The firmament lowers darkly, and now hail sharply pelts us; still I am a somewhat suffocated, unwilling prisoner. The gentleman ahead has donned a picturesque bandanna havelock and stalked into the brush in quest of partridges. Presently is heard the echo of a shot gun, and three fluttering birds are brought down. This causes much excitement. I emerge from the wet blanket, put on my calico sun-bonnet, raise my umbrella and resolve to witness this sporting prowess or perish. The rain slackens—the sun peeps forth for a second—bang! bang! and two more hapless fledglings are triumphantly strung up for our supper. Woe is me! my balmoreal is sopping, my hair is horribly disheveled and plastered around my eyes. The pung tiff recklessly and pours rusty rivulets from the skillet upon my shivering anatomy; however, we hear the cheerful shout of the advance guard, who has not goaded Bright, the faithful ox. It tells us that deliverance is at hand. We now come into a clearing one and one-half miles from our promised haven. I stamp about to get warm; the ox is tethered for the night and we hopefully go up the hill, the vines and leaves dripping in our faces. Over some marshy places the herelean guide nimbly carries me, lest I sink too deep in the mire. A boat is taken from a hollow and we skim across an azure lake hemmed in with gigantic trees that spread away up some steep hills into dense jungles.

How fatigued and hungry we are. I scramble impetuously after the drone of a guide, (man of all work,) and we discover a birch bark shanty the shape of a Dutch oven. About three feet in front of the large open side is a stone fire-place. Very soon enormous beech and spruce half tree trunks are blazing there, and we recline upon the balsam boughs "shingled" on the ground of the hut. How grateful is the warmth, and the delicious odor of the hemlock buds permeates the air! We dried our clothing so hastily that a certain pair of corduroy unmentionables were scorched a beautiful brown in a short time, and the stogs curled and frizzled in the ashes. Our supper of fried potatoes and the birds was highly relished. If you want a good cup of tea, drink it without milk from a tin cup. Never was sleep sweeter or more profound; awaking to grope hark to consciousness, seeing the spruce sparks sputter and watching the stars through the trees.

Our ablutions are made in the brook below, the inlet of the lake. Sometimes we there surprise a portly squirrel titivating—arranging his whiskers over the molten surface, preparatory, I shrewdly suspect, to paying court to some sweet-voiced blue jays, who give matin concerts just as the sun trembles upon the rim of the horizon. Nor is he their only listener. The butterflies softly sway their jaunty

wings, the chipmunk pauses in his deprecation upon our cup-board, and his frogship catches every note as he naturally applauds from the edge of the lake.

Entomology might be studied profitably here, had we the requisites—a gauze flapper or sharp instrument to transfix the legions of insects. By the inscrutable laws of nature, (see Mr. Darwin,) they are furnished with appliances for gaining sustenance, weapons offensive and defensive, streaked, speckled, grizzled, striped and indented, parasites of moss, tree bark and leaves; winged monstrosities, with bodies like a caution, in prismatic colors, go booming wher ever their sweet will and the expanse of the Adirondack Park invites. The mosquito is abroad early and late, winding his blithesome horn; he is accessory to the attacks of the "punkies" that rejoice in jumping with stinging tiny feet upon one's nose, ears and hands, when slumber prevents resentment of such murderous familiarity. The insinuating centipede threads the fragrant balsam shoots, and small worms, looking like fir twigs, until they propel by drawing up their backs, crawl leisurely in the punkwood. Some ungainly arful beetles will be stricken dumb upon the slightest provocation, and pretend to be dead. Poke them never so gently and they seem stiff and stark, but keep a look out and after a time you will see Sir Beetle revive and steal away. Brats whirr near the fire in the dusk, and the dull hoot-owl shrieks dismally. We are told that panthers and wolves are not far distant on the mountains, so I at once get into a frozied alarm, and imagine I hear the wolves bark. There is a State bounty for the panthers, so they are diminishing.

In the cool early dawns we go out fly-fishing. Sometimes a bait is attractive, and we have tried trolling with a spoon-jig. The luck of the amateur angler varies according to the time of year, the direction of the wind, &c. Veterans will coolly inform us that such and such a pool isn't up to time for fish just now. Their logic is, that if we had arrived a fortnight earlier, or had postponed our visit, perhaps until after the frost, "I don't say but what you might o' ketched slathers o' fish." Query, were we not born under the wrong planet? possibly ours is not a game temperament. What are we to rely upon, when some people aver that there are no temperaments? Well, nothing daunted, we gaily anchor, unearth our fly-book, discuss the merits of the slearlit bis fly, grey hackle and white miller; untangle the leader—peer into the depths, then courageously whip out in hope of "getting a rise." We see the ripple of "a break" here and there; real fishes come to the surface, those whose wings have stirred, and others ready to leave the chrysalis, when they start into the air seeming to know pleasure in the use of their bluish-tinted, filmy wings, and are lost in ether. Now what joy is ours, when we hook a trout, perhaps not large, but so pretty; its mottled sides glistening with red and canary-colored spots. Wait a while; don't scare them. Ah! the slender rod is bent nearly double with the antics of the scaly unseem, violently swishing to and fro. See! there are two fish, one on the hackle. Fle! an insignificant chub. The guide inserts finger and thumb under its gills and contemptuously throws it away. Poor chub! its neck is broken. The heavy one is a slippery customer. I have much ado to secure him; he is a beauty, (scarlet bis was his destruction,) peach-blow and orange, with vivid blue and cherry dots. He is appetizing in his last moments—foundering, gasping on the floor of the boat. His jaws are torn and bleeding. Dear troutling! it seems pitiful, but you must succumb. This is "natural selection," if you please. At noon-time we return to camp for luncheon, seldom more than tea, bread and butter, and for those who affect them, an onion. The bag of Bernudas, bere by my foresight, is jealously guarded. We have two irregular meals daily, i. e. when we can get them. The fish are strangely capricious. But this very precariousness adds zest to the situation. Were we to bring delicacies and modern patent cooking vessels, the charm of eking out our living would be dispelled. We learn the following from the chief guide:—The growth of the trout quite naturally depends upon ample food and clear water. Experiments he has made in this wise:

While fishing one year he threw back about eighty trout weighing four ounces each, or a little under, first cutting a narrow strip from the top of the back fin or a corner from the side fin. The next year he caught fifteen or twenty such marked, weighing from one-half to three-fourths of a pound.

At certain seasons a fresh spring bubbling from the earth in the middle of the lake may be the head-center for hundreds of trout. Quietly they bait themselves in their mind a lot of wriggling angle worms. An unsuspecting little fellow nibbles at it, is carried up some distance, squirms off the hook, or takes it down to "carry the news" to his kin-folk. Then all effort to inveigle them during patient hours proves unavailing. They "die low," or temporarily disperse. One egg in a thousand becomes a fish, because they prey upon the spawn. Every stream of course has its best time for success in the fall, when the hordes of four or five squirrels at odd poverty-stricken times, but I have issued a fiat that we marauders shall subsist on "bread alone" rather than interfere with their innocent devices. At twilight the hazy sunbeams still linger, the branches of the trees all growing toward the lake, crowd each other to catch the light and absorb the moisture, and are reflected in exquisite mosaics of Nile green, the lustrous sheen of the birch, the planks of the boat, the moss and the water turned to crimson and ochre, all repeated in one gleaming mass. It is so silent here that our every word is echoed from hill to hill, and each day we fear that the axe will drive away any stray deer. They are ever on the alert and have signals of warning to their brethren. Something of their habits I gather while luxuriating, prone upon the earth, comfortably sniffling the invigorating smell of the mounding cones, but as I leaves, by applying my ear to the ground, try to interpret the pleasant small sounds of the forest. I am content to remain in ignorance, when an uncouth spider with prying eyes and seven legs menaces me. Meantime camp life goes on and is delightful. An acquisitive hedge-hog travels nightly to our vicinity to lap up any appearance of salt, and field mice and ferrets make a clean sweep of fish bones and bread crusts cast aside. The cabin is trim by S. A. M., and the red and white awning on the two porches. The "smudges" at the paper stifling pitch burning the blood-thirsty bugs and turning the bipeds—a rare London smoke. I adorn the joists of our house with during yellow lilies and astrigent choke berries, but we are happy? Nay, verily! the heart of man is singularly grasping. We are pining to capture a deer, to decoy a buck into our deathly clutches.

Through several evenings we have linked over the fire and heard fabulous tales of hunts, and we longed to figure in such happy excitement, so on these dark nights "at the hour of fairy ban and spell," we have stealthily put out, intent upon slaying the guiltless venison. One or is muffled and used as a paddle; noiselessly we glide along the shore; the hunter, armed to the teeth, is crouched in the bow under the jack, (a piece of bark holding two lighted candles.) They twinkle and reveal ghostly shadows among the white alders. To the native hunter, the forest and its woods are a floating enigma. We breathlessly strain our vision and crane our necks that we may be first to find him cutting of the great velvet lily pads. Anxiously and doggedly we swing around the circle, but the bounding gazelle may have chosen other scenes for his midnight puppy feast. Clearly the mosquitoes are in this case reprehensible in not desperately goading him. In the interims we begin that conversation that in the woods and that we shall be out very early, that the daily routine may not reach their covets. But our precautions were futile. I had got to the pass of settling with my conscience for, perhaps, despatching with an oar a timid fawn rushing past our boat, on the watch. We decided to solemnly conclude to send for some hounds. Seventeen hours were passed in feverish expectancy, when two noble dogs arrived quite eager for the fray. Men were stationed on the shore, and the dogs were on the lake, three down in the clearing by the creek, and the last plodded through fern and fen to find the track. The day wears on. From a great distance we occasionally hear the baying dogs. We fast more or less, as at any moment we may see the raft of them in hot pursuit, but, alas! the fates are leagued against us, our game dimmer is a delusion and a snare. Night falls and the hunters return. One outsider, a novice, deems it a duty to demand the story of the within, even of the rods of him, all deer and accuse him of sleeping at his post; then we retire in dudgeon to the seclusion of our blanket. It rained all the next day. We were obliged to sit like Turks, (no chairs in camp,) and anoint our faces with pennyroyal oil, in order to withstand the onslaught of heavy detachments of midges. After supper the dogs returned, their heads pierced with porcupine quills. They invariably go back to the spot where they were put upon the scent. They were at last and whined piteously.

We have but a few more days to stay. Our last expedition was to the "Oregon," four miles distant, after fish. The coarse sodden grass was trodden down, it was said, by bears that come down from the mountains and spend their evenings there in social accord, and mildly feed upon raspberries. Unlike the bears of baby memory, these run away upon the approach of man. They "den up" and hide away in a scrubber. The creek had been "whipped" extensively, for five mortal hours upon a very hard board, passed the fly-book, expressed oracular opinions concerning the theories of Mr. Isaac Walton, and observed the animated attitudes of a bright-haired youth with unalloyed satisfaction. Now that we are going away I fancy that the lumps behind our ears and blisters on our necks are quite formidable. We have not supported by a fringe of Indian tobacco wood. I have interviewed the guide about other desirable localities and this is the digest. From Lake Pleasant to Riquette Lake, thirty-six miles by the State road. For a tramp, this is the route.—From here to Jessup's River, thence to Indian Lake, from Indian Lake Falls to Jackson's Hotel on Cedar River, up the river ten miles to Blue Mountain Lake, fifteen miles to Riquette, thence to Long Lake, down the outlet to Stony Brook, thence to the saw-mill. The outlet is one hundred miles. Indian Lake is the reservoir for Jessup's River. Cedar River is the outlet of Cedar lakes, named for speckled trout. Raquette, the largest inland lake, is full of salmon trout, and at Long Lake may be had bass and pickerel. The best guide at Lake Pleasant's Burr Storges.

We are home now at the hotel. We have heard the ravens croak for the last time this year. We bade reluctant good-bye to the little cabin. The allurements of sky

and mountain, on the way and from the piazza, are like a changeable face, scarcely twice the same. There is a new carpet for the parlor and it has been stretched with a pitchfork.

Two deer have run into Elm and Lake Pleasant in our absence. After all said and done we cannot wish to exchange our stock of henry fish for a glimpse of them, so we are glad we went. Deer really play the part of the aggravating side of it. The requirements are, no wind, no moon, then in the dim religious light demolish your deer. The other Sunday a good divine was discoursing of the Better Land to the boarders and some farmers, when an urelin with bare feet and cap aloft hounced into the room shouting, "There's a deer in the lake!" It walls have arisen the worthy man of God had auditors after this thrilling statement.

The people here are mostly indigent. No wheat is raised because of the short summers. Trapping for four months of the year is lucrative. The animals follow the trail of the trapper, who pulls a rabbit, a piece of venison or a bird wing by a rope along the path. Muskrats are caught in steel traps set in the water. The fisher, a species of cat, lives on the upland, rests in streams and valleys. These, with martens and otter, are entirely gone, and "dead falls." Three stout studs of wood are driven into the earth in a square, then brush is piled over the top, three withes in the shape of a figure four, the bait on one end, are propped up in the centre of this little cage. A log proportionate in size is then placed across the withes. The beast, coveting the morsel, has but one mode of ingress through the small aperture under the log, then its spine is broken or it is instantly killed. It is not unusual for one man to have set fifty steel traps and twenty-five dead falls at one time. So it takes constant toil, a hardy constitution and a practiced eye to find the "blazed" trees that mark the course. There are fur-traders who come up here and barter for the pelts.

Towing on the lake is agreeable exercise, and we rest in the shade of the Speculator, a mountain that frowns at us from the attitude of three thousand feet. The angular school-mistress does not "board around," but waits at table for the city-bred. If perchance, we dawdle after the lark soars from her nest, this august pedant raps us up savagely, that she may proceed to the educational edifice. Here there is charming unconsciousness of any plane where social distinction draws conventional lines, but the weary and misanthropic are rejuvenated and find potent panacea in the marvellous efficacy of the canoe.

Oct. 11th.—After having outlived the disappointment of missing all the deer, at camp, I enthusiastically chronicled the fact that we have got one at last, amid jubilant rejoicings. This morning there started for the Sacandaga River three gentlemen and four guides. The hunt occupied all day. It was doubtless stupid enough maintaining such quiet for weary hours; with a bread roll and a small fish, perhaps a book, it is made endurable. Of course we were allowed to total failure, but at sunset there was vociferous demonstration and the partner of my earthly span loomed up in the road bearing high in air the head and antlers of a magnificent buck which he had shot. We shouted triumphantly, insisting upon specific detail of the affair—how the deer looked while pursued, etc., etc. It is too bad that we "feminiles" could not have been "in at the death." The poor savory fellow is certainly packed away in the capacious ice-house, and his head shall be preserved as a trophy. And we will have an old-fashioned barbeque when we return home. SARAH GOODYEAR.

SHOOTING WILD PIGEONS.

ALTHOUGH I have been reading your paper for nearly one year I have seen little in its columns concerning the wild pigeon, its habits and the country which it selects for its habitation during the winter months, and its nesting places in summer.

Although not strictly a game bird, I esteem it one of the most interesting birds in our country as regards its habits, with some few of which I am acquainted, and being very desirous of becoming more familiar with it, I know of no better place to seek for information than in the columns of your valuable paper; I would, therefore, ask any of your correspondents, to whose eye this may come, to add by a future letter to my information.

At this season of the year the Alleghany Mountains are literally alive with them, and it is not difficult to find in the best localities can be heard but the sharp crack of rifles and the heavier sound of shot guns. Every one seems to be impressed with the idea that he must make the finest bag of the season, and consequently every one that can procure a gun, no matter of what kind, sails forth to wage an indiscriminate war upon the poor pigeons that have visited our hills and valleys to feed upon the acorns and wild cherries which are found in the greatest profusion on the top of the Alleghany in a strip of country called the Glades. These Glades are open spaces devoid of trees in the midst of unbroken forests covered by tall grass and elder bushes; they extend for perhaps fifty miles on top of the mountains, and are from fifteen to twenty miles in breadth. This section of the country seems to be the favorite ground for pigeons in the fall of the year, when they are making their way from the northern frosts to find a more congenial clime in the Southern States.

Hearing of the immense numbers of pigeons in this section of our State, my friend J. and myself determined to take a little trip to see if we could not kill a few of the countless multitudes that were swarming in the mountains. We took the afternoon express on the Baltimore and Ohio Railroad from Cumberland, and after a two hours ride arrived at Deer Run, a small town on the line between Baltimore and Ohio, and no sooner had we stepped upon the platform and cast our eyes about us, than we saw large flocks flying in every direction. We left the station and walked about one hundred and fifty yards in the woods, when I succeeded in bringing down the first pigeon; that shot seemed to open the ball, and we never ceased to load and fire until darkness closed the day. Although late in the evening when we commenced shooting, and the dead birds being difficult to find, on account of the thick jack oaks, our bag contained fifty pigeons.

We stayed all night with an old gentleman named Friend, and the next morning, just as daylight began to wake a sleeping world, we hurriedly dressed, and for fifteen or twenty minutes had delightful sport; as the pigeons left the roost for their feeding grounds we stood in an open field, and as flock after flock passed over each one con-

tributed to our bag. In half an hour not one pigeon could be seen, and although we hunted diligently all day, some thirty pigeons rewarded us, until four in the evening, when the gorged birds began to seek their roosting place of the previous night. We selected one of the glades, of which I have before spoken, where the grass had been mowed, and the pigeons sweeping over its grassy surface as splendid sport, as it has almost never before been found. But all things must have an end, and so had our hunt here; and on counting our pigeons for the afternoon, found we had bagged ninety-four.

We determined that wearied nature needed repose, and our old host, Mr. Friend, insisting upon our staying, we took up our quarters for another night with him, and the next morning being Sunday, we started for home. The moral sense of the community was shocked, and nothing that we could do or say seemed to have any effect upon the highly religious people of Cumberland. No express wagon could be found to transport our game to our respective homes, and necessity compelled us to brave the world's censure and carry our own game, which we did, regardless of those envious ones who blamed us for what they were sorry they had not done. TOURS, OBSERVER.

"COME, YE DISCONSOLATE."

"There's not a day but to the man of thought
Begets some secret that throws new reproach
On life, and makes man's nature more aware."

THERE is some truth in the above lines, and we might make many other quotations of a like dismal sentiment from the pen of Dr. Young. We say some truth, but far from being the whole. Heaven has indeed furnished the only panacea for these sore and multiplied ills. Still, there are partial reliefs of a subordinate character that are not to be overlooked in our efforts to augment the sum of human happiness. Granting, as many say, that our best effort cannot reach their full measure of the Divine—they are good as far as they go. It is good to find out the nature of that ailment that is spreading such a cloud of sadness over the face of your fellow man; and when you have found out, see what can be done to roll off the cloud from his face and the burden from his soul.

Had that worldly minded Doctor, in lieu of lamenting "your too brief correspondence with earth," sought to the forest and stream, in their beauty and majesty, he might have found more frequent occasion for a smiling thought and have learned at least to know

"How sublime a thing it is
To suffer and be strong."

We must confess to a liking for the name of your journal. It awakens in our mind a host of pleasant memories. The forest and stream have furnished our professional recreation for more than thirty years of severe professional life; and hence it is that the very name comes to us embued with pleasing recollections no pen can describe.

There is something suggestive of a nobler and manlier way of unbending from the mental and physical log of life than the too common method of following a crowd in the old beaten paths to some "dicer lick" or other place of hourly tales and stories a thousand times repeated, of dissipation and folly.

Although your correspondent can boast a "home" in one of the most favored spots to exercise one's skill in the use of "gun or rod," he must not, and cannot, if he would, be enrolled in the category of sportsmen; still, on his part, he has never been refused whatever there may be of sport and manly athleticism in the broad domain of field and forest, lake and streamlet. We have ever found the genuine sportsman a genuine gentleman, all unlike what Frank Forester has yelet, "pot-hunters."

So far as our observation goes—frankness of speech, urbanity of manners and honesty of heart, devoid of all cant and coekneyism, defines the true sportsman. But whether we are able to give the red sportsman his true position or not, one truth stands boldly out, challenging the consideration of every thinking man, that some kind of relaxation from the exhausting effects of too close application to study and business are imperiously demanded. What shall they be? We answer emphatically, field sports, if we would preserve a sound body, sound mind and sound heart; or if more to the taste, while equally exciting and less fatiguing, learn to handle the rod and the troll. One need not ask, Where? No such matter as ours, for the latter sport on the Rocky Mountains, our lakes and mouths of large rivers abound with the sea trout, the bass, maskalonge, pike and pickerel. If you prefer that of all fish, the "speckled trout," learn to throw the fly, and practice the art piscatorial upon the cold streams that flow the bluffs in Minnesota and Wisconsin, and through various channels mingle with the dark waters of the Mississippi.

It is pleasant to know that professional men—especially city pastors—are spending their vacations on the shores of our northern lakes, or among the cliffs of the mountains, boating, fishing and enjoying the free air of heaven "without money and without price." It may be replied that this kind of sport will answer for the ministers. It will; and we hesitate not to affirm that the most active and effective men in the American pulp have been, and are, with few exceptions, those who have sought renewed energy in the field, on the streams or lakes. We never pass among the Thousand Islands of the St. Lawrence, or revisit them in imagination, without associating with the whole scene, the name of the eloquent Bethune. We never shudder the "trusty gun" and go forth to the wooded hills without thinking of the lamented Dr. Todd, who added years of usefulness to his working life, and died ailing heavily and unwell, in these manly sports. To the man born in, or habituated to, a condition of mental and physical torpidity, who would feel no more quivering of the nerves at the leaping of a trout from the foaming basin in a mountain gorge, than at the fall of a "Tumble Bug" from his little hillock of mud, we say of such an one, who never felt the recoil of a brain struggle in the study or on the platform—who never uses your excelsior, and who knows no necessity for these safety valves to the life of the earnest, toiling man. They see no demand for the FOREST AND STREAM. They cannot understand it. They cannot. They never had a throb in their own breasts, and never produced one in the soul of a fellow man. They cannot see why President Lincoln felt compelled at times to tell a story or die; or why others at times must "kay to the forest or stream, or to the hills, or to the water, or to the mountains, or to the sea, or to the fields." Exempli, they may have been, and ever will be, from a single paroxysm of mental

English—and this they may credit to their philosophy, rather than stolidity. One thing they cannot do. They can never credit themselves with one generous gush of joy.

Hoping that you will receive that patronage from a generous public, which will insure success to your noble enterprise, we close, in the hope of sending you a better article on no distant day.

For Forest and Stream.

GREAT PECONIC BAY.

HAVING two weeks since passed a short time at the village of Peconic, and having, while there, fished in the company of good men and true, an account of our trip and luck may be uninteresting to your readers. I left your city in the company of Count Shorb, betwixt known to the readers of your companion in sporting matters (the *Turf*) than possibly to your own. The Count was suffering from that troublesome but not dangerous malady, "hay fever." My other companion was Harry Durrell. Don't know him? If not, allow me to introduce you. Imagine a gentleman of eighty in years, but still in heart a boy; his eyes being blue in color, in action of medium stature; clean shaven face, bright, clear blue eye, which age has not dimmed, nor has age changed as yet the color of the iris of his eyes; hair white and soft, and plenty of it; a good companion—can tell a good story, and enjoys one told by others; a good shot, even now; a lover of a hunting dog, and you have "old Harry Durrell." To every shooting man in the vicinity of your city he is as well known as was Hiram Woodruff to the lovers of the trotter. Unfortunately, he was also suffering from the same nose-irritating disease as the Count. We were bound for a fishing excursion in Peconic Bay. Scott Rodman was to be our host, and a host we found him.

