of American make. It has been said to us, and perhaps with reason, that it will require a certain amount of time before such arms will be produced in the United States. Perhaps next season we will see muzzle loaders in use in Creedmoor. As it is, however, comparing American scores with the English ones, Creedmoor against Wimbledon, the shooting of our breech loaders leaves nothing more to be desired.

GAME PROTECTION IN SWITZERLAND.

WE had the pleasure of an interview last week with M. Edward Guyer, fish commissioner from the Canton of Zurich, in Switzerland, who is now on a visit to this country with a view to ascertain what has been done here relative to the protection of game, and to investigate our methods of fish culture. His journey will extend through the West as far as California. From him we learn that Switzerland has taken up the whole subject in earnest, and has acted with a promptness, energy and thoroughness altogether worthy of imitation. Some three months ago the constitution was revised, with the popular consent, so as to place the protection of her forests and streams, with their game and fish, entirely under the control of the Federal Government, the several Cantons or States relinquishing all their rights in their respective domains. By this action she can now treat with other countries upon all questions involved in these special interests; whereas unity of action was before embarrassed by each separate State having jurisdiction over its own affairs. The great advantage thus gained must be conceded. The Federal Government now designates close times and open seasons for game and fish, controls water rights, grants licenses and leases, regulates the fish passes and the sizes and forms of nets, supervises fish culture, prescribes the weight and size of fish to be sold in market, and moreover prevents any one from engaging in the business of fishing unless he thoroughly understands it—a wise provision, certainly. It has also set apart and reserved certain waters for propagation, in which no fishing can be done for a specified number of years. In these respects, it has followed the example of Canada, which seems to be in advance of most other countries in these matters. Each separate Canton, however, is to have its own fish commissioner, and appointments have already been made in nine out of the twenty-two.

This plan of protection includes the forests and their belongings, the propagation of trees for timber and shade, and all other kindred economic interests.

Without at present pressing upon the United States the adoption of a similar system in its entirety (which would certainly seem most advantageous), we will simply state that Austria, Holland and Germany are preparing to reconstruct their game laws upon some improved basis, and are only awaiting the success of the movement in Switzerland to make them conform to hers in all essential features. We shall do wisely if we also scrutinize carefully the work she is doing. A growing interest is certainly manifested throughout this country in this most important subject, not only in the formation of clubs and associations to protect game, and the holding of conventions to discuss vital points, but in the increased amount of information that is daily and weekly disseminated through the press, and the eagerness with which it is everywhere read. The establishment and liberal support of papers devoted exclusively to these interests, two of them within fourteen months, is a most positive indication of the popular drift. Our people seem to have awakened to the exigencies of the hour, and to have heartily embarked in the work demanded of them. What is important is to secure the best method for preservation and protection that can be devised, and then to place it in the hands of the best executive to enforce its observance.

In this connection we may mention one fact most interesting to Americans that has been communicated to us relative to the Austrian fish commission; namely, that its president bears the name of Baron WASHINGTON, who is none other than the great grand nephew of our own George Washington, and the only one of the name now living. He comes from a branch of the family who did not follow the fortunes of George from England to America. His age is about 55, and his wife is a sister of the reigning Grand Duke of Oldenburg, and a niece of the Emperor. He resides at Schloss Poels, Steiermark, Austria.

—Last August was the hottest month that has been experienced in Florida for many years. The average midday temperature was over 90°; highest point reached, 97°; lowest, 77°. Rainfall for the month, one inch. We have a full record from our regular observer at New Smyrna.

—There was a sharp white frost in the Muskoka district, in Ontario, Canada, on the night of September 3d, which blighted the potato vines.

NITRO-GLYCERINE FISHERMEN.

SOME weeks ago we were requested by a person in Massachusetts to give the method by which torpedoes and explosive materials could be manufactured to be used for the destruction of fish. We naturally hesitated before giving such information, and finally thought it better to give no reply to the party making such inquiry. We could, of course, imagine an isolated case where the use of torpedoes to destroy fish might find legitimate employment, as when a pond contained pike, and where it might be necessary to kill all the pike in order to introduce trout or other fish. Of course we gave our enquirer the benefit of this doubt, straining a point, thinking perhaps that torpedoes might be wanted for the above purpose, but determined that it was better to keep to ourselves what we knew of the many rascally methods employed to kill fish. Our most worthy contemporary, the *Twif, Field and Farm*, did not, however, mince matters, for having been requested, very probably by the same person who addressed us, to give the much desired information, "How to kill fish by torpedoes," very properly gave the inquirer a sound rating.

And just here we may mention (not as a coincidence so much as a consequence, perhaps,) that a man has just been discovered killing fish at Quincy Point, Mass., by the explosion of nitro-glycerine, and that much excitement has naturally resulted therefrom. The facts as we gather them from the *New York Times*, are these:—The fish killed were principally sea bass. A small trial of the explosive was at first used, but with indifferent success, as only a few fish rose to the surface; but with an extra charge in a can all the fish within a circle of forty yards were shocked by the concussion. About one hundred were killed instantly, and captured and sold. It is estimated that a hundred more were so seriously affected as to perish. A careful inspection of the fish killed showed, in every instance, that the second or air bladder was rent and filled with blood. The fisherman has been warned against a repetition of this experiment, which is punishable by fines.

We are moreover informed, by the most reliable authority, that quite lately on the Jersey flats nitro-glycerine has been used, and that numberless fish have been destroyed. Though we have looked up the subject carefully, we have not been able to find out whether there is any positive law for the prevention of the use of nitro-glycerine on the seacoast. All we have to say is, that without exactly advising the enforcement of a maritime Lynch law, we would endorse the principle carried out successfully some years ago by those catching smelt in Massachusetts with a hook and line. Those men who used nets to capture the fish (although the law was not explicit as to their prohibition) were caught by the hook and line men and ducked. As to the nitro-glycerine fishermen, we should think a good galvanic kicking, prior to ducking, would be beneficial. To go as far, however, as "to hoist them with their own petards," would be carrying the punishment perhaps a grade beyond what such a crime deserves. We very respectfully bring this subject of nitro-glycerine before the United States Fish Commissioners, and the Massachusetts and Boston societies for the protection of fish and game.

In this connection we may state, and with regret, that questions are very frequently put to us in regard to methods of killing birds, beasts, and fishes by means which are unsportsmanlike, and that it has been our invariable rule to pay no attention to such questions. Our advertising space has also been asked for by parties desirous of selling instruments or substances which we knew were to be used for the destruction of game in an illegitimate manner, and such space in our advertising columns has been, as it always will be, denied to them.

RATIONAL RULES FOR CROQUET.

OUR recent remarks on croquet have called out some correspondence indicating a general interest in the subject, and a demand for some recognized authority. In view of the fact that there never has been, and probably never will be, any published laws, resting on national authority, governing this popular game, the next best thing that players can do will be to adopt by common consent some popular manual, and thus in time make it practically the desired national authority.

From 1864 to 1868 there was much controversy among players as to the methods of the game, and several valuable works were published. When croquet was first introduced to this country, the English rules of Mayne Reid, Routledge, and Jacques were the recognized authorities. In 1865, "Croquet, as played by the Newport Club," was published, and was the subject of much comment among expert players. In 1868 a new edition of a book by R. Fellow was published, in the preface of which the author mentions as one reason for revising a former edition, and a cause greatly influencing and modifying his whole method, the publication of "Croquet: its implements and laws," drawn up by a committee of players appointed by the editor of the *Field*, London; also an article on this book in *London Society*; and states that he had endeavored to agree, as far as possible, with the English committee. But these and many other books seemed to mystify and muddle the average player, and to disgust him with the "scientific game," producing a false impression and laxity of discipline in the game that many years will not eradicate. And yet, with all this wrangle and discussion, there seemed to be very little advantage to the game, as the only really practical point at issue was the restriction or non-restriction of the

For some of these differences of close times, it may be urged in palliation that the quail has an exceedingly wide range—wider than any other game birds. But why should it be closer season for quail in New York from January 1st to October 20th, while as to Pennsylvania there is a difference of ten days? In Massachusetts and Connecticut the law is the same in regard to quail, but differs in Rhode Island, as it does in Maine, New Hampshire, and Vermont. Grouping together States having the same climate and general geographical conditions, why should not the legislation be uniform?

We are pleased to notice that the efforts we have been making for the last year have at last had some effect, and that the convention lately assembled at Niagara Falls has paid some attention to the securing of simpler and more judicious game laws for the country.

MORRIS COUNTY SPORTSMAN'S CLUB.—This club was organized last June for the specific purpose of preserving the game and enforcing the game laws of New Jersey; and, from what we personally know of its character and composition, it cannot but prove a powerful auxiliary to that other association known as the West Jersey Game Protective Society, as well as a useful coadjutor in the universal work which all sportsmen's clubs and associations of good standing have imposed upon themselves. We have received a copy of its by-laws and a list of its members, which comprises some fifty gentlemen, chiefly of Morris county, whose social position, influence, and means will enable them to be fearless in the prosecution of offenders, and vigilant in their watch and ward. There is great need for more clubs of this character every where, and we would most earnestly urge their rapid organization in all States, with a view to their eventual combination in the possible formation of an International Game Protective Association, to include both the United States and Canada. It is not necessary that members of such clubs should be practical sportsmen, or expert at trap shooting, so long as they have seriously at heart and in view the great desideratum of multiplied game and decimated pot hunters. We have expectations of great usefulness from the Morris County Sportsman's Club, and wish it every success. Its officers are:—A. W. Cutter, President; James Bryce, Jr., Vice President; Chas. H. Raymond, Secretary; D. D. Craig, Treasurer; Frank Child, Legal Counsel; who, together with three members at large, Messrs. Whitney, Quimby, and Stout, constitute an executive committee.

THE AMERICAN TEAM.—Last Monday the Amateur Rifle Club selected a team to compete with the Irish riflemen on the 26th instant. It was agreed that two riflemen should be selected by ballot, the two selected to choose a third, and so on till the team and reserve were chosen. The ballot resulted in the choice of H. Fulton and H. A. Gildersleeve, and T. S. Dakin, L. L. Hepburn, G. W. Yale, J. T. B. Collins, J. Bodine, and A. Anderson were in turn selected to constitute the team. E. H. Sanford, J. S. Conlin, L. M. Ballard, F. S. Gardner, and A. Y. Canfield, Jr., were in like manner chosen for the reserve. Colonel Wingate was elected captain of the team. The members of the American team will be provided with ammunition, and their expenses paid, on two days each week, until the day of the match.

We congratulate our riflemen on having such worthy representatives, and believe that the appointment of Col. Wingate as captain of the American team is of most excellent ome. No one has worked harder than Col. Wingate to advance the interests of the National Rifle Association, nor is there to be found any one who combines more thoroughly the scientific and practical details of rifle shooting.

PREPARATIONS FOR THE RECEPTION OF THE IRISH TEAM.—The Executive Committee of the Amateur Rifle Club held a special meeting at Creedmoor, Long Island, on Thursday last, for the purpose of completing arrangements for the reception of the Irish team and their friends, who are en route for this country, and were expected to arrive yesterday. It was resolved to receive the party at the pier, and escort them in carriages to the hotel they may select. Two large hospital tents are to be erected on the range; one to be tendered to the Irish team for their use, the other to be used by the American team. The Treasurer's report showed the amount on hand to be \$884. Of this amount \$100, equivalent to about \$530, will be required for the stakes, leaving a balance in the treasury of \$354. A resolution was adopted directing the President, Col. Wingate, and Col. Gildersleeve, Secretary, to take the necessary steps to raise \$1,000, additional, for the proper reception of their guests. The members have already raised \$600 by subscription for that purpose. The following committees were appointed:—On Reception, Col. Wingate, Col. Gildersleeve, and Lieut. Fulton; Badges, Messrs. Schermerhorn and Fulton; Carriages, J. T. B. Collins; Police, Lieut. Fulton; Tickets and General Arrangements for the Match, Col. Wingate.

THE GREAT PIGEON MATCH came off on September 14th, and Capt. Bogardus claims forfeit on account of James Ward not furnishing the blackbirds. A new match was made as follows: To shoot from ground traps 23 blackbirds and 77 pigeons, 21 yards rise and 80 yards boundary. The match was then on a tie on the blackbirds, each man holding 21 each. Bogardus killed 85 birds out of 100, Ward killing 88. In the latter end of the match Bogardus killed 65 straight birds, a most extraordinary performance; perhaps the best ever shot.

NIAGARA FALLS.—The Niagara Falls Pigeon tournament resulted as follows: Smith killed 19 birds; Welch 15; Newell 16; Kleinman 13; Bogardus 20; Long 19; Price 20; Brown 19; Turrill 13; Wheel 19; Hudson 16; Sherman 19; Tanner 17; Johnston 18; Fish 19; Witmer 17; Moore 13; Jones 18; Landon 17. In the ties of twenty Bogardus had one bird drop out of bounds, and Price won the first prize, \$400. Sherman won the second prize, \$300, by killing every bird at twenty-six and thirty-one yards. On the shoot-off Turrill made a clean score at twenty-six yards, and won the third prize, \$150. Witmer won the fourth, \$100, and Newell the fifth, \$50.

EXPERIMENTS WITH OLD ENGINES OF WAR.—In Paris, last month, under the directions of General de la Faye, a series of very curious experiments were made with engines of war, modelled precisely on the plans of the battering implements and siege trains employed by the Romans. From a Ballista, cannon balls and stones were thrown a distance of over 220 yards. In a period of time not exceeding six seconds, heavy arrows were thrown from a Catapult, a distance of 300 yards. Stones were launched with an initial velocity of forty-two yards a second. The elevations having been carefully studied, no great difficulty was found in placing the projectiles at a distance of 160 yards within quite a limited area. All these warlike implements were constructed after the designs found on *bas-reliefs* on Trajan's column. There is every reason to suppose, that with the warlike instincts of the Romans, their battering trains were powerful implements of destruction. It should be born in mind that sixty years ago army muskets were scarcely of any avail at ranges over eighty yards.

MR. BERGH AND VIVISECTION.—Fully as we may endorse many—not all—of Mr. Bergh's doctrines, we are entirely at variance with him in regard to vivisection, and think that he ventures into waters far beyond his depth. It is a part of all moral reformers to go sometimes, to too great extremes, and thereby retard true progress. Mr. Bergh can never become the censor of what may or may not be the methods to be employed for the highest mental culture. We are all individually obliged to Mr. Bergh for his untiring energy in defence of the animal, but our debt to Prof. Bernard, to Doctors Brown Squard, Hammond and Flint, is even greater. If the hidden secrets of physiology can only be discovered by sacrificing animals, man follows but the highest instincts of his nature, the desire to acquire knowledge, by subjecting the lower creatures to his researches. The animal suffers, it is true, but the man gains a new life.

The Kennel.

FIELD TRIALS.

We have been urging for some time the necessity for the improvement of the breeds of pointers and setters, and have published from time to time several challenges to test the merits of dogs in the field. None of these matches have amounted to anything at present, with the single exception of the coming trial between "Gopher" and "Mowhawk." We congratulate ourselves that owing to our continual agitation for the advancement of the field sportsman's dog, we are enabled to state that there is scarcely a single sportsman's club in the United States but what can now show some evidences of good blood and superior merit in the field, either in the pointer, setter or retriever, since, through our untiring energies, a new, and as we think, a better strain of blood has been infused into the various kennels of America. We hope there are a sufficient number of gentlemen owners of first-class animals to authorize the inauguration of field trials. We must make a beginning somewhere, and therefore trust that there will be a large number of entries to the following stakes to make the first field trial a success:—

THE QUAL FIELD TRIALS FOR POINTERS AND SETTERS.
The Qual Stakes for all aged pointers and setters; entrance fee, \$10. To be run near Keyport, New Jersey, between November 9th and 14th. The precise date, place and time to be agreed on by the majority of entries. Entries to close at this office on November 2d. These trials will be run under the rules as given by the FOREST AND STREAM in its issue of February 5th, 1874, allowing points for retrieving in setters, but none for pointers.

THE SNIPE FIELD TRIALS FOR POINTER AND SETTER PUPPIES.
The Snipe Stakes for puppies born since January 1st, 1874; entrance fee, \$10, with a handsomely designed snipe collar, given by the FOREST AND STREAM. This trial will take place on the Troy Meadows, Pine Brook, N. J., on or about March 6th, 1875. Entries to close at this office on March 1st.

—We knew that whisky was good for human beings when bitten by rattlesnakes, but had never heard before that dogs were benefited by stimulants. We take the following from the *Seick Rapids Sentinel*, of Minnesota:—

A few days since, while James Beatty, Jr., was out chicken-hunting, he ran across a rattlesnake, which he shot, cutting it cleanly asunder. Shortly after his bird dog ran against the severed head and was bitten. Mr. Beatty came into town with him, gave him a good supply of whisky, and bound his leg with earth, which effectually killed the bite of the snake.

GUN TRIAL.—An interesting report of a recent gun trial, sent us by our correspondent at Jackson, Miss., is deferred until next week.

—"Unmanned by the loss of her husband" is the new style of indicating a widow's grief.

TENNESSEE SPORTSMEN'S ASSOCIATION.—The State Sportsmen's Association of Tennessee will hold a grand pigeon shoot, a bench show of dogs, and for the first time in America will inaugurate a series of Field Trials for pointers and setters. This gathering of sportsmen will take place at the Agricultural Fair Grounds, Memphis, on October 7th, 8th, 9th, and 10th. The Field Trials will take place on the 8th. We take great pleasure in congratulating the sportsmen of Tennessee, as they are the first organization to move in earnest in a public field trial for pointers and setters in America. We understand that a large number of entries have already been made. The whole arrangements of the field trials and dog show have been managed by practical men, and when this is the case, a brilliant success for the exhibition is inevitable. If nothing of greater importance, (and we do not think there is anything that would please us better), should intervene, we may be there to see.

The following is the programme:—
WEDNESDAY, OCTOBER 7TH.
Bench Show of Pointers and Setters.
For best setter dog over twelve months, prize Silver Goblet.
For best setter bitch over twelve months, prize Silver Goblet.
For best setter puppy under twelve months, prize Silver Goblet.
For best pointer dog over twelve months, prize Silver Goblet.
For best pointer bitch over twelve months, prize Silver Goblet.
For best pointer puppy under twelve months, prize Silver Goblet.
All entries must be accompanied with pedigree and age.
Sweepstakes for All Ages.
For best pointer or setter, prize Silver Goblet.
Entrance to bench show free.

SCALE OF POINTS GOVERNING BENCH SHOW.

Head	Neck	Body	Feet	Legs	Stomach	Flanks	Thighs	Traps	Pointing	Style and Staunchness	Ranking	Roaming	Quality	Total.
10	10	5	5	7	5	12	2	4	15	15	5	5	5	100
80	10	19	8	15	15	10	10	10						

SHOOTING MATINEE.
Wednesday afternoon, October 7th.
Prizes—\$400. Class match, ten single birds. Open to all amateurs. First prize, cash, \$150; second, \$100; third, \$75; fourth, \$50; fifth, \$35. Entrance fee, five per cent. of purse. Twenty or more entries to fill.

FIELD TRIALS.
Thursday, October 8th, 1874.
Prize, Silver Service for best setter and pointer in a field trial. Entrance fee, \$5.

Two hours will be allowed to each trial. Trials will be continued from day to day, at the discretion of the judges.

SCALE OF POINTS GOVERNING FIELD TRIAL.

Name and age of Entry	No. of Entries	Face and Style.	Breaking.	Pointing, Style and Staunchness.	Ranking.	Roaming.	Total.
	30	30	30	15	10	5	100

Rule 1. The field trials will commence promptly at nine A. M., and all dogs entered for the trial must be at the Fair Grounds by eight A. M. of each day.

Rule 2. Dogs will be matched by lot, and order of running will be decided by the same. No more than a brace will be hunted at once.

Rule 3. Each dog will be judged according to the scale, as heretofore given; total number of points to decide. Should a dog not have an opportunity of exhibiting any particular point or points, the judges shall decide the number given to him for that point or points, by the average number of points gained.

Rule 4. All entries to be made by ten P. M. of October 7th. No bystander or spectator permitted nearer the judges than one hundred yards, except the shooter and handlers of the dogs.

Rule 5. No guns allowed on the ground other than those belonging to the appointed shooters. The shooters will be appointed at 3:30 A. M. by the Executive Committee.

Rule 6. The judges will give full instructions to the shooters.

Rule 7. The owner's name, and name of sire and dam of every dog entered must accompany the entry.

FRIDAY, OCTOBER 9TH.

Grand Pigeon Tournament—State Association Championship.

Prize, Gold Medal. Match, five double birds. Entrance fee, \$5.

Class Shooting, Eight Single Birds.

Prizes, \$175. Thirty yards rise, eighty yards boundary. Both barrels allowed. Entrance fee, \$10. Open to all amateurs.

Class Shooting, Twelve Single Birds.

Prizes, \$200. Open to all amateurs. Entrance fee, five per cent. of purse. Twenty or more entries to fill. Application for entries prior to October 7th, and afterwards, must be made to P. H. Bryson, Sec.

The prize of \$200 was originally offered to professionals. At the request of many amateurs it has been changed as above.

The Exhibition and Tournament will be under the management of the following gentlemen: H. C. Fritchitt, superintendent; J. F. France, assistant superintendent; P. H. Bryson, secretary.

The State Association was organized on May 1st, when the following officers were elected: R. W. Lighthurn, president; Memphis, W. E. Watkins, first vice president; Nashville; Joseph H. Dew, second vice president; P. H. Bryson, secretary; Memphis; S. L. Barnds, treasurer, Memphis.

—The Queen's County Agricultural Society of Mineola, Long Island, as stated before in this journal, will hold their annual meeting, and also the novel exhibition of sporting dogs on the 7th, 8th and 9th October. We published the following points by which the marks of purity of blood and general style of the dogs are to be judged:—

POINTS IN JUDGING.

Head	25	10
Chest	10	10
Neck	10	10
Shoulders	10	10
Feet and Legs	10	5-100

—Mr. Samuel Thorne, of this city, paid us a visit last week in order to show us a brace of English setters recently purchased for him by a friend in Scotland. They are a beautiful brace of dogs, and have evidently been under the eye of a thorough game-keeper. The colors are nearly all white and orange and white with black muzzle and ears. He has written to his friend to ascertain the pedigree, &c.

DOG-ERRORYER.—We have received a beautiful photograph of a pointer belonging to S. E. Dillay, Esq., of Lake City, Minnesota. The color is liver and white ticked, fine, deep, powerful chest, with grand hind quarters, and an exquisitely tapered tail—one of the handsomest specimens of a pointer we have seen.

The Horse and Course.

EQUINE SPECULATION.—Where are we going to? Lady Suffolk's 2:26 was thought a miracle; then Flora Temple made her mile in 2:14; then Dexter did it in 2:18 one-fifth; then in 2:17, and three years ago Goldsmith Maid got through in 2:14, and now her last performance is 2:14! We shall never be satisfied until we get the mile to somewhere between 2 minutes and 2 1/2. When Goldsmith Maid was very young, say only eleven, she was thought to be a fair juvenile trotter. Just then she became the property of Messrs. Jackman and Doble. American Girl at that time could show the Maid her heels, but Doble, her trainer, saw there was something in the Maid, which only time would develop. As Goldsmith Maid waxed in age, her powers seemed to increase, until at Mystic Park, three years ago, she made her mile in 2:14. The Maid was now fully sixteen and a half or seventeen years old. Taking her case in a sum of equine arithmetical progression as to speed, should she live to be twenty, we may probably get the Maid down close to two minutes, and should her life be spared until she is thirty, we may see a contest between the trotting and the running horse. Who knows? Questions of the maturity of speed in a trotting horse re-vo-lutionise all preconceived ideas, and reverse the human theory of "Go it while you're young, for when you're old you can't."

THE GREAT CENTRAL NEW YORK FAIR.—The annual fair of the Central New York Society, will open on October 6th, at Utica. There will be displays of horses, blooded cattle, sheep, poultry and farm implements, with contests between noted horses. As the programme is of the most interesting character, it will certainly draw a large concourse of people to Utica, and the display of animals and implements will undoubtedly fully represent the great State of New York. It will be open from the 8th of October for a week or more.

The Beacon Park races on September 10th were well attended. The first race was for horses in the three minute class. There were but five starters, the well-known speed of Wellesley Boy keeping several of the entries in the stable. He was the favorite, and won the race in three straight heats, the time of each being 2:27. The double team race was devoid of interest, and was confined to Tom Carpenter's pair of Jay Clark and ch. m. Mollie Morris, and D. B. Graf's b. m. Lady Woods and b. m. Carrie N. It was won by Tom's pair in straight heats. The third race was for horses in the 2:26 class, for a purse of \$3,000. There were six starters, viz.: Dan Mace's b. g. Fred Hooper; Carrom's br. s. Jubilee; L. J. Dongry's f. m. g. Joker; Camee's b. g. Camee; Ferguson's b. m. Lady Bowker, and Farmun's br. s. Commonwealth. Hooper won the first heat in 2:27. Commonwealth expiated the defeat in 2:24. The third was won by Joker in 2:27. On September 11th the unfinished race of the 10th, for 2:26 horses, was decided. Hooper took the fourth and sixth heats and race. The second event was for horses in the 2:31 class, which had seven starters. Kansas Chief was the favorite and won very easily in three straight heats. Time, 2:30, 2:29, 2:34. The most interesting race of the week was for the 2:30 class. Five horses started, Red Cloud, Sensation, Gloster, Nettie, and Camors. Red Cloud won the first heat, Gloster the second, and Nettie the third last, in 2:18, 2:19, 2:24.

The Buffalo Park Association closed their running meeting on September 10th. The first race was a hurdle handicap. Six horses were nominated and four started, viz.: Gaffney, Grauger, Macon, and Bennett; they cleared the first hurdle together, also the three next without a mis-lap. In the second mile Helen Bennett fell, and the fifth hurdle, throwing the jockey, and McCaughin, and the rolling over him, he is probably fatally injured. On the three-quarter stretch Macon and Gaffney came down together under whip, and Grauger two lengths behind. Macon and Gaffney came in neck and neck, with Grauger half a length or so behind, Macon winning in 4:01. The second race was a sweepstakes for two-year-olds. There were three nominations, but only two horses started, which resulted in a match between Enlistar and Volcano. The latter got a good start, Volcano taking the lead before reaching the first turn. At the quarter pole Enlistar was only half a length behind. Volcano, however, widened the gap, and ran splendidly throughout, beating his antagonist by ten lengths in 1:47. The third race was for the Buffalo Cup, value \$1,000, added to sweepstakes of \$100 each; distance two miles and a half. Three horses started, and got out evenly, but on the second mile, with Katie Pease second, and Lizzie Lucas on the outside. The latter took the lead, but Wanderer, who did splendidly, soon got ahead and maintained the lead with the end of first mile, when he lost ground rapidly and the contest became hot between Katie Pease and Lizzie Lucas. Katie Pease, however, now showed herself to be good stuff, and astonished her backers by winning the race in the remarkable time of 1:43, the fastest ever on record by six seconds. The fourth and last race of the meeting was for a purse of \$500 for all ages; mile heats. Culpepper, Spendrift, Josie B., and Larry Hart started. Josie B. led by two lengths, but on coming up the home stretch Culpepper made a rush and won the heat by half a head. In the second heat "another jockey up" on Spendrift. There was a good start, Culpepper led by a length, with Larry Hart second and Spendrift third, which placed the race in a very tight position. Spendrift leading and came past under the wire four lengths ahead. Time, 1:44. In the third heat Larry Hart and Josie B. were withdrawn, leaving only Culpepper and Spendrift to decide the heat and race. The horses got off well together, and at the quarter Spendrift was a length ahead. On the back stretch he increased the distance to five lengths, and came in three and a half lengths ahead of Culpepper. Time, 1:47.

Horses that are kept in the stable during the summer should be given daily the luxury of a roll on the earth. Rolling is the means given by nature for the animal to rid itself of vermin and skin diseases, and it tends to make the

animal healthy. Some owners object to allowing a horse to roll on the bare earth, because it gets dirt in the hair and makes extra work to keep the animal clean, but the extra work pays if rightly understood. We allow our horse to roll in the dirt when he is not moist with perspiration, and then stand an hour or two with his coat full of dust before being cleaned up.

CHINCOTEAGUE ISLAND PONIES.—The annual penning of the ponies for the purpose of sale and branding took place on the 18th ult. at Chincoteague, Accomac county, Va. The King of Chincoteague, Kendall Jester, came in first with about "fifty head of critters," as the native islanders call the ponies, and at three o'clock at least 350 were in the pen. The sale was a slow one, some of them even all told, being disposed of and at prices averaging some \$60. The owners are evidently a little excited on the subject of the market value of these animals, and are holding them too high for the purposes of speculators. The original stock from which these ponies sprung held possession of this island before it was trod by human feet. It is believed that a vessel was wrecked along the coast baying on the point. Shetland ponies, and also some of them crossed ashore. They have been intermixed with imported blood, however, and now only bear resemblance to the real Shetland pony in that they are small. Some of them are very handsome, and are full of spirit and fire. I drove one to a sulky on the beach at a gait inside of 3:45, and without the slightest training. They run wild on the island. Very few are ever broken to harness, and in no instance do they ever perform a useful bit of grain. King Jester had a mare in his drove from which he has sold \$1,100 worth of colts, none over and most of them at rates much less than \$100 apiece. After the colts had been branded they were again turned loose to roam and feed at will over the entire island. Altogether there are some 500 of them. —*Cor. N. Y. Herald.*

THE RACING SEASON.

THE Summer racing season of 1874 has proved so far to be the most memorable and remarkable one in the annals of the American turf. The records for both running and trotting necessitate a material alteration in the title of fact, from a half mile to four miles. The most remarkable performance of the year opened at Lexington, Ky., on May 12, with the remarkable performance of Tom Bowling, in Lexington, 104 pounds, running one and a half miles in 2:34, three seconds faster than the same distance had ever been run. In this race, by a resolution of the Lexington Association, he is credited with one mile in 1:44. The horse was permitted to extend his run to two miles, which he performed in 3:27, four and three-quarter seconds faster than True Blue's, with four pounds less weight, timed by the official timers of the day, three gentlemen whose integrity and honesty are beyond question.

On the same day Leona, a two-year-old filly, daughter of War Dance, Lexington, ran half a mile in 49 1/2 seconds, with eighty-nine pounds, being six pounds over the weight required by Lexington rules for two-year-olds.

As the summer advanced the horses centered at Saratoga. The track during the two meetings was generally in fine condition, especially so during the second one. On the first day Ollata, a two-year-old, by imported Leamington, out of Ollata, by Lexington, ran half a mile in 1:47, a few days after Madge, by imported Australian, three years old, eighty-seven pounds, dam Alabama, by Brown Dick, ran three-quarters of a mile in 1:54, thus beating Alarm's time one-quarter of a second.

On the 13th of August, Gray Planet, five years old, 110 pounds, by Planet, dam English, by Gloucece, ran a mile against time in 1:42, beating Alarm's and Springbok's time one-quarter of a second; Springbok as four years old, 108 pounds, and has a second heat in 1:42, after the first in 1:45.

On the 15th of August, Pielou, three years old, by Concord, a son of Lexington, with eighty-three pounds, ran one and an eighth mile in 1:56.

On the 19th of August, Fadladeen, seven years old, by War Dance, a son of Lexington, with 111 pounds, ran the same distance, one and an eighth miles, in the same time, 1:56, or at the rate of 1:43 1/4 to the mile.

The day after, Reform, three years old, by imported Leamington, eighty-three pounds, ran one and three-quarter miles in 3:05, thus beating Frogfoot's time, 3:07, one and a quarter seconds, he being four years old and carrying 104 pounds.

The greatest and grandest achievement of them all was the great race of Fellowcraft, by Australian, dam Aerolite, by Lexington, running four miles in 7:19—the first three miles in 5:29. The pace did not seem to fatigue the horse more than an ordinary run of two miles. In two hours he was entirely over and ready for his foot. The record on his grandsire on the dam's side, 7:19, stood for nineteen years. It will not be so long before this one will be beaten.

Thus the fastest half-mile, 1:42; the fastest mile 1:42 (unless we give Tom Bowling credit for the 1:41 made in a mile-and-a-half dash, and by resolution of the club, a record); the fastest one and an eighth miles, 1:56; the fastest two miles, 3:23; the fastest two and three-quarter miles, 4:53, and the fastest four miles, 7:19, all have been run on the Saratoga track. Whether the fast time is to be attributed to the nature of the soil, the superiority of the track, the pure and clear atmosphere, or to the improvement in horses, is a question yet to be solved. Before the close of the fall campaign we predict some additional changes in our time tables. —*Turf Field and Farm.*

RICHMOND SHOOTING CLUB.—A number of young gentlemen of Richmond, amateur disciples of Nimrod and Isak Walton, having formed themselves in a club, and sporting operations, propose to inaugurate the season on Friday next in a convivial and social way by a little entertainment at their hunting lodge, "Chalbourne Hall," in King William county, to which we kindly acknowledge the receipt of a polite invitation. Among the guests will be some of our most distinguished citizens, and a very pleasant time is anticipated. —*Richmond Dispatch.*

We are only too happy to hear that such an organization exists in good old Virginia, and we trust the members of the Richmond Shooting Club will let us hear from them from time to time.

Rational Pastimes.

Secretaries and friends of Athletic, Base Ball, Cricket and other outdoor Clubs will kindly mail their contributions not later than Monday in each week.

Below is a summary of the regular game of base ball—out including "scrub matches"—played in England by the Boston and Athletic clubs. It will be seen that the Boston are way ahead on the total number of runs, and that McVey is far ahead in the list of batsmen, while George and Leonard lead the score at cricket:

Games Played at	Boston.	Athletic.
Liverpool, July 30	11	14
Liverpool, July 31	22	18
Manchester, August 1	15	23
St. George's Grounds, August 3	24	7
Prince's Grounds, August 6	14	11
Richmond, August 8	3	11
Crystal Palace, August 10	17	8
Crystal Palace, August 11	8	19
Keelson Oval, August 13	16	6
Sheffield, August 15	19	8
Sheffield, August 16	18	17
Manchester, August 20	9	11
Dublin, August 24	12	7
Dublin, August 25	4	15
Total	183	161

The record of the cricket work done by the two clubs is as follows:

NAME.	Runs	Balls	Wickets	Runs per Wicket	Balls per Wicket
G. Wright	7	189	54	81	14.83
L. George	7	189	54	81	11.55
H. Wright	7	75	33	31	8.38
A. Barnes	6	81	24	30	8.10
S. Spalding	6	75	23	28	7.50
O'Rourke	6	59	13	13	5.90
McGeary	6	51	18	28	5.66

Commenting on the departure of the American ball players for home, and reviewing their work on the English cricket fields, *Land and Water* says:

While on the subject of the American invasion, it would be unjust to omit mention of the feats achieved by the base ball players at cricket. Below will be found the result of the matches in which they figured in England, and wherever the composition of the teams to which they were opposed, it will be seen that they were never once defeated:

	1st In.	2d In.	3d In.
Eighteen of America	107	107	107
Twelve of Marylebone Club	103	103	103
Unfinished owing to rain.			
AT PRINCE'S, AUGUST 6, 7.			
Eighteen of America	110	110	110
Prince's Club and Ground	21	39	60
Americans won by one inning and 18 runs.			
AT RICHMOND, AUGUST 8.			
Eighteen of America	89	89	89
Thirteen of Richmond	108	108	108
For six wickets. Unfinished.			
AT OVAL, AUGUST 12, 14.			
Eighteen of America	100	111	211
Stray Club and Ground	37	42	215
For four wickets. Unfinished.			
AT KINGSFIELD, AUGUST 15, 17.			
Eighteen of America	130	130	130
Sheffield	43	45	83
Americans won by an inning and 42 runs.			
AT MANCHESTER, AUGUST 20, 21.			
Eighteen of America	121	100	121
Manchester	43	53	95
Americans won by 136 runs.			
AT DUBLIN, AUGUST 24, 25.			
Nineteen of America	71	94	165
Twelve of All Ireland	47	32	79
Americans won by 80 runs.			
Matches played, 7; won, 3; lost, none.			

The cricket shown by the Americans was, as may be expected, rough and incorrect, according to strict English notions; but splendid fielding, some good bowling, and many fine innings, being returned home vicariously, were probably throughout. Harry and George Wright both bowled well, the former medium paced round-arm, the latter fast ball, bowing with considerable independence. The Wrights showed themselves to be very fair batsmen, and Leonard, Bevis, Barnes, Anson, and Spalding, with practice, would all bat well.

The Nassau club of Brooklyn were very successful on their recent tour through New York State, as the appended record of their games shows. They returned home victorious in all their games but one, the Fly Aways being the only club to defeat them. At the tournament they won two games out of three played, and were thus placed on an equal footing with any of the contesting clubs. The first and second prizes (\$300 and \$200 respectively) were divided between the Fly Aways of New York and the Nassaus of Brooklyn, each club receiving \$225, \$50 being given to the Nassau local association. The boys were greeted on their return by a large party of friends, who escorted them from the Fulton Ferry in triumph. One and all unite in saying that they have had a splendid time, and have been received everywhere with the politest attention. The record of the tour is as follows:

Played at Onondaga, August 31, Nassau vs. Fly Aways	8 to 15
Played at Oneida, September 1, Nassau vs. Chelsea	8 to 12
Played at Oswego, September 2, Nassau vs. Utica	8 to 0
Played at Utica, September 4, Nassau vs. Utica	10 to 10
Played at Johnstown, September 5, Nassau vs. Johnstown	17 to 0
Played at Johnstown, September 8, Nassau vs. Murphy	12 to 0
Played at Amsterdam, September 10, Nassau vs. Columbia	22 to 0

Among the games since our last issue worthy of record, from the small figures of the scores, may be named the following:

Chelsea of Boston vs. Arlington of N. Y., at Boston.....	6 to 3
Mutual vs. Chicago, at Brooklyn.....	5 to 2
Harford vs. Chicago, at Harford.....	7 to 5
Boston vs. Athletic, at Philadelphia.....	6 to 4
Athletic vs. Boston, at Boston.....	6 to 6

The series of ten games which each of the contesting unies in the professional arena have to play with each other between April and November, number in all 280 games. Of these 163 had been played up to September 15, leaving 117 yet to play. Thus far the clubs stand as follows:

Club.	Games won.	Games lost.	To Play.
Boston.....	31	10	59
Chicago.....	29	17	33
Athletic.....	24	12	24
Philadelphia.....	24	25	31
Harford.....	23	29	34
Brooklyn.....	22	23	34
St. Louis.....	11	27	32
Baltimore.....	7	26	33

The annual fall games of the New York Athletic club will take place on the Out-door grounds of the club, corner 149th and 10th avenues, 10th Ave., on Saturday afternoon, September 29th. The program will comprise the following contests: 100 yards running race; 1/4 mile running race; 1/2 mile running race; 1 mile running race; 3 mile walking race; running high jump; putting the shot. These games are open to all amateurs, whether members of the club or not, and the following is the club's definition of an "amateur": Any person who has never competed in an open competition, for public, or admission money, or with professionals for a prize, public money or admission money, nor has at any period of his life taught or assisted in the pursuit of athletic exercises as a means of livelihood. The prizes will be elegant gold medals, to be the property of the winners. The entry list will be closed September 19th, and no entrance fee will be charged. For other information address W. E. Snelair, Secretary P. O. box 243.

The Staten Island club have completed their tour, and they are now home again, having had a pleasant trip, though not so successful a one as anticipated. Their record is as follows:

September 2—Staten Island vs. Eagle, at Louisa, Va.....	3 to 2
September 3—Staten Island vs. Red Stocking, at St. Louis.....	10 to 12
September 4—Staten Island vs. Empire, at St. Louis.....	10 to 16
September 5—Staten Island vs. Western, at Keokuk, Iowa.....	5 to 11
September 7—Staten Island vs. Public Money, at Philadelphia.....	9 to 6
September 8—Staten Island vs. Liberty, at Springfield, Ill.....	25 to 20
September 9—Staten Island vs. Teutonic, at London, Ont.....	17 to 1
September 10—Staten Island vs. Lew, at Onondaga, N. Y.....	11 to 19

A close contest took place at Jacksonville, Fla., Aug. 23th, between the Robt. E. Lees of the former place, and the Garden City nine of Tallahassee, the Lees winning by a score of 14 to 13. The Florida Union, commenting on the game, says: During the past six months great interest has manifested throughout the entire State in this popular amusement, but it has only been within the last two or three months that Jacksonville has followed the example of her sister cities and towns, and organized a base-ball club, composed of some of our first and most active young men, selecting as a name to inscribe upon their banner and urge them on to victory, that of the noble soldier and Christian gentleman, General K. E. Lee. By constant practice they soon developed a nine that will stand second to none in the State, and a week or two since challenged the Garden City to play for the belt they won from a team until then considered invincible within the limits of Florida—the Jeffersons of Monticello, who, but a week since beat the crack club of Savannah. The challenge of the Lees was accepted by the Garden City, and the first game played on Thursday, as above stated.

Weston, the pedestrian is now engaged at the Hippodrome in another attempt to walk 500 miles in six consecutive days. Monday was his first day, when he walked sixty-four miles. Mr. Barnum is to pay his wife \$5,000 if he succeeds, and \$1,000 if he fails.

At Easton, on September 12th, the Mutuals beat the Eastons by 19 to 2.

The Westerns beat the Empires, of St. Louis, at Keokuk, on September 8th, by 9 to 2.

Radcliffe, of the Philadelphia club, has been expelled from that club for dishonorable conduct, and is now unable to play in any professional nine.

An eleven of the Manhattan and Prospect Park clubs played the Staten Island eleven September 12th, and defeated them by 64 to 49. Two against one is not exactly the thing.

A Boston paper says:—Persons who found fault with the Boston and Athletic for going to Europe will find consolation in the fact that they paid expenses on the trip, while all the other clubs have been losing money at home.

The champion Bostonians sustained the worst defeat known in their record on September 14th, on which day the Chicago nine took them into camp by a score of 10 to 0. The odds were 100 to 20 on the Bostonians, and the result was a surprise to the Bostonians.

A fine game was played at Greenville, Mich., on September 9th, between the Athletics, of Grand Rapids, and the Eaton Rapids club, the former winning by 6 to 5.

The Osceolas, of Salem, defeated the Invincibles, of Albany—what's in a name—by 82 to 1, (1) on September 4th.

Frank Macker, of the Red Stocking nine of Chicago, ran the bases at the Clinton tourney in 15 2/3 seconds. Berthrong, in 1867, ran them in 14 1/2.

The Unes, of Charlestown, Mass., defeated the Resolutes at Deering, Me., on September 10th by the small score of 4 to 1. It was a model contest.

The Odgensburg club defeated the Prescotts, of Canada, September 10th, by 9 to 6 only. A finely played game.

The Harlem Rowing Club regatta can be out on September 14th. In the two mile race for the single scull championship yesterday, Mr. T. B. Keator, last year's champion, was the victor. Mr. Dodson won the medal presented by President Tighman. In the one-mile pull-out race, contested, Messrs. C. W. Turner, stroke, and J. W. A. Van Hook, were the conquerors. The single scull one-mile handicap was handsomely won by Mr. H. Conkling, a nephew of the Senator, Messrs. Knapp, Osborn, Dodson and Keator were the fortunate men in the two-mile four-oared shell match.

Sea and River Fishing.

A FISH IN SEASON IN SEPTEMBER.

Black Bass, *micropterus salmoides*, *micropterus nigricans*.
Striped Bass, *Roccus lineatus*. Weakfish,
Bluefish, *temnodon saltator*. Sheepshead.

Trouting is permitted in Maine and Canada until October first.

SOUTHERN WATERS.		SHEEPSHEAD.	
Pompano.	Trout (black bass).	Sheepshead.	Tailorfish.
Snapper.	Drum (two species).	Sheepshead.	Sea Bass.
Grouper.	Kingfish.		
Rockfish.	Striped Bass.		

FISH IN MARKET.—There were several novelties on the slabs this week. Notable was what is called the reddish, or spot. In form the fish resembles the striped bass, only it has a reddish hue. The name spot is derived from a small black spot, found just before the caudal—a mere blotch of black, but standing out boldly in relief against the yellow and crimson hues of the fish. This specimen was caught off the Jersey coast. In winter, reddish come in quantity from North Carolina. In our waters the fish is quite unusual. It is a fair fish to eat, perhaps a trifle coarse. We noticed, too, a drum fish, caught off Montauk; he must have weighed fifty pounds. Drum fish in these waters are not common. In the South the roe is a great delicacy. We took some scales from this drum, which are fully a sixteenth of an inch in thickness. Flesh rather coarse. This fish was captured while fishing for striped bass, some thirty having been taken, which averaged forty pounds each. Bluefish very abundant, and found off Canarsie; worth eight cents. They are now in their prime, and will be plenty for the next month. Smacks are now fitting out for the fall bluefish catch. This is the season when bluefish are "refrigerated" for winter consumption. Spanish mackerel plenty, and worth thirty-five cents; caught off Long Island and Seabright, N. J. These fish are also now being put away for winter. Striped bass continue scarce, only a few schools being captured; they are in demand at twenty-five cents. There never was such a profusion of spot crabs; worth from seventy-five cents to one dollar a dozen. Frogs not in quantity. Lobsters plenty, but very minute. Scallops coming in fair quantity; worth \$1 50 a gallon. By the way, kingfish have been quite rare this year, and never plentiful; worth twenty-five cents. This week finishes the salmon. The amount put away for winter use, it is stated, will be much less than last year, perhaps not more than 80,000 pounds. Last year it was thought to have been 175,000 pounds. It may be remembered that in July and August there was a sudden falling off in the salmon catch.

The Germantown Telegraph complains that the tavern keepers at Barnegat tell big fish stories of great catches there, in order to attract visitors. Correspondents who write for FOREST AND STREAM, however, are none of them inn keepers, and their statements are wholly reliable, we have every reason to believe. In the case of one individual, whom we supposed to be interested in the hostelry, we threw out his letter on this very account.

MASSACHUSETTS, Sept. 11.—A second drive of "blackfish," numbering 618, were captured at North Truro, Mass., last Thursday, and sold in lots, aggregating \$5,805 25, and the purchasers expect to realize \$20,000 at least from the oil.

The North Sydney Herald says that two fishermen, engaged in the quiet and lawful pursuit of taking cod, were surprised by the appearance of a dog-fish on one of their lines, which measured fifteen feet from gill to tail, and had to be raised on board by the fore and main trawl blocks. The liver of this monster dog-fish filled a barrel.

ONTO.—Mac Libson, Sept. 9th.—The old question, Will black bass take a fly is still agitated, I see. I concluded to try the bass last week, for the first time this season, and, not having any good flies, I took a good supply of black "chub" minnows, and a few "hellgrunites." I was rewarded with thirty fine bass, weighing from half a pound to two and a quarter pounds. I found the chub minnows just the thing for them, and the music of my double click reel was better than Pat Gilmore's jule. Now that it is not so bad for one, in this section, where bass are scarce and fishing not his forte.

NEW JERSEY.—Barnegat Inlet, Sept. 12th.—Weakfish scarce this week; only catch worth noticing was sixteen on Friday. Blackfish also run small. Dr. Kenworthy on Friday landed here with twenty-eight bluefish—weight from one to eight pounds—and reports them in schools of acres from the Inlet to Reed's, outside. To-day they came in the Inlet. The light house boat took thirty-eight, all good size; only four boats out.

Eighty-five guests from the United States have registered at the Couching Hotel, Ontario, Canada, the present season. The hotel is the most elegant summer watering place in the New Dominion. Couching is one of the Muskoka chain of lakes, and is accessible by railroad from Toronto. An elegant and most comfortably appointed steambot also runs from it through the outlet to the foot of Lake Simcoe, a distance of thirty-three miles.

Messrs. Hart and Miller, of Kimball's Tobacco Manufacturing Company, of Rochester, and Mr. Strong, of same place, started for the South Muskoka, Canada, last week, on a hunting and fishing tour. They purpose extending their trip to the Magnetawan region, famous for its deer and bass, and will be absent about four weeks.

Three Messrs. Walker, brothers, of this city, and a friend have just returned from the Muskoka country, and are so well pleased with their trip that they propose to try it again. They caught several dozens of fine trout.

In a recent number of our paper we spoke of a grayling weighing five pounds having been captured in Michigan by our friend Samuel C. Clarke, Esq. That gentleman waives any claim to the distinction. The fish was caught by Robert Clarke, of Chicago, some years ago in the Jordan, when that river was first visited by anglers.

OUTRAGES IN SUPERIOR WATERS.

PITTSBURGH, Pa., September 19th, 1874.

EDITOR FOREST AND STREAM:—I think it my duty as a sportsman to inform you of a practice of the officers belonging to the Collingwood and Lake Superior steamers, which company advertises in your columns, and is largely indebted to the patronage of American sportsmen.

These officers carry torpedoes in their vessels, and explode them under water in all harbors where their boats may land, in this way killing hundreds of fish, which are dipped up as they float. Men are going round through all that region selling these torpedoes, and the result will be that the Indians and settlers will be able to and soon destroy the trout. I was obliged to procure a permit to enable me to fish with a line in Canadian waters, while Canadians are killing them in this wholesale manner. I would call the attention of the Superintendents of the Fisheries to this fact.

We thank our wide awake correspondent for calling our attention to these wanton proceedings, and shall most certainly place the matter before the Canadian Fishery Commission. If the offenders can be designated, we see no reason why they cannot be punished by fine, under existing laws. The fact that permits to fish are issued by authorized agents, implies a police surveillance of the Superior waters, which, if too loosely exercised, ought to be made more efficient. The name of our complainant is at the disposal of Commissioner Whitehair, who we trust will take the offenses under official consideration.—Ed. F. & S.]

—George Dawson, Esq., the veteran angler and editor of the Albany Journal probably does not shoot wide of the mark when he says that there are not twenty salmon anglers in the United States outside of New York City. Old as he is, and experienced in the gentle art, he is obliged to confess that he never himself caught a salmon until the summer of the present year. Catching one's first salmon is an episode in life which is pregnant with strangely peculiar sensations. Entirely new sets of brain nerves and body nerves are brought into play, and the man who stands for the first time at one end of a line, with a salmon fast at the other, feels—well, hardly like "a fool," but very much as if he had got himself "on a string," as the saying is. Few persons, perhaps, would be able to describe their exact mental stress and physical condition at the time; so we hasten to give this experience expressed in words as received from one gifted with the pen. Mr. Dawson says:—

As I seized my great salmon rod, which secured like a cedar beam after the manner which I had been fishing—so I became gradually to extend my cast, I felt as if I supposed the new recruit feels when he first hears the rattle of the enemy's musketry, or as some very timid men feel when they are first introduced to the sufficiency and grandeur of independent electors to entertain and enlighten them with those profound exhalations of wisdom and those brilliant bursts of eloquence which are the staple of the orator's art. I had reached a cast of perhaps fifty feet, in a direct line, and was watching my fly as intently as ever as I advanced toward the river bank. I was not aware that a monster head emerged from the water, and, with distended jaws—disclosing his red gills, so distinctly as to make his throat look, in my excited imagination, like a very fine diamond—opened wide, and, with the spurge of a sea-horse—for my fly. It was my duty, of course, to accept the challenge and "strike" at the right moment, and so hook my monster. The chance for the monster. But I had no more power of "strike" than if every limb and nerve and muscle was paralyzed. My rod remained poised not motionless, and I stood gazing at the spot which the question appeared in my eyes. I was not aware that I had, for a single moment, been buried in that great open sepulchre—trapped upon the surface quietly unconscious of the terrible ordeal through which I had just passed. I had not time to think of anything but "knocked me down with a feather" at that particular moment; but I do know that I never before came so near "going off in a faint," or found a moment when water more refreshing than the air I breathed, or when I had the "back fever," and I shall hereafter have more sympathetically and greater respect for them than heretofore, for I undoubtedly had the malady in its most violent form. I had not time to think of anything but "knocked me down with a feather" at that particular moment.

But this state of ridiculous semi-stupor lasted but for a moment. The eight or ten feet of fly slipped from the mouth of the fish operated like the sound of a trumpet. Every nerve tingled, and the blood leaped through my veins as if every drop was an electric battery. In a very few moments I however, I had recovered my senses, and I had time to feel where the fish had been, and had gathered up my line for another cast. Had dropped the fly, like a snow-flake, just where I desired to rest, when, without any warning, I felt the same old sensation of "back fever," and revealed themselves, a swirl and a leap and a strike followed, and my first salmon was hooked with a thud which told me, as plainly as if the fisherman had said, "I have got you." My fly was not a fly, but a monster, it would be my own fault. When this assured, there was excitement but no hurry. My nerves thrilled, and every muscle assumed the tension of well-tempered steel, but I realized the full ability of the occasion, and a sort of majestic calmness took the place of the stupid inaction which followed the first apparition. My unsteady rod bent under the pressure in a graceful curve; my reel clicked on a lively melody than ever emanated from harp or lute; and as the astonished fish made his first dash; the tension line emitted a soft music as it stretched and vibrated like the strings of a violin, and I felt the subject and the strings, there was such giving and taking, such snaking and rushing, such leaping and tearing, such hopping and fearing, as would have "induced me into the ribs of death," and I felt as if I had been struck by a lightning bolt, and caused my true anger to believe that his heart was a kettle-drum, every snave a new-bar, and the whole framework of his excited nerves a drum, and during all this time my ceaseless movements of the struggling fish. "Hold him head up, if possible," was the counsel given me, and I had no time to think of anything but "hold him head up," and I took fifty yards or a foot, I tried to make him pull for it, and then to register whenever was taken as soon as possible. The result was an incessant clicking of the reel, either in paying out, or in taking in, with an occasional rattle and leap which could have been no more prevented than the rushing of a locomotive. Any attempt to have suddenly checked him, or to have made any sudden stop, would have made me lose my rod or wreck in an instant. All that I was proper or safe to do was to give to each just the amount of strain and pressure which he could stand, and to make more or as an ounce, and I believe that I measured the pressure so exactly that the strain upon my rod did not vary half an ounce from the first to the last of the struggle.

Toward the close of the fight, I took that the "big was up" and I felt myself master of the situation, I went my stand upon a projecting point in the river, where the water was shallow and where the favorable opportunity possible would have made me lose my rod or wreck in an instant. All that I was proper or safe to do was to give to each just the amount of strain and pressure which he could stand, and to make more or as an ounce, and I believe that I measured the pressure so exactly that the strain upon my rod did not vary half an ounce from the first to the last of the struggle. BROOKLYN YACHT CLUB.—The annual fall regatta and clam-bake of the Brooklyn Yacht Club will take place on the 24th of the present month. The prizes to be sailed for will be a champion pennant for each class; one for schooners, one for sloops, and one for boats; subject to challenge within thirty days. The race will be sailed on time allowance, the start to be a flying one. The course to be sailed is to and around South Spit buoy, S-1-2 (keeping same on port hand turning); thence around buoy 5, off Sandy Hook (keeping same on port-hand turning) to home stakeboat in Gravesend Bay, keeping same on port hand in passing. Messrs. M. T. Davidson, H. Baraganwanth, and John A. Braman are the gentlemen of the committee in charge, and they promise a genuine Rhode Island clam-bake in the afternoon.

SEAWANAKA YACHT CLUB.—The Regatta for the "Ladies' Prize" was sailed at Oyster Bay on Saturday last, and it was a gala of wind, and great credit must be given the club for the weatherfulness of the contending yachts, and the skill and daring of their crews. It was to be regretted that so few of the large yachts were able to enter, and that those contending were so unevenly matched in point of size. The race, as far as these two classes were concerned, was a foregone conclusion, and lacked interest. The course for the schooners and first-class sloops was for an imaginary line between Middle Ground buoy and shore to and around Hog Island buoy, thence to and around buoy off Eaton's Neck, thence to and around buoy off Shippan Point, returning to starting point. For the smaller boats, from the anchorage at Oyster Bay to Middle Ground buoy, then twice around the triangle, the points of which were the Middle Ground, Hog Island, and Lloyd's Neck buoys, returning to home stakeboat at Oyster Bay. The following is a list of the entries:

SCHOONERS.		
Name.	Mean Length.	Owner.
Idler	65	S. J. Colgate.
Ariel	63	Commodore W. L. Swann.

CABIN SLOOPS.		
Name.	Mean Length.	Owner.
Addie	60	Cornelius Roosevelt.
Alert	30	114

SECOND CLASS SLOOPS.		
Name.	Owner.	Feet.
Mirth	Mr. Beckman	33
Undine	Mr. Williams	28
Fei Seen	W. Trotter	27

THIRD CLASS SLOOPS.		
Name.	Owner.	Feet.
Mary Emma	Mr. Iselin	23
Alycane	H. Townsend	23
Jeta	J. E. Aijer	21
May	W. E. Roosevelt	21

The time arrangement for the start of the second and third class sloops was 10:30. The start was very even, no perceptible advantage being gained by any boat. The wind was very strong from the northeast at this time, and other yachts could just lay their course clear of Old Man's Point. The second class, in the strong wind then blowing, soon separated themselves from the small boats in the third class. The tide was on the last quarter of the flood. After clearing the point it became dead beat to the Middle Ground. The time of rounding the buoy was as follows:

Name.	H. M. S.	H. M. S.
Wm. T. Lee	11 17	11 39
Mirth	11 13	11 35
Fei Seen	11 14	11 36
Undine	11 17	11 37

From here it was a run to Hog Island buoy, during which the relative position of the yachts was not materially changed. When after rounding, they hauled on a wind and began their heat to Lloyd's Neck buoy, the real work commenced. The tide had just turned ebb, and with an increasing wind the already high sea gradually grew higher until it fairly stood the little vessels on their ends. The Lee proved herself the best boat in the seaway, and in the water to windward continually increased her lead. The Fei Seen stuck close to the Mirth, and the Undine withdrew, having carried away her hobby-stay. As no shifting ballast was permitted, and the number of the crew limited, it was very lively work to keep the yachts right side up. The Lee astonished every one who remembered her as a sand-bag boat, and saw how remarkably well she sailed on her own bottom. Of the other class the Jeta was very much admired for the manner she carried her enormous spread of canvas. The Middle Ground buoy was turned after completing the triangle for the first time as under:

Name.	H. M. S.	H. M. S.
Wm. T. Lee	12 35	1 02
Mirth	12 40	1 03
Fei Seen	12 40	1 03

The second round was very much like the first, only "more so"—more wind, more sea, and more loose water where it did not belong. The Mary Emma hauled down her second reef, and the Alycane was obliged to retire from the contest by weight of weather. Right pluckily was she sailed, too. Below are the times of arrival at home stakeboat, together with the start and elapsed times.

SECOND CLASS SLOOPS.		
Name.	Start.	Elapsed Time.
William T. Lee	10 41 00	3 31 43
Mirth	10 41 00	3 31 43
Fei Seen	10 41 00	3 31 43
Undine	10 41 00	3 31 43

THIRD CLASS SLOOPS.		
Name.	Start.	Elapsed Time.
Mary Emma	10 41 00	3 14 30
Jeta	10 41 00	3 19 34
Alycane	10 41 00	3 36 32
May	10 41 00	3 38 30

The Lee won without time allowance in her class, and the Jeta wins by 11 seconds in her class, but is disqualified, from the fact that a club member did not steer her the whole time.

The large yachts started and finished, as is shown in the summary of the race, but as before mentioned the result was a foregone conclusion. The Idler, after rounding Hog Island buoy, made one stretch across the Sound, followed by the Ariel, the two sloops preferring to work down the Long Island shore. The Addie carried away her topmast at the cap, after trying the strength of the sea, ran under Lloyd's Neck Point, and hauled down a reef. After reaching Eaton's Neck buoy, and rounding the yachts came home right merrily off the wind. The Idler wins the schooner prize, and the Addie the one for sloops. Below is a summary of this portion of the regatta:

Name.	Start.	Finish.	Elapsed Time.
Idler	11 38 56	11 51 31	3 12 35
Ariel	11 38 56	11 51 31	3 12 35

CABIN SLOOPS.		
Name.	Start.	Finish.
Addie	11 38 17	3 08 18
Alert	11 41 16	3 40 52

EASTERN YACHT CLUB.

Boston, September 6th, 1874.

EDITOR FOREST AND STREAM.—The autumn regatta of the Eastern Yacht Club took place yesterday at Beverly.

The list of starters was as follows: First class schooners—Foam, T. D. Boardman, 76.35 feet water line; Rebecca, J. H. Reed, 66.73; Holyoak, Vice Commodore Jeffrey, 65.5. First class sloops—Coming, Commodore Parker, 57.5. Second class schooners—Latona, J. G. Chabing, 55.5; Belle, J. P. Gardner, 48.5; Romance, C. W. Conroy, 55.6; Fearless, E. B. Phillips, 51.5. Second class sloops—Imogen, A. C. Wheelwright, 34.1; Gannett, E. M. Cary, 33. Allowance 36 seconds per foot in first class, and 48 in second. Course from a stakeboat near the Haste to starting point, distance, 3.13 miles in each class of schooners, \$75 in each class of sloops, to be sailed for with time allowance, but no prize to be given unless two boats started, \$75 for the best time over the course, provided that the boat making it took no other prize.

The iron sloop Undine was expected, and a lively race between her and the Coming was anticipated, but she did not arrive in time from an early cruise. The whole interest of the race, therefore, centered on the Foam and Holyoak. The Holyoak was the champion last year, winning handsomely in every race she entered, while the Foam made her first appearance in Eastern waters at the spring regatta, where, after an unsatisfactory drift to windward, and a good free run home, she beat the Holyoak by 45 seconds, with time allowance, the latter making the best time over the course. She sailed very well also in the race on the Foam and Holyoak. The Holyoak was the champion last year, winning handsomely in every race she entered, while the Foam made her first appearance in Eastern waters at the spring regatta, where, after an unsatisfactory drift to windward, and a good free run home, she beat the Holyoak by 45 seconds, with time allowance, the latter making the best time over the course. She sailed very well also in the race on the Foam and Holyoak. The Holyoak was the champion last year, winning handsomely in every race she entered, while the Foam made her first appearance in Eastern waters at the spring regatta, where, after an unsatisfactory drift to windward, and a good free run home, she beat the Holyoak by 45 seconds, with time allowance, the latter making the best time over the course. She sailed very well also in the race on the Foam and Holyoak.

The starting signal was given at 11.5, when the yachts crossed the line as follows, with a light S. E. breeze: Belle, 11:30:21; Rebecca, 11:32:41; Coming, 11:33:24; Foam, 11:35:13; Fearless, 11:37:31; Gannett, 11:37:33; The America crossed the line at 11:30:50, and sailed over the course, though not belonging to the club.

In the beat out to Marblehead Point the Coming took a decided lead, the Foam being second, with the Fearless very close on her weather quarter, and Holyoak third, though in short tacks and light breeze. The Coming seemed to gain a little. At this point the crews were met by the Marigatta, Flirt, Brenda, Princess, Gracie, Julia, Alice, Dream, and other yachts belonging to the club, which accompanied them part way over the course, or remained to see the finish. The stretch across to the Hardines was made without a tack by the four leaders, though the others had to heat for it. As the yachts neared the south shore the breeze increased, and Holyoak ran through Fearless's wake, and steadily crept on Foam, who was now leading boat. Foam gained round the buoy at 1:24:00, followed by Holyoak at 1:20:00, the latter gaining 1 minute and 25 seconds in the run. Coming rounded in 1:30:00, followed by Fearless, America, Latona, Belle and Gannett. Imogen, though beating Gannett at first, ran too far to the eastward, and gave up the race. Romance and Rebecca doing the same. After rounding Harding's the wind being on the quarter, halloo sails were set all round, Coming carrying away her boiler jib-stay and topmast back-stay to the freshening breeze. A collision compelled Foam to lift off a little just before reaching Egg Rock, which she rounded two minutes ahead of Holyoak, the latter gaining one minute in the run from Harding's. From Egg Rock to the Pigs the boats had a stormy breeze close land, Holyoak passing Foam beyond Egg Rock, rounding Pig stakes at 2:42:45, one minute ahead of Foam; from the Stakes in, halloo sails were again in order. Off Lowell Island Holyoak's balloon jib sheet broke loose, Foam gaining a little while it was being recovered.

The home line was crossed as follows:—

Yacht	Return Time.	Actual Time.	Correct Time.
Holyoak	3 40 30	4 05 17	4 03 27
Foam	3 30 30	4 05 17	4 03 27
America	3 33 32	4 13 02	4 17 50
Fearless	3 37 05	4 23 11	4 23 11
Coming	3 37 05	4 23 11	4 23 11
Latona	3 58 28	4 40 14	4 39 50
Belle	3 58 28	4 40 14	4 39 50
Gannett	3 58 28	4 40 14	4 39 50

Prizes were awarded as follows:—
First class schooners—Holyoak, \$125. Second class schooners—Fearless, \$135. Second class sloops—Gannett, \$75.
The \$75 for best time was not awarded, as Holyoak took the prize in her class. The first prize for first class sloops will probably be sailed for next Saturday by the Vindex and Coming. Yours, &c.

BLUE WITH A GOLD CASTLE.

SCHUYLKILL NAVY REGATTA.

PHILADELPHIA, September 14, 1874.

EDITOR FOREST AND STREAM.—The entries for the fall regatta of the Schuylkill Navy will close on Saturday, September 15. It is now on the stocks at Metcalf's for repairs, and it is to be hoped will be finished and entered.

As the Vespers are not in the Navy, they cannot enter Mings, the winner of the Junior Sails on the 7th, which is to be regretted. This leaves the coast clear for Max Schmitt, the present champion, unless McBeath, of the Quaker's, enters, when "we shall see what we shall see." The Quaker's Club are practicing a strong four; McBeath, stroke; Gomley, bow; "Flip" Piesouton and "Dick" Adams in the waist—probably the best team to be raised on the river.

The College Club's house is fast approaching completion, being ready for the roofers to-day. It is 60x25 outside, two stories high and built of unadorned brown stone. The Park Commission take care that the houses shall meet their requisition of "ornamentality," and we will begin to see

the bay windows and balconies this creek. These fine houses are very nice to show to strangers, but fall heavily on a young club's treasury. This one will cost \$25,000, to which they will have to add another before it is finished.

The Club has one six-oared Gannet buoy, one four-oared gig, one double gig, and a single shell. Their membership numbers thirty-five, offered as follows:—
Cathoon Meagray, President; John K. Fell, 1st Vice President; W. H. Patterson, 2d Vice President; E. B. Morris, Treasurer; Samuel T. Kerr, Secretary; W. R. Philler, 1st Club Coxswain; James W. O'Neill, 2d Club Coxswain.

On Saturday the Navy lost one of its oldest and most active members, Mr. Jacob S. Miller, for many years the secretary and treasurer of the Undine Club. In one year he pulled upwards of 2,600 miles on the Schoykill, and for several years averaged more than 2,000, pulling and winning a number of races, and that when over fifty years of age. His loss will be deeply felt.

The Christian Navy, of Wilmington, Delaware, hold their Fall Regatta on Saturday, October 3d. Their races will be single sculls, open to all amateurs. Four-oared gigs for their own Navy and six-oared Gannet barges open to all amateurs. Entries, which close September 19, must be addressed to E. L. Holmes, Secretary, Wilmington, Delaware. I hope to have a line zig lake to report, for they turned out the best material in the Spring Regatta I ever saw.

From the press this morning I clip the following:—
LONDON, Sept. 12.—A meeting of amateur oarsmen is called for Monday next in this city, when an effort will be made to induce one or more crews to go to Philadelphia to take part in the international regatta of 1876.
Commodore Ferguson is at work, which means success.
Truly yours, SCULLS.

CECILIAR POINT REGATTA.—A regatta for cash prizes of \$40 in each class of yachts entering, took place near Westport, C., on the 10th of September. There were four cutters in the first class, two in the second, and six in the third, with representations from Norway, South Norway, Westport, Bridgeport, and New Haven. None of the yachts were more than thirty feet in length. A stiff breeze blew from the southwest. The Ada, of Southport, was the winner in the first-class; the Pearl of Bridgeport, in the second; and the Quickstep (Brooks) of New Haven the third.

BEVERLY YACHT CLUB.—The fifth Union regatta of the Beverly, Mass. Yacht Club was held on August 29th. Wind light, S. E. Courses triangular for first and second class, and round the point for third class. Judges, J. G. F. Williams, C. H. Howland, C. H. Williams, Judge of the yacht, the Foam, of the Eastern Yacht Club. The following yachts entered:—
1st Class.—Eva, Posey, Firefly, Fanchon, Surf and Ariel.
2d Class.—Mabel, Water Lily, Ibis, Peri, Curlew, Madge, Mona, Hebe and Coast.
3rd Class.—Tulip, Pink, and Lizzie.

Eva, Water Lily, and Tulip taking first prizes, Posey, Water Lily and Pink second. Eva, Water Lily and Tulip champion pennants. Tulip winning hers for the third time and holding it for good. The annual cruise took place September 4th.

THE LYNN YACHT CLUB.—The members of the Lynn Yacht Club and invited guests, comprising a party of seventy-five, sailed at 9 o'clock Monday morning in the yachts Lillie, Lizzie, Addie Elmer, Nellie J. and Fleeting to Mous Island, Boston harbor, to join the South Boston Yacht Club in a grand clam bake.

—The Watkins and Seneca Lake Association held their first annual regatta on Seneca Lake. On the first day, September 9th, the attendance was large, and the water fairly smooth. The races were the junior single sculls, distance two miles; six-oared shells, distance three miles. The races commenced at 2 P. M.; they were spirited and well contested for. The first was for four-oared shells, distance three miles. The Buffalo club won easily, time, 19m. 20s. Union Springs second, time, 19m. 35s.; the Stars of Rochester, third, time, 20m. 38s.; and the Seneca Falls fourth, time not taken. The Alacans, of Owego, did not start. The following were the prizes awarded to the first and second crews:—Four gold watch chains to the Buffalo's and four gold glasses to the Stars of Rochester. In the single sculls, two-mile race; a grand silver tea set to first, a silver pyramid fruit stand to second. Robinson of the Union Springs, came in first, time, 15m. 35s.; W. E. McCready, of the Athletics, New York, second, time, 15m. 55s.; Lindsay Watson, of the Nassau, New York, third, time, 16m. 15s.; and John Dorr, of the Buffalos, time, 17m. 58. Six-oared shells, three-mile race; six silver ice pitchers to first, six opera glasses to second. Cornell College Club, class of 1877, came in first, time, 23m. 27s.; Greenways, of Syracuse, second, time, 24m. 7s.

On September 10th the attendance was much more numerous than on the first day. There were some twelve thousand people present. The first race was for six-oared shells, distance three miles. The Nassau crew, of Harlem, N. Y. won in 21m. 3s. Class of '76 of Cornell second, 21m. 45s., coming in only three feet behind. The Greenway Club, of Syracuse, were distance. The crew first, six opera glasses; second, six silk umbrellas; third, six gold pen-holders and pens.

The second race was two miles by the Seniors, single scull race. First prize, a solid silver table set; second, a silver wine set. It was won by the champion, Charles Courtney, of Union Springs, in 14m. 10s.; R. H. Robinson, of Union Springs, second, 15m. 29s.; and W. E. McCready third. The winning time was only seventeen seconds short of the fastest time on record. The third race, three miles, was contested for by double and pair-oared shells. First prize, two diamond studs; second, two sets of cameo studs. It was won by the Riversides, of Rochester. The fourth race, by four-oared shells, was won by the Seneca Falls, of Seneca Falls.

On September 11th, the regatta closed with a yacht race, a four-oared and single scull race. The management of this the first regatta on Seneca Lake has given great satisfaction to all parties, so much so that the Association should be congratulated for its success. The races were first, six opera glasses; second, six silk umbrellas; third, six gold pen-holders and pens.
The four-oared two mile race was won in 14m. 45s. by the Stars, of Rochester, over against the Riversides, of Rochester. The single scull race was won by C. S. Galt, of Rochester, in 14m. 19s., over Compton Myers, of Saratoga. The prize for this last was a \$100 gold watch.

SEPTEMBER.

BY MILLIE E. BARR.

O RICH, sweet month, by summer, sunshine hrowed,
With bronzing leaves and golden wheat-ears crowned,
With calm, glad eye o'er finished labor bent
In deep repose and measureless content,
Thine is the joy of harvest—thine the spoil
Of fields and vineyards and of summer toil.

For thee the sun withdraws his fiercest rays,
And veils his face behind a silvery haze;
For thee the moon prolongs her wondrous light,
And with a double beauty comforts night;
For thee earth doth the royal robes unfold,
And clothe herself in crimson and in gold.

The merry songs from vine-clad hills are thine,
The shouts of husbandmen that wheat sheaves twine,
The negro chants among the Indian corn,
The children's laughter and the hunter's horn,
The hymn of gratitude from every clime,
The year's most joyful melodies are thine.

O lovely month! If, in thy perfect days,
When all the world was singing songs of praise,
"The Christ again in love and peace should come!"
Thou earth, indeed, wouldst heed her "Harvest Home!"
And sweet September's name stand first among
The glorious syllables of heaven's "new song."

—Animal Kingdom.

For Forest and Stream.

The Ichthyofauna of the North-
West Coast.

SALT WATER AND RIVER FISH.

THE Pacific Ocean will probably equal the Atlantic in its variety of edible fish, and, I think, excel it in numbers; but the species frequenting both are quite opposite, and in many cases the contrast is so very great between the two varieties that it is hard to identify them. A large number is known by names different from those they bear elsewhere, hence one is apt to be confused unless he examines closely, and has a work of reference. The latter is an article that cannot be found in the Northwest so far as I know—at least anything general—and even if it were, the difference between the eastern and western species is so great that one might be led into error unless he exercised strict caution. Take, for instance, that type of the percidæ family, the *Ambloplites interruptus*, which is found from the rivers of Oregon to Mexico, I believe, and you hear it called by half a dozen names, not one of which gives a clue to the other. By these appellations one is very apt to be led astray, hence is liable to place the same species in one or two localities, under different names, unless he has made a personal examination. The following list is, however, as near correct as I could secure, and if it does not embrace all varieties, it does at least the principal species. Of the salt water fish the best for commerce are the halibut (*Hippoglossus*) and cod (*Morhua*), and both are quite abundant, yet they are not used as an article of commerce; in fact, the abundance of salmon causes all ocean fish to be entirely overlooked.

Of the families the *heterolepidæ* is represented by a couple of species, the *catfish*, or sculpin, by about seven, the *scorpenidæ*, or rock fish, by four, the *gasterosteidæ*, or sticklebacks, by three, the *blennidæ*, or blenny, by three, the *gobiidæ*, or gobius, by one, the *ophidæ*, or lance, by one, the *gadidæ*, or cod, one—though there is a second variety of the *morhua*, yet it is not a true cod—the *pleuronectidæ*, or flounder, by three, the *embiotoxidæ*, or perch, by three, the *apryrinidæ*, or dace, by several, the greater number being suckers, and the *percidæ* by one.

Of the latter the *Ambloplites interruptus* is found in southern Oregon and at the head waters of the Pitt and Sacramento rivers, in California. It is sold in San Francisco under the name of perch. Of the *heterolepidæ*, the best is *Chirolophis pictus*, which is known as sea trout and rockfish in California. The Indians of Fuca Straits capture an-

Selected.

other, the *Oplopoma pantherina*, but for this there is no vernacular. The dorsal and lateral region is spotted black; beneath it is a reddish brown, and above a blackish brown. The sculpins are very numerous, and bite freely at a hook, but they are not used at the table, owing to the insipid character of their flesh. The *Chirolophis nebulosus* is black on the upper region; olivaceous beneath, and the caudal is sub-concave posteriorly. It seems to prefer the brackish mouths of rivers subject to tide water. The prickly skinned sculpin (*Cottopsis asper*), the slender sculpin (*Leptocottus armatus*), toad fish, or buffalo sculpin (*Aspicottus bison*), Ayre's sculpin (*Aretidius notosphrotus*), the rough sculpin (*Zanobopsis lupinensis*), and the bar-eyed sculpin (*Nautichthys oculo-fasciatus*), are as abundant as desired, and about as useful as that family is anywhere.

The *Gasterosteus serratus*, or stickle back, frequents the fresh water in June, July, and August during the spawning season. Its grass-made nest may be seen in the rivers emptying into Puget Sound, and also the parents hovering around it until the young are hatched. It has a plated body; peduncle of tail keeled, dorsal spines three inches high, and slender, and conspicuously serrated upon the edges. The upper region is of a dark grayish olive; beneath of a purplish white.

The *Gasterosteus pugnetti* differs from the preceding in not having the peduncle of the tail keeled, and not having its dorsal spines serrated, and the body only partly plated. It varies in length from one to two and a half inches, and is very dense in the fresh water streams. Another species, the *G. inopinatus*, is found in California.

Of the blennidæ, the most curious is the *Gunnelus ornatus*, or banded mud fish, a sort of amphibious creature that loves the higher beds of molluscs to the liquid element. It measures only a few inches, say from three to six, and is useless as an article of food. It is found in all the bays formed by the Pacific Ocean. Its dorsal and anal fins are contiguous to the caudal; it has two anal spines, two very small ventrals, and its color is a sombre grayish. The common monkey fish (*Cebidiopsis violaceus*), and the eel-shaped lumpenus (*Lumpenus anguillarvis*), are also found in all the interior bodies of salt water.

The porous catfish (*Porichthys notatus*) is also abundant in the interior basins. This handsome creature was, in my opinion, placed in the Sound to make people swear, for it will rush for a bait with an energy equalled only by its impudence. Of the *gadidæ*, there is but one true cod (*Morhua proxima*), and that is found very abundantly from California to Alaska. It has always been a leading article of food with the Indians, as they can spear it in all the shallow waters during the summer. It is excellent eating, so meets a ready sale. It weighs, perhaps, five or six pounds. A variety known here as rock cod (*Sebastes rosenouensis*) is quite common, and as it bites readily at a baited hook furnishes excellent sport. It varies from sixteen to twenty-two inches in length. The upper regions and sides are of a light purplish brown, the latter being mottled a shade darker. The superior surface of the head is spineless. Three other varieties, or species, are found south of Astoria, Oregon, namely, the *paucispinis*, *arviculatus*, and *fasciatus*, which differ only in minor details.

The *Platichthys rugosus*, or rough flat fish, is the representative type of the *pleuronectidæ*, and is quite abundant at the mouth of the Columbia, but especially in Puget Sound. The eyes are on the left side, the inter-ocular space being of moderate width; the right is a dark yellow, and the left a reddish brown hue; the fins are olivaceous, dorsal and anal having alternate bands of black, merging into longitudinal on tail, the ventrals and pectorals being unicolor. The scales are rugose. The length varies from seven to twelve inches. It is captured in nets, but can also be speared or taken with the hand after the recession of the tide, as it lies high and dry on some of the flats. The Indians slaughter large numbers along Shoalwater Bay and Gray's Harbor, where they crowd in immense throngs. When started, this fish will dive right into a mud bank, stir it up, and escape under this cloak of concealment. Another species, having a light brown hue on the left side,

and a light brown on the right, is caught in Fuca Straits, and is known specifically as the *P. umbrosus*. The *paraphrys vetulus* is a denizen of the waters around Astoria, Yaquina Bay, and Port Orford. Its ground color is cinereous, interspersed with black; the head and body is a reddish ash; the fins are maculated and olivaceous.

The viviparous or sapphire perch is the handsomest species of the *embiotoxidæ*. It is a deep purplish blue above, lighter beneath; fins, except pectorals, reddish purple; latter yellowish. It is very abundant, and presents a striking appearance as its gaudy colors change from purple to olive, green and glistening golden, according to the way in which the light strikes it. It can be taken readily in summer, as it frequents shallow water, but the Indians capture it extensively at all seasons. This species must remain pregnant a long time, as the flesh is even soft in mid-winter. Some caught as late as January by the Pingallup Indians contained over forty young, and others had several in the uterine sacs. An old swash fisherman told me that it always contained young, or, as he expressed it, "Yaka mitite konoway hiyon tenas fish," always full of young fish.

The silvery perch (*Danaitichthys vacca*), which is also quite common, never takes bait. It is of a grayish olive color; scales have a silvery and golden reflect; fins unicolor. The male carries the sac on the anterior third of the anal.

The golden barred perch (*Hidconotus rhodoterus*) has a small mouth, sub-conical head, large eyes, and the colors vary from a bluish gray above to a silvery white, with three transverse bars of golden on the belly and sides. It arrives in immense schools as early as May, keeping close to the surface, so is caught quite readily. It bites freely at a hook baited with salmon roe; but the mode of taking it adopted by the Indians is to push their canoes among a school, and as it has a habit of leaping out of the water the canoes are filled in a short time, especially when the fish are crowded towards the shore. It leaps to its death quite frequently, without any other motive than sportive playfulness. It has rather good edible qualities, but this does not induce fishermen to seek it.

The *apryrinidæ* are best represented by the Columbia River dace (*Alycheichthys caurinus*), but its gastronomic qualities are poor indeed, being bony and soft. This has a round, somewhat blunt, sub-conical snout; the posterior end of the maxillary extends to a vertical line drawn across the posterior rim of the nostril. The colors are a brownish black above, golden beneath, the two lateral bands being darker, the inferior one as far as the vent.

Several true suckers are found in Klamath Lake, eastern Oregon, but they scarcely deserve a description. About the most common is the *Alganensis bicolor*, whose back and sides are a metallic blue, intermingled with a golden yellow; inferior region a whitish yellow. Some species are quite common in the upper Willamette River, and in the streams of northern Idaho.

Of the *gobiidæ*, I know only one species, the *Gobius lepidus*, found in southern Oregon; the *ophidæ* is also represented by only one, the *Ammodytes persouatus*, or sand lance. Two species of killy are found in the Sound, the *Richardsonius latratis*, or spotted, and the *R. balteatus*, or Puget Sound killy. They run in large schools, bite readily at a bait, but are not very edible. The color of the latter is a grayish black above, silvery white beneath; fins unicolor. The *Argyrens nubilus* is also common.

The most abundant club is the *Cheonoda cooperi*, or Vancouver club, which has a subfusiform profile and elongated body. The head is about one fifth of the body; snout thick, overlapping lower jaw; eye and fins well developed. Superior region reddish gray; sides and belly yellowish white, with metallic reflect. Bites at hook baited with meat; useless as food.

The *C. coarctata* is found in the Willamette. The Western dog fish, *Acanthus suckleyi*; *Raja cooperi*, northwestern skate; *Ptychocheilus Oregonensis*, Oregon carp; and *Occipenser transmontanus*, or sturgeon, are very abundant. The carp, which is common in the Columbia, is about fifteen inches long, and bites readily at a hook, but not

being very edible are let alone. Some of the sturgeon, known here as sea bass, weigh from forty to one hundred pounds. In the spawning season they run as far as the Shoshone falls, a distance of several hundred miles from the ocean. The true smelt, *Agrionus pygmaea*, arrives in myriads in the spring, and are caught with nets in immense numbers. *Chupeidia* is well represented by the Puget Sound herring, a very agreeable species, and one which furnishes an unlimited supply of food to the Indians, who capture it in weirs. Another mode they have is to put two rows of nails into a paddle, then push their canoe in among a school and toss them into the boat—a feat to be acquired only by long practice. The color of this fish is blackish above, and yellowish white beneath, the fins being unicolor.

The anchovy (*Engraulis mordax*) frequents Shoalwater Bay in countless myriads; they are so dense, in fact, that they can be taken with the hand in large numbers on the flats at any time during the summer. This is equal to the best French sardine, and it canned like it could be worked into a prominent industry. The body is subfusiform; deep bluish brown above, silvery beneath.

The most peculiar of the finny tribe is the *Okimueri collei*, or little elephant fish, called *soomui* by the Indians. It has a smooth skin, brownish above, dull white beneath; back and sides with numerous whitish patches of various size. Length, seven to fourteen inches; first dorsal subtriangular; upper margin crescent; lower parallel with back, to which it is attached by a thin membrane. Flesh ous.

We have one whitling (*Homaloptera*), also a *coregonus*, or white fish, in the streams, which take a fly with alacrity. I have heard of a blood red trout frequenting a lake in eastern Oregon, but I have not seen it. It is said to be superior to any in the waters of the West, to weigh from one to two pounds, and to bite readily at a salmon fly. Those who have caught it say they would not use any other fish for one tasting its rich, hard flesh.

This list embraces so far as my knowledge extends, the principal species in the northwest, excepting, of course, the *salmonidae*, and a few of the less known varieties of the chub, and kindred fish inhabiting the more remote streams. There are, no doubt, several species of trout in the streams that are still unknown, and it will require some time ere they are presented to science. As a field for angling I believe there is no other in the world, and my assertion will, I think, be verified by all who have cast a line in these waters.

THE COMANCHE INDIANS.

NUMBER THREE.

A FEW more words in relation to their customs; a short account of the cause of the present war, and I will finish the Comanches.

The dances are frequent, and as among whites, any excuse is sufficient for a dance, though some are stated and formal affairs, most prominent being the yearly medicine dance, or horse dance, the object of which was to find out who were worthy of being classed as warriors. This dance was held each spring, when the cotton wood trees were in bloom; it was a very severe ordeal, the dance lasting three days and nights, during which time the aspirants were kept dancing and moving about without cessation and without food or water, in addition to this they were subjected to painful tortures, cutting and branding the flesh on the arms and brains were thrust into the body. Those who passed through this rather tough examination were pronounced warriors, a rifle fully compensating the successful for all their sufferings. It was imperative upon those who passed this ordeal to stand and fight without regard to death; this duty was so religiously observed that their best warriors were constantly being killed, so the older and wiser heads decided on grounds of political expediency and discretion, to abolish this dance. And a Comanche may now run without disgrace, and thus live to fight or steal a horse, another day.

The right of a husband to divorce himself from his wife is recognized, for adultery, laziness, or general worthlessness, yet it is seldom resorted to; in most instances the infliction of a little corporeal punishment in the way of a whipping suffices to correct all domestic difficulties. It is a common saying that a squaw is lazy; they are taught to work from childhood, and to much hard work through life without complaint. A squaw cannot divorce herself, though sometimes she takes a bolder step and elopes with some brave, this then brings the matter to a settlement in ponds.

Time is measured by the moons, seasons, and snows. The year is designated by the word "tome," meaning a winter, the seasons are "tome," "tomorra," "tatch," and "yerban," corresponding with our seasons, using winter as the first. In divisions of time less than a year the moons are used, each moon having a different name.

In speaking of days, it is not days, but nights that are meant, thus a "three nights journey," or "in three nights time," may mean five full days, but it always means that three nights must be divided into long and short distances, by representing long distances as "so many days' journeys." An ordinary journey would mean fifteen or twenty miles, yet a journey of a war party may mean fifty miles, or even more. Short distances are measured as "so many arrow flights," an arrow flight being estimated at about two hundred yards.

Counting for small numbers is done upon the fingers, though their language provides a means of counting as high as two or three thousand, above that it is "a heap."

They have names for some of the stars, and use the north star as a guide. I once gave a Comanche a compass; meeting him soon after on the prairie, I asked him where his compass was, and why he did not carry it, he answered, he supposed that was for the whites, men, who did not know the way.

Comanches are looked upon as harbingers of war. The great comet of 1860, was a certain sign of great war; the rebellious moon followed, and fully confirmed in the Comanche mind the certainty of war, succeeding a comet.

Approves of the late comet's appearance, I will tell you the story of the present war, and also define the meaning of medicine man.

Some time early this spring a famous medicine man arose like a second Moses among the Comanches. He belonged to the Quohoda Comanches, the most warlike and

hostile of all the tribes. His prophecies were startling; he predicted "the speedy destruction of the entire Comanche people, unless they arose and destroyed as many whites as they had lost warriors in the past year; that the Great Spirit was angry at them for the apathy and want of spirit displayed, and that certain destruction awaited them, unless they listened to his counsels, as he had seen the Great Spirit in a dream and was directed to tell the people of his anger." It must be stated here that the Comanches lost nearly thirty warriors last winter, who were riding in Texas. The address and its effect upon the Quohodas was beyond words; in May the bands all collected and after a full discussion decided to go on the war path.

The medicine man promised perfect security and immunity from danger to all engaged; that "he would stop the bullets in the muzzles of white men's guns, and they would fall harmless to the ground."

With this feeling fresh in their minds they started, nearly five hundred warriors, to attack a party of Buffalo hunters, thirty-odd in number, who were hunting in the pan handle of Texas, at a place known as the Adobe Walls; of their failure and loss in this attack you have already seen accounts.

This sore defeat greatly incensed many of the Indians against the medicine man, who, however, was equal to the occasion, and soon rectified matters by reminding them that when they started he had particularly cautioned them "not to kill any skunks, but to go around them," that he "knew they had disobeyed him in this matter, and that the failure was entirely due to their own folly and disobedience." This straightened matters again, for believing as they do in the mighty power and wisdom of the "medicine man," he still maintains his dignity and position. Soon after this comet made his appearance, and as it confirmed his prophecy, it was the medicine man pointed to it with just pride as "the omen he knew was to follow his predictions."

A Comanche who was at the Adobe Walls fight, has assured me that "at first the white man's bullets dropped right on the ground, but that soon after the white men somehow broke the medicine, and after that the Indians suffered badly."

Such are the Comanche Indians. These and many other superstitions are more firmly rooted in their minds than is faith in the mind of a christian. There is not a shadow of excuse on their part for this war; they do not even make a complaint. In conversation with Essahabet and Horseback, also other friendly chiefs, they said that "the Comanches did not pretend to have any cause of complaint against the whites; that they were only following the medicine man's advice." Up to the time they started to hear this prophet, they drew their rations regularly at this agency, and were apparently friendly.

The fact that the Penateka band have been friendly for nearly fifteen years, is proof positive that the others may be made so, but not by systematic deception and cant.

There are none more thoroughly disgusted with the present state of things than the friendly Penatekas, and the Coddas, who openly declare that the only means of bringing the wild ones to a sense of good behavior, is to give them a thrashing that they will remember. In the interest of humanity, and in recollection of nearly one hundred murders committed by them during my knowledge of them, I hope this thrashing may soon be given the wild Comanche.

I must close now with the remark, that a few more matters of interest may occur to my mind which I will give in a short letter next week.

CHICKEN SHOOTING IN IOWA.

LETTER FROM TOM.

[Four weeks ago we printed a characteristic sketch from a new correspondent who will for the time being simply as "Tom." That sketch was worthy of a more prominent place than was given in our columns, and we therefore compromise with our conscience, by raising the one before us to the dignity of a master communication. It will be especially interesting to old chicken shooters, while to experts it gives much information.—Ed. F. & S.]

BELLE PLAIN, Iowa, Sept. 1, 1874.

EDITOR FOREST AND STREAM.—In addition to Hanson and myself our party consisted of a young fellow clerking in a drug store who had never shot a chicken or any other bird on the wing. I believe he said, and a hardware man who had been anxious for some time to drive the team for us in some of our short runs; and at just four o'clock we left the barn. On all our trips we have taken a northerly course, and this time determined on an opposite direction. We found the road across the bottoms a circus outfit on Thursday, and our progress was necessarily slow. Reaching a point about four miles due south, Hanson said that for the past five years he had never failed in finding a covey of birds in this slough, but I said our time was so short we would hardly have time to find it. His confidence was so great, however, that he said the drug clerk taking the side of the slough, and I with "Coy" going along the edge of the corn. Reaching the end of the route assigned me, I sat down to watch the success of the others passing up the hollow, as they seemed confident the birds must be somewhere. Soon the dog began trailing for them, and following him a hundred yards I saw a single bird start—then saw a puff of smoke, and the bird dropped, and in a few seconds heard the crack of the gun. Then I saw more arose—two more pairs—two birds falling—and then the reports of the guns. It looked very pretty from my elevated position to see this little play, and I naturally regretted not being an actor. The three birds going off took refuge in the corn, and we all returned to the wagon; I with a clean gun and they with three birds, and Hanson then fired a second time, and the druggist killing his virgin bird.

We drove due south two miles further, and there found we should have taken a road west just a half mile back, as we were brought to an open prairie beyond our ground and the sun was fast sinking. Taking a north-west direction we reached the point where we proposed trying our luck, and dividing as before, directed the driver to go a half mile west and we would there meet him. Hanson and the druggist took the south side of the fence, and you will now follow me to the north side of the fence on the north side into a little stubble field bounded on the north and west by corn, and well grown with weeds from the recent rains, containing about twenty acres, and about twice as long north and

south as wide. The wind was brisk from the northwest, and when about one-third the length of the field "Coy" came to a point where he stood with his back to me, while as his muzzle was pointing a trail where he is sure of birds, he began crawling and almost dragging his body. In this manner I walked just behind him about 100 yards, when a bird got up about twenty feet ahead of me, and upon its reaching a proper distance, I fired; this startled the balance of the covey; as they hastened to get beyond my reach, two came in range, and it did me a power of good to see them drop in the stubble. "Coy" was in the same way intending to travel, and seeing no prospect of following them, told "Coy" to get the dead birds, and he brought me in the three, although the first bird I did not see fall, so quick did I change to the rest of the covey. Going to the left a little, "Coy" was hunting fast to see if any had been frequently seen a dog lake when he was almost on the game. His nose was toward me and I walked directly toward him, halting about ten feet from him. As I told him to go on, the bird flew directly over his head, and giving a spring he caught it by the legs and dropped to the ground with it. In attempting to hold it with his paws until I should take it, he missed his calculation, and off went the bird, chucking his nirmenous escape for a couple of twenty yards, when he quickly dropped in the stubble.

Following ourselves that they had all left, we walked through the rest of the stubble, then turned west through a field of corn, and came out in another wheat field. This was a very long field running north and south about a quarter of a mile and probably 200 yards wide. We struck it about a third of the way up, and wishing to hunt with the wind in our faces turned north. "Coy" was hunting pretty fast over the stubble, and "Coy" was hunting pretty fast over a single old bird left about twenty feet in front of him, which he failed to see. Knowing he had done wrong he dropped until I came to him, but I thought a scolding under the circumstances better than flogging, and with a few cross words I told him to go on and be careful, and right well he obeyed the command. A few yards further on and he struck a trail, with a covey of ten birds, but as he was working under the corn, I think it too bad to be useful, he came to a point. This proved a false alarm, and I sent him around a short distance, when he again pointed. As I leisurely walked toward him a bird arose on my left and then fell. Changing my shell I again started for the dog, who still stood his point, and with a few steps only started another which shared the same fate. Again changing shell, I this time changed the dog, and he ordered the command "Coy" to walk a few steps when the bird started. Having used my left hand barrel to kill the two then on the ground, I decided to give the one then in the air the contents of the right; I pulled, and from the peculiar sound knew that the wad had been improperly placed on the shot, and that only powder remained. Instantly covering the bird, I pulled the left, and although a very long shot, it dropped, the worse being "Coy" ordered "Coy" to drop "Coy" dead, and he brought me in the three. Pursuing our course north only a few rods, the dog again began working as if on game and soon pointed. I went up and had just reached him when the bird flew and died. Dropping my barrels, I changed shell, and at the crack of the gun it fell within four feet of the former. Again changing shell, and without taking a step, another got up and soon dropped, and changing the dog, I dropped the fourth bird got up like the other three, and dropped in the stubble. With this four others got up out of range and escaped without my compliments. They completing the covey, I told "Coy" to bring the dead birds, and he readily brought me three. For the next five minutes he hunted faithfully for the fourth bird, but in vain, and noticing that he had started once as if trailing, I concluded the bird was on "Coy" and taking him to where I called him from at that time, he again struck in, and following him a few rods, he stood as if close to game, and looking ahead of him about two feet, there, in a little hole, I saw the bird hugging the ground close. Knowing it was the winged bird, I told him "dead bird," and with a spring he placed his paws on it. This made me eleven birds at ten shots, although only a young bird. I began retracing my steps, and as I was reaching the road, I saw another shot, and I called "Coy" to bring the bird, I signalled the wagon, which was a quarter of a mile ahead, and the driver came to my relief. When the team had come within a few yards of me I heard the report of a gun, and looking in the direction saw a covey of birds coming over a cornfield, and then saw the others of our party.

The driver and I marked the birds down in a line to the fence and slough gave the team to the team to the fence and the other drivers, and all hands started for the birds just as the sun was going out of sight. Reaching the point we walked four abreast, and a bird flew far for the druggist, and he, in his excitement, dropped it in a very short range. Soon another flew for him, which he brought down in a proper distance. The next was for me and I did my duty. Finding no more in the slough, I started to go on, but "Coy" which he said was a single bird, but failing to drop it, he wanted I should try "Coy" in the corn while he stood on the edge, as his pup wouldn't mind him with "Coy" near. So, changing positions, I took to the corn, and then made the luckiest shots of the trip. I heard a bird fly and catching a glimpse, fired in the direction, and he being another start, got a quick sight of him and fired. The muzzle of my gun being in a high of corn, I saw those outside of it kill him, they said "yes, both of them," and sure enough, "Coy" brought them both in. Holding my gun at the wrist of the neck, I could just reach the top of the corn, so rank is its growth. Failing to start any more, and being seven miles from home, we repaired to the wagon and were soon on our way rejoicing. Like myself, Hanson and the druggist had been enjoying them, and I, in the counting up, "Coy" was in a high of corn to result in thirty birds, and not a single one was among them, although thirty other birds were more than three-fourths grown. The score of each was—Hanson, 10; the druggist, 6; and yours truly, 14. Hanson got a bird for each shell, having killed two with one, and missed in the corn; the druggist killed 6 out of 10; and I got my 13 with 13 shells. A two-hour moonlight ride through safe fields, home, and a good dinner, some of them smoking, and a good night's sleep, made that I continue to write to you. Do you wish you had started when you read my last hunting letter?

—The Brown and Morris boat race, which takes place to-morrow on the Keonbecassis river, near St. John, N. B., is creating considerable interest. Brown is the favorite. Both men exercise on the course every day.

Fish Culture.

OVERLAND TRIP WITH SALMON EGGS.

[Below will be found an account of an overland trip with one lot of California salmon eggs, kindly sent to us from the Fishery Commission located on the McLeod River.—Ed.]

EDITOR FOREST AND STREAM.—

At four o'clock on Tuesday afternoon, September 30th, 1873, all the eggs for one shipment, to the number of 600,000, having been packed in three large crates, we began moving them to the wagon, which was to carry them to the railroad station at Redding, California. The crates containing the eggs averaged in weight about 350 pounds apiece, and it was with great difficulty that we managed to get them up the long steep to the stage road, where the wagon was waiting. With the help of half a dozen Indians it was accomplished at last, however, and at about five o'clock I started with the eggs for Redding, California, distance twenty-two miles. So rough and difficult is the road that we did not reach our destination till one o'clock the next morning. I had previously arranged to have two hundred pounds of ice provided at Redding, which I distributed on the crates upon my arrival. The eggs were consigned as follows:—

- Seth Green, Rochester, N. Y., three boxes, 200,000.
R. G. Pike, Middletown, Conn., two boxes, 150,000.
F. W. Webster, Cold Spring Trout Ponds, Charlestown, N. H., one box, 50,000.
E. A. Braekett, Winchester, Mass., one box, 50,000.
C. G. Atkins, Beekmantown, N. Y., one box, 50,000.

The train left Redding at three o'clock A. M. on Wednesday, October 1st, for Sacramento City, which I reached safely at one P. M., the crates apparently in good order. I left Sacramento on the Central Pacific Railroad on the train going East at two P. M. the same day, the eggs being in Wells, Fargo & Co's express car. The morning was warm. The night had been quite cool. The next morning, Thursday, October 2d, at seven o'clock we reached Ogden, and the crates were transferred to the express car of the Union Pacific Railroad train, which connects here with the Central Pacific Railroad. In the afternoon of Friday I opened one of the crates, and examined the top layer of eggs. They were in perfect order, and looked precisely as well as when first packed. I put on more ice, and left them till morning. On Saturday, October 4th, I got up early and went to the express car to examine the crates. The night had been cool, but the express messenger had kept a hot coal fire in the car, and it was very hot. I procured a lot of ice at Cheyenne, Wyoming Territory, which I used at once, and telegraphed ahead to Laramie for more. The day was comfortably warm. No mishaps except the heating up of the car the night before. On Sunday, October 5th, at one P. M. we reached Omaha, crossed the Missouri River, and at Council Bluffs at three P. M. on Chicago, Rock Island and Quincy Railroad. That day was quite cool. On Monday, October 6th, at three P. M., we reached Chicago. The last night was cold and favorable for the eggs. Left Chicago on the Michigan Central at quarter past five P. M., with the eggs apparently in good order. Up to this time I had kept constantly replenishing the crates with ice. On Tuesday morning, October 7th, at four o'clock, we entered Canada on the Great Western Railroad, and the Union Pacific express car, which accompanied the train, was sealed up by the custom house officers, and I would not enter it till we left Spenston Bridge that afternoon at two o'clock. The crates had been well provided with ice, however, the night was frosty, and the day was cool, so I did not feel uneasy about the eggs. The car which contained them had a large amount of gold and silver coin and bullion in it, and the messengers had instructions to keep every one out of the car, their instructions being so imperative in this particular that they would not even listen to explanation. I had fortunately provided myself with a letter from Mr. Tracy, of Sacramento, one of the head managers of Wells, Fargo & Co's express, and by means of it managed to get aboard the express car and attend to the crates. Without the letter there would have been no chance of getting at the eggs. Even with such a letter I kept every one out of the car, and was a risk of being shot by the messenger's revolver. We arrived at Rochester about five P. M. on Tuesday, October 7th. Here I left three boxes (a crate and a half) for Seth Green. Tuesday night, at two A. M., the train reached Albany, with the crates in good order. I went to bed, supposing that the express car would go to Boston; but in point of fact it is the custom to swap it off at Albany. On Wednesday morning, October 8th, at about eight o'clock, the train arrived in Boston, to my great surprise and dismay. I could not find the salmon eggs for Mr. Atkins and Mr. Brackett, and then learned for the first time that they had been left with the car at Albany. I was the more chagrined at this because I had been so very careful to keep with them. I might almost say I had hardly let them go out of my sight, and now, at the end of this long and arduous exceedingly anxious journey, just as I thought my care had been rewarded with success, and was at hand, there came this disappointment and new anxiety. I could not get track of these eggs again, nor learn for some time what delayed them, and it was three days before Mr. Brackett got his, and four days before Mr. Atkins received his. It was very provoking, when time was so precious, to reflect that the eggs were one half as long going from Albany to Winchester, three hundred miles, as they were coming from Albany, 300 miles, and the weather was warmer during those intervening days, it is surprising that more boxes of eggs were not entirely lost. Mr. Brackett, however, saved one half of his, and Mr. Atkins one tenth of his consignment. The eggs for Mr. Pike and for the Cold Spring Trout Ponds, were put off at Springfield, Mass. The latter arrived in good condition, but there was a large loss of the former lot. I learned subsequently from Seth Green that his lot of 500,000 arrived in excellent order, and that not less than 90 per cent. of the eggs were lost, both in transportation and in hatching.

To EDITORS.—We beg our contemporaries to pardon us for declining their requests to exchange, as our list is already so cumbersome as to be burdensome.

DISEASES OF FISH.

The following letter is worthy of the serious consideration of our Fish Culturists. We trust that some of them will be able to give Mr. Keut the information he desires. Moreover we earnestly beg all those gentlemen interested in this paper and in the diseases of fish to use our columns freely for the dissemination of such information upon this most important subject as they may be able or willing to communicate.—Ed. F. & S.

BALTIMORE Md., September 15th, 1874.

EDITOR FOREST AND STREAM:—
Though much has been said in your excellent paper on the general subject of Fish Culture, I have never been able to find anything touching the particular branch of this subject on which I find myself most in need of information—viz: that of diseases in fish. Among the many works published on pisciculture I have met with but one—that of Mr. Stone—giving any consideration to this topic, and this book deals only with such diseases as affect the small fry. Some of our fish have ulcerated fins, and we are at a loss both as to cause and remedy. The water is pure and abundant, the ponds are kept clean, and until within a fortnight the fish seemed to be in perfect health and hearty. Now several are affected with what appear to be ulcers at the roots of the fins. I would attribute, if unhesitatingly to the character of the food—hog's livers and lights—were it not that they thrive so well for nearly a year, and also that the young trout, though kept on the same kind of food, are in excellent condition now. I have changed the food, however, hoping for favorable results, and in the meantime would like to hear through your paper whether others have had this disease among their fish, and what remedy, if any, they found successful. Yours truly,

ALEX. KEUT.

OVA.—The United States Fish Commission on the McLeod River, California, under charge of Livingston Stone, Esq., is now taking about a quarter of a million of salmon eggs per day, and hope with good luck to get a large supply. A correspondent of the Evening Mail, writing September 13th, says:—On or about the 22d instant the first shipment of salmon eggs, from the Salmon Breeding Works here, will leave for the East. The orders from the different States for these eggs have just reached our camp from Washington, and are as follows:—

Table listing salmon egg orders by state: Maine (100,000), Pennsylvania (400,000), Vermont (50,000), Maryland (500,000), Massachusetts (700,000), Rhode Island (100,000), Wisconsin (100,000), Connecticut (500,000), Minnesota (350,000), New York (250,000), Iowa (250,000), New Jersey (250,000).

Besides, there are the States of Virginia, Indiana, Illinois, and Utah and Colorado, which have not reported. The first shipment will be for Iowa, Wisconsin, Minnesota, and Michigan, and will be under the direction of E. Conklin.

THE ORIGINAL AMERICAN FISH CULTURIST.—MR. W. H. Brewer, in a contribution to the American Naturalist, gives an interesting account of an old traveller, Peter Kalm, who at the suggestion of the illustrious Linnaeus came to North America to make such observations and collect such seeds and plants as would improve Swedish husbandry, gardening, manufactures, arts and sciences. In Kalm's travels it may be found that it was Ben. Franklin's father who was the first fish culturist of America. Kalm says, vol. 1, page 229.—

Mr. Franklin told me that in that part of New England where his father lived two rivers fell into the sea, in one of which they caught great quantities of herrings, and in the other not one. Yet the places where these rivers discharged themselves into the sea were not far asunder. They had observed that when the herrings came in spring to deposit their spawn they were taken in the one river, and they were caught there, but never came into the other. This circumstance led Mr. Franklin's father, who was settled between the two rivers, to try whether it was not possible to make the herrings likewise live to the other river. For that purpose he put out his nets, as they were coming up for spawning, and he caught some. He took the spawn out of them and carefully carried it across the head into the other river. It was hatched, and the consequence was that every year afterwards they caught more herrings in that river; and this is still the case. This leads one to believe that the fish always like to spawn in the same place where they were hatched, and from whence they first put out to sea; being, as it were, accustomed to it.

Here is another item Mr. Brewer has found in our old authority. While speaking of New York, and the oysters found there, Kalm says, vol. 1, page 187.—

Lobsters are likewise plentifully caught hereabouts, plentiful much in the same way as oysters, and sent to several places. I was told of a man who had been successful about these lobsters, and I have afterwards frequently heard it mentioned. The coast of New York had already European inhabitants for a considerable time, yet no lobsters were to be met with on that coast; and though the people fished ever so often they could never find any signs of lobsters being in this part of the sea; they were therefore continually going in quest of well boats from New England, where they are plentiful; but it happened that one of these well boats broke in pieces at Hell Gate, about ten English miles from New York, and all the lobsters in it got off. Since that time they have so multiplied in this part of the sea that they are now caught in the greatest abundance.

A parliamentary return has recently been issued giving the extreme limits to which salmon can ascend the Irish rivers. From this we gather that in the twenty-two fishing districts into which Ireland is divided, the total length of river is 5,394 miles, 454 miles of which salmon are debared from entering by the existence of natural obstructions, while 527 miles are closed by artificial impediments. If the return in question gives an accurate estimate of the exact length of rivers to which the fish have free and easy access, the country may, we think, on the whole be congratulated on the comparatively "open" condition of its water. Compared with England, the number of miles of water unobstructed in Ireland certainly bears a favorable proportion. We fear, however, on many waters where it is stated in the return there is "no obstruction," the salmon where they are plentiful, but in other places where they are scarce, they are often provided with hadders, which, although they occasionally (in heavy water) allow salmon to pass out freely, are in many instances ill-constructed and useless, and contribute really little or nothing to the opening up of the rivers.—Pall Mall Gazette.

—The finest potatoes we ever ate are the Early Rose variety, grown in Muskoka district of Canada.

Natural History.

THE GRAYLING ONCE MORE.

GRADUALLY we are reaching an accurate determination of our species of American grayling, and our readers will note with interest the progress of the development. For our own part, we have been inclined to think that our own and the English grayling possessed nearly the same characteristics, and that they were possibly identical, but it seems now that they are no nearer allied than are the English trout and our salmo fontinalis—the distinguishing marks of the two varieties being quite apparent, even to the novice. Our opinion was formed, however, from written descriptions and plates only, as we had never seen a live specimen of the English grayling. To assure ourselves that this opinion was correct, we recently forwarded to Francis Francis, Esq., of London Field, a dorsal fin taken from a full grown grayling, (in the absence of any better means of determination,) and received from him an autograph letter, in which he advanced the opinion that the grayling of Michigan is akin to the Arctic grayling of Richardson, (see plate in Dr. Suckley's Reports,) and quite different from the English variety. Of the latter there seems positive proof enough, while in confirmation of the first position, we may state, as we have already done, that we were reliably advised by a U. S. Army Officer, some months ago, of the existence in Montana of grayling like those of Michigan; and as these occupy a locality intermediate between Michigan and the Arctic belt, the identity of the three is more than probable.

Since receipt of the letter of Mr. Francis referred to, the London Field of Sept. 5th has reached us, which compares the characteristic features of the fins of the English and American varieties, as follows:—

THE ARCTIC GRAYLING, &c.—We have received from Mr. Hallock, the editor of FOREST AND STREAM, (the New York Field), one of the dorsal fins of the newly-discovered grayling. The fin is quite unlike ours, and leaves us little doubt that the Michigan grayling is nearer akin to Back's Arctic grayling than to our fish, though it may not be identical with either. It is clearly larger in comparison, and even though dried the colors dimmed by time, we can see how brilliant it must have been when the fish was newly caught. Five transverse lines, composed in part of the most brilliant spots, and edged with crimson, make the fin even now much too remarkable to be confounded with that of any grayling in this country. It has been discovered since this subject was first broached that the grayling has a larger habitat than was at first supposed, and that it is found in some of the lakes and streams of Minnesota—that country of lakes and streams, which, in judge from the map it would almost take a lifetime thoroughly to become acquainted with, and in which the head waters of the Red River rise. If this statement be accurate, then no doubt the grayling will be discovered in the great Winnipeg lake, when another step towards the Mackenzie river district, the home of the Arctic grayling, will be gained. Mr. Francis and I are doing good service to the cause of acclimation in seconding and recording the efforts made to distribute the shad, and to place the pinnated grouse in England; and generally it endeavors to raise the tone of sport in America as well as to forward its interests. As these are objects in which we, with all English sportsmen and gentlemen, warmly sympathise, we can but wish that its efforts may meet with the success they deserve.

With regard to the very graceful compliment conveyed in the last clause quoted above, we can only say that we rejoice that our humble efforts should have earned it, and we may add that each weekly mail from abroad brings us substantial evidence of the benefit which the endorsement of so distinguished an authority carries with it.

MORE RARE FISH.—Among the rare fish which have recently made their appearance in Fulton Market are two species of small tunny, obtained by Mr. E. G. Blackford and forwarded to Prof. Baird, at Noank, for determination. One of these he reports to be the coast tunny of the Mediterranean, Oregynus altilavatus of Mr. Gill's catalogue of east coast fishes, as published in Prof. Baird's report. This is best known as an inhabitant of the Mediterranean, where it goes in large schools, and is extensively used for food. It appears to be a great wanderer, however, as specimens have been figured and described, taken on the coast of Norway.