We arrived at Peconic late in the evening, and had but little to say until after supper. Through with this, the fishing prospects of a narrow were eagerly and anxiously discussed. Bait and tackle had been ordered, our traps engaged, and tonight was to be done save to get tackle in order, and adjust rods and reels for those who fancied pole fishing, and get ready lines and sinkers for those who chose drop lines. Up betimes, we found breakfast ready, and although eaten by artificial light—how short the days lately grow—it was heartily eaten. The wagon awaited us at the door, and lastly organizing our tackle we jump in and wrap ourselves in lap blankets and horse covers for our two mile ride to the bay. A heavy sea fog was rolling in from the ocean, and lung damp and dark over the salt meadows. The only sound we heard was the shrill whistling of a flock of "yelpers," and the more plaintive whistle of the plover.

Getting out at the port of New Suffolk, we soon have our horse in a Nisus, as McNish is a Jolly Scotchman, who has drifted here seaward, and now keeps covers for the hotel which is the headquarters of all the fishermen and duck shooters of this great bay, which bay is, in fact, an inland ocean. Here we got our fiddlers, bait for blackfish; shrimp for our kingfish, and a hard shell clam or two for a change of bait if desired. Ben Webb was the captain of our craft, and Ira Brewster Tuttle our man Friday.

Now this is a man to know—knows everything, too; is as familiar with every nook of the bay and Long Island Sound as the most of us are with our A. B. C's. He can tell you all the good fishing grounds of both waters. He can sing a song, dance a jig, sail a boat, and, in fact, I do not know what he can't do, and what's more, do well. A jolly companion is this same Ira. The clam bait was on Ira's fishing craft, and he and myself stole away in the snail's pace for it, before picking up the bait we descended to the bottom of the entry gate, and as the morning was damp, and the air chill, took something to clear our throats and keep out the fog. A little five year old apple, a dash of lemon, and a modicum of sugar, we found an admirable specific. So successful did we find it that, despite the impatient snouts of our companions, we had to repeat the dose. Gathering hastily the hard clad molluscs, we returned to the boat, and to be our home for the day. Her white sails flapped savagely, and the breeze from the loosened whip which held her, as the ball from the cannon's mouth. The breeze was fresh, and our ten mile sail was a delightful one. The heat of the rising sun dispelled all fog, and it melted into "thin air" speedily. As Ira and Ben Webb attended to the boat, our party had nothing to do but lounge, and lounge we did successfully till nearing our fishing grounds, "Freakish" had left the boat, and was walking on the beach. "Freakish" fish only broke the day we left your city, had driven them off. Bluefish and striped bass had not yet come, and our only hope was the kingfish. Coming up in the wind the headway of our craft is checked, and our anchor dropped. The first fish is the honor to be gained, and all lines are quickly halted and dropped in many fathoms water. The wind dies away from the surface, and the water is as smooth as blue surface. A shout from the Count, and a fish near surge upward, and then a hand over hand pull, announces a catch.

"First fish," he shouts. "Ah, me! that I have to tell it. A cloud-compelling success—dire result of his extantial affection—interrupted his steady pull, and the attention his nasal organ demanded from the duty he owed the King. No man can serve two masters." Under which King, Bezonian? fish or nose. The nose had it. His pull stopped, his line relaxed, and away sailed Mr. Fish, with no doubt slightly heathered jaws, to nurse on the uncertainty of bait. No more "swamp" for him. In unison with Diudrcary, that fish no doubt found it hard to sit shrimp. That game old pebble Durrell was the next in luck, and announced the first success as the Count. The excitement was too great for these sickly landmen, and the English fisher, brine of their noses answered each to each. Old Harry, however, with his forty years' experience of the disease, was too well seasoned to be unnerved, and despite his sonorous sneezes landed his fish. A beauty, too, of at least two pounds weight. And what a pretty fish it is. Silvery gleam its scales as it flashes from water to air, and the dark, inversely barred markings seem but a change of light, swinging for a second, it turns and turns in the sun. So a bird's plumage changes in mid air as sunlight or shadow falls across the varied color of feather and of plume. Scott, fishing with rod and reel, speedily raises from the depths fish after fish, but all small, running from a few ounces up to half a pound.

Ira, hidden under the lee of the half dropped jib, sings out to the boys, "Look out there, Harry; haul in your line! You'll foul me! Be careful, you'll?"

A-a-a! what a rush! Look at that! Will you look? Of course we all looked and looked. Eyes fairly started from their sockets, and the Count and old Harry sneezed in chorus. Ira danced around on that small forward deck till all rag again. His rod, albeit a stout one, bent like a little bamboo or a lance wood tip, and the large rushes of the fish were exciting to the extreme. Keeping his sinister thumb firmly pressed down he reels as rapidly in as the vigorously struggling fish permits. Anon, with a rush like a whale, the pull has to be relaxed, and the reeling in all to be done over again. Five, ten, twenty minutes elapse, and the excitement is ever on the increase. Each and all tell Ira how to do it.

"Now, Ira, snub him, old fellow; turn him now; he'll stand it," as the fish passes for a moment. Before he can act on the advice, off he goes again. We wonder what manner of fish it is, and speculation is seen in the eyes of all. Anxiously the moments speed by, and if only that fish had come to our hook how quickly we would have had him "comfortably settled for life." The thing was becoming monotonous. Ira evidently thought so, and once again his pull commenced. Slowly, but steadily and surely, foot after foot of the fish came up, and all needed with anxious looks through fathoms of water. A yard more here, and a streak of morning light flashes like a meteor through the blue. Steadily the pull is kept up by Ira. We all crowd to his side to watch the rush of this three feet long denizen of the deep as he approaches the surface. Ira looks as if the fate of nations depended upon his success. Nearer and nearer he comes, when great heave, and the fish is up, and the fish is up, and the fish is up. The half drowned, half submerged fish, at this unceremoniously, with one half expiring snub snapped the line as if it were paper twine, and sought fresh fields and marine pastures new. Ira sank savage and exhausted against the mast, while the prettiest scene of mutual erudition took place between the three. "Twas you that did it. It was n't I, say it was!" Well, this fish was no exception to all that we had seen. It was the best fish we had seen.

Fishing after this exciting episode was tame indeed, and the few dozen small kingfish we took did but little to sweeten our sour tempers. The catching of a dogfish by Scott, and a toothfish by the Count, was the last weight that disabled the already suffering camel. Up anchor, stop fishing, and all hands vote for a sail. All wanted to be sailors—no more fishermen in that party. So jib and mainsail were hauled up, and the boat was left to the wind and the water with her bow in musical murmurings. Ben steers a straight course for the further side of the bay. The sun slowly sets in a blaze of glorious color, while already the silver softening light appears at opposite points. The breeze is scarce six miles an hour, yet how lovely it all is. We are bound for Canoe Place, situated at the head of Shinnecock Bay, on the South Side. Arriving at the far side of Peconic, we find the boat again, and once again, our small boat come into requisition, and Capt. Ben lands us all on the soft sandy beach. The island here is a scant half mile wide, and a walk of that distance over the sandy dunes, scarce held together with bunches of wiry beach grass, brings us to Buddington's. Here is the paradise of duck and goose shooters in late November. Live decoys are owned by every fishing farmer, and their elations are heard by the water, and the air, and the wind, and the flag of the *B. Connecticut*. Here our worthy Recorder, John K. Hackett, renews his youth season after season. The hotel is scarce a hundred feet from the bay. A long, low, rambling looking building, it looks of the sea, salty. Small panes of glass scant light to hall and to room. Everywhere is sand and salt. Huge heaps of oyster and clam shells stand as ornaments on the sandy beach used for a lawn, as well as on the beach. A row of trees, basket willow, stand as sentinels between tides and house. The low wash of water is heard unceasingly. From a ripple to a roar, as the wind blows easily or angrily, the transition is great. The foliage of the willows shows white gauze-like, lace-like, as the dried spray here leaves its salty deposit.

Our supper here was clam fritters, and cooked as only those who are contented to broil to broil can cook them. To say justice was done to those fritters is to say but little. Six hungry men made sad havoc, and a new pile of shells attested to the prowess of our company. Adjoining after supper to the cover of the low-hung, pillar-supported porch, the age of old Harry Durrell was brought up for discussion. The topic was scarce started ere an old sail stepped up and stated he was just as old as Harry, and marked down the water, and the air, and the wind, and the flag of life and to earth. Scarce through with this, when along comes another youngster of a year's more growth. Durrell was waxing wroth that any one could carry age as well as he, in spite of his sneezing affection, when our landlord, Buddington, who was at least sixty-five, heard the discussion, and stepping up said, "wait till I call father." Answering to his call, an old gentleman, little the worse for his water, stepped on the piazza to our steps, and was introduced to us. Upright and erect, with hair and beard as white as white could be, and somewhat supporting his erectness with an ivory cane, stood an aggregate of ninety-four seasons, and good at least for a dozen more. Here was richness—four men whose united age was three hundred and seventy-five years. The experiences of these old veterans as they talked to each other, all wanted to the water, and the air, and the wind, and the flag of nine or four summers eclipsed the lad Durrell by fourteen years, and snuffed him, for the time, completely out. As he told us afterward, when revived, "Hm, ninety-four, eh; don't believe it; not a word of it."

The moon had now risen, and gave light sufficient to guide us across the sandy hills. After making all arrangements, such as securing live decoys, &c., for a week's wild-fowl hunting, and the water, and the air, and the wind, and the flag of craft, Ira and the Count dropped behind, anxious to renew acquaintance with the fair Ida, who had waited on the clamoring crowd at supper. A damsel as fair in face and lovely of form as the mythological nymph of the ancients, her charms had stricken them both. As time and tide, however, wait for no man, so we had to leave the curly-locked priestess of Canoe Place, and start on our way to the water, and the air, and the wind, and the flag of a glorious one. The stars in their brightness rivalled the moon. The wind was fair, and from the right quarter. Laying our course on the start, we kept it, not having to make a single tack in the twenty mile sail. The water was phosphorescent with millions of algalculae. Each passing ripple flashed back an answering gleam to moon and to star, and equally as brilliant. The Count, Ira, and Scott early sought the cabin's bunks, but old Harry Durrell and

your correspondent boldly stood the heavy dew for the sake of the beauties of the night, and lying stretched at length on the vessel's deck gazed and thought—

"How beautiful is this night the naughtiest sign
Which vernal zephyrs breathe in evening's air.
Were discord to the spirit of the breeze,
That wraps this motionless sea, Heaven's ebony vault
Should be their innumerable track,
Through which the moon's unclouded splendour rolls,
Seems like a canopy which love has spread
Above the sleeping world."

GOPHER.

For Forest and Stream.

A GAME REGION.

WE have just arrived at Bismarck, Dakota Territory. Our party has travelled 1,800 miles down the Missouri River in four-oared boats. During the trip many buffaloes, mountain sheep, antelope and elk were seen; also a great many beaver and a few minks. The buffaloes were crossing the river in many places in the mountains, and they appeared to be partially demoralized. Some of them stood on the river bank looking at our passing boats, others galloped up the steep mountain sides, and several small bands jumped into the river and crossed, galloping away from the river bottom into the mountains, leaving a cloud of dust to mark their trail. One large bull lost his footing and rolled down a mountain side raising a cloud of dust, which partially concealed him.

Elk were heard whistling in many places, and at one of our camps they were whistling so near as to awaken me several times during the night. There is splendid hunting to be had on the Musselshell and Missouri rivers, if it was not for those good Indians on reservations who stay on them when they wish to and leave them to hunt or steal stock, or any straggling white's scalps, when a chance offers. The only really good Indians on the Upper Missouri, are those which are wrapped in blankets and put-up on poles on the hills for an Indian or two. A short time ago two men were murdered and burned at the Musselshell on the Missouri River; another man was found in a decomposed state lashed to a tree at the forks of Milk River, and several others are missing. One man was eluded and had four bullets put into him by Indians at Fort Peck, and he told me he thought the Indians who shot him were some of their own Indians, that they were feeding at the agency at Fort Peck. A friend has just come from a hunt, and he tells me the Indians have just run off his two horses which he left but a short time while hunting. His scalp would probably have gone with the horses if he had been with them.

Near the Sweet Grass Hills, Montana, we found twenty-seven dead Indians. They were scalped and some of them had several bullet-holes in their heads. Some of the dead Indians had daggers with their knives in their hands, and others had enlarged the mouths of badgers holes so they might get to them and be partly shielded from their enemies' bullets.

The battle had evidently been a long and hard one, as several kinds of cartridge shells were found in the pits by the dead Indians. Their entire scalps of the victims had been removed by the successful party, which is unusual, as at that portion of the scalp was gamed by the Indians in St. Paul, in about three days shall go from there to the Big Woods of Minnesota to hunt and trap specimens for mounting. Very truly yours, J. H. BATTY.

Bismarck, D. T., Oct. 1, 1874.

DEER HUNTING BY STEAM.—A Schroon Lake correspondent of the Keeseville *Republican* tells the following story:

As the steamer Eppingham, en route for our usually quiet village, laden with summer tourists and pleasure seekers, was plowing her way through the placid waters of the lake, and when opposite what is known as Eagle Point, one of the engineers, Jesse D. Smith, who, by the way, is always being something, suddenly remarked to me, "I shall be very sorry to see you from the point into a dense thicket a few rods from the shore. This information was at once given to Capt. Pat. Russell, who, under the excitement of the moment, gave orders, put on all steam, and the steamer was headed direct for Schroon, intermediate landings not noticed. On arrival at Schroon the steamer Libbie was fired up, and manned by men and dogs. Proceeding to Eagle Point at a rate of speed that would have amazed the renowned John Giffin, in due time the point was reached, the dogs put on track, but strange to relate, the dogs, although of good blood, utterly refused to take the least notice of it. We are told that John D. Barwell, of the Ondawa, was so disgusted that he threatened to shoot one of the dogs, which threat would have been doubtless carried out, only for Jess Smith, who saved the animal's life by his timely interference. The engineer, followed by the party, then started on track, occasionally stopping to make sure they were on the point. Here let me say that among the party, and at this stage of the game, who took the lead in the chase, was Mr. Jim Cheney, nephew of the famous panther hunter, John Cheney, of the Adirondacks. We understand Jim made the remark: "Uncle John has been in worse places than this. I have the Cheney blood in my veins." Follow! As an exciting chase of a mile and a half, it ended when upon what they supposed to be a deer. If possible, imagine the surprise, chagrin, and appearance of the engineer, and in fact, all the party, when on nearing the beautiful buck it proved to be a yearling steer belonging to Mr. A. Seott.

—Mrat Halstead thus tells how the King of Denmark goes salmon fishing, (or potting,) in Iceland:—"The King took a ride of five miles into the country yesterday and caught salmon. The process of fishing in which he indulged is not a difficult. The river is dammed so that the water runs into large boxes, making a slight fall. The hole is guarded on the inside against fish by long, converging sticks, and the adventurous fish, swimming up the river, find the little water fall flashing before them, and seeming to come from a pleasant pool above, jump it with force sufficient to plunge them into the box, and there they are safe as mice in a trap into which they have crawled in several channels. The salmon's well-known power and gameness in jumping water falls gives rise to this contrivance. The King caught the salmon by inserting in the trap where they were taken a basket net on a pole and scooping them out. In this way fifty-one were captured during his visit, the largest weighing twelve pounds and a half. When his Majesty was weary of landing out the fish he passed the spoon net to his son."

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

FISH CULTURE FOR NEWFOUNDLAND.

THE people of Newfoundland, notwithstanding the fact that they own some of the finest marine fishing banks in the world, have taken the preliminary steps to establish river pisciculture as one of the most prominent industries of the country. They, like ourselves, feel the importance of this movement, so we have little doubt that when they have gained the preliminary experience they will make the industry a success. The following letter in the *Standard* shows what the organizers of the movement have done thus far.

"We are, at present, in communication with C. G. Aikins, Esq., of the Bucksport Salmon Breeding Works of Maine, United States, and others, with reference to this matter; also, one of our members of the St. John's Lodge, No. 5, is at present on a tour through Canada and the States, where he intends visiting the fish breeding establishments of those countries, and I trust that upon his return, we shall have much practical information which will greatly assist us in the construction of our hatching house, mode of manipulation, &c. The great difficulty we have now to contend with is the want of the necessary funds for the purpose of erecting a suitable building for carrying on our operations. These works, we allow, will cost about £100 or £150, and that sum, I fear, we shall be unable to raise, unless the Government or men of capital come to our assistance. If we can succeed in procuring our necessary requisites, this Fall and Winter, we propose importing from the Bucksport works a quantity of salmon ova; and I doubt not that before very long we shall succeed in turning into our waters millions of young fish.

We have many obstacles to overcome—imperfect knowledge, want of means, and men—who, from their position, should be foremost in such an undertaking—giving us the cold shoulder. We have very few sympathizers in Conception Bay, though, I am happy to say, many influential and working men have joined us in St. John's. It is our intention to appeal to the Government for aid in the erection of the required building; and I believe its leading members will afford this national project all encouragement in their power."

THE GRAYLING AGAIN.—One of the most interesting departments of the Michigan State Fair was that devoted to the exhibition of fish. This was much better than any people could reasonably anticipate, as such exhibitions are of recent occurrence in this country, and especially in the West. All the principal species indigenous to the Michigan waters were represented, but the first prize, the blue ribbon, was awarded to the grayling (*Thymallus tricolor*) for its powers of endurance; for though subject to the hardships of being transported over four hundred miles, and confined to bad water, yet when placed on exhibition it showed more sprightliness and energy than either the bass, brook trout, California salmon, bass, and the salmon family of New England, though the latter were often more favorably situated and better attended. While several of all the latter species died, not one of the *Thymallus* showed even signs of debility. From this fact we should deduce that the grayling having greater power of endurance than any of its congeners, is about the fittest of the ichthy order to be transported long distances, and that it will thrive where other fish species cannot. This is an important fact to fish culturists, for they know now which species is best adapted to withstand the rough usages of travel and the unfavorable conditions of impure water.

MASSACHUSETTS ANGLERS' ASSOCIATION.—A regular meeting of this society was held at their elegant room in Boston on Tuesday evening 7th inst., President Ordway in the chair. Quite a number of members were added to the roll, and more received for consideration. M. Julius Eichberg of the Boston Conservatory of Music, a member of the Association, presented to them an elegant engraving entitled "Great Expectations." The engraving, which is very fine, consists of four children hovering about a boulder on the bank of a small stream, all intent upon a baited hook which one of the group has cast into the placid waters beneath. A very handsome pen and ink tray of antique piscatorial design was also presented by another member. In both of which instances a vote of thanks was presented. Attention was called by the President to the elegant paintings and engravings presented during the Summer vacation, which adorned the walls, and that books, papers &c., would be very acceptable for the reading room. It was voted that a special committee be appointed to use its influence against any change in the present snail law, and to look after the interests of the lobster, cod and haddock, before the next legislature. The chair appointed as the committee, Messrs. James P. Richardson, S. M. Johnson, Charles E. Pierce, John F. Mills, James Walker. The President was unanimously chosen chairman of the committee. Mr. S. M. Johnson of the Executive Committee made some remarks upon the lobster question. He thought that the law now in force had been satisfactory in its working. He regarded license as better than prohibition in regard to lobsters as well as some other things. He agreed with the President that the law was somewhat imperfect. He advocated the passage of the same law in New York which prevails in this State, inasmuch as lobsters under size are taken in Massachusetts waters and shipped to the New York market. Several other gentlemen made remarks of the same tenor.

IS FISH CULTURE PROFITABLE?

EDITOR FOREST AND STREAM:

Your item of my writings on fish culture not being a profitable business, hardly hits the point. Not our loss of salmon called out the inquiry, but a question of dollars and cents. And to explain: We have been to considerable expense to procure a good stream with abundance of water, and have in stock some 12,000 trout, grayling, salmon and black bass, procured and hatched the past year. During this time Mr. Perkins has been East twice and we have made many inquiries as to its being profitable to grow trout for market, but I must say that, up to this time, we have not been able to find the first man that has made anything by it in that way. Money has been made in selling the spawn and young fry, &c.; and I would now put the question to your home office—Will it pay to raise them for market? If so, where is your proof, other than figures, or who is doing it? Do not let me throw cold water on an enterprise new to us, and one in which I feel a deep interest, but would find a practical demonstration of its results. H.

If any of our pisciculturists can show that fish culture for market is profitable, we should be pleased to hear from them, as we think it is, or at least can be made so.—ED.

Natural History.

THE BLUE FISH PARASITE.—A short time ago we sent Prof. Verrill, of Yale College, a parasite taken from the stomach of a blue fish, and requested him to classify it and give us its specific name. The following courteous letter furnishes the needed information:—

NEW HAVEN, October 24, 1874

EDITOR FOREST AND STREAM:

The specimen of parasite from the stomach of a bluefish, sent by you was duly received. It proves to be the *Diploana dactynota*, a parasite that has been described by me in the *Annals*, both in an *acropylar*, but not found before in the bluefish, so far as I know. I found a similar one last Summer (but larger and longer) in the stomach of a fish called the "oil fish," and there are over 250 species of the genus already described. They occur in animals of various classes, but especially in birds, reptiles and fishes. The creature has a large sucker in the middle of the body for adhesion, but the mouth is in the bottom or centre of the small sucker at the front end of the body. Although somewhat resembling a leech externally, it really belongs to a very different class of worms. Its internal anatomy is entirely unlike that of a leech.

Very respectfully yours,

A. E. VERRILL.

CAN FISH HEAR.—Mr. G. H. Jerome, in the query "Can Fish Hear?" relates the following curious incident relative to the fish recently on exhibition at the Michigan State Fair:—

"The large aquariums, containing the fish, were assigned by the committee of arrangements to 'Music Hall.' And when the piano, the harp and melodeon were in active blast, coupled with the invading music of the extemporized vocal choir, the fish would rise up from their semi-lethargic repose, move about with greatly increased rapidity, in a manner showing a delirium of pleasure and gratification. And as the waves of the 'concord of sweet sounds' died away, the finny audience gradually subsided to their previous condition of composure and quiet."

BRAINS OF MEN AND ANIMALS.—At the recent meeting of the British Association the Dean of Clonfert, Dr. Byrne, made a very praiseworthy attempt to trace to the anterior, middle, and posterior portions of the brain-hemispheres or cerebrum, the various mental faculties which we see successively developed in those lower animals most nearly akin to man. He pointed out that in the rabbit, dog, ape, and man, certain portions of the brain are relatively of larger development as we pass from the first to the last, and that accompanying this development we have the development of new psychical powers. In the rodents and ruminants there is first perceptible the power of thinking of a series of connected acts. In the *Canis* there is a power of design, and in the antilopoid apes a sense of general principles. Cases were cited to support these propositions, and it was suggested, in accordance with the corresponding anatomical arrangements, that the anterior lobes of the cerebrum belong to the act of thinking of single objects of sense; those of the middle lobe to the act of thinking of such objects, with a sense of their succession, and of each as a part of the succession; and those of the posterior lobe to the act of thinking of the co-existence or succession of them as a general principle.