This dwarf tunny, as we may call it, made its appearance on the coast of the United States in 1871, many specimens having been taken in Buzzard's Bay and Vineyard Sound and shipped to New York, where they brought a very small price, owing to the rather strong flavor of the fish. It is said that five hundred were taken at one haul in a pound near Gay Head. These fish usually weigh from ten to fifteen or eighteen pounds.

The other species is much shorter and stouter in its proportions; its precise name has not been determined by the Fish Commission. He thinks, however, that it is either a young horse mackerel or a species described by Gunther as Thynnus argente-vittatus. Comparison with the collection in the Smithsonian Institution, Washington, will settle this question, and we shall inform our readers in due time of the result of the examination.

The horse mackerel, (Oregynus vulgaris,) on our coast attains a very great size, sometimes weighing as much as 1,200 pounds. A fine specimen in the National Museum at Washington, taken in one of the fish ponds at Gay Head, weighed about 400 pounds. It is very seldom that those of the smaller size are seen on our coast, and our fishermen are not acquainted with them as young fish.

What was probably a third species of tunny was obtained at the same time, but was received in too bad a condition to be considered fit for transmission to the Commission.

ing, with a quick appearance; neck thin and deep at setting in on chest, moderately long and slightly arched, with no appearance of throatiness; shoulder blades long and well receding; the points, with a tenuity at the shoulder not noticed in any other, but narrow at shoulder point, but great muscular development in the shoulder blades and fore arms; chest very deep, not over narrow between the forelegs. It is seldom you find the setter with such a round, cat-like foot as the pointer. Forelegs strong and muscular in the fore arm; leg straight, with a slight elastic appearance; foot moderately round, but offener fine and deep, with a slight ribbing; lowering slightly to the shoulder to the hip, long, wide, and very muscular; stifles full and well developed; hock well bent; stern carried almost level with the back, a moderate length, well flagged from the root, wearing off to nothing at tip of stern; coat wavy or straight, fine and silky, free from curl, especially on hind quarters. The colors most in fashion at the present day are Belton grey or blue Beltons; black, white, and tan, and lemon and white, and white and leucity or ticked; some whites show that the lemon color on the ears. Black is not objectionable, and now and then a good liver and white is seen.

POINTS IN JUDGING. Head, 25 Feet, 5; Neck, 10; Ears, 10; Shoulders, 15; Coat, 10; Legs, 10; Stera, 15-20. -Fancier's Gazette.

THE GORDON SETTER.

DELAWARE CITY, Delaware, September 16th, 1874.

EDITOR FOREST AND STREAM:- A letter in a recent number of the FOREST AND STREAM from your interesting correspondent, "Homo," and your comments on it, prompts me to a few remarks. You tell us that the black and tan setter existed in England before the present breed of the Gordon family was born, and that the true color of the Gordon setter was black and tan, as usually understood, but that it is black, white, and tan. Now, Alexander Duke of Gordon, Marquess, Scotland, whose name this far famed strain of setters bears, is dead. If living he would probably settle the question beyond dispute. Istone, in his work on the dog (page 100), says that the black and tan setter was originated by the Gordon family fifty years ago or more. Stangehouse says "the color of the Gordon is a coat point. The black should be a raven black, with a blue or plum bloom on the bright lights. The tan rich red, or burnt sienna color. There is no objection to a white shirt frill, although the absence of white is a good thing." Lavrack says, "originally the Gordon setters were all black and tan," and all of the acknowledged authorities agree that the Duke bred four colors, namely—black and tan, black, white and tan, red and black. They also all agree that the dogs which make the Duke's strain famous were the black and tan in color. The same authorities also tell us that the black and tan, and black and red dogs, are one and the same strain, and that either color would throw the other two, but that black and tan was the prevailing color, and that the black, white, and tan, which you speak of as being the true color, was bred by a cross of white and black, and prized by the Duke because he thought it finer, and not so difficult to back on the hillside as the dark colors. In your quotation from the Fancier's Gazette, would not the experimenter lose efficiency of point by crossing with the spaniel? I think that this cannot be the way in which the Gordon setter originated, for the reason that of all the celebrated strains of setters the Gordon is acknowledged to be the most distinct in character and color, and that the strain which you speak of him, but I have never seen him accused in this respect, and if there was a spaniel cross in him, beside giving him insufficiency of point, would it not give him a disposition to tongue? There is no strain of the setter which has less of the spaniel characteristics in it, which characteristics all of the successful breeders have done all in their power to obliterate, and which resemble the coat of the self liver and liver and white setters have been excluded from the show bench.

To my mind, the Scotch colley argument is equally as far fetched. They in no way resemble each other, but in color and tall, and in color not so much as they do the black and tan foxhound. According to Istone, the black and tan Scotch colley has a white collar, white legs, and white belly. The hair of the black and tan is a regular wave, not like the forehead, and a white blaze down the nose. They say the same about, nothing is more characteristic of pure colley origin than a sharp, foxy, pointed face. There is not the slightest plea for a resemblance in faces. The colley ears are small, half pricked, and sometimes erect. The Gordon is known to have the largest, most peadlinos, and handsomest ears of the setter race. This fact, together with the keen nose, graceful bounding gait, power of endurance, and speed, with the knowledge that fox hounds make a short point (and sometimes a long one), on feathered game especially, are arguments in favor of the fox hound cross. My opinion is that he has not a drop of spaniel, colley, or Irish blood in him, but that he is a cross between a black English and a red Irish setter, with blood the richest and bluest of the blue. Istone says many have written as to the color of the Gordon, and of these famous setters, but no dispute has ever been raised as to their quality; and he says that he has seen better setters of black and tan than of any other breed, and says they are very beautiful dogs, and that he has seen many good ones. In speaking of the merits of the Gordon setter I speak from experience, as I have shot over several, and now own dogs bred from the Duke's kennel, both black and tan and black, white, and tan. Yours respectfully, Wm.

MONTREAL FOX HOUNDS.

The first "meet" of the Montreal fox hounds took place on Saturday, 14th September, at the residence of D. Lorn McDougal, Esq., Montreal. The Gazette of that city gives the following sketch of their early history. It is the only pack in America:-

The first record of their "meets" was as far back as the year 1829, when the following gentlemen of well known names were appointed to manage the affairs of the club then formed, viz:- the late F. Westworth Monk, John Jones, Dr. Arnold, John Molson, and Edward Jones (brother of the late Hon. Robert Jones), who is now the only survivor. To give the names of those to whom the credit of the introduction of the pack, which we recall and feel proud to say, nearly all have long ago gone their rest, in the year 1825 the late William Forsyth, of the old and respectable house of Forsyth, Richardson & Co., who had always taken a great interest in the pack, became "master," which position he held for some years, and on his retiring from the firm to reside in England left a property on the Papineau road for the use of the amateur and pack, which was occupied by both until a few years past. Many, no doubt, will remember old Kennedy, the huntsman, who is still living, though quite blind. On the retirement of William Forsyth, his brother John took his place, and remained master until he also left to reside in England, in the year 1843. For some years after this date it was a hard struggle, and often the question was mooted as to the advisability of continuing the pack, now reduced, and almost worn out pack, the principal supporters being the military and a very few civilians, but among the latter was our much respected and true sportsman, D. Lorn McDougal, who, when things were darkest, came to the front, and at his own expense, in the year 1852, imported English and a half copies from the best strains in England, and not only succeeded in saving the pack for a period of five years, which necessarily took up much of his time, and no inconsiderable amount of his money. To him, then, alone is due the credit of their

being to-day in Montreal the only regularly organized pack of fox hounds in America. In 1858 Mr. McDougal offered inducements to Mr. Alloway to come and reside in Montreal, and take charge of the pack and hunt them. Mr. M. still retaining the mastership until the year 1865, when, feeling that he had done his share towards the maintenance of the hounds, resigned his position, much to the regret of all the members, who, as a slight token of their appreciation of his efforts, presented him with a piece of plate.

From that time till now the membership has been yearly increasing, owing to the prejudice which existed among a few of the straight bred opponents a few years ago are now the principal supporters of the hunt.

In the year 1866 John Crawford, Esq., of Verdun, was unanimously elected master, and it is unnecessary to say how efficiently he filled his office. In wet or shine he was found at his post, and whether in "covert" or "tran" he kept the field moving. Last fall, feeling he should give place to some other member, his resignation was very reluctantly accepted, when Mr. Andrew Allan, with one consent, was elected master, and from the interest he has shown in the hounds for some years past we feel certain that the prestige of the Montreal hunt will not fall away under his charge.

It is expected that the stephencasters, under the auspices of the hunt, which are to come off on the 14th and 17th of October, will be superior to those for many years past; a number of our young sportsmen have purchased first class horses, and we hear a rumor that "Somebody" intends inaugurating his first year with a hunt-cum-cup.

SHELBYVILLE, Tennessee, September 15th, 1874.

EDITOR FOREST AND STREAM:- O. H. H., in a letter published in a late number of your paper, tells of how his dogs, on one occasion, pointed a tortoise. The same thing happened to me this afternoon. I had my dogs out in the field for the purpose of training one of them—a pointer pup seven months old. We were in some stable, when I perceived my setter come to a point. He held his point for an instant only, and then began trailing. He trailed for about fifteen yards, and then came to a dead point over what I thought at the time to be a covey of quail. I advanced, and trampled the weeds down in front of him, but nothing stirred. He still held his point, and the pup, to my great delight, was barking him about twenty yards off. I examined the ground most closely, and found under the dog's nose a box turtle. Hoping this new point in "Dogology" may be of some interest to you, I remain, very respectfully, Edmond. [Pointers standing to the scent of a tortoise is bad; the backing of the pup was all right enough.—Ed.]

Mohawk requests us to state that his imported bitch, Bronsa, has a handsome litter of puppies. These are the only stock of Macdonna's Ranger in the United States. As only two dogs puppies will be sold, those that want them can apply to Mohawk at this office.

Rational Pastimes.

Secretaries and friends of Athletic, Base-Ball, Cricket and other outdoor Clubs will kindly mark their contributions not later than Monday in each week.

But three championship games were played on the professional arena during the week ending September 19th, four days of rain having stopped play in this vicinity. The games played since our last issue were as follows:

Table of championship games: September 14—Chicago vs Boston, at Boston; 10 to 0; September 15—Mutual vs Athletic, at Brooklyn; 6 to 2; September 16—Boston vs Chicago, at Boston; 12 to 2; September 21—Philadelphia vs Boston, at Boston; 10 to 2; September 22—Mutual vs Chicago, at Brooklyn; 14 to 7; September 23—Athletic vs Mutual, at Philadelphia; 12 to 1.

The full record showing how many games each club has won and lost with every other contestant, is as follows:-

Table showing games won and lost by various clubs: Athletic, Atlantic, Baltimore, Boston, Chicago, Hartford, Mutual, Philadelphia, Games Won, Games Lost.

This leaves 115 games to be played within the period of thirty-six weeks still left in the club season, and the close of the season. The Chicago nine have finished two of their series of ten games, and the Boston and Baltimore clubs one each.

The President of the Knickerbocker club, Mr. James W. Davis, is desirous of getting up a game of base-ball, in which none but veterans of not less than 40 years of age shall take part. In a letter on the subject, he says: "I want you to say that the Knicks over forty desire to play with any vets over forty who have been members of the old Gotham, Eagle, Excelsior, Futurer, or Empire nines, and those desiring to participate, to send to me address; and then if I have sufficient answers, I will arrange the match on our ground the latter part of this month or the first of next." Mr. Davis' address is No. 43 Clinton place, New York. Mr. Dick Stevens, of the old nine of the Knickerbockers, is desirous of playing in this match. His address is Long Branch, care of N. J. Southern R. R.

On the 21st ult. the Chicago Cricket Club played with the St. Louis club at St. Louis, and were defeated by a score of 107 to 67, the Chicago eleven scoring but 47 off the bat. On the 22d they played the St. George eleven at St. Louis, the score being St. George 51 and 36, to Chicago 45 and 41, only three Chicago wickets being down when the stumps were withdrawn, the first innings score deciding the game. Courell's 20 was the best St. George score, and Street's 12 the best on the part of Chicago.

Weston has again failed to walk 500 miles in six consecutive days. At Barnum's Hippodrome last week he accomplished 323 miles. He will make another attempt during the week commencing October 5th.

Rudolphe and Cyrille Diou played a game of billiards at Tammany Hall last week, 600 points up, \$500 a side. Rudolphe won by a score of 600 to Dion 338.

Wm. Cook, the champion billiard player of England, who arrived in this country last Saturday, is matched to play against Rudolphe, the French billiard expert, for \$1,000, 400 points on an English table with English balls. Cook brought a table from London, which differs from the American in being considerably larger and having six pockets. The men are to play between the 5th and 10th of October.

The annual meeting of the Germantown Cricket Club was held on Monday, September 14th, 1874, when the following officers were elected for the ensuing year: President, Thomas McKeen; Vice-President, Samuel Welch, Jr.; Secretary, Wm. H. Castle; Treasurer, Elliott Fisher; Ground Committee, F. E. Brewster, H. W. Brown, John W. Hoffman, James Large, Joseph Hargrave.

James Adams, of England, a pedestrian, walked in the Wigwam Hall, Haverstraw, September 19th, a distance of 115 miles in 23 hours, 31 minutes, and 30 seconds. He made the fourteenth mile in 7 minutes and 44 seconds, and the last mile in 8 minutes and 28 seconds.

The New York Athletic Club's annual fall meeting will take place on their new grounds at Mott Haven on Saturday, September 26th.

Yachting and Boating.

All communications from Secretaries and Friends should be mailed not later than Monday in each week.

HIGH WATER, FOR THE WEEK.

Table of high water for the week: Date, Boston, New York, Charleston, with times in H. M.

EASTERN YACHT CLUB.—The prize for sloops not having been awarded upon the occasion of the regular regatta, from the fact that according to club regulations two vessels in each class must start, in order to constitute a race in the class, Wednesday last, the 16th instant, was appointed by the committee for another race. This amounted to simply a match between the Vindex and the Coming, as these were the only entries. The Vindex was probably the favorite, from her success in previous encounters with the Coming this season, but when the day broke cloudy, almost calm, and the Coming, trimming on the starboard tack, bore down on the line, and crossed at 11:05, the Vindex following at 11:06:30. Just at the start a slight breeze sprang up from the S. W., and the yachts with the wind on the quarter, steered for the Pig stakes, the Vindex overhauling the Coming very rapidly, until when three-quarters the distance had been run down she found herself close on board her adversary, and a hot tug war ensued, finally abandoned by the Vindex, who preferred going through the lee of her competitor. After passing the "stakes," the course for Half Way Rock brought the wind dead aft, both vessels setting their jib topsails, whiskered out to windward, while the Coming, set in addition a balloon jib topsail to leeward. She now gained perceptibly on the Vindex, and continued to do so all the way to Half Way Rock, which she passed as follows:

Table showing Vindex and Coming times: Coming, 12:01:40; Vindex, 12:03:15.

From here to the Hardings the course was to windward, and the racers and large fleet of yachts following, found they had very little wind to get their with. Among the fleet of spectators, may be mentioned the Tempest, Fearless, Julia, Belle, Grace, Latoua, Brida and Haleyou schooners, and the Haraquita sloop. The Coming continued to gain on the Vindex, until about 2:15 the Vindex had been sailing tack and tack until at about 2:15 the Coming tacked to the westward, the Vindex keeping on until she could clear the Hardings on the overtack. After going about for this purpose, she found herself on the weather quarter of the Coming, and as the wind then hauled aft a trifle, it enabled the latter to round, which she could only have done without a stretch, except by this piece of good luck, and the Vindex found herself going round as follows:

Table showing Vindex and Coming times: Coming, 3:09:30; Vindex, 3:13:30.

From here to Egg Rock there was little of interest, the Coming increasing her lead more and more as the wind died away; both the sloops, however, creeping through the fleet of small schooners. The Egg Rock was passed as below:

Table showing Vindex and Coming times: Coming, 4:21:15; Vindex, 4:29:00.

As the yachts sailed into the harbor, and the Coming crossed the line, the last breath of wind died away. The gun announcing the arrival of the Coming was fired from the judge's boat, the schooner Foam at 4:42:30, the Vindex being then about one-third of a mile astern. There is some prospect that this race may be re-sailed, to be determined by the decision of the Committee as to whether the regatta had been sailing tack and tack until at about 2:15 the Coming tacked to the westward, the Vindex keeping on until she could clear the Hardings on the overtack. After going about for this purpose, she found herself on the weather quarter of the Coming, and as the wind then hauled aft a trifle, it enabled the latter to round, which she could only have done without a stretch, except by this piece of good luck, and the Vindex found herself going round as follows:

THE BOSTON YACHT CLUB.—The seventh annual regatta of the Boston Yacht Club took place Saturday of the Club House, City Point. The day was pleasant, and a strong wind blowing about southeast by east, sent the boats flying through the water at a rate of speed that made the races both exciting and interesting. The first class comprised sloops and schooners measuring 35 feet and upward, and four entries were made, a first and second prize being offered for schooners and also for sloops. The start was a flying one. The whole course sailed was 23 miles. The following is a summary of this race:

Table of race results: First class, Yacht, Captain, Regular, Correct. Fearless, E. R. Phillips, 3:59:53, 3:42:06; Gracie, Tower, 4:05:43, 3:47:35; Tempest, J. W. Tower, 4:19:50, 3:51:10. First prize, second prize, Gracie. The second race was for keel and centre-board boats, measuring 26 feet, and less than 26. There were eight entries, and two prizes for each kind of boat, and at 12:50 o'clock a start was made from Cranston. The whole distance

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK, 125 SOUTH THIRD STREET, PHILADELPHIA, COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscribers and Ten Dollars will receive a copy of Hallock's "FISHING TOURIST," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. All advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, SEPTEMBER 24, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notices of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between zealous sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and confidence of the portion of the community whose real intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will wander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Managing Editor. WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, September 25th.—Brown and Morris boat race, Kennebocasis River, St. John, N. B.—Seavanhaka Yacht Club regatta, Newton Creek.—Trotting meetings at Prospect Park, N. Y., White Marsh, Pa., Sandusky, Ohio, Evansville, Ind., Ambler Park, Pa., Folsom, Cal., Meridan, Conn., Monongahela City, Pa., Cuba, N. Y., Tippecanoe City, Ohio, Middleton, Del., Sbaron, Pa., and Lockport, N. Y.

SATURDAY, September 26th.—Bogardus vs. Paine, pigeon match Schuykill navy regatta, Philadelphia, Pa.—New York Athletic Club, Fall games, Moh' Haven, N. Y.—Practice day, Harlem boat clubs.—Trotting meetings at Sharon, Pa., and Lockport, N. Y.

MONDAY, September 28th.—Atalanta Boat Club regatta, Harlem River.—Trotting meetings at Fleetwood, N. Y., and Easton, Pa.

TUESDAY, September 29th.—Trotting meetings at Woodstock, Vt., Ypsilanti, Mich., Greensburg, Pa., Tannont, Mass., Bangor, Me., Dayton, Ohio, Lexington, Ky., Omaha, Neb., Manchester, N. H., and Delaware, Ohio.

WEDNESDAY, September 30th.—Match day, cricket club Hoboken, N. J.—Trotting meetings at Fleetwood, N. Y., Easton, Pa., Woodstock, Vt., Ypsilanti, Mich., Greensburg, Pa., Tannont, Mass., Bangor, Me., Dayton, Ohio, Lexington, Ky., Omaha, Neb., Manchester, N. H., Delaware, Ohio, Manhattan, Kan., and Charleston, Ill.

THURSDAY, October 1st.—Boston Yacht Club rowing regatta, Boston, Mass.—Anastasia vs. Pokonag, rowing regatta, Washington, D. C.—Trotting meetings at Tannont, Mass., Bangor, Me., Delaware, Ohio, Woodstock, Vt., Ypsilanti, Mich., Greensburg, Pa., Manhattan, Kan., Omaha, Neb., Charleston, Ill., Manchester, N. H., Easton, Pa., Greensburg, Pa., Fleetwood, N. Y., Dayton, Ohio, and Lexington, Ky.

THE ENGLISH RIFLE TROUBLES.

THE contest in regard to the Martini-Henry rifle in England still continues. In referring to our Ordnance Memoranda XV, we find that the Ordnance Board were inclined to attach "considerable importance to diminishing recoil, deeming that refinements of action in other directions are largely thrown away if there is to be any finching in the soldier who pulls the trigger." The table of recoils the Board found to be as follows:— Fifty caliber service (U. S. arm), 129.6 pounds. Forty-five caliber service (U. S. arm), 123.3 pounds. Martini-Henry, 120.3 pounds.

The Board adds "that though acknowledging 2' 4 additional inches of penetration, made by the Martini-Henry, it was too dearly bought at sixteen pounds increased recoil, leaving out of consideration the much heavier ammunition." This question of the weight of ammunition—a most im-

portant one—seems clearly in favor of the cartridges used for our Springfield arms when compared with those necessary for the Martini-Henry.

Springfield, 50 caliber, 40 rounds weighed 3 pounds, 13 ounces. No. 58, 45 caliber, 40 rounds weighed 3 pounds, 7 ounces. No. 49, 42 caliber, 40 rounds weighed 3 pounds, 5 ounces. No. 55, 40 caliber, 40 rounds weighed 3 pounds, 3 ounces. Martini-Henry, 40 rounds weighed 4 pounds, 6 ounces.

From which it is evident that fifty-one rounds of ammunition for No. 58 could be carried at less weight than forty rounds of the only foreign ammunition whose performance assimilates with it, viz., the Martini-Henry, (Ordnance Manual, page 376). From this it is apparent that the United States soldier can carry with the same load over twenty-five ounces more cartridges than the English infantry soldier. This question of supplying the rapid waste of ammunition on the field of battle is fast getting to be an important one, in fact may be regarded as an essential point, especially as the magazine gun seems to be coming every day more into repute, and forcing itself into notice like the breech loader and revolver have done before it.

Undoubtedly a great deal of the trouble our insular friends have found in the Martini-Henry may arise from the defective holding of the piece, though it is an undisputed fact that the recoil of this arm is at times hardly endurable. At Springfield, where daily trials of arms take place under inspection of competent ordnance officers, the regular marksman who shoots all the guns has complained of the severity of the Martini-Henry recoil. The bruising of the cheek, arising from the firing of this gun, does not necessarily follow from the rising of the butt, but probably from the violent throwing downward of the head by the recoil on the shoulder. Such devices as cheek pieces, crescent butt plates, etc., would be of general inconvenience in a military arm.

The apparent simplicity of the Martini-Henry, and its fewness of motions, may have certain merit, but if the character of the arm is such that a violent shock is given to the system when the piece is fired, such simplicity of parts is of little advantage.

In target rifle it requires no comment on our part to explain how any arm having a violent recoil would be prejudicial to shooting. At Creedmore, with the Remingtons, Scarps, Ward-Burtons, or Springfields, any remark on the recoil, or "kicking," is uncalled of. Sometimes some few marksmen wear a pad, but its use is exceptional. Occasionally muzzle loaders brought on the range have been found difficult to handle on account of the butt fitting to the shoulder with a narrow slip of crescent-shaped metal. The recoil in this case, coming almost on a knife edge, gives increased concussion. As we remarked in our last, we have every reason to be contented with our present systems of breech loaders as to comfort. Perhaps in the field, when the contest comes off with our Irish guests, our breech loading rifles will play no undistinguished part. *Qui vivit verret.*

COLLEGE JOURNALS.

THE College terms began with September, and we are again in receipt of the characteristic publications—be they oracle or organ—that emanate from the several universities of learning throughout the land. Nearly every college has its representative journal, and very creditable indeed are the most of them, both in typography and contents. Often there is evidence upon their pages that the maturer thoughts of the teacher have been added to those of the student; and we believe that both Faculty and undergraduates take pardonable and natural pride in maintaining for them a high tone and enviable standard of literary excellence. Each journal serves as a sort of compendium and record of the year, and is made valuable to parents, alumni, and any others interested in the progress and success of the respective classes or institutions. The first of these that has reached us this term is the *Trinity Tablet*, of Hartford, Ct., a sixteen-page, 8x10 sheet, printed on tinted paper, with exquisite taste, and carefully compiled. Very similar, but more pretentious, are the *Harvard Magneta*, the *College Argus*, of Middletown, Ct., and a half dozen others; while a few, like the *Yale Record* and *Amherst Student*, affect rather more the character of the general newspaper. We shall hope to welcome these to our table in due course of their publication. Some are hebdomadals and others are printed monthly. No doubt they serve as a very instructive practical school for a rising generation of editors with *hands and brains*, who will do credit to a profession to which men are very apt to resort after they have failed in a variety of other pursuits. One thing is certain, they outrank 50 per cent. of the journals of the country in all those qualities requisite to make a newspaper and to give it a character above that of an advertising sheet and chronicler of vegetable moustrosities and neighborhood casualties.

This college journalism has grown to be quite a feature of late years—very different now than in the early days of the *Yale Banner*, which was the pioneer of College periodicals, not quite thirty years ago. Such publications were simply tolerated then. They were looked upon by the staid professors rather as puerile emanations, which, while admitted to give relaxation to pre-occupied minds, were nevertheless discountenanced as tending to encroach upon the studies of the curriculum. At that time, too, the range of subjects for consideration was circumscribed. Topics could be found only within the envelope of the academic walls; and because these were grave and trite, and distasteful to minds that craved a change of pabulum to spice their daily routine of thought, it happened that such extraneous

subjects as were selected to give variety to the contents, were trivial and shallow; so that the "light literature" of the paper comprised a *melange* of frivolous criticism of unpopular tutors and students; of personal banter, stale jokes, quiddities, and chaff. The "body" of the paper (certainly not the brains) consisted of wise essays on abstruse subjects suggested by college text books, which owls might possibly have read with profit. No wonder that college papers were distasteful to the Faculty, or that their rapid utterances cloyed upon the students, whose minds, however fond of pranks and fun, nevertheless wanted strong food to aid the development of their vigorous growth.

Circumstances are very different now. As we have said, almost every college has its representative paper, and teachers unite with students in making their contents entertaining, instructive, and dignified. The nonsense column is very modestly assigned to an obscure corner, like the school-boy with the fool's cap; there is a marked absence of childish personality or cruel criticism; the cultivation of physical studies in later years, has given a wide scope for useful essays upon which both mind and muscle may develop and harden, and the relation of physics and metaphysics, of gymnastics and moral science, are so combined and presented as to afford a study exceedingly attractive to those who impart, as well as to those who receive. So that we find our college editors really at work in a sphere of labor peculiarly their own, and accomplishing results which cannot be measured for their usefulness. They are adding height to mental stature and weight to cubic inches, that will make *men* of them instead of cynics when they mature—men shaped in a natural mould—a mould that gives freedom and play of limb, while at the same time it is plastic in its operations and conservative in its forces. In lieu of printing dry homilies, or dissertations on Tacitus and the Sphinx, they induct us into the mysteries of sliding-seats, of scientific training for physical contests, of the philosophy of putting the stone and the standing jump, of the anatomical structure of the biceps, and the mechanism of the lungs. They give us current records of college events, both in the curriculum and the campus, so that the private life and employments of the students are more longably indicated thereby, and anxious parents may no longer worry as to what is done with a leisure hour. Begetting confidence in themselves, they learn to confide in others, yea, even in the magisterial Faculty whom they formerly regarded with awe; and they find their reward in liberal contributions to boat clubs and gymnasias, as well as to those higher arts which grace their Alma Mater and give her substantial character and enviable reputation.

Success to the college papers!

HO! FOR FLORIDA.

THE usual migration of sportsmen and invalids to Florida will soon begin. We have several letters from gentlemen who purpose leaving the North about November 1st, asking for information as to routes, hotel accommodations, fares, shooting grounds, etc. This we shall furnish to our readers from this time henceforward throughout the season. We have unusual facilities for gathering reliable information of highest practical value not only to sportsmen and tourists, but to invalids and persons seeking lands with a view to settle. We have correspondents at St. Augustine, Jacksonville, New Smyrna, St. Lucie, Melbourne, Palatka, and Glen Cove, the objective points of all tourists visiting the Land of Flowers. We made Florida statistics and resources a specialty of this paper last winter, and succeeded in sending at least fifty sportsmen and two settlers there. This year we shall devote our columns still more largely to this section, and doubt not their use will serve the reader and advertiser better than any other paper of whatever circulation. Our statements are accepted as facts, and our recommendations are couched in and acted upon. It is this that gives our journal precedence and value. We trust that hotel and boarding-house proprietors at favorite Southern resorts, agents of popular railway and steamboat lines, land owners and others interested in the development of the South, will recognize this fact by giving us their patronage, and eventually realize it in pecuniary profits. We are prepared to offer the testimony of those who used us last winter as to the advantage thereby gained.

The increase of Northern patronage of Southern winter resorts, especially at St. Augustine, within the past two years, is something remarkable. Present hotel accommodations have proved insufficient, and several additional and more commodious buildings are being prepared for the reception of guests upon the opening of the season. Traveling facilities are being everywhere increased; better boats will be supplied and more of them, and better railway coaches. New routes of travel will be opened, both in eastern and western Florida. The long contemplated railroad from Jacksonville is in process of rapid construction, as we learn from the *St. Augustine Press*, and even the shakily, rickety wooden railroad from Toccoi is being replaced with iron rails. On the 7th instant 200 yards of new rail had been laid, and all the iron required for the whole fifteen miles is reported soon to arrive. All the neighborhood is agog. Toccoi, which contained only three buildings two years ago, has now grown to the dignity of a hamlet.

It is quite probable that we shall fit out an expedition to explore the whole western coast of Florida this fall, provided we can receive the necessary assistance and co-operation of the railroad and steamboat lines in transporting our correspondents with their boat, and aiding them otherwise.

Moreover, we are exerting ourselves to secure the opening of a comfortable, clean hotel at some desirable locality on the Indian River, and we think have secured the proper man to take charge of the enterprise. Such a hotel will be available both for sportsmen and their wives, and is very much needed. It will be sure to remunerate anyone undertaking the venture, and we would herewith advise any persons contemplating such a movement to put themselves at once in communication with us, as we can furnish them with points of the utmost value. Parties having orange groves and farms to sell would also find it to their advantage always to advertise them through our columns, as we have frequent enquiries respecting such from intending settlers.

Mr. Whitney, of the St. Augustine Press, will receive subscriptions and orders for this paper.

MORE NITRO-GLYCERINE.

WE see no reason why a weekly magazine of undoubted excellence and merited popularity, under the heading of "Science and Invention," should give unusual space (at least without condemnation,) to a method for destroying fish with nitro-glycerine, employed by a gentleman attached to the United States coast survey. It strikes us that gentlemen attached to this useful department, even those of the most inquiring minds, have a sphere of usefulness not confined by the theodolite, the plumb line, or their instruments for triangulation, yet, to go out of their way to detail the barbarous methods of slaughtering fish by the thousands, by means of infernal devices, is certainly stepping beyond geodetic limits.

If fishing by means of nitro-glycerine ever comes into vogue, it means not only the destruction of the fish, but the ruin of those who follow fishing as a vocation. For one fish taken by this abnormal process, thousands are stunned, maimed and killed, which are never seen. Since it is pretty well determined that even noises and surface disturbances, such as cannonading, drive fish away from certain localities for a season, if nitro-glycerine explosions are used, we may bid good-by to our sea coast fish. It seems strange that Professor Baird, the United States Fish Commissioner, on the one side should be laboring manfully to protect the fish, and that on the other side, some one in Government employ should be doing his best to destroy them.

To use nitro-glycerine, or any explosive material for fishing, no matter whether on our immediate coast or in California waters, is as reprehensible as would be the employment of strychnine on the wild waste of the prairie to kill buffalo.

People must be bred up to proper ideas on these particular subjects; and all wholesale and indiscriminate slaughter of God's creatures, whether on water or land, should be discontinued.

THE IRISH TEAM GOING FOR GROUSE.—Very few sportsmen come to us from over the water at this season who do not improve the opportunity to take a hack at the pinnated grouse, or "prairie chickens," as they are called in the Western vernacular. The recent efforts to acclimate this desirable game bird in England, made by the Prince of Wales and others, have given them something of a widespread fame abroad, and therefore increased the interest in them. The Irish Team are not behind Dunraven, St. George Gore, the Earl of Roseberry, Dr. Kingsley, and other cosmopolitan crack shots, in their desire to test their quality in the open field; and several of their members have expressed their intention to go West after the conclusion of the international rifle match. The matter of securing them good sport has been left entirely in the hands of the Editor of FOREST AND STREAM. We have accordingly placed ourselves in communication by mail and telegraph with our friends in Iowa, Missouri, Kansas, and Nebraska; and if the Irishmen do not get a good bag of chickens, it will not be the fault of ourselves and our friends. We have already received such replies to our inquiries as to assure us that arrangements will be made that cannot but prove satisfactory to them. A deputation will probably meet the team at St. Louis, and escort them to the locality determined upon for the sport. We will announce the programme as soon as it is perfected, which should be by next week.

THE FRENCH GUN TRADE.—We notice in *La Chasse Illustrée* the advertisement of a three-barreled breech loader. Two barrels are placed as in an ordinary double gun, and the third barrel is piled on top of that. A party with a gun of this kind would of course load for a party. We see too, manufactured by the same maker, Lafin, a revolving shot gun, which has in addition a magazine for cartridges. By St. Hubert's game must be plenty in France when they want such engines of destruction. There is a great deal of prejudice against French arms, which arises from ignorance. There is no more beautiful gun in the world than those which are turned out by the Parisian artist. Material, finish and shooting qualities are admirable. Englishmen and Americans object to too fine a worked up gun on the outside; but if you want a good arm, you can have one made in France as plain as a pick-staff. We scarcely know in this country what an *arme de luxe* is. People who shrug their shoulders at French guns would do well to remember that we owe our present system of breech loaders entirely to France, and as has been said before by Greener and Glean that all our turn or slide barrels, whether horizontal or lateral, are simply modifications of Lo Faucheur's first breech loaders. *La Chasse Illustrée* is now publishing

a most thorough and interesting account of the French arm trade, to which we would call the attention of our readers. Monsieur de Bevens is a thorough master of the gunsmith's art, of which he treats, and we have to remark that our own manufacturers might read with *no little profit* his articles on *Les armes de Chasse*.

A RELIC OF THE MOUND BUILDERS.—Major G. C. Alden, of New Smyrna, Florida, who has been excavating the ancient Indian mounds in that vicinity, has sent us the skull of an individual of the ancient race exhumed. It is a noble skull, with monumental occiput, and every tooth perfect—the entire knowledge-box in as good a state of preservation as when it was stored with its fulness of cerebrum and cerebellum, before it was discarded by the middle-aged man whose shoulders it once adorned. Whenever that time was—how many decades of years ago—no exhumation will reveal, for there are neither signs nor tokens to indicate identity of birth or race, except a few arrow heads and bits of pottery. The cyclus sockets are filled with white beach sand, and through the jaws there has been growing the root of some vine whose slender tendrils have crept up into the brain-pan; so that we can easily understand that, long after the human life had passed away, a vegetable life quickened within that skull and made it throbb once more.

This is no "poor Yorick." This cranium doesn't look as if it could ever have contained a joke. No "infinity of jest" is there! Evidently it belonged to a member of the "Serious Family." Only the stern realities of life were met in its day and generation—the struggle for existence, the battle brunt, and horrid wars. Perhaps this vacuous thing was the very "head and front of the offending." Strange that the empty shell should so long outlast the entity that vivified it and gave it power! It is useless now, except to speculative anatomy. Therefore, we shall lay it away upon the shelf of our miscellaneous collection, and patiently await the arrival of bones that shall complete the skeleton, even if it be until doomsday. Of what service is a head without the members? At the resurrection all will reunite.

WANTED A FISH.—We are very desirous of obtaining for Professor Baird, United States Chief Commissioner of Fisheries, a specimen of a peculiar species of tunny, one of which we saw in Fulton Market a week ago. The fish wanted is larger than a bonito, and has blue bars on it, something like the bonito, but instead of these bars running slanting to the top of the fish, the bars in this species of tunny run in parallel lines from head to tail all around the fish. If any of our numerous friends in Fulton or Washington market, will inform us when such a fish turns up, we will be glad to purchase it, in order to forward it to Professor Baird. Questions of the identity of fish, or of the finding of new fish on our shores, are not alone of importance in a scientific way, but may be rendered profitable in an economic sense.

KENTUCKY STATE SPORTSMEN'S ASSOCIATION.—The Tournament of the Hunters' Club of Lexington, Kentucky, opened on the 22d inst. and is advertised to continue until to-morrow—three days. The sum of \$1,400 in cash prizes will be divided. We have a special representative on the ground, through whom we shall be enabled to give full details. From this gentleman, who is an officer in the Club, we are pleased to learn that a called convention will be held at the Phenix Hotel, Lexington, on the 1st day of the shoot, to organize a State Sportsmen's Association, a grand movement, and one much needed in Kentucky. A full delegation will be designated for the National Convention in 1875. The Hunters Club, we ought to say, has been chiefly instrumental in drawing attention to the necessity of suitable game laws for the State, and securing their co-operation of citizens for their construction and enforcement.

WASTE OF PHYSICAL FORCES.—A French author, M. Meulier, in a clever book called *L'Impot sur le Capital* says "Homer shows us twelve slave women preparing meal with stone mills for the daily consumption of the heroes." Now a woman working hard all day cannot make meal for more than twenty-five persons. Of course then, in the heroic ages, there must have been absorbed an enormous amount of capital paid out for labor. To day twenty millers in an ordinary establishment, can produce by means of machinery four enough for the daily consumption of 72,000 people, or each can can feed 3,600 men. In Homer's time it would have taken 144 millers. If all the machine made cotton thread produced in England was turned out by hand, it would represent the individual labor of ninety-one millions of people. A smart woman can make eighty stitches a minute with her knitting needles, while a machine is working 490,000 stitches. The machine then represents 6,000 work-women.

ADIRONDACK WOODS AND WOEBLES.—We have a letter from a retired Adirondack lumberman which takes issue with the sportsmen, guides, hotel-keepers, &c., of that region, and which we shall print next week, in order to show plainly the relations that exist between the parties. It is well that the grievances of both sides should be heard, and if there is likely to be any conflict or exhibition of bad blood, the sooner the State inaugurates her proposed Adirondack Park, the better for all interested and concerned.

—The fires in the woods of New Jersey have made a clean sweep from Sandy Hook to Tuckerton, and were only subdued by the rain. Long Branch escaped with the loss of a few fences and fields.

CREEDMOOR.

THE IRISH TEAM—FALL MEETING—SCORES.

WOULD we had the pen of the Wizard of the North! Then we might slightly paraphrase Walter Scott's wonderful description in *Ivanhoe*, of how the smiths and armorers worked manfully for the knights who were to try their skill at the Grand Tourney of Ashby de la Zouche. In our prosaic times the simple substitution would be that of a rifle for a lance, of a butt for a shield; for now rifle makers and gunsmiths are busy getting their arms in order for the Fall Meeting of the National Rifle Association, which takes place on the 29th of this month. Last year this most important event in the annals of the National Rifle Association, took place on Wednesday October 8th, and was continued on until Saturday. Very probably as the contestants may be more numerous this year, the same length of time, three days, will be consumed in shooting, but as the offers have no doubt gained additional experience as to the carrying out of the programme, we see no reason why it should be extended beyond that time.

Great attention *enlat* is added to the Fall Meeting by the presence of our most excellent friends and guests the Irish team, who have most gallantly crossed the Atlantic, in order to compete for rifle supremacy with our own men. We give a very brief *resumé* of the matter. On October 3d of last year, Major Blennerhassett, A Leech, through the medium of the New York *Herald*, sent a challenge to American riflemen offering to meet our men on the range at Creedmoor, to shoot for £100. Some of the leading provisions were as follows:—

Targets, scoring, &c., same as adopted by the National Rifle Association of Great Britain, at Wimbledon, 1873 (when the Irish shot the international match for the Echo Shield, beating England and Scotland).

Ranges—800, 900, 1,000 and 1,100 yards.

Rifles—Any not exceeding ten pounds weight, but without telescopic sights or hair triggers.

Position—Any, but no artificial rest permitted, either for the rifle or person of the shooter.

The American team to be composed exclusively of riflemen born in the United States, and to shoot with rifles of American manufacture.

The Irish team will shoot with rifles by Bigby, of Dublin.

On December 20th 1873, Col. George W. Wingate, then Secretary of the National Rifle Association, and then as now President of the Amateur Rifle Association, entered into a correspondence with Major Leech, and in time, with some very slight alterations, principally that of the extreme range 1,100 yards being altered to 1,000 (the range at Creedmoor having for its extreme range 1,000 yards), the match was satisfactorily arranged. It must be here distinctly placed on record that Col. Wingate by no means arrogated to the Amateur Rifle Club or to himself the choice of those who were to represent the American team. Great care was taken, and a considerable amount of money was expended in addressing riflemen all over the country, requesting them to come forward and to give some evidences of their skill. Of course it was absolutely necessary to have some standard of excellence, and as the Amateur Rifle Club was the only regularly organized association of the kind in the United States thoroughly conversant with rifle shooting according to the Wimbledon rules, it was perfectly proper that the Amateur Rifle Club should take precedence in this matter, as it was the only rifle board, as we may call it, capable of awarding a diploma of excellence to riflemen. The FOREST AND STREAM has unhesitatingly requested riflemen out of the State to send in their scores to the Amateur Rifle Club, and has been equally urgent with manufacturers of arms, other than breech-loaders, to bring their rifles to Creedmoor. As to the men who are to shoot with the Irish team at Creedmoor on the 26th of this month, we must unhesitatingly declare them to be the best shots in the United States. Perhaps in the South there are individual riflemen who at 100 and 200 yards, can equal our Creedmoor men with peculiar sights and hair triggers, but over that, or beyond 300 yards, we may safely assert that save in California, where shooting at extreme distances under Wimbledon rules, is having a most excellent development, pretty generally our people are quite ignorant of how to use the rifle at very long ranges. How could it be otherwise, when one year ago long range rifle shooting even at Creedmoor, was in its infancy? We are thus careful to state this fact at the very outset. If we are beaten, we do not wish it to be said, "There are better men;" or if we are the conquerors we do not desire to have the merit of our team diminished one tittle by the carping remark, "Oh, there are quite as good men to be found down South, or out West."

Nevertheless, it is a matter of regret to us—which, no doubt the Amateur Rifle Club feels—that the element composing our team should be entirely composed of those living in or around New York. We should have been glad to have seen the team composed of men from every section. We would have welcomed any of the clever shots from Mobile, New Orleans, St. Louis, or San Francisco, and would have been glad to have fraternized on the range with the hunter of the trackless prairies, or with the trappers from the far off plains of the Pacific slope. Still there is a certain amount of excuse for all this. If the trite saying, "*Arms nascitur, non fit*," is true, rifle shooting may be a little inborn; but its development with arms of precision is very much of a study, and a protracted one. Men have not always the time to devote to such matters. Then, again, systematic rifle shooting in the United States, by military organizations, is yet in its infancy. The excellent example shown by our own National Rifle Association must have its effects. Before next year there is not a doubt but that other ranges will be established, on the model of Creedmoor, in large centres of population. Then contests will take place between Chicago and New York, or between St. Louis, San Francisco, and New York, and

thus will be eliminated the best shots in the United States, and the time may come when an American team, representing all sections of the country, may send a challenge across the water to our present guests.

The Irish team arrived in New York on Wednesday, 16th September, accompanied by Right Hon. Morris Brooks, M. P., Lord Mayor of Dublin, and the Lady Mayores; his daughter, Alderman Manning and daughter; W. W. Waterhouse, Esq., and Messrs. E. B. R. and F. Kelly. The distinguished guests—twenty-eight in number—were received at the Cunard wharf by Col. George W. Wingate, Messrs. J. T. B. Collins, A. Alford, and G. R. Schermhorst, of the Amateur Rifle Club, and escorted in carriages to the Windsor Hotel, corner of Fifth avenue and Forty-sixth street, where they are to remain during their visit to this city. The following are the names of the team—Major Arthur Blennerhassett Leech, of Dublin, captain; John Rigby, A. M., a graduate of Trinity college, Dublin, and a member of the firm of Rigby Bros., gun makers, Dublin, aged forty-four years, and who will hold the first place in the team; James Wilson, a merchant of Belfast, aged twenty-six years; Edmund Johnson, of Dublin, aged thirty-two years; Joshua Milner, of Dublin, merchant, aged twenty-four years; John B. Hamilton, M. D., of Dublin, an army surgeon, aged thirty-six, the champion rifle shot in India in 1870; Capt. Philip Walker, of the Thirty-fourth Regiment, a native of Kilkenny county, Ireland, aged thirty-six years. The "reserves" are as follows: John A. Doyle, Fellow of All Souls' college, Oxford; John J. Kelly, of Kildare county; Viscount Masserene, Antrim Castle, Dublin, the latter accompanied by his lady; H. H. Foster, Esq., Dublin; and John J. Bagnell, Esq., Civil Engineer, Dublin.

On Friday the various members of the team paid a visit to Garden City, Long Island, passing by Creedmoor; but as the day was rainy no stop was made. At Garden City Messrs. H. C. Poppenhausen and E. C. Hinsdale received the team, who had been under the escort of General Shaler, Col. Wingate, Capt. Bruce, Lieut. Fulton, and other leading members of the National Rifle Association, and dinner was partaken of.

For two days this week the members of the Irish team will take their practice at Creedmoor, where, no doubt, every facility will be given them, so that they may be thoroughly acquainted with the peculiarities of the range.

On Tuesday, September 16th, the Twelfth Regiment held their contest for the Gildersleeve badge; won by Sergt. Reddy, with the score of twenty-eight—five shots at 200 yards, and five at 500 yards—not very good shooting. The Koss badge, open to members of the Seventy-ninth, was awarded to Private Robertson, Co. B, with a score of forty—seven shots at 200 yards, and the same at 500 yards. Shooting fair, and just above the average. The Twelfth Regiment team's practice was better, Sergt. Murphy scoring thirty-three—fifteen in five shots at 200 yards, and eighteen in five shots at 500 yards. It must be borne in mind that the day was a most unpropitious one for rifle practice.

On Saturday, September 19th, the handsome trophy presented by the Messrs. Remington, known as the Remington Diamond Badge, was shot for. Arm, any breech loader, according to the rules of the National Rifle Association; seven shots each, at 500, 800, and 1,000 yards. The members of the Irish team having been invited to shoot, Mr. Alford had placed at their disposal Remington rifles. Dr. Hamilton, and Messrs. W. Waterhouse, J. Doyle, H. H. Foster, Capt. Walker, James Wilson, and J. K. Milner, all of the Irish team, then became acquainted with the range, and for the first time tried their hand with an American breech loader, and their general performance was of the most creditable character. The Irish gentlemen showed their skill by using an arm entirely unknown to them, differing in every way from what they were accustomed to—as to sights, elevations, etc.—and still made most excellent shooting, showing convincingly that a "good workman can handle any tools."

The day was rather overcast; wind blowing across the range from III., but allowing of good shooting. Mr. L. L. Hepburn's score—seventy-eight in a possible eighty-four—is the highest yet made on the range, and is superlatively good shooting, and the four scores under the winning one, are also excellent. We append the twelve best full scores, in which it may be noticed that two of the Irish team—Messrs. Hamilton and Waterhouse—had places—

Table with 2 columns: Name and Score. Includes names like L. L. Hepburn, D. Walsh, A. V. Canfield, Jr., Lt. Col. Gildersleeve, J. T. B. Collins, Lieutenant Fulton, J. S. Conlin, E. H. Sandford, J. Trageser, L. Geiger, Dr. Hamilton, Irish Rifle Association, and William Waterhouse, Irish Rifle Assn.

Capt. Bodine, after making twenty-five at 500 yards, very unfortunately made an error in elevation, shooting at 800 yards as for 900, and was off the target for the whole 800 yards. A lesson of this kind is a most disagreeable but useful one. We are quite willing to believe that on the occasion of the International match Capt. Bodine will get his elevations just right, for there is no steadier, nor better, nor more lasting shot than he is.

We give the handsome score made by Dr. Hamilton at 500 yards—3 4 4 4 3 3—twenty-five in a possible twenty-eight. This was made with a rifle the gentleman had never seen before, and on his first visit to the range.

The Irish team, on the occasion of the match, will wear an exceedingly appropriate badge, embroidered for them by the Irish ladies. Two hands arc interchanged; there is a wreath, and the colors of England and the United States are blended. This pretty emblem is to be worn on the arm. Should our men be the conquerors, we understand that it is intention of our Irish friends to place them on the arms of our team.

May the best men win! Though it may not be our good fortune to sport the favors worked by fair Irish woman's hands (not recalling old Esop's sour grape fable), we are sure that the presence of these ladies and our Irish friends will ever be pleasantly remembered by us in the United States.

The match with the Irish team will take place on Saturday, September 26th, at ten o'clock.

THE RIFLE ASSOCIATION.

Programme for the Fall Meeting at Creedmoor.

LIST OF PRIZES TO BE CONTESTED FOR—NAME OF DONORS—CONDITIONS OF THE MATCHES.

The Fall meeting of the National Rifle Association will be on Tuesday, the 29th inst., and continue four days. The following is the programme—

Table for Opening Match—Judged Prize. Lists prizes for First, Second, Third, Fourth, Fifth, Sixth, Seventh, Eighth and Ninth Prizes with values.

Table for Cavalry Match—Open to teams of five from any troop of the National Guard, S. N. Y. Lists prizes for First, Second, Third, Fourth, Fifth and Sixth Prizes with values.

Table for Sportsmen's Match—Open to all comers. Lists prizes for First, Second, Third, Fourth, Fifth, Sixth and Seventh Prizes with values.

Table for First Division Match—Open to teams of twelve from each regiment or battalion in the First Division of the National Guard, S. N. Y. Lists prizes for First, Second, Third, Fourth, Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for Second Division Match—Open to teams of twelve from each regiment or battalion of the Second Division of the National Guard of the State. Lists prizes for First, Second, Third, Fourth, Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for Third Division Match—Open to teams of twelve from each regiment or battalion of the Third Division of the National Guard of the State. Lists prizes for First, Second, Third, Fourth, Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for New York State Match—Open only to teams of twelve from each regiment or battalion of the National Guard of the State of New York, each being certified to by their regimental commander to be a regularly en-

listed member in good standing of the regiment he represents, and to have been such on June 1, 1874. They shall appear in uniform (full dress or fatigue). Distance, 200 and 500 yards. Position, standing at 200 yards, kneeling at 500 yards. Weapon, Remington rifle. State model. Rounds seven. Entrance fee, \$1 each man.

Table for First Prize to the highest individual score, a gold medal, presented by the State Prize, a silver trophy, value \$75, and a life membership in the State Rifle Association. Lists other prizes for Second, Third, Fourth, Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Total, thirty prizes, value \$205.00. Competitors failing to score eight points at the first distance will be excluded from firing at the second distance.

Table for Officers' Match—Open to all officers and staff officers in the First Division, N. G. S. N. Y. Lists prizes for First, Second, Third, Fourth, Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for Army and Navy Journal Match—Open to teams of twelve from all regularly organized military organizations in the United States. Lists prizes for First, Second, Third, Fourth, Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for Golfing Match—Open to teams of twelve from each regiment or battalion of the National Guard of the State of New York. Lists prizes for First, Second, Third, Fourth, Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for All-Comers Match—Open to all comers. Lists prizes for First, Second, Third, Fourth, Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for First Prize to the highest score, a gold medal, presented by the State Prize, a silver trophy, value \$75, and a life membership in the State Rifle Association. Lists other prizes for Second, Third, Fourth, Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for Second Prize to the highest score, a gold medal, presented by the State Prize, a silver trophy, value \$75, and a life membership in the State Rifle Association. Lists other prizes for Third, Fourth, Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for Third Prize to the highest score, a gold medal, presented by the State Prize, a silver trophy, value \$75, and a life membership in the State Rifle Association. Lists other prizes for Fourth, Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for Fourth Prize to the highest score, a gold medal, presented by the State Prize, a silver trophy, value \$75, and a life membership in the State Rifle Association. Lists other prizes for Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for Fifth Prize to the highest score, a gold medal, presented by the State Prize, a silver trophy, value \$75, and a life membership in the State Rifle Association. Lists other prizes for Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for Sixth Prize to the highest score, a gold medal, presented by the State Prize, a silver trophy, value \$75, and a life membership in the State Rifle Association. Lists other prizes for Seventh, Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for Seventh Prize to the highest score, a gold medal, presented by the State Prize, a silver trophy, value \$75, and a life membership in the State Rifle Association. Lists other prizes for Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for Eighth Prize to the highest score, a gold medal, presented by the State Prize, a silver trophy, value \$75, and a life membership in the State Rifle Association. Lists other prizes for Ninth, Tenth, Eleventh and Twelfth Prizes with values.

Table for Ninth Prize to the highest score, a gold medal, presented by the State Prize, a silver trophy, value \$75, and a life membership in the State Rifle Association. Lists other prizes for Tenth, Eleventh and Twelfth Prizes with values.

Sporting News from Abroad.

[FROM OUR SPECIAL ENGLISH CORRESPONDENT.]

As I write I can hear the breech-loaders cracking away right merrily amongst the turpins, and see white puffs of smoke rising on the hillsides, whilst two spots, one white and one red, denote two dogs which have dropped, or have been dropped to shot. The weather is inauspicious, for the rain "it raineth every day," and during the past week it has blown half a gale, and spoilt the very best marsehaum I could choose from my tobaccoists' stock. I don't think there has been on the whole so bad a crop of birds as the dyspeptics say. I for one have seen plenty, and killed enough to show me how beautifully developed is the instinct and sagacity of my black and tan stud sciter, who is as good as wedded to me, and too good for any man's money, as the farmer said to the old duke who wanted to buy his old mare. As for the rain, I can laugh at it, for Cording's water-proof keeps it off like a cuirass would arrows, and I take good care that my boots are not of the light fantastic toe pattern. When a friend of mine in the North asked me to stalk deer with him, and throw flies over the brawling mountain streams, I may have hesitated and lit an extra pipe over it, but my mind was set on "things below," and I don't regret my choice, though twenty-five brace all told has been the best bag at present made by two games of which one is myself. The worst part of my shooting is, or perhaps are, the red legged Frenchmen. These wretched foreigners, unlike our English birds, and like enough to the Gauls themselves, are so terribly foad of running, especially where there is any chance of their being shot. They were imported by some lunatics, and have gone on and prospered, and like the Haoverian rats, cannot be exterminated. "I doubt very much," said a distinguished naturalist to me the other day, "if it even really pays to acclimatise birds or animals." I laughed at him, then, and said something I thought very crushing about pheasants, but he howled me over by some clever arguments about pheasants dying out if artificial means were not employed to prevent it, and it never struck me to mention the French partridges. There is no fearing their dying out. They abound in some parts, and my shooting teems with them. My dog makes a point. "Now for it," I mentally ejaculate, and go up to him, and there is nothing there. Fifty yards further on he becomes cataleptic again, to a like effect, and after some mysterious roading and feathering and champing, the scent ends by putting up one of these best dogs, and he looks as bad fool as his master. They spoil the best of dogs and the best of tempers, and I wish the acclimatizers had chosen pinnated grouse instead of them, or even quail, though I believe the latter are to be found in the fens of Lincolnshire in some abundance, and require some little "struttin powder" to hit them.

Hunting men will soon have their turn again, and the advertisements for cleaning top hoots and stretching breeches are fast re-occupying their old places in the sporting journals. I read some accounts of excellent sports with the eubs, but this is a schoolboy's sport, and as it necessitated nothing better than an ordinary hack and a knowledge of the country, it isn't quite good enough for me, at all events. The Carlisle otter hounds would be more in my line, if 250 miles didn't separate us. It is often difficult, even behind as plucky a fox as ever broke cover, to get up much feeling of excitement when your horse is blown, and you have to get across ten acres of ploughed ground; but with wild woodland scenery, and a frothy, sparkling river in the foreground, with the rough, unkempt and picturesque hounds trying every nook and "holt" along the banks, it is very suggestive of too many glasses over night, and strongish cigars, if you don't feel a hunter's joy, let the morning be bleak and cold as it may. There are no spears or other such atrocities allowed at Carlisle. The varmint has a fair chance, and though the bulbles mark his track, not a single thrust is leveled at him. The killing part of the programme is left to Lucifer, Dellman, Matchless, and Mermaid, the grand old hounds which, almost unique in their style and beauty, have won Mr. Carrieh the master, fame, both in the field and on the show bench. If they can't follow him up drains or under the tree roots, there is another sort of physic in store for him; but it is purely of a canine nature, and consists of the terriers; and a terrier that will face an otter in his lair is no pampered drawing-room favorite or carpet knight. A badger is a joke to the salmon poacher, and not a patch on him. Talk about a dog heaving his weight in wild cats, and you will yet have out your meat lean. These otters bite, and then hold on and tear out their teeth without loosing their grip, and they tell me the way the old hounds are cut and scarred is a caution to snakes. Approhs of hunting, a Mr. Fitzwilliam, a well-known M. P. H., has started a theory (not a new one by the way, but an old one revived), that hounds don't require "blooding." This, coming from a man of Mr. Fitzwilliam's experience, carries some weight with it, but I do not agree with him, as I think an occasional taste of blood gives a hound far more dash and go than forced abstinence. Beekford, who is to hounds as great an authority as Stonehenge is to other dogs, is on my side; but the Coiley harriers, it seems, have not eaten a hare for the past five years, although they killed no less than 138 last season. Mr. Meynell, another hunting authority, was very indifferent about blood, and Mr. Osbalstone, who ranked "faele princeps" in his day, says the best sport he ever had was out nine days in Leicestershire (our best hunting county), where his hounds never tasted a single fox, the system of rewarding hunting leopards in India with

the deer's entrails, and trained falcons with some portion of the quarry, seems opposed to this theory, and I cannot but think that it must beget indifference. I have to record a pedestriar feat in the behalf of a somewhat brilliant amateur, Lieut. Byrnie, of the 38th regiment, (who a short time ago walked from Aldershot to London in less than seven hours), recently for a considerable wager walked twice the distance, nearly 70 miles, within 17 hours. He started from the officer's mess for London at 3 P. M., on Wednesday, and arrived at the mess at 7.39 A. M., on Thursday morning, thus winning by half an hour. He was heartily cheered, and appeared but little distressed. It is said a good deal of money changed hands over the affair.

The death has just been announced of a celebrated tragedian, known in professional circles by the *soubriquet* of Master Betty, at the mature age of 83. This pupil of Thespis some seventy years ago was the idol of all theatre loving London; and one of the shortest, yet most brilliant runs which ever an actor experienced in public. It is said that at seven years old he became almost miraculously "stage struck," whilst witnessing the acting of Mrs. Siddons, and when eleven, he prevailed on his friends to allow him to appear as Osman in the play of Zara. His success was wonderful, and far exceeded every one's anticipations at Belfast. He next played Douglas, in Homes' once famous play of that name, and when he betook himself to Dublin, crowded houses witnessed his rendering of Hamlet, Prince Arthur, Romeo, and other difficult characters. When he made his *debut* in London at Covent Garden theatre, the place was crammed within half an hour after the doors were opened, and he received an ovation unprecedented since the first existence of the stage. He was then engaged at Drury Lane for twenty-eight nights, at £50 a night, and the receipts for those twenty-eight nights reached the sum of £18,000, or about £600 a night. So great was the enthusiasm he inspired that Mr. Pitt actually used his influence to adjourn the House of Commons on one occasion to see him play Hamlet, and the University of Cambridge made him the subject of a prize poem. This case of a boy of 13 making at least £10,000 a year has never been equalled, and the extraordinary part of his history is, that when he grew older his talents decreased, and though at 13 he had thrown Macready, Kemble, and a dozen talented men into the shade, yet at 30 he failed to secure the slightest notice, and finally left the stage in disgust, but with a large fortune.

The mare "Apology" is still well up in the betting for the St. Leger, but Atlantic, another favorite it is said, has broken a blood-vessel; and though Hermit won the Derby after a similar disaster, yet it is to be feared that he will not perform a similar feat. The favorite of this race, second only to English Derby, will be found in a future letter from

Shot Gun and Rifle.

GAME IN SEASON FOR SEPTEMBER.

- | | |
|---|---|
| Moose, <i>Alces Michxli.</i> | Snipe and Bay Birds. |
| Elk or Wapiti, <i>Cervus Canadensis.</i> | Caribou, <i>Tarandus Rangiferus.</i> |
| Hares, brown and gray. | Red Deer, <i>Cervus Virginianus.</i> |
| Wild Turkeys, <i>Meg. gr. gallopavo.</i> | Sparrels, red, black and gray. |
| Woodcock, <i>Scolopax rusticicola.</i> | Snipe, <i>Tringa Iowanus.</i> |
| Ruffed Grouse, <i>Tetrao umbellus.</i> | Pinnated Grouse, <i>Tetrao Cupido.</i> |
| Esquimaux Curlew, <i>Numenius borealis.</i> | Curlew, <i>Numenius Arcticus.</i> |
| Plover, <i>Charadrius.</i> | Willetts. |
| Godwit, <i>Limosa.</i> | Wood or Rice birds, <i>Dolichonyx oryzivorus.</i> |
| Tails, <i>Rallus Virginianus.</i> | Wild Duck. |

Under the head of "Game, and when in season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of space, an undesirable game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

GAME IN MARKET.—Woodcock not plenty, though a shade lower in price, and selling at \$1 50 a brace. Perhaps the proportion of birds coming from the West is 100 to one killed in the States adjacent to New York. Prairie chickens rather scarce. Worth \$1 50 a pair. Birds in nice order. Majority young birds. Pinnated grouse in good demand, but hardly any supply. Selling at \$2 00 a pair. Red birds from Delaware and rice birds from Savannah, all in prime order, selling at \$1 25 the dozen. Ox eyes—plover—and small bay birds, coming in, in good quantity, and in nice order. Wild pigeons, the early flights killed in Fulton county in this State, are selling at \$2 00 a dozen.

VERMONT.—Grafton, Sept. 16.—Any persons desiring some good partridge shooting would do well to visit this section. As I remarked to FOREST AND STREAM once before, there is not a good dog nor gun in this town. The country is rough and birds plenty, and we have a first rate hotel.—S. W. G.

MASSACHUSETTS.—Salem, Sept. 20th.—Bays birds plenty, black breast, plover not having been so numerous for years. Two Salem sportsmen, in one week, at Chatham, shooting 383 good birds, including dough birds, yellow legs, plover, &c., not but this for the old bay State. Coats are also reported in the bay. Prospects for quail fair. Woodcock and snipe scarce. Rail, a few of them. Quail on Cape Cod thick. Yours, R. L. N.

NEW JERSEY.—Wareton, Sept. 21st.—Shooting has improved, and fine bags are reported as having been made. On the meadows near West Creek, Barnegat, and here, curlew and brown hawks have appeared in great numbers. One party in West Creek killed over forty on Thursday. On the same day several fine bags were brought in from the Barnegat meadows. While here I saw one sportsman come in with twenty brown hawks, and another with curlew and brown backs; low many I cannot tell. Yours, A. BRICK.

PENNSYLVANIA.—Philadelphia, September 16th.—The eastery winds of the past two or three days prompted us to experiment with the rail at Chester yesterday. Fully twenty boats started from that point, some to try the flats on the Jersey shore, and other Chester Island; but nothing was done by any. My pusher, one Ed. Rump, brother of the famous defunct Bill, so long noted for his prowess with the push pole, worked over ground enough for me to have killed one hundred rail, but a lack of water prevented their being started, and we heard them all around us. Never have I seen the reeds and cover so dense. I boated all I saw, only one in number, and five in our party could not get out, but twenty-one on their return to the flat rail, and "a big blow of weather" to make shooting good. Today's showers savor well, and I hope to give you a better report the latter part of this or the beginning of next week.

I hear of nothing but small scores at all points on the Delaware. At Port Perio, 90, 84 and 73 rail have thus far been "high boats." This does not compare favorably with the record of the shooting of about the same date, and same places last year, which was published in the FOREST AND STREAM. At Chester 28 birds is the highest up to 15th, and at the Lazaretto, 29. On the flats in the neighborhood of Bristol, it is said 39 rail were boated by a sportsman one day this week, but I doubt it, for we have always had better shooting down the river, and birds are more plentiful there. I learn from parties at Chester that a company of three gentlemen boated 575 rail at Augustine in flats in three days the first of the season. Black ducks, teal and snapper duck are beginning to arrive in the Delaware, but shooting for them will not commence until the weather is cooler.

VIrginia.—Snicker's Gap, of the Blue Ridge, Va., is said to be alive with quail.

—Between one hundred and fifty and two hundred of the different varieties of plover, besides immense numbers of snipe and red birds, were killed in the marshes near this city yesterday. A pair of fine blue wing ducks lighted among a flock of tame ducks swimming near Jones' Point, this morning, but were soon singled out and shot by some of the many sportsmen who continually roam about that locality.—*Alexandria Gazette.*

—The Mount Vernon Ducking Club has been reorganized, and has elected the following officers:—J. H. Krulhing, President; A. S. Bryan, Vice President; Henry R. Searle, Secretary; J. R. Moorehouse, Treasurer. They are now actively engaged in removing the ponds, traps and quarters, and as they have their headquarters at Washington to Occoquan Bay as their hunting grounds, taking in Mount Vernon, we expect to hear a good report of them. They propose to commence their shooting about the 1st of November, and continue during the season.

Messrs. Smith, Crecey, Woods, and Hager paid a visit to the Patuxent on Wednesday last, and returned Thursday evening, having been successful in bagging, in the order named, 148, 87, 92, and 97 rail, (ordinary) This is the work of one tide, and is a fine showing.—*Washington Sunday Herald, 20th.*

MICHIGAN.—The St. Clair flats are favorite resorts for gunners, both from Canada and the United States. The Indian reserve on the Canadian side, has been overrun of late years by crowds, who have made a pretty clean sweep of the ducks, muskrats, fish, &c., without recognizing the rights of the Indians at all. To counteract the mischief the Indians have leased their marsh shootings for ten years at an annual rent of \$400, while they retain for their own exclusive use the animals and the fish. Trespassers will be warned off, and if they persist, will be prosecuted. This is a capital move; it will benefit the Indians and the duck-shooters, and preserve the animals. Any respectable person will find little difficulty in securing permission at reasonable times and on reasonable terms, and surely this is all that is necessary.

FLORIDA.—Jacksonville, Sept. 19th.—The weather is getting very pleasant and cool. Wild ducks have made their appearance on the river, a sign of early winter at the North, (so southern papers say) and an early crop of visitors South.

CANADA.—Game is plentiful in the North this season. A Party Sound correspondent of the *Free Grant Gazette* reports that deer, duck and partridge are numerous.

—Wild pigeons are in great numbers through the States of Michigan, Indiana, and Wisconsin, and can be shot without much difficulty. These birds come in very nicely for the pot, especially when grouse and other game birds are scarce. They are generally to be found in the hick woods, and as there are large quantities of mast and hick this fall, they are likely to be plentiful.

—Moose have become so scarce in Maine that a bill will be brought before the Legislature at the next session to prohibit the killing of these animals for a period of five years. The bill ought to pass without debate.

—They have at least one vigilant and earnest conservator of game in Connecticut, a gentleman who is known to our readers as an occasional correspondent of the FOREST AND STREAM. This is Mr. S. Chamberlin, of New Haven, who advertises in the city papers, over his own signature, a reward of \$25 to any one who will detect and prosecute any person violating the game law by shooting woodcock, quail, or ruffed grouse out of season, trapping or snaring game on another person's land at any time, or dealing in said game out of season. Mr. Chamberlin's offer holds good until July 1st, 1875.

—The Walloon Club of Elgin, Ill., dedicated with all honors their fine club house at Fox Lake, Wis., on Tuesday last.

—The Virginia Shooting Club of Illinois is an organization comprised of 132 members. On the 15th of September they shot a pigeon match which resulted in the killing of nineteen birds by one side and thirteen by the other, each side shooting at thirty-six birds. This week six prominent shots of the club, three on each side, will shoot for \$50 a side.

—Last week our Scotch friends given to rifle shooting held a meeting. Colouel Lang was chosen chairman, with Sergeant Cameron as Secretary. Colonel Beattie, Captains Munro, Dingwall, Lyndsay and Bruce were appointed a committee to consist of a general manager of the club, the qualification of membership and nomination of officers. After a short recess the committee reported that the name of the organization be "The Scottish-American Rifle Club

of New York," that all men of Scottish descent be eligible for membership, and that the officers consist of president, Vice-President, Secretary and Treasurer. The committee's report was accepted, and a committee of three was appointed to wait on James Gordon Bennett, Esq., and ask if he will consent to become the President of the club.

—At Ottawa, Canada on the 18th, the Dominion Rifle Matches were continued. The Provincial Match—300, 500, and 600 yards was won by the Ontario team. Ontario 610; Quebec 287; New Brunswick 290; Nova Scotia 595. Asst. Surgeon Arkin made the highest score, seventy-six points.

—On the 21st at Creedmoor the contests took place between members of the Forty-Fifth, Ninth, Seventy-Ninth and Twelfth Regiments. The Twelfth team made the highest aggregate score yet recorded, 355. Their team will consist of Messrs. Gildersleeve, Fulton, Smith, Wood, Smith, Murphy, Roddy, Dolan, Van Reusseler, and Beattie. The shooting of all the regiments was remarkably good. Very remarkable progress has been made in regimental practice during the year, which will no doubt be apparent at the Fall Meeting.

—It is not often that our breech loaders are directly pitted against the Metford rifle. On the 10th of this month at Hamilton, Messrs. Adams and Mason, with Remington's shot guns, Messrs. Morrison and Schwarz, the latter using Metfords. The shooting was to have been ten shots each at 800, 900, and 1,000 yards, but the Remington ammunition having given out, it was agreed that averages should be taken. Mr. Adams score was at

Table with 2 columns: Name and Score. Lists scores for Adams, Morrison, Schwarz, and Wilson at various distances.

The total averages were as follows: Adams, 3.60; Morrison, 3.14; Schwarz, 3.28; Wilson, 2.80. A few facts of this character may do a great deal to keep up our men in heart.

—The following very handsome score was made lately with a Remington military rifle by Mr. F. J. Millen of the Herald staff, and President of the Irish-American team, 500 yards.—4, 4, 3, 3, 18.

It is highly probable that the Third Regiment National Guard of New Jersey will construct a range.

—A. H. Bogardus, of Chicago, and Ira A. Paine, of New York, will shoot a match at pigeons on September 26th. Paine to select the place. They are to shoot at one hundred single pigeons each, from ground traps, twenty-one yards rise, eighty yards boundary, with one ounce and a quarter shot, for \$1,000 a side and the championship of the United States.

EDITOR FOREST AND STREAM: Table with 4 columns: Name, Straighl, Killed, Name, Straighl, Killed. Lists names and scores for various hunters.

ANOTHER GUN TRIAL.

JACKSON, Miss., September 8th, 1874.

EDITOR FOREST AND STREAM: Since my letter of July 24 on the Chicago Gun Trial, in order to verify my conclusions, we have had a gun trial of our own, the result of which I give you below. Very few specimens of the capacity of their guns, except the actual result in the field, and were acquainted with the proper charges of powder and shot necessary for their respective pieces. I am more and ever convinced of that fact from inquiries I see in your "Answers to Correspondents." Why do not those queries go out and try their guns, say with one ounce of shot from No. 7 to 10, and use 35, 33, 31 to 4 drachms of powder, according to weight. If a 12 bore gun use but very little, if any, more shot and powder than for a 10 bore, except No. 7, when 4 or 5 oz. more might be advisable. Shoot each charge six times, three from right and three from the left barrel, as we did, at 30-inch circular targets, remembering that over 150 pellets is fair shooting, so far as pattern is concerned, when shooting No. 7 shot, the standard at gun trials. We used Laidlaw's or orange dressing No. 4 powder.

GERMAN GUN: Table with 2 columns: Name and Score. Lists scores for various hunters using German guns.

From these tables you will see that the German gun and the Dougal distributed No. 7 shot better with increase of powder, while almost exactly the reverse is true for the two guns when No. 8 shot was used. The Clark & Snider, on the contrary, coated more pellets in the ratio of its increase of powder, except when four drachms were used with No. 7 shot. We had no penetration sheets; the German gun penetrated three

Hostetter Bitters ailments. Target was made of white pins, nailed against a stump, and not at all solid. Distance forty yards, measured with tape line.

There are some things in a gun's shooting that cannot be accounted for. In one batch of six shots the Clark & Snider had five shots with over 200 pellets each, the sixth had less than 100 pellets; the German gun drove one was one-fourth of an inch into the target, and showed less than fifty pellets at the same time.

I would mention that a 10-bore gun will not chamber five bullets, (see FOREST AND STREAM Sep. 24) but only three No. 6, and would do with sportiveness to use one oz. of No. 8, 9, or 10 shot only.

Very respectfully, GEO. C. EYRICH.

NOT DERELICT.

We are glad to print, on so good an authority, a flat denial of the report alluded to in the letter subjoined.—ED.

PHILADELPHIA, September 17th, 1874.

EDITOR FOREST AND STREAM: There is no foundation whatever in the report that a member of members of the Philadelphia Sportsmen's Association have been shooting fall before the season began on the Delaware River. A report was so circulated, and such a charge was made at a meeting of the club by one member against three or four others, but merely on the strength of what somebody had said—current rumor. I am glad to state that the gentleman who were so charged with violating the laws of the society are men of veracity and standing, and have emphatically denied it to the satisfaction of their fellows.

There are always dissatisfied members in every association, who are ever ready to listen to evil reports and create mischief and trouble. After carefully looking into the whole matter, I am satisfied the charges were made, not in the interests of the club, but instigated by malice. All the market shooters and sportsmen in Philadelphia are in the same boat, for the reason that they are restrained from violating the law. A number were prosecuted last winter, and now take every opportunity to spread all manner of evil reports. For their benefit, let me state, they will be as closely watched in the future as in the past, for we intend that our game laws shall be recognized.

NOVEL CAPTURE OF A DEER.

MARQUETTE, Mich., August 26th, 1874.

EDITOR FOREST AND STREAM: I will tell you of a little adventure that happened here a short time since. Last week, as a party of three were returning from a day's fishing at Presque Isle, which is a few miles from Marquette on the lake shore, they espied something dark in the water, which, as they neared, was found to be swimming towards them. It was almost dark, and they were in a small boat, a mile or more from land. Getting closer it proved to be a large bear, which, when within a few rods, he made several frantic attempts to get up the edge of the boat. He made several frantic attempts to get up, but having no foot hold he was unable to do so. Before reaching shore they decided it was best to kill him, as they were afraid if he once touched bottom it would be good-bye, so they slaughtered him and there with a dirk knife which one of the party fortunately had. He had ten prongs on his horns, which I think must have been at least ten years old, and weighed, when dressed, 287 pounds. Why he was there at that time of day no one can conjecture. Several years ago another one was taken in almost the same place and manner.

In your publication of my last you make me say that four teen trout were taken in two hours in a lake near Grand Marais. It should have been fifty trout.

Partridges are very plenty now in the woods. Two guns bagged twenty-five on last Tuesday afternoon. I remain yours truly, H. R. MATHER.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

Table with 2 columns: Name and Description. Lists various fish species and their characteristics.

Trouting is permitted in Maine and Canada until October first.

Table with 2 columns: Name and Description. Lists various fish species and their characteristics.

FISH IN MARKET.—What fish is that lying gaunt and glistly on the slabs? Certes! he is not a pretty fish. He has an ugly snout; his under jaw is hooked and has worked up into a socket in his upper jaw. He looks slimy and out of shape; has huge girth and squat form. He no more looks like the lordly salmon than does a pewter mug look like a silver flagon. He is more *exot* than *salmo*; and yet it is a true specimen of the king of fish, the beautiful shapely salmon, but now in the neglect of his Protean forms. We turn from him in pity and think it a shame that he has been caught in the Miramichi and sent to New York market, but that full of milt he should have been left to reproduce his kind in the Canadian River. Nature points so clearly when the salmon is out of season that simply to look at this fish, makes one loathe him. As it is, he is worth only thirty-five cents a pound, with no takers. Fish, owing to the storms of last week, are rather scarce. Blue fish, however, "animated chopping machines," as Professor Baird calls them, "the business of which is to eat to pieces and otherwise destroy as many fish as possible in a given space of time," these hungry blue wolves are in great abundance, and worth eight cents. By the end of next month blue fish will be even finer, and then our winter stores will be put up. Spanish mackerel are very scarce. It is likely that by the end of the month the finest of the *Scomber* family will betake themselves to warmer climes. Spanish mackerel are worth fifty cents a pound. Perhaps Spanish mackerel have not been quite so plentiful this year as last; at least fishermen say so, but we can never determine these points accurately, until Professor Baird's tables of receipts are used by the fish dealers, which more exact data will, we trust, be obtained. Weak fish in great abundance, selling at ten cents. Some ceca, caught off Long Island, coming in, worth twenty-five cents. This fish should be better known, as it is very excellent food. Sheepshead scarce, and selling at twenty-five cents. Old Wadsworth in 1649 says: "This fish makes broath so like Mutton broath that the difference is hardly known." Sea bass hard to find and worth twenty-five cents. The catch will increase before long, and later this fine fish will be plentiful. Soft crabs in

abundance at \$1.25 a dozen. Frogs scarce at sixty cents a pound. Nonak lobsters in good supply. "As the harvest of the ocean diminishes, not as to quantity but as to variety, we will commence to draw on the fish of our inland seas, and soon salmon trout and white fish from the lakes will be on the slabs.

New Jersey.—Beery, Sept. 18th.—Friday, 11th, crossed bar and found number of sickly fish, which they refused to sell. Sailed to the northward about eight miles and found immense quantities of blue fish, but they refused to look at a squid. Worked south with the fish and succeeded in landing twenty-four. As soon as hooked they would commence disgorging young porgies; and when landed in the boat they would scatter them far and wide. Curiosity induced me to open one fish weighing about three and a half pounds, and I removed from its stomach thirty-five young porgies averaging about three inches in length. The opinion of the Smithsonian authorities appears to be, that blue fish do not prey upon porgies, but my experience proves the opposite. On Saturday we proceeded to sea at 7 A. M., and returned at 12 M. with forty-one blue fish and one Spanish mackerel. From the amount of food disgorged by the fish, we deemed it best to abandon the fish and wait until the blue fish have captured the young porgies between Barnegat and Sandy Hook. If this is accomplished by the 25th, I am satisfied that there will be rare sport at Barnegat for the disciples of the squid.

RANGELEY LAKES.—During the two months of July and August the fishing in this vicinity has been remarkably good, better than usual in fact. But from September 1st to the week ending September 14th the fishing has been very poor, and at a time when it ought to be perfection. The following large trout only have been captured, two pounds and over in weight:—

Mr. Hobbs, of New York, captured at the mouth of the Rangeley River, on the 7th instant, two trout weighing each four pounds. Mr. E. S. Sykes, of Hartford, Conn., took on the 11th instant, off Sandy Point, Moosehucmagin Lake, in half an hour, three trout of two pounds each. Mr. T. L. Page, of Boston, Mass., landed at the outlet of Rangeley Lake, on the 12th instant, one trout weighing five and a half pounds, also had a rise from two other fish, judged to be about the same weight, but he failed to strike them. Mr. Stadinair, of Brooklyn, N.Y., captured on the same day in Rangeley Lake one trout weighing 2 1/2 lbs. The temperature of the Rangeley and Kennebecog lakes is 60°, of the Moosehucmagin Lake, 64°. The weather has been clear and bright, only one rain storm since the month came in. The thermometer at 6 A. M. ranges from 34° to 35°; at 12 M. 70° to 85°, and at 7 P. M. from 50° to 58°, and the black flies and mosquitoes are as plenty as in June. Dr. Ordway and party of Boston have been camping on the Cuspsuptuck stream and fishing with fair success. John J. G. Whittier, the poet, has been stopping on the Rangeley Lake the past week.

CANADA.—A great improvement is taking place in the salmon fisheries of Quebec, and in some localities the yield has increased 300 per cent. This result the Commissioner, Mr. T. L. Page, of Boston, Mass., landed at the outlet of Rangeley Lake, on the 12th instant, one trout weighing five and a half pounds, also had a rise from two other fish, judged to be about the same weight, but he failed to strike them. The River Moisie has improved greatly, and the beneficial effects of decreasing the netting is proved by the fact, that with 15,000 fathoms of nets in 1850, the Moisie yielded 75,000 pounds of salmon, whilst in 1873, with only 2,500 fathoms of nets, it yielded 204,000 pounds.

The Cape Ann Advertiser mentions a swordfish captured by the crew of the fishing schooner Laughing Water of Swampscott, Capt. John Higgins, while off Moon Island, on Friday evening, probably the largest ever caught in northern waters. Upon being dressed it weighed 600 pounds, and must have turned 1,000 pounds when caught.

Table with 2 columns: Name and Description. Lists various fish species and their characteristics.

AS TO BASS.

LEESBURG, Virginia, September, 1874.

EDITOR FOREST AND STREAM: I promised to let you know if the black bass took the fly in Elk River, near Sewanee, in Tennessee. Dr. Elliott, one of the professors in the University of the South, whipped the above mentioned stream upon two different occasions with no success. I tried the same rod from Andrew Clark & Co. in the same stream, but failed to take a bass. I caught, however, a black perch about fourteen inches long on a bass fly. The black bass certainly will take the fly, notwithstanding all this, for as I passed through Knoxville I found that sportsmen take them there with the fly. And upon my arrival in Leesburg in Virginia, I saw the fish commissioner, Mr. Maryland, taking them with the fly when no one else could catch them with live bait. I heard of authentic instances of their capture on the Tennessee and one of my tributaries before I left the West. Leesburg is quite a sporting town now. Nearly every young man has a good rod, breech loaders are common, and fast horses are not unusual. With boats and bait furnished on the river, the bass fishing has ceased to be a tedious business. It used to be. Twenty-three bass, weighing fifty pounds, were brought to town yesterday by one of our enthusiastic anglers. T.W.

SALMON SCORES OF THE RESTIGOUCHE.

METAPEDIA, QUEBEC, September 8th, 1874.

EDITOR FOREST AND STREAM: The season for salmon fishing has closed, and as I know you are fond of statistics I thought I would let you know what has been done on the Restigouche this summer. The first catch was by Captain Livelyn, on June 20th, and his score on August 6th was 96 salmon, 14 grilse; average of salmon, 19 pounds. Mr. Wilby, a parson, killed 107; George Stephens and two friends, on the 15th, 115; Mr. Blomfield's party, 75; other friends of the Restigouche, 149, the largest 42 pounds. A brother of Livelyn's, 35; friends of Sir Hugh Allan, 54; residents of Metapedia, 82. And now my score, which is the biggest in the river. I commenced on last day of June, when I caught 1; on the 8th of August I stopped at 137, the largest being 84 pounds and smallest 16 pounds. On the 25th I started up river, and on the 26th I returned, having landed Sunday I killed 13, one of them the largest ever caught in this river. It weighed 454 pounds. This makes my score 130, and gives an average of 19 pounds. Beside these I have 22 grilse. So you see the fishing has been good. I was disappointed in not seeing you here, but hope to have you for a month next year. Yours truly, C. S. SRAW.

[Mr. Shaw's average of 192 pounds is very remarkable, although it is said that forty years ago the salmon used to run eleven to the barrel in this river. His 452 lbs. fish is the largest we have ever heard of, and we have talked with Adam Ferguson, the oldest settler on the Restigouche—Ed. F. & S.]

THE SINGING LESSON.

Selected.

A NIGHTINGALE made a mistake;
She sang a few notes out of tune;
Her heart was ready to break,
And she hid herself from the moon,
And wrung her claws, poor thing,
But was far too proud to speak;
She tucked her head under her wing,
And pretended to be asleep.

A lark, arm-in-arm with a thrush,
Came sauntering up to the place;
The nightingale felt herself bluish,
Though feathers hid her face;
She knew they had heard her song,
She felt them snicker and sneer;
She thought this life was too long,
And wished she could skip a year.

"O nightingale!" cooed a dove
"O nightingale! what's the use?
You bird of hearty and love,
Why behave like a goose?"
Don't sneak away from our sight,
Like a common, contemptible fowl;
You bird of joy and delight,
Why behave like an owl?

"Only think of all you have done:
Only think of all you can do;
A false note is really fun
From such a bird as you!
Lift up your proud little crest;
Open your musical beak;
Other birds have to do their best,
You need only to speak."

The nightingale shyly took
Her head from under her wing,
And, giving the dove a look,
Straightway began to sing.
There was never a bird could pass;
The night was divinely calm;
And the people stood on the grass
To hear that wonderful psalm!

The nightingale did not care,
She only sang to the skies;
Her song ascended there,
And there she fixed her eyes.
The people that stood below
Sue knew but little about,
And this story's a moral I know,
If you'll try to find it out!

JEAN INGELOV.

Muskoka Land.

I PROMISED a few facts respecting the Muskoka country, which lies a hundred miles to the northward of Toronto, in Canada, and stretches away to Georgian Bay. Until recently it was a wilderness, but within five years or so, numerous towns and hamlets have sprung up, many summer hotels have been opened at attractive points, and settlers have poured in with a rapidity equal to the settlement of many parts of our own Western country. A railroad has penetrated into its heart, steamboats ply upon its larger lakes, and some excellent highways traverse its length and breadth. It is emphatically a country of forests, lakes and rivers. The lakes vary greatly in size; the larger ones thirty or forty miles in length, and the smaller ones mere ponds, but clear and deep, and all abounding in salmon trout, perch, black bass, &c. The principle rivers are the Muskoka, with its two branches, both heading in lakes, and broken by many falls; the noble Magnetewan, the Severn, Moon River, Sharpe's Creek, South River, and the Kashe-shobogamog. Large trout abound in the South branch of the Muskoka, which is broken by thirteen falls. This stream is some ten rods wide and uniformly deep, with forests impinging upon the margin, in which deer are very numerous. There are but few ruffed grouse here and but little small game. In the North Muskoka, there are no trout. In the Magnetewan, which empties into Georgian Bay, the speckled trout reach five pounds in weight, black bass eight pounds, and pickerel fourteen pounds. This river traverses the finest deer country in Canada. Grouse are also numerous, and ducks in their season. In Moon River

are monster muskalonge, or maskinonge. This stream is the outlet of Lake Muskoka. On the Severn, between the towns of Bracebridge and Gravenhurst, is a fine ruffed grouse district. The whole country is now so accessible that the sportsman can easily visit the principal hunting and fishing grounds in the space of a single month. At the most frequented places, boats, canoes, dogs, and guides can be procured. A canoe with guide will cost \$3 per day. Provisions and wagons can be obtained at the larger towns, but it is advisable for the sportsman to bring his own camp kit and tent. Heavy clothing is requisite at all times of the year, although the mid-summer days are often very hot. On September 3d I sweltered at mid-day, and suffered from the chill of a frosty night. For a successful and enjoyable trip, I should recommend a complete tour of the lakes upon which the several steamers ply, with stoppages at each, making the very comfortable hotels headquarters, and taking excursions to the adjacent hunting and fishing grounds; camping a week on the South Muskoka, and ten days on the Magnetewan.

Perhaps I can make the tour and route intelligible to intending visitors by taking them with me from the point of departure. To those leaving the States, Toronto is the first objective point, reached from New York by the Erie and Central railroad, via Niagara Falls and Suspension Bridge, and from the West by Lake Shore and Great Western. The great bugbear to strangers is "crossing the line." At Clifton, we encountered his much-dreaded Eminence, the Customs Inspector—one Mr. McGrath—whose stature reaches six feet and more or less inches. His face is familiar to those who have travelled this route for many years past, and many wayfarers have had occasion to acknowledge his friendly offices, especially if they be ladies or nervous old women. His gallantry and his consideration are only exceeded by his volubility on the fish question. On all sporting matters he is enthusiastic. Gentlemen of the rod and gun are his special favorites. It may readily be imagined, then, that when we presented ourselves, with our luggage, for inspection, his sympathies were at once touched. Locks and straps remained sacred.

"So you are sportsmen, you say?" chuckled Mac. "Faith, I never trouble sportsmen. Sure, I'm a sportsman myself. Is it for salmon you're going? Many's the beautiful big salmon I've taken from under the bridge on the Liffey at Dublin. You should have seen the fly I hooked them with—one of my own pattern, with a brown body, and a blue wing, and a red tail, with a bit of hog's fur for a hackle! That's the fly that will take the salmon. What's that you say? not going for salmon? well—no matter—success to you, whatever you do, and may you have plenty of luck! Now here are the checks for your luggage and there is the car, and you'll have plenty of time for dinner."

Here, surely is a mold that Custom House officers should be fashioned from. After all, there's "nothing like fish." "By the way," we said, detaining him to hand him a copy of FOREST AND STREAM. Here is a paper perhaps you may be pleased to read. It tells all about angling and gunning, and sports generally.

"Let me see it. Oh! I know that paper very well. Sure and I read it every week. Begorra! the beggars have sent me a bill for the same, and I have it in me pocket now, and its not paid yet. A good paper it is, too. Now I must go. Good morning, and a pleasant journey to you!"

The remembrance of this episode amused us till we reached Toronto. After a comfortable night at the Rossin House, where much information as to game and game localities was obtained from the proprietors, who are thorough sportsmen, we took passage on the Northern Railway for its terminus at Washego, distant 100 miles. This is the expeditious course to the back settlements, but with a few days to spare, the tourist should leave the train at Belle Ewart, and there take the very elegant and comfortably appointed steamboat, the "Lady of the Lakes," up through Lake Simcoe, into Lake Couchiching, which two bodies of water are connected by a navigable channel. Near Starvation Island at the head of Simcoe, and two miles from the inlet, is a famous place for black bass. The steamboat

passes, or crosses, the railroad here through a drawbridge, and presently lands at the Couchiching Hotel, which is located at the point of a peninsula or tongue of land, about a mile in length, the whole of which belongs to the hotel company, artistically laid out in woodland, lawn, and garden, and embellished with rustic fences, arbors, summer houses, and kindred attractions. The Canadians are justly proud of this summer resort, which compares most advantageously with any in the States. Indeed it is much patronized by people from the other side. The main building accommodates about 200 guests. The establishment in its entirety is owned wholly or in part by the railroad company, and both hotel and railroad are managed and equipped in the most creditable manner. Fred. Cumberland, Esq., of Toronto, is the leading spirit of each.

The pleasant town of Orillia occupies a hillside two miles distant, across the bay which the peninsula forms. From thence a steamer runs to Washego at the head of Couchiching Lake. This lake is filled with islands, around which the fishing for bass is fine. Guides and boats can be obtained at the hotel or at the Indian village of Rama, three miles above. At Washego one must take stage and travel fourteen miles to Gravenhurst on Lake Muskoka, but there is a good plank road, and the change is not altogether disagreeable. In two years the stages will be superseded by the continuation of the railroad.

From Gravenhurst the route is all by water through lakes Muskoka, Rosseau, and Joseph—all connecting—and the whole may be said to be under the sole charge of A. P. Cockburn, Esq., a member of the Dominion Parliament, who has been mainly instrumental in opening up this region. Intending visitors will receive all required information by addressing him at Toronto. After a few miles run through picturesque islets, the steamer turns abruptly into the river Muskoka, which it ascends seven miles to the thriving village of Bracebridge—where a beautiful cascade prevents further navigation. After a brief stop it returns to the lake and continues its voyage through the chain before mentioned. Bracebridge is the starting point for the South Muskoka and for Trading Lake, sixteen miles distant, both splendid deer and trout districts, with guides, boats, and dogs at both places. It is necessary, however, to haul a boat over to the former, some ten miles. Next year the road will be passable. Mr. Higgins, of Queens Hotel, Bracebridge, will be of service in securing guides and conveyance. At the head of Lake Rosseau is a fine hotel that will accommodate sixty guests, kept by Mr. Pratt, a New Yorker. Every convenience there. At the head of Joseph Lake is a very comfortable hotel kept by Mr. Fraser, and quite romantically situated. There is a road from there to Parry Sound and Georgian Bay. From Rosseau there is an excellent mail road to the Magnetewan, thirty-three miles distant, and extending as many more miles to Lake Nipissing. Telegraph communication between all these points, which are designated here merely as places of rest and departure, accessible to the most feeble and comfortable in all respects for the wives of sportsmen. There is no end to minor objective points which can be reached by steamboat, skiff, or wagon—Gull Lake, near Gravenhurst, at the beginning of the interior route, with fair fishing for salmon trout, speckled trout, pickerel and bass, and some deer and ducks; Moon River, twenty miles northwest from Gravenhurst, with a beautiful fall, and very good fishing for the fish above mentioned, and maskinonge; Perch Lake, Silver Lake, Pickere Lake, and Terry's Lake, all near the head of Muskoka Lake, and well stocked with fish; Sharpe's Creek, near Bracebridge, with speckled trout; a chain of lakes, reached by sixteen miles staging from Bracebridge, called Pairy Vernon, Fox, and Peninsula lakes, with the Lake of Bays, reached by a portage of three-fourths of a mile; and best of all, the waters adjacent to and including the famous Magnetewan, all of which teem with deer, ducks and fish of various kinds. Of these are Aunick Lake, Seeb Lake, White Lake, and Doe Lake, the last little visited but highly spoken of.

I have simply designated these lakes, so that the sports-

man may have some idea of their locality and value, without attempting anything like this. If he is acquainted in any place, he can easily change his base to another. June, September, and October are the best months, the former for fish, the latter for game. The weather is not severe in October, and navigation does not close until the end of the month. Expenses of round trip for a month, say \$100. PENMAN.

TROUT FISHING IN MAINE.

ABOUT a week was pleasantly spent in discussions as to the relative cost, time, and advantages of a trip to the Nipigon, the Adirondacks, or Maine. Finally, all things considered, I decided in favor of Maine, aided in our choice by FOREST AND STREAM, to which we hereby tender our hearty thanks.

Starting from Gotham July 3d by the Fall River boat, we arrive at Boston on the morning of the 4th, take breakfast at the Parker House, then start out to make the few needful purchases to complete our outfit, and at half past twelve are off for Portland by the Boston and Maine Railway. From Portland, via the Grand Trunk, to Bryans Pond, the ride is mainly plain, through thunder lightning, and rain, we wended our way, arriving at Bryans Pond at four o'clock on a most uncomfortably damp Sunday morning. Here we got a substantial breakfast at the Bryans Pond House, and made acquaintance with several local characters, from one of whom we hired, for five dollars, a horse and "carriall" to convey us and our big box of traps to Andover, where we arrived a little before sunset. We put up at the hotel of Mr. Albert Thomas.

From Bryans Pond to this point a daily line (Sundays excepted) of old fashioned stage coaches runs over a first rate road; but, we wishing to gain time, took the private conveyance. At Andover there are three men who take parties to the lake (the first of the Richardson lakes), whose charge is generally five dollars each passenger, in or out, though for parties of three or four it is somewhat less. These wagoners are Cushman, Thomas, and another man of a Scotch cognomen, which latter we do not recommend, for reasons not wholly unconnected with his manner of keeping his engagement with us. We have employed both the other teamsters, and found them obliging and reliable. Albert Thomas and his better half will take the best of care of any tourist, and will give all needful information by letter to any one intending to visit this region, concerning the best season for fishing, guides, teams, and boats. We found at his house good rooms, clean beds, good plain fare, and an exceedingly obliging and attentive host and hostess; board, two dollars per day.

The ride from Andover by huckboard wagon is for about three miles over a fair country road, the remaining nine miles being about the roughest. At eleven o'clock in the morning we reached the Wolkenknechtowoc Lake, and found our guide, who had walked in by a short cut, waiting for us with a good boat. Putting our traps aboard we stepped in, and were rowed past Middle Dam, about four miles up the lake, through the narrows into the Molechuckanouch Lake, and across it to a point which looks as if it might receive the breeze from all quarters, and thus protect us from the flies, situated about half a mile southward of the mouth of the stream through which the Moosehucmagentic pours its waters into the Skunkic.

Here we debark, and pitch our tent, getting everything shipshape at about six in the afternoon. Leaving B, we went to the finishing touches to our temporary home, N, started for the Upper Dam to catch enough trout for supper. Just below the dam, in a deep pool near the white water, a trout nearly a half pound and a broken tip are the result of his first cast. Landing the fish, and replacing the tip with another, he soon placed four other fine fellows alongside of the first, and returned to camp and to supper—our first supper in camp, with trout cooked by ourselves. No fisherman need be told that it was superb. Bacon, the best that could be had in the New York market; coffee, as strong as horse's hind leg, and clear as clear, with condensed milk, hot coffee, hard crackers, and fried eggs. After supper a pipe, a *poisson café* of Purdy Rye, unlimited chat, and then our luxurious couch of arbor vite branches, and the sleep of the just, superinduced by the cheerful cry of the loon on the lake.

For ten days we caught all the fish we cared to take, fishing about an hour in the morning and about the same time in the evening—killing no trout we did not eat or save in cans, to bring out where we should have. Our catch was nearly all from the point, and it is possible that it is all. We brought home a good condition all we could pack, about 150, all taken with the artificial fly. After our experience in these waters we do not care to look elsewhere for trout fishing.

Black flies? Well, yes; a few; but with plenty of our war paint they didn't bite us. A few mosquitoes; but by far the greatest pest was the little midge. These attacked us sometimes by night, taking us at a disadvantage without our paint; but this only happened once or twice during our stay.

There are three routes to this locality—*via* Farmington (a long and tedious trip), *via* Bethel and Upton, thence by steamboat through Umbagog Lake to the mouth of the Rapid River, thence a carry of four miles to Middle Dam; and the third and best, we think, is that already described, *via* Bryans Pond, Andover, and the boat up the lakes to Upper Dam. Fare from Portland to the Upper Dam, *via* Andover, \$5.50. Andover, which is situated on an extensive plain, surrounded by a few resque mountains, is a favorite resort for a few Philadelphia and Bostonians, with a sprinkling of New Yorkers. Putting into this sort of amphitheatre are half a dozen beautiful streams, well stocked with brook trout. Take it all in all, there are few places where one fond of sport could spend a month or two more pleasantly.

And now, having given a few of our impressions, here I close, leaving a passage read with hearty approval while lying in our tent on the shore of the Molechuckanouch—*Maine*—there is no region in the United States (I speak advisedly) equal to it. As to the fishing, who that has ever wet his line in these waters could thereafter be content to angle elsewhere, unless it be in the more distant waters of the Canadian Dominion? F. F. C.

TO DRIVE AWAY HATS.—Harness team in a sulkey, at Fleetwood Park, and then say "Go."

A LITTLE DINNER ON THE RESTIGOUCHE.

AS we were sitting at breakfast on Saturday morning, the Engineer, H. and I, after our morning's fishing, (which, by the way, had not been particularly brilliant), the Engineer suddenly remarked— "I say boys, let us ask the Inspector and the Warden to dinner with us to-morrow. They will camp at Patapedia to-night, and will be glad to come down and spend a quiet Sunday here with us at Ludian House."

Myself—"All right, but what can we give them?" The Engineer and H. simultaneously—"Lots of nice things." "We have several kinds of soup and some mutton cutlets in cans. Then the regular standing dishes, salmon, trout, and pork and beans, are not to be despised."

Myself—"Not bad for the wilderness. Then there is lots to drink. I will have a jorum of punch; and thanks to C. J. B. there is plenty of ice to ice it and other liquors with."

The Engineer—"Come, do you write the Bill of Fare." Myself—"Compose the *Menu*, is the proper expression. Here Francois, bring me a clean and thin piece of birch-bark to write upon! Now then, here goes: Scribbles awhile furiously. Now my friends listen to this;" reads—

- Menu. Camp Mignon Sauvage, 1/2 lb. Molechucko, Dinnauche, 1/2 lb. sauce. AYANT DENER. Ouisi qnen de Cuck à la Quaqueur de Philadelphis. PORTAGE. Green tortis de Londres, Pouché glace. POISSON. Saumon naturel, Pouché glace. ENTREES. Pommes de terre frites avec onions, Truites avertards, Pouché glace. ROUL. Grand jambon de Maryland, Bass' a la mousseuxie. RELIEVES. Coteletes de mouton avec sauce tomate, Baked port a la viande à la Vaucke, Cognac a laço. ENTREMETS. Slapshicis mollasses. APRES DENER. Chasse café, Pipes and tobacco.

Engineer—"Why! hang me if he has not composed a bill of fare worthy of the 'Trois Freres' in its best days. I like the persistent manner in which his iced pencil shows itself in every course. That grand jambon de Maryland ought to read ancient grand jambon, etc., for I believe it is nearly half eaten. Never mind! If the day is fine we will make the dinner a success."

Accordingly the guests were invited, the dinner was prepared, fortunately, without accident, and the day being delightful, our Indians rigged us up a table outside of the tent of sticks covered with hemlock bark. Finally at five minutes before three o'clock the canoe, containing our three guests, appeared around the point of rocks above camp. Everybody who has been on the Restigouche knows the Warden, and has experienced his kindness. To praise him would be superfluous. Suffice it to say that he is a good fisherman and an honest man. The Inspector is a gentleman, known to fame as the originator of fish culture in Canada; and is one of the keepest and most successful, as well as one of the most clever anglers in the Dominion. The third guest was an exceedingly agreeable French-Canadian gentleman connected with the Fisheries Department at Ottawa, Monsieur B.

As the canoe glided up to the beach the Warden cried out: "See what we have brought to put in your ice-house!" We all ran down, and there in the bottom of the canoe lay four fish, the finest salmon quartette, we all admitted, that we had ever seen. One weighed 25 lbs., one 27, one 29, and the last and greatest, 40 lbs. These, the Inspector told us, were all taken by him yesterday in Red Bank pool, along with three others of less size.

"And when you consider," said he with pardonable pride, "that even the Warden said it was a waste of time to stop and fish Red Bank, you may well believe that I am not a little proud of my day's sport."

So saying, we all sat down to dinner. The soup was discussed in solemn silence, and after a mighty draught of cold punch, conversation began.

The Engineer—"Mr. Inspector, had you much sport killing that forty pounder?"

The Inspector—"No. I can't say I had. I landed him in eight minutes with single gut. I never let my fish have their own way more than I can help."

Mr. H.—"But tell us, how do you land them so quickly?"

Inspector—"Oh! I give them the butt, and they have to come. This fellow never jumped once, and I had to tow him round the pool. It required as much force as it would to tow a big saw-log."

The Warden—"A fish of fifteen pounds, fresh run from the sea, will give you more sport than one of double his weight who has been lying in the river."

Myself—"What is the reason of that?"

The Warden—"During the winter the salmon feeds voraciously, and when he first enters fresh water he is very fat and strong. During their stay in fresh water the fat is turned into eggs in the female and into milt in the male. They then get thin, are poor eating and are heavy and dull on the hook."

Mons. B.—"This is my first experience of salmon fishing, and I do not claim to be an expert as to that, but I do know something about salmon eating, and I must say I never ate a finer cooked fish, or one in better condition. The fat, which the Warden speaks of, is all here."

The Inspector—"Cooked Tweed side fashion, I suppose?"

The Engineer—"Yes, or Restigouche side fashion. Take a fresh run fish of from five to twenty pounds weight, lay the belly open, wash it out with water with a handful of salt. Boil this twenty minutes and another minute for each pound, say twenty-six minutes in this case. Serve him in his own juice, and don't be ass enough to put on sauce of any kind."

The Inspector—"Always exceptions, lemons and cayenne, which I see you have."

The Warden—"I am sitting on a crate of onions. I suppose now you know that all the way from St. John, for there are devilish few about here; more's the pity."

Myself—"Yes. I never trust myself in the wilderness without onions. I fancy I am descended from the ancient Egyptians, who are said to have worshipped them."

Warden—"And a much more sensible object of worship than those beastly beetles, which are of no use to anyone." Mr. H.—"I am inclined to worship that big fly I see in you hat, Mr. Inspector. He is as large as a scarabee. Do you prefer such a large fly?"

The Inspector—"Yes, for these heavy waters. Some very *notable* Bostonians who fish on the Gaspe waters use fly as a hook, but a hooker fly, or for big fish give me one of these largest sized Jack Scott's, Fairies, Butchers, or Silver Doctors."

The Warden—"These big fellows are the killing flies for heavy waters, but when the water gets clear and without ripple, as it generally is at this time of year, you should use a smaller fly. The big one makes too much of a splash and scares the fish."

The Inspector—"The bigger splash the better. I have always found. Why, sometimes I have risen a salmon when all flies failed, by tossing a big stone into the pool."

All—"Let us take a drink after that."

The Engineer—"He is right. Look at the pool at Fraser's. It is constantly crossed by scows, horses and boats employed about the bridge, and yet the fish increase in it from year to year. I don't believe that you can frighten salmon away with the noise and the scow."

The Warden—"On this river, before 1850, when protection really began, the fish were so wild, on account of being chased with nets and spears, that no fly-fisher could come near them. Now if they don't rise is not from fear, but because they are not in the humor. Since 1850 the take of salmon in the Restigouche has increased over 300 per cent, and is increasing faster every year."

The Inspector—"A remarkable case is that of the River Moisie, where in 1857, 75,000 lbs. of salmon were taken out of 15,000 fathoms of nets, while in 1872, 204,000 lbs. were taken out of 2,500 fathoms of nets, showing clearly that the fish were scared out of the river by the multitude of nets."

The Engineer—"I came down this river in 1855 on one of my trips of reconnaissance for the Intercolonial Railway, and although I profess to have something of the gentler art, I could not rise a fish. Now any tryu can find them."

Mons. B.—"Yes. I can find them myself. Another cup of coffee if you please. Thanks, that is perfection. Mr. Inspector, return thanks."

Mr. Inspector—"Serenely full we all of us can say: Fate cannot harm us. We have dined to-day."

All—"Amen!"

The Warden—"I suppose you have had good luck?" Myself—"Yes, very fair, considering the high water. Besides Theodore Wintthrop, one of our clever writers, says: 'The luck of all fishermen is pretty evenly balanced; since men who cannot master facts are always men of imagination, and it is as easy for them to invent as for the others to do.'"

Mons. B.—"Now I understand what is meant by a fish story."

Mr. H.—"What success, Mr. Inspector, have you had with your propagating establishments this year?"

The Inspector—"The prospect is very encouraging. The percentage of fish hatched from eggs is increasing, and we can count on 95 fish out of 100 eggs, or 475,000 fish this year. Salmon are now visiting the streams on Lake Ontario, where none have been seen for fifty years. In the creek at Newcastle, where the propagating establishment is, it is not uncommon now to count from twenty to thirty salmon at once in some of the pools. In some of the other creeks, where young fish have been placed, forty salmon nests have been counted in a mile. If we can only keep the poachers away for a few years we will fill Canadian waters full to overflowing with not only salmon, but also trout, black bass and white fish."

Myself—"God speed you in your laudable efforts, Mr. Inspector. My countrymen are glad to thank you for the introduction of fish culture into American waters; for it was your success that encouraged our Fish Culturists to really practical efforts."

Mons. B.—"It grows late, we have four miles of rapid water to pole up, and these lads make me do all the hardest work. Au revoir, my friends."

So the last drink was taken, the last pipe was lighted, and our pleasant companions bade us adieu to their camp at Patapedia. A few days after we also struck camp and left the lovely Restigouche. Queen of salmon rivers! What, though heavier fish have been taken out of the Cascapepis, or more in a day out of the Goudbot, yet no other river combines so many charms of beautiful scenery, and uniformly successful fishing as the Restigouche. Long may these beautiful waters be free from the profanation of cockney tourists, poachers and snobs, whatever of American or English origin, is the prayer of T. C. C.

FROM THE ROCKY MOUNTAINS.

The following letter from a well known naturalist and explorer, whose communications frequently find place in our columns, will be found of interest.—Ed.

WE have reached the Rocky Mountains at last. We are now camped on a lake, and near a river, where salmon are plenty, and brook trout can be caught by the dozen, the trout weighing four pounds. My largest trout scaled four and a half pounds. I have not killed much game, excepting a few quail. As they were scarce, we came across four, and they were running I rolled over the biggest ram, and had to sleep all night alongside of the meat, so as to keep my share from the wolves. Early in the morning I went back to camp, got a horse, and proceeding to the spot where my sheep was, loaded him on my sled and rode back to camp again, just in time to find our party gone. I sought in the deserted camp, and by sunrise followed our trail, and struck our party by eleven o'clock in the morning.

In about three weeks we will start for the head waters of the Missouri River, and once there we will take boat for a trip of 1,100 miles, until we strike the Northern Pacific Railroad. We will divide the party into flat boats, and so paddle and float along. I have some curious relics, having done some trading with the Sioux, Assiboules, Stos, Gros Ventres, and miscellaneous Indians.

April 18th.—Our camp is gloriously pitched at the base of a spur of the Rocky Mountains. We are killing for camp use sheep and beaver, and for their pelts occasional wolves. Of course hostile Indians, or suspected to be such,

I have seen in quantity. They are good enough Indians when in camp, but bad enough when out of it. They are willing to swap and dicker, but our chances of trade will be better when we reach Milk River or Hoese Run. Our position is close to the 49th parallel. I trust to see you sometime about the end of October. B.

GROUSE SHOOTING IN COLORADO.

FOR weeks previous to September 1st, all the good, bad and indifferent shots in this city had been on the quai vive for intelligence relative to the "chicken crop" for the year. Every ranchman and charcoal burner, whose ranch or camp was located near the "divide," was, on their arrival in town, but not inquired and questioned by some eager Nimrod, as to whether chickens were plenty in their neighborhood or not.

None had been more anxious than the Doctor and Sierra for the 1st to come, and they, with Clarence as a volunteer driver for the occasion, left town on the afternoon of the 31st of August. They had with them Sam, a red setter, and Frank, a liver and white pointer, from whom great expectations were being deriving at the twenty mile house in time for the team was "out and arrangements effected with the honest Tom Parker for the night. Parker's is twenty miles from Denver, as the name of the house indicates. In order that an early start in the morning might be obtained we retired at 9 o'clock.

Breakfast was over by 6 o'clock, and soon after we were on our way to the hunting grounds. They are in the gulches, from two to ten miles from where we had stopped over the night. These gulches water courses in wet weather for the drainage of the surrounding country, are from ten to fifty feet in width, with thick cover on each side for some distance; beyond this, open prairie, affording most capital shooting at chickens when routed out of the gulch and passing in open view. As a rule the sharp tailed grouse, (*Tetrao phasianellus*) the only prairie chicken we have in Colorado, are to be found in these gulches. Unlike the painted grouse, which is the chicken of Illinois, they are but seldom found away from cover.

Arriving where we wished to hunt, the dogs were sent in, Sam taking to business speedily. Frank acting only adding well, and placing ourselves on opposite sides of the gulch, we hunted for a mile without seeing a bird. We were becoming somewhat discouraged when a fine rabbit was seen in the gulch, forty yards from the front of Sierra, who sent a charge of number eight shot after him. Immediately Sam bolted and ran the rabbit, and after a chase of one hundred and fifty yards it fell dead, when he brought it in. It has been a matter of great speculation to Sierra since, as to how, or in what manner Sam knew this rabbit was wounded, as he never runs a rabbit, and during the day at least a hundred jumped up in front of him and he paid no attention to them. Being a witch from a plum bush, Sierra was about to reprimand him severely, when, just as the rod was descending the whir and kuk, kuk, or chickens with the sharp reports of the Doctor's gun, drove every other thought, except chickens, out of Sierra's head, and Sam escaped for this time.