AN "AQUARIUM FIGHT."—The inhabitants of Havre seem to be making bad use of their fine aquarium, by setting octopods and conger eels to fight. A number of spectators assembled the other day to witness the disgusting exhibition, among whom was a correspondent, who declares the affair, which was advertised as a "combat," to have been a mere slaughter. The octopods, formidable as they are to many of the denizens of the deep, are far from being a match for the agile and voracious congers. Accordingly, no sooner did the eight-armed combatants perceive their antagonists than they endeavored to escape from them by throwing out the inky fluid which is their chief resource in the hour of danger; but the eels knew where to find them, and a shocking scene then ensued. The congers seized the tentacula of the octopods in their powerful jaws, dragged the helpless creatures round and round, till their feelers were so twisted that a violent wrench was sufficient to tear them off, and pursued this system till nothing remained of the octopods but their beak-like bodies, which the victors then devoured. One octopod alone distinguished itself by an energetic resistance, and tore out the eye of a conger, but the result was the same, and the eight-footed champion went the way of his colleagues.

STRANGE FREAK OF NATURE.—Some youths in the vicinity of Eagle, near Wallace-town, Ont., captured a raccoon the other night that had three perfect ears on one side of its head and one on the other. It can hear with equal distinctness with all four ears.

A long-lost American mammal, a black footed ferret, has just been ferreted out in Kansas.

HOGS TRAILING RATTLESNAKES.

WOBURN, Mass., October, 1874.

EDITOR FOREST AND STREAM:

Reading in FOREST AND STREAM of September 17th the account of black snakes devouring woodcocks, recalls to mind an instance in my own experience. When a schoolboy, with another lad, I was one day out in the woods where we discovered a dead tree with a woodpecker hole in it. My "chum" climbed the tree and set his head as high as the hole, when, with a sudden change of countenance, he fell to the ground, the cause being the sudden appearance of a black snake at the hole, where he doubtless went to gobble up the young birds.

But speaking of snakes, reminds me of what an old "Forty-niner" told me. He said who he had reached the mines he saw many strange sights, none of which astonished him more than the following: One morning he saw two large hogs—heads down, tails up, *à la pigeon*—potting through canyons, acting as though they were on a trail. Asking an old settler the meaning of their actions, he was told that they were trailing rattlesnakes, and that they would catch and eat them every time. I have sometimes read of an eccentric Englishman who shot woodcocks with a hog trained for that purpose, but never heard such a snide story from anyone else, did you?

The use of carrier pigeons for press purposes is on the increase, and the breed is rapidly improving. By careful "selection" and allowing the "survival of the fittest," povers have been developed which a few years ago would have been thought impossible. They can be specially trained to fly over 500 miles, and it is no uncommon thing for despatches to be brought to London from Paris, Lisbon, or Brussels. *Land and Water* records a case of interest. An ocean "homing" bird, first great docility, intelligence and spirit, has been found in Iceland which flies at the meteoric speed of 150 miles an hour. A pair of these birds whose present home is in Kent, within ten miles of London, recently carried despatches from Paris to their home in one hour and a quarter. Press pigeons carried on the despatches to London, and the whole journey of the despatches from Paris to London occupied only one hour and a half. The press pigeons now commonly used, including the ordinary carrier pigeons, but are bred by Messrs. Hartley, of Woolwich, from prize birds selected from the best lots of Antwerp, Brussels, and Liege.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
NEW YORK, Oct. 11, 1874.

Animals received at Central Park Menagerie for the week ending October 10, 1874.

Two Barred Dogs, *Canis strigata*. Hab. India.
One Spider Monkey, *Alouatta palliata*. Hab. South America.
One Sooty Mangabey, *Cercopithecus fuliginosus*. Hab. West Africa.
One Yellow Bird, *Chlorophaps tristis*. Presented by Martha Gabriel B. Obarria.
One Opossum, *Didelphis virginiana*. Presented by Mr. Calvin C. Atwood.
One Ounce, *Conurus vertiginus*. Hab. Brazil. Presented by Miss Miller. W. A. CONKLIN.

Woodland, Lawn and Garden.

BIRDS AS THE FRIENDS AND CO-LABORERS OF THE GARDENER.

A SHORT extract from a letter from a friend now traveling in Vienna says: "All the principal men among our best agriculturists here have come to the conclusion that many of our birds are a necessity to agricultural prosperity."

Here there are to be found, as is well known to many of our readers, a great abundance and variety, both game and other birds, many of which are migratory, and are, as accurate observation has verified, very beneficial to the small as well as extensive gardeners and fruit growers. The wanton destruction of the migratory, useful birds, has been very great, and now the question of their preservation is of great practical interest. In the absence of any game or protective laws, such as we have in the United States, every one deems himself "a law unto himself," and, consequently, accountable to no one. Here is to be found that game bird called the meadow lark, so familiar all over the world—a fine game and good eating bird. This is one of the useful birds that should be spared and protected. The lark is one of the earliest returning game birds of the migratory season, and is one of the earliest visitors to Germany in Spring time. This bird is a great enemy of insects of almost every kind, and its numerous multitudes of noxious insects every year you allow them to work, and may truly be called the friend of man. If they work as hard on the borders of the shore, in the uplands, and in the German gardens as they do in America, they should be called the "benefactor bird." I have seen one pair of larks in the space of an hour pick up, as close as I could count, over two hundred insects, such as grasshoppers. Now these birds are a great devourer of insects about the salt marshes, and is considered very "monthly" by all epicures and lovers of game. In some sections of Europe they abound in multitudes almost without number, and on the great plains of Leipzig they are killed in great numbers as market birds, and always find a ready sale. These birds are also found in great numbers on the migratory passage from Italy, and along the entire Mediterranean coast. Now these birds, numerous as they are, are just beginning to be appreciated for the great good they perform as the destroying enemy of the numerous pests which infest our gardens. With us, this bird, although not so numerous as in the countries above cited, are nevertheless becoming more plenty every year, and in places where they are not molested they are found both in our meadows and gardens. Although rather a shy bird, they are ready to take wing at danger quite remote, yet they will acquire confidence and boldness in man. I have found them year after year in a meadow not far from my grounds, and they seemed to know me from strangers, for I could approach within short pistol shot of them before they would rise, and then they would only fly a short distance from me before alighting, and were not frightened at my approach. When accompanied by a stranger they seemed to be as well aware of the fact as myself, and we could not approach them nearer than a long gun shot range before they were up and off in double quick time. At this time these birds can be found in goodly numbers upon the Ipswich salt marshes. They are quite fat, and are affording good sport of a morning, especially on one of our hazy

partially cloudy days. On such days they sit close and still, and if the sportsman is careful, and a good shot, he can easily fill his bag.

This species of bird is only one among many which may be welcomed as valuable aids to man in the protection of the fruits and vegetables of the garden. We shall take occasion from time to time to speak of quite a number of others of our familiar bird friends, and their uses, and abuses in and about our gardens and fields, and try to point out quite a number of them upon which it would be a sin against good sportsmanship ever wantonly to draw a bead.

OLLIFD QUILL.

ANSWERS TO CORRESPONDENTS.

MIGNON DEVEREAUX, Marblehead, Mass., writes to know something of the winter cultivation of the mignonette, (*Reseda odorata*.)

This is a native of Egypt, and, strictly speaking, is an annual plant, growing from one foot to fourteen inches in height. It is quite hardy, and although it will not survive our Northern Winters, may nevertheless be readily made to accommodate itself to quite adverse situations. With a little care we have, at the orders of this fine Summer flower, and pluck the same for bouquets during February, March and April, and after enjoying in full its sweet perfume during the Winter we can cut back the flower stalks on the 1st of May and plant it out in the garden, and it will grow with inspired and stimulated energy. I have found the following to be the very best manner to grow the mignonette in Winter, and when I took the necessary pains I have invariably succeeded. I obtain some fine boxes of an oblong, or square shape, or have them made sometimes of a length sufficient to span the window seat, and generally from eight inches to a foot and five inches in width. I have always found charcoal, when in bits the size of a walnut to an egg, the best drainage to be found, as it is clean, porous, and exceedingly well adapted to the culture of the mignonette, besides many other plants. The soil should be in one half garden earth, one quarter well rotted stable manure, and one quarter leaf mould from the wood or peat; add to these one pint of coarse sand, or fine road soil, mix closely, and fill the box nearly full. If for the window, you should bake the soil thoroughly for an hour, for the purpose of destroying all ova and embryonic life that might in future trouble you with forms of worms. Your soil being prepared, fill your box to within one fourth of an inch of the top, giving a gentle pressure only to the soil, be quite particular to drop your seeds with an even distance from each other, and do not sow too thickly. Have a fine sieve, and drop very evenly and carefully a little pure sand over them, and your work is done so far as planting is concerned. Wet four thicknesses of common newspaper and cover the boxes, setting them, if possible, in the sun. As soon as the seeds come up, remove the papers, and if you have some panes of window glass it will do very well to place the same over them for three days. After the plants are well out of the earth you need not fear for their future, as they can then take care of themselves. When three or four leaves appear stir the soil about the plants with a sharp pointed piece of wire, and carefully thin out, leaving them about three to four inches apart. As they gain in height, you will notice their demands and requirements. On your way to hanging their heads in consequence of your neglect, but provide them with small neat stakes, to which you will carefully tie them. Do not water too much, for too much is worse than a little. Your plants will now go on during an entire Winter, gladdening your hearts with their greenness of leaf and fragrance of blossom. If you carefully observe the above rules, you can have good and strong plants for May.

The Hienel.

THE GILDERSLEEVE SETTER BLOOD.

SOME time since we published a short account of the Gildersleeve setters, but since its appearance in the columns of the FOREST AND STREAM, we have learned more interesting facts relative to this stock, and the transmission of its blood to the setters of the present time, and we are of the opinion it has done much towards the improvement of our breed of American field dogs; for in the many pedigrees, perfect and in part, that we have lately looked over, we directly trace back the descent to the celebrated bitch Tip, of Mr. Gildersleeve, of Canterbury, Delaware, noted over thirty years ago as the best in that State. Of Tip, no satisfactory pedigree can be given, but from her appearance and wonderful qualities, among which, marvelous nose, great speed and staidness, stood prominent, we doubt not she was of good blood. In color she was a deep orange and white, with black nose and dark eyes, and her puppies seemed to be stamped with the great individuality of the dam, who was first bred to a noted setter of like color, widely known as "the Carter dog," belonging to a gentleman of that name at Canterbury. From the union came "the Bouwell bitch," and she in turn became the mother of Mr. G. A. Benson's Bruce, and Mr. Horace Smith's Bruce—both remarkable dogs—by a setter of Capt. Sipples, of Frederick, Md., said also to have been the best dog of his time in that State. From the same litter Mr. James T. Massey procured a bitch which he named Tip, after the grand dam, and Mr. R. Abbott, of Philadelphia, also one, which a Mr. Fitzgerald, of Camden, N. J., afterwards owned, and called Fashiona. These three bitches were all that were ever raised from Mr. Gildersleeve's Tip, and from them started the three branches of the stock which thus far had always been bred to color, producing invariably the characteristic orange and white, or orange roan, in the offspring. Mr. Massey's Tip was bred with a large liver-colored setter owned by Mr. Gatzmer, and we now see in her descendants dogs resembling the sire, as in Mr. Daniel Elmer's Nannie. We, likewise, notice liver, and white whelps in litters from a daughter of Nannie, although sired by an orange and white and an

almost white dog, thus showing a breeding back to the shade of Gatzmer's Jim. Of Fashion's descendants, little if anything is known, as no record has been kept, and the blood can now only be traced through the Bonwell bitch, and Massey's Tip, or their offspring. We find in Mr. Theo. Morford's orange and white setters at Newton, N. J., through Mr. Horace Smith's Bruce, and in the latter gentleman's stock, and other strains by the same source, and we judge Mr. Morford has had the favorite color of his breed more firmly stamped by this introduction of Gildersleeve blood. There are at the present writing two grandsons and one granddaughter of the Bonwell bitch living. Buster, fast drawing near to his end, owned by Mr. Geo. Twadell, of West Philadelphia; Hank, belonging to Mr. John Twadell, and Nellie, the property of Peter Rose, Esq., of West Philadelphia, the three nearing to ten years of age, and all sired by Mr. G. A. Benson's Bruce. The breed has been in Dr. Henry Twadell's hands for many years, and with him a favorite one.

It is only of late that our sportsmen have been paying attention to the keeping of records of the descent of their field dogs, and we would strongly urge for the future the preservation of such pedigrees, that it may, in a great measure, tend to improving our stock of setters and pointers.

MORE HYDROPHOBIA.—The learned doctors who so scientifically analyzed the symptoms of hydrophobia last summer, and proved to the satisfaction of the public that they knew nothing about it, have now a new subject to theorize about, one which bears a close affinity to that which agitated them during the heated months. A boy named Hake, who lived in Chicago, attempted to punish a very docile cat for some misdemeanor, but such treatment being objectionable to the feline it turned and bit him, and from this, apparently, trifling wound he died in a few days. The wound in itself could not have been necessarily fatal, so we must conclude that the cat in its anger generated poison in the saliva of the mouth, and that this was the cause of death. If this be true, would it not simplify the hydrophobia theory to assert that the anger of animals is liable to poison their blood by a violent disarrangement of the vital fluids; that a person bitten by an animal in this condition is very apt to be poisoned so seriously as to cause his death, or at least to endanger his life; and, in conclusion, that it does not follow that animals should be virtually stark mad—though admitting that anger is a temporary madness—to render any wounds they might make with their teeth extremely dangerous to mankind. By arguing from this premise, it would, apparently, enable one to account for many of those peculiar and anomalous conditions which could not be satisfactorily accounted for by the investigations on hydrophobia which were so frequent last summer; and so technically pompous when they were reported to the public. If the theory of poisoning from the effect of anger be true, it must follow that muzzling dogs during the hottest months of the year is an extremely cruel act, both unwise and unnecessary. It would also seem plausible to suppose that if a chemical analysis of the saliva of rabid or angry animals were made, its deadly compound would be detected and some antidote found for its fatal power.

THE PROPOSED MATCH BETWEEN DASH AND SANCHO.—We trust the talk of a match between Mr. Scott Rodman's veteran Dash and Mr. T. Furman Taylor's Sancho, familiarly known as "the one-eyed dog," may take place during the present October flight of snipe, so that the sportsmen interested in the inauguration of public field trials can witness that which will undoubtedly lead to other friendly canine contests. Dash has for some years had the reputation of being the snipe dog of the country, and his right to the honor has never been publicly disputed until lately, but we would rather have him a little younger, in order that he might more successfully compete with his justly noted rival, Sancho.

We fancy a very interesting trial of skill for setter puppies, under twelve months old, on quail, could be gotten up for November, and would propose that Mr. Theo. Morford should come forward with Duke and Mr. Horace Smith with one of his best. We add the pedigree of Sancho, as far as we can get it, and it can be seen he is from good and tried stock:

Mr. T. Furman Taylor's "one-eyed setter"
SANCHO, of Colli's Neck, N. J.
B. F. Jones' Sauchoo G. C. Colburn's
Irish setter, Kate.
Ma J. Vredenburg's Dash. Vanderhoff bitch of Freshhold, N. J.
Imp. o and w setter of Daniel Schanck. Imp. Rose, of Daniel Schanck.

THE POINTS OF SHOW DOGS.

THE GORDON SETTER.

HEAD a little heavier than the English setter, more fleshy; deeper in chest and body, and, and heavier all through; more bone, and certainly more lumber to carry; therefore we cannot believe them to be such "lasters" in work. The Gordon setter is longer in the body, not so beautiful and symmetrical in shape as the English setter, but is judged by the points as near as possible to the English dog, only allowing for his being heavier. Judges principally go by quality of coat and color, being a glossy black, with clear tan of a rich red, but of course all must be symmetrical. At the present day they are not fashionable, not having the good head qualities now required.

POINTS IN JUDGING. Head..... 20 Shoulders..... 15 Neck..... 5 Back..... 10 Loin..... 5 Tail..... 5 Feet..... 5 Coat..... 10 Legs..... 5 Sides..... 15 Total..... 100

THE IRISH SETTER.

Head round, widening a little in the forehead, skull slightly arched; ears a fair length, slightly folded, hanging straight, set well back in the head, and moderately feathered; eye hazel or brownish, with a sensible and loving look, not prominent; nose dark flesh color or black; chest but moderately wide, with great depth; back straight, but slightly receding to the hip, with good loins and well-set stifles. Stern carried slightly up, not much flagged, but slightly; coat inclined to be harsh, not soft and silky, smooth, or wavy, and thick, but not too long; color a deep mahogany red, but not any black; white, however, is allowable in some Irish breeds on chest and legs and neck.

POINTS IN JUDGING. Head..... 20 Shoulders..... 15 Neck..... 5 Back..... 10 Loin..... 5 Tail..... 5 Feet..... 5 Coat..... 10 Legs..... 5 Sides..... 15 Total..... 100

THE IRISH WATER-SPANIEL.

Head should be rather long, but a broadish skull, and somewhat pooleish, with a long powerful jaw; forehead very prominent, with a well-defined and capacious top-knot hanging down the centre of forehead, not spread out, but coming to a point between the eyes, with a crisp and curly appearance; body well developed, with good loins, coat curly, but longer in curls than the curly-coated retriever; in fact a different style altogether; legs, in proportion to body, longer than any of our field spaniels, with a deal of feather of a ringlet description; well-webbed feet; stern showing a slight curve upwards, but not coming over the back, without feather; color liver; whole appearance a "devil-may-care" look.

POINTS IN JUDGING. Head..... 20 Shoulders..... 15 Neck..... 5 Back..... 10 Loin..... 5 Tail..... 5 Feet..... 5 Coat..... 10 Legs..... 5 Sides..... 15 Total..... 100

Panier's Gazette.

Shot Gun and Rifle.

GAME IN SEASON FOR OCTOBER.

Snipe and Bay Birds. Wilets. Elk or Wapiti. Cervus Canadensis. Caribou, Turanus Zangifer. Hares, Brown and gray. Bad Deer, Cervus Virginiana. Wild Turkey, Allisoria gallinapa. Squirrels, red black and grey. Woodcock, Scolopax palustris. Quail, Orange Virginiana. Redcock, Falco virens. Curlew, Numenius Arguria. Squawking Curlew, Numenius lutescens. Tattler, Tringa. Plover, Charadrius. Golden Plover, Tringa. Rail, Rallus Virginiana. Wild Pigeons. Wild Duck, Geese, Brant, &c.

Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that we are obliged to refer to the laws of each State for the full particulars of these entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

GAME IN MARKET.—There is nothing new to report in the game market, the prices being the same as those of last week, and the arrival of birds about the same. Venison is somewhat more common and retails at twenty-five cents per pound. Ruffed grouse, from the interior of New York State, at \$1 per brace. Not very abundant. Wild pigeons are abundant, and sell at \$2 per dozen. English snipe retail at from \$2 to \$2 25 per dozen; but the large yellow-leg variety brings \$3, and upland plover the same price. The latter are in excellent condition. Teal are worth seventy-five cents per brace; mallards, \$1 25; red-heads the same; widgeons seventy-five cents. The West is the principal source of supply at present. Prairie chickens are coming in from the Western States, Iowa, Illinois and Missouri being the largest shippers. The supply is large for this season. Hares being in season, they are quite abundant and sell at \$1 per brace.

NEW JERSEY.—Game is abundant throughout the upper portion of Union Hill, and the place is thronged every day by sporting men anxious to bag the superior samples.

The existing game law of the State of New Jersey prohibits the killing, exposing for sale or having unlawfully in possession the kinds of birds and animals below described, within the periods respectively stated, and under the penalties in each case named, viz.:

KIND OF GAME. PROHIBITED TIME. PENALTY FOR EACH BIRD OR ANIMAL. Quail..... Jan. 1st to Nov. 1st..... Fifteen dollars. Ruffed Grouse (Partridge)..... Dec. 15th to Oct. 1st..... Fifteen dollars. Woodcock..... Jan. 1st to Oct. 1st..... Ten dollars. Wilson or Grey Snipe..... May 1st to Oct. 1st..... Ten dollars. (English snipe). G. C. Colburn's Setter..... Jan. 1st to Aug. 1st..... Ten dollars. Hall or Red-bird..... Dec. 1st to Sept. 1st..... Five dollars. Hare or Rabbit..... Jan. 1st to Nov. 1st..... Five dollars. Squirrel..... Jan. 1st to July 1st..... Five dollars. (Grey, Black or Fox). Pinnated Grouse..... Until Nov. 1st, 1880..... Fifty dollars. (Prairie chicken.)

The penalty for taking, at any time, any ruffed grouse, (pleasant or partridge), quail or woodcock, by means of any blind, trap, snare, net or device whatever, is ten dollars for every bird so trapped, snared or taken.

MARYLAND.—Dear Park, Oct. 12.—Pigeons are still plentiful some six or eight miles from here, but are scarce near town, although they fly over in the morning and evening to and from the feeding grounds.

On Wednesday I bagged sixty-two in about two hours. Immense numbers of birds have been killed, and quite a number of gentlemen have been here from Baltimore, Cumberland, and two the best shot and keenest sportsmen) from Bedford Springs, Va. Some of these gentlemen have not been successful, for they came too late for the shooting near town, and had not time to go any distance. Two or three men, whose names I don't know, have been netting pigeons for the past two or three weeks, and you may judge of their luck from the fact that they shipped 300 dozens of birds in the first two weeks of their being here. I do not know whether they were the same as the ones of Maryland, but it is against those of fairness and humanity.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY;

PUBLISHED BY

Forest and Stream Publishing Company.

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
(Post Office Box 2332)
 125 SOUTH THIRD STREET, PHILADELPHIA,
 COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tackle," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading copies, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, OCTOBER 15, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notices of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if annoyment befall to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

THURSDAY, October 15th.—Trotting at Henderson, K., Gardiner, Me., Parkins Landlog, Pa., Leesburg, Va., New Haven, Conn., Deerfoot Park, Boston, Mass., Joliet, Ill., Lancaster, Ohio, Keene, N. H., Deerfoot Park, St. Paul, Minn., Paducah, Ky., and racing at Boise City, Idaho Territory.

FRIDAY, October 15th.—Trotting at Henderson, Ky., Deerfoot Park, Boston, Mass., Lancaster, Ohio, Keene, N. H., Deerfoot, Ill., Paducah, Ky., Plaquemine—Racing at Boise City—Tournament at Plaquemine, Ohio.

SATURDAY, October 17th.—Trotting at Lancaster, Ohio, Plaquemine, Ohio, Deerfoot, Ill., and racing at Boise City.

MONDAY, October 19th.—Georgia State Agricultural Fair.

TUESDAY, October 20th.—Fair at Alleghany Valley, W. Va., and Penn. Cumberland—Georgia State Fair.

WEDNESDAY, October 21st.—Trotting at Bethel, Vt., Portsmouth, Ohio, Providence, R. I., Lawrence, Mass., Massillon, Ohio, Poughkeepsie, N. Y., Cambridge City, Ind.—Georgia State Fair—Horse fair and shooting tournament, Champaign, Ill.

THURSDAY, October 22d.—Trotting at Portsmouth, Ohio, Providence, R. I., Lawrence, Mass., Massillon, Ohio, Poughkeepsie, N. Y., Paterson, N. J., Danville, N. Y., Deuver, Col., Cambridge City, Ind.—Tournament at Bedford, Ohio—Horse fair and shooting tournament, Champaign, Ill.

FRIDAY, October 23d.—Trotting at Poughkeepsie, N. Y., Cambridge City, Ind., Massillon, Ohio, Paterson, N. J., Fleetwood Park, N. Y., Danville, N. Y., and Denver, Col.

JEROME PARK FALL MEETING.—One of the most brilliant seasons that the always brilliant Jerome Park has enjoyed was the Fall meeting, which has closed this week, as the track was in fine condition, the attendance very large, a great number being ladies, and the best stables in the country were represented. The racing was characterized by close competition and large fields; two of the most important adjuncts to the success of such contests. One feature noticeable about it was the rapid downfall of the favorites of past years, and another, the exceedingly good time made by the winners, the average being equal to the best of former years.

The great improvement in the speed of our running and trotting horses is becoming more evident every day, and if in the years coming they can make the same progress as in a few past, the steeds of America must prove successful competitors in the race to attain the position of Eclipse, and even the ideal equines of the Arabs. The last meeting at Jerome has also proved a financial success, so that the managers may be congratulated on the brilliant termination of their effort.

—The mean temperature in Florida during the past month was about 80 deg.

CENTRAL PARK ZOOLOGICAL GARDEN.

IT has been the aim of all European cities, of metropolitan pretensions, to set apart a portion of the public land for parks and gardens, in order that their citizens might have an opportunity of beholding something more picturesque than the wearying brick, or dazzling, though monotonous petal columns of stone which form their architectural structures, and to enable them to enjoy those beauties of Nature represented by umbrageous trees, the emerald grass, and the rich tues of her lovely flowers. This attention to aesthetic tastes is founded on the highest principles of philosophy, for it is a well defined fact that cities deprived of those purifying retreats are, as a general rule, much more infested with crime than those possessing them, and for the very simple reason that the vagabond and vicious classes, if they have no place of resort but vile dens, are always on mischief bent in moments of idleness. Public parks are for all classes, but they are appreciated by none better than the latter, for they give them the only vistas of pastures green that they get from one end of the year to the other. But as parks are intended to become educational institutions, to a certain extent, as well as *sans souci* retreats, they should embrace, as much as possible, all that imparts instruction, as well as that which pleases the eye and appeals to a cultured taste; and it is for this reason that they are made the receptacles of such treasures of Nature as the person of average means seldom sees elsewhere. No portion of a park has as much interest for the general public as that devoted to wild animals, for they possess a power of attraction unknown to inanimate objects, no matter how beautiful they may be in form and color. Such being the case, it is the duty of all interested in the welfare of the cities in which they dwell to encourage zoological gardens, for they repay in manifold shapes all the care and expense required for their establishment. The only city in the Union that has paid any attention to this subject, until recently, is New York, and the efforts made here are prae, indeed, compared with its wealth, importance and great resources. As this is not only the Metropolis of the country, but also the intellectual centre, and the place from which all great enterprises, whether of finance or intellect are supposed to emanate, it is not much to our credit that our cherished park is so sadly deficient as it is in its zoological department. True, it possesses a fair amount of the quadrupeds and larger birds peculiar to the North American continent; but even that is meagre to what it should be. The only living representatives of the foreign fauna which it owns are confined to a few lions, tigers, hyeans, monkeys, and camels, and four or five species of the bovine family. All the higher order of animals, such as the giraffe, elephant, rhinoceros and quagga, are the property of importers or proprietors of menageries who have kindly loaned them for a short time. If the authorities who have the power to improve this department of the park could see the eager through which press around the cages every afternoon, and especially Sundays, they would soon become convinced that any money spent for its improvement could not be expended to better advantage, or in a way which would be more highly appreciated by the public. The menagerie is a constant source of pleasure to all classes, hence, it should, at the earliest moment, be raised to the importance which it deserves.

The Commissioners do not make any appropriation for its support, so that its Superintendent has to draw from another fund the means required for even feeding the animals. Not a cent is allowed for the purchase of any animal, no matter how cheaply it may be bought, or how interesting it may be to science. The consequence of this niggardliness is that no addition of foreign fauna is made to the collection; and that it is entirely dependent on the contributions of the public for any increase in its collection of the natural history of our own country. For the present efficiency of the department, the public are more indebted to Mr. Conklin, its Superintendent, than to any person or any official body of men, for to him its improvement is a labor of love. No man better fitted for the position than he is, can be found in the country, as he brings to his aid arid, close observation, and a large experience which has extended over a space of fifteen years. Few gentlemen are better versed in the habits of animals than he is, for few are so diligent to duty, and as close observers.

The amount of money required to place the zoological garden in such a position as to make it worthy of this great city is very trifling, if the expenditures are made gradually and with discrimination; so we hope that the Legislature, at its next session, will pass a bill making yearly appropriations for its support and improvement. Every person in the State should be as much interested in its welfare as the citizens of the Metropolis, as its advantages and pleasures are open alike to all. Of one portion of the department of natural history we can speak in the highest terms, and that is the Museum, which has now become public property through the liberality of its former owners. This is the finest collection of both native and foreign fauna on the continent, and, as it is arranged in groups and divisions, it affords ready facilities of investigation to the student or mere observer. A new building to contain these treasures is now in process of erection on the corner of Eighth avenue and Seventy-sixth street, and that, when completed, will be fully adequate to meet all demands upon it for years to come. It is to be a plain, solid, and commodious structure, arranged specially for the purpose for which it is to be used. It will cost the sum of half a million dollars, and we may expect such an edifice as will be worthy of the city and the high duties for which it will be employed.

But while this mortuary collection is worthy of all care and expense, yet, our authorities should bear in mind that the living representatives are also entitled to their serious consideration; that they are in fact the first in importance, as the study of their habits is interesting alike to *fleur* or naturalist, and the means by which we can judge of their adaptability to the use of mankind. Any appropriations our legislators may make to increase the living fauna of the park will meet the approbation of the public, and this fact, combined with the necessity of making the collection worthy of this city, should induce them to take prompt action in the matter, for a work of such excellence cannot be commenced at too early a day.

THE LESSON OF THE RIFLES.

THE competition for supremacy between the manufacturers of different rifles is exceedingly vigorous at present, both in this country and Europe, as each is bringing forward a mass of facts and testimony to prove that his rifle is superior to all others. This active canvass of the merits and demerits of each weapon is sure to result in good, as it will inform us of the faults and advantages peculiar to any one, and by this means we shall know how to unite those qualities of excellence which all may possess, and thus produce a perfect arm.

In England the fight is between the Metford muzzle loader and the Martini-Henry breech loader, but both seem to have so many apparent faults that the final conclusion must be that neither is adapted to the present exigency, and must, therefore, give way to a superior weapon. The merits of the former are its fine finish and accuracy of fire, and of the latter its simplicity and the readiness with which it can be loaded. The former has been the victor in the principal Wimbledon contests, while the latter is said to have produced a score even inferior to the Snider rifle. It is also said to kick badly, so much so, in fact, as to give a large number of those who use it a lame shoulder. This is a most radical defect, if the statements are true, and one which must more than counterbalance any merits it may possess. At the Wimbledon matches the Metford and Rigby muzzle loader rifles have borne off the palm of victory most frequently; but, though they may possess accuracy, and prove better for target practice than the breech loader, it does not follow that they are superior for general work, especially military work, nor that the breech loaders cannot be brought to their state of perfection.

The Whitworth rifle, when first brought out, was deemed almost incapable of improvement, yet, when the Rigby style of grooving was introduced and its superior merits made known, the former was withdrawn entirely from public use, and its more successful competitor adopted. Could the Metford or Rigby rifles retain the accuracy as breech loaders, that they do as muzzle loaders, they would, in all probability, be the acme of perfection; but as we have not heard that the experiment of transformation has been tried, we must conclude that their makers do not think the fact possible. Although the muzzle loaders have thus far proved victorious in the larger number of contests, we must not deduce that breech loaders equally as good cannot be made. The recent contest between the Rigby and Sharp and Remington rifles at Creedmoor proved naught so far as it went, or if anything, it was that the Irish were the best marksmen.

To prove which weapons were the best, they should have been fired from fixed rests, and then the mean deviation from the "bullseye" noted and compared. The result would then have been more satisfactory, and would have, to a certain extent, proved which was the superior weapon. The Rigby and Remingtons, for instance, use broad, and the Metford and Sharp narrow grooves, and each have often been the winners in matches, but we cannot from this fact prove that one style of grooving is better than another; nor neither can we prove, other conditions being equal, that the muzzle loader of the same make as the breech loader is superior to it.

We can assert with confidence, and we believe prove it satisfactorily, that our American breech loaders are fully equal to the best of the muzzle loaders, and certainly far superior to the best English make of the same pattern, as they are grooved on higher scientific principles. If we mistake not, the characteristics of the latter are deep grooving, and using hard balls in order to resist the power of the deep twist. The American arms, on the contrary, have very light grooves, and use a soft ball. By a comparison of the effect of both principles or characteristics, we must deduce that the latter are the best; for the light grooving is undoubtedly as effective as the heavier, and superior to it in the fact that it offers less opposition to the expansion of the ball, and, therefore, has less friction, so that the missile is not deviated from its course, while the latter, on the contrary, must resist it with such force as to lengthen it out, and by this elongation changes its centre of gravity, and, as a natural sequence, its accuracy. If, then, our American weapons combine the best qualities of the muzzle loader with the simplicity and quickness of loading and firing of the opposite style, we must conclude that they are the best in the world, not only for sporting but for military purposes.

There are other rifles manufactured in this country, probably, equally as good as those mentioned, but not being acquainted with their good qualities we cannot cite them as examples. The fact that arms manufactured in the United States possess the merits of all those of other countries is highly creditable to our inventors. So, possessing good weapons, it must follow that with practice our people must

CREDMOOR.—Preparations are being made to close the Creedmoor matches of this season still undecided. These are the competitions for the *Turf, Field and Farm* Challenge Badge, the Remington Diamond Badge, and the Leech Cup. All promise to be interesting, as the best shots in the National Rifle Association will undoubtedly try their skill, for it is no small honor to win any of the enumerated prizes. The first badge is to be shot for at a distance of 200 yards; position standing; any rifle within the rules; that is, it must not weigh over ten pounds, have telescope sights, nor have less than a three pound pull of trigger. The ninth competition comes off at three P. M. October 31st, and the tenth competition November 29th at the same hour. This has to be won three times to enable the victor to hold it; but after that it is his personal property. The winners thus far are the following gentlemen: Capt. J. Bodine, 17 points; Col. Geo. W. Wingate, 18 points; J. T. B. Collins, 16 points; L. M. Ballard, 16 points; Col. Geo. W. Wingate, 16 points; E. H. Madison, 18 points; J. T. B. Collins, 16 points; E. H. Madison, 17 points.

From this score it will be seen that Messrs. Wingate, Collins, and Madison have won it twice. Should either of them tie in the next contest it will be given to the one making the best general score.

The sixth competition for the Remington Diamond Badge, will come off October 17th at eleven A. M., and the seventh competition November 14th at the same hour. This, also, has to be won three times ere it becomes the personal property of the victor. The distances at which it is to be shot for are 800, 900, and 1,000 yards. Such a prize is sure to elicit a lively competition, so we may anticipate some capital work at the next meeting. The following are the winners up to the present time:—

Yards.	500 Yds.	800 Yds.	1000 Yds.	Total.
R. Omand	23	25	22	70
Col. J. Bodine	25	24	21	69
J. P. M. Richards	28	21	22	71
A. V. Canfield, Jr.	24	26	23	73
L. L. Hepburn	26	27	25	78

A glance at this table will show that the competitors made most excellent shooting, the last being quite an unusual score. Good as this seems, we expect to see it excelled at the next meeting, as the practice since that time must have improved the men in almost geometrical ratio.

The final match of any importance, during the present season, will be for the Leech Cup. This handsome tankard is valued at \$600, being made of pure Irish silver, by the best artist in the Gem of the Sea. It was presented by Major Leech, of the Irish team, to the Amateur Rifle Club, to be competed for by American riflemen. The Executive Committee of the Amateur Rifle Club are preparing the conditions for which it is to be contested, and will submit them at as early a day as practicable to the donor for approval. The probability is that the cup will be made a perpetual challenge cup, out of compliment to Major Leech, and to give proper encouragement to long range rifle practice. The first competition will take place some time in November, as Major Leech, who is now absent in the West, enjoying the pleasure of a hunt among the prairie chickens, is expected back in two or three weeks. This handsome prize is open to all citizens of the United States, who may use any rifle within the rules, the distances being 800, 900, and 1,000 yards. As a compliment to the genial captain of the Irish team, the Amateur Rifle Club have made him an honorary member of their Association, a courtesy which will, no doubt, be highly appreciated by the gentleman thus honored. The Bennett Cup, won by Mr. Rigby, is also being suitably engraved for presentation to the winner on his return from the West.

The Executive Committee of the National Rifle Association met at the rendezvous of the First Division, No. 7 West Thirtieth street, on the 14th instant, to hear and decide upon all protests entered at the last contest for the Gatling, All Comers' and Cavalry matches.

THE J. H. STEWARD PRIZES.—Mr. J. H. Steward, of London, the appointed official to the National Rifle Association and National Artillery Association, of England, tendered to the National Amateur Rifle Association for competition, three prizes, after the programme for the second annual prize meeting had been made up. These prizes were therefore added as follows:—

- 1st. To the highest aggregate score in the first or second division matches, and the State and Gatling match, a Steward's New Camp-Banner Field Glass, as used officially at Wimbledon. Value, \$45.00. This aggregate prize was won by Col. Gildersleeve, 12th Regiment, who, in the three matches, made 81 points.
- 2d. To the marksman making the highest aggregate score in the "Sportsman's," "All Comers' and "Bennett" matches, a Lord Barry Telescope. Value, \$40.00. This prize was won by Lieut. Henry Fulton, of the 12th Regiment, with an aggregate score of 225 points.
- 3d. To the marksman making the highest score in the third stage of the Bennett match, a Steward's Improved Watch Aneroid Barometer, for measuring mountain heights, and forecasting weather, with the addition of Compass and Thermometer. Value, \$30.00. Won by Captain Mason, of Canada, with a score of 52 points.

- 4th. A third prize was added in Competition VII., the officers match, as follows:—To the third highest score, an Officer's Dress Watch, as selected by the winner, presented by Horstmann Bro's & Allen, Value, \$40.00. Won by Lieut. Col. H. A. Gildersleeve, 12th Regiment, N. G. S. N. Y., by a score of 23 points.

THE FIRST SUBSCRIPTION.—The following letter from the proprietors of the Windsor House, of New York, expresses the feeling of all those interested in our rifle, and we hope that others will be equally generous in their contributions, so that our team may have more than a

stinted enough to defray their expenses to the Green Isle:—

WINDSOR HOTEL, New York, October 10th, 1874.

Colonel GEORGE W. WINGATE, President Amateur Rifle Club.

DEAR SIR:—In common with all Americans we have been greatly interested in the International Rifle Match at Creedmoor, and while proud of the success which has been achieved by the American team, are glad that the honors of the contest were so equitably divided as to reflect no discredit upon their gallant opponents, who crossed the ocean to shoot this match.

The circumstances connected with this contest have been of such a character as to do much to create a friendly feeling between the two nations, and to render it wise to encourage such contests in the future. We are therefore pleased to see that you have, on behalf of the Amateur Rifle Club, and of American riflemen, accepted the challenge of Major Leech to shoot a return match in Dublin next year, and that you have, but what you will be able to secure a team that will uphold the credit of America upon such an occasion.

Respecting the outfit of your club, in taking this step, are simply acting in a representative capacity, and that, to enable them to carry the matter to a successful conclusion, ample funds should be provided to meet all expenses we have to make in the way of the interest we take in the match, and as a token of our respect and esteem for the gentlemen of the Irish team and their friends, who have been our guests at the Windsor, to contribute \$200 for which we enclose a check, to be devoted by your club toward defraying the expenses of selecting and sending an American team to Ireland to shoot this match.

Feeling that the coming competition will be marked by the same fairness and friendly feeling as the recent match, and proving the beneficial of many similar contests between the riflemen of America and other countries, we remain yours, very truly,

HAVE & WINGATE.

THE IRISH RIFLEMEN.—The Irish riflemen are now in Kansas or the Indian Territory, engaged in slaying prairie chickens and such other game as they may encounter. They have been treated with the most distinguished courtesy wherever they went, the railroads vying with each other in honoring them. They are accompanied by Mr. Hallock, editor of this paper, who has attended to the arrangements of their tour. We learn that they are receiving the most profuse courtesies throughout the country, and that preparations are being made in Chicago, St. Louis, Toledo and Hannibal, to give them enthusiastic receptions on their return homeward, which will be in a couple of weeks.

—The following is the result of six shots fired from six different kinds of guns by members of the Nassau Sporting Club, all using the same quality of ammunition. Target, 8 inches diameter, distance, 45 yards, 1 1/2 oz. of No. 8 shot (Tutman's).

First—12 gauge gun, 30-inch barrel, weight, 7 1/2 pounds, 3 drachms powder. Highest number of pellets at one shot.....	30
Lowest number of pellets at one shot.....	9
Average of the six shots.....	15-1-8
Second—10 gauge gun, 30-inch barrel, 8 pounds weight, 3 1/2 drachms of powder. Highest number of pellets at one shot.....	23
Lowest number of pellets at one shot.....	10
Average of the six shots.....	13
Third—11 gauge gun, 30-inch barrel, 7 1/2 pounds weight, 2 1/2 drachms of powder. Highest number of pellets at one shot.....	13
Lowest number of pellets at one shot.....	6
Average of the six shots.....	8-4-8
Fourth—10 gauge gun, 30-inch barrel, 8 pounds weight, 3 1/2 drachms of powder. Highest number of pellets at one shot.....	15
Lowest number of pellets at one shot.....	8
Average of the six shots.....	10-4-6
Fifth—12 gauge gun, 7 1/2 pounds, 30-inch barrel, 3 drachms of powder. Highest number of pellets at one shot.....	18
Lowest number of pellets at one shot.....	9
Average of the six shots.....	12-4-4
Sixth—14 gauge gun, 7 pounds weight, 30-inch barrel, 2 1/2 drachms of powder. Highest number of pellets at one shot.....	10
Lowest number of pellets at one shot.....	3
Average of the six shots.....	4-1-2

S. A. L.

GAME PROTECTION IN NOVA SCOTIA.—The Game and Inland Fishery Protection Society of Halifax deserves credit for the energetic manner in which they have set about a very laudable undertaking. They have published a pamphlet containing the constitution of their society, also a copy of an Act passed at the last session of their local legislature, entitled an "Act for the preservation of useful birds and animals." The 1st and 7th sections of this Act prohibited the killing or chasing of any moose or beaver from three years from the first of September, 1874. As the new Act is one of considerable interest to sportsmen we publish three sections alluded to:—

2. No person shall take or kill, or attempt to take or kill any partridge between the first days of January and October in any year, nor shall he buy or have in his possession any partridge so taken, between such last mentioned days, both inclusive, and no person shall take or kill, or attempt to take or kill, or have in his possession any woodcock, snipe, blue-winged duck, or teal, between the first days of March and September in any year. The possession of any such bird during the close season prescribed in this section in respect of such bird shall be presumptive evidence of such bird having been illegally taken. No person shall kill any woodcock before sunrise or after sunset.
3. The killing, taking, or having as aforesaid each partridge, woodcock, snipe, blue-winged duck, or teal, shall be deemed to constitute a separate offence; and any person violating the next preceding section, shall be liable to a penalty of not less than five nor more than ten dollars for each offence, and an additional penalty of one dollar for each bird so taken or killed after or in addition to the first bird.
10. All penalties imposed by this Act may be recovered in a summary manner before a Stipendiary Magistrate or before one or two Justices of the Peace, in the name of any person who may sue for the same, and when recovered shall be paid, one half to the informer, and the other half to the prosecutor; and in ease the amount of penalty and of costs be not paid, the defendant shall be committed to jail, and shall not be admitted the benefit of the chapter of the revised statutes, third series, for the relief of insolvent debtors, until he shall have undergone an imprisonment, without jail limits, of one day for each dollar of such penalty and costs.

This latter provision is certainly sufficiently emphatic, and the penalty severe. In commenting upon the above the *Toronto Sporting Times* says:—

The reckless manner in which game of all descriptions has been in past years destroyed in all the other provinces, calls not only for legislative interference, but also for the appointment of suitable officers to enforce the law. Even in Ontario, where some very useful legislation has been inaugurated for the preservation of game and fish, there is

not that respect for the law exhibited which would be the case if it were somebody's special business to carry out its provisions. We know that several of the finest trout streams in the country have been nearly ruined this season through the willful carelessness of mill owners in throwing their scum into the water, and if such recklessness is permitted another year or two none of these rivers will be worth fishing. It is all very well to say that neighbors should inform against the offender, but very few men care to breed a bad feeling in their neighborhood by acting as an informer, and rather than play what they consider an ignoble role they look quietly on and refuse to interfere. Let us hope that more active legislation will be induced in this direction, because if our legislature will but appoint one or two active overseers the people will soon be made one to respect the law and assist in preserving what they now appear anxious to destroy.

The great obstacle to the enforcement of law in every country seems to be the fear or reluctance on the part of officers and others to arrest or inform against offenders. Hence the appointment of suitable men becomes imperative; who are not afraid to do their duty, but whose pay shall at least approximate to an equivalent for their police duties. When people find that offenders cannot escape and that penalties are to be enforced, they will respect the game laws as much as any other laws. At present most persons cannot understand the force of public property; but they must be taught, ever will severity that the legislation that protects them is constitutional and wise, and for the universal good.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER

Black Bass, *micropterus salmoides*. *interpretatus nigricans*
Striped Bass, *Morone saxatilis* (Weakfish)
Bluntnose, (*menidion aulator*). Sheepshead.

SOUTHERN WATERS.
Pompano. Trout Blackthroat. Sheepshead.
Snapper. Drum (two species). Tailorfish.
Groupers. Kingfish. Sea Bass.
Flounder. Striped Bass.

FISH IN MARKET.—Mr. Blackford, of Fulton Market, reports smelts as quite plentiful. They hail from Maine. The blue fish, which is coming in quite freely from New Jersey, retails at eight cents per pound; and salmon-trout and white fish, which are sent here from Sandusky, Ohio, sell at eighteen cents. Small striped bass, weighing from two to three pounds, are very abundant and sell at fifteen cents, but the larger variety, weighing from seven to twelve pounds, is very scarce, and brings twenty-five cents. These are shipped from Rhode Island. Eels, from the coast of Massachusetts, are very plentiful at fifteen cents per pound. Soft-shell crabs are scarce, and bring in \$3 per dozen, but the hard shell variety is abundant at from \$2.50 to \$3 per dozen. In the language of our informant, now is the time to enjoy "devil'd crab." The only uncommon type of the *pioceus* family on Mr. Blackford's tables was the "triple tail," (*Lobates Surinamensis*) which was caught off the coast of Long Island. This is a very rare visitor to our market, so is interesting from its scarcity. According to DeKay, this has an elliptical form, deepest opposite first dorsal ray. The scales are moderately large, adherent, forty-five in a longitudinal row, and thirty in a vertical line. The edges being dilated. The head is covered with scales, except on the snout and end of jaws; the lower jaw being somewhat projecting. The dorsal fin is long, with twelve subequal spines, and fifteen soft rays, the longest of the latter reaching nearly to the middle of the caudal fin. The pectoral fins are small and oblong, and the caudal is rounded. The color of the back is a rusty blue; abdomen dingy rufous, variegated with black and yellow. The dorsal and ventral fins being slightly tinged with yellow.