"What luck Doctor?" "A clean miss, but we can get them; one flew to the right and two to the left. You take one in the willow and I'll take one in the brush." "All right," said Sierra. "Here Sam, go on." The dog had scarcely got to the willows when he came to a point. Landseer never drew or issued so handsome a picture—the beautiful sheen of Sam's light hairy coat—the out-stretched neck—straightened tail—quivering lips—uplifted foot—the rigid body—all, one of the most exhilarating sights in the world. With a loud whir, up through the willows, arose a fine grown bird, bang bang, bang bang, bang bang, bang bang feathers—and a thump on the ground told the tale. "Fetch him here, Sam." "Good dog."—And the joyous voice of Sierra is heard to shout, "Hello Doctor, you owe the champagne, I've got the first bird." Soon after a covey of five birds was found and all bagged, then more birds, Sam doing wonders in the way of finding birds and retrieving them after they had been dropped.

Sierra, the Doctor in the half dozen birds, and finding the Doctor in having trouble with his dog, which finally ran off entirely to Parker's, where we found him in the evening.

Hunting all day with varying luck, on our return to Parker's we counted heads. Sierra produced thirty-one, the Doctor eleven—and two that both had shot into at the same time, making in all, forty-four, as fine full grown fat prairie chickens as were ever bagged. Our volunteer driver, Clarence, who, in the way of driving, and since his return I understand has applied to the proper authorities for the position of referee in the horse racing at the coming Territorial fair—says he has had experience in meing.

We arrived homo at 9 o'clock in the evening tired, but so enthusiastic and well satisfied that we have determined on having one more hunt; when it occurs I'll let you know the result.

Sam, the dog who so distinguished himself on this occasion, is a deep red Irish setter, with a most silky coat that glistens in the sunlight, white breast, white feet; small white spot on the back, and white tip on the tail, was four years old on May 21st, 1874. I have owned and hunted him for three seasons and have never owned so good a dog. Dr. Clarence, who, during his week in the afternoon as in the morning, was fresh. Money would not buy him, he is not for sale, but deserves to be immortalized by having his good qualities lauded in the FOREST AND STREAM.

Denver, September 5th 1874.

SIERRA.

For Forest and Stream.

SPORT IN NORTHERN CANADA.

YOUR favor of the 4th found me at Alexandria Bay on my arrival. I found the place so crowded, fashionable, and dreary, and I found it so poor that I said but one day, then, taking my old boatman, Jerome Thomson, I started for the Canada lakes, first fishing Charleston Lake, some twenty-two miles back of Gananoque, reached by row boat via Gananoque River and Wisley Creek, also by stage from Brockville out. This creek flows through drowned lands, and in the proper season is full of ducks. The black bass at Charleston Lake is small, averaging one and three quarter pounds, but is very game; one pound bass giving as much sport as a three pound St. Lawrence bass. I caught 110 in one day with the minnow.

There are two fair hotels, charging one dollar per day. Boat accommodations poor. The lake is full of islands, and affords excellent camping grounds. At Gananoque we took the Canadian line of boats to Port Hope, thence

by rail to Lindsay, where we lunched on the Seaugo river, and pulled nine miles to the entrance of Pigeon Lake, and at the foot of the lake on Little Bob River, made our headquarters at Bobeageon.

This is a good place for any sportsman desiring variety. May, June and July muscungeon can be caught in any quantities. The run is from five to twenty pounds, averaging about nine pounds. Black bass are also plenty, gamey, and large. Dneek were scarce this year, still we got a few. Partridges and snipe were plenty. Deer plenty, and hounds and starters can be found at the village. Half a mile beyond Bobeageon the river enters Pigeon Lake, and from this lake can be reached numerous others, all well supplied with fish. At Bobeageon good hotel board can be had at one dollar per week. The house is kept by John Simson, whose wife makes it a place of home neatness. This place can be reached by steambot (Capt Crandall from Lindsay). There are no boats or guides.

I do not write this for publication, but often see in your answers to correspondents inquiries where the above might come into play. And again, I see by your issue of the 14th you were out a few miles back of where I saw it, the night before last. The run was from five to ten. In Pigeon and Sturgeon lakes we caught from seven to ten muscungeon apiece per day, fishing only one or two hours early, and the same late in the day. The Indians from Buck Horse Lake, six miles away, bring in the "lunge"—as they call them—and sell them at five cents per pound, dressed; head and tail cut off, and back bone taken out. Yours truly, W. C. EGAN.

Chicago, September 14th, 1874.

For Forest and Stream.

A DAY WITH THE BAY SNIPER.

A FEW days since, with Major Beckwith and C. K. Smith, Ex-Superintendent of Telegraph of the New York Fire Department, (and two more genial spirits and keen sportsmen, to say nothing about practical jokers, one does not often find) the undersigned, with his new breech-loader, took the morning train at Hunter's Point for Shinnecock Bay and its environs. And speaking of the gun, allow me to remark that it is a good one, and proved well worthy of its generous donors. A ride of three and a half hours on the cars, and a couple of miles in a lumber wagon furnished at the station by the miller of the place, brought us to the domicile of William Lane, the best shot, the most successful duck stooler, and one of the best fellows in all that region. We met with a hearty reception, and had our food and water taken and the stools in the trim sail boat and Lane as steersman, we started for the meadow across the bay. As we sped on our way a shrill, peculiar cry broke on our ears:

"Wild as the scream of the curlew."

Now as there were no crags anywhere in view around that salt marsh, and as the curlew turned out to be a loon some half a mile down the bay, I don't know as the above quotation is very appropriate, but I thought it sounded well, and rather wanted to put it in.

We were soon at our point; having located our boat in the grass and put out the stools, we awaited further developments. The Major had made a bet of a dose of medicine (?) all around, that he would kill the first bird. Soon Lane called out to us, "Here, here, here, take a peep, here, whistle, and we perceived a half dozen large birds coming towards us, and as they dropped their long legs preparatory to alighting among the stools, the Major let drive, and sure enough, he killed his bird; but had he waited a moment longer, we could all have got a shot and probably bagged every one of the bunch. Many and harsh were the expressions used, such as he had cut out, and brought in that splendid man, but he called it "I'll take the bird in prescription," (beverage he said it)—the check of that man is wonderful. Soon we got a crack at some yellow shunks and jack snipe, they call them. Then for some time nothing coming to us, Smith and myself went off prospecting down the meadow. We soon got among the dowitchers, and had some fine sport, getting some twenty or more; a half dozen with a snipe, a hittern and a couple of hawks that came sailing by, we dropped out of pure cussedness I suppose.

I had forgotten to mention that Lane, previous to starting had put a dozen or two clams in the boat which (the birds not flying with sufficient rapidity) for excitement he was to roast for us before our return to the boat. We found them about ready, nicely roasted, and with melted butter all the look of my piece another arose and I thought of the one which I soon also bagged. Upon returning to the boat I was chagrined to see the last clam disappearing down the Major's capacious throat. In vain were my expostulations that it was a shame and an outrage; the Major coolly said he thought I was having a good time, and would not want any, and that there was only enough for them. And all the way back across the bay how he expatiated on those juicy clams, swimming "as hot as fresh home-made butter. It was outrageous, but I had to take it the best I could.

The next morning we were off again before day break, as we wished to return in time for the 2 P. M. train for home. Upon starting out we took with us a couple of bottles of fresh water to dilute the medicine so necessary in those malarious districts where fever and ague might be contracted, though I don't know that there was any special danger, as we were taking "a dose of prevention," and we took along several ounces of course.

Upon reaching the ground Lane proposed dividing our party—to leave the Major on one point, or bar, with a dozen or more stools, while he took Smith and myself across the channel to a point opposite. While putting out the stools and the Major was busy fixing up his place to lie in, (no pun intended) Smith managed to empty one of the bottles of water, and in so doing, the water which I slipped the ague preventative into my shooting coat pocket. We were soon at our stations, Lane returned to the Major, and a few birds began to show themselves. Ah, then I realized the benefit of a good whistler, or caller, for snipe, Lane could call the birds right away from us, and they had double the sport we did. Finally I saw the Major looking anxiously around in the boat; I knew very well he was

fearful of a shake; he bus those fears very often when out shooting, sometimes as often as every half hour. They effect him more frequently though in the evening after our day's hunt, and when sitting around with the party all together.

Lunch time I saw the Major dipping into the basket; soon he seemed dry, and poured out a cup of water from the bottle, tipped back his head, took a couple of gulps—a spitter, an awful contortion of countenance—a general out-throwing of the lunch previously taken in, and I called out "how are you, clam?" The language that then and there issued from that young man's lips could never have been learned at Sunday school in that shape, or been inspired by the Apostles of old. Upon meeting later in the day he cried quail.

We arrived at Lane's in due time, and after an ample dinner of duck, tender and juicy—for Mrs. L. does know how to roast a duck to a nicety—we were off for the train. Our birds—tied up in neat bunches, between seventy and eighty in all—consisting of marlin, yellow shanks, or rattler, and brown brants, brant brails, rail, and others. We parted with our two half day's sport, we need not repeat here that there are few spots contiguous to New York that furnish such facilities for sport as Pon Quog, and that more efficient and gentlemanly gamblers than William Lane and his son it is rare to find. But the duck season, which commences about the middle of October, is the time to take it at its best. Lane has twenty-four wild geese that he has trained down to use as stools, and to see those geese sport, especially two famous ones that will hook and call down their fellow hipeds to destruction, is a sight well worth going a hundred miles to see. About the 30th we propose to again witness the performance, and they say Major Billings will go with us, if he does, then there will be fun and you may again hear from JACOBSTAFF.

QUAIL AND QUAIL SHOOTING.

I MAY be prejudiced in favor of the quail, as giving a greater amount of real enjoyment to the sportsman than any of the game birds of the United States; but surely I will find many who will side with me in placing its pursuit foremost in the list of American field sports. The American quail breeds in almost every State in the Union, and there is a diversity of opinion among naturalists and sportsmen, whether it regularly hatches two broods a year. Both sides have strong advocates, but I am inclined to believe the matter should be entirely decided by the climate of the season and climate. In latitudes where spring and summer are short, very likely but one is raised as a rule; but in more southern sections, probably two are often reared. If the parent birds are successful in the hatching period and the nest and young have not been destroyed, they remain with the brood and do not hatch a second; but on the other hand, if any mishap befalls their eggs or young in early summer, undoubtedly the hen begins another brood, so that she hatches again. This may account for the great diversity in the size of quail in different coverts we so often notice in Maryland, Delaware and Virginia. As late as the middle of November the writer has found them too young to be killed, plainly showing they were brought forth late in the summer, and I have always observed that a great number of half-grown coverts are seen in seasons which follow wet and cold springs. I have a better law in regard to the quail than the present one of Pennsylvania, which protects them from January 1st until November; but in Kent County, Delaware, quail shooting is tolerated until February 15th, and I can see nothing more damaging to the increase and preservation of the bird, especially if deep snows cover the ground after the 1st of the year, and shooting continues. All persecution at this time should cease, and the quail should be left to seek what little food there is for them during such periods. In Maryland October 20th is given as the opening day for the sportsman, which is almost two weeks sooner than it should be.

It must be urged by the National Sportsmen's Association that a United States law shall be passed making the season for quail shooting a uniform one throughout the country—namely, from November 1st until January 1st in each year.

The quail is by far the best bird we have on which to break setters and pointers, as the trail the feeding covey leaves behind it is stronger in scent and undoubtedly of greater scope than that of any other game, giving the young dog an amount of independence, range, speed and caution attainable in the pursuit of no other; besides the sportsman with well broken setters and pointers, has got to rise to the question whether it can voluntarily withhold its scent, but there is no reason for attributing to it such powers, and I think it readily explained. After being flushed and shot at, the covey, in its flight, scatters in every direction, making all haste to escape from danger, and each quail pitches into whatever cover offers the best concealment—crouching into the smallest possible space, with feathers pressed tightly to its body, reserving little, if any scent, to pass off for a time, or at least until they move and suppose danger has passed. Thus it is not a will power on the part of the bird, but resulting entirely from the body (from whence their scent issues,) being so firmly pressed by the quail with its plumage in its endeavors to hide.

In the latter part of September and first of October the quail in some sections of the Eastern States is termed "fall quail," and the season, which may be accounted for in a measure as follows.—In cultivated and settled regions where many broods have been hatched during the summer, much of the food on which they were dependent is destroyed and taken away by the farmer in putting in his winter grain and turning the soil; a part of the birds impelled by instinct to seek other quarters for the winter begin the movement and travel great distances and find proper shelter and ground is discovered, where they settle for the season.

In the work the sportsmen of the United States will have before them in connection with the National Association, let all attention be paid to the protection of the quail in those States where no law is known, and where if steps are not taken to punish unseasonable slaughter, we will have the bird as scarce as it is in the Eastern States. HOMO.

the *Tritonia*, of two feet between each plant, I have placed with good effect a plant of the *Arundo donax*; this plant grows all winter with a fine green leaf. Or you can use in its place, with fine effect, the *Silphium*, a curious and interesting plant. You can now place the *Spiraea filipendula* and *Stachys latifolia* in position. These will be found graceful and pleasing. Now if you place in your next row outward, at two feet distance from the first, any light good, strong, well growing plants of the *Amarantus laevis*, at equal distances, you will, if you fill up the intermediate spaces with the *Schiller aster*, or any dwarf variety, have a fine circular show. Now we propose to fill up in like manner in groups, at equal distances, with *Chrysanthemums*, for continuous circles at six inches distance from plant to plant, will give us a circular ribbon or belt running around our entire circle. For this purpose we choose good strong plants of the purple aster, or any color you may desire. Between the ribbon of asters and the extreme front of your circle you will have considerable space left, which I usually planted with groups of *Dracopis* and *canas*, four plants of each in groups, and running around the extreme edge within one foot of the grass edge. At equal distances of four feet set out the finest plants of the *Caladium esculentum*, and have the plants started well before putting out. Your best way is to buy all your plants previous to making your garden, and then place them out as I have named, or just as your own taste may suggest. Or you can write the names of your plants upon a piece of silling, or label, and stick them where you desire to place your plants. Put out these plants in the outer row (we mean the calladiums) you can place very small round geraniums—scarlet or white—but never mix colors in this arrangement. Remember, you must have space to give a fine effect to such a garden. Though but small, your flowers and plants need room to show; and for development take particular notice that you had better by far look upon the soil than to muck up or crowd your plants. At some future time I may tell you how to make a trough or a bed of plants upon a similar plan, and give you a list of plants suited for the same.

ANSWERS TO CORRESPONDENTS.

BLOOD RED WATER.—Can you give me the reason of the very red color of the water contained in the accompanying vial? I took the same from a small pond in our State, which at times has this peculiar red appearance. It remains sometimes from three days to a week, and then it becomes clear again.

We find the first mention of the "blood red water" so far back as the days of Moses, and had not modern science dispelled the old charm of this ancient superstitious omen we should be left to search for the truth of this interesting scientific fact in vain. The microscope has stripped the subject of much of the mystery which has for so long surrounded it, and in the dim redness of the water we find only a natural cause, extending and applicable to the entire class, as well as to the individual searcher after the hidden beautiful. The real cause of the redness of the water contained in the vial before us is the presence of an innumerable multitude of *legons* of extremely small plants and animals, which, under the influence of certain atmospheric states and conditions, multiply in such wonderful myriads that the mind can scarcely realize the wonderful extent of their procreation. The system contains a species of *Trichocapsa* not very unlike that found on the borders of the Red Sea. This animalcule, when seen under the microscope, will be found composed of a gelatinous matter of a purplish red color, termed microscopic alga, having the appearance of slightly curved scales of half an inch in length, some of them variegated in color, and belonging to the lowest forms of animal and plant life. They may be considered as belonging to the algae, or living bodies. The greatest wonder concerning these minute animalcules is that the supposed weight of a single one would be less than the millionth part of a milligramme, (0.054 grain).

We have another letter upon this subject, relating to another species of these *Infusoria*, and will answer the same as soon as we can give the subject a careful microscopic investigation.

OLLIPOD QUILL.

CLARA WESTON, River Head, New York.—The vorheba mite, for which you ask a remedy, is a mite indeed. It is not so large as the spider pest, and much unlike him in his operations. You cannot see this mite unaided by the glass, but with it it appears as large as a common sized house fly, and is seen very zealously at work. Leading to this mite, you have the green spider upon pearance, as they are very social, and congregate together in great numbers. If your vorhebas are troubled with them you will do well to examine other tender leaved plants, such as the heliotropes and petunias, for they love them also. You can kill them with most any mineral fertilizers. We use Gould's and Grafton's mineral fertilizers; both are good and effective. After showing your plant leaves well with tepid water, sprinkle the dry powder on them, and the mites will leave at once. Lime water, tolerably hot, poured over your flower pots, will also exterminate them. The other insect of which you write is a species of thrip. The fumes of tobacco well applied will kill them. Two or three good smokings will compel them to change their quarters.

ADIRONDACK WOODS AND WORRIES.

SANDY HILL, N. Y., September 21st, 1874.

EDITOR FOREST AND STREAM.—

In your issue of September 17th is an editorial relating to some acts of C. F. Norton & Co., and the subsequent proceedings of the sportsmen, hotel keepers and guides of the Saranac region, that appears to me to be ill considered, very nearly to the verge of hypocrisy. I have to say that I am not a member of the party, and have no interest in the matter, but I will not willingly go off on a wrong tack, and will venture to ask what legal or moral right the sportsmen, hotel keepers and guides had to put their feet upon the Sangamo Carry, or to launch their boats in the middle of Big Clear Pond? Is not this land and this stream the property of C. F. Norton & Co., upon which they pay taxes to the State, and which C. F. Norton & Co.'s property beyond dispute? The sportsmen, etc., do, not I presume, claim any shadow of title to the land and waters upon which they are removing these obstructions, and have no more right there than they would have to enter your office and pick any piece of furniture out of the window that chanced to be in their way. But why this controversy between these parties? Norton & Co. are lumbermen, and have large tracts of timber exposed to the incursions of the Arah of that region, the Saranac guide. They would not incur the ill will without great provocation. What Norton & Co. have suffered I

do not know, but will give you a couple of instances from my own experience in doing a lumbering business on the Saranac waters. From 1853 to 1865 inclusive I was getting saw logs out of the Upper Saranac; was part owner of the northwest one-third of Township Twenty-three. Upon this land was a quantity of valuable pine timber. A fire, which started from the shore of Lead Pond, burned about 15,000 standard logs of that timber, causing me a loss of at least \$5,000. That fire, I can now prove, was caused by the carelessness of a wealthy sportsman (since dead). These men and their appendages (the hotel men and the guides) caused me great loss and annoyance. We were compelled to watch our rafts and boats night and day, until our logs were safe in the keeping of the current in the river. Our lumber camps were burned, or the roofs used for fuel, or carried off; our dams destroyed, timber lands burned; our timber systematically stolen for all the uses of the country about. I had occasion to build a couple of boats, and not having any lumber suitable, I applied to a man by the name of Reynolds, who, I was told, had some. I paid him a large price, and when the lumber came to hand found my own log mark on a number of the pieces. The fellow had selected the right kind of a log and stole it from my drive when it was passing Miller's Pond. I believe that up to 1855 there was not a half dozen boats floating on the Saranac waters that were not made from stolen timber. I am sorry to say that the sportsmen that I have chanced to fall in with in fifteen years' experience, have not secured my admiration, or even respect (with a few notable exceptions). As a rule, they were ready to back up the guide in any device he might take in hand. Now the whole crew—sportsmen, hotel keepers and guides, were and to a great extent, now are, nothing but intruders and trespassers. Having no permanent interest in the country, nine-tenths of them don't own a foot of land—not one-half of them have even a nominal home—they are a nuisance and a curse to any country which they invade. And the fact that they are a convenience to your sporting people had not ought to blind you to their faults, or make you willing to encourage or assist them in such enterprises as they appear to have got in hand now, for you may feel assured that C. F. Norton & Co. have not braved a general condemnation of their property without an adequate cause.

I know the hotel keepers and guides of the Saranac through and through, and I do not believe the FOREST AND STREAM has anything in common with them, and will not, after the second thought, make itself their mouthpiece or their organ.

[Our correspondent has stated to us in a supplementary note that he speaks in general terms in his strictures above. He recognizes honorable exceptions among guides, and other classes, who have come under his displeasure. This matter of trespass and rights involves serious and complicated questions, which can only be settled by wise adjudication in the future.—Ed.]

The Hennel.

BY E. S. CARMAN.

DOUGHT SETTERS TO RETRIEVE?

IT is a matter of the greatest surprise to me that gentlemen who profess great experience in the rearing and training of hunting dogs, can advocate retrieving in setters. Either in their experience they have not closely considered the effects of this practice, or my own experience has been made up of exceptional instances not generally applicable. If upon any one principle connected with the rearing of setters I entertain a stronger conviction than upon all others, it is that teaching young setters to retrieve has wrought an injury which, in its direct and hereditary effects, has well nigh rendered impossible that willing, unquestioning obedience and discipline, at all times and places, of which the setter that has never dreamed of fondling a wounded or dead bird is easily capable.

The natural instinct of hunting dogs, as we all know, is to seize and devour their game. The pounce made by lions, panthers, cats, dogs, and many others, preparatory to springing upon their prey, has in the setter been converted by training into a stop, that should terminate only with the flight of the birds. Any relapse upon his native prompting to seize and devour the bird is so severely punished that he must in the future choose between the pain of such punishment and curbing the passionate temptings of his nature. If the latter, so far so good; if the former, the dog generally becomes eager, headstrong, and unruly to worklessness.

Now, we will suppose our young setter thoroughly house broken. He charges at a whisper or a point of the finger. He remains as long as required. Whining, barking, furious demonstrations, and all puppyisms, are suppressed or under control. He seeks, finds, and fetches any article from a three cent piece to a handkerchief, ball, or hat. He ranges satisfactorily, obeys the wave of the hand, charges at a distance upon signal, and is altogether mellow for the practice to which this education has tended to fit him, and we are now to ascertain how far our dog is worthy of the patient, studied, affectionate instruction we have lavished upon him.

Most gratifyingly he points his first quail, remaining steadfast under fire and the tempting sight of the fall of the bird. Though aglow with excitement, and trembling in every nerve, he wistfully charges at his master's well known word, to await in anxious, nervous expectation his further command. Is it to "go" and "fetch" that bird? (I

If birds, when shot, dropped dead in every instance, the vital objection to retrieving might no longer exist. But it may be conceded that in a majority of cases there continues a muscular action of the dying bird perceptible to the sensitive mouth of the dog to invite or justify a closer hold. Occasionally, though falling as if dead, the bird is only wounded, and flutters off when it catches a glimpse of the dog close upon it. Disregarding the sternest warning from the master—if, indeed, there is time to utter a warning—the dog rushes after the bird, that now appears for an instant, is then hidden in the grass, again manages to fly a few feet, and releases itself from the first cautious grasp of the dog to be bitten through and through, and held as in a vise at last.

This is not theory or conjecture. It is an old story, to be repeated as long as retrieving is tolerated. Thus our

promising dog tastes the blood that his keen, vivid, electrical nature, untempered, craves. It is brandy to the lips of the drunkard that struggles to reform; fire to the veins already red hot. A lesson has been taught too well that he will never unlearn, and for the future, unless we break his spirit by everlasting and cruel drubbings, his retrieving will prove mortifying and unsatisfactory. As a rule, the dog will either mouth or bite his birds, or drop them several times in his return to his master as an excuse for mauling them without seeming to do so. I have seen dogs waver for moments, in the act of returning, between their well conceived allegiance and duty and a gnawing desire to mutilate or destroy their birds, sometimes with one, sometimes with the other result. As injurious, however, as this objection may be in itself, it is a hundred times more harmful in one of its bearings, as I beg very briefly to consider.

Setters should never once become familiarized with live birds. Their province is to find and point live birds, and their sole reward is to see and smell the dead birds shot over them through their sagacity.

Retrieving, as I have before remarked, tends to establish a connection between seeing and pointing in lieu of smelling and pointing, and the dog, from contact with live birds, is ever goaded by gradual steps to catch a glimpse of the bird which he should be well contented to point from scent alone, if acting under a well advised discipline. Staunchness is therefore impaired, and the already too impetuous nature of the setter rendered more impetuous.

It is urged that we lose birds by hunting over non-retrievers. There are occasions certainly when birds are lost, but they are rare. When wounded we can sometimes shoot them again. Seldom it is that a bird falls in bushes which we cannot penetrate; and not once in fifty times does it fall in a stream or body of water that we cannot ford. What sportsmen will not agree with us that it is better to lose one bird in fifty—yea, one in twenty—than to suffer his dog to depart from the staunch, artistic, incomparable maneuvers that we can never witness without admiring? I believe that nine dogs out of every ten will either, at odd times, mouth or bite their birds, and that the tenth dog, perfect in retrieving, will be deficient in nose, enthusiasm, or some other essential qualification.

My dear FOREST AND STREAM, you cannot perform a richer service to the true sportsman—whom you serve so splendidly—than by a conspicuous and continued denunciation of this pestiferous practice.

FIELD TRIALS—No. 1.

BY SNAPSHOOT.

I HAVE often wondered how it was that there were still judges to be had, both for dog shows and dog trials, considering the treatment the said judges invariably receive, particularly at shows, and at a considerable percentage of owners of the dogs under inspection. I, for one, would not be a judge under any consideration. *Le jeu n'en vaut pas la chandelle*. To be abused, reviled, ridiculed by every dissatisfied exhibitor must be an ordeal which, I imagine, but few men could withstand tamely. It is terribly trying, even to a bystander, to hear the rough observations made, so what must it be to him against whom the shafts of the satire are directed, and who can plainly enough hear the invectives and *double entendres* directly or indirectly heaped upon his devoted head. His post is certainly an unenviable one, for whichever way he decides there must be some dissatisfied parties; and it is not pleasant to know beforehand that, whatever your decisions may come to, there will be some one to find fault with them.

Such being the case, and the arrangement of having a judge or judges proving so unsatisfactory, why not have a jury? Surely no one would have the audacity to find fault with a body of gentlemen for coming unanimously to a decision; and if any one did they would hardly have the "check" to express all their doubts about the jurymen's integrity in the way one may hear them expressed now-a-days in connection with the judge's or judges' name.

Field trials are not quite so open to adverse criticism as are every other form of trial present at a trial can so readily enough, from the various competitors' performances, which among them are worthless, which are good, and amongst the good ones which are the best. But then, again, as concerns these last, there comes a hitch occasionally; for though there are two or three judges they, even they, sometimes disagree. And you know the saying, "When doctors disagree, die." This happens mostly from one of the judges nursing some pet theory of his own, which clashes with that of his opponent. Perhaps that pet theory of his will be style. It used to be said of one celebrated judge that, if allowed his own undisturbed way, he would always have placed first and foremost any fast ranging and high stepping dog over the heads of his more steady and more staunch opponents, simply because he (the judge) is so taken in by flash that it blows out in his own favor every other defect. Now, this is simply absurd. Style is all very fine, certainly, but it is not a *sine qua non* in setting dogs. The quality *par excellence* is staunchness. If a setting dog be not staunch he ought to be disqualified at once; for what is he good for? A dog that does not keep steady on game (whatever may be the value placed upon him on account of his pedigree, his appearance, his temper, and his winning ways) is worse than a hare. Of course, the dog's style would be very much admired at starting, but the right value of the animal would pretty soon be estimated by the shooters.

Owners of such flashy dogs are always misled by their own eyes, and for reasons that would seem boorish and rather unkind, after being invited by a friend to his shooting party, to find fault with his dog, or dogs, of whom he has evidently such a high opinion. The consequence is, that though you inwardly curse the dogs, you are obliged

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted. All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged in favor of this brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor permit the legitimate sports of land and water to those base ones which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

Articles cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, October 2d.—Trotting meetings at Ypsilanti, Mich.; Greensburg, Penn.; Manhattan, Kan.; Onatka, Neb.; Charleston, Ill.; Manchester, N. H.; Easton, Penn.; Greenville, Penn.; Fleetwood, N. Y.; Dayton, Ohio.; Lexington, Ky.; Catskill, N. Y.—Mutual vs. Baltimore B. & C. Union Grounds, Williamsburg, N. Y.

SATURDAY, October 3d.—New Jersey Athletic Association, Ridgewood, N. J.—American Jockey Club, Fall meeting, Jerome Park—Practice day boat clubs, Harlem, N. Y.—Trotting meetings at Easton, Penn.; Greenville, Penn.; Fleetwood, N. Y.; Dayton, Ohio.; Lexington, Ky.; Catskill, New York.

MONDAY, October 5th.—Trotting meetings at San Jose, Cal.; St. Louis, Mo.—Racing meetings at Galesburg, Ill.; Nashville, Tenn.—Weston's Walk begins.

TUESDAY, October 6th.—Trotting meetings at Corning, N. Y.; Mount Holly, N. J.; Prospect Park, N. Y.; Boston, Mass.; Gosliem, N. Y.; Pittsburg, Penn.; Uida, N. Y.; Danbury, Conn.; Galesburg, Ill.—Racing meetings at Galesburg, Ill.; Nashville, Tenn.

WEDNESDAY, October 7th.—Bulls vs. Ten Eyck, boat race on the Hudson River at New York—American Jockey Club, Fall meeting, Jerome Park—Agricultural fair and dog show, Muesola, Long Island—Trotting meetings at Corning, N. Y.; Mount Holly, N. J.; Prospect Park, N. Y.; Boston, Mass.; Gosliem, N. Y.; Pittsburg, Penn.; Uida, N. Y.; Danbury, Conn.; Galesburg, Ill.—Racing meetings at Galesburg, Ill.; Nashville, Tenn.

THURSDAY, October 8th.—Tennessee State Sportsmen's Association, field trials for dogs, Memphis, Tenn.—Trotting meetings at Prospect Park, N. Y.; Boston, Mass.; Gosliem, N. Y.; Pittsburg, Penn.; Uida, N. Y.; Danbury, Conn.; Galesburg, Ill.; Newport, Ohio.; Chagrin Falls, Ohio.—Racing meetings at Galesburg, Ill.; Nashville, Tenn.

—We beg to acknowledge the receipt of a capital likeness of Major Arthur B. Leech, Captain of the Irish team, sent us under cover of a paper published in Dublin entitled Ireland's Eye. Having had the pleasure of a visit from Major Leech we must declare the cartoon, from our personal knowledge, to be an excellent one. In the picture the Mayor is depicted with his clear cut features and flowing beard, and for the back ground there is a flag and the Elcho Shield, while the Captain of the team holds jauntily in his hand a rifle—a Rigby, we suppose. The picture has for a title, "Major Leech," and the motto, "Near or far off, well won is still well shot." (King John: Act 1, Scene 1.) In the text of Ireland's Eye, we find the following:—"Major Leech, as leader of the Irish Rifle Association, is well known. He organized it and brought it to its present state of efficiency. Last year, under him, the Irish team carried off the Elcho Shield." * * * We have given the gallant Major Leech's semblance an appropriate niche in our Pantheon of Worthies.

CREEDMOOR.—THE IRISH AND AMERICAN COMPETITION.

WE must confess to something of a tumultuous feeling now that the contest is over, and our emotion finds its natural expression when we declare that the victory won by the American team was merited, and that it was the fruit of their patience, industry, and hard plodding toil. Full praise is due to their Captain, Colonel G. W. Wingate, whose zeal has been untiring, and who has labored in this matter night and day in order to uphold the reputation of American arms and American riflemen. We are not in the least abashed when we say to-day that we were not at all sanguine of success. Notwithstanding the fine effort made by the American team two days before the match, in our own experience we had seen so many wonderful preliminary trials, which ended in overwhelming defeats, that we were doubtful of the final effort. It may do very well for those who are always certain of events after they are decided, to say "we told you so." We had the best reasons to believe, and our opinion was backed by the most expert riflemen in the country, that if we could only hold our own, or should be beaten by a few points, the National Rifle Association of America and the Amateur Rifle Club would have deserved the highest praise. In our last issue we made the assertion that the men composing the American team were among the best riflemen in the United States, and their performances have proved our dictum. We can make no distinctions. Comparisons just now in regard to our materielle would be invidious. Take any six men in the world celebrated for peculiar skill, all to do the same thing at the same time, and the idiosyncracies of these men may exert themselves so differently that some may do better and some worse in the prescribed period.

There is one thing we see in this match, and it is an important one, and one as yet overlooked by the general press, and that is the question of arms. It cannot be dodged any longer. The match at Creedmoor, shot on the 26th of September, was a battle fought not more with arms than with men. It was the contest between muzzle loaders and breech loaders.

The FOREST AND STREAM has been asked time and time again, this question: "Which are the better rifles for accurate shooting, muzzle loaders or breech loaders?" and we have been unable to reply. We do not say that now—to-day we can positively and decidedly affirm that breech loading arms are as accurate as the muzzle loaders, for it may take another match, and even more than one, in order to decide the question in our minds between the two systems, but we openly declare, that as one of a jury, we would incline to the American breech loading rifles, such as are made by the Remingtons and Sharps, believing that they will be found to be quite as accurate as the Rigby or Metford muzzle loading arms. We trust to be fully understood in this matter. Questions of nationality, of particular prowess, we put aside for the moment, for it is with us simply the problem of the two systems—the point at issue the comparative excellence of two kinds of arms.

The match between the gallant Irishmen and our own team, though having a natural home interest to us, was even something more than that. Our Irish friends used an admirable gun—the Rigby, a muzzle loader, a rifle the peer and equal of the Metford. It was handled by John Rigby, Esq., in a mastery way. All the members of the Irish team used the same arm, and wonderful was their performance. Pitted against them were the members of the Amateur Rifle Club, representing the American riflemen, using Remingtons and Sharps, the most approved breech loaders our country could produce. The skill evinced on both sides was immense. Scores were rolled up, showing a lasting power and endurance of men and arms which was unparalleled, and the American breech loaders held their own. The Remingtons scored 478, the Sharps 456; the total was 934 for the American team, 931 for the Irish team. Let, then, both the makers of our American arms, the Remingtons and Sharps, hold their heads high, for they have brought out results which neither the English makers of breech loaders, or any other European makers have ever accomplished. If we are elated, it must be remembered that our victories in national contests have been few and far between of late, and that the last occurred so long ago (that of the yacht America) as to have been almost forgotten. We recall, however, the America for this reason: Our friends on the other side, though acknowledging the speed of the vessel, declared that rapidity of movement was accomplished at a sacrifice of safety or convenience. It is said that American breech loaders recoil, that gas escapes, and lastly, that our breech loading arms for accurate shooting require constant and careful clearing. Noticing fully the match of the 26th September, we do acknowledge that more time was occupied by the American team in cleaning their rifles, but this inconvenience on the occasion of delicate practice is quite overbalanced by the amazing rapidity with which these breech loaders can be used on all other ordinary occasions. This objection does not however in the least militate with their accuracy. The question of the fouling of breech loaders has been settled long ago. Military experts, who urge their adoption in every part of the world, find that such difficulties in regard to fouling do not exist to such a degree as to impair their accuracy in continued firing. The Remington or Sharpe does not foul any more than does the Springfield, the Martini-Henry, the Snyder, or the Swinburne. To conclude these introductory remarks, we look upon the match at Creedmoor as a great advance made in the history of arms of precision, and a signal triumph of American manufacture.

THE MATCH.

As early as nine o'clock the broad green lawn of Creedmoor was dotted here and there by gentlemen of the N. R. A., and of the Amateur Rifle Association, who, as committee of arrangements, were already on the ground. Every detail had been carefully thought of, and at the appointed hour, the whole machinery of the range was in complete working order. At the proper time the shooting commenced, the Irish team using targets 16 and 17, and the Americans 10 and 20.

Captain of the Team—Colonel G. W. Wingate. Lieut H. Fulton, Remington Sporting.

Table with 3 columns: Yards, Score, Totals. Lists scores for various participants including G. W. Yale, Sharp Sporting, Colonel John Bodine, Remington Sporting, Colonel H. A. Gildersee, Sharp Sporting, L. L. Hepburn, Remington Sporting, and General T. S. Dakin, Sharp Sporting.

Grand total 931. Captain of the Irish Team—Major A. Blomberghsen Leech.

Table with 3 columns: Yards, Score, Totals. Lists scores for John Rigby, James Wilson, Dr. J. B. Hamilton, Joshua Milner, Edmund Johnson, and Captain Phil P. Walker.

Grand total 931. The diagram we print shows the exact position of each several shot.

The score made by Lieut. Fulton was an amazing one. In a possible 180 he scored 171, making 36 bulletseyes and nine centres. To show how close was the contest, we give the scores at the various stages of the match, as follows:

Table with 5 columns: Yards, Rounds, Irish Team, American Team, Dif. Shows the progression of scores for both teams across different yardages.

The very last shot was that on the American side by Captain Bodine. It was a moment of intense excitement. Though a gentleman of unflinching nerve, the steadiest of the steady, with no end of lasting power, though ignorant that everything depended upon him, indifferent as to the anxious crowd surrounding him, his right hand slightly scarred and bound up with plaster, having just been cut by the explosion of a most unpoetic ginger bottle (and it is surprising what little in momentous occasions disturb the equilibrium of the greatest men), Captain Bodine slowly bent breast down to the ground, as carefully drew a long breath (so did we), held his Remington straight on, then gradually gave that pull on the trigger, when eye and brain and every nerve work in sympathetic tension, and the report of the last shot rang through the silence. Slowly came the first signal. "We are on!" was said with bated breath; then there was a pause. It may be a tie, perhaps a centre, when we would win! But no, by Phebus Apollo! (who was a noted shot), it is a white disk, a BULLSEYE which looms up. Hurra! hurra! we have won by three points! Captain Bodine is no sooner on his feet than he is surrounded by a group of frantic men, who yell around him; who almost insist on carrying him in triumph in their arms. Then Mr. Bodine understands what the last shot meant.

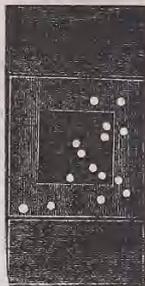

We relate this incident as one of the most pleasant occurring on the occasion. Lieut. Fulton's manner throughout (for he was the great hero of the day) was superb. He was the embodiment of all that was cool and determined. There is a peculiarity about Lieutenant Fulton's loading which requires particular mention. This gentleman has accurately measured out just 85 grains of powder in glass vials. He loads his metal case with this powder, then places a wad on the powder, the cartridge is then introduced into the chamber, and into the muzzle of his Remington he pushes down his ball. Mr. Fulton is thus enabled to add somewhat to the strength of the charge. We are by no means prepared to state what the advantages are of this method, nor would we advise other riflemen trying this extra charge. All we can say is, however, that in addition to practical skill with the rifle, Lieut. Fulton is thorough master of the theory of projectiles.

Our Irish friends, especially cared for by Major Leech, shot magnificently. It must be said that the weather in [concluded on page 123.]

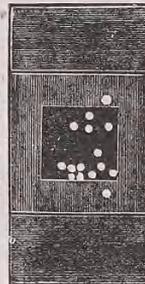

Diagrams of the Targets Used at the Rifle Match Between the Irish and American Teams at Creedmoor September 26th, 1874,

IRISH TEAM.

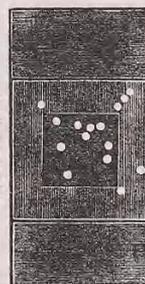

JOHN MOORE—800 Yards—Total 22.

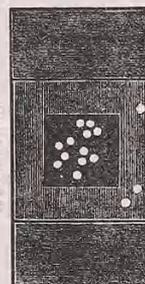

R. E. HAMILTON—800 Yards—Total 18.

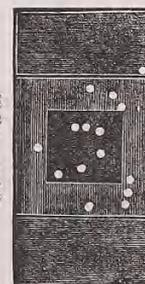

JAMES WILSON—300 Yards—Total 14.

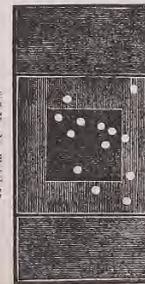

J. R. MURPHY—800 Yards—Total 25.

[CONTINUED FROM PAGE 120.]
 every way was as favorable to the Americans as it was detrimental to the Irish team. It was very hot; there was scarcely a breath of air, and though there was but little mirage, the glare was excessive. In fact the heat was at all times wilting. If the moral effect of a considerable advance in the 800 yard range made by our men, might have had a depressing tendency on a less gallant team than the Irish, with them it had no effect. Sturdily, bravely they fought, and struggled manfully, and came near, very near, within an ace, of winning. If, unfortunately, a wrong target had not been taken by a gentleman of the Irish team, it might have gone hard with us. It is highly probable that a score was lost by General Dakin from a defective cartridge. Mr. Rigby's score, 163, was immense, and Dr. Hamilton's first score at 800 yards of 88 rivaled that of Lieut. Fulton. Every man on both sides did well, and they did their best.

SPEECH-MAKING AND FESTIVITIES.

At one o'clock, after the shooting at 800 yards was ended, the gentlemen of the two teams assembled at a refreshment tent, handsomely decorated, where they found the Lord Mayor of Dublin, the Lady Mayoress, Lady Masserene, and a number of distinguished guests. Here a charming epiece took place. After an excellent luncheon, Major Leech presented a splendid silver vase of Irish design to the riflemen of America. The vase bore the inscription: "Presented for competition to the Riflemen of America by Arthur Bleumerisset Leech, Captain of the Irish International team of Riflemen, on the occasion of their visit to New York, 1874." An appropriate and happy speech was made by Major Leech, which was responded to by Colonel Wingate. After the luncheon the shooting recommenced. The match was concluded at about half-past 5 o'clock.

Here another charming and graceful act on the part of Lady Masserene occurred. Not content with the magnificent present of Major Leech, to cap the climax, each member of the American team and their captain was decorated by the fair hands of Lady Masserene with an elegant badge, to be worn as a souvenir of the occasion. The emblem was of gold, the flag of England and America being blended. Among the many pleasant things said by the grateful recipients of her ladyship's favors, none was more to the point than that expressed by Mr. Hepburn: "Your Ladyship," said he, "I feel the more proud to receive this emblem, because the rifle I shot with was all made by my own hands."

So ended the first great rifle match held in America. The effects of this match cannot but be of immense advantage to the N. R. A., and we are indebted to Major Leech and to his gallant team for having assisted us in founding rifle shooting under systematic rules in the United States. May the Irish team have better luck next time, but they can never well meet more sincere friends, or find better wishes than among our American riflemen.

—Just complaint is made in regard to the railroad company, who try to carry passengers from Creedmoor to Hunter's Point. Last year the service was badly performed, and this year it was worse. It must materially affect the interests of Creedmoor if such delays or difficulties occur.

—We regret to announce the death of C. F. de Bost, of Company G, Seventy-first Regiment, who was badly injured at the railway station by falling from the overcrowded platform of a car attached to a train returning from Creedmoor. He fell under the wheels. Lieut. de Bost was twenty-seven years of age, and he formed one of the team of the Seventy-first Regiment. His death will materially affect the chances of the regimental team at Creedmoor.

—An effort will be made to get up a match between four of the Irish team and four of the Americans, at Creedmoor, on Saturday next; distance 1,000; the Irishmen to use the Rigby, the Americans any arm. We should be glad to see this match come off. As it is, we trust to see some of our gallant Irish friends taking home a harvest of prizes.

—In addition to the prizes offered at Creedmoor, (see our last issue,) the following handsome gifts have been added, all presented by Mr. J. H. Stewart, of London, who is the optician of the English N. R. A.:

- To the Marksman making the highest aggregate score in Competitions II, VI and VII, a Lord Bury Telescope. Value, \$40.00
- To the Marksman making the highest score in the Third Stage of Competition XIII, a Stewart's New Camp Binocular. Value, \$45.00
- To the Marksman making the highest aggregate score in Competitions II, X, and XIII, a Lord Bury Telescope. Value, \$40.00
- To the Marksman making the highest score in the Third Stage of Competition XIII, a Stewart's Improved Watch Anemoid Barometer, for measuring mountain heights, and forecasting weather, with the addition of Compass and Thermometer. Value, \$50.00
- A third prize is added in Competition VII, as follows:

To the first highest score an Officer's Dress Sword, to be selected by the winner, presented by Horstmann Bro's & Allen. Value, \$40.00

ACKNOWLEDGMENT.—We are indebted to the New York Herald for the use of their prints of the targets, which appeared in their editions of Sunday and Monday last. Though through the bad management of the railroad, train the staff of the Herald, leaving Creedmoor at six o'clock, did not reach their office until ten o'clock at night, yet a perfect copy of the targets was produced in the Sunday edition, showing every shot struck for all the twelve marksmen at the three ranges. In no other way could have been produced so truthful or accurate a picture of the match, nor one so readily understood. This is a journalistic feat which has never been attempted before, and was thought by the gallant captain of the Irish team, and by the Irish gentlemen, to be one of the marvels of American journalism. The admirable résumé of the shooting at Creedmoor, and its clear analysis, was the work of Mr. O'Kelly, of the Herald staff, well known for his intricate experiences in Cuba as the correspondent of his paper.

At the practice match, on Thursday, 24th, the following were the scores of the Irish and American teams:—

Scores of the Irish Team.			
	800 Yards	900 Yards	1000 Yards
J. Wilson.....	57	57	47
Captain Walker.....	54	51	52
E. Johnson.....	55	53	49
J. P. B. Collins.....	54	47	49
Dr. Hamilton.....	57	52	46
J. K. Milner.....	51	52	58

Score of the American Team.			
	800 Yards	900 Yards	1000 Yards
Henry Fulton.....	57	55	56
John Bodine.....	54	50	54
T. S. Dakin.....	55	54	48
J. H. Colburn.....	55	47	54
L. H. Hepburn.....	53	55	48
H. A. Gildersleeve.....	52	52	50
G. W. Yale.....	54	50	46
E. H. Sanford.....	48	52	44

The following telegrams have been interchanged with the Canadian riflemen and the N. R. A.:

HAMILTON, Ont., September 30th, 1874.
 H. A. Gildersleeve, Secretary Amateur Rifle Club:
 Will the American team shoot against the Ontario team at Creedmoor this week. If so, I will endeavor to take the team down.
 (Signed) J. J. MASON, President Ontario Rifle Club.
 To this message Colonel Gildersleeve sent the following reply:
 NEW YORK, September 23th, 1874.

Mr. J. J. Mason, Hamilton, Ont.:
 Creedmoor range will be occupied this week by announced ranges. I shall be pleased to meet you all in the "Bonnar" match. The American team will not engage in another contest this year.
 (Signed) H. A. GILDERSLEEVE, Sec. American Rifle Club.

THE IRISH TEAM OUT WEST.—Major Arthur B. Leech, and several members of the Irish Rifle Association, including Messrs. Rigby, Milner, the brothers Kelly, several ladies, and probably Viscount Masserene, will start next Saturday on their chicken shooting excursion to Kansas. They will be accompanied by Mr. Hallcock, the editor of this journal, by whom the entire programme of their trip has been arranged. They will go by way of the Erie, Lake Shore and Toledo, Wabash and Great Western railroads, the officers of which have freely extended the courtesies of their respective lines to the distinguished guests, providing special cars, &c. At Hannibal, Missouri, they will be met by Colonel H. W. Lamb, the President of the Hannibal and St. Joseph Railroad, who has provided a sleeping car specially arranged for the trip, and will join the party for the purpose of accompanying them to the shooting grounds.

They will also be met by a delegation of Western sportsmen, headed by G. W. Dorman, Esq., a wealthy merchant of Hannibal, who has been especially instrumental in arranging the programme at the western end of the route. They will then proceed to St. Joseph and further West. Dogs, tents, &c., have been provided. The guests will lodge in the sleeping cars during their sojourn on the prairies. They will be absent about ten days, and upon their return will visit Chicago and some other places of interest. The Winkle Club, of Lawrence, Kansas, has sent us a telegram, through its President, E. D. Thompson, Esq., extending special trains, &c., with a deputation to meet them at any given point. Although the party is under charge of Colonel Lamb and Mr. Dorman, it will experience great pleasure in meeting the Winkle Club delegation, and in thanking them for their attention. Dr. Rowe, ("Mohawk") has very generously offered his splendid imported Maedona dog "Dan" for the use of the party in Kansas.

QUEEN'S COUNTY AGRICULTURAL SOCIETY.—The event of the season in the exhibition of stock, machinery, works of art and products of the soil, is to take place on the 7th, 8th and 9th of October on the spacious grounds of the Queen's County Agricultural Society. These grounds are situated about twenty miles from this city at Mineola, L.I., adjoining Mr. A. T. Stewart's Garden City, and embrace one of the handsomest parks (of 40 acres) in the State, in the midst of high cultivation, with shrubbery, walks, &c., with a drive for the exercise and use of horses. There are stables, stalls, an exhibition hall, and all the appurtenances of a first-class exhibition ground. Judging from the entries for exhibition alone, it is expected the display will be unusually fine. The railroads from Hunter's Point carry all articles to and from the grounds free of charge; the East River Ferry Company are equally liberal. Among articles promised is a steam plow, the property of Mr. A. T. Stewart. It is of English make, and used for the cultivation of his immense purchase, the Hempstead Plains. The engine attached to the plow is of ten horse power, can draw over twelve tons on a common road, will turn as short as an ordinary wagon, and drives four plows set ten to twelve inches apart. Some new Syria tobacco is to be on exhibition, which is an item, when we know 322,407 cigars were made in Queen's County alone during the month of August last. Mr. Samuel Thorne, of 76 Gold Street, has received from England a handsome pair of setter dogs, which may be on exhibition. Mr. E. W. Karke, of College Point, L. I., will exhibit a new patent "Extension Table;" and for the horses and cattle, Messrs. Durkee, DeLamater, Pale, Parke, Ingraham, Swan, Jones, Wolbert, and many noted breeders and raisers of fine stock, will be in attendance. Special trains and excursion tickets have been arranged with the railroad companies, and for the convenience of the public. Mr. John C. Jackson, 69 Barclay street, is the president; Mr. Benjamin D. Hicks, of Old Westbury, L. I., treasurer, and Samuel Willets, Little Neck, L. I., secretary. The directors are, one gentleman from each town in the County of Queen's. With fine weather we predict an unprecedented display, and fine sport for lovers of horses, &c. Communication for entries for exhibition, also copy of the premium list, can be had by addressing the secretary at Little Neck, or the Fair Grounds, Mineola, Long Island.

GAME IN FLORIDA.—The St. Augustine (Florida) Press utters the following timely remarks upon the reckless destruction of game in that State. Were it not for the almost impenetrable jungles and swamps that overlie so large an extent of the territory, the wanton slaughter that goes on constantly at all times and seasons would soon render game as scarce there as it now is in the Eastern States. It is extremely important that Florida should enact a game law immediately, in view of the increased facilities for reaching her interior regions, and the rapidly increasing number of sportsmen who annually visit them. The Press should be encouraged to urge this measure upon the Legislature. It says:—

We have commented somewhat on this subject before. We were informed that the Legislature, at its last session, would very probably take up the subject. It is evident that some legislative action is requisite to preserve the game of all kinds, in this State, from the merciless and unnecessary slaughter to which they are now subjected by the thoughtlessness of hunters and sportsmen. Moreover, it is necessary to pass laws, by which game that has been slaughtered, or driven from a range, can be restored.

Our suggestions are very simple; but they may be worthy of some consideration: Let the Legislature enact, that from the 1st of September to the 1st of June, no deer, without horns, shall be shot, under a severe penalty. It is during that period that the females gestate, and the destruction of one is more frequently the destruction of three. This law would also protect the young deer, until of a suitable age for increasing. Unless this regulation is enforced with regard to the game of all kinds, they will soon be exterminated in this section at least: whilst a wise protection of them would cause them to "increase and multiply," in a wonderful degree.

Next, let it be enacted that whoever shoots the old hen—the patriarch and leader of a flock of wild turkeys—shall be heavily fined. There is no difficulty in distinguishing her from the rest by her color and general appearance. When she is killed, the whole flock, which have kept together for years, disperse. Allow no quail to be shot or trapped from the 1st of March to the 1st of September. In addition to the latter species, it is worthy of remark that four years since there were any number of them just outside the City Gate. They have disappeared, owing to the thoughtlessness of the residents out there, who trapped whole covets that had, in a measure, been domesticated—we may almost say in wantonness.

THE RIGBY SHOT GUN.—We call attention to the advertisement in another column of the Rigby Shot Gun. The Rigby Rifle is already made famous by the recent International contest at Creedmoor, but the shot gun, a most superb arm, is not as well known in this country. Parties desiring guns, would do well to examine the Rigby.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

- Black Bass, *micropterus salmoides*, *micropterus nigrilunus*.
- Striped Bass, *Roccus nebulosus*. Weakfish.
- Bluefish, *temnodon callator*. Sheepshead.

SOUTHERN WATERS.

- Pompano. Trout (black bass).
- Snapper. Drum (two species).
- Groupers. Kingfish.
- Rockfish. Striped Bass.
- Sheepshead.
- Tailorfish.
- Sea Bass.

FISH IN MARKET.—Last week, at the close of it, the first California salmon appeared in New York Market. These fish were in beautiful order, and would weigh fifteen pounds; selling at fifty cents a pound. Our California salmon, first cousins to the Canadian fish, are three weeks earlier this season than last. They were caught and put up by Mr. A. H. Cumings, of Sacramento. The characteristics of the *Salmo gairdneri* we have before described. There is also in market some preserved Nova Scotia salmon. It is quite an art to keep a hoguet of flowers so they may retain their bloom and fragrance. Similar skill is now evinced in preserving fresh salmon. This most excellent of all fish, must keep up his reputation for good looks. Not only inside must his flesh be replete, creamy and flaky, but his outside must retain its burnished silver sheen. Enoch Piper, of Bathurst, Nova Scotia, is the inventor of the refrigerating process, and his *salmon*, as the French would call it, is but half a mile away from the salmon fishery. Piper prepares his fish in some peculiar way, (the secret of which after some little trouble we found out for ourselves) which keeps every beautiful scale in place. Such fish are in active demand all through the winter, and are bought by the hotels and leading restaurants.

Welcome the first of the smelt, coming from Massachusetts. If insects look like leaves, (and there is a wonderful assimilating power in animals,) the peculiarities of the odors of fish and their resemblance to fruits and vegetables have perhaps never been thoroughly studied. Does not Seth Green say that he can tell various species of fresh water bass, with his eyes shut, only by the smell? Green, cucumber-like to a degree, if we may use the expression, is the odor of the first smelts. Did you close your optics and use your nose only, you would declare that a dish of sliced cucumbers had been put before you. Smelts in market are rare as yet, and worth thirty-seven cents a pound. By the time of the first frost they will be worth twenty-five cents, and when it passes, some fifteen cents. Blue fish were never so abundant, and are fatter than pigs. We don't like to mention wholesale prices, but at retail you are asked to "take 'em, boss, at seven cents a pound." Ten pounders are common. Spanish mackerel are hard to find at sixty cents, though the last caught sealed seven and a half pounds. This fish is now heading southward. We will intercept the school off the Chesapeake; head it off again

below Norfolk, and then say good bye to them. Striped bass scarce at twenty-five cents. Sheephead not easy to find at twenty-five cents. This year they have never been cheaper than twenty cents.

From California comes now occasional specimens of big crabs. They weigh three pounds, are eight inches across the shell, and twenty inches from the tips of the claws. Terrapins coming in from Georgia are worth \$12. There is an over-abundance of soft crabs, worth \$1 a dozen. Lake fish scarce. Market generally plentifully supplied.

—“Snapping mackerel” are abundant at Glen Cove.

—Newburyport has the credit of having the only vessels which are engaged in the Labrador fishing from the United States the present season. At one time there were sixty sail from that port engaged in the business. Next year, so the *Herald* says, the business will be among the things that were. It is not from a scarcity of fish, but the business has been unprofitable.

—M. S. Loman went fishing in the Stanislaus river the other day. He was going to fish with giant powder cartridges, but the first one exploded and tore his hand to pieces. Rightly served.—*Portland Advertiser*.

MAINE.—Ranglee Lakes.—The fishing in this region with the week ending September 19th, has been much poorer than usual. The long-continued hot weather has prevented the trout running up the streams to their spawning beds. On the 16th ultimo a northeast storm commenced and prevailed for three days, cooling the air and water so that from now until October 1st the fishing will be trouty. Probably the best of the season. The poet John G. Whittier, has been stopping at “Camp Henry” at the outlet of Ranglee Lake, while Baron Hayes and Messrs. Osborn and Prescott, of England, have been guests of the Oquossoc Angling Association. The “rod huckle” still holds its own, although the “Maine farmer” did well early in the season. A party of gentlemen from Brooklyn and Connecticut passed down the entire chain of lakes, and had no difficulty in getting heavy baggage through to Carrol Dam, Umbagog Lake.