—Frank Duckland, Esq., of *Loud and Water*, has been studying the anatomy of the tunny, (*Scomber Thynnus*), and has besides been eating of it. He says:—

"In order to get at the skeleton, I had to cut off all the flesh; this was red like beef, exceedingly firm, no fat, but oily like salmon. I distributed this among my friends. My secretary, Mr. Searle, made his supper off of it, and he reports that, fried in thick slices, it resembles very tender veal cutlets; when boiled and pickled, is very much the flavor of salmon. Those who have never tasted tunny should try the tin of potato tunny that can be obtained at any provision warehouse. The red heads are very strongly set together, and bound together by extremely firm ligaments."

We, too, have just been eating tunny. The only objectionable part about tunny is, that the flesh is dark in color. The meat, however, was short and crisp. I tunny put in cans and cooked in oil would be a most desirable article of food. The small tunny, (*Oreogmus Thynnus*) is not uncommon now in market, but finds no purchasers.

New Jersey.—*Barnegat, Oct. 10.*—Sheepshead gone; plenty of black fish; big catches of blue fish reported from the Branch, South to us. We are expecting our turn soon. A few good catches of striped bass are reported this week. Our gauting season commences on the 13th. Do you want a big day's shooting? KINSEY.

—Jersey fishermen have had a good "catch" of Spanish mackerel during the present season.

—William Green, while fishing in front of the Pavilion Hotel, Long Branch, caught the largest Spanish mackerel ever caught in those waters. It measured three feet and a half in length, and weighed 1 1/4 pounds.

—A remora, or sucking fish, about eight and a half inches long, was caught near the Goswold Mills, New Bedford, recently. When found he was on his back, fast to the upper surface of a log.

—The catching of smelt with the use of a light pole, hook and line, with shrimp bait, is now engaging the attention of anglers in the waters and estuaries of Massachusetts Bay. Seventy dozen to a tide is reported as the catch of an expert fishing from a row boat and tending two poles. It is fun.

man being put out by a beautiful throw. An eleventh inning was then resorted to, but before it was completed, the rain, which had been threatening all day, came down in torrents and stopped the playing. The game at the close stood three each, so neither club won. The champions in this game were easily outplayed, both at the bat and in the field, by the Athletics, who, but for their very poor base running, would have won the game. Sweater, of the old Red Stocking club, played second base for the Athletics in this game, and showed himself to be the best second baseman the Athletics have had for many years. They also presented a new catcher in the person of Fleet, formerly of the Chelsea club.

The championship record up to October 14th is as follows—

Club.	Games won.	Games lost.	To play.
Hartford vs. Baltimore, at Hartford.	13	15	4
Baltimore vs. Hartford, at Baltimore.	14	14	4
Athletics.	40	19	11
Philadelphia.	39	18	12
Chicago.	38	21	13
Philadelphia.	36	22	32
Athletics.	31	31	32
Hartford.	21	31	22
Baltimore.	9	36	23

—Mr. D. O'Leary, Chicago's great pedestrian, has just completed a remarkable feat of walking in St. Louis, one which throws Weston completely in the shade. Being asked by some friends if he could walk two hundred miles in forty hours—an effort which Weston engaged but failed in—he responded affirmatively, and accomplished it in the time of one of 136 hours, 29 minutes. The following is his walking time: First fifty miles, nine hours, twenty minutes; second fifty miles, nine hours, seventeen minutes; third fifty miles, nine hours, thirteen minutes; fourth fifty miles, eight hours, thirty-nine minutes.

—The following professional games were played since our last issue:—

October 1—Boston vs. Atlantic, at Boston.	29 to 0
October 2—Hartford vs. Baltimore, at Hartford.	14 to 4
October 2—Hartford vs. Baltimore, at Brooklyn.	4 to 1
October 3—Athletics vs. Mutual, at Philadelphia.	6 to 4
October 3—Atlanta vs. Baltimore, at Baltimore.	10 to 2
October 3—Boston vs. Hartford, at Boston.	15 to 9
October 3—Boston vs. Hartford, at Hartford.	7 to 4
October 4—Baltimore vs. Mutual, at Boston.	7 to 4
October 4—Hartford vs. Baltimore, at Brooklyn.	17 to 1
October 4—Mutual vs. Athletics, at Brooklyn.	7 to 0
October 4—Boston vs. Hartford, at Hartford.	14 to 3
October 4—Boston vs. Atlantic, at Brooklyn.	4 to 3
October 7—Philadelphia vs. Chicago, at Chicago.	15 to 9
October 7—Philadelphia vs. Chicago, at Philadelphia.	15 to 9
October 7—Chicago vs. Philadelphia, at Chicago.	15 to 13
October 12—Boston vs. Baltimore, at Boston.	7 to 4
October 12—Atlantic vs. Athletics, at Philadelphia.	10 to 3

—A Boston paper says "various rumors" have prevailed regarding changes in the Boston next season, most of which are without foundation. The two Wrights, McVey, Leonard, O'Rourke, White and Schafer have already signed contracts to play with the Boston next season. Hall is going to the Philadelphia club, and Manning will probably be one of the substitutes for the Boston. Beals has received a flattering offer to play second base for the Athletics, but his decision is not yet known. Barnes will probably be engaged. White, released Wednesday, is being paid \$500 to join the White Stockings. Spalding's engagement is reported somewhat in doubt, and in case of his going elsewhere, it is likely Matthews will be engaged as pitcher."

—One of the best lacrosse matches of the season was played on the Jarvis street grounds, Toronto, Canada, last week between the Toronto club and a team of Royal Canadian Ontonago Indians. The ball was faced off shortly after three o'clock, and was thrown almost immediately to the Indian goal, where it struck Mr. Shaw's cross and fluked between the flags, scoring one for the red men. The Toronto men lasted only two minutes, and went to the Toronto men by a clever throw of Mr. R. Mitchell's from point. The Indians won the third game in eight minutes, and to balance the books, Mr. George Boyd sent the ball home for the fourth game in two minutes. The decisive struggle was concluded in about ten minutes, Mr. R. Mitchell again making the successful throw. The match was thus won by the Toronto club.

—About 2,500 persons were present at the game between the Athletics and Mutuals, played on the Union grounds last Wednesday. The contest opened with a very small score, as neither side was able to get a run before the sixth inning. In fact the Athletics were unable to get a runner past third base during the entire game, so beautifully did the Mutual's team play together. In the sixth inning, when with two men on bases it looked as if they would certainly score, but they did not, and the game at the close stood Mutuals, 3; Athletics, 0. This is the second time this season that the Athletics have been "choked."

—A game of hand ball was played at Chicago October 9, between Alderman O'Brien of Chicago, and Sheahan of Toledo, against the team of Chicago, and Carney of Toledo. Best of 5 out of five games. The former won the four; their opponents the second, with a score of 21 to 9, and the third with 21 to 10, but the former won the latter two games, scoring respectively 21 to 9, and 21 to 4. A large number of spectators witnessed the match.

—The St. Louis Base Ball Association is an established fact, and the new club is now prepared to engage first-class players who can show a clear record for long seasons' services, such as Joe Start and players like "old honesty" can display. Al Wright, the scorer and secretary of the Athletics club, has been engaged as manager, and players should address him.

—No more exciting game than that contested by the Boston and Mutual nines on Friday afternoon on the Union grounds has been played in this vicinity this season. The two clubs are so close in the race for championship honors that their games excite much more than ordinary interest. The Boston won by a score of 4 to 3.

—The return match between selected tens of New York and Brooklyn was played on the Capitoline Grounds on October 5th, on which occasion New York again won by 5 to 3. The gate money was shared by the amateur contestants.

—On October 7 the Easton club visited Philadelphia and astonished the Athletics by taking them into camp to the tune of 7 to 3. They then, by a very clever throw, defeated the Philadelphia nine by 11 to 3, and the Athletics by 5 to 3.

—The Mutuals were similarly surprised by the Baltimore club on the morning of October 5, when the Caucasians captured the green stocking nine by a score of 4 to 2.

—All the Red Stockings are now out of the market for 1875, Harry Wright having wisely re-engaged all of them, and all have signed papers to that effect except Geo. Hall, who goes to the Athletics.

—Spalding has the best record as a pitcher for 1874 thus far. He beats Matthews in the Boston and Mutual games by three to one. He is the most gentlemanly and educated pitcher in the fraternity.

—The return base ball match between the Anity and Nassau clubs was played at Prospect Park last Saturday in the presence of 4,000 people. The former were the winners by a score of 13 to 3.

—The third game between the St. Louis "Reds" and Empires took place October 4, on which occasion the Empires scored a signal victory by 8 to 1.

—The Athletics beat the Athletics at Philadelphia October 12, by a score of 4 to 2, and the Boston beat the Baltimore the same day by 7 to 4.

—Higham, Rensen, Carey and Burdock have signed papers to play in the Hartford nine next season, so it is said.

In a game of base ball between the Boston and Hartford clubs last week, the former won by a score of 7 to 6.

—The Philadelphia's beat the Chicago on the White Stockings' grounds October 7, by a score of 13 to 9.

—The Red Stockings and Franklin, amateurs, played at Chicago last week. Latter won by a score of 32 to 7.

—The Graces have scored "centuries" no less than thirteen times in single innings this past season.

—In a match, Oriol vs. Wadhau, at Oxford, the Oriols scored 382 in their first innings, of which Mr. W. H. Game made 234, not out.

—In the contest Morisbury vs. Clifton, in which the latter eleven scored 427 in one inning, W. G. Grace made 259, the next highest score of the season.

—No less than 442 runs were made by the Ninety-fifth Regiment eleven in one inning in their match with the officers of Garrison Club. In this game Mr. R. O. Cotton scored 225 in the first innings.

—In the match Thornbury vs. Sneyd Park, the Thornbury eleven scored no less than 463 in their first innings, of which W. R. Gilbert made 254, not out, G. F. Grace 91, and J. W. Fleischer 87, not out.

—The biggest scoring in cricket during 1874 was that of the Northwood eleven in their match with Freshwater, in which they scored 535 in one inning, Mr. E. W. Collins carrying his bat out for the unprecedented total of 233.

—An interesting game of cricket was played between the U. C. College and Oakville clubs (of Canada) last week, upon the grounds of the latter, which resulted in an easy victory for the College club, they scoring 44 to the 31 of their opponents.

—An Italian named Gineppe Ricci walked recently from Constantinople to Alexandria because he had not the means of paying his bill by steamer. His tramp occupied 153 days.

—They have opened a Swedish gymnasium in Boston, where ladies and gentlemen practice athletic exercises, and where bayonet, foil and sword fencing is taught.

ATHLETICS AT PRINCETON.

PRINCETON, N. J., September 28th, 1874.

EDITOR FOREST AND STREAM:—The opening of this college year finds Princeton much further advanced in athletics generally, than any previous period in her long existence. Boating has received a new impetus from the glorious success of our Freshmen crew at Saratoga. The interest in base ball is none the less on account of our defeat last season at the hands of Yale; and foot ball has life for it as popular as ever. Football is now the more of a universal inclination in its favor. The new students generally seem very much inclined toward all athletic sports, while the old students are as enthusiastic as ever, some of them having acquired new zeal in these pastimes.

Boating is fast becoming one of Princeton's favorite sports. Every day crews can be seen plying their oars on the canal, some indulging in the diversion simply for the exercise and pleasure to be derived from it, while others are striving to obtain a position on one of the two representative crews which Princeton expects will do her credit at the regatta next summer. The boating association has been reorganized, with A. Alexander, class of '75, of New York, as President, and B. Hall, class of '75, of New York Vice-President. A committee of three from each of the three upper classes was appointed to select the captain of the university crew. B. Nicoll, class '77, captain of the freshmen crew last year, was the one unanimously chosen by the above committee to fill this responsible and highly honorable position. It is generally believed that he will not be more than one or two members of last year's unfortunate crew will be returned. Captain Nicoll, having proved his efficiency and ability, will no doubt select men fully competent and capable to fill the vacant places in the crew. A method similar in some respects to the one adopted last year is to be used in selecting the men. All who wish to be candidates are requested to hand in their names to one of the officers of the association. After these men have been thoroughly tried, the captain will make the final election. Next Spring of six men for the crew, and of two substitutes. The latter provision is a new one. Last year an executive committee chose the men, which caused considerable dissatisfaction. In order to avoid any trouble of that nature this year, the above new article was added to the constitution of the association. The freshmen are taking active steps toward forming a crew. They have already had some of their final election. As they have plenty of good material and several experienced oarsmen among their number, there is no reason why they may not be as successful next summer as their predecessors were last July.

The prospects for a good ball nine are very fair indeed. Though it will be hard to replace Beach, Eaton, and Williams, the great credit in the year's work, we do not find cause of regarding our lost honors in the ball's return. Bryner, our first baseman of last year, having taken a past graduate course, still retains his position. Then there are five of the old players still in the nine. The new men, having had but little chance yet to display their good or bad qualities, but little can be said against them. Bradford, the new right fielder, did not do great credit in his first games of the season with the Staten Island Club, on the 26th inst. The game, though but six innings were played, was a very good one indeed, and much fine playing was evinced by both nines. The score for the six innings was 6 to 3 in favor of the Staten Islanders. As this was the first game our new nine had played we were not at all disappointed at their defeat, but very much pleased at their success against such a noted nine as their opponents. Cricket has been introduced here, and has already found many devotees. We have some very fine cricketers in college from Philadelphia and vicinity, so no doubt they will succeed in keeping up the interest already manifested in this game.

The foot ball twelves have not been formed as yet. There is no doubt but that Princeton will be able to retain the championship in foot ball, however, as it is still almost her greatest favorite among her many outdoor amusements.

The foregoing is the present condition of field sports at Princeton, and there is no reason to believe that her fame as a great teacher and promoter of physical development, as well as of mental progress, may not be greater during the coming year than ever before.

BOOKS RECEIVED.

FIELDED, COVERED AND TRAP SHOOTING. BY A. H. BOGARDUS. New York: J. B. Ford & Co. publishers.

This handsome and convenient volume is the latest addition to the field literature of the United States. The author, Captain Bogardus, is undoubtedly the best authority in the world on all the topics which he treats, for his experience as a hunter and crack shot has ranged over a period of twenty years. He is now the acknowledged champion of the United States in either field or trap shooting; hence his advice to young sportsmen, and his opinions as to the best habits of birds are worthy of the highest consideration, as they are founded on close observation and careful study. One feature very evident in all, whether experienced or not, for no matter how good a sportsman a person may be, he can afford to accept information from one who has attained the highest rank as a field shot, and who has made a profession of what is to another but an occasional pleasure. The aim of the work is to impart to lovers of field sports that practical knowledge of dogs and birds which will enable them to hunt intelligently and with good results. As to each mode of development, and the deductions are the logical sequence derived from a wide and varied experience. Old or young sportsmen will not act amiss if they read this work with care. The habits of the plumaged grouse and the mode of hunting it is treated with the breadth and detail the subject deserves, and we can, from personal experience, state that the opinions expressed are truthful and as thorough as need be, except in one instance, and that is scarcely necessary to refer to, as our eye might have been deceived from an exceptional experience.

These are followed by chapters on quail, woodcock, ruffed grouse, snipe, goose, turkey and duck shooting, each of which is quite thorough in detail. The art of shooting on the wing is treated broadly, and the author is quite interesting to all, whether experienced or not; for no matter how good a sportsman a person may be, he can afford to accept information from one who has attained the highest rank as a field shot, and who has made a profession of what is to another but an occasional pleasure. The aim of the work is to impart to lovers of field sports that practical knowledge of dogs and birds which will enable them to hunt intelligently and with good results. As to each mode of development, and the deductions are the logical sequence derived from a wide and varied experience. Old or young sportsmen will not act amiss if they read this work with care. The habits of the plumaged grouse and the mode of hunting it is treated with the breadth and detail the subject deserves, and we can, from personal experience, state that the opinions expressed are truthful and as thorough as need be, except in one instance, and that is scarcely necessary to refer to, as our eye might have been deceived from an exceptional experience.

THE MAGAZINES.

The American Naturalist for October opens with a chapter on experiments on the supposed auditory apparatus of the mosquito. Prof. A. M. Mayer treats this subject with most painful detail and the aid of technical apparatus. The result of his experiments, which must be interesting to entomologists, and to those who think that a mosquito cannot hear them when they go in camp at night in the dense woods, may be summed up in his concluding paragraphs, where he says:

"That the male should be endowed with superior acuteness of the sense of hearing appears from the fact, that he must seek the female for sexual union either in the dim twilight of the morning, or in the evening but her sharp humming noise can serve him as a guide. The necessity for an equal perfection of hearing does not exist in the female; and, indeed, we find that the organs of the ear in the female are developed which the others never reach. In these views we believe ourselves to be borne out by direct experiment, in connection with which we may allude to the greater difficulty of catching the male mosquito."

"In the course of our observations we have arrived at the conclusion, that the antennae serve to a considerable extent as organs of touch in the female; for the palpi are extremely short, while the antennae are very movable, and nearly equal the proboscis in length. In the male, however, the length and perfect development of the palpi would lead us to look for the seat of the tactile sense, and indeed, we find that the two apical antennal joints to be long, movable, and comparatively free from hairs; and the relative motion of the remaining joints very much more limited."

The cause for the failure of persons to kill the musical male is now made apparent, so hunters should act according to facts gleaned. This is followed by interesting chapters on the gossamer spider, the nesting of certain birds, the metamorphosis of the butterfly, anthropology, and kindred subjects. This is the only magazine of its class published in the United States, and from its tone and ability it deserves the patronage of all interested in the higher studies of the natural sciences.

Lippincott's Magazine for October contains the usual assortment of well selected essays, tales and adventures. One of the most interesting of the latter to us, is the experience of Robert Somers, Jr., among the gronse in Galloway, Scotland. In this picturesque bit of description he enters into a full and accurate description of the habits of the gronse visited, and the characteristics of his companions; and all are related in a quiet, stylish humorous manner. In one of his pleasant moods he makes O'Shaughnessy sing the song of "The Proud Red Gronse," a ditty as quaint as it is full of scenic similes. This will be found on the first page of the FOREST AND STREAM.

The Overland Monthly, California's representative magazine, contains a series of well selected and valuable articles this month, and which might be called the sagary and vinegary, according to the subject under consideration. We see several new names among the contributors; a fact much to the advantage of both the magazine and its readers. Livingston Stone has a very interesting article in it on the first aquarium in California, which is terse and replete with facts.

The Peoples' Monthly, published by the Publishers of Penn., is replete with interesting matter this week. The lovers of the chess will find a very witty article in it on "Chambers Hitting," by Marco Polo, Jr., and the lover of adventures an exciting sketch about Simon Girty, the well known bandit of the border during the earlier portion of the present century.

ANNOUNCEMENTS.

We have received from J. W. Schenckhorn & Co. the American Educational Annual, a compendium of all matters pertaining to our schools and colleges.

ORANGE CULTURE IN FLORIDA is the title of a pamphlet written by J. H. Fowler, of Fort Orange, which treats of the soil, climate, resources, and orange culture of Florida. The facts are arranged concisely, each important matter being "sub-headed," so that each topic can be found at a glance. These persons interested in that grand Western resort will find this little work a most interesting read.

ILLUSTRATED ANGLER'S HANDBOOK FOR 1875. We have received from the publishers a copy of this German work. The author, Max Von Dorn, treats of all matters pertaining to angling with most thorough detail, and every important point is explained by well executed wood cuts. The work bears the impress of a Berlin Prussia, printing-house. It presents a handsome typographical appearance, and should be interesting to our German sportsmen.

The Horse and Course.

—The second day of the Jerome Park races was one of the most interesting in the turf annals of that course, from the fact that the best horses in the country competed for the liberal purses offered, and that a large field generally went to the starting post. Out of the fifty-one entered, forty-three started in the six events of the day.

In the first race, for a one mile for all ages, proved the power of the competitors. The winners of \$1,000 or more carried seven pounds over their weight for age, beaten maidens, if four years old or less, receiving an allowance of seven pounds, five-year-olds or more receiving an allowance of twelve pounds. The starters were Quix, with 105 pounds; Prekness, 125 pounds; Andubon, 106 pounds; Picolo, 95 pounds; Governess, 98 pounds; Marmion, 95 pounds; Stanford, 105 pounds; The Hoaxer, 88 pounds; Gray Planet, 121 pounds; Paulladen, 118 pounds; and Rosebud, 95 pounds. The lot presented a handsome appearance as they came around the first half mile in a bunch, but on the homestretch the contest distended outward, and won the race in 1:45, Prekness second.

For the Hunter Stakes, a dash of a mile and three quarters for three-year-old fillies, only four started out of the twenty-three nominated, viz., McDaniel's Madge, Cottrell's Bonaventure, Sanford's Lava, and Lewis & Co.'s Yandallite. The latter, Cottrell had the call until the very last pool, when, through rivalry on the part of bidders, Madge was forced up to the first choice. The race was won by Madge in 3:10, Bonaventure second, and Yandallite third. Considering the pace of the first three quarters of a mile, it is the best race ever run by 54 seconds. Remorseless ran it in 3:70 in 3:15.

The Maturin Stakes, three miles for four-year-olds, was shorn of much of its interest by the disability of all the supposed great ones entered for the stake. Ex-Governor Bowie started Catesby, M. A. Littell Wildside (his first appearance since a two-year-old), Babcock & Ransom's Ransom, and John Coffee's B. F. Carver—all decidedly second class in character. Catesby came in winner by three lengths in the good time of 5:36, Wildside second, and Carver third.

For the dash of five furlongs, for two-year-olds, eight out of the nine entries faced the starter, namely, Enlister, Finework, Holbrook, Warmister-Rebel mare colt, Scramble, Aristides, and the Betty Ward colt. The latter, a yearling, was the best in this season, several of them being remarkably good looking. The run up the stretch was a fine one, especially by Babylon, the Warmister and Betty Ward colts. Aristides won by half a length in 1:04, with Finework second a half length in front of Babylon, who beat the Warmister and Betty Ward colts by a head; Enlister second, Scramble seventh, and Holbrook eighth.

The dash of a mile and a half for all ages had nine entries, all of whom went to the post at the course, viz., Sanford's Kadi, with 106 pounds; Bowie's Picolo, 90 pounds; Lewis & Co.'s Bessie Lee, 106 pounds; Lawrence & Lorillard's Resolute, 109 pounds; McCormack's Spindrift, 113 pounds; Hunt Reynolds's Whisper, 103 pounds; Medratt's Jury, 106 pounds; Paryear's Grinstead, 95 pounds; and McDaniel's Harry Bassett, with 118 pounds. Grinstead, to the surprise of most all present, won a handsome race by two lengths in 2:40—good time for the weight—with Kadi second, and the Bessie Lee by half a length for second place just at the finish. Bessie beat Picolo a length for third place.

The day's sport ended with a steeple chase over the usual course, with seven starters, viz., Terrence's Trouble (a recent importation from Canada), carrying 150 pounds; Tully's Vesuvius, with 142 pounds; Jackson's Buckshot, 140 pounds; Cady's Impromptu, 140 pounds; Lewis & Co.'s Chief Engineer, 140 pounds; Green's Daylight, 138 pounds; and Lawrence & Lorillard's Lady Bess, 125 pounds. The race was a most excellent one, as all the horses took the leaps in fine style. Trouble came in victor by two lengths in 5:53, Daylight second, Vesuvius third, and Lady Bess fourth. This is the most exciting for the day, which were interesting in the highest degree.

—The third day of the Jerome Park races was characterized by some splendid running and close contests between the best horses on the continent. The first race of the day was the dash of a mile and a half for all ages, the winner to be sold at auction. This had six entries, viz., D. McDaniel's ch. c. Galway, 4 years; P. Morris's b. c. by Leanington, out of Rebecca, 4 years; Cady's Sanford, b. g. Kadri, 3 years; Lawrence & G. Lorillard's ch. c. Resolute, 4 years; J. G. Bethune's b. f. Red Bud, 4 years; and Joseph Donahue's b. c. Seratch, 3 years. All of these came to the post, and the speculation on the result was somewhat heavy, especially as the track was heavy in places, and the result deemed uncertain. Kadri, however, had the most admirers, and he proved the correctness of his backers' views, having come in first in 2:48, Galway second, and Leanington third. After the race the winner was sold to Mr. Shed, of Boston, for \$1,350.

The second race on the card was the Grand National Handicap Sweepstakes, of \$100 each, half forfeit, and \$20 if declared, \$1,000 added. This had eighteen nominations, three of whom were declared out, and nine paid forfeit. Those that came to the post were M. H. Sanford's br. h. Mate, G. Lorillard's b. h. Shylcock, D. McDaniel's ch. h. Abdel Korae, A. B. Lewis & Co.'s h. m. Bessie Lee, A. M. Burton's ch. c. Jack Frost, and James Donahue's gr. f. Lizzie Lucas. In the betting Mate was a great favorite, and sold for more than the entire field. The contest seemed to be between Mate, Bessie Lee, and Shylcock, but on the homestretch the former burst to the front, and made her two and a quarter miles in 4:13, Shylcock second, and Bessie Lee third.

The third event was the Annual Sweepstakes for three-year-olds, two miles and an eighth, which closed with seven nominations, but only four entered, viz., A. B. Lewis & Co.'s f. Vandalite, Thomas Puryear & Co.'s ch. c. Rutherford, and W. Cottrell's b. f. Bannerette and ch. c. Planter. Vandalite won in 4:03, Rutherford second, and Bannerette third.

The card presented for the fourth contest, the Champagne Stakes for two-year-olds, three quarters of a mile, closed with twenty-two nominations, out of which number the following nine started, viz., Wood Stringfellow's b. c. Rowena, P. Lorillard's b. c. James A., D. McDaniel's ch. e. by Australian, out of Betty Ward, Lawrence & G. Lorillard's b. c. Hyder Ali, D. D. Withers' imp. b. f. by Gladiator, F. Morris's b. c. Baymaster, J. H. Hunt Reynolds's ch. f. Anella, M. H. Sanford's br. f. Finework, and John Hunter's ch. f. Australia. The latter, an exceedingly big lot of youngsters, and puzzled the speculators to pick the winner. The betting on the result was very heavy, and some of the knowing ones were badly bitten. Hyder Ali came in victor in 1:20, James A. second, and Finework third.

The concluding race of the day was the ever popular one of a mile heats for all ages, which proved to be a magnificent race, and met with great enthusiasm. The entries were John H. Stone's b. c. Col. Milligan, M. H. Sanford's h. b. Prekness, H. P. McGrath's m. m. Jury, F. Stearns' gr. c. Frank, H. Gaffney's ch. c. Spendrift, and John F. Chamberlain's b. c. Snrvivor. This was indeed a splendid field for this kind of a race, and although Prekness was a great favorite, many bet by no means considered a sure thing for him. Prekness won the first and third heats, and Spindrift the second, the remainder having been ruled out, except Snrvivor, who was distanced. Time—1:47, 1:48, and 1:53.

The second autumn trotting races of the Prospect Park Association opened last week quite brilliantly, the principal stables in the country being represented. The first race was for a purse of \$500, for horses that never beat 2:50; \$300 to the first, \$150 to the second, and \$50 to the third. Mile heats, best three in five, in harness. There were some twenty-four entries, the favorite being Falmouth Boy, but J. H. Phillip's mare Adelaide captured the money and race; heat time, 2:31. The second watch was for a purse of \$800, for horses that never beat 2:25; \$450 to the first, \$250 to the second, and \$100 to the third. Mile heats, best three in five, in harness. For this there were nine entries. The first and second heats were won by G. B. Danics, the third by Mary Whitney, Annie Collins the fourth, and Danics the fifth, the last heat being made in 2:24.

The third day of the Prospect Park Autumn meeting was one of the best. The first race was the unfinished one of the previous day, for a purse of \$600, for horses that never beat 2:35; \$350 to the first, \$150 to the second, and \$100 to the third. Mile heats, best three in five, in harness. The following started: Lady White, May Bird, Black Crook, W. Walsh, Phil O'Neil, Rosa Sonberg, Mausny, Belle Cleveland, and Lotie. The trotting was quite spirited, as one after another came in winner of a heat, but the victory finally fell to Lady White, who beat her in 2:33, May Bird being second. The second race was for a purse of \$500, for teams; \$300 to the first, \$150 to the second, and \$50 to the third horse; mile heats, best three in five, in harness. The following started: Lady Woods and Carrie N., Ella Madden and Regulus, Frank Ferguson and Crown Prince, and Adeline and the latter an exciting one for the former team; best time, 2:42. The third and most important trot of the day was for a purse of \$1,000, for horses that never beat 2:36; \$550 to the first, \$350 to the second, and \$100 to the third horse; mile heats, best three in five, in harness. The following started: Lady Woods and Carrie N., Ella Madden and Regulus, Frank Ferguson and Crown Prince, and Adeline and the latter an exciting one for the former team; best time, 2:42. The third and most important trot of the day was for a purse of \$1,000, for horses that never beat 2:36; \$550 to the first, \$350 to the second, and \$100 to the third horse; mile heats, best three in five, in harness. The following started: Lady Woods and Carrie N., Ella Madden and Regulus, Frank Ferguson and Crown Prince, and Adeline and the latter an exciting one for the former team; best time, 2:42. The third and most important trot of the day was for a purse of \$1,000, for horses that never beat 2:36; \$550 to the first, \$350 to the second, and \$100 to the third horse; mile heats, best three in five, in harness. The following started: Lady Woods and Carrie N., Ella Madden and Regulus, Frank Ferguson and Crown Prince, and Adeline and the latter an exciting one for the former team; best time, 2:42.

The trotting at Prospect Park on the

7th instant was spirited. In the race for a purse of \$1,000, for horses that never beat 2:24; entrance, ten per cent. of the purse; mile heats, best three in five, in harness; \$550 to first, \$300 to second, and \$150 to third, there were five competitors, but Thos. L. Young won the race. Best time, 2:23.

The trotting at Prospect Park on the 12th instant was very spirited, as quite a large field competed. Bruno was the winner of the 2:20 race, but the 2:42 race had to be postponed after five heats had been trotted, so hotly was it contested.

The races of the Nashville, Tennessee, Blooded Horse Association, which opened auspiciously last week, terminated in the most satisfactory manner. The first race was for the Peyton Post Stake, for all ages; \$50 entrance, play or pay, the association to add \$600; two seconds to have \$100, closed with five subscribers; two mile heats. The contest brought out Arizona, Big Fellow, Halzen, Jack of Trumps, and Nellie Grim. Big Fellow won the first heat, but he was 6 to 1 against the field. He won in two straight heats; time, 3:41, 3:43. The second race was for a purse of \$250, mile heats, all ages. Five horses entered, and after a most exciting contest was won by Joaume, who came in leader in the second and third heats, Mue being second. Time, 1:48, 1:48, 1:50.

The third and last day of the Nashville Blooded Horse Association closed last Saturday with a very large attendance. The first race was for the Maxwell Horse Stake for three-year-olds for a purse of \$400. The entries were Vanderbilt, King Pin, Modoc, Orphan Girl, Bowman, and Valentine. The former won in two straight heats, King Pin second. Time—1:40, 1:45.

The second race, a mile and a half dash for a purse of \$200, brought Arizona, Elkhorn, Nurse, and Halzen to the stand, the former winning. Time—3:24.

The third race was for the consolation purse of \$200, mile heats, for beaten horses. Astral, Velocepede, Kilburn, Red Jackson, and Lady Kilburn competed. Astral won the second and third heats. Time—1:47, 1:49, and 1:50.

The Nashville races, held on the same day, were replete with excitement, as they were the best ever run on that course. The first race was for the Young America Stakes No. 2, for two-year-old colts and fillies; mile dash; \$25 entrance fee, the association to add \$220; \$50 to second horse. There were thirty entries, and the following started: Asteroid, Ventilator, and Katie Pearce. The former won in the excellent time of 1:40. The second race, for a purse of \$400, was contested by Arizona, Granger, and Egypt. Heats, best three in five. Won by former. Time—1:47, 1:46, 1:49, 1:51. Egypt was distanced. The third race, for a purse of \$125, brought Elkhorn and Lady Greenfield to the post. Former the winner; time, 1:47.

The third day of the Nashville races brought out a large field. The first race, a dash of two miles, for stakes valued at \$2,500, was won by Wagon in 1:43 and 3:48; the second, a dash of two miles, by Elkhorn in 3:45, and the third, a dash of a mile and a quarter, for a purse of \$150, by Egypt in 2:16.

At Dexter Park, Chicago, October 7th, Goldsmith Maid trotted against time for a special purse. She was accompanied by a running horse, and was allowed three heats. The first heat was trotted in 2:19, and the second in 2:17, beating her previous record on this course. The third heat, by Judge Fullerton then trotted for a division of the gate money, and Gloster won in three straight heats. Time—2:22, 2:23, 2:24.

An interesting contest was trotted at Charer Oak Park, Hartford, Conn., last Saturday afternoon, for a purse of \$1,000, between Cusick's stallion Hamilton, and the Boston stallion Arthur. The latter won the first heat, but the other three fell to his rival. Time—2:40, 2:39, 2:34, 2:36.

The racing at the Dayton, Ohio, fair last week was attended by 50,000 people. The first race was between Gloster and Fullerton, later winning in three straight heats. Time—2:24, 2:23, 2:24.

Goldsmith Maid came next. Never was such interest taken as when the queen of the turf came on, with Budd Doble holding the lines. She was cheered most enthusiastically, the entire crowd trying to get a glimpse at the horse. She was not allowed to run with Gloster and Fullerton, but this was changed to run against time. She made her first heat in 2:21, and her second in 2:18. This is the fastest time ever made on a half mile track. The running race resulted as follows: War Jig took the first money, Lady Washington the second, and Jack Hart the third. Time—2:24, 2:23, 2:24.

The races at the Galesburg, Illinois, fair last week were quite spirited. The first running race, for a purse of \$500, brought Elkhorn and Armas, but the former won in 1:46.

The second race, one mile and repeat, for four-year-olds, for a purse of \$500, was

contested by Emma M., Ella Hankins, Ural, Veto, and George Rice. Ella won, gaining the first and third heats. Time—1:46, 1:47, 1:50.

The third race, a two mile dash free to all, for a purse of \$500, was competed by Disney and Roxello, the latter winning. Time—4:40.

THE CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY—Traverses a finer country, affords views of grand scenery, and passes through more business centers and pleasure resorts than any other northwestern line. Its forests, prairies, lakes and streams, abounding with game, present unequalled attractions to the votaries of Nimrod and Walton. It is the only railway route along the valley of the Upper Mississippi. It is also the shortest, as well as best, route between the great metropolitan centers of the S. and W. Chicago, Milwaukee, St. Paul and Minneapolis. Track and equipment unequalled, and its trains of palace coaches and sleeping cars run through without change.

HENRY C. SQUIRES,
Fine Breech & Muzzle loading Guns

SHOOTING TACKLE,
BREECH LOADING IMPLEMENTS, & C.
 NO. 1 CORTLAND ST., (First door on Bd'wy)

Attention of sportsmen and dealers is called to my stock of Breech loaders, which, for quality and variety, challenges comparison with any other.

TAYLOR & CO., Bankers, 11 Wall Street, New York.

Remington's Long Range, Breech Loading, Target Rifle.

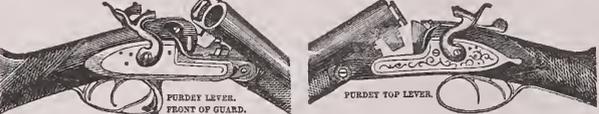

Diagram of First target made by Henry Fulton, Civil Engineer, Lieut. 12th Regt., N. G. S. N. Y., of Brooklyn, at Montreal, Can., Aug. 14th, 1874, with a "Remington Breech Loading, Long Range, Challenge Rifle," 2 1/2 inch barrel, 44-100 calibre, wt. 10 lbs., cartridge containing 10 grains powder, 50 grains bullet. Price of rifle, \$100, including pistol grip stock, ventur guard orthopedic, and wind gauge fore sight; extra for spirit level, \$5; extra for disks for fore sight, \$2.50 each; cartridges, \$4.00 per 100.

Distance, 840 yards; No rest; Position, prone. Special Telegram to "Commonwealth Liberator," Montreal, Can., Aug. 14, 1874. "Remington ahead of long range. I have taken one first and one second prize to day at 800 and 900 yards. In one match I made a clean string of seven bulls-eyes, and in another fifty-four out of a possible fifty-six, an aim and for the aggregate. Canfield took second and Omond fourth prize in one match at 800 yards. Three of the first four prizes taken by Remington rifles. To-morrow we shoot the small-bore championship match." HENRY FULTON.

Extract from the "Army and Navy Journal" Official Report, Dated Oct. 3, 1874. "The match decided several disputed points, as near as they can be decided; first, that there is no perceptible difference in accuracy between breech loaders and muzzle loaders, but that if anything the former are the best, as they are certainly the quietest; second, that in our clear climate we may look for even better shooting in the future; third, that the Remington rifle stands at the head of all others for accuracy, as it does in simplicity of mechanism, the Remington rifle in the match scored three points ahead of the same number of muzzle loaders, and twenty-two points ahead of the Sharp's breech loaders in the same time." In the International match, six muzzle loaders, three Remington, and three other breech loaders were used. Lieut. Fulton, Col. Bodine, and E. J. Hopkins used the three Remingtons. For full official report, see Army and Navy Journal, Oct. 3d, 1874. Send for Treatise on Rifle Shooting (free) to E. REMINGTON & SONS, Manufacturers of Breech Loading Guns, Rifles, Pistols, Ammunition, &c., ARMSRY, LILTON, N. Y. 253 BROADWAY, N. Y.

FOR SALE IN PERFECT ORDER—A MANTON Gun, worth \$35, for \$20, and a Roper 4-shooter Breech loader, worth \$75, for \$32. Apply at office of Borest and Stream. R. J. WALSH, DRAPER and TAILOR, MOVICKER'S THEATRE BUILDING, CHICAGO.

Miscellaneous.

This arm was submitted in competition with over one hundred different systems, American and European, to the Board of United States Officers, appointed by Act of Congress, 6th June, 1873, for the purpose of selecting the best arm for the service, and of which Brig. Gen. A. H. Terry was President. It successfully passed through all the tests.

The following is the report of the Board: "Resolved, That the adoption of magazine guns for the military service by all nations is only a question of time; that whenever an arm shall be devised which shall be as effective as a single breech-loader, as the best of the existing breech-loading arms, and shall at the same time possess a safe and easily manipulated magazine, every consideration of public policy will require its adoption."

Resolved, Further, That the experiments before the Board with the Ward-Burton Magazine System have so impressed the Board with the merits of this gun, that they consider it as more nearly fulfilling the conditions above specified than any other tried by them or of which they have any knowledge, and it does recommend that a number of magazine necks be made on the plan for further trial in the field. (See Ordinance Report.) We are now receiving orders for these guns, and due notice will be given in this paper when they are ready for delivery.

The following is one case or prices: Special Magazine for large game, carrying from 3 to 8 cartridges, 70 to 85 grs. of powder, 350 to 400 grs. of lead, 8 to 10 lbs. weight, from \$80 and upward, according to finish. Special Long-range Magazine Rifle for Creedmoor shooting, 30 grs. of powder, 480 grs. of lead, carrying 3 to 8 cartridges, weighing 10 lbs., from \$100 and upward. Magazine guns for general use, carrying 3 to 9 cartridges, 60 grs. powder, 320 grs. lead from \$40 and upward. Single Breech-Loader, Creedmoor shooting, for long range, 90 grs. powder, 480 grs. lead, from \$60 and upward. Single Breech-Loader for general use, 6 to 7 lbs., 60 grs. powder, 320 grs. lead, from \$30 and upward. The calibre of all our rifles, unless otherwise ordered, will be 45-100. All communications should be addressed to W. G. BURTON, Care Ward & Co., 54 Wall St., N. Y.

FISHERIES.—MADE TO ORDER for the trade. Every variety of Net, Seine, Dredge, &c. suited to Sea, Lake, Pond or River. AMERICAN NET and TWINE CO., Boston. 75-60

HAVANA LOTTERY. Drawings every 17 days. 742 PRIZES, amounting to... \$150,000. One prize of \$10,000... \$10,000. One prize of \$5,000... \$5,000. One prize of \$2,500... \$2,500. Two prizes of \$1,000 each... \$2,000. Ten prizes of \$500 each... \$5,000. Fifty prizes of \$100 each... \$5,000. Six hundred and fifty prizes of \$50 each... \$32,500. Circulars with full information sent free. Tickets for sale and prizes cashed by P. C. DEVILIN, Stationer and General Agent, 201 Liberty Street, New York.

Reduction in Price.

J. & W. TOLLE'S CELEBRATED BREECH LOADING GUNS, Manufactured by Pioneer Works, Birmingham, Eng.

These guns are built with every improvement for American sport, and are the choicest and guaranteed quality and shooting powers sold in the United States. They are made in six qualities, each gun being branded with one of the following mentioned names, which denotes its quality: Pioneer, \$65 Gold; Tolley, \$90; Standard, \$115; National, \$140; Challenge, \$180; Paradox, \$225. Any one of the above may be selected with confidence, as no gun bears our name which we cannot thoroughly guarantee in every respect. Send for reduced illustrated descriptive price list. BRANCH HOUSE, 29 Maiden Lane, Corner Nassau street, New York.

CHICAGO SHOT TACKER CO., MANUFACTURERS OF STANDARD DROP AND BUCKSHOT BALLS AND BAR LEAD.

Our aim is to manufacture an article of SHOT that is unassurged in ROUNDNESS, SOLIDITY, Precision of POLISH, Uniformity of SIZE, and Accuracy of WEIGHT, in each bag. Orders from the Trade solicited, and will be filled at the Lowest Market Prices. E. W. BLATCHFORD, President. G. F. GATES, Treasurer. July 23

THE NEST.

BY H. H.

UNDER the apple tree, somebody said,
"Look at that robin's nest overhead!
All of sharp sticks, and mud and clay—
What a rough home for a Summer day!"
Gannt stood the apple tree, gaunt and bare,
And creaked in the winds which binasted there.
The nest was wet with the April rain;
The clay run down in an ugly stain;
Little it looked, I must truly say,
Like a lovely home for a Summer day.

Up in the apple tree, somebody laughed,
"Little yoo know of the true home craft.
Lanah if yoo like, at my sticks and clay;
They'll make a good home for a Summer day.
May taras the apple tree pink and white,
Sunny all day, and fragrant at night.
My babies will never feel the showers,
For rain can't get through these feathers of ours.
Sang under my wing they will cuddle and cresp,
Said the robin mother, flying away
After more of the sticks and mud and clay.

Under the apple tree, somebody sighed,
"Ah me, the blunder of folly and pride!
The roughest, small house of mud or clay
Might be a sweet home for a Summer day,
Sunny and fragrant all day, all night,
With only good cheer for fragrance and light;
And the bitterest storms of grief and pain
Will beat and break on that home in vain,
Where a true-hearted mother hoods always
And makes the whole year like a Summer day."
—St. Nicholas for October.

ONWARD!

Let me go on!

I know the way behind me seemeth fair;
I know the sun above brightly, warmly there;
And on before lieth a broad, dry meadow;
And what waits there is draped in shadow,
And yet I would press on.

Not hot, hot on!

I know the past was full of pleasant things:
The songs of birds, the rustle of their wings.
I know the future holds no sounds of singing,
No sounds of laughter, nor of glad tones ringing,
And yet I would go on.

Steadily on!

What though the past was a smooth, even road;
What though the present holds no heavy load,
And all the future way is rough and hilly,
Whose snows are endless, and whose winds are chilliy,
But yet I would keep on.

Aye, up and on!

I hate this even, uneventful life;
Give me the scenes of labor and of strife,
My path is rugged, but it is ascending,
And I shall stand exalted at the ending,
And so I will press on.

For Forest and Stream.

Santa Monica.

RANCHE LIFE IN SOUTHERN CALIFORNIA.

BY WM. M. TILSTON.

THE storm was increasing in intensity. Every fresh gust appeared to bring the low flying scud closer to us, and my horse, scrambling and stumbling among the boulders which lined the beach, threatened every moment to come down. Looking ahead, the huge mountains, seamed with black ravines, came nearer and nearer to the sea, and promised to cut off what little of road was left. Oceanward the huge rollers, their crests torn and scattered by the wind, were dashing in grand confusion against the rock-bound coast, each succeeding wave throwing a foaming line of water closer to where steed and rider struggled against the gale.

I had followed closely the directions given me at Santa Barbara, and after making a short detour inland had struck the old stage road at the charming little village of Carpen-

tiera. Leaving its groves of olives and shady oaks, the road, as had been described, gradually approached the coast, and after fifteen or twenty miles of as hard riding as circumstances would permit, all prospect of further progress appeared cut off. On one side was the Pacific Ocean, stretching away for six thousand miles to its Asiatic shore; on the other the coast range of Sierras, rising thousands of feet in height, dark and forbidding, their summits obscured in mist. Every little arroyo, or gulch, had now become a foaming mountain torrent, roaring and dashing on to meet the breakers which threw them back again. Low in the Western horizon a brighter spot of sky indicated the setting sun, and the darkness of night appeared about to be added to the perplexities of my situation.

"Whoa, Pinto," and the mustang gladly stopped and stood with tail to wind, while I took a pull at my flask and considered what was to be done. To go back and be lost on the beach for the night, and perhaps engulfed by a rising tide, was out of the question; to remain where we were, with a wall of rock on one side and the whole Pacific on the other, was equally so. The only chance was to push on, and trust to finding a break in the mountains, or a friendly shelter where we could pass the night. Pulling the folds of my serape closer around me, and sheltering my thighs as well as was possible, with a melancholy attempt at cheerfulness, I shook the jingling bit and heavy rowelled spurs, and urged the caballo to a canter. While the good horse is endeavoring to pick his way over the rocks I will briefly explain the causes which led to my present embarrassing position.

A short month before I was lounging in New York, pretending to read law, but in reality nursing an incipient cough, and speculating upon the chances of pulling through the year. A few drops of blood, discovered by my lynx eyed madre on my pocket handkerchief, and the imperative mandate of the family physician, decided the question, and in ten days I was in San Francisco. A trip to Yosemite and Mariposa resulted in my meeting at the latter place with a gentleman who was about proceeding on a horseback trip through the State. Accepting an invitation to join him, I procured the necessary outfit, and invested fifty dollars in a mustang.