NEW JERSEY.—Wareham, September 26.—Sheephead’s fishing is not very good. The Barneget fishermen have taken a few, but no large catches. Capt. Nelson Soper, of this place, a reliable fisherman, and who follows fishing, going out every day, tells me that he is not going any more after sheephead. He tells me that he has taken a number of striped bass each day during the week, about five on an average; he catches every day a number of weak fish, porgies, black fish and sea bass. A BRICK.

BARNEGET INLET.—September 26.—Sheephead, which we thought had left our waters, have commenced again; Chris Gray took 11 yesterday. Parker 5. At the entrance near the C. E. Carnan of Carmansville, and some friends, have caught a good many weakfish with rod and reel, but none of large size. I should judge they would average one-half pound. Black fish still plenty and fair size. I hear of good catches of stupid bass. Blue fish, none since the equinoctial storm. J. W. K.

—Dad Parker, the veteran fisherman of Barneget Bay, caught a shark at the Inlet last Saturday. Dad saw the shark sporting among the waves, ran for a line, and after trying on a shark hook, baited it with a black and white cord-wood stick for a float; he threw out his tackle, and in less time than it has taken to tell it, had the fish hooked, and was playing him, or rather the fish was playing Dad. But by the aid of the spectators, the huge monster was landed high and dry on the tawny sand of the beach. It measured upwards of seven feet in length.

—Col. Bruce, of *Turf, Field and Farm*, went down to Barneget last week, and caught a fine lot of black fish and sea bass, some weighing five or six pounds.

—Our correspondent, “T. W.,” of Lechesburg, Va., is a strong advocate of fly-fishing for black bass. He writes:—

I mean to let you know of some experiments with the fly (for black bass) near Sewanee, Tenn., some reported success there Knoxvile, and some veritable cases near this town, near Maj. F. H. Mary and Fish Commissioner, catches them with the fly, often when no one else can take them in any other way.

SALMON ON THE MIRIMICHI.

St. JOHN, N. B., September 10th, 1874.

EDITOR FOREST AND STREAM:—

I proposed to furnish you with an account of our adventures on the southwest Mirimichi. Well, I left St. John, Monday, August 31st, at 4:15 P. M. Arrived at Fredericton 7:30 P. M., where I remained all night. September 1st left Fredericton in company with Bob Orr and an Indian called Gabe, on the New Brunswick Railway for Hartland Station, 61 miles from Fredericton, and 22 miles from the headwaters of the southwest Mirimichi. We had two hired canoes with us. Here we procured a wagon, loaded our canoes and supplies, and left at 2:30 P. M. for Gabe and I had been threatening for some time, and just after starting it came down in torrents and continued till late in the night. We arrived at Love’s Hotel, Glassville, about seventeen miles from Hartland, at 7 o’clock P. M., when we had supper, and finding this hotel so nice a place we concluded to remain all night. Arose September 2d at 4 A. M., had breakfast, and left for the stream about 9 A. M., and had our canoes and fisher gear without remark. Left without remark and paddled and poled about twenty miles this day; water very low and black. No signs of fish, so we did not put our rods through until we reached the forks, when we camped. We found the river entirely destitute of protection, and spear and netting good on everywhere. September 3d, up early, Gabe had breakfast ready in a short time. Put our rods together here and fished about without remark. A large number of killed lots of beautiful trout, and Gabe cooked them in a variety of ways. The river here shows unmistakable signs of netting and spearing, every stream and spring bearing the marks of salmon having been kept in them, and the salmon often round these places smelt so fearfully bad that we were only too glad to get away. After taking our places in our hired canoes, we found that our trout and shoulders were somewhat stiff from yesterday’s work. Our Indian (Gabe) complained of a headache, and our handling our birch. Said if we were not experts we ought to be Indians. He had part of the luggage in one canoe, and we had the balance and ourselves in another about five miles below the forks. Bob hooked a grise and I another, both of which we lost. Bob however, killed two large trout, about three pounds each. We had a lunch at Upper Birch Island, served up in Gabe’s usual style. We had a lunch in the form of coaks and so jolly. Shot several ducks this afternoon, and fished all the promising pools, but neither caught nor raised a salmon. Indeed I don’t very much if the poachers have left a salmon above Burnt Hill. I found lots of pitch wood, all of which we burned. About 5 P. M. to day, the wind had changed, and during some time, began to fall, so we found anxious for a camping ground. Passed Otter Brook,

and pushed on till we came to the chain of rocks, and as we rounded the point we came upon to two men with all the appliances for spearing. We at once took care of them, burnt their pitch wood, and made them promise to never care again. After frightening them pretty thoroughly we gave them some of our goods, and then, as they thought we would have contacted all they had, only we could not get the things down to a settlement, they being over forty miles above. This point is evidently a great haunt for salmon in the right season. The water is deep and rapid, and full of large rocks, but we could not raise a tin. We pitched our tent in the midst of a pelted rain, but succeeded in getting a good fire blazing, which kept the ground under the tent, when we unloaded our canoe, and at 9 P. M. I had supper and went to bed, and was fast asleep, dry and hearty. Friday morning up and had breakfast early, fished the chain all through again, but no success. Left at 9 A. M. to-day. The signs of recent poaching are so numerous that our hearts beat fast with indignation. Arrived at Two-and-a-Half Mile Pond about 6 P. M. Camped, and whilst Gabe got tea we tried this pool, which has a grand reputation. Many a salmon have we taken here on other occasions. Of course we anticipated lots of sport now, but alas we found this pool also had been netted and speared to death. We did not raise a fish, but saw several grise jumping. Saturday morning got off early, expecting to do something at Little Burnt Hill and other pools to-day before firing at Burnt Hill proper. But again we were doomed to be disappointed, as we reached Burnt Hill without seeing a fish about 2:30 P. M. Here we met a party of three ladies and three gentlemen from the settlement, who were on a hireney expedition. They having taken possession of our house here, we are again obliged to put up our tent. This evening we have fished all the pools in this vicinity, raised several salmon and killed two grise. There are evidences of a great many salmon being here, but the water is so low and black that the fish do not look fit to kill. We intended to remain here several days, but concluded to-night we had better go home as soon as possible, so we left Sunday morning about 9:30, went down about nine miles and camped at Gillman’s Brook. Monday morning left at 9 A. M. for Boie-toon, about twenty miles below, where we arrived at 7 P. M., having killed a large number of beautiful trout on our way. We are the first two white men that ever accomplished, successfully, this route in a hired canoe assisted. We put up at McKay’s Hotel, where we were made particularly comfortable. Left in mail stage at 9:30 A. M., and arrived at Fredericton at 6 P. M., rather tired, but feeling well. Left this Wednesday morning at 8 o’clock A. M., and arrived in St. John 11:30 A. M. It is too bad that this river is so low and black that we can see one gentleman, Mr. W. F. Bunting, killed 65 salmon and 12 grise in July on this river in three days. Total weight of which was 804 pounds.

Yours truly, C. S. B.

Yachting and Boating.

All communications from Secretaries and friends should be mailed not later than Monday in each week.

HIGH WATER FOR THE WEEK.

THE BROOKLYN YACHT CLUB—FALL REGATTA.—The course selected for this race was from an imaginary line between two stake boats anchored off Long Dock to and around buoy 2, and back to home stake boat, anchored off Gravesend Bay. The prize in each class was a pennant the winner holding himself subject to a challenge for the next thirty days. The morning of the 24th did not promise well for a breezy day, but the yachts after receiving the guests assigned to each, made sail, and worked out to the vicinity of the starting line. The following vessels finally signified their intention to compete:

Name.	Length.	Builder.	Owner.
Clio.....	76	Aston & Bradburst.
Meta.....	66	G. A. Belling.

FIRST CLASS SLOOP.			
Undine.....	54	0.....	Brusher & Fowler.
Kaiser.....	52	1.....	Robert Dillon.
Sadie.....	50	1.....	M. T. Davidson.

SECOND CLASS SLOOP.			
Kaiser.....	45	0.....	Greenleaf & Norris.
Flying Cloud.....	39	3.....	Wm. P. Small.
Lizzie L.....	38	0.....	St. Wood.
Dudley.....	42	0.....	Edgar Williams.
Sophie.....	35	0.....	St. Wood.
Linda.....	36	2.....	John W. Stout.
Emma M.....	43	0.....	John T. Trendwell.

The steam yacht Emily, Mr. Theo. Meyers, carried the judges upon this occasion, and at 9:45 the preparatory gun was fired from her deck. At 10, the second gun gave permission to cross, which was immediately accepted by the schooner Meta, followed very shortly by the Clio. The times of starting were as below, the judges being obliged to extend the fifteen minutes margin, owing to the lightness of the wind.

Kaiser.....	10 18	06 Emma T.....	10 35 10
Flying Cloud.....	10 20	28 Sadie.....	10 35 60
Sophie.....	10 21	26 Undine.....	10 41 43

The Meta, going off with the lead, steadily increased it in the light air then blowing, leaving the Clio a long way astern. The Kaiser, in the sliding, soon drew away from the rest, and passing the Clio, became second boat. The race at this time, however, was merely a drift, and so light was the wind that abreast of Bay Ridge several of the yachts were obliged to anchor to avoid going ashore. Shortly after eleven a light breeze from the southwest sprang up, and the Meta catching it first, drew out her lead to nearly a mile before it reached the other vessels. The Undine now began to make play and force her way towards the front. When the Meta reached Roper’s beach, she was leading the entire fleet, with the exception of the Kaiser, over two miles, but at this point she was becalmed, and the fleet ran down nearly the whole distance before they in turn lost their wind. Shortly after one o’clock, however, the breeze came out comparatively strong from the southeast, and now the racing began to show itself rapidly to the leaders. The wind now hailing to E. S. E. it became a dead heat to buoy 2, and with a lee going tide, the Kate picked up the Recreation and passed her, the Kaiser being at this time in the wake of the Meta, and about a quarter of a mile astern. The following are the times of rounding for the last yachts it was possible to take, the judges fearing the leaders might outrun them to the home stake-boat.

TURNING THE MARK.

Name.	H. M. S.	H. M. S.	
Meta.....	2 01	30 Undine.....	2 10 50
Kaiser.....	2 09	30 Sadie.....	2 19 10
Sadie.....	2 09	38 16 Linda.....	2 19 10
Recreation.....	2 10	10 Dudley.....	2 15 15
Emma T.....	2 10	45 Clio.....	2 30 00

Off the wind the pace of course increased, as did the wind, and the Undine finally showed to the front of the Kate. The Kate also passed the Kaiser and became second sloop. The Recreation is sailing in very good form, too, and the Lurline, which had accompanied the fleet over the entire course, held her own remarkably well. Eventually the home stake boat was passed, with the following result:

SCHOONERS.			
Name.	Start.	Finish.	Time.
	H. M. S.	H. M. S.	H. M. S.
Meta.....	10 21	3 34	5 09 14
Clio.....	10 58	3 39	5 28 57

FIRST CLASS SLOOPS.

Undine.....	10 10	43	11 44	4 38 31
Kate.....	10 18	6	3 15 54	4 55 43
Sadie.....	10 35	5	Not timed.	

SECOND CLASS SLOOPS.

Kaiser.....	10 11	16	3 14 02	4 59 46
Recreation.....	10 16	19	10 33	4 43 43
Emma T.....	10 25	10	3 18 41	4 55 81
Flying Cloud.....	10 10	38	2 33 55	5 08 47
Sophie.....	10 23	32	3 25 07	5 01 35
Lizzie L.....	10 22	26	3 19 23	5 07 57
Dudley.....	10 23	32	3 22 32	5 15 00
Linda.....	10 24	01	3 45 00	5 30 59

The Meta consequently wins the prize for schooners, the Undine the prize for first class sloops, and the Recreation the second class sloop prize. The Meta has a possibility of losing her, however, as it is believed she will be challenged by the Clio and the Comet.

—The Onieda Boat Club of Jersey City held their annual fall regatta on Saturday, September 26th, on the North River, opposite Pleasant Valley, N. J. The first race was in working boats, distance two miles, on the ebb tide. There were three entries, of which C. F. Ockerhausen and W. J. H. Schanck, leading and pulling a vigorous and handsome gold medal was given to Clark, owing to a foul made by Ockerhausen. The next race was for the single scull championship and a gold medal, and the entries were J. P. Hardenburgh, Jr., blue and red; J. N. Gregory, cherry and white; V. D. Schanck, blue; F. S. Jordan, white. The rowing on the part of the men was spirited, each one struggling hard for victory until the latter part of the race, when Schanck, leading and pulling a vigorous stroke, won by ten lengths ahead of Jordan—the rest nowhere and dropped out. The prize awarded to Mr. Schanck was a gold medal. The third and last race was in six-oared gigs for leather medals, and was entered by the two following crews: G. H. Ockerhausen, stroke; F. S. Jordan, D. Henry, William Clarke, Jr., R. C. Vroom, J. P. Hardenburgh, four colors white; and E. C. Neilson, stroke; V. D. Schanck, P. S. Jordan, C. F. Ockerhausen, P. C. Wolbert, C. P. Douglas, bow; colors, blue. Neilson’s crew led all the way, notwithstanding some good spurring of the Ockerhausen crew, and finally won the race and leather medals. This last race was rowed on the first of the flood tide, and the following gentlemen officiated. The referee and starter was Mr. E. C. Neilson, and Dudley Gregory time keeper.

—The Atlantic Boat Club of Hoboken held their seventeenth annual regatta at Pleasant Bay on Saturday last. The first race was the single sculls, distance three miles, with a gun. The entries were, among others, L. E. Ackerman. The latter won by about one length and a half in 19:45. The second race was between Dixon, McQueen, Charles Ellenkotter, and John Devlin, in seventeen foot boats. McQueen reached the home stake first, his time being 22 minutes. Devlin came in second. For the third race between four-oared barges, the following-named crews entered: Barge No. 1—Bow, P. C. Ackerman; second, A. Klet; third, J. H. Altaire; and a Captain, J. Benson. Ackerman, second; J. W. A. Dupaigne, stroke; George H. Dudley, third, Charles Ellenkotter; stroke and Captain, John Devlin. Over the first half of the course the two barges kept abreast. On the home stretch the crew in barge No. 1 gained on their competitors, winning by one length and a half, their time being 44:15. Joseph Russell, Chairman of the Hoboken Common Council, acted as referee.

—The Atlatna Boat Club held its annual regatta on September 28th, on the Harlem River. The first race was for the single-scull championship, for the belt of the club, distance three miles. There were three entries, Hoses, Withers and Dealy. Hoses was the first to get off, and held the lead easily to the finish, and won the race by eight boat lengths. The second event was the junior single sculls, distance two miles. George M. Young and E. Mills Jr., were the only real contestants in this race, and after an exciting struggle Mills came in a winner by two lengths. In the third race for pair-oared shells, distance two miles, J. E. Eustis, late stroke of the Wesleyan crew, and O. T. Johnson started against Dr. Withers and R. B. Wallace. The former took the lead from the start, and won with great ease. The fourth race was for eight-oared barges, distance one mile. J. H. Lindsay, G. T. Ackerson, J. T. Fryer, C. Zachman, P. C. Benjamin, J. B. Goodrich, W. J. Worrall, W. H. Wagstaff, and E. Mills Jr., coxswain, were arrayed against W. C. Mainland, H. B. Leroy, S. M. Clark, George M. Young, A. R. Hindock, B. F. Kobbe, W. H. Dealy, W. G. E. Williams, and J. B. Wallace. This was by far the most closely contested and best rowed race of the regatta; the Lindsay crew winning after a final spurt by a short length. The last race was for four-oared shells, distance two miles. R. Bainbridge, W. Spear, O. S. Johnson and R. Withers wore red colors, and T. Blake, H. B. Leroy, S. M. Clark and J. E. Eustis white. Withers’ crew led for the first quarter of a mile, but the Eustis’ crew, who had a bad foul occurred, which caused both boats to stop. The race was finally won by the whites.

—James Barton of Brooklyn, and Richard Hall of this city, rowed a race on September 28th in nineteen feet working boats, on Gowanus Bay, for \$200 a side. The distance was one mile and a half to a stake boat and return. Both men got away together, Hall verging slowly ahead, and when within one quarter of a mile of the home stake-boat the row-lock of his boat gave way and he was capsized. Barton rowed across the line, winning the race. Hall was much exhausted.

The Gramercy Boat Club held their fifth annual regatta on the Harlem River on September 23d. The day was beautiful and the water as smooth as could be desired. The first race was a single scull, distance three miles straightaway, for the championship of the club, and the silver belt held by George Pierce. There were ten entries, and eight started, as follows:—H. R. Mills, F. Winnie, C. F. Naething, E. B. Webb, George H. Pierce, David Roach, E. Wiesner, and E. J. Atkinson. Mr. Peverly started the race evenly. Roach was the first to get away followed by Mills; F. Winnie, Atkinson, and George Roach followed all the way, and finally won the belt in twenty minutes and thirty seconds. Naething second and Mills third. The next race was the Senior Sculler's race one mile straightaway; the starters were:—E. J. Atkinson, R. J. Seeborg, J. C. Pentz, E. B. Welch, F. Winnie, H. Mills, and R. W. Zoller. Mills got away with a lead, but was soon overhauled by Winnie, Welch and Atkinson. At the half-mile Atkinson passed to the front, and after a spirited contest with Winnie, was declared the winner by half a length, in 6:10. Winnie's time was 6:12, Welch came in third. Zoller fourth, and Seeborg last. The fourth event was the four-oared shell race, distance two miles. There were three entries, as follows:—

- No. 1. Charles Earwicker, bow; M. L. Sutton, W. H. Smith, R. E. Wiesner, stroke.
- No. 2. H. Mills, bow; C. H. Wilcox, George H. Pierce, L. H. Mills, stroke.
- No. 3. David Roach, bow; George Krapp, F. Winnie, C. F. Naething, stroke.

The Mills crew led for the first quarter of a mile and then a collision took place with the Weisner crew. The Naethings now led, and before the other boats could be reached, had gained such a decided advantage that with all the spurring on the part of the crew, they were not easily in 19:45. Mills crew second. It was now getting a little dark, so the double scull race had to be omitted and the day's sport was concluded with an eight-oared barge race. The following are the names of the crews:—

- Barge Nautilus.—H. F. Kennedy, D. Peutz, Frank Hooper, J. Baird, H. Mills, C. H. Wilcox, H. Brown, H. R. Mills, stroke; C. Hudson, coxswain.
 - Barge Adolena.—David Roach, bow; George Krapp, A. Saxon, M. L. Sutton, R. W. Zoller, W. H. Smith, R. E. Wiesner, Charles Earwicker, stroke; F. Winnie, coxswain.
- They started very evenly and kept abreast of each other to the first mile, and on crossing the score the barges unfortunately collided. Commodore Brady, who acted as referee, decided that the race should be rowed on another day.

SCHUYLKILL NAVY REGATTA.

PHILADELPHIA, September 28, 1874.

EDITOR FOREST AND STREAM:—The full regatta of the Schuylkill Navy was held on Saturday 26th instant, and everything seemed to combine to make it a perfect success. The arrangements of the Committee were perfect, the races for the most part exciting, the boats and the weather fine. The river was alive with boats, and the banks were well lined with spectators. The tug Frakey was filled with guests, members and reporters, while the *Umpire's* boat, the *Diamond*, had, as usual always be the case, only the officers of the regatta and of the Navy.

The races, which were for the championship of each class and except for the commencement of the first two miles with one turn, except the four-oared shell race, which was one and a half miles straight away. At 2:30 the singles were called into line, and of the four entries, three started: John D. McBeath, Quaker City Club, on the west; Jos. B. Leiber, of the same club, on the east; with Max Schmidt, of the Pennsylvania, between them. They made a good start, and held abreast for the first quarter of a mile, when McBeath closed on to the island, until in self-defense McBeath sprang to the lead. Leiber, who was well out in the middle of the river, was nearly level with McBeath at the Willows, when the latter was forced to "duck" under the tow lines of a couple of canal boats, which on regatta days appear to come out as far from the tow-path as their pilots can make them. This gave Leiber a short lead, and with his usual industry, he managed to caution the Regatta Committee previous to the race, he attempted to turn McBeath's mistake boat, purposely making a foul, and was disqualified by the *Umpire*. McBeath having a race to pull later, wisely saved himself, coming in in 16 min. 10 sec., followed by Max, who had been left out of the race on the first mile—time not taken.

For the first race there were two entries:—**Bridle.**—Crescent Boat Club.—H. K. Hinchman, stroke; G. W. Young, Geo. Milliken, Jr., C. E. Steel, bow; H. F. Witmer, coxswain.
Phantom.—Pennsylvania Boat Club.—E. C. Cox, stroke; C. Zeller, Geo. Haldern, J. McElmali, bow; R. H. B. Fairman, coxswain.

The Crescents caught the water first, and rowing well together at 38 to the minute, soon had a length lead. The Pennsylvania boys pulling at 40 to the minute, and making 100 much "water works." At the "Willows" Wilmer gave the wash to their opponents, but made such violent use of his mider as to materially check his boat. At the stake he muffed it so badly that a two-length lead deviated to two seconds, turning in 6 min. 58 sec., the Pennsylvania in 6 min. 55 sec. The other crew rowed out together, and when McBeath was within a length, they were two throes, when McBeath unslipped his sliding seat, but the lead was too much. Getting on to his seat again they went home in 14 min. 18 sec.; Crescent, 14 min. 30 sec.

Then followed a double shell race, for which there were only two entries, both from the Crescent. As three of the four men were in the Barge Crew one boat withdrew, giving room and water to the other. The two boats, which were within a length, pulled the Pennsylvania boys pulling last on Saturday. While waiting for the doubles to start, a crowd just above the landing gave signs of an internal disturbance, which was not to be wondered at when it was found they had located right over a "Yellow Jacket's" nest. The bees disputed possession, and served an ejecution.

There were three entries for the six-oared barges:—**Bull.**—Matta Boat Club.—C. E. H. Brelsford, stroke; E. W. Dean, Wm. Hopper, J. Hlman, J. Hooker, bow; F. F. Warburton, coxswain, Position west.
Falcon.—Pennsylvania Boat Club.—Thomas Massey, stroke; W. G. Thomas, C. E. Hasselbruch, H. Conrad, J. McElmali, A. Street, bow; R. H. B. Fairman, coxswain. Position east.
Lark.—Crescent Boat Club.—H. K. Hinchman, stroke; George W. Young, H. R. Barnhart, A. Spring, H. F. Witmer, Geo. Milliken, Jr., C. E. Steel, coxswain.

That the start of the Crescent had its own way, Steel taking his boat straight up the east side to his stake boat, around it and back without apparently noticing the desperate struggle for second place. Along the island going up the Pennsylvania crew were fighting to lead the *Matta*, but after getting a clear length couldn't shake them off. The boats arrived at the stakes, Crescent in 6 min. 25 sec., Penna. in 6 min. 15 sec., *Matta*, 7 min. 28 sec. The latter making a splendid turn, overhauled and passed the Falcon, and for half a mile held nearly a half length, but Brelsford, stroke of the *Matta*, who rose almost from a sick bed to row the race, was fast, fading, and although sticking to it with wonderful pluck, fell into his coxswain's arms as they crossed the line, two lengths to the "head." Crescent, 14 min. 38 sec.; Pennsylvania, 15 min. 17 sec.; *Matta*, 15 min. 28 sec.

The last race was for four-oared shells from Falls to Rockland. The entries were:—**Pennsylvania Boat Club.**—John Lavens, Jr., stroke; F. Henderson, Max Schmitt, O. F. West, bow.
Quaker City.—J. D. McBeath, stroke; S. Stinson, James Fowler, S. Gormley, bow.

There was much speculation on the race. The "Quakers" used to win all the fours in our Navy regattas, and still had their old stroke, the best on the river. Their team was certainly strong, but one week's practice was not enough to get the "waist men" into the proper trim. The Pennsylvania crew was the same that beat the *Friendships* in June, and that is credited with giving the *Argonauta* a hot race in the final heat at the same regatta. There is no denying that it is a strong crew, and with a change at No. 3—the weak spot—and three judicious casting, would not be likely to be "hit down of three" in any of four entries that we have seen on this river. The boats got away well together. Gormley steering beautifully right down the middle; West going closer to the tow-path, so close in fact that off Laurel Hill he found himself close under the stern of a canal boat, and had to go sharp out into the stream. Being nearly a length ahead, and close to the Quakers, this race he had to cross their bow, and offered them a chance to win on a foul. Gormley, bow over, with consideration not often seen in the excitement of a race, gave way, jamming his rudder hard to port and coming to arcs. Upon straightening out, being on the outside of the curve, he found his boat a clear length behind, and having to take a severe wash, (which, by the way, Pennsylvania's wash was not credited after the other mile) could not catch their leaders. The Pennsylvania's time was 9 min. 45 sec.; Quaker City, 9 min. 30 sec.

SUMMARY.

Schuylkill Navy Regatta, Sept. 26, 1874.
Single shells, three entries, two miles, one turn from Rockland, won on the west side, J. D. McBeath, 15 min. 10 sec. For champion belt and special flag.
For champion and special flag, same course, 4-oared gill, two entries: Penna. shells, 1 h. 14 min. 15 sec.; Quaker City, 1 h. 14 min. 22 sec.
Double Shells, two entries; Crescent, 1 h. 15 min. 22 sec.; Pennsylvania, 2 h. 10 min. 27 sec.; *Matta*, 2 h. 15 min. 28 sec.
Six-oared Barges, three entries; Crescent, 1 h. 14 min. 28 sec.; Pennsylvania, 2 h. 10 min. 27 sec.; *Matta*, 2 h. 15 min. 28 sec.
Four-oared Shell, National Course, one end and a half mile straightaway: Pennsylvania, 1 h. 9 min. 55 sec.; Quaker City, 1 h. 9 min. 30 sec.
Pennsylvania "Ice Creamery," V. R. Tucker, J. S. Turner, J. Thompson, "Phila.," Thumpkeop.—V. R. Tucker, Umpire, Judge.—F. Mitchell, Quaker City. Very true yrons, SELLIS.

The badge presented by the Schuylkill Navy to James M. Ferguson, Esq., is a beautiful specimen of the jeweller's art. The clasp represents two sailors, with oars crossed saltierwise, from this, by two chains, hangs the main emblem of the badge. This is the monogram of the Schuylkill Navy, surrounded by the pennant of all the various clubs, the colors being faithfully represented. The badge was designed and made by L. Bedichimer of Philadelphia.

The Fall Regatta of the Yale Navy will take place at Lake Saltonstall on the afternoon of Wednesday, October 14th. There will be a shell race, a barge race, and a single scull race.

At Grand Rapids, Mich., a regatta for single and double shells and duck boats, will come off on Reed's lake, on Friday, October 17th. Yates and Childs, of Chicago, have catered. Curtis will row singly against a double scull.

Under the auspices of the Cincinnati Commissioners of the Exhibition, regatta took place on the Ohio River on September 24th. The Cincinnati and Pittsburgh clubs, and the Naiaid club, of Toledo, took part. There were four races, all down the river, without return. The first race, three quarters of a mile, single shells, was rowed by three boys, nine years old. Time, eight and a half minutes. The second race, two miles, single junior shell, was rowed by boys not over 16. Time, 58 seconds.
Sweeney, 11:50. The third race, senior sculls, two miles, was won by Riskey, in 14:18; Waddle, 14:20. In the fourth race, three miles, four-oared shells, three entries. Won by Duquesne club, Pittsburgh, in 15:03; Cincinnati club, 15:05; Naiaid, of Toledo, 15:30.

The great international single scull race between Geo. Brown, of Halifax, and E. Morris, of Pittsburgh, Penn., for \$2,000 in gold, a side, was rowed on the Kennebecasis river, near St. John, N. B., on Saturday, September 26th. The course was the same as that over which poor Renforth pulled a few years ago, and was a Brown put on a magnificent start, but the race was not started evenly, and dipped the oars simultaneously, and the light craft flew over the water, Brown pulling about thirty-five strokes, and Morris forty-two to the minute. The America was ahead until turning the stake boat, when Brown turned the quickest, and gained at least a boat's length. This lead he maintained throughout the race, which was a very close contest. Both were doing their best, and when Brown put on a magnificent spurt just at the end of the race, and showed his boat he had a two length time, over 87 minutes. It is said by competent judges that this was the best contested race and the most evenly rowed match that ever was seen on these waters.

At Teddington, near London, a forty foot in length, built from the design of Mr. H. M. Stanley, the discoverer of Livingstone, and intended to accompany that gentleman's expedition to Central Africa, was launched. It can be divided into five sections, weighing 120 pounds each, and a section can be carried, after the fashion of an Indian palanquin, by two men. *Irish Times, Dublin.*

We regret to hear of the death of W. J. Shipton, of Burton, Eng., who was drowned in Lake George, near Hart, Indiana, on September 17th, while on a fishing and shooting excursion. His body has been recovered.

The Farrago Boat Club, of Chicago, held a meeting at the Fremont House last week. Mr. George Murison presided, and Mr. A. S. Porter was secretary. Mr. A. D. Downs was chosen to represent the club as a member of the Executive Committee of the Northwestern Amateur Boating Association, with headquarters at Toledo. Among other matters of importance the following resolution was passed:—The Captain is to have charge of the club boat here, and no boat will be allowed to be taken therefrom on Sunday. Some routine business was then transacted, after which the meeting adjourned until the second Monday in October.

The champion four-oared crew of England, composed of J. H. Sadler, Robert Bagunell, Joseph Taylor, and Thomas Winship, recently issued a challenge, offering to row any four men in the world a four-oared shell race for 2500 a side. This challenge has been accepted by the Hon. Bernard Biglen of this city, who agrees to select four men from New York and Pittsburgh to meet the English champions and armaments, to be held on the following terms: The race to take place at Philadelphia, Springfield, Mass., or Saratoga. The distance to be five or six miles straight away, or with a turn. The stakes to be \$2,500 to \$5,000 a side, and the English crew to be allowed \$1,000 for ex-

penses. The American four will be selected from the following noted oarsmen:—Bernard Biglen, John Biglen, Josh Ward, Donald Leary, of New York; Eph. Morris, and Wm. Schurtz, of Pittsburgh. The proposed contest is creating quite a stir in sporting circles.

The members of the Boston Yacht Club will engage in a roving contest for the single scull championship of the club October 1, on the Charles River course, and an exciting race may be expected.

The Murphy Brothers and Messrs. Worthington and Comstock rowed a match race on the Thames River near Norwich, Conn., on September 10th. The course was two miles to a stake boat and return, in working boats, four oars each. The contest was intensely exciting, the boats keeping close together most of the way, with the Murphys leading by from a half to one and a half lengths, which was increased just at the finish, and they came in four lengths ahead in 154 minutes.

The Annapolis and Potomac boating clubs of Washington, D. C., will hold their annual regatta on October 1st. The following is the programme of the races. The first race will be for four-oared shells over a straight course from King's wharf, just below Potomac boat-house, one and a half miles and return. The second race to be six oared shell gill, on 2d October, on the old course, known as the Aqueduct course, one mile and a half and return. After the races both clubs will proceed to Baltimore to take part in the Patapsco regatta, which will take place on October 3d and 4th. Then again the crews will arrive in New York to row their return race with the Nassau club on the Harlem river, which will probably come off on October 15th. The following are the crews:—Annapolis, shell, Prescott, (stroke); Nesbitt, (3); Stowers, (2); Brown, (bow); gill, in addition to the above, Messrs. Prescott and Corson, Potomac, shell, Coughlin, (stroke); McEllir, (3); Randall, (2); Truax, (bow), and for the shell, Durick and Sam. Wheatley will be added.

TO RESUSCITATE THE DROWNED.

GRANTVILLE, MASS., August 25th, 1874.

EDITOR FOREST AND STREAM:—There are two things to add to the directions of the Massachusetts Humane Society—how to restore the apparently drowned. Pull the tongue forward which you are about to inflate the lungs, and raise the arms at the same time from the side, through the angle of about 120°, returning them as soon as the lungs are filled; continue these movements for twenty minutes. The only reason why I write these directions is, that I am confident that lives will be saved by following these instructions that would otherwise be lost. I like to see all advice given by the FOREST AND STREAM perfectly correct. Very true yours,
J. H. HAZELTON, M. D.

New Publications.

Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our Editorial Rooms will be promptly acknowledged in the next issue. Publishers will send a list of prices, and of the value of any omission in this respect. Prices of books inserted when desired.

THE MAGAZINES.

Harper's—With a charming poem of Mr. Trowbridge, entitled the "Enigmata's Story," there follows an interesting article on English decorative art, where, in the course of the paper, in English art, is described. Mr. P. Aldrich contributes a pleasing description of Portsmouth, the old town by the sea, and a few pages are taken from the *Niurod of the Sea*, where the capture of the whales is told. Two capital stories, "Ami Julie" and "The Golden City," follow, and the ballet of the magazine is represented by Signor Castelar's "Republican Movement in Europe."

Scientific American, Edward King's "Great South," with charming illustrations, takes us down the Mississippi, and that most difficult question—negro labor—is discussed. For a charming story, we recommend our readers to "The Pontiere," which, full of local color, is thoroughly evoked, and is not only daintily, but pathetically written. Mr. Cahle has created in this little story a sweetness of manner and a carelessness of finish which are entitled to the utmost praise. What a number of excellent articles there are in this issue, and in descriptions of our manners and customs only fifty years ago. Mr. Wilkinson gives a fair and dispassionate analysis of George Eliot. The whole number of *Scientific* is excellent in quality and variety of matter.

The Galaxy—"Liny Rochford," now in the thirty-third chapter, is still cleverly managed, and in the present number we bid good-bye, with regret, to the gallant Gustar, and read with no little emotion how the white girls were at last rescued from the villainous Indians. In the General's article as to the "California Fish Culture," it is shown that Joe does not favor California fish culturists. General Castelar's articles in the *Galaxy* are of distinguished merit. To be a *beau soigneur* is one thing, but to combine with it that of a pleasant writer, is to add an additional plume to the General's cap. Miss Woolson's poem, "The Florida Beach," is most musically descriptive. Mr. Grant White's "Foghorn B," a clever philological digression, has his peculiar idiosyncrasies.

We commend us to the *St. Nicholas* for our children, little and big—children as big as we are—who read heavy magazines. How clever are the illustrations, and nicely written are the stories! Miss Louisa M. Akcott's autobiography of an omnibus is admirable. When our little ones drop *St. Nicholas* we take it up and delight in it. How cunning is the picture of the little girl who has a party all to her own self, seated in her own chair.
"But as her friends were shy and wary,
Nobody came but her own canary."

FIELD, COVER, AND TRAP SHOOTING. By Adam H. Bogardus, Champion wing shot of America. Enlarged hints for skilled marksmen; instructions for young aviators; habits and habits of game birds, flights and resorts of water fowl, breeding and breaking of dogs. New York: J. B. Ford & Co., 1874.

A RIFLE RANGE AT PERU.—In July last a meeting was held in Lima, for the purpose of organizing a shooting association, to be styled the "American Rifle Club of Lima." C. T. Rand, Esq., was made President. It was determined that the committee should send to the United States for information as to the construction of ranges, &c. Major DeGreiss, of New York, a life member of our N. R. A., was selected an honorary member of the club.

Some of the old shooters still live at the Isles, and one of them, evincing with critical eyes a pretty little yacht that was moored at Star Island, spied its name, Psyche. "Spelt the old man slowly, P-s-y-c-h-e, 'Well, if that ain't the dumdest yaw I ever did see to spell fish!" said he.

A Boston woman who objects to nude statuary, has ordered a figure of Venus cut out of dressed marble.

A GOLD MEDAL TO W. S. KIMBALL & Co.—We announced a few months ago the award of a prize by the Vienna Exposition to the above firm for their "Vanly Fair" smoking and "Peelers" chewing tobacco. This indorsement has just been supplemented by the award of a GOLD MEDAL from the Western New York Fair. These brands have acquired wide popular favor with astonishing rapidity. They have been popular with everybody, and with no class more so than with sportsmen, who know what a good article of tobacco is and how to enjoy it when they get it. The fragrant fumes of Vanly Fair excite many a fervent puff and lead to the pleasant feelings of taste and stream. In fact, Vanly Fair for smoking and Peelers for chewing, are universally popular with sportsmen, who are constantly sending for it in large quantities. Kimball & Co. supply many sporting clubs throughout the country with these brands. They are now manufacturing it on a much larger scale than ever before, and are able to ship the largest orders to the trade at a moment's notice.

THE NEW ORALINE is a Toilet luxury which we are convinced from personal experience is invaluable, both for the teeth and to purify the breath. It is adapted for all climates and conditions; the old use it with satisfaction, the young with delight; the ladies find it an exquisite toilet luxury, and the *homme de la creme* endorse it. Its properties are entirely harmless, for while it removes tartar stains and arrests decay, it does not inflame the gums or injure the enamel of the teeth. Prepared by Dr. J. D. H. Hanzlworth, whose name itself is a guarantee of its freedom from deleterious substances, and is prepared exclusively for Messrs. LORDB & TAYLOR, of this city, who are the sole agents.

PHILADELPHIA AND SOUTHERN STEAMSHIP LINES.—The managers of the lines of communication with our South Atlantic and Gulf ports appear to fully appreciate the importance of the increasing Winter travel, and are affording increased facilities for the comfort and safety of passengers. The steamship Junata, just departed from Philadelphia and New Orleans, via Havana, has been undergoing very extensive alterations, refitting and furnishing, and has just resumed her regular trips in connection with the Yazoo. A gentleman who was on board the Junata states that the accommodations are of the highest order in every particular one of the best vessels on the Atlantic coast. The main saloon is superbly fitted up, the berths richly upholstered, and every part of the vessel re-arranged, re-furnished, and run in splendid condition. This line also runs the C. W. Lord and W. W. between Philadelphia and New Orleans, and Tonawanda and Pioneer between Philadelphia and Wilmington.

THE UNITED STATES CENTENAL COMMISSION announces its readiness to receive applications for space in the International Exhibition of 1876, at Philadelphia. It is especially desirable that provision should be made for the organization of those collective exhibitions of the natural resources and raw materials of different sections of the country which cannot be made by individual exhibitors. As an incentive to immigration and to the investment of foreign capital, such collective displays are most important, and a prompt and liberal provision for the performance of this work will employ many those States which undertake it. The advertisement of the Director-General of the International Exhibition tells in what manner applications should be made.

The Horse and Course

The Prospect Park first fall meeting took place on September 23d. The first race was for a purse of \$500 for horses that had never beaten three minutes. D. Mace's Arthur won; time 2:39, 2:37, 2:34. The second race was a purse of \$500 for the 2:31 class. D. Mace's Vanly Fair won the three last heats and race; time 2:39, 2:34, 2:30. On September 23, the first race was for a purse of \$600 for 2:35 class. D. Mace's Arthur won the three last heats and race in 2:33, 2:34, 2:36. The second race was a purse of \$1,000 for the 2:24 class. J. L. Doly's Thomas L. Young won the three last heats and race in 2:23, 2:23, 2:26. On September 24th, the first race was for a purse of \$200 for double teams. A. H. Schenck's Listener and Adonis won in three straight heats; time 2:47, 2:45, 3:14.

The trotting meeting closed on September 25th. The first event was the unfinished race of the 2:27 class, Katie D. and Mystic having won two heats each. The start was an excellent one. Katie D. led throughout the race, and won easily in 2:27. The second race was for a purse of \$600 for horses that had never beaten 2:45. There were thirty and twenty entries, eight started. Falmouth Boy won the first heat in 2:32, the second heat 2:29; Arthur the third heat in 2:35, fourth heat 2:32, and fifth heat and race in 2:34. The last race was for a purse of \$2,000 for horses that had never beaten 2:20. The entries were Fleety Goldust, Sensation and Hunter's Fleety Goldust won the heat by two lengths in 2:27; the second heat by a length in 2:23; Sensation the third by a short head 2:23, the fourth by half a length in 2:29; and Fleety Goldust the fifth heat and race by a length in 2:26.

At the San Francisco race course on September 25th there were over 20,000 people present to witness the great trot between Occident, Sam Purdy and Blackbird,

for a purse of \$3,000. Occident won the first heat in 2:31, the second in 2:24, and Sam Purdy the three last heats and race in 2:23, 2:20, 2:23.

The American Jockey Club will begin the fall meeting at Jerome Park on Saturday, October 3d, and continue on the 7th, 10th, 14th and 17th. The following prominent stakes will be run for: The Jerome stakes, Nursery stakes, the Manhattan handicap, Hunter stakes, Maturity stakes, for four year olds, three miles; the grand national handicap sweepstakes, the Champagne stakes; also one handicap steeplechase, and two hurdle races.

The Mystic Park running races closed on September 23d. The first race was for the citizens' handicap stakes for all ages, two mile dash, \$50 entrance, h. f., with \$500 added; second horse to receive \$100, third horse to save his entry money. The starters were Lizzie Lucas, B. F. Carver, Lincolnton, Eclipse, and Quis, but Quis was the favorite at 40; Quis, 20, and the field 30. The race was won by Lincolnton in 3:37, Lizzie Lucas second, Eclipse third. The second race was for a Consolation purse of \$400, mile and a quarter. Spendrift and Ida Wells started, and the former won in 2:14. The third race was a steeplechase handicap, over two and a half miles of country, including the track and a run out over one side of Winter Hill. Tom Collins, Blind Tom and Vesuvius started. The run was a very good one, and was won by Blind Tom in 6:37, Vesuvius second.

The following stables have arrived at Jerome Park, and most of the horses have engagements at the coming meeting: McDaniel's, Lawrence's, Lewis & Co.'s, Suedrick's, Walden's, Donaldson's, Stringfield's, Corlee's, Hunter's, O'Neil's, Murphy's, Bannan's, Moore's, Fershay's, Babeok's, O'Donnell's, with a few horses belonging to other parties; Littell's Fellowcraft and Reform; Morris, Withers', Lloyd's, Sandford's, with Preakness, mate, and Brigard; Lorillard's, with Saxon and Athilla; Hitchcock's, Chamberlain's, with Survivor and others; Cottrell's, with Sallie Watson and Adventure; McComb's, McGrath's, with the famous Tom Bowling, Aaron Pennington, Calvin and Chesapeake; Belmont's magnificently appointed stable, with Gray Planet, Steel Eyes; Davis', Morris' Lloyd's, Reynolds' and Moore's horses. Mr. Davis' stable consists of Alle Hums, Steel, by Vandal, Eudiasoon, aged, by War Dance; Frank and Merodae, 4 years, by Australian; Hunt Reynolds' bay colt Whisper, 4 years, by Planet. Morris and Cameron's string consists of a four year old Lemington colt, the Eclipse filly Regardless, a three year old, and two two-year olds. Mr. Lloyd has Wilde, four years, by Australian, out of the famous Oldwid; the formidable three year old Acrobat, by Lexington; and Court Hampton by Hampton Court.

1876. INTERNATIONAL EXHIBITION.

OFFICE OF THE UNITED STATES CENTENAL COMMISSION, PHILADELPHIA, PA. In accordance with the several Acts of the Congress of the United States, providing for the celebration of the Centennial Anniversary of the United States Independence, there will be held in FAIRMOUNT PARK, Philadelphia, in the year 1876, an INTERNATIONAL EXHIBITION of Arts, Manufactures, and Products of the Soil and Mine. The Exhibition will be opened on the 19th of April and closed on the 19th of October.

APPLICATIONS FOR SPACE. To secure space for exhibits in the Buildings or the Park, early application should be made. The necessary forms, and the rules, together with the Regulations for Exhibitors and needed information, will be forwarded on application to the Office of the Centennial Commission. A. T. GOSHOORN, Director General.

HOMES! HEALTHFUL, CONVENIENT, LOVELY! Just think! Only 23 minutes, and seven cents fare, commutation, to Liberty Street, New York, from FULTON, whose greatly improved land, from the crown to the shore of New York Bay on the one side, and Newark Bay on the other, unfolds a panorama of such exquisite beauty, such diversified prospects, and ocean views far in the distance, that for a home, one finds it, in its every sense, of fancy and reality, in this lovely place. Removed from the noise and dust of the great city, yet so near that the time and expense of transit thereto is less than from Wall to Broadway street. Fishing, boating and bathing unsurpassable. Lots in the most beautiful locations rapidly sold; the choicest will soon be taken up, while the cost of such exquisite beauty, such advantages, owing to the rapid appreciation of property here. Delay involves two losses: First, the choice of a building site; second, the price at which it can now be obtained—\$25 monthly instalments. When \$500 is paid in, a nice home will be erected at cost for the lot purchaser, and the balance will again be far advanced, owing to the rapid appreciation of property here. SCHUYLER, HARTLEY & GRAHAM, 19 Maiden Lane, 20 & 22 John street, N. Y. BREECH LOADING GUNS A SPECIALTY.

We would call the attention of the public to our large assortment of Breech-Loading Shot Guns, Manufactured by the following celebrated makers: Messrs. W. & C. SCOTT & SONS (winners at the International Gun Trial of 1873); P. WEBLEY & SON, W. W. GREENER, WESTLEY RICHARDS, J. HOLLIS & SONS, and other makers.

A full line of fine PISTOLS AND RIFLES CONSTANTLY ON HAND. DIXONS & HAWKSEY'S SHOOTING TACKLE. To insure good shooting from Breech-loading Guns, we would recommend the use of the STURTEVANT BRASS SHOT SHELLS, manufactured by the Union Metallic Cartridge Co., Bridgeport, Conn. These shells are the cheapest and best in the market, can be easily re-capped with ordinary caps, without the use of the implements necessary in priming all other styles of shells. BUSSEY'S PATENT GYRO PIGEON AND TRAP, WITH CASE AND 100 BIRDS.

Black's Patent Cartridge Vest. This Vest affords the best arranged for carrying cartridges. The weight is so evenly distributed that it is scarcely felt. Cartridges can be drawn down in this vest, which has brass buttons on the head up the weight on the front, which forces the vest back and forward, when desired. In ordering send measurement around the chest. Price \$7.50.

AGENTS FOR THE Union Metallic Cartridge Company's Ammunition, WARRANTED THE BEST IN THE MARKET. SEND FOR CIRCULAR.

\$10 to \$1,000 Invested in Stocks and Gold pays 20 per cent a month. Pamphlet free. Tounbridge & Co., Bankers, 2 Wall street, N. Y.

Miscellaneous.

This arm was submitted in competition with over one hundred different systems, American and European, to the Board of United States Officers, appointed by Act of Congress, 6th June, 1872, for the purpose of selecting the best arm for the service, and of which Brig. Gen. A. H. Terry was President. It successfully passed through all the tests.

The following is the report of the Board: "Resolved, That the adoption of magazine guns for the military service by all nations is only a question of time; that whenever an arm shall be devised which shall be as effective as a single breech-loader, as the best of the existing breech-loading arms, and shall at the same time possess a safe, easily manipulated magazine, every consideration of public policy will require its adoption.

Resolved, Further, That the experiments before the Board with the Ward-Burton Magazine System have so impressed the Board with the merits of this gun, that they consider it as more nearly fulfilling the conditions above specified than any other tried by them of which they have any knowledge, and it does recommend that a number of magazine pistols be made on the plan for further trial in the field." (Ses Ordinance Report.)

We are now receiving orders for these guns, and due notice will be given in this paper when they are ready for delivery.

The following is one scale of prices: Special Magazine for large game, carrying from 2 to 8 cartridges, 70 to 85 grs. of powder, 350 to 400 grs. of lead, 8 to 10 lbs. weight, from \$60 and upwards, according to finish. Special Long-range Magazine Rifle for Creedmoor shooting, 60 grs. of powder, 450 grs. of lead, carrying 3 to 8 cartridges, weighing 10 lbs., from \$100 and upwards. Magazine gun of general use, carrying 3 to 9 cartridges, 60 grs. powder, 350 grs. lead, from \$40 and upwards. Single Breech-Loader, Creedmoor shooting, for long range, 40 grs. powder, 450 grs. lead, from \$50 and upwards. Single Breech-Loader for general use, 6 to 7 lbs., 60 grs. powder, 350 grs. lead, from \$30 and upwards. The calibre of all our rifles, unless otherwise ordered, will be 45-100 in.

All communications should be addressed to W. G. BURTON, Care Ward & Co., 84 Wall St., N. Y.

HAVANA LOTTERY.

Drawings every 17 days. 782 PRIZES, amounting to \$450,000. One prize of \$100,000. One prize of \$50,000. One prize of \$25,000. One prize of \$10,000. Two prizes of \$5,000 each. Ten prizes of \$1,000 each. Eighty-nine prizes of \$500 each. Six hundred and fifty-five prizes of \$200 each. For sale and prizes cashed by P. C. DRVILL, Stationer and General Agent, 30 Liberty street, New York.

Reduction in Price.

J. & W. TOLLEY'S BREECH LOADING GUNS, Manufactory, Pioneer Works, Birmingham, Eng. These guns are built with every improvement for American sport, and are the cheapest of guaranteed quality and shooting powers sold in the United States. They are made in all sizes, each gun being branded with one of the under mentioned names. One hundred and fifty-five prizes of \$200 each. For sale and prizes cashed by P. C. DRVILL, Stationer and General Agent, 30 Liberty street, New York.

CHICAGO. SHOT TOWER CO., MANUFACTURERS OF STANDARD DROP AND BUCK SHOT BALLS AND BAR LEAD.

Our aim is to manufacture an article of SHOT that is unsurpassed in ROUNDNESS, SOLIDITY, PERFECTION OF POINTS, UNIFORMITY OF SIZE, and ACCURACY OF WEIGHT, in each bag. Orders from the Trade solicited, and will be filled at the Lowest Market Prices.

E. W. BLATCHFORD, President. C. F. GATES, Treasurer.

For Forest and Stream.
THE GRAVE OF CAPTAIN HALL.

THE day was night, and the night was day,
 As smooth as the waveless sea,
 An iceberg nigh loomed ghostly high
 O'er a funeral train and bier.

The starry flag hung half-mast high,
 While the kindly stars above
 In the night-mid day looked down always
 With a distant, helpless frow.

God's sun was dead so long ago
 We lived in endless night,
 But the sad, far stars, gazed through the bars
 Of the weird Boreal light.

The Polar blast swept o'er a plain
 As smooth as the waveless sea,
 Like a voiceless breath from the lips of Death,
 So fiercely, silently.

We scooped his grave in the iron earth
 Of the ever frozen zone,
 And the strong man lay with his kindred clay,
 As cold, and dead, and lone.

No choir may sing his requiem,
 No shaft may mark his tomb;
 Go, place his name on the roll of fame,
 Where the brave find ever room.

Though flowers deck not the distant grave,
 Nor tears bedew its turf,
 We hear his dirge in the solemn surge
 Of the ever sounding surf.

J. J. ROEHL.

**Zoology of the Northwestern Ter-
 ritories.**

THE ANSERINÆ AND CYGNINÆ.

THE anserine, notwithstanding all references to their ungainly movement and doltish intellect, still maintain their exalted position in the sportsman's estimation, and he, if keen of observation, will learn from them many things that will materially entitle them to advancement in the mental grade, and prove the truth of that very old adage which specifies that you cannot judge of things by their outward appearance. A goose, waddling around the barn yard, may not present a very graceful appearance, nor seem anything above an idiotically obtuse bird mentally, yet that ungainly creature, when in its natural state, has an ease of motion in flight which will compare with any of the feathered tribe, and evinces a knowledge of the means of defence and of overcoming its enemies that few can excel. I am unacquainted with any bird more cautious, vigilant, and apprehensive of danger than this, and those qualities alone should entitle it to more respect than writers unacquainted with its habits have shown when speaking of it, for few carry the objection as far as the table. A round, plump wild goose makes a delicious *morceau* for the palate; and all the trouble of hunting after it through marshes, morasses, or lakes is amply repaid when its succulent flesh, moistened by the contents of a musty old bottle marked "Lafitte" passes down the thoracic cavity. Wild geese of different varieties are so dense in Oregon, Washington Territory, Alaska, and Idaho in certain seasons as to require one to use the millions to number them. Not a species of the family known to this continent leaves the region unvisited, so that it is, in my estimation, with all due allowances for other places, the greatest resort for geese in the world.

Certain portions of California, such as the Sacramento and San Joaquin valleys, will compare with Oregon in the profusion of geese, but shooting is enjoyed at least a month earlier in the northern than in the southern State. One of the commonest is the snow goose (*Anser hyperboreus*), and that is found from Alaska to Mexico. This variety has reddish legs and bill; body color pure white; primary quills silvery bluish, gray towards the base; spurious quills bluish; inside of wings, except primaries, white. It fre-

quents the sand bars of the Columbia and Willamette rivers in countless numbers in the autumn, especially during the night and dry weather, the plains being preferred during the cool of the day, or in rainy weather. The usual mode of hunting it is to lie in ambush behind a fence on the prairie, and as the waddlers approach to give them both barrels, heavily laden with No. 1, or buckshot; this is sure to leave half a dozen *hors de combat*, and very often double the number. If the hunter does not show himself, he is liable to get several volleys at them, as the noise frightens them only for a few moments. Should their suspicion be aroused, they rise upward slowly in a dense cloud of white, and sound their alarm notes; but they may not go over fifty yards ere they alight again, so that the amusement may be continued without much toil or inconvenience. Another mode is to mount a horse and approach them as close as possible, then give them the contents of your barrels, and if they do not fly to draw still nearer and give them smaller shot at from forty to sixty yards.

I have seen hunters west of the Rocky Mountains approach a flock under shelter of oxen or cows, and bag forty or fifty brace ere the foolish natatores could tell what was the cause of the noise and their own destruction.

In Oregon, the *chasseurs* hunt on the prairies during wet or lowering weather, but resort to the sand bars of the rivers during moonlight nights and sunny days. Some excellent sport can be enjoyed by shooting the birds on the bars as they return from their feeding grounds late in the evening, or taking them on the wing as they fly past. A favorite method for hunting them at night is to light a fire on the river bank, or bar, so that its glow may illumine the honking natatores adjacent, and then pouring volley after volley into them as they rise in the air to escape the unusual apparition, or to study its meaning and purpose.

No matter in what way the birds are killed, there seems to be no diminution in their numbers at the return of each season, as they are reported abundant everywhere, from the Pacific Ocean to the Missouri River. This species winters in southern California, Texas, and Florida, reaching its grounds about the first of December, though of course many arrive at their southern home a couple of months before that time.

The white fronted, or laughing goose (*Anser gambelli*, or *Albigrona*), has reddish legs and bill; alongside of bill and forehead, white; margined behind with blackish brown; remainder of neck and head grayish brown, but paler on the fulgulum. The back is bluish gray; the feathers anteriorly tipped with brown; the breast and belly are grayish white, blotched with black; the anal region, flanks, beneath tail and upper coverts, white; greater coverts edged with white. Tail, sixteen feathers, and colored brown, with white tips; axillars and under surface of wings ashy plumbeous. This species is very abundant in the autumn, and some remain all winter; but the greater number go farther South. At the mouth of the Columbia River, and in the valley of the Willamette, it can be found in large flocks, but it seems to be quite scarce along Puget Sound. It appears to prefer the grassy patches along streams flowing into the ocean, or the tide-water flats so abundant in several parts of Oregon and Washington Territory.