"I allow, stranger," said the dealer, one of Mr. Fremont's subjects, "that this yere boss ain't much to look at, but yer can bet yer bottom dollar he's a good un to go." And so he proved.

Proceeding leisurely by the stage road, and stopping at the stations—which are only twelve or fifteen miles apart—for board and lodging, or sometimes camping for the night under a sheltering oak, and rolled in our blankets, with our horses picketed near; or again, sharing a shepherd's cabin and homely fare, we had reached Santa Barbara after one of the most delightful and health-inspiring trips that can be imagined. Here my companion was detained for several days attending to some business matters, and after "doing" the old mission, and other lions of the place, I became tired of inaction, and longed to be again on the road. Observing this, my friend suggested that I should ride on one day in advance of him, as far as San Buenaventura, fifty miles down the coast. There he could join me, and we could proceed together to Los Angeles, our ultimate destination. Assenting willingly to this proposition, notwithstanding the threatening storm, I had started immediately after breakfast, with the results I am now describing.

Louder roared the wind and fiercer came the gusts as we struggled against the gale. Lifting my eyes, which were almost blinded with the spray, I saw in front a sharp wall of rock rising almost perpendicularly from the water which was washing its base. Beyond it nothing was distinguishable, and there was but the bare chance of finding a better road on the other side. I urged the unwilling horse to enter the water. Gradually and cautiously he felt his way over the sandy bottom until we had passed the point, when, turning at a sharp angle, he scrambled on to the beach again, and gave a neigh of satisfaction. I felt

like cheering myself as I noticed the change in our prospects. Before us was a cañon, or barranca, perhaps half a mile in width, running deep into the mountain, its further side forming a wall similar to the one we had just passed. A stream, swollen to a torrent by the heavy rains, was rushing over its tiny bed, and joining its flakes of foam with the salt brine of the ocean. Dividing here and there, it formed little islands, on which were great sycamores and cottonwood trees. The walls of the cañon were covered with tall pines, and on the little bits of *mésa*, or table land, were scattered huge live oaks, their spreading branches covering space enough to afford shelter for a regiment, and the ground beneath them carpeted with soft green turf. But what pleased me most was the sight of a well defined trail, leading directly up the cañon, which promised to lead to shelter at least, if not to supper. Pinto made the discovery at the same time as myself, and pricking up his ears started off with more animation than he had shown for hours. A sharp ride of a mile and we hear the tinkling of a sheep bell, and a few minutes afterwards the bright light of a fire became visible through the trees. Three or four wild looking dogs sprang from the fire as we approached, but were called back by the shepherd, who came from the shadow of a tree. Near by was a large corral, in which a thousand or more sheep were gathered for the night.

"Buenos tardes, amigo," said I, addressing one of the men.

"Buenos tardes, caballers."

"Adonde estar la casa?"

"The house of the padrone is near by, señor; you will be welcomed there."

"Who is the padrone?"

"Valga a mi Dios, señor; you must have ridden far not to know the padrone."

"Yes, I am a stranger; but what is his name?"

"Don Enrique, señor, and the house is beyond the cañon, on the *mésa*. I will conduct you there."

Following my guide up the stream to where a series of boulders enabled him to cross, he bounded over with the agility of a mountaineer, and my horse managing to scramble over after him we soon struck a path cut in the side of the cañon, which led us gradually to the table land above. It was too dark to distinguish clearly, but at a short distance I could see lights twinkling, which indicated a house of some kind. Now, thought I, for martyrdom and phlebotomy. But even the prospect of a night among the fleas on a sheep ranche, was better than spending it on the beach. To my surprise, however, white washed fences came in view, and I could see rows of olive and other trees. The house proved to be one of the long, low, rambling structures peculiar to Mexico and southern California, built in the form of a square, with a courtyard in the centre. Saluted by a chorus of dogs, we approached the main entrance, which was guarded by a pair of immense doors. My guide entered the courtyard, but being uncertain of the reception I should meet with, and not knowing what to do with my horse, I waited without. In a moment I heard a deep bass voice exclaiming "Where is the caballero?" and my prospective host appeared at the door.

"Alight, stranger, and come in the house; Juan will take care of your horse."

I succeeded in getting to the ground, but, sore and stiffened with the long day's ride, my legs refused to perform their office, and had it not been for the strong arm thrown protectingly around me I should have fallen to the ground.

"This way, friend, your wet ride has been almost too much for you, but a little *aguardiente* will set you straight in jiffy. Move, *muchísimos*, and let the stranger have some of the fire."

A swallow of the fiery spirit, and the removal of some of my outer garments, restored my scattered senses, and the feeling of intense fatigue gave way to one of astonishment at the quarters in which I found myself. The room was comfortably, even luxuriously, furnished. Two lovely girls, and a buxom lady, evidently their mother, gazed

not rudely, but inquiringly, at the apparition of a half-drowned trawler. Seated before the immense wood fire, which roared and crackled up the wide chimney, I got both light and heat to the apartment, the exultant of the past few hours seemed like a dream. To my host I explained in a few words the mishap which had befallen me, and received an assurance that I was welcome to his house.

"We don't see many strangers in this out of the way spot," said he, "and my girls will be delighted to hear all you can tell them about the Eastern cities and the fashions."

I turned to the "girls" for a confirmation of their father's remark, but beyond a few blushes and shy glances at each other, they continued to busy themselves in preparatory for supper. While these were progressing, the old gentleman and myself entered into conversation, and I discovered under whose roof I had found shelter. Col. Forrester—to whom, as luck would have it, I was in possession of a letter of introduction from one of the magnates of San Francisco—was one of the "Argonauts of '49," who, instead of searching for a golden fleece, contented himself with a woolly one, and, leaving Ohio with a band of some five hundred sheep and cattle, after a weary journey across the plains succeeded in reaching California with a larger portion of his herd. Resisting all temptations to go to the mines, he purchased, for a song, a large tract of land in the Santa Clara Valley, and engaged himself in the raising of sheep. His herds increased with wonderful rapidity, and a few years previous to the time of my visit his land, becoming too valuable for sheep pastures, he had sold it at an enormous profit and moved his flock, now fifty thousand strong, to a newly purchased rancho on the lower coast. Shortly after his arrival in the State he had married a native California lady, daughter of one of the old Rancheros, whose name is identified with the history of the country. His family now consisted of two sons, who were at college, and the two daughters, with whom I was rapidly becoming acquainted. In person the Colonel was a magnificent specimen of physical manhood—tall, broad shouldered, and burned and hardened by exposure to the sun. A heavy beard, a little grizzled by age, concealed most of his face, and fell far down on his chest. His deep blue eyes indicated frankness, and a wide, high forehead bespoke great intelligence.

"You see, Mr. Irving," said he, "I like the occupation, and it suits me at my time of life better than anything I could engage in elsewhere. What my boys and girls will do after I'm gone I can't tell, but I'm too old now to change. The boys are away East at college, and the girls ought to be there, too, but their mother won't hear of their leaving home. (It may have been selfish, but I justly thought of the same.) I'm afraid they are growing up very ignorant, but if they marry among our neighbors it won't matter much. (Mentally, I almost resolved that if Miss Anita did not finish her education in New York it would not be for want of an invitation.) You see," continued the Colonel, "although we've been married these twenty odd years, my wife don't speak a word of English, and never will. She understands almost everything, but somehow or another she is proud or better. I don't know; very few of the natives of this country will learn any language, and many of them are as bitter against the 'Gringos' as they were in '48; but here's supper; sit to it."

The young ladies, assisted by some dark-skinned hand-maidens, placed the smoking dishes of *frijoles* and chickens *colorado*, stewed *chilis*, and platters piled high with water-kick *tortillas* on the table, all of which were relished with a traveler's appetite. After supper the Colonel and I filled our pipes, and drawing and waving the smoke through the family circle made me rejoice again at my lucky star. The rough, charming, black-eyed Anita and her older but equally lovely sister, Inez, busied themselves with their embroidery, the senora devoted herself to the family repairing and mending, and the Colonel and myself smoked pipe after pipe while he recounted to me his experiences of early days. But fatigue and the getting better of me, I pleaded it as an excuse, and we showed, to the mutual regret of both, with a bed which the sheets, pillow cases, and even the snow white spread, were trimmed with the lace so beautifully worked by the native Californian woman. Overhead, a picture of some martyred saint gazed with calm complacency upon my heavy slumbers.

"Una manzana allegro, quando el rosa escachava,
Una pastora, salo de su cabana."

The words of the simple Spanish song, describing the little shepherdess coming from her cabin in the early morning, when the dew on the roses, was the first sound which greeted me when I awoke, and I recognized the voice of my host's youngest daughter, as she sang in the courtyard under my window. Hurriedly I made my toilet and stepped out on the verandah. Miss Anita's back being towards me, I had ample time while leaning over the railing to watch her trimming and tending the plants with which the centre of the courtyard was filled. From her perfect feet, with their high arched insteps and delicate ankles, to her head, covered with heavy braids of black hair, everything about her trim, neat little figure was as strictly on *profil* as the finest of the French. Although she had just graduated from a fashionable boarding school, Anita and her sister differed, in that the former had large, lustrous brown eyes, and her clearer complexion showed the Anglo Saxon in her origin. Inez resembled more her mother; her eyes were black, and her figure already exhibited a tendency to that embouppant which, after the *primiere jeunesse*, is the fate of the women of the country.

The song finished, she turned and discovered the audience. "Ah! senor, you've been listening, have you? If I had known that I should have sung something not very complimentary to the Gringos."

"You would have been too cruel; and as you are half a one yourself you would have had to share the odium."

"Yes, but you know I was born here, so I am a native Californian. Not that I'm very proud of my Spanish blood, for it makes me dreadfully wicked sometimes, and you wicked; and with all this lovefulness about you, I can't believe it. It seems like fairy land to me."

The orange trees towering above the roof of the house still had a few of the golden fruit peering from among the dark green leaves, and some late blossoms exhaled a delicious perfume. A group of oleasters, grown to the size of small trees, were covered with clusters of fragrant pink flowers. Lemons and lemons were stalked and tree in the courtyard, while around the fountain in the centre of the courtyard were masses of heliotrope, tube roses, fuschias, and other plants unknown to me by name. On each

pillar of the verandah were climbing roses of different varieties, many of them only standard in less favored climes, here attaining a size and beauty almost incredible.

"Our country is the best," said Nita, "but you've seen nothing of it. Come to the roof with me, and after seeing the view from there I shall expect you to say that Santa Monica is the loveliest spot on earth. Of course, I've had no opportunity of comparing it with other places, but all our guests say so, and I quite believe it."

My little friend tripped after me up the steep staircase to the roof covered with asphaltum and pebbles, and pointed out the view from the roof, and the neighborhood. Nature never painted a fairer picture, and I required no effort to produce the enthusiasm which she expected.

In front of the house, and beyond the enclosed orchards, a smooth, grass-covered plain stretched for a mile or more to the cliff which formed the barrier to the Pacific. The ocean, glistening in the sun, was apparently as smooth as glass. Although not in sight, being hidden by the cliffs, we could hear the sullen roar of the surf as it broke upon the coast. To the right the line of dark tree tops, appearing above the level of the plain, marked the line of the cañon where I had found my deliverance the night before. Looking inland, the mesa, or table land, on which were scattered with park-like regularity numbers of magnificent live oaks, stretched away for five or six miles, until it gradually joined the foothills of the Sierra Mañras. The oaks, growing thicker and thicker, until they became forest, formed a dark green belt for the mighty mountain range, which, scarred and seamed with canons and gulches, rose to the height of six or seven thousand feet. In some of the upper cañons, and on the summit of the highest peaks, the snow was still unmelting. In various directions little columns of smoke marked where the sleep herders, in care of their several flocks, had their camps, and bands of horses and cattle were feeding at different places on the plain.

About the rancho, or rather about the house—for everything in sight, except, perhaps, the mountains and the sea, comprises the rancho—were orchards of almost every description of fruit. English walnuts, olives, and almonds; oranges, lemons, and limes, as well as the more homely, but none the less valuable, apple, pear, and peach, as also apricots, peaches, and figs, were growing in the greatest profusion. On one side was a vineyard covering many acres of ground, and on the other the stables, outbuildings, and barns, all of which were of a quality very superior to what is common in the country. A ditch of water, brought from the canon a mile or two above the house, and carried skillfully along at the proper level, supplied the necessary means for irrigating all these trees, for this wonderful growth of orchard and flower garden would not come to ruin if left to the care of Nature alone, the ficke dame not providing one drop of rain from May until October.

"Look, Mr. Irving, at that bright spot on the side of the mountains. Every Spring, before the rains have quite left us, it appears there. We call it our flower garden, and, although it seems so near, it is miles and miles away. It is one bed, a mile or so square, of wild flowers. The roses, white-like escholista predominating, gives it its bright yellow shade. I don't know whether I have gotten the name correctly, but a very learned gentleman from San Francisco, who was here not long since, told me it was named after a celebrated German botanist, who was the first to discover it."

"It is indeed wonderful. And what is that little house I see almost half way up the mountain, at the mouth of the cañon?"

"That is a her rancho, and the residence of our hunter, old Grizzly Bill, as they call him. You will make his acquaintance before long. Now look up the coast, and you will see a large gray building with a number of little white-washed houses about it. That is the old mission church, and the buildings, together with many little *jacals*, or huts, built of rushes, which you cannot see, comprise the *rancho*, where live a few Mexican families and the Indians, or their descendants, who are the first civilization in the district. You have just ride over there and call on Father Antonio. He has been here ever so many years—long before I was born—and he can tell you all about the earlier days of the country, when cattle were valued only for their hides and tallow, and the native families had more dollars than they have *centavos* now. And you can practice your Spanish with some of the senoritas."

"Thank you, Mr. Anita, but I don't think I'll have to go off on the ranch to do that."

"Not with me, senor. I never speak in Spanish when I can get any one to talk English. Inez, now, prefers to, but you must not be too attentive, or you will make Pablo jealous."

"Pablo and who is he, may I ask?"

"Don Pablo de la Cruz, who, I imagine, is to be my brother-in-law, is the son of one of our neighbors. You will probably see him as he is here every day."

"And who is to be jealous if I am too attentive to Miss Anita?"

"That, sir, you must discover for yourself; but in the meantime allow me to suggest that if we keep the household waiting for their breakfast they will be jealous, or even worse."

So we descended, and, making my salutations to the family, I entered upon the business in hand with a countenance's appetite.

The first word I uttered about proceeding on my journey brought out a protest from Col. Forrester, and the discussion ended by my accepting an invitation to remain a week, or perhaps more, at Santa Monica. Said the Colonel: "You will find plenty to amuse you, particularly if you are fond of shooting and fishing. We have a regular hunter about the establishment, who, by the way, is quite a character, and who can take you to where you can kill anything, from a jack rabbit to a grizzly bear. I ride over the ranch every day, looking out for the shepherds, so you must not expect much attention from me, but the girls and Pablo will be glad to ride about the country with you. There is much at the old mission that is interesting and characteristic of the times before the annexation, and if you could get at the records, and translate some of them, I have no doubt that much could be found to throw light upon the early colonization by the Jesuits."

The prospect seemed so well suited to my present condition of mind and body that I immediately arranged to send a message to my traveling companion to go on without me, and prepared to enter with zest into the new life.

[To be Continued next week.]

A PISCATORIAL EXCURSION TO MAINE.

AFTER an all-night ride of 250 miles in a Pullman sleeping car from Boston, I found myself at Bangor, at the head of ship navigation on the Penobscot. The tide rises at this point seventeen feet, enabling vessels of the largest size to reach the city. Bangor being the centre of a large foreign and domestic trade and the home of a number of brook-trout anglers, the anglers would afford me pleasure to stop over a day, but my time being limited I pushed onward by rail, reaching Dover and Foxcroft, fifty-two miles further North, in time for dinner. These villages are really but one place, being divided by but a small stream, the Pisetaquis River. Having accepted an invitation from that thorough sportsman and unsurpassed roder, Mr. Hiram L. Leonard, of Bangor, to visit the State Fish Works at the head of Sebago Lake, of which he is Superintendent, after partaking of an excellent meal at the Foxcroft Exchange, we started for the lake, four miles distant. Our party consisted of Mr. Leonard and wife, his father-in-law, Henry A. Head, Esq., and myself. The Exchange conveyance carried us comfortably over a good road to the steamboat landing, which is equidistant from the inlet and outlet. We started ourselves and luggage in a sailboat, and with a gentle breeze we soon reached the head of this beautiful sheet of water, which is twelve miles long and upwards of 600 feet deep in its deepest part. Although Mr. Head is well on to four score years, I found him as enthusiastic a sportsman as most of the younger members of the fraternity. On our way up the lake he captured and landed in fine style a beautiful fresh-water, humped salmon. During the morning boat up Moosehead Lake. By this management I saved one day's time, and the regular train and stage I would not have reached the lake until evening. Moosehead is the largest sheet of fresh-water in New England, being about forty miles long, and in its widest part seventeen miles. There are two hotels at the foot, (Greenville) Henry L. Wilson's at the outlet, the Mount Kincaid House, half way up the lake, commodious, cleanly situated, well conducted, and well furnished, on the northeast carry. C. J. Jordan keeps a house. A long wharf has lately been constructed here, so that passengers can at all times be landed without resorting to small boats. For fishing at this time I went to the outlet. The first evening I caught three speckled trout, weighing five pounds; the next day I added seventeen, weighing twenty-two pounds, the largest one of which weighed four pounds, and measured twenty-two inches in length. They were taken on the fly and $\frac{1}{2}$ ounce bamboo. In the evening I killed my fish, which had been kept alive in cauls, selected fourteen, weighing twenty-three pounds, wiped off with towels all blood and slime, and without dressing them wrapped each fish in a separate piece of paper, so as to exclude the air as much as possible, and packed them in a box with ice. For eight hours, when some of the fish were eaten, they were found as fresh as when taken out of the water, and the balance, served fourteen hours later, were in equally good condition. I have made many trips to the Adirondacks, but this is my first to Maine, and I hope not my last. I arrived home October 3d, fully satisfied with this closing of my angling season.

Yours respectfully,
W. W. HILL.

VACATION RESORTS IN NEW HAMPSHIRE.

IT is not generally known to what extent the old State of New Hampshire is used as a summer resort by the people of Massachusetts, New York and Connecticut. A trip through the State would, I think, reveal the fact that no town in the State is devoid of its quota of city boarders, many, of course, in the small towns being attracted there by the love of childhood homes, while in the more mountainous districts we find the lovers of all that is wild, grand and sublime in nature. To the noble Connecticut River, the Ashuelot River and tributaries, drain the county, with the exception of the northeast part, which is reached by the arms of the Merrimac.

The infant City of Keene is the Hub of the County, and by many travellers said to be the prettiest in it; it being laid out in clean, wide streets, and adorned with a profusion of shade trees, many fine residences, churches and hotels. The greatest natural attraction is the Grand Monadnock, twelve miles from Keene, in the eastern part of the town. This has no rival in its class, but stands out alone in the rugged country at its feet, a proud landmark for many miles around, for its head towers thirty-five hundred feet above the sea level. A nice carriage road is built to within one mile of the top, at which place we find the Mountain House, containing forty rooms, well furnished and well kept by Messrs. Newton & Batcheller. The number of people spending the summer at this house, and the number of tourists yearly increasing. The distance to the summit, one mile, is made on foot, for with a considerable outlay it has been made but little more difficult of ascent than a flight of stone steps.

The summit affords a view but seldom surpassed. The eye at once rests on a country of hill, valley, field and forest, with sixty ponds and lakes and thirty-eight villages, all mingled in Nature's order, with the summits of the White Mountain range. Keenage, Whose, Agency Pond and Holyoke in the distance, which, with the sea, see Portsmouth Harbor and our own Bunker Hill Monument. All these ponds abound with pickerel and perch; a few only have the "speckled beauty," which, however, is found in nearly every creek. I took a string of twenty

weighing twenty-six pounds from one. Here again comes in the old story of lack of protection, and hence, the result that many of these streams are fast with species of fish now unknown. The older residents on the tributaries of the Connecticut tell you of the carloads of shad taken years ago, but with stocking and the increasing interest in, and popularity of, game and fish laws, they still have a hope of a shad breakfast for their own catch before they die.

At the foot of the Mountain of the same name lies Monadnock Lake, with its pebbly bottom and beautiful trout and brook trout, shady groves, and ten miles west of Keene, Spofford Lake, with its transparent water, and its pike that turn the scales at twenty pounds. What can we conceive more grand? These two, were they found in the Adirondacks or the fastnesses of Maine, might well be made the great havens of tourists. With a good dog—not found here—the game season can be made an interesting feature. Tame grouse are abundant, also ducks, plovers, foxes, minks, rabbits, raccoons, and grey squirrels. Uncle B., of Westmoreland, with his three-dollar musket and a hatchet, has for years boasted his coon skin robes and squirrel coats and caps, sold annually his dozens of mink skins, and grows fat on squirrel pies. His traps, which appear in the ravines as if by magic, are made with a flat rock and a split stick, a la figure four. Besides all this, much more might be said of the trap lines, charming drives and hospitable inns that help to make a country enjoyable to those not wishing to "anglo or camp out." M.

For Forest and Stream.

SNIPES AND SNIPES SHOOTING—No. 3.

THE arrival of the Wilson's snipe with us in the Spring is very uncertain, and depends entirely upon the state of the season. If, after a cold and blustering Winter, March suddenly opens warm and genial, which is seldom the case, and the frost is drawn from the ground by the sun's rays, the snipe will be in the meadows, but not often does he reach us before the middle of the month, and then in small numbers, uneasy in his habits, and sorely lying to the dog. By the last of March, or the 1st of April, the great flight of birds arrives from the Southern States, and, like the woodcock, the prevalence of a warm rain appears to be chosen for the migration. The average appearance of the snipe from Delaware eastward, is in the latter part of April, and for this reason appears to be the best season for sniping, as about April 1st, but frequently, when the Spring is late, and Winter has lingered into April, we find it passing hurriedly northward, scarcely visiting our meadows, and directing its flight to its breeding grounds. We have always thought the snipe, after tarrying with us until May, are mated, and leave us in pairs ready to begin nesting. In fact, we have on several occasions killed and found in them fully formed eggs as early as the 20th of April, and for this reason oppose the shooting of snipe during their Spring passage northward.

On their return from the North with their young, they pay us a visit before moving South, reaching us in September and October, the first cool weather having prompted them to seek winter quarters, making their autumnal migrations southward in stages in advance of hard freezing, stopping and resting on the route. In the Southern States, where snipe are comparatively rare, a good dog, thoroughly understanding his business in this particular, is invaluable; but in some portions of the Southern and Western country the bird is so numerous that a setter or pointer is of very little use, unless he be kept at heel and used as a retriever. But we confess our own shooting is to us more enjoyable when fewer are hunted, and the working of a well bred and trained setter is added to the pleasure.

The snipe lies best to the dog on warm, sunny days, when gentle winds are blowing, and if feeding in high tussock meadows will not take flight until almost trodden upon. But during blustery weather, especially if the wind is from the northeast, they are very loath to allow even the most steady dog to come within thirty or forty yards of them. This is more noticeable in the Spring, when the birds have first arrived, and are in whisks and bushes, than in Autumn, when they appear to have made up their minds to stay for awhile previous to moving southward.