The *Bernicla Canadensis*, or Canada goose, is the largest, as well as most abundant, of the family. This has black legs, head, neck, and bill; a large triangular patch of white decorates the cheeks behind the eye; the two of the opposite sides are broadly confluent beneath, but do not extend to the *rami* of the lower jaw; a few whitish feathers on eyelids. The superior region is brown, with paler edges; anterior light, with tinge of purplish gray; body of feathers darker on inside of wings, sides, tibia, and axillars. The upper tail coverts are white; the primary quills and rump blackish brown; tail feathers black. This bird has a length of 35 inches; wing, 18 inches; tarsus, 3.10 inches; and commissure, 2.10 inches. It breeds from Alaska to Oregon, but its favorite habitat for that purpose is the streams flowing from the higher mountains into the Columbia. I have seen more of them on the Snake River,

where it flows through northern Idaho, than in any other section of country. Their selection of this region for the purposes of incubation is an excellent one, as they find a profusion of tender grass along its margin, and it is, besides, free from any disturbing elements, for nothing larger than an Indian canoe traverses its waters during the greater portion of the year. While passing up this river on a steamer, last May, I saw several couples paradiog their young broods along the beach, and, though naturally timid, yet they took no notice of our puffing monster until it approached close to the shore, when they trotted off very quietly, and apparently in no hurry. We chased a few in the water, but the parents remained with the youngsters until we approached close enough to almost touch them; they flew, then, but with great reluctance, and left the piping, alarmed goslings to look out for themselves. This the latter apparently understood, for when the steamboat sent a volume of water rolling towards them they dived under the miniature mountain of hyaline fluid, and by this means escaped. It was exceedingly interesting to watch them seek cover under the muddy billows, and in a few moments emerge, with open bill, in the greatest excitement, and in a soft, musical tone call for their guardians. About the middle of June these are half grown, and are then killed in large numbers by both Indians and whites. I have shot them with my revolver from the deck of a steamer, as they were quite numerous even within the distance that would carry. With a shot gun one could reap an anserinian harvest that would set the sportsmen of the East or Great Britain in an ecstatic frenzy.

This goose is a denizen of all the high plateaus between the Missouri River and the Pacific Ocean, and rears its young in many of the streams percolating the country, especially those which have a medium altitude and a northern latitude. It is exceedingly abundant throughout the West from the 1st of October to the middle of December. On the plains of Nebraska flocks numbering thousands are found along the Platte River late in the autumn, and large numbers of these are killed by both sportsmen and pot hunters. The favorite method of hunting here, is to dig a hole in the stubble fields frequented by the geese, cover it with straw, and lie in wait until four o'clock in the afternoon, when the birds resort to feed, then shoot into them as they fly over, and in this way the hunter manages to return home each evening heavily laden with his spoils. Wounded or dead geese are often used as decoys, and prove valuable auxiliaries to the sportsman. Shooting them on the sand bars, as they return to their sleeping grounds, is also practiced extensively, and generally with excellent success.

The *Bernicla Hutchensii* resembles the *Canadensis*, except that it is smaller. It has a length of about 30 inches, the tarsus being 2.70, and the commissure 1.76 inches. Its weight ranges from eight to twelve pounds, whereas the preceding will often reach eighteen, and sometimes exceed this figure.

The black brant (*Bernicla nigricans*), the most duck-like in its habits of all the anserine, frequents the coast region principally, making its habitat among the salt marshes or tidewater lands. Its head, neck, and body, anterior to the wings, are a deep black, passing into sooty plumbeous on the remainder of the body, except the rump, where black prevails. The throat has a white patch in the middle and on the sides; the collar on the nape is interrupted behind by an isthmus of black. The body is small, but the flesh is excellent; the voice is quite thin, not being by any means as full and vigorous as that of its congeners. When flocks are flying over at night one can readily detect this species by its vocal peculiarity. Another means of distinguishing it in the air is that it does not adopt the V shape in flight, and that the flocks, in their migrations, are much smaller in numbers than the other varieties or species. It seems to be very fond of the water, as it is liable to be found at any moment riding the billows flowing shoreward, or wafted about by the gentler current of a lake. A large portion of its food is composed of fish, yet the flesh is free from

the disagreeable flavor generally produced by its plumage. It is not hunted as much as the others, owing to its aquatic habits and solitary rovers.

The *B. leucophaea*, which resembles the Canada goose, except being darker, is found from British Columbia to California—sometimes in flocks by itself, and frequently mixed up with its congeners. It has a length of about thirty-five inches, and its weight varies from twelve to sixteen and even eighteen pounds when in good condition.

The cygnine we have two varieties—the American and the trumpeter swan. The bill of the former is as long as the head, broad and high at base; feathers radiating on the forehead in a semi-circular outline. The anterior extremity of the nostrils is forward of the commissure. It has a length of 5½ inches when full grown; wings 22, and tarsus 4.25 inches. This beautiful bird is an inhabitant of the Columbia, Snake, and Lower Willamette rivers. Flocks varying from twenty to one hundred can be seen on the Columbia lake in the autumn, and they present a handsome ornithological scene as they soar over the bluish-green forests of firs, or sail gracefully with the current. Several are captured or shot for their feathers, and I understand that some are eaten. I have heard hunters speak of them as good eating, and others say they were tougher than tanned buffalo skin; but from personal experience I am unable to decide their gastronomic qualities.

The *Cygnus lineator*, or trumpeter swan, is also quite common. It differs from the former in having a bill larger than the head, and the feathers on the forehead ending in a semi-elliptical instead of crescent-like outline, while the anterior extremity of the nostril is only half as far forward as the commissure. This species derives its name from its peculiar voice, for it forms an exception to the general silence of the family, at least to those in a domestic state. I shot one on Swan Island, in the Columbia lake, to see if I could find a note of that delicious sound which it is said to pour forth when about to bid farewell to the joys of this world, but I failed to hear it, perhaps because, like the music of the spheres, my sense of hearing was not acute enough to catch its enchanting tones.

MORTIMER KERRY.

For Forest and Stream.

THREE MONTHS IN FLORIDA FOR A HUNDRED DOLLARS.

IT is a pity that people other than rich, should be afflicted with sickness or diseases that spring from a craving for a change of climate. So wide a difference exists between the climatic conditions of the Northern States and that of the South, that it is quite practicable, for many persons, to possess of means to remedy any defect in his constitution, pulmonaryly, if this expression be allowable, merely by a change of residence. It is so well known that it needs no further showing, that consumption, that scourge of the North, can be cured, (if not radically, at least its fatal consequences postponed,) by the patient is taken in land in the early stages of the disease, and treated to a dose of the pure and health-giving climate of Florida. It is so well known that thousands seek, and gain relief, by a temporary residence in that land of the "Fountain of Youth."

Perhaps that term, "the Land of the Fountain of Youth" has not already been used several thousand times; but no matter, it is very telling, when one would attract the attention by the use of sonorous phrases. But Florida deserves all such flattering titles as the above, and that of the "Land of Flowers," no matter how much her defamers may say to the contrary. There are thousands more who would be but too glad to avail themselves of the advantages accruing from a winter's stay there, could they but afford it. Consumption is so insidious in its approach that its victim is lulled by a fatal sense of security to postpone the day of departure until too late, and he departs only for the shadowy life. Any well-to-do gentleman who wishes to avoid the result of a sufficiently early change of the disease to warn the patient, and then—then only, is the time to profit by the knowledge, and leave a place of death for a country of health.

To those who are suffering; who are hesitating, dreading the annoyance and expense incident to a voyage to Florida; feeling that they would rather face the certain dangers of another winter at the North, I address myself. To such a horde of citizens the information to be given here will do much to amuse—to those who read, or ought to read, the FOREST AND STREAM, who, though in good health and strength, have unassisted longings for the game region of the South. It cannot be denied that many sportsmen are just now suffering from a plentiful lack of money, and any suggestion tending to furnishing a moderate supply of game at slight expenditure will be acceptable. To them, then, as well as to the invalid, the following notes may be of service; though, in fact, as may be expected, the invalid will drop his role of sick man and assume that of sportsman, at an early period of his stay in a land whose climate is so gloriously rejuvenating as that of Florida. Since the writing of this paper was begun a letter has been received by me, one of many of like tone, which was written, evidently by neither invalid or sportsman, and as it illustrates the widespread desire to wing the way south, let the birds so common to us all at this season, it is given *verbatim et literatim*.

September 24th.

"DEAR SIR,—I have read of some of your work in FOREST AND STREAM with great interest, as I take quite an interest in Florida I should like to know if you are going out again this winter, and if so, if you imply any one from on this side to go with you, as I wish to go but cannot afford to do so, an expense to myself if I could get some kind of a situation to go in I should like it, if you know of any opportunity offering will please to let me know of it and you would oblige me very much."

It pains me very much that I cannot afford the writer of the above epistle an "opportunity" to luxuriate in the orange trees of the Flowery Land, but I can tell him how to do it by a small outlay of his funds, and that's what this long introduction is intended to do. In fact, the expectations expressed by my announcee's trip to Florida for a hundred dollars, I must assume that the tourist be tolerably strong and able to endure a sea voyage in a sailing vessel. That, you may say, is rather rough! Well, one can't get a dinner at Delmonico's or the Parker House for fifty cents, no more can he make the trip to Florida in a palace car for \$15.

PAGES.

Fifteen dollars will cover the cost of a "cabin" passage from New York to Jacksonville, in Florida. Fifteen dollars and two weeks time. Perhaps three weeks; may not consume but eight days; but two weeks is a fair average. Assume \$15 is expended for passage down, twice fifteen (coming back) makes thirty dollars, leaving a balance of seventy dollars for other expenses for two months, (one month supposed to have been passed on the briny deep. Regarding the joys and delights of an ocean voyage in winter, I remain silent; that is a matter of taste, and individual taste does not come within the scope of this article.)

There are people who revel in the beauties of an ocean storm; who climb out upon the bowsprit as the wind rises and falls to get the full benefit of the plunge. To such, a trip to Florida in a schooner would be unalloyed bliss, provided cabin accommodations were good, and "grub" well cooked and varied. Again, there are those to whom the dreary monotony of sailing on and on is horrible, and to whom a storm but represents so much racking of bones, and so many dangers lost forever. These seek consolation within themselves, and draw upon their reserve fund of vitality fearfully.

Other routes are at the disposal of one not confined to a limited amount of cash, and for thirty-five dollars he can reach Florida by one of the many steamers that ply between New York and the South. These steamers run to Charleston and Savannah, and connect with other steamers that enter Florida. The accommodations are very good upon the majority of the lines, and the time consumed in the entire trip generally less than five days. All rail routes, there are, for those who dread the ocean, which make the distance in about a day less, and at a cost of about forty-five dollars. If the railroad building between Jacksonville and Savannah is completed in season for this winter's tourists, a saving in time of some twelve hours and much disagreeable water travel, or dangerous railroad travel, will be avoided. The most profitable way, in my opinion, is by steamer to Savannah and thence by the new road direct to Jacksonville. Provided that it is not opened and time is not an object, the "inside route," among the sea islands of Georgia, is very pleasant.

WHERE TO GO.

There are but three ports directly accessible by sailing vessel upon the east coast of Florida. Commencing with the northernmost, these are, Fernandina, Jacksonville and New Smyrna. The two first named have a large lumber trade with the North, and frequent opportunities are offered for passengers on freight upon the vessels engaged in the business. They go down light, in ballast, and are but too glad to receive any quantity of freight. This is why Jacksonville can furnish provisions and nearly everything else at New York prices.

Fernandina has many inducements to offer in the matter of out-door life. It has a magnificent ocean beach, pure air and delightful bays, harbors, creeks and rivers to sail and fish, close at hand, and many things it outranks its lower neighbors, but in the way of game it cannot approach some places on the lower coast and St. John's. It has direct rail communication with the west coast at Cedar Keys, fare about \$7, and steamboat communication with Savannah and Charleston by both the inside and outside lines. The town itself is orderly, pleasant and well supplied with markets and stores.

As a place from which to reach the most attractive portion of the State, Jacksonville should be selected. Situated upon the St. John's, it has steam communication with every settlement upon that interesting river, and with St. Augustine, New Smyrna and Indian River, upon the coast. It has direct rail connection with Tallahassee, the capital of the State, with Cedar Keys upon the west coast, and thence with all the Gulf ports, the keys and Cuba, and with Savannah, by the direct circuitous route, and a more than new one, being naturally so centrally and commandingly situated, drawing the trade and productions of the St. John's with its countless tributaries and lakes, it is the place of all places to obtain a first glimpse of Florida in its most flourishing condition. The climate of Jacksonville is not all that could be desired, for it does not possess that remarkable softness and warmth generally supposed to attend it. In winter it will chill a sensitive invalid to the bones with its nocturnal frosts. It has much that is desirable, however, in its bright warm days, and possesses a grand birdlight in the St. John's alone. Here the camper-out had better procure his outfit, except tent and personal effects.

From Jacksonville to Enterprise, 300 miles up the St. John's, the fare by steamer is \$12, and of proportionate price to intermediate landings. To Salt Lake, the farthest point reached by steamers, (curious stern-wheelers,) it is about \$6 more; all freight at the rate of about \$1 per barrel; a small boat up the St. John's pays \$5 for passage upon the steamers. Indian River, the great game section, is reached *via* Salt Lake, from the St. John's, the distance across land at that point being but six miles.

New Smyrna, about 100 miles from the mouth of the St. John's, has more inducements in fish and game, and rent enjoyable camping life, but lacks the many conveniences of diet and travel that the other places possess. Few vessels visit it, and these for lumber, chartered by live oak contractors. For a party in good health, with plentiful supplies, it is the best point one can choose for a few months stay, when the object is merely to gain flesh and have a good time hunting and fishing on large lagoons, thirty miles in length, enter the ocean at this point, and to the south or Mosquito lagoon, can be reached the famous Indian River.

St. Augustine, though claiming attention from its delightful climate and the interest attached to its ruins, is not especially referred to, as not being in direct communication with the north. It has small sailing vessels, as well as New Smyrna, connecting with Jacksonville, and rail connection with the St. John's, but is a dear place to visit.

WHEN TO GO.

depends upon so many things that it is not an easy matter to advise correctly. If one wished merely to get rid of cold weather, then the first of December would be a better time, being sufficiently early, and in season to catch a parting touch of the hot season. The months of January, February and March are probably the best to spend in Florida; being the pleasantest there, as well as the most trying to the invalid at the North.

Perhaps a few facts as to climate will be pertinent to the subject, and are accordingly produced. By reference to

my note book of three years ago I find that the temperature, in January ranged from 28, to 80 deg.; was more equable in February and March, with less extremes, though growing warmer. The mean temperature of January was about 60 degrees, according to the only tables at present accessible the mean temperature in New York, for January, for 20 years, was 57 degrees, for February, 58 degrees, and for March, 63 degrees. In St. Augustine, for the same time and months, the means were, respectively, 57, 59 and 63 degrees, thirty degrees warmer than the mean temperature of West Point during the same period and months. At Key West, the extreme southern port of Florida and our Union, the range of the thermometer was nine degrees higher than at New York. The climate, however, is entirely modified, and on Indian River the change is much greater, temperature being several degrees warmer.

CAMPING OUTFIT.

With the object in view of spending two or three months in Florida at an expenditure of no more than a hundred dollars, the only mode of living practicable will be in the open air. To many of the readers of this paper, whose camp fires have gleamed in every corner of the Union, the proposition to camp in such a wild and delightful climate as that of Florida, would be hailed as likely to give the "substance of things hoped for." Let those who wish, patronize the hotels at a monthly expense exceeding our total outlay for the entire trip. Camping, however, is to be the manner of living, and to do this successfully, much is needed. If desired, this luxury can be dispensed with, and a shelter constructed with the stalks and leaves of the palmetto. To one "handy" with an axe and knife, and an old campaigner, this house-building would be a small matter. It is assumed, however, that the party be ignorant of all that pertains to camp life and needs to go provided with a shelter from the elements. Now tents can be bought in any variety, but what is really needed is—first, a tent to withstand the weather, and the greatest amount of room consistent with weight and bulk. A tent, large enough for a party of four, with room for "traps," and provisions for two months, can be made at an expense of about \$15, if made by the party, and of light, waterproof drilling. It should be about twelve feet long, with walls about four feet high, and a slanting roof, with no poles, and no ropes on the ground. Should be made so that it can be tightly closed at times. Fifteen dollars for a tent and thirty dollars for passage down amount to forty-five dollars already expended. Can we provision and provide for the welfare of the party with the remainder? Let us see.

After the tent poles are cut, at the place of camping, which should be upon fresh ground, in a rather airy situation, the objects to be provided for are—first, a heavy tarp, and we have a habitation. If a party of four start together something is saved to each individual, as the labor and expense of freight, etc., is much less borne individually. While one is driving tent pins and another cutting wood for fire, another can be preparing the food for cooking, while the fourth is hunting for the long "Spanish Moss," (Tillandsia,) for bedding. Provisions demand the first attention, and the first thing to be provided is a heavy hunter. Pork, then, must be taken, say fifty pounds; this may be enough and it may not; there may be an abundance of venison, when the pork will, of course, be consigned temporarily to solitary confinement; but the chances are, that pork will appear upon the table, or palmetto leaf, three times and more a day. Pork \$5; dry salted is best for transportation, and a course bag, denominated "gunny-bag," the best receptacle for it.

Some persons may need to be told, is sometimes called the staff of life. That depends wholly where it is. In some places it is made of secondary importance to whiskey, and the true Floridian regards the fluid that cheers, likewise inebriates, as the real staff and mainstay of his existence. When the whiskey is gone he is gone. When the popularly known "stuff" is gone, he can repair to the nearest hammock and eat a "palmetto cabbage." To me, satisfactory food is the first thing to be provided for the march loved whiskey. Flour for one person, two months, sixty pounds. Better take the self-raising flour, either Lecker's or Jewell Brothers', being in convenient packages, and ready for use by the addition of a little water and a stick, (not the metaphorical "stick,") it is much prized, and saves a great deal of labor. With the flour costing about \$3, and a box of good crackers, (better than flour, because they are ready cooked,) costing as much more, one will be prepared with all the farinaceous food he needs during his stay. A few pounds of meal, costing nothing worth calculating, should be added. A bushel or a barrel of good potatoes is necessary, and if those give out, sweet potatoes can be purchased at a dollar per bushel or less. Upon the man who would exclude the potato as a luxury dispensable. We can afford it, the quantity desired, and with so little cost, it remains the mainstay of our hundred dollars. Who does not remember the delicious, delicate, fragile, conceptions of potatoes sliced and prepared at the higher class restaurants? At least, who does not remember reading of them? Two dollars fifty for potatoes, and as much more for coffee. Nothing so helps to strengthen one after a heavy tramp, or long hunt, as a cup of good coffee. Carry it whole, and in a frying pan and pour it into a sugar-bag with an axe. Thus it is kept until needed, of refreshing strength and vigor. The condensed coffee is liked by some, and if it suits the taste, should be taken, as it saves much in bulk and preparation.

A dollar more needs to be added for this substitute. A little sugar, of course, unless one prefers "log sweetening," which latter is more liable to loss, being un-pick-up-able when split. A couple of pounds of condensed milk, costing but three or four dollars, will last a single person a long time. If this is taken the sugar may be dispensed with; if it is not, then take three dollars worth of cut leaf sugar. In a land of sugar cane one need not be without sweetening for his coffee. Salt and pepper, a few pickles, or pickled onions, and a little condensed beef, in all not exceeding three dollars; to which may be added, very gratefully, a choice lot of delicacies, such as nutmegs, and other things that we haven't got any further than the ladder, and have expended sixty-eight dollars already. The indispensable cooking utensils are few. First, as the chief friend of

For Forest and Stream,

WOODCOCK AND WOODCOCK SHOOTING.—NO. 2.

THE woodcock begins its yearly migration from its southern winter quarters to its more northern breeding grounds early in the spring, and makes its appearance with us about the latter part of February or the first week in March when the winter has been open and mild, but in seasons that have been blustery and cold, their travels are delayed as late as the first of April. They appear to cloase the progress of a southeasterly storm on which to make their journeys, and frequently after such rains, are found in great numbers scattered throughout the country.

Very soon after their arrival they begin laying and hatch their young in about the same time as the quail—three weeks before the period of incubation of the latter bird—and when sections of the country in which they breed are visited in early spring by severe snows and freshets, thousands of the young are destroyed, as in the past season, when very few broods escaped the heavy snow and rains experienced in the Middle and Northern States on the 23rd and 24th of April. I am not inclined to believe the woodcock as a rule raises a second brood, which I have heard argued, and it is only in "dry" years, as has been destroyed early in the season, can I think the parent birds begin to nest again, for our springs are too variable to regularly permit the hatching and rearing of a first, and to give time for the raising of a second before their moult time, which begins in August. I will not say the woodcock does not frequently have two broods, but feel convinced such is their habit only when deprived of their young by early spring rains or snow.

I have always looked upon the present law respecting woodcock as unjust and not giving the proper protection to the bird, and would advocate the close seasons to begin January 1st, and end September 30th. I have been particularly inquiring of my shooting friends who have been in quest of woodcock many times during the past summer, what had been the ratio of young birds to the old ones they had killed, and in almost every case found that where two or three were bagged, but one or two young were to be found, proving beyond doubt that the severity of the weather in the spring had destroyed the greater portion of broods, and the sportsman had been "killing the goose that laid the golden egg," cutting off the source of supply for the next season, and preventing the rearing of a second brood.

Granting that woodcock four years out of five are in condition to be shot in July, how much better, how much more sportsmanlike, should it be to allow them to remain until autumn, when no doubt can exist of their being in full plumage, strong and vigorous on the wing, and without the cares of a family?

Summer cock shooting when the mercury is among the nineties, and in swampy thickets where mosquitoes and flies are swarming in myriads, cannot possibly be compared to autumn shooting of the same bird. In the first season, we have it hardly two-thirds grown, often being tattered before we reach home, while in the latter we find it far more difficult object to bring down, much more puzzling in its flight, and worthy of the sportsman's skill.

About the middle of August the woodcock leave their old haunts in low wet localities apparently almost in a mass, to seek higher and more mountainous sections where they now pass undisturbed their moulting season, and to remain until early frosts drive them to more sheltered and swamplier grounds. It is believed that the birds take to the corn field to moult, but I think it safe to say they are only attracted thither in wet seasons for their usual food. I have shot them in such places quite frequently in July and the first of August, but have always noticed the ground was moist enough at the time to admit of their boring in search of worms, the larvae of insects, &c. In searching for food the woodcock appears to depend upon the sense of smell, and in one of the most interesting operations to the spot where a worm is hidden. Some years ago I secured a full grown bird, which had flown against a telegraph wire and injured its wings, and having furnished it with a supply of worms which I placed in a box of earth, turned it loose in a large enclosed summer house, and for several evenings watched it while feeding. Taking a position on one side of the box it would gently touch the earth in different places until its bill came finally on the spot where the worm was situated, when it was thrust downward to the nostrils, and the food secured, which it would swallow after throwing its bill up and that the worm might pass down end foremost.

During droughts in July when the smaller streams are dried up and the ground becomes parched, woodcock are driven to the cripples bordering our rivers and creeks in search of food, and great numbers are killed there. Sometimes when they are thus concentrated as they were in a season marked by dry weather is called a good one for woodcock; in one sense it is, namely, for their slaughter, but I should more appropriately term it a very bad one for the bird; indeed this shooting of cock, when they are collected together to a certain extent in places that are always moist, deprives the sportsman of a greater enjoyment in the fall, for I have then noticed the autumns are just as noted for their scarcity.

The woodcock has this year received a blow from which it will not soon recover, and if good laws looking to its protection in the summer, are not passed, in a few years we will have no cock shooting at all.

To insure success in autumn cock shooting, the sportsman should select a dog that will work carefully and slowly in cover and be not too anxious to disclose the bird he is pointing for, although woodcock lie well, they differ from the quail in not being quite so stubborn in their hiding.

In beating for quail in November we should never neglect working on the hill sides of second growth timber, or saplings adjacent to swampy bottoms, which come in our path for woodcock. Black alder margins of streams running through woodlands should be visited, for if any flights of birds have come in from more northern sections impelled to point to the South by still earlier frosts, a good sportsman be fortunate enough to find such a country, and be on the ground at the proper time in autumn, he will never forget it, and evermore denounce the shooting of woodcock in summer. H. HOSS.

the camper-out, is the frying pan. Never omit it. Let it receive early attention. It should be a foot in diameter, well made of wrought iron, and with a long handle. The handle is especially marked long in italics for the benefit of the novice in cooking over an open fire.

Next in order is the bake kettle, an article once in use among our ancestors a hundred years ago, or so, in the good old times; and to be found in every cracker family at the South at the present day. The camper-out should have a bake kettle at least a foot in diameter, and cost, with the frying pan, not over \$3. A quart tin cup, a tin plate, a knife and fork, and spoon, will be seen only to be appreciated by the knowing one. These may be duplicated, as the loss of either, though not wholly irreplaceable, might occasion discomfort. They cost but little, say a dollar or so. A sharp knife should be in camp, but we are not Yankees if we do not have a jack-knife in our pocket. An axe or hatchet should certainly be taken, say \$1 for a hatchet. A few matches, candles, a little soap, salve for bruises and liniment perhaps, should be taken, and two dollars will cover that whole bill.

For a complete list of small articles of use in camp, I would refer the reader to numbers of FOREST AND STREAM for October and November, 1873, where, in "Hints to Sportsmen," he will find many valuable and timely hints upon woodcraft and camp life.

As an extra expense, entailed in respect to clothing, nothing will be allowed for its purchase. If anything, there should be credit given for the amount saved by wearing old clothes the entire winter. Aim to dress comfortably, and be able at times to dress warmly. Take a good stock of old cast-off clothing and remember to donate it when you leave for the benefit of some one—you are sure to meet him—poorer than yourself. At least one pair army blankets, consisting of \$60, a rubber blanket, or better, a good one, costing \$2. A mosquito net, or bar, of fine lawn or mosquito netting, is absolutely necessary, as mosquitoes and sand flies fairly revel at times, and at such times—generally when the camper-out most desires repose—commit unsufferable depredations. Make the bar of fine lawn or cotton cloth six feet long, four broad and three high. This will shelter two persons, or one, and will cost about \$3. A sheet of fine muslin, or gauze, will be valuable in not travelling in the woods, and as he will not want to remain at all times in close vicinity to camp, and as the faculty of direction is not generally sufficiently developed in an amateur to enable him to wander far into the swamps without getting lost, one had better be taken. Expnd a few dollars in fish lines; good, strong bass lines and hooks, and some smaller ones for speckleback and smaller fish. These, with the expense of outfit, will cost at least five dollars, making a total expense for the whole trip of ninety dollars. This leaves \$10 for contingent expenses, which, by a judicious expenditure, may be made to conduce materially to the comfort of the camper-out. I flatter myself that the amount would not have remained had I not, by very careful calculation, reduced his wants to the minimum. Do not cast about for some means of spending this sum, though it may be small enough, but I think what I give upon it, at least until the very last week of camping. By the addition of a few dollars one can secure a most convenient arrangement called a "camp kit," containing everything desirable for cooking in a small space. In a large pail is packed frying-pan, plates, knives, forks, &c.—in fact, everything necessary to the wants of a party of six for the sum of a dozen dollars. And then there is the portable stove, which, weighing but a few small pounds, will prove a blessing in any camp. A kerosene stove is very convenient, but will necessitate carrying fuel, while for the camp stove, the fuel is at hand, only needing to be cut. I speak of these things lest any one should think me regardless of their comfort. It is possible that some desiderata may be omitted, but the main desires and wants at least, are provided for. In provisions there may not be quite enough, but I think what I have enumerated will supply the wants of a winter's stay. Fish and game will very likely aid greatly in providing for your wants; but then fish are sometimes very perverse and will not bite, and turkeys, quail and deer will persist in seeking themselves in inaccessible places. That ten dollars should be sufficient to cover all extra outfit for provisions. Now I expect some envying person will say, "You have not provided game and outfit, and I think you are necessary to one's comfort in a land unknown to him."

I know that. I didn't agree to; merely promised to take you to Florida and back, giving a month on the water, two on land, for one hundred dollars. I have done more than that. I have provided for your wants for that period, not taking into consideration the fact that your bare board at the North would cost you twice the amount I will to camp. You haven't allowed for the value of the cooking utensils, blankets, &c., which they have served your purpose, and you do not consider, though it is true as gospel, that you have, if an ordinary man, saved at least half the expense of clothing a winter's residence at the North would necessitate.

Really the trip to Florida has cost you nothing, and with a little more time and "faggerly" I might perhaps show that you had made money by the venture. Am, and you will come back with a renewed lease of life and rejoicing in regained strength, which of themselves, are inestimable and inalienable. A gun, by all means, should be taken, and if the choice lies between shot gun and rifle, take the former. With a shot gun one can secure a greater variety of game than with a rifle, and should be able to supply the camp. Do not get a muzzler if you can procure a breech loader. There is no comparison between them, and I unhesitatingly conceded the breech loader surpasses in safety, and rapidity of loading and firing. There is little choice in the various kinds, except in price; they are all generally safe enough, and the choice of selection will depend mainly upon the length of the purchaser's purse. The Remingtons manufacture the cheapest. The new side-action "Fox" gun is the best now produced, probably, and destined to hold at a high price for some time. Prices from about \$25 to \$40 for the latest and best. A Remington. A revolver is sometimes useful, but not necessary, unless one is expert enough to kill small game with it. My word for it, there will be no occasion, unless one

visits the wilder portions of Florida for its use upon larger game, if I may except an infrequent chance at deer or turkey. Take a few steel or brass shells for the breech loader, but let the bulk of them be paper, which, costing but \$1 per hundred, can be thrown away after discharged, and thus much weight of carriage and annoyance avoided. By oiling them well they will not stick in the breech, and will prove equally serviceable. Carry a quarter keg, fill with good powder, as it can be readily exchanged for other things, if not all needed. In short, take three sizes; a few pounds of buck; ten pounds No. 2, and ten of No. 6 or 8. This will give sufficient variety without too great weight. If caps are taken, choose the best Eley's. The cheaper grade of water proof at about \$1 per m. is good enough.

And now, if you would enjoy himself to the fullest extent, let him take a boat. Whether he camp on the coast or the St. John's, he will find himself sadly at loss for means of conveyance, unless he has a boat of his own. Good boats are scarce in Florida out of the cities, and cannot be obtained. It is not necessary that it be valuable or fast sailing, but it should combine safety with lightness and buoyancy. For merely coasting about the creeks and quiet portions of the inlets, a light boat, like a "dory," or gunning shif, is all that is needed. But for more extended voyaging, a larger one, built upon the same pattern, is what is wanted. When not in use, it should be drawn upon the sand and covered with palmetto leaves to keep the sun from warping it. A coat of copper paint is necessary to prevent the worms, in the brackish waters of the coast, from riddling it with holes.

It is thought that everything is now provided for a three-months trip, and affording a few words regarding the drawbacks to enjoying life in Florida, as elsewhere, this paper will be brought to a close.

ANNOUNCEMENTS

incident to a camp life in Florida, the insects take first rank. In fact, there are no other real causes for complaint. Mosquitoes undoubtedly take precedence of all others as the most blood-thirsty, persistent and numerous. They cannot be entirely avoided, though they may be kept at bay by the use of a good mosquito bar, large enough to cover the blanket and being in light; in the day time their depredations are confined to swamps and dark places, and at such times, which sometimes appear in clouds, bite like a bull-terrier, and sting like a red hot iron. They will crawl into your hair, nose, ears, unless much care is used, and withal, are undesirable neighbors. They bite principally in early morning and evening, but are very uncertain, and their mosquito is bad, the worst of all, there is one that can hold a candle (figuratively speaking), to the flea. In many things the flea, the wicked flea, is wholly unapproachable. He can jump farthest, hold his wind longest and bite the cussedest of any members of his tribe. Of all things the most annoying, he holds on, hits hard, and his persecutions end only with his death. He is a regular hard-shell Baptist; and if there is no place of future punishment in his creed, his victims are not likely to be any more than if. If one of these crustaceans takes up his abode with you, it is for life, and should at once be hunted down. But the flea is not indigenous to Florida, as is well known, and he has no particular State for habitat, though dwelling only in certain places. If the camp be pitched in an old plantation, or near a family of crackers, where canine and porcine quadrupeds do abound, then look out for fleas. Camp on fresh ground, near fresh water, or in a swamp, and you may be exempt from their ravages. Should a flea obtain a lodgment in your garments, (you will know it at once,) lose no time in doffing your clothes and instituting a thorough and vigorous search. Remain out a week rather than carry him to camp. These are extreme measures not recommended—only suggested.

Scorpions sometimes alarm the camper by suddenly appearing from under an overturned piece of bark, or perhaps from under a blanket. They are not very common, and their sting, though painful, is not fatal. There is no danger from them unless suddenly grasped or confined in the clothing. They are very disagreeable visitors, however, and one that I happened to take in my hand once, gave a rude shock to my nerves, though it did not bite. It said that salt and vinegar are good for the bites of mosquitoes, take tar and oil and smear the face and hands, though there is a feeling against such a remedy. Ammonia is recommended, though of little use. Fear of snakes is almost wholly groundless. Though many varieties exist in Florida, there are but two to be feared, the moccasins and rattlesnake. The former is in great abundance in the swamps, though the rattlesnake is not common. Both are exceedingly venomous, and their bites speedily prove fatal. There is little danger to be apprehended, except from snakes in the grass; the danger being in stepping upon one unawares. There are many remedies which may be spoken of in the next article, but the one surest in effect and most generally in use is whiskey in large doses and soon taken. This may account for the general and widespread use of that article, as it is in great demand, and there are many who believe that a remedy of prevention is worth an ounce of cure, and act accordingly.

HEALTHFULNESS

of the country is the first consideration. It has been abundantly and conclusively shown that Florida is tolerably free from any endemic disease. The climate of the coast is remarkably salubrious and conducive to health. Except in the near vicinity of swamps, and along the rivers and fresh water lakes in summer, there is no cause for alarm, and one can preserve his health with tolerable care. A winter's residence in any section of the coast is not likely to give one who is in good health, and justly dreaded—the "shakes," have camped in swamps and marshes night after night and have passed weeks upon the banks of rivers and lakes, with no covering over me at night except my blanket and mosquito bar, and have yet to feel the slightest touch of fever. I have known of instances of fever the first season, but do not think the disease was contracted there. So far as my observation extends, I am inclined to agree fully with one better qualified to judge than myself, that "Florida possesses a much more agreeable and salubrious climate than any other State or Territory in the Union." FRED BEVERLY.

—The average temperature of St. Augustine, Florida, for September, was about 70 degrees.

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

SETH GREEN HONORED.—We learn from the Rochester Democrat that the Societe d'Acclimation de Paris has requested and obtained permission of Seth Green to translate his work on Trout Culture into the French language. The request urges that such translation would be of great service to Frenchmen. The honor is well merited, showing that his labors and talents are appreciated abroad, as well as at home.

—Fishermen will do well to observe that, in accordance with a law passed by the last Legislature, the Board of Fishery Commissioners give notice that black-bass spawn from the first day of May until the fifteenth day of July, pickered spawn in March, April and May, pike and perch in April, May and June, sunfish in June and July, trout from the fifteenth of August until the first of April, yellow perch in March, April and May, catfish in June and July, during which time it is unlawful to take the said fishes. The penalty for having any of these fishes in possession during the times mentioned is \$5.

AQUARIA AT THE STATE FAIR.

EDITOR FOREST AND STREAM:

Among the many attractive things shown last week at Rochester hardly any interested, instructed and amused more people than the fine display of fish exhibited by Seth Green. While many points of seeming attraction were, at times, almost deserted, these beautiful aquaria were densely surrounded at all times, and it was almost impossible for your correspondent to fairly see the collection, and by the courtesy of Mr. Green he was admitted within the circle. The arrangement was excellent. The tanks of clear glass were around a large circle, open freely on the outside, but shaded by a canvas cover, under which were gracefully hung globes of gold and other brilliant fish. A line passed over all the tanks and kept them fresh, clear and aerated, and the fish were all lively and active. A description of all that was there open to every eye would be very valuable to your readers, but the time of your correspondent was far too limited to permit suitable notes to be taken. Among the more interesting fish to sportsmen were the young Kennebec salmon, the small Sacramento and Pacific salmon, the brook trout, the latter beautifully shown, and the famous grayling, with some distinctive females hatched from eggs obtained by Mr. Green in Michigan. The gayety bass were well represented by specimens of black bass, Oswego bass, strawberry bass, rock bass, and rock fish bass, and the bright-headed sunfish, familiar to recollections of pink hook ventures, delighted the little ones held up to look. One large tank was filled with a great variety of fish. Bass, gar fish, turtles, crabs, eels, trout, scurgeon, and a dozen other wrigling, creeping and crawling forms were all living in peace, even the live pickered being "for this occasion only" well conducted—probably being a vegetarian reformer at this peace congress—and looking through this aquatic mass were dozens of wondering eyes that seemed never to tire of seeing so clearly the life that goes on under the surface.

The effect of seeing the crowd through the glass and water was very dull. The motion and refraction of the water mingled the features of the faces pressed to the glass with the fins within, not one's studies of the finny denizens were interrupted by a series of eyes, mouths, and noses in kaleidoscopic confusion; very unscientific, but equally amusing. It was a valuable lesson among the many at the fair, and well appreciated. Many thousands saw it and went from it with new ideas and freshly awakened interest in our valuable fish, and it is to be hoped that some one will, another year, show in as attractive a way our wild game birds and animals, and with each variety mention its breeding season and the proper time for legally killing it.

Mr. Green could present his fish at an annual meeting of the American Fish Culturists' Association, if these beautiful aquaria were made, and many would value the opportunity to deliberately study the classes of fish and their peculiar habits.

UNITED STATES FISH COMMISSION,
DEPARTMENT OF THE PACIFIC COAST,
McCLOUD RIVER, CALIF., September 23d, 1874.

EDITOR FOREST AND STREAM:

We receive from Mr. P. Rockwood, Esq., Superintendent of Fisheries at Salt Lake City, Utah, interesting accounts of the shad, salmon and oysters which Mr. Stone has introduced there. Some of the young shad which were left there last year on the overland trip with shad to California, have been seen within a few weeks, and are about three inches long. Of the California salmon eggs which Mr. Stone sent there first Fall, ninety per cent. are now out of the young salmon, but owing to the loss of these eggs, ninety per cent. have. Some were put into artificial ponds, and some into the tributaries of the Jordan River. The fish in the streams are doing better than those in artificial ponds. Their size at ten months varies from four to six inches in length. Various experiments were tried with the oysters left there this summer from the California aquarium car. Three pools were made in Great Salt Lake, but owing to the large amount of clouds and uncommon freshets in the mountains, an unusual amount of sediment has been brought down, and has covered the deposits, so that no live ones have been found among them. Two deposits were made in fresh water, and in one of them no live ones were found, and in the other several dead ones and a few live ones were seen. A deposit was made in the headwaters of a small creek, and in a week it was into which the lake flows at high water, and in both of these deposits the oysters are doing very well. The lobsters left there to date, 1874, from the California aquarium car, have not been heard from. Mr. Rockwood has recently taken a few mountain hermit— which are rare in the Territory, except at very high altitudes—and he intends to try the experiment of propagating them. He also writes with a letter in order for one hundred and fifty thousand (150,000) more California salmon eggs of this year's taking. Very truly yours, M. L. PENN.

FISH CULTURE IN NEW JERSEY.—Negotiations have been opened for the purchase of Lake Weewanape, Connecticut Farms, Union County, N. J. The price fixed is \$300,000, and the transfer is to be made on Tuesday next. The lake covers an area of 200 acres, and is well timbered with the best species of trout and salmon. It will be divided off into compartments, so that the several species of fish in its waters may be divided from each other. It is said that the negotiations are being conducted in the interest of the Prussian Government, and that the salmon will be taken to Prussia to stock the rivers of that country.—N. Y. Times, 27th.

Few things are more willfully treacherous than a newly tarred boat turned keel up on the beach. A man who sits down on one is apt to grow misanthropic, moody and inactive when he attempts to rise; and no matter how many tailors' bills he owes, he is pretty sure to require a re-seat in his pants.

Natural History.

AN ANCHORITE.—There is an attractive strip of woods in Beverly called Snake Hill, which an enterprising gentleman is opening to the public, constructing roads through it, and bringing out its hidden beauties. As one of his workmen was splitting open a large log, nearly three feet in diameter, he found carved, near the heart, a figure of an anchor six inches in length. The log had been split with powder, and consequently the annular rings could not be counted, but it is thought that the tree was not less than ninety years old. The figure, which is solidly filled with pitch, was not deeply cut, probably only through the liber and cambium layer of the young tree.

If the handiwork of the person who carved it could speak, what a history it could unfold of the silent processes of nature. First, after the healing of the wound, and the forming of the liber, or inner bark; then the layer of wood which, as the inner bark is exposed to the elements, and by the dropping away of the outer, hardens, is surrounded by another layer, and so on till the once living outer sheathing of wood becomes hard and sapless heart. In all these years the shape of the anchor is retained, to be brought to light years after its author has returned to dust.

THE HAYDEN EXPEDITION.—Special dispatches from the Hayden Expedition have been received of importance. The results are far beyond the work of previous years. A new pass has been discovered over the main divide low enough for a railroad to the Gunnison Valley, the richest region of the Rocky Mountains. The finest collection of fossil remains ever found in America, has been discovered by Professor Cope, paleontologist, on the shore of the ancient ocean in New Mexico. Forty-seven specimens were found in one day. The megatherium, the mastodon, and all classes of saurian monsters illustrating the gigantic natural wonders of extinct ages are among them.

MATING OF PIGEONS.—Seeing in many numbers of your invaluable paper invitations to fanciers to send you accounts of extraordinary mating or mating among birds, I take the liberty of sending the following as likely to interest brother fanciers. I have now in my loft a pair of an owl cock whom I mated with the hen of the same kind; they lived harmoniously together, and raised last season five pairs of young. During the winter I had the misfortune to lose the hen, when the cock, being a lively little fellow, set about finding another wife for himself. After a few days he succeeded in finding a wife in an unnamed agate hen, who in due course laid the usual couple of eggs, he (the owl) residing there now in incubating them; but when living about the loft I noticed he was paying marked attention to a blue Antwerp, who, in a fortnight after the agate laid, also laid him a couple of eggs, the owl, in the most complacent manner, assisting both his wives; the result being that the agate's eggs are hatched, and the young ones are progressing favorably, the owl regularly feeding them, and also assisting the Antwerp in incubating her eggs, which are not above ten days. If they also hatch, I will write you further on the subject, but I think that, as the young already hatched get bigger, the owl will find plenty to do to help the one hen.

THE MICHIGAN GRAYLING.

I HAVE just returned from a visit to the Au Sable. There I made acquaintance for the first time with the American grayling, which I found to be no myth, but a numerous and rising branch of the salmon family. The grayling is a beautiful fish, and at this season is in fine condition. It spawns in May. I seemed to me more gamey than a humpback, but he observed in many kinds of fish, however. The flesh of the grayling is sweet and delicate, but lacks the high flavor of trout and other fish of the salmon family.

These fish are certainly abundant in the Au Sable and its branches, in the Hersey and in the Manistac, and probably other streams in Northern Michigan. The latter stream is, as yet, comparatively untouched by the angler. All are easily accessible, and afford the finest fly-fishing. The Au Sable is a stream to captivate the heart of an angler or the eye of a painter; water clear as crystal, flowing swiftly over sand gravel and clay, winding between banks clothed with the "forest primeval," and affording charming spots for camping and the "noontide roast."

I was fortunate on this visit to the Au Sable in being a guest of Mr. D. H. Fitzhugh, Jr., of Bay City, who, besides his discovery and patron of the American grayling. Fish culturists and anglers have put him on the roll of honor in that capacity, and he must stand it, whether posterity can or not. Besides filling this honorable office gracefully, Mr. Fitzhugh is a most hospitable and genial gentleman and a true angler, able to quote his line of Horace or Goldsmith apropos, and to cast his line with equal precision into that of any right to the officials will have to meet us in the still. Len Jewell, the "brave boy" who accompanies him on all his hunting and fishing expeditions, rises above the emergencies of shooting a rapid, or pitching a camp, as he does in stature above the heads of his countrymen. Fortunate are they who go into the woods with two such companions. B. F. BOWLES.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
NEW YORK, Oct. 4, 1874.

- Animals received at Central Park Menagerie for the week ending October 3d, 1874.
- One brown Pelican, *Pelecanus fusces.*
- One Sharp-shinned Hawk, *Accipiter fuscus.* Presented by Mr. E. B. Gleason.
- One Flying Squirrel, *Pteromys volucella.* Presented by Miss Mary A. Cole.
- W. A. COSKIN.

Woodland, Lawn and Garden.

LILIUM JAPONICUM LONGIFOLIUM.

"Smithson," of Paris, Mo., asks us to give him and others a description of this surpassingly beautiful lily, and its method of cultivation. We comply with pleasure, and place at the head of this article a well executed illustration of this celebrated lily. The japonicum longifolium is, as you will observe, somewhat of a trumpet-shaped flower, of the purest pearly whiteness. When fully grown, and under good aspect, it is from four to four and a half inches in length, and rich in all the developments of a perfect flower. It is also a perfectly hardy and healthy plant, in which it differs somewhat from another and very valuable flower called the liliium lancifolium, which will be spoken of in a future number of this paper.

The longifolium rarely exceeds two feet in height, and a medium is generally found to be eighteen inches. The bulbs are generally small, and of compact and finer scales. It is not at present grown in such numbers as it should be, but we believe the time is not far distant when it will take a foremost rank among our choice bulbs of the outdoor as well as indoor garden. It need only to be known more fully to be thoroughly appreciated. Among its many recommendations to favor it, that it can be forced with great success. It is admirably adapted for all the uses to which we put our favorite potted plants. We have frequently grown them in the house with the very best success. If our friend Smithson will only follow our directions he will find himself in possession of the most beautiful flower of the floral catalogue, and at almost any season of the year. The soil we have found best adapted for the growth of the above bulb has been composed, when of a made soil, of a friable nature—say loam or peat, and sand, as follows: One part yellow loam, one part silver sand, one part of old peat soil, and one part of decayed soil from forest leaves. If to these you add half a pint of pulverized charcoal, or charcoal dust, you have the best compost to be had for your plants, either for the garden out of doors or the pots within doors. If you choose to give a stimulus to your plants, you should add another part of old, well rotted cow manure. Plant your bulbs, if for out of doors, at a depth of four and a half to five inches, and if for pots a little less. In winter cover the outdoor plants with dry leaves or straw. When once well planted they need not be removed oftener than once in three years, and then only to recuperate and replant.

About the middle of April they will commence to grow quite rapidly, and will now absorb considerable water. The best way will be to apply with a garden syringe tepid water at evening. If you have them under glass, or in frames—as they can thus be grown well in common glass houses—they will need a good circulation of air. I have raised them under glass frames with sun heat alone.

Here a peculiarity of culture not common to many other plants is necessary for our bulbs. From June 1st to the 6th you will fill your pots to the brim with a turf or peat, leaving the stem bare, which will send out its strong tap roots in abundance. Now you will tie up your stems to neat stakes, and give your plants an abundance of light and air. About the 20th of June you should water them copiously with soft water, which can be made as follows: Take one peck of soot and eight gallons soft water; stir it, let it settle, then carefully skim off the top, and it is ready to use from a common watering pot. When the flower buds appear, if you wish to hasten them, you can do so by placing them in a warm room kept moist and close. Your bulbs, being natives of Japan, will at this stage bear a considerable degree of heat, and repay you all your care. As soon as your plants have ceased to bloom, place them in full sunlight, to well ripen the bulbs. Gradually diminish the waterings until you find your bulbs quite dry, and when the stalks are dead cut them, and place the pots in a good dry place until the next season. Then turn them out of their pots, and select the best bulbs for replanting again in pots, and the rest you may plant in a bed in the garden to recuperate for a later bloom in the fall.

Now let none of our readers fall of raising good, handsome Japan lilies next year. If they do it will not be the fault of OLLIPOP QUILL.

ANSWERS TO CORRESPONDENTS.

THAXTER, St. Louis.—Can you tell me anything concerning the "Cassady grape"—what color, what habit, time of ripening," etc.

This grape was a chance seedling, produced in the garden of H. P. Cassady, Philadelphia, Pa. The bunch is of a medium size, and compact, and the skin is slender. The berries are of medium size, round, of a pale green color, and covered with a delicate white bloom. When this grape becomes very ripe we have noticed that its color changes to a light yellow. The skin is quite thick, but a little tough. The fruit is very sweet and pulpy, and has a peculiar sweetness, unlike any other grape we have eaten.

Ripe about the same time as the Catawba. The vine is a moderate growing one, by no means a rambler, yet it is exceedingly productive. The leaves are tender, and hot sunshine will sometimes scald them, particularly if the vine grows in very southern and southeastern localities. It is very desirable as a good grape, as it rarely rots, and does not mildew. You should grow this grape on northern exposure. If you would have good, large, rich fruit. Set this vine in a rich, rather sandy soil, on either a northeastern or a northern exposure, and take good care of it, and we venture to predict complete satisfaction. A fine spire wine can be made from this grape, and will keep growing better and better with age.

OLIPPO QUILL.

MARSHALL, of Tennessee.—"What is this sand?" It belongs to one of the most interesting studies of ages past. It is, when strictly defined, one of a species of the infusoria, which existed before the deluge. This is the house of an antediluvian insect, whose extreme minuteness is such that sometimes more than a million of them are found in a cubic inch of chalk. They were so extremely small, and so miraculously prolific, that their "houses" built up that those large mountains, made up of calcareous substances, crinapages, hold so important a place in the mineral crust of the globe. To the microscopist of today they stand revealed as the triploli of commerce. Some of the triploli are of a red color, and are familiar to every horse painter. Our servants use the coarser sorts to scour and keep bright the kitchen utensils. It is called the oscurous structure of the infusoria.

OLIPPO QUILL.

H. H. T., Esq., Randolph, New York.—I received your package containing the "grasshopper parasites." They are the same kind of an insect that I saw ten years ago, when they produced the most terrible mortality among the grasshoppers. At that period the whole of the grasshoppers disappeared; they were literally eaten up. It was, I recollect, a theme of every day comment, yet to the best of my knowledge there was no scientific examination made at the time. This parasite, according to my own investigations, is an unknown depredator upon grasshopper life. I will let you know the result of my future investigations upon this subject.

OLIPPO QUILL.

The Kennel.

THE WEBSTER SETTERS.

BY GEORGE W. BLUNT.

Being the person who had the first brace of these dogs imported into this country, I will give their history and pedigree.

While on a visit to Daniel Webster, Esq., at Marshfield, I had a pointer bitch which I bought of the Earl of Derby's game keeper. My friend Charles King, who was with me, had a pointer dog, a very fine one, and Mr. Webster was very much interested in their performance when after woodcock. I told him there was a breed of dogs in Scotland far superior—the Duke of Gordon setters—which I could not get, as I was not an F. F. V.; that he might get it if he went abroad. He said if he did he would try. I put it down among great men's promises, and soon forgot it.

In December, 1839, I received a note from Mr. Webster, who had arrived from England, stating that he had a brace of Duke of Gordon setters for me, which I found on board the London packet—John Griswold's line. The dog was named Rake, and the bitch Rachel. The pair were the handsomest I ever saw—gentle and intelligent, with most acute powers of scent.

The pair were sired out of different mothers by Regent, who was bought by the Earl of Chesterfield at Tattersall's as a stud dog, for seventy-five guineas. Rachel dropped eleven pups soon after she arrived in this country, which were distributed among the friends of Mr. Webster and myself.

The dogs, I may add, were obtained through Sir Henry Hallford, the King's physician. After shooting over them for six seasons, Mr. Webster (who went off politically with Mr. Tyler—I stuck to Mr. Clay) demanded a separation of the dogs, he taking to Rachel, and I taking to Rake as most appropriate. I have a picture of Rake, taken in the act of pointing, which describes him far better than I can write; but a handsome, more delicate, intelligent dog never ranged a field. I have known him to point an English snipe over forty yards off. Rake died in 1844, but I kept up the breed, and shot over those of my own raising until 1856. Of Rachel's "mourning" I know not.

THE PESTIFEROUS PRACTICE OF SETTERS RETRIEVING.

NEW YORK, 1874.

EDITOR FOREST AND STREAM.—

In direct contradiction to all theories and most experiences, your correspondent, E. S. Carman, tries to convince us of the utter uselessness of retrieving, and its ruinous effects on setters. The argument he uses has certainly the merit of ingenuity, and, to the eye, might seem plausible; but they cannot and will not be accepted as proof by others. Whether his experience is made up of exceptional, not applicable instances, I cannot say, but to judge from his conclusions, and taking into consideration his previously expressed ideas on "reduced mongrelism," and his avowed preferences in that direction, it would not be the strongest thing were it even so.

I fail to see what connection there is between staunchness and retrieving. Real staunchness, as I understand the quality, cannot be whipped into a dog; it is "bred in the bone," and under reasonable treatment—aye, sometimes even under the most improper usage—is sure to develop itself, if the first consideration of "blood" has not been neglected, and cannot be affected by the cultivation of the setter's instinctive love of fetching. If you desire, by being permitted to retrieve, is led to flush game, and to pick up your mind that by looking back you will find something radically and unalterably wrong!

That retrieving should effect a reversion from *stunning* and pointing to *setting* and pointing, can just as little be sustained by experience. Who has not frequently seen a setter in the act of retrieving, when close on

to the bird, make detours according to the varying current of air bearing the scent, showing conclusively that he was absolutely and literally *following his nose and not looking for the bird!* While hunting last Fall I crossed a mountain that had been swept by fire, leaving the ground covered with wild ash, and an incident that seemed very much *appropos* in this connection occurred to me there: A grouse rose wild and was killed, falling in full view of where I stood. After reloading I gave my little *retrieving* setter—not more than four or two years old, the order "Lead bird." The dog had seen the bird fall, and with fire, leaving the ground covered with wild ash, and an incident that seemed very much *appropos* in this connection occurred to me there: A grouse rose wild and was killed, falling in full view of where I stood. After reloading I gave my little *retrieving* setter—not more than four or two years old, the order "Lead bird." The dog had seen the bird fall, and with

This is a single instance, which no doubt many a sportsman can multiply ad infinitum from his own observations.

The pointing before fetching is, to my mind, by no means essential; it is pretty and nothing more. The most killing and staunchest working dogs I have ever seen could not be induced to point dead, and they furnished the most unanswerable arguments against the theory that retrieving can only be obtained at the expense of staunchness, by invariably pointing any fresh bird that happened to be on their path while in search of the dead, their merrily seething powers enabling them to discern between dead or wounded and alive, and never once leaving them astray.

And now, as a conclusion, I call attention to a great inconsistency in Mr. Carman's own arguments. He says in the enumeration of the points and virtues of a thoroughly house-broke dog: "He seeks, finds and fetches any article from a three cent piece to a handkerchief, ball, or hat." Why is such stress laid on this, when he intends to say to the dog in the field, for which he has with great care prepared him: "You shall not fetch; retrieving is not only no part of a setter's education, but it is essential to the success of his leads in the field!"

In these times of breed leaders and general expeditiousness, we cannot afford to waste precious moments in appearing personally in the role of retrievers, and I emphatically endorse your opinion that it is a vital part of a setter's education, and greatly enhances his value. GUY.

THE SETTER IN AMERICA AND ENGLAND.

BY "LIDSTONE."

If a man keeps a setter in America, he wants a "general dog," as we call it in this country. By that an American means a dog that finds, and points, and retrieves, and that will go through thick underwood, thorns, and so on; but an Englishman does not look for *pointing* in his "general utility" dog—simply he wants a dog that ranges close, and drops to shot or wing.

Years ago pointing dogs were used for pheasants as well as partridges, and almost all the old portraits represent them with a pheasant in their mouths. In the old *Sporting Magazine* there is an engraving of an old short-tailed pointer (the original was, I think, by the celebrated Abraham Cooper, the Royal Academician), who has one pheasant in his mouth, and is pointing another before he brings it back.

The retriever is a comparatively modern invention; our forefathers made their dogs do anything—but then, dog breaking was at its zenith. No gamekeeper could get a situation unless he could break pointers; and what is more, every man who shot knew how the dogs ought to be used.

It is a common opinion—indeed, it is my opinion—that you imperil the staunchness of a dog, and his position in the hunt, by "retrieving" a bird, or taking a retrieve if, though a great deal depends upon the man himself; and unless the sportsman is thoroughly at heart a lover of the dog, he is very much tempted to "lie on" his dog directly he has shot at or crippled a bird, and to do so in ruin to the dog.

In my work on the dog I have been a little severe on those who profess to break setters with bells; but setters vary so much in temperament and general disposition, that I incline to the opinion they may be more readily trained to anything than any other dog in the world. There is also the undoubted fact that American sportsmen, second to no men who shoot in the four quarters of the globe, use setters for woodcock shooting in swamps and thorny brakes, and that they do their work well where the ordinary spaniel would be too slow. But especial training, as well as a marked fitness of disposition and constitution, is desirable for the purpose, and the physical fitness of the dog is of the greatest consequence. Setters are not by nature dogs to be hunted through covert, and for such purposes it is better to have a dog that will creep under than go over thorns or furze.

If a setter is good, I have no prejudice about his breed or color, though I have about the purity of his blood, the form of his frame, and the texture of his coat. "Droppers," as dogs half pointer are called, are frequently good droppers in their first generation, but I never saw the produce of a drop that was worth a shilling. I would never breed them, for it is decidedly the way to deteriorate setter blood, as directly you let them out of your hands they may be used to propagate their race by unscrupulous or unprincipled persons.

I cannot recommend any special breed of setters for American shooting; it will not be the breed that will suit, but the individual specimen. As, however, the dog ought to be contented he should have a considerable portion of white about him, and failing that he would be, I should say, very hard to find when on his point, whether he wears bells or no; for, of course, just when the sound is most required the dog is, of course, and a white croquet collar, (such as is used to distinguish greyhounds, I believe,) would be a sore impediment in the American jungle.

I am not sufficiently experienced in retrieving setters to say which they are a dislike to lifting woodcocks; but certainly English retrievers object to them at first, and some dogs never get over their antipathy. This might be got over by the early training of the setter to retrieve, and the accomplishments should be taught when he is not over four months old; whilst ordinary setters' work is not commenced until he is twelve or fourteen months, or even later.

I recollect breaking a capital black, hute and tan dog to retrieve, commencing with him at three months. He worked at retrieving until he was a year old, when he took his course of setter-breaking with the others. I sold him, on his merits as a setter, to an excellent sportsman, and heard nothing of him for a couple of years after, when his owner said, "In addition to his other qualities, what an excellent retriever he was." The friend discovered quite by accident, and Robin now takes the place of two dogs on

the moors, and, though both retriever and setter, he is, I believe, as steady as ever, singly or in company.

On the moors I prefer the dog which finds a wounded or downed bird, and then, if the man chases it, if the man chases it, will drop and remain down until he returns. This shows a good deal of sagacity on the dog's part, and a confidence in the setter's steadiness; and I have frequently seen Scotch keepers do it, though contrary to my canon, that in shooting all excitement and hurry on the part of man or dog is a mistake, and the consequences are not uncommonly disastrous.

By a "certain" dog—such as I saw worked in the Highlands last August by a friend's keeper, (which dogs, by the way, I subsequently purchased for Russia), with certain dogs you may take any liberty, and David never hesitated to chase a cripple after one of his dogs had found it; and the only thing he did as he stalked back over the heather was to say in his deep bass voice, which seemed to me nearly as round and mellow as Lablach's, "Good dog? seek about now." Still, though David was as good a man with dogs as it has ever been my lot to go out with, and his setters were almost faultless, I experienced the sort of fierce feeling which comes over one when an amateur "sings flat," or the "gentleman who plays the fiddle so beautifully," (and who, by the way, is no larvish of it,) is "slopping" out of time instead of stopping altogether.

I wonder what effect retrieving has upon the setter's range. Does it in a great way contract it? for that in Scotland would be fatal things. Indeed, the English breaking in partridge fields has a tendency to spoil the sweep of a setter for grouse, and to make him too anxious to be within hail. I have seen many a good worker frightened at the long stretch of moor before him when first cast off on a hillside, and quite bewildered at finding himself, as David called it, "alone on the ocean." Some dogs have in this way been lost at once and forever. I remember once one brace purchased by a young member of the "Upper House," who thought he had got a bargain—and they were in one sense, for they never cost him anything to keep. They turned their backs to each other and raced off, one north, as his gillie told me, and the other "south"; and he added, "As the wether's roan, if they go on lang enough praps they'll joost meet." "And did you never see them again, Sandy?" I asked. "No," he replied, in guttural accents, in a way which I can't describe, and with a severe wrinkle of his eye, "but when the grouse on the next moor sold his dead lambs' skins next year, twa of 'em were liver and white!"

I can imagine nothing more utterly hateful than a bad dog on the moors, where all your sport, possibly for the only fortnight you can spare, depends upon the dogs, which probably are short in number and shorter still in quality—a dog that won't range until he catches sight of a group of those weird Scotch keepers, at which he dashes with frantic bounds and loud yelps; or, if he has handed up a grouse, which falls a few yards ahead, saunters no to it in a leisurely way, and proceeds to crack the bones.

I saw a liver pointer loosed from a bundle of dogs once in the next moor to ours, which commenced rolling instead of ranging, and so continued for about a quarter of an hour, when they caught him and let loose his brother, (to all appearance, a setter), and he rolled on.

The dogs seemed a mystery to their owners as well as to us, and frightened at the kilts worn by their masters, (for the first time probably, judging by the whiteness of their knees); and upon making inquiry we found that they were English manufacturers—one of them, his English valet told us, "the largest tape maker in England." This information was vouchsafed as we overtook the scimitars with the game pointers, which he contained, so our gillie declared, a good deal of leather and three grouse, though we heard a good deal of unmeaning. The head gillie explained that he really thought the gentlemen might have killed more, only their dogs "wouldn't" let the grouse alone. "They shot one of their dogs," the stunted English-grown boy said, "but, (he added apologetically,) I don't believe as they aimed at him."

I can't say for the truth of it, but they tell me the dogs were shot every day, and that as every dog disappeared the tape-maker and his party did better. The reports of the guns as we now and then worked near their "dyke" much resembled fire-bird, and sometimes there was a volley, I suppose at a single bird; whilst now and then one of their best dogs would be seen full chase on the sky-line after a black spook which did not fly more than a couple of feet from the earth. In some instances, and by receding from a dog's head match on the horizon, and the fluttering of a kilt in full pursuit. Yelps would then be heard faintly in the distance, from which we argued that a bird was wounded, that it had been overtaken by a dog misnamed or nicknamed a pointer, that the gillie had been also in hot chase, but that he had not come on the scene in time to prevent "Scamp yer bric" from bolting "feathers and all"—London, Feb.

THE DACHSHUND.—I was absent from the "old country," one-and-twenty years, occupied in racing, steeplechasing, and fishing. Whilst abroad I had a great fancy for this game little hound, and have still, as my first specimen I had never provoked in my life, and by receding from a dog's head in one of the large government forests in Ulster Britany, I came across a good old sportsman, over seventy years of age, who had been the greater part of his life in Germany. He assured me "my little hounds were all wrong—that they should not have crooked legs." He said, and in which I fully agree, that "the crooked fore-leg had come merely because they had been badly handled and cared for in the first instance, and by receding from a dog's head in one of the large government forests in Ulster Britany, I came across a good old sportsman, over seventy years of age, who had been the greater part of his life in Germany. He assured me "my little hounds were all wrong—that they should not have crooked legs." He said, and in which I fully agree, that "the crooked fore-leg had come merely because they had been badly handled and cared for in the first instance, and by receding from a dog's head in one of the large government forests in Ulster Britany, I came across a good old sportsman, over seventy years of age, who had been the greater part of his life in Germany. He assured me "my little hounds were all wrong—that they should not have crooked legs." He said, and in which I fully agree, that "the crooked fore-leg had come merely because they had been badly handled and cared for in the first instance, and by receding from a dog's head in one of the large government forests in Ulster Britany, I came across a good old sportsman, over seventy years of age, who had been the greater part of his life in Germany. He assured me "my little hounds were all wrong—that they should not have crooked legs." He said, and in which I fully agree, that "the crooked fore-leg had come merely because they had been badly handled and cared for in the first instance, and by receding from a dog's head in one of the large government forests in Ulster Britany, I came across a good old sportsman, over seventy years of age, who had been the greater part of his life in Germany. He assured me "my little hounds were all wrong—that they should not have crooked legs." Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

- Black Bass, microperca edulis, microperca nitridum. Striped Bass, Roccus harelotti. Weakfish, Sciaenops ocellatus. Bluefish, Menidia menidia.

SOUTHERN WATERS. Pompano, Front (black bass). Sheepshead. Salmon, in two species. Kingfish. Sea Bass. Crayfish, Kingfish. Striped Bass. Rockfish.

FISH IN MARKET.—Mr. Blackford of Fallow market has been receiving the delicious smelt for the past week, from both Maine and Connecticut where it is captured in immense numbers. This fishery is gradually expanding and promises to become much more important from year to year. Salmon are also flowing hither from the Nutmeg State, but to us they seemed rather diminutive after seeing their ponderous congeners of the West. Very few Spanish mackerel are in market except those on ice; so the indications are that this lethargic pabulum will be a rarity in a few days. Lake Superior is sending hither large quantities of white fish of excellent gastronomic quality; while New Jersey furnishes a liberal supply of weak fish, halibut, blue fish, soles and flounders, and sea bass. Scallops, which are rapidly supplanting clams, owing to their greater delicacy of flesh and better digestive quality, are quite profuse. The larger number come from Maine, and the adjoining coast. The only unusual species of the flumy tribe which we beheld were the tapering, lance-headed gar-fish, and the baracouta, a denizen of the southern waters, which was caught off the Florida coast. This presents a close resemblance in bodily outline to the salmon family, but the likeness goes no further. Its head is long and pointed, the lower jaw overlapping and terminating in a small dilated knob. The upper maxilla contains four large teeth at the anterior termination, and the lower, only one, for which there is a small round receptacle in the outer end of the upper jaw, so that the mouth can be closed without inconvenience, an impossible feat if the cavity were absent. The flesh of this species is said to be highly edible. The body has a length of three feet, including the head, the latter being about one-fourth the length of the former, and the weight is about eleven pounds. This is the first of its species sent here the present season, so possesses interest for the lover of fish.

AS OUTRAGE.—We have done our best this year to acquaint our readers with eligible fishing grounds, and have taken particular pains to send parties to Twin Lake, in Connecticut. We are informed by an authority not likely to be mistaken that travel lines are in use in Twin Lake, lines baited with their hundreds of hooks; also that parties residing about the lake were in the habit of seining, and that quite lately a haul of five barrels of black bass had been made. Will our numerous friends at Twin Lake look into the matter? Wholesale work of this character will very certainly deprive Twin Lake of all attractions, at least for fishermen. We trust this is not another case of killing the goose which lays the golden eggs.

—We are pleased to learn by a card in the Boston Journal that the wholesale slaughter of fish at Quincy Point, Mass., recently by the use of submarine explosives was not so successful as "outrage" as the published accounts have led us to infer. It says:

"The facts are simply these: The Messrs. Phillips Bros., well known and skillful divers, residents of Quincy Point, have just returned from their summer job at Black Island, New York, and laying on board a small quantity of 'dynamite,' the new explosive, to gratify the curiosity of friends and citizens, and to show the effect of this powerful article, arranged for a harmless experiment in the deep water at the Point. The experiment was successful and gratifying to the spectators, but the afterpiece was wholly unexpected, and was a great surprise to all present, as none, or but a few bass had been seen or at least caught there. The impression sought to be conveyed by your informant that the humane and very respectable divers, as all who know them will testify, ever entertained the 'brilliant idea of killing and capturing whole shoals of mackerel' by any such method is simply absurd."

NEW JERSEY.—Waretown, Oct. 5th, 1874.—No sheepsheads caught for the last week, but several good catches of striped bass are reported. Cambridge, the fisherman, caught twenty-three near the Great Lodge. In "Mad Channel," and on the points below, a number are caught daily. Weak fish are abundant, and of small size. Capt. Parker caught fifty on what is called the "Gravelly" last Friday, some weighing four pounds. A big school of very small blue fish came in last week; but fishermen say that "one large run must come yet."

BARNEGAT AS A FISHING GROUND.

EDITOR FOREST AND STREAM:—Understanding from a friend that the FOREST AND STREAM of their correspondents had been taken to task in regard to the fishing at this point by the Gazette, I thought I would send the following large catches from my register, and let the writer of said article do the gentlemen names. First day of their appearance, May 25th. Willie Kinsey, 7; T. B. Tutting, New York, 10th; May 25th, Hon. John Whitehead, Newark, 12; John A. Davis, David D. Orange, N. J., 13; John G. White, John C. Bailey, Jersey City, 2nd; June 8th, Col. R. Dale Benson, Philadelphia, 10; 1st, 11th, 12th, 2nd; June 1, 1st, 2nd; June 13th, N. Taylor, Jersey City, 2nd; 1st, 2nd; June 27th, J. D. Brown, Hightstown, 1, 2nd; June 29th, N. C. Taylor, 1st; 2nd; June 30th, 1st; 2nd; July 1st, 2nd; July 2nd, 1st, 2nd; July 3rd, 1st, 2nd; July 4th, 1st, 2nd; July 5th, 1st, 2nd; July 6th, 1st, 2nd; July 7th, 1st, 2nd; July 8th, 1st, 2nd; July 9th, 1st, 2nd; August 2

H. & St. Joe R. R.) said to me last night that if it was possible for him to go he would do so; but he is not well, and being very busy there is scarcely any hope that he will go. It said in lieu, however, that anything that I wished, him or Mr. Towne (superintendent) to do should be done. Write me promptly, and say if dogs, guns, and supplies are to be looked after by me. Give me as full particulars as you can.

Come direct, on account of the shooting, and you can take your time going back. Don't fail to let me know the exact time of your arrival. I am more than ready to see you are coming with them. Very truly yours.

G. W. DUNMAN.

Subjoined are letters received from the Winkie Club, of Lawrence, Kansas, and the Tecumseh Club, of Tecumseh, Nebraska.—

LAWRENCE, KANSAS, September 30th, 1874.

DEAR SIR—Your favor of 31st inst. was duly received, and immediately submitted to the club for its consideration. As the result of its action, I have to report the following programme:—A delegation of the club will meet the "team" on their arrival in St. Louis, and escort them to Kansas City via the St. Louis, Kansas City & Northern Railroad. At Kansas City a special car will be in readiness to take them to Peabody, on the Atchison, Topeka & Santa Fe Railroad, at which point you hope to meet some good game shooting, although it is too late in the season to expect first class sport. From Peabody we will take them up the Kansas Pacific Railroad to the Republican Valley, where we can show them more game than in any other section of the State. We have secured a special rate for them from St. Louis to Kansas City, and through the courtesy of the Kansas Pacific and Atchison, Topeka & Santa Fe roads, are able to furnish transportation for the party free to the above points. Several of our club will accompany them, and place at their service all the dogs we have.

If this programme is acceptable to the gentlemen, we will be most happy to meet them, and will endeavor to make the trip an agreeable one. We do not propose to bore them with receptions, speeches, etc., but will take it for granted that they come out with no less as sportsmen, and as such we will extend them a hearty sportsman's welcome, and do the best we can for them.

Have telegraphed you to-day, and hope for a favorable reply on Monday. With much respect, yours truly,

FRANK S. EARLE, Secretary Winkie Club.

TECUMSEH, NEBRASKA, September 26th 1874.

DEAR SIR—Your favor of 25th inst. was duly received, and immediately submitted to the club for its consideration. As the result of its action, I have to report the following programme:—A delegation of the club will meet the "team" on their arrival in St. Louis, and escort them to Kansas City via the St. Louis, Kansas City & Northern Railroad. At Kansas City a special car will be in readiness to take them to Peabody, on the Atchison, Topeka & Santa Fe Railroad, at which point you hope to meet some good game shooting, although it is too late in the season to expect first class sport. From Peabody we will take them up the Kansas Pacific Railroad to the Republican Valley, where we can show them more game than in any other section of the State. We have secured a special rate for them from St. Louis to Kansas City, and through the courtesy of the Kansas Pacific and Atchison, Topeka & Santa Fe roads, are able to furnish transportation for the party free to the above points. Several of our club will accompany them, and place at their service all the dogs we have.

If this programme is acceptable to the gentlemen, we will be most happy to meet them, and will endeavor to make the trip an agreeable one. We do not propose to bore them with receptions, speeches, etc., but will take it for granted that they come out with no less as sportsmen, and as such we will extend them a hearty sportsman's welcome, and do the best we can for them.

Have telegraphed you to-day, and hope for a favorable reply on Monday. With much respect, yours truly,

FRANK S. EARLE, Secretary Winkie Club.

TECUMSEH, NEBRASKA, September 26th 1874.

DEAR SIR—Your favor of 25th inst. was duly received, and immediately submitted to the club for its consideration. As the result of its action, I have to report the following programme:—A delegation of the club will meet the "team" on their arrival in St. Louis, and escort them to Kansas City via the St. Louis, Kansas City & Northern Railroad. At Kansas City a special car will be in readiness to take them to Peabody, on the Atchison, Topeka & Santa Fe Railroad, at which point you hope to meet some good game shooting, although it is too late in the season to expect first class sport. From Peabody we will take them up the Kansas Pacific Railroad to the Republican Valley, where we can show them more game than in any other section of the State. We have secured a special rate for them from St. Louis to Kansas City, and through the courtesy of the Kansas Pacific and Atchison, Topeka & Santa Fe roads, are able to furnish transportation for the party free to the above points. Several of our club will accompany them, and place at their service all the dogs we have.

If this programme is acceptable to the gentlemen, we will be most happy to meet them, and will endeavor to make the trip an agreeable one. We do not propose to bore them with receptions, speeches, etc., but will take it for granted that they come out with no less as sportsmen, and as such we will extend them a hearty sportsman's welcome, and do the best we can for them.

of our sportsmen contrive a field trial on new principles; one that would excite a noble emulation, without involving cruelty.

These competitive hunts have been quite in vogue in the southwest, but we think are now dying from lack of natural supply of game.

Sporting News from Abroad.

[FROM OUR SPECIAL ENGLISH CORRESPONDENT.]

I REALLY have but little sporting news of any interest for American sportsmen this week, and I am not like Wilkie Collins and Edmund Yates, who can write an amusing article about nothing, and make substantial ropes out of sund. As I passed through London I saw the photographs of the base ball players in the Field office window supported on one side by the skull of a red Indian and flanked on the other by a viper in spirits of wine, and a pair of antelope horns, whilst an enterprising vender of Dark's cricket paraphernalia had gone in largely for the base ball bats and gear; so I imagine the game has "struck fire" somewhere. Curiously enough, Beecher and Tilton are everywhere "commu talk," and it is not everyone that remembers, singularly enough, that the "Beecher, Stowe and Byron" scandal which monopolized the prudent student table talkers' conversation a few years ago, was started by a member of this same family.

The grouse disease, like hydrophobia, and the foot-and-mouth, still baffles the scientific naturalist, and Dr. Farquharson, a savant of great repute, has been engaged in dissecting a large number of its victims. One exhausted bird picked up before its death, he found to be much emaciated, and a mere mass of bones and feathers. The liver was soft, friable, (quarry, like that of a calf) and of a dirty greenish yellow color. I presume somewhat after the style of an old Anglo-Indian's, who has undergone a long course of jungle fever and brandy pawnee. The smaller intestines were found densely packed with tape worms. The coeca and larger intestines exhibited similar symptoms to those observed in cases of typhoid fever. They contained a moderate number of the "stronglyus," small microscopic thread-like worms. In three diseased birds received later in the month of August emaciation had not reached anything like the same extent, but the morbid appearances differed slightly from those previously noticed. Hardly any of the tape worms were present, but the smaller parasites were very abundant, and an examination with the microscope revealed them in all the various stages of growth. The tenacity of life exhibited by the entozoa was remarkable. Dr. Farquharson's theory is, that the grouse disease consists essentially of a specific fever, propagated by epidemic or infectious influences, in the same way as cholera, typhoid or enteric fevers among ourselves. He finds brownish droppings in the spring to be a sure sign of coming disease, and remarks that as the birds are invariably found when dead from the disease in the neighborhood of water, and even half immersed in it, that this betokens a well-marked feverish condition. The results of his observations go to show that the disease occurs about every seven years, and generally follows successful seasons, from which it may be argued that overcrowding and underfeeding in some manner augment it. From the Doctor's notes W. B. Tegetmeyer, a well known judge of pigeons, and an experienced ornithologist, arrives at the conclusion that the only method to be adopted to rid the moors of this scourge is to shoot down and bury all diseased grouse as early as possible, to prevent their spreading the disorder, and to encourage birds of prey who only destroy the weak and sickly, and thus give great assistance in carrying out the sanitary laws of nature. I shall be glad to hear from any readers of FOREST AND STREAM if the ruffed or pinnaed grouse of your prairies suffer from this disease, and if so, if it takes a similar form, and what means are adopted for its extermination. (Editor has my address.)

Lawn tennis, badminton, and tilting at the ring, are fast rivaling croquet, but the latter game still seems to hold its own, and disputes the supremacy of the lawn with bowls and archery. Billiard matches are not very strong at present, and I believe Cook, our champion player, has retired for America. The American game, with four balls, is much played at Manchester and our large manufacturing and seaport towns, where it has been introduced by visitors from the United States, that I fancy our game, which admits of losing hazards, is more scientific, and though spoilt amongst the professional set by "the spot stroke," it is more interesting to the looker on. The public matches are often played on the "flat" system, and the £200 a side is frequently all talk, whilst the winner had won before they broke the balls. I saw only the other day that the Field refused to insert the account of a match, because it had been played "on the cross," and sharp practice seems inseparable from the atmosphere breathed by markers. At one large underground establishment in London called "Gally's," there are over forty tables in one hall, and in every little country town there is more than one public billiard room. Since the days of wooden beds and no tops to the cues, we have changed very much for the better, and it no longer takes us six months to turn a single ball. W. Cooke, whom I have mentioned, is, I believe, a very straightforward man, and I do not wish my remarks to make him appear in any unfavorable light. He is, no doubt, the best player we have ever had, and plays a most marvellous all round game, besides being able to score several hundred in a break, if he once gets "on the spot."

A short time ago a marker introduced the idea of "thumb and finger versus cue," spinning the ball between his finger

and thumb instead of putting it with his cue, but the thing didn't take, and I hear no more of him, though a rival of his still plays, I believe, a hundred up, and gives points, too, with an old umbrella!

A grant by Parliament is talked of to pay the Prince of Wales's debts; it is, however, gratifying to learn that they weren't incurred on the race course or at roulette and cards, like those of H. R. George IV.

THE GREAT ST. LEGER—THE FAVORITE SCRATCHED, AND APOLOGY WINS.

"George Frederick out of the Leger at 9:7 A. M." Thus ran the laconic announcement which flashed down the wires from London.

'Tis a great race, this St. Leger, and the last grand race of the season. Originated in 1770 it has survived the flight of time for close upon a century, and though the first race saw but six subscribers, last week their number reached nearly two hundred. Some of the most celebrated turf fights on record have taken place on the Doncaster course, and if George Frederick and Apology had gone to the post as fit as when they pulled off their respective triumphs in the Derby and the Oaks, the St. Leger of 1874 would have been a memorable one. As it is, it is unprecedented in the annals of the turf.

All through the hot summer months in the billiard rooms of the London clubs, at Tattersall's at the German Spas, at Baden Baden and Guy Paris had George Frederick reigned supreme, since the scarlet jacket of Custance left every other corner far behind and landed an easy victory for his lucky owner. At one time happy was the plunger who had succeeded in booking the short odds of five to two about him, and his backers slept lightly and soundly, for they thought the breed they had cast on the water would return to them after many days. But there is on the turf a power capable of controlling horses and men, and against which many a gallant thoroughbred has struggled in vain. This power, which never fails in its judgment, and whose ways are inscrutable, is the "The Ring," and the ring had said that he should never win. They had been dead against him from the first, since he had run at Epsom. There was no real reason why he shouldn't win, as he had beaten directly or indirectly every horse in the race. Trent, the winner of the greatest French race, was pounds behind, and yet had beaten Apology. Atlantic, the two thousand guineas' winner had broken a blood vessel, and of all the rank and file which made up the field, not one of them boast of having been up to his girths.

Previous to the race it was rumored that one of his legs had filled, and his owner, Mr. Cartwright, would not risk him, though it is said he had backed him freely. Be thus as it may, Custance would not at first believe it, and though it came out subsequently that the horse had hit his leg at exercise, the men who had thrown their money to the winds were inclined to be very skeptical. Horror upon horror's head accumulated when it was rumored that the mare Apology, who was the Public's second string, had pulled up lame. In the height of the panic she fell back rapidly from twelve to one, and even fifty to one was laid against her, and an even monkey that she did not start. Eventually she settled down to the comparatively long price of four to one as first favorite, and though lame just before the race, managed to win in quickest time ever recorded. It is as well to state that when her owner, an invalid gentleman in Lincolnshire, was informed of her mishap he replied that so much money was invested on her that she must start if she had but three legs, and this determination to give people fair play was amply rewarded.

All Yorkshire went mad on the occasion, for she is bred on the borders of the county and her owner is, I am told, very popular in the neighborhood, and a good old sportsman of four score years and two.

After one failure the starter got them well away. Blantyre taking the lead and cutting out the running at a snapping pace, Atlantic and Leolinus following, and to them succeeding Trent and Lady Patricia, Volturino and Apology bringing up the rear. At the road the mare became an absolute whipper-in, and here ten furies were laid against her. Meanwhile Atlantic was pulling hard but soon succumbed, having burst another blood vessel, and from the mile post Leolinus forged ahead, some outsiders being still in the van. Between the six furlong post and the "Red House," the mare began to mend her pace and Blantyre giving way was pulled back and knocked Lady Patricia out of her stride, Leolinus also having been forced back against the rails by the retiring Atlantic. Trent and Apology had been compelled to make wicsh tracks, owing to the erratic course taken by Blantyre, but they ran respectively fifth and sixth round the bend into the straight. Here Rostrevor and Pen D'Amonr hung out signals of distress and Leolinus was lending the field. As they neared the judges' box Johnny Osborne brought Apology, and sitting still on the mare, centered in length and a half to the good, Sir R. Bulkeley's Chester Cup winner being second and Trent third. Atlantic walked in with the crowd. Not a vestige of Apology's lameness was apparent, although she was said to have stood with her leg in hot water all the morning. Such has been the St. Leger of last week, and it has surpassed all other Leger in varied phases of excitement. The race has been won five times in the last five years by the mare, including Achievement, Formosa and Hannah, and this goes to prove the superiority of the gent sex at this period of the year. It is a rare thing since Bleak Bonny's time to see a mare running in the Derby.

The Lincolnshire Field Trials, under the patronage of the Kennel Club, take place this week. There is a great dog show at Nottingham, but the absence of "circuit judges," as they are called, from the face of their attending all the principal dog shows, is to be deplored, and the conduct of the Committee in depending on gentlemen who may be called "amateurs," though original, is scarcely calculated to give satisfaction to the exhibitors, and has caused a fierce discussion in the sporting papers.

CREEDMOOR.

THE excitement about Creedmoor was never before so intense as during the past week, and for this interest manifested in all pertaining to it, we are, in a great extent, indebted to the international contest, and the participation in the subsequent matches, of any importance, of the leading Irish and Canadian shots. Every one in the city interested in rifle practice, and who had the time to spare, thronged to the ground, and bravely withstood the drenching storms, or the gusty, disagreeable winds, that they might be witnesses of such marksmanship as the world had never before seen. Even the fair sex was out in exceedingly large numbers, and their gay toilets, contrasting, as they did with the showy uniforms of the National Guard and the sombre black of the citizens, gave a most pleasing animation to the scene. Our city regiments were well represented in all the contests, and their scores, as a whole, will compare favorably with the shooting of the English Volunteers, and in several instances the best efforts of the latter were excelled. This interest in rifle practice has now become quite general throughout the country, but in no place is it so manifest as among the citizens of New York; a fact which is quite evident by a glance at our shooting galleries, and the numbers trooping to Long Island every day of the exercises. The result of the comparatively limited practice of our citizen-soldiers is quite satisfactory, for on no previous occasions was their shooting, everything considered, as good as during the past week, though the opening of the contest augured the most unsatisfactory sequences, owing to the condition of the weather; yet the bright, sunny days which smiled on the leading matches caused a reversion of the prediction, and the consequence is, that though some rather poor shooting was done at first, the total result is in the highest degree satisfactory, and one of which our riflemen may well feel proud. The prizes competed for were numerous and very valuable, certainly far superior to those given in any other portion of the world. They numbered in all about one hundred and seventy, and were valued in the aggregate at \$8,292. All our leading gun manufacturers, many of our leading merchants, several of our division commanders and staff officers having contributed largely to the fund. The most important prize was that of James Gordon Bennett of the Herald, a gentleman who has done as much to foster all athletic exercises that can improve body, or eye, as any person in the country. This consisted of a silvery trophy and cash, which was valued in the aggregate at \$1,100. This was won by Mr. Rigby of the Irish Team, so that our genial Celtic visitors take home with them the most valuable prize of the American Wimbledon.

The entire programme was carried out in the most satisfactory manner, and for the fair play displayed, and the good order kept, the officers of the Rifle Association, prominent among whom are Colonels Wingate and Gilderleeve, deserve the congratulations of the participators and the public.

The shooting opened last Tuesday amidst a disagreeable storm of rain, but this did not seem to dampen the ardor of the riflemen. The first competition was for the prizes in the Judd Match, which were valued at \$245. This was open to all rifles; but the pull of trigger was not to be less than six pounds. There were two hundred entries for this match, but owing to the storm only a small portion competed. The shooting as a whole was poor, owing to the gusty winds and other atmospheric causes, so that even our crack shots failed to count little more than half their usual score. The following are the winners:

Table with 3 columns: Name, Total, Name, Total. Lists winners of the Judd Match.

The next was a cavalry match, open to teams of five from any troop of the National Guard; distance 100 yards; position, standing; ten rounds; weapon, Remington breech-loading carbine, State model; pull of trigger not less than six pounds. The first prize was a handsome silk guidon, to be given to the troop making the highest score. The shooting on the whole was fair, considering the day. Following is the score:

Table with 3 columns: Name, Total, Name, Total. Lists winners of the Cavalry Match.

SEPARATE TROOP, FIRST DIVISION. Serjeant E. Muller... 291 A. Schmidt... 10 Corporal John Pelton... 27 Fritz Specht... 24 Jacob Dillenbergl... 24 Totals... 123

FIFTH BRIGADE INFANTRY. Lieutenant Heald... 24 Private Luckman... 10 Sergeant Ponsberg... 27 Private Barker... 26 Private Grane... 25 Totals... 121

K TROOP, THIRD CAVALRY. Captain C. Friedman... 23 H. Schreder... 25 H. Schroeder... 23 Aug. Sprung... 20 H. Heinicke... 28 Totals... 120

WASHINGTON GRAY TROOP. M. Primmer... 121 James Muldoon... 43 J. S. Huff... 26 A. P. Decker... 23 G. A. Pailer... 24 Totals... 150

A TROOP, THIRD CAVALRY. Captain A. Fisher... 27 J. Hugo... 30 H. C. Heidman... 23 H. Schroeder... 23 H. Von Oesber... 12 Totals... 115

C TROOP, THIRD CAVALRY. Henry Blesher... 30 A. Wicke... 18 John A. Pugs... 20 A. Ellis... 20 P. Laforda... 26 Totals... 113

E TROOP, THIRD CAVALRY. Lieutenant J. A. Hartorn... 38 P. Volkman... 21 H. Strank... 27 H. Pennekker... 21 C. Roffman... 21 Totals... 162

SEPARATE TROOP, ELEVENTH BRIGADE. John Krueker... 23 Jacob Bossert... 19 Felix Kramer... 13 George Giesl... 13 Michael Hoffman... 19 Totals... 101

Wednesday was one of the most important epochs in the Creedmoor calendar to the National Guard, as regiment was pitted against regiment, and division against division. All the leading regiments had their representatives present, who fought gallantly for victory; yet, the shooting was not as good as it might be if the weather were more propitious. The first contest was the division matches, open to "teams" of twelve from each regiment or battalion in the First and Second Divisions; weapon, Remington Rifle, State model. Five shots; position, standing at 200 yards; any position at 500 yards. The prizes competed for were valued at \$450. Following are the regimental scores:

FIRST DIVISION. Regiment, 200 Yards, 500 Yards, Totals. Lists scores for various regiments.

SECOND DIVISION MATCH. *Twenty-third... 70 207 *Fourth... 123 41 *Thirty-second... 119 43 *Twenty-seventh... 124 33 *Twenty-eighth... 113 28 *Thirtieth... 110 13 *Fifteenth... 47 13 60

Under the rule that any one of a team that does not make eight points at 200 yards is debared from shooting at the 500 yards distance, the Eighth, Twelfth, Seventy-first and Twenty-second each lost one man; the Eighty-fourth, six; the Ninety-sixth, five out of its eight men; the Ninth, three; the Fifth, three, and the Eleven's, nine.

The Sportsman's Match, which followed, was open to all comers; any rifle; distance, 200 yards; position, standing; seven shots. The winners of prizes were: J. L. Price, 27; J. D. Day, 24; J. B. Collins, 21; H. B. Domick, Seventh Regt., 19; H. A. Gilderleeve, Twelfth Regt., 18; G. A. Briggs, Twenty-second Regt., 21; A. J. Berrian, Jr., 21; J. H. Cowperthwait, 7; J. Allen, 3; B. A. Collins, 17; J. J. Collins, 12; T. W. Landon, 12; J. P. M. Richards, 14; J. W. Gardner, 19; A. J. Baker, 19; E. H. Sanford, 20; H. A. French, 24; G. A. Briggs, 20; E. W. Price, 16; J. H. Judd, 19; B. Holland, 2; B. Barton, 15; T. C. Rees, 12; J. P. Borrell, 19; A. J. Roux, 18; C. E. Prescott, 15; C. Rowand, 17; J. Turner, 10; J. Romiz, 11; W. S. Collins, 17; A. Smith, 17; W. H. Clark, 21; G. A. French, 20; A. B. Canfield, Jr., 18; J. Barry, 23; J. T. Holton, 14; J. H. Stuaenes, 12; B. Waring, 13; W. G. Barton, 22; T. S. Dakin, 22; J. T. B. Collins, 23; G. T. Adigison, 22; J. More, 7; D. E. Vannet, 24; W. F. Skidly, 13; W. F. Edmondson, 25; E. S. Laycraft, 21.

THE STATE MATCH. Lists scores for various regiments in the State Match.

The Officers Match, open to all general, field and staff officers in the N. G. S. N. Y., brought out only a few competitors, who made the following score:

Table with 4 columns: Name, 200 yds, Total, 500 yds, Total, Grand Total. Lists scores for Officers Match.

The Army and Navy Journal Match, open to teams from all regularly organized military organizations in the United States, including the regular army, navy and marine corps; weapon, any military rifle; distance, 500 yards; position, any; rounds, seven. First prize valued at \$750. The following teams competed, the Seventh Regiment winning:

SEVENTH REGIMENT. Name, Score, Total. Lists scores for Seventh Regiment.

TWELFTH REGIMENT. Henry Fulton... 34 4 3 4 4 3 26 Lieutenant Col. Gilderleeve... 25 H. B. Smith... 24 Achilles Wood... 22 W. S. Smith... 22 T. J. Dolan... 21 James Van Kesselcar... 20 Charles Herzog... 19 Wm. H. Murphy... 15 John Beattie... 15 J. H. Wood... 15 W. C. Reddy... 15 Totals... 217

TWENTY-SECOND REGIMENT. Private Barker... 3 3 2 4 4 4 24 Private Rouse... 8 4 4 3 3 3 25 Captain Horvath... 4 3 3 3 3 3 20 J. Barry... 3 1 2 3 3 3 20 Lieutenant Carmichael... 3 3 3 2 3 2 19 Private Freeman... 3 3 3 2 3 2 18 Private Greave... 3 3 2 2 2 2 14 Private Burian... 2 3 3 2 3 2 18 J. Scaquer... 3 3 3 0 3 2 17 Private Lockwood... 3 3 0 2 4 3 17 *G. A. Strabe... 0 2 4 4 0 2 15 Private Ferris... 4 3 1 3 0 0 17 Totals... 236

*Disqualified on account of not using the ammunition issued by the State.

The Gatling Match, open to teams of twelve from each regiment of the State National Guard; weapon, Remington Rifle, State model; distance, 500 yards; rounds, seven; position, any. The first prize a Gatling Gun, to be given to the regiment making the highest score, and to be retained if won twice in succession—though not necessarily consecutively. The total prizes in this match footed up \$2,275. The following are the winning teams: Seventy-ninth Regiment... 206 Twenty-second Regiment... 156 Twelfth Regiment... 194

The following gentlemen in this match won prizes for the best individual scores:

Table with 3 columns: Name, Total, Name, Total. Lists individual winners of the Gatling Match.

The Press Match brought out several representatives of our daily journals, and even Canadian reporters, at least those who were duly authorized to act as such by the Dominion newspapers. The prizes were gold and silver badges amounting in value to \$147. The distance was 500 yards; weapons, any military rifle; rounds, seven. The following were the prize takers:

Table with 3 columns: Name, Total, Name, Total. Lists winners of the Press Match.

The All Comers' Match brought out a large field, and the Consolation some of the best shots on the ground. Following is the score:

Table with 4 columns: Name, 500 yds, 600 yds, Total. Lists scores for All Comers' Match.

CONSOLATION. Dr. Hamilton... 26 Lieut. Henderson... 26 J. A. Doyle... 25 Capt. Lindsay... 24 Chas. Hasman... 24 Serat. Laycraft... 24 Geo. Cronch... 23 T. E. Addison... 22 W. H. Brislay... 22 J. H. Sturcke... 21 J. Koulter... 21 Alex. Pyle... 20 E. A. Perry... 20

The exciting event of the week was the competition for the Bennett Long Range championship, as the best shots of the representative Irish, Canadian and American teams were pitted against each other. The contest from the beginning seemed to be between Mr. Rigby of the Irish, and Mr. Fulton of the American team, and so close were they in their scores that it was a hard matter to decide which should win. By missing the target on the last shot Mr. Fulton lost his opportunity, so Mr. Rigby carried off the best trophy in the contest. Something like a dispute as to the result of the former's last effort seemed to arise at one time, but it was settled amicably. The Irish team representatives in this match shot splendidly. Both teams had representatives on the ground, but these did not enter into the calculation of the final result. The Canadians also had a team present, or rather some of the best shots in the Dominion, for they were not organized as a body. The result of this contest proved that the Irish had a more thorough practical knowledge of the effect of light and shade, and knew how to meet all exigencies caused by a change in the wind, so they beat the American score by forty-six, and

The Horse and Course.

The York Trotting Association held their annual meeting at their grounds at York, Pa., on October 6, 7, 8, and 9. The Association have recently improved their grounds and increased the size of the track, so some good trotting may be expected. The sum of \$1,250 is offered in premiums.

The trotting at Fleetwood Park, Friday October 1, was characterized by much enthusiasm, as the track was in excellent condition, the day fine and the entries quite numerous. The first race was for a purse of \$400 for horses that had never been 2:50. The animals starting were—Arthur, Midget, Linnie Case, Cheston, Gordon, Alexis, Little Nell and Richards. The former won; Midget and Linnie Case getting second and third money. Time—2:36 1/2, 2:37 1/2, 2:37 1/2. The second race for a purse of \$250 free for all, mile heats, best three in five in heats. This was fought out American and Germans, Sensation, and Henry. The former was the winner. Time—2:24, 2:25, 2:23 1/2, 2:25. The American Girl was the favorite throughout, having brought \$300 in the pools to the \$90 and \$41 of her opponents. Some good trotting occurred at Fleetwood Park October 2d. The first contest was a match for \$1,000 between D. C. and their brown mare "Laura," and F. Fowler's black gelding "Black Diamond." The former won in three straight heats. Time—2:53, 2:57 1/2, 2:56 1/2. Second race was for a sweepstake of \$300; mile heats, best three in five in heats. The entries were—John Murphy, s. g. Sorrel Jake, John Hastell's m. m. Maria and Trimble's Lad, Frank's m. m. Tom, and Timmer won, having gained the first, third and fifth heats. Time—2:39, 2:37 1/2, 2:39, 2:42, 2:43 1/2. This race was well contested, and so closely run that betting often changed from one to the other according as they came in winners of a heat.

The Autumn meeting opened at Jerome Park last Saturday under the most favorable auspices, as the best stables in the country were represented, the track was in splendid condition and the attendance was very large, a very great number being representatives of the fair sex. There were five capital races during the day, and each was well contested. The first was a dash of three-quarters of a mile; the second, the Jerome stakes for three-year-olds; the Nursery stakes for two-year-olds, one mile; the Manhattan handicap, one and one-quarter miles, and a selling race of one and one-eighth miles. There were five curries for the first, namely—Countess, Lotta Moore, Audbon, Warmister and Harry Bassett. The latter was the favorite, but Countess won in 1:16 1/2. For the Jerome stakes there were seven starters, namely—Acrobat, Brigand, Banaret, Anson, Pomplington, Hoaxer, and Grandstand. Acrobat, the powerful steed, and the favorite, won the purse and race in 3:37 1/2. The stake, including the plate, was valued at \$4,950. The Nursery stakes for two-year-olds of \$100 each, half forfeit with \$1,000 added, second horse to receive \$200, was closed with forty-three nominations, but of which only eight were entered. The winner, Oltipha, Chesapeake, Rhadamuthus, Bayminster, James Hunter, Athlete, and Australand. Mr. Hunter's stable represented by Oltipha, who was the favorite in the betting, and the accuracy of those cognizant of the good qualities of the mare was evident when she came in winner in 1:46, Chesapeake second, followed by Rhadamuthus, whose stakes were valued at \$3,500. The fourth race, the Manhattan handicap, closed with ten nominations, and that number went to the starting post. The competitors were—Mate, Survivor, Catesby, Josie B., Lizzie Lucas, Rutherford, Leamington, London, Gray Planet, and Dublin. The mile and a quarter was run in 2:11 1/2, the fastest time it was ever made in; value of stakes \$1,310. The fifth race was for a purse of \$3,000, the winner to be sold at auction and if entered to be sold for \$1,000. The starters were—Mary Buckley, Mollie Darling and Binghamton. The coutest was most exciting as the horses passed or lapped each other from time to time. Mary Buckley was the winner by a length, Mollie Darling second. Time—2:02 1/2; distance, one and one-eighth miles.

A trotting race, best three in five to harness, came off last Monday at Deerfoot Park, Long Island, for a purse of \$1,000, with \$1,000 added. The competitors were—the American Girl and Copperbottom, the former won, best time made, 2:25. A race between Dan and Whitestone for a purse of \$100 was run on the same day and was won by the former in three straight heats.

At Bescon Park the horse Ingomar was matched against time on the 4th inst., for \$1,500, the endeavor being made to beat the best ten miles trotting time ever made, viz., 28:02 1/2. The attempt was a failure, the distance being made in 29:10 1/2.

The trotting at the Catskill course on

the 5d ult. brought out several horses. The first race was for a purse of \$600 for horses that never beat 2:58, miles heats, best three in five to harness. There were seven entries, but Sandy won. The second race, for horses that never beat 2:35, was won by Trout. Best time made, 2:33.

SHOOTING SUITS.

We have received from Mr. W. H. Holabird, of Valparaiso, Ind., one of his celebrated shooting coats, made of the best English duck, which is both water and mildew proof. It is very convenient, having an abundance of pockets, and it is large enough to place outside the ordinary coat. Sportsmen will find them very useful.

HENRY C. SQUIRES,

IMPORTER OF

Fine Breech & Muzzle loading Guns

SHOOTING TACKLE, BREECH LOADING IMPLEMENTS, & C. NO. 1 CORTLAND ST., (First door from 14th Wy)

Attention of sportsmen and dealers is called to my stock of Breech loaders, which, for quality and variety, challenge comparison with any other.

Sent for Illustrated Catalogue. Oct 8

SHOOTING PROPERTY ON THE EASTERN OR Adkins' shore of Maryland for sale.—The property consists of four hundred acres of land and marsh—about one hundred under cultivation—with new, two-story houses. It is the centre of the best goose and duck shooting on the coast, being from October to March, no better quail shooting than on the upland. The owner will also sell, if the property is disposed of, his entire shooting tackle, consisting of one eight and one ten bore W. & C. Scott's and some triple fire breech loaders, leather cases and all the implements complete. Also six wild live geese, decoys, duck decoys, and two new duck boats. The property is only used in consequence of the ill health of owner. For further and full particulars, and to see m. p. of place and chart of the Bay, apply to Mr. E. K. BAXTER, of Bangs, Merwin & Co., 656 Broadway. Oct 8-23

GOSHORN, Director General.

J. L. CAMPBELL, Secretary.

HOMES!

HEALTHFUL, CONVENIENT, LOVELY! Just think! Only 23 minutes, and seven cents fare, commutation, to Liberty street, New York, from PARK PLAZA, whose cost has been removed from the crown to the shore of New York Bay on the one side, and Newark Bay on the other, unfolds a panorama of such exquisite beauty, such charming sunsets, and ocean views far in the distance, that for a home, one finds it, in its every sense, of fancy and reality, in this lovely Place. Removed from the noise and dust of the great city, yet so near that the time and expense of transit thereto is less than from Wall to Broadway street. Fishing, boating and bathing unsurpassable. Lots in the most beautiful locations rapidly sold, the choicest will soon be taken up, while the cost of purchase will again be far advanced, owing to the rapid appreciation of property here. Delay in purchasing thus loses: First, the choice of a beautiful site; second, the price at which it can now be obtained—only \$25 monthly instalments. When \$200 is paid in, a nice house will be erected at cost for the lot purchased, and only the same amount of monthly instalment required. This you own your house and lot for less than you are paying rent. J. OS. HALL, LOCK, FOREST AND STREAM OFFICE, 17 CHATHAM STREET, Oct 1-4.

AMERICAN WILD FOWL SHOOTING.—BY J. W. LONG. A practical treatise on the habits, habits, and methods of shooting, also specific explanations for building traps, blinds and decoys, the training of water retrievers, and other valuable miscellaneous information, by an experienced duck shooter. Price, 250 pages, cloth, illustrated, \$2.00. To be had of all booksellers and the leading gun stores, or will be mailed to any address, post paid, on receipt of the price, by J. B. FORD & CO., Publishers, Ready Sept. 26th. 27 Park Place, N. Y.

2. A real young SETTERS of good blood (Irish).
3. MUSTARD, Dandie Dinmont, 2 years old; blue and tan, bred by the Rev. Tomkinson Mose; no handsomer game at anything, quite a show dog.
4. G.P. Blue Set, 5 years old; very handsome, show form, famous at water and rabbit; no better.
5. BRACE OF DANDIE DINMONT pups, dog and bitch, by Mustard out of a first rate Dandie bitch; blue and tan; fit to leave in a fortnight.
The above are all in splendid coat and condition. Apply to Old Calabar, Abbey House, Romney, Hunts, England.

BREEDING KENNEL.

The best strains of Pointer and Setter stock for sale. Dogs boarded, exercised, and cared for at \$5 per month, at the Kennel of A. C. WADDELL, Newell, New Jersey, or P. O. box 2422, N. Y.

Macdonald's Dogs.

THE FOLLOWING VALUABLE DOGS have been just received from the kennel of Mr. Macdonald, and are offered for sale. The blood, as will be seen, is the very best in England:
Liver and white young pointer dog SEFTON, as handsome a pointer as has ever been, thoroughly broken; \$50. SEFTON is by Lord Sefton's dog Sam, for which he has refused \$5 guineas, out of Star, Star out of Mr. Macdonald's Champion pointer bitch Miranda, by Cotter, own brother of General Prim.
Handsome young pointer whelp between 7 and 8 months. A pointer as fine as any ever bred. SPEER is by field trial winner Squire, out of Captain May's bitch.
Young setter bitch WOOLSACK, of 5 months old, by Ranger, out of Mr. Garth, Q. C.'s field trial winner Bess. Price \$25.
NOTE.—Until sold, SEFTON will be allowed a few bites of pure blood at \$50 each. Address, MOHAWK, Box 2882, New York P. O.

For Sale.

ONE OR A BRACE OF VERY SUPERIOR thorough-bred well-broken SETTERS—good retrievers. For particulars, address H. S., Box 210 P. O., Philadelphia. sep17

SPORTING BOOKS.

I.
HIRAM WOODRUFF'S—THE TROTTING HORSE OF AMERICA. New edition (the 18th), with nearly 100 pages of entirely new matter by Wm. F. Foster, bringing the work down to May, 1874; with a new record of performances, giving the best times made in the last fifty years and with seven new full-page engravings of celebrated horses. Cloth, black and gold, \$2.50. This is the standard book on the subject, and the additional text made added greatly to its value and interest. Every horse lover should own a copy.

II.
STONEHENGE'S—THE HORSE IN THE STABLE AND THE FIELD. His management in health and disease. By J. H. Walsh, F.R.S.C. ("Stone-henge"). Thoroughly revised and Americanized by Robert McCure, M. D., S. and with an essay on the Trotting Horse, his breeding and training, and with full tables of pedigree. Illustrated with nearly 100 engravings. \$2.50. This is universally admitted to be the best horse book ever published.

III.
DR. McCURE'S—THE AMERICAN GENTLEMAN'S STABLE GUIDE. Giving full directions for the management and care of stables, horses, and carriages and harness. By ROBT. McCURE, M. D., V. S. A practical manual for every stable owner.

IV.
THADDEUS NORRIS—THE AMERICAN ANGLER'S BOOK. The Natural History of sporting fish and the art of taking, with instructions in Fly fishing, Fly making, and Rod making, &c. &c. With 50 engravings. 8vo. cloth, gilt top, \$5.50. A classic on fishing by the best fisherman in America. Should be in the bag of every sportsman.

V.
THADDEUS NORRIS' AMERICAN FISH CULTURE. Embracing all the details of Pisciculture. 12mo. Cloth. Illustrated 41. \$1.75.

VI.

Invested in Stocks and Gold pays 2 1/2 per cent a month. Pamphlet free. Tumbleidge & Co. Bank, 4 S Wall street, N. Y.

This arm was submitted in competition with over one hundred different systems, American and European, to the Board of United States Officers, appointed by Act of Congress, 6th June, 1872, for the purpose of selecting the best arm for the service, and of which Brig. Gen. A. H. Terry was President. It successfully passed through all the tests.

The following is the report of the Board: "Resolved, That the adoption of magazine rifles for the military service by all nations is only a question of time; that whenever an arm shall be devised which shall be as effective as a single breech-loader, as the best of the existing breech-loading arms, and shall at the same time possess a safe and easily manipulated magazine, every consideration of public policy will require its adoption."

Resolved, further, That the experiments before the Board with the Ward-Burton Magazine System have so impressed the Board with the merits of this gun, that they consider it as more nearly fulfilling the conditions above specified than any other tried by them or of which they have any knowledge, and it does recommend that a number of magazine muskets be made on the plan for further trial in the field." (See Ordinance Report).

We are now receiving orders for these guns, and due notice will be given in this paper when they are ready for delivery.

The following is our scale of prices: Special Magazine for large game, carrying from 3 to 5 cartridges, 70 to 85 grs. of powder, 250 to 400 grs. of lead, 5 to 10 lbs weight, from \$50 and upwards, according to finish. Special Long-range Magazine Rifle for Creedmoor shooting, 40 grs. of powder, 480 grs. of lead, carrying 3 to 5 cartridges, weighing 10 lbs., from \$100 and upwards. Magazine guns for general use, carrying 3 to 9 cartridges, 60 grs. powder, 225 grs. lead, from \$40 and upwards. Single Breech-Loader, Creedmoor shooting, for long range, 90 grs. powder, 480 grs. lead, from \$60 and upwards. Single Breech-Loader, general use, 6 to 7 lbs., 60 grs. powder, 350 grs. lead, from \$30 and upwards. The calibre of all our rifles, unless otherwise ordered, will be .45-110.

All communications should be addressed to W. G. BURTON, Care Ward & Co., 54 Wall St., N. Y.

SONG OF AUTUMN.

YOU love Nature? Then greet crisp October—
Let us welcome its advent with glee,
If old Winter be sullen and sober,
His youth is most jaunty and free;
If Summer enchants and beguiles us,
With sunshine and bird melody;
If Spring ever wins and bewiles us,
With many a sweet mystery,
Let us still have a heart full forever,
For the glorious days of the Fall,
When the gold of the sun will not sever
Its hues from the raim of the wall;
When the tints of the fair Summer flowers
Live again in the haze of the air,
And the dreams of voluptuous hours
Are seen in the colors they wear;
When valley, and mountain, and lakelet,
Are crested with foliage so bright
That we feel that the blessings of Summer
Were never so fair as their flight.

L. W. L.

THE PROUD RED GROUSE.

BY ROBERT POWERS.

SOON as the sun peeps o'er the hill,
And birds are piping merrily,
When mists of night at morn'd drell
In dewdrops pure and peary,
Then from the covert where he dwells,
Among the purple heather-bells,
The grouse leads forth to bracken dells
His hungry brood right early.

The capers elastic and curl
May speed across the mosses;
The darting snipe, that dips in dew,
May haunt the bays and fosses;
These tempt us not to greet the sun,
And range the heath with flog and gun.
This day the proud red grouse alone
Our sporting craft engrosses.

We long to see him upward spring
And spread each russet feather;
And with the wind, on eddying wing,
Sweep crowing o'er the heather.
Then hastes we now into the hill
Where roams the game old grouse at will;
His fate, foregone, we shall fall
Ere home we hie together.—Lippincott's Magazine.

For Forest and Stream.

In the Wilderness.

WE are encamped at Little Round Lake, Hamilton County, N. Y. For ten days and nights we have dwelt in the heart of the woods. We were three days wending our way to this remote corner. Up the river by boat all day to Albany, thence to Fonda, where we peacefully reposed on feather beds. Next morning to the busy village of Gloversville. After a homely dinner we left for Northville in a rickety stage. No episodes, save the advent of a colossal personage occupying the middle swing seat, giving a wide margin for the support of the spine at the expense of pigmies. Northville is a quiet village of one long shady street lined with ancient pillared homes. Early the following day we were alert for the drive up the mountains; broke our fast by candle light. At last we were under weigh, drawn by a pair of antique sortel cobs; but we cared little for speed, surrounded by a landscape surpassing show, starting peaks, exquisite sky, etc., and all that sort of thing—at any rate, creating appreciation, defying expression; beside, landscapes have been overdone. At Lake Pleasant there are three stalwart brothers, Scandinavians, who have been bred hunters and fishermen. Inured to hardship, they not infrequently pass the rigorous winters trapping along the banks of the streams. They can despoil the waters of their finny denizens when all craft of the novice fails, so skilled are they in piscatorial art. Provided with blankets and clad in bloomers, and head gear, a calico sun-bonnet—my consort in corduroys and cow-hide stogas—we were driven on a buck-board three

miles as far as Elm Lake. For a comfortable vehicle over an undulating cow-path commend me to a white ash buck-board; it so pliantly accommodates itself to the mysterious ruts.

Our guides led the van with an ox hauling a sled, in which were conveyed our food and utensils. I was snugly stowed away with the potatoes, kettles, salt and bread; however, not before inspecting the blackened ruins of a fine old house recently destroyed by fire, built sixty years ago by Mr. Rhineland of New York. The site is something enchanting. There was state and gay company from the South and East enlivening this retreat by a silvery lake swarming with trout, and at that time deer in every thicket. Now rank grass overruns the foundations. The barn boasts a sky light, and the wild spider weaves unmolested among the rafters, but the hand of man could add naught to the serene loveliness of this elysium. They say it was haunted, but we must push on, it is beginning to rain. In this region the sun is hidden, damp clouds enoous and the rain descends trippingly; the astonished wayfarer, who has scarcely forgotten the blue dome that would more than construct a garment for a cat, of a few brief preceding moments, is unromantically deluged. Our brave ox plunges through bushes, brakes and over decayed logs, crashing, toppling. The men sturdily walk. The rain increases, and I take refuge under the blanket spread over the sledge.