The snipe is noticeably the most difficult game we have to kill, although we have seen only medium quail shots that were really brilliant in their shooting on the meadows; but we also noticed that such persons resided adjacent to good snipe grounds, and devoted much more time to it than to any other sport.

Beating for snipe with the wind in one's back has been always advised by experts, as the bird invariably rises against wind, and flies at an angle towards you, either to the right or left, thus presenting a more easy shot than when going straightaway in a zig zag course. Sometimes, however, on account of the many ditch drains that intersect in our tramps over the meadows, and which, if it is convenient by far to take the wind at our backs, and are compelled to breast it; but we should bear in mind that far better chances are given to kill if the advice is carried out, and always endeavor to follow it.

Snipe not infrequently take to swampy thickets of black alder, and what are known as "willow gardens," with springy bottoms, in the Spring for shelter and food, when, as in our tramps over the meadows, they are visited with a snow squall and a touch of the past Winter. We have on two occasions found them in such localities lying like stones, and making capital shooting, and fully as expert in twisting their way through the sprouts and alders as their larger cousin, the woodcock.

The snipe remains with us frequently as late as the latter part of November, and on occasion, the quail shooting in the State of Delaware, and in the month of December, but the weather during that month and the one previous had been remarkably open and mild, and we doubt not the bird could have been met with on the same ground a week after. We made two memoranda that season, and they appear on reference.—Shot five Wilson snipe on 18th December. "Shot one well conditioned woodcock on the 21st of December."

We noticed in the report of the proceedings of the National Sportsmen's Convention, held at Niagara on the 9th of September, that it was urged that the Spring shooting of woodcock, snipe, and "bay birds," during their sojourn in the Middle and Eastern States, previous to their moving farther North, for the purpose of breeding, should be abolished. Nothing could more benefit the sportsman.

Recollect, every pair of birds thus killed in the Spring makes just three or four in the Autumn.

In spite of being considered as given to chronic growling, we shall continue to urge, as we have always done, the cessation of the murderous and unsportsmanlike killing of our game birds of passage on their journeys toward their nesting ground, albeit they may not be at the time paired, knowing well the time has arrived when the fast disappearance of all game demands it, and we call on all sportsmen to follow the like examples we all are endowed with, and have such laws passed as will benefit the sporting fraternity of every State.

Within our own recollection, snipe ten years ago were far more numerous at Pine Brook, N. J., and other meadows of that neighborhood, and certainly in far greater quantities on the feeding grounds bordering the Delaware and Schuylkill rivers near Philadelphia. Then we could be tolerably certain about making a bag; now we more frequently see them at the traps shot at. The steady destruction of the source of supply in the Spring has brought this about; nothing else. The meadows have not changed, and food is just as abundant.

A fellow sportsman, who had always been able to find game enough in the neighborhood of his city home until within a few years, made the remark to me that he found it did not pay to keep traps, and that he had sold his traps, and so scarce was the train upon, and that he intended devoting his attention to the little "Basset" of slow chasing of the rabbit, feeling this was all that remained. Hosto.

× A MINKERY.

AMONG the novel features of the Albany County Fair is the minkery exhibited by Mr. H. Resseque, of Verona, Oneida county, New York. Seven years ago he came in possession of a wild mink, and through her progeny his stock, at some periods during this time, has numbered ninety individuals, besides many specious disposed of throughout the different States of the Union.

Mr. Resseque's home yards contain twelve stalls, each twelve feet square, the soil is stale, and around the outside of the yard a trench is dug five inches deep, and a plank fifteen inches wide is laid on the bottom, close to an upright plank nailed upon the fence-post as a base. The dirt is then filled in, and the fence is composed of upright rough boards six feet in height, with a eab projecting over the yard, in order to prevent the mink from climbing outside. In each stall is placed a dry goods box, which is inhabited by a female. This box has two openings opposite each other for ingress and egress, with a door on the top, allowing inspection and cleanliness.

Minks are not burrowing animals when in a state of nature, but freely avail themselves of the burrows of the muskrat or some other vermin. They cannot climb a smooth surface, but when there is enough roughness for their paws to get a hold, they will run together, excepting during the month of March, which is considered the running season for wild minks. If allowed together for a longer period the male annoys the female by teasing her. The female remains in heat about four days, and all of the females in his yard are ready for the male within a period of ten days' time. One male will serve six females. The female carry their young six weeks, and in kitting they do not carry twelve hours from this time. They average from three to ten kittens at a litter, which, when born, are blind, and remain so for five weeks. They are quite destitute of hair, and are as white as a piece of paper, and devoid of animal shape. Mr. Resseque informs me that they resemble the shape of a finger, and are about the size of his little finger. By the time their eyes are open they are covered with a coat of beautiful glossy hair. The young females develop sooner than the males, the former obtain their growth in ten months, while the males do not until eighteen months of age. The females are capable of bearing young when one year old.

In his yards they are fed exclusively on soft fresh meat. They do not relish tainted flesh. He feeds them once each day in the summer, but in cold weather the food is thrown to them in quantities, and allowed to freeze, so that they can help themselves at pleasure. During the month of February a short allowance of food is then given them, to get them in condition for breeding. When running wild, food at this season is scarce with them. Mr. Resseque, in managing them, attempts as near as possible to imitate nature, and he says that this comparative fasting makes them much more lively and playful.

In a litter of four or five, the other is apt to predominate, that is, they do not usually come half males and half females, but are either all males or all females. A grown male mink will weigh about two pounds; the female is heavier than she seems to be, and will weigh from one and a half to one and three-quarter pounds.

They are readily tamed when taken in hand when their eyes are beginning to open; they are not to be allowed the society of their kind, or the rest of the litter. By constant petting and handling they become like domestic kittens, and exhibit all of the playful antics of the feline tribe. They can then be handled without fear of being bitten by them, but they are represented as being exceedingly mischievous; their exceedingly sharp scent will enable them to find food which was not intended for them to eat. Their fondness for water, and their prompt response to the sound of a tin tea-kettle, or any open vessel filled with water, and while wet will roll and dry themselves in a clothes-basket of freshly ironed clothes, or on a lady's dress. In this way they are troublesome pests.

Mr. Resseque, at several fairs, has been in the habit of exhibiting two female tame minks to the bystanders through his cage, which he hands to the promiscuous crowd to be pressed and poked, and they will themselves be handled by other persons to please, but it was a noticeable fact that their eyes were constantly on their keeper, and when they came within reach would extend their paws to him like a child wishing to return.

Tame minks make excellent ratters, and bunt with vigor, and speedily exterminate these troublesome pests. The rats will immediately flee from them when first they scent the man, and they will follow the rat, and if they never give battle, but yield at once, and so swift does the mink cut the main arteries of the rat's neck, an observer would scarcely think the deed was done.

During the running season the males fight desperately, and if several are allowed together one always assumes the mastery. About the first of November the young males should be separated from the females. Minks only have

one litter a year, and never breed at unreasonable times. When tame and wild minks are confined together the tame ones always prove victorious, being much stronger than the wild ones. Too much confinement will make their fur look dead and rusty. They require a dark place to roam and exercise. If fish is given them during September and October their fur is much improved; soft water for bathing purposes also improves it much.

Mr. Resseque tells an amusing story of a stray cat that invaded his minkery, and was confined in a cage, but the minks proved too much. At last the cat gained the outside of the inclosure, the yard was strewn with leeks of cal-hair, and for a hundred feet or more in the track of her exit were found tufts of cal-hair; but notwithstanding this, a strange person can go in the minkery with impunity, and observe these shy creatures playing like kittens around him.

Mr. Resseque finds ready sale for all the minks he can spare at \$30 per pair. His prices are, for a female, \$20; for an impregnated female, \$25; for a male, \$10. He informs me he cannot now supply the demand.—Poultry Exchange.

THE NORTHWESTERN BOUNDARY SURVEY.—The party engaged in making a survey of our northwestern boundary arrived at Bismarck, Dakota, October 1st, from Fort Benton, all in good health and spirits. The following account of the region through which they passed is given by a correspondent of the New York World:—

"With the exception of a small tract of bad lands along the Milk River and two of its tributaries, the country passed over by the survey is highly spoken of. It is so level that the brakes of the wagon were not once required, and so well watered that not a dry camp was made during the entire season. In the Sweet Grass region the rich black soil stands eighteen inches in height, and here buffalo were so thick that they were shot from the wagons, and in some instances with pistols. The train was several times broken by them, and forced to halt while they passed. The buffalo seem to gather in immense numbers and winter here. On every pond their skeletons may be found. In one case a ravine was discovered in which the skeletons lay five deep in some places. The buffalo appear to have tried to cross the ravine when it was filled with snow, and perished in the attempt. The brooks, cool mountain streams, afforded rich sport and many a delicate morsel. They were filled with trout, and from them one could take ten pounds an hour. The country swarmed with black tailed deer; the celebrated mountain sheep were found in abundance, and, though a hard animal to bring down, several were secured. A line 350 miles in length was surveyed, commencing at a point on the forty-ninth parallel, nearly north of Fort Buford, continuing westward to the Rocky Mountains, closing on the work abandoned in 1860. The distance from the Sweet Grass Hills to the Rocky Mountains is 120 miles. The country lying along the edge of the mountains, and eastward to the Hills, Major Twining pronounces the finest he ever saw, and is capable of cultivation, though probably too cold for corn. This region, 1,500 miles northwest of Bismarck, and from there northward throughout the Saskatchewan region, may yet become the granary of North America, for cereals of all kinds will certainly thrive and mature even hundreds of miles north of the forty-ninth parallel. This, probably, because of the modifying influence of the Pacific on the climate. This influence is perceptible even here, and our Western friends will form a better opinion of the Winters of St. Paul, nearly 600 miles southeast of us."

A SPORTING PARTY IN INDIA.—The Pioneer says: "Our Russian visitor, Prince Czeterwytzki and party, consisting of Count Batyushin, Baron Orezy, Lieut. Howard, R.H.A., and Lieut. Gerard, Central India Horse, started from the neighborhood of Indore on the 14th of April, and up to the 30th of May—when the usually early rains set in and to all intents and purposes rendered the country uninhabitable—six bears, besides sambar, cheetah, &c.; five more tigers fired at, escaped, wounded or otherwise, as might be expected when a large number of sportsmen were devoted to shikar. When the rain unfortunately terminated proceedings no less than five tigers were marked down, but all decamped. The party had to halt several days before commencing their return, owing to the flooded state of the rivers."

THE REMOVAL OF GLASS STOPPERS.—One of the little things that now and then provoke good-tempered people is the persistency with which glass stoppers in bottles remain inserted when it is desired to take them out. The *Canada Medical Record* tells how to get them out, as follows:—"In most cases when a stopper is fixed, without an intervention of an adhesive substance, it is by turning it as one would drive a screw. The direction is almost invariably from left to right, and thus a thread is formed which is easier to follow backward than to break. The trouble with which the removal of stoppers is usually attended must form my apology for introducing a suggestion of so little apparent importance."

—The Paris *Tribune* gives the following advice to those who carry loaded guns in the ears: "Make it a point to move the muzzle round in a circle, occasionally put the gun in between your legs and lean your head on the muzzle, or poke it into your neighbor's stomach. Try the locks several times, and be assured that both triggers work evenly. If any body say to you, 'Por Heavens sake! now be careful with that gun of yours!' All you have to reply is, 'Why bless your soul! what's the use of fidgeting so? There is only one barrel loaded!'"

—Nothing but a fish diet for eighteen years could enable a man to compose this verse, by which the Cape Codders remember their islands:—

"Nashon, Nonameset,
Oneatona and Weepocket,
Nashewana, Pesquinese,
Cuttyhank, and Penikese."

—What bird is that which is absolutely necessary that we should have at our dinner, and yet need neither be cooked nor served up? A swallow.

—Had did Noah's bees do while afloat? They kept the arc-hives.

—A Pueblo lady was bitten by a tarantula recently. Though delirious for a time, brandy cured her.

THE AMERICAN DEER.—The precise relationships of certain species of American deer to European analogues, the moose, the reindeer, and the elk especially, have been the subject of critical consideration on the part of naturalists for many years past, some maintaining that they are identical, and others that they are distinct. No one has given the matter more attention than Judge Caton, of Illinois, who for many years has had in his large park near his residence at Ottawa specimens of nearly all the American species where they have been carefully studied in their habits.

Quite recently Judge Caton visited the north of Europe for the purpose of examining the Old World forms in life, and has satisfied himself, from careful study, of the absolute identity of the moose and caribou of the two continents, and of the very close relationship between the American elk and the European stag. One character of much importance in the deer consists in the presence and shape and entire absence of a peculiar gland on the metatarsus of the hind leg, this being indicated, if present, by a tuft of hair of a particular shape, and varying with the species. The American representatives of the moose and caribou do not possess such a gland; and as Dr. John Edward Gray asserts its existence in the European species, Judge Caton at one time inferred a specific distinction. He was, however, led to the opposite conclusion, and he is now of the opinion that the gland, and that there is absolutely no point in which they can be separated.

In regard to the relationship between the European stag and the American elk, he finds the principal difference to be in the smaller size of the former. Fossil remains, however, show a size equal to our variety, with antlers equally large, and with all the distinguishing peculiarities, even to the occasional presence of a tuft of hair on the brow, which occurs in about five per cent. of our elk; but never, so far as Judge Caton could learn, in the European animal of modern times. The two also inbred perfectly well in European forests, with fertile progeny.

This entire subject will probably be thoroughly elucidated by Judge Caton in an exhaustive work on the American cervidae, upon which he has been engaged for some years past.—*Harper's Weekly.*

THE DRIVER ANTS.—Rev. J. G. Wood, in his fascinating book, "Strange Dwellings," describes the habits of the terrible driver ants of Western Africa, so named because no animals can withstand them. Even the agile monkey they have been known to destroy. When they enter a pigsty they soon kill the inmates, who have no chance to escape, and those tough hides are no protection against the enormous jaws and dreadful teeth of the driver ant. As for fowls, they make short work of killing them, murdering a whole hen roost full in a single night, and afterwards digging out the feathers and devouring the birds. All reptiles, and even snakes, are their victims. They commence on a snake by biting its eyes, so that it writhes helplessly on one spot instead of gliding away. They march in armies, curiously arrayed, preferring nights or cloudy days; or, if the sun shines hotly, constructing arches over their heads, or if accumulated with a fluid exuded from their mouths. This dread of the sun's rays, reported by Dr. Asaph Wood, seems strangely inconsistent with the statement of Dr. Livingston, that heat has but little effect upon them. He says that he put the bulb of a thermometer three inches under the soil, in the sun at mid day, and found the temperature to be 132 deg. to 134 deg. Beetles placed upon the surface ran about a few moments and expired. But this boiling of heat only augmented the activity of the ants. (Perhaps Livingston here refers to another species, though Mr. Wood quotes the passage in his description of the driver ants.) They have no vestige of external eyes, nor does the microscope detect in them any visual organs whatever. The horny head covering is, however, translucent, and they may recognize through it as they march the objects of their flight. Their wings will frighten almost any creature, has no terror for the driver ant, which will dash at a glowing coal, fix its jaws in the burning mass, and shrivel up in the heat. They do not willingly enter water, but when they are compelled to cross a river on a march, they bridge it with festoons of their own bodies.

A BIRD GHOST STORY.—The *Athenaeum*, noticing a book on birds, says:—"Birds have a great fear of death. A hen canny belonging to the author died while nesting, and was buried. The surviving mate was removed to another cage; the breeding cage itself was thoroughly purified, cleansed, and put aside till the following Spring. Never afterwards, however, could any bird be induced to set out eggs. The cage was then washed and scrubbed, and, as it obliged to remain, they huddled close together and moped, and were thoroughly unhappy, refusing to be coaxed for any amount of sunshine or dainty food. The experiment was tried of introducing foreign birds, who were not even in the house when the canny died, nor could, by any possibility, have heard of her through other cannies. The result was the same, no bird would live in the cage. The cage was haunted, and the author was obliged to desist from all other attempts to coax or force a bird to stay in it."

PROMPT EDUCATION.—The following note from a Canadian correspondent brings an interesting bit of news, from its novelty. Perhaps some of our readers may have had some such experience before. If so, should be pleased to hear from them.

DANVILLE, CEBRIDA, Oct. 17, 1874.
 EDITOR FOREST AND STREAM.—
 I have a pair of our common woods partridges, caught wild from the forest less than a month. They are so tame that they will eat from my hand and I never heard of such an instance before.
 Yours truly,
 M. W. CLARK.

—The exhibition of useful and noxious insects in Paris, recently opened in the Tuilleries Gardens, was highly interesting and useful.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
 125 N. YORK ST., N. Y. CITY.
 Animals received at Central Park Menagerie for the week ending October 17th, 1874:
 Two White Pelicans, *Pelecanus onocrotalus*. Hab. South Europe.
 One Marabou Stork, *Leptoptilos crumeniferus*. Hab. West Africa.
 Two Elands, *Oryx capensis*. Hab. South Africa.
 One Horned Owl, *Bubo Virginianus*. Presented by Dr. E. Sterling of Chicago.
 One White-throated Sparrow, *Coturnix hypoleucis*. Presented by Mrs. W. A. CONKLIN.

Woodland, Lawn and Garden.

LILIUM LANCI-FOLIUM.

THERE can be no handsomer pot plant introduced among your numerous varieties than the liliun lancifolium. They are beautiful for either the conservatory, parlor, or the sitting-room. We have grown these lillies for years, and never thought them difficult of culture. The want of success complained of by "A. M." of Minnesota, we cannot account for on any other ground than that he made his soil too rich and his pots too large.

Our own manner of planting a bulb has been as follows, and we have never failed of obtaining good, strong flowers: We provide for the Japan lillies pots certainly not less than fourteen inches in diameter; we plant three bulbs in each of these pots. Always if possible select the double-crowned bulbs, as they are the best for culture in pots—single eyes do not give you good satisfaction. You now want a good, fair drainage of broken crock at the bottom of a modest; saw the soil very carefully prepare a compost for your bulbs, containing three parts of good peat soil, one part fresh loam; this with one part of old rotted pasture sod, and one part of coarse river sand is all you require. Mix these together, fill your pot to within four inches of the rim, place the bulbs at equal distance from each other, and do not fill up the pot to the top, leaving the crown of the bulb exposed. Your best time to plant will be from 10th November to 10th February. They should be protected and kept from cold. If you have not a greenhouse of your own some of your friends having one will let you use it. Let no water drop upon them. They can also be left in a light cellar where no frost can chill or blight them; let them have all the air they want. While in this state, as they are slowly forming rootlets, they require only a moderate; saw the soil very carefully prepare the pots be neither wet nor dry, but a medium between the two. As they begin to push the green shoots or young leaves they require more water. At this period these bulbs are sometimes troubled with an enemy called "green fly." Rout him out at once with the fumes of tobacco-smoke; he is no lover of tobacco, and will be sure "to get" as soon as you smoke him. **OLLIFOD QUILL.**

THE SLEEP AND ODOR OF FLOWERS.—Sir John Lubbock, in speaking before the British Association concerning the fertilization of flowers by insects, said—"Everybody, however, has observed that even in fine weather certain flowers close at particular hours. This habit of going to sleep is very curious. Why should flowers do so? In animals we can understand it; they are tired and require sleep. But why do flowers do so? They should some flowers do so and not others. Moreover, different flowers keep different hours. The Daisy opens at sunrise and closes at sunset, whence its name day's eve. The dandelion (*Leontodon taraxacum*) opens at seven and closes at five. The *Arenaria rubra* is open from nine to three. The ear hawkweed (*Hieracium pilosella*) is said to wake at eight and go to sleep at two; the scarlet pimpernel (*Angulifera arvensis*) to wake at seven and close soon after two; while the *Trogonopsis pratensis* opens at four in the morning and closes just before twelve, whence its English name 'Jolingo-to-bed-at-noon.' Farmer boys in some parts are said to regulate their dinner hour by it. Other flowers, on the contrary, open in the evening. Now it is obvious that flowers which are fertilized by night-flying insects would derive no advantage from being open by day; on the other hand, those which are fertilized by bees would gain nothing by being open at night—say, it would be a distinct disadvantage, because it would render them liable to be robbed of their honey and pollen by insects which are not capable of fertilizing them. He believed, then, that the closing of flowers had reference to the habits of insects. He observed also, in support of this, that wind-fertilized flowers never sleep; that some of those flowers which attract insects by scent, emit their scent in particular hours; that the *Forsythia natalensis* and *Lychnis repleta* smell in the evening, and the *Orchis bipolia* is particularly sweet at night. He had been, he said, good humoredly accused of attacking the little busy bee, because he had attempted to show that it does not possess all the high qualities which have been popularly and politically ascribed to it; but if scientific observations were more rigorously pursued, the intellectual emporium which has been ascribed to bees, they have made known to us in the economy of the hive many various peculiarities which no poet had ever dreamt of, and having shown that bees and other insects have an importance as regards flowers which had been previously unsuspected. To these we owe the beauties of our garden, the sweetness of our fields. To them flowers owe their scent and color—without their very existence in the insect world, we should have their brilliant colors, the sweet scent and the honey of flowers been gradually developed by unconscious selection of insects, but the very arrangement of the colors, the circular bands and radiating lines, the form, size, and position of the petals, the arrangement of the stamens and pistil are all arranged with reference to the visits of insects, and in such a manner as to insure the grand object which the insect has in view. In conclusion, he observed that while he had attempted to point out relations which exist between insects and some of our wild flowers, and the whole subject is one which will repay most careful attention, for, as Muller has very truly said, there is no single species the whole history of which is yet by any means thoroughly known to us."

TUBEROSE BULBS.—There are a few rules that the novice in these matters must bear in mind. Do not undertake to try the bulb with all the top; or do not cut it off too near the crown of the bulb. Either proves injurious. The first, because there is such a mass of green, succulent growth to wither up, and consequently to engender decay; and the latter because there will be great danger of destroying the germ in the centre. I have seen bulbs to all outward appearances sound and healthy, but when I examined this vital point I found the germ decayed, and the bulb was necessarily worthless. My practice is to dig them up as soon as the first frost injures the leaves, cut them down to say three inches of the bulb, and then spread them thinly on a shutter, or what is better, a slatted frame, and place them in the sun or near fire heat, until every vestige of moisture has departed. It is really wonderful how much vitality there is in the leaves of this beautiful flower, for not unfrequently one has to wait for sev-

eral weeks before they are ready to store away. When once the bulbs are dried, I simply place them in a box without any packing material, and keep them in a warm and perfectly dry place. The cellar near a furnace will answer, provided there is no dampness in the air. It is a good plan to examine them carefully during the Winter to see if there is any moisture present, and if it is detected take them out at once, and again spread thinly over the top of a furnace or other surface, to remain until dry once more.

PRUNING AND TRAINING FRUIT TREES.—Our most successful pomologists agree that a standard tree in an orchard should have five or six feet of a clean, straight stem. Straightness can be perfectly obtained by keeping the young tree tied to a stake until it has acquired strength and firmness enough to support itself in a straight position. All shoots proceeding from the stem, below the first tier of branches forming the head, should be rubbed off with the hand while tender, as if allowed to grow they retard the development of the head and impair the form and habit of the tree. In forming the head of a young standard a vigorous upright root should be secured for a leader, and three or four others of the most vigorous to form branches or spurs. The thickness or firmness of limbs can be corrected by pinching off the ends of the branches, producing a more horizontal growth. At the present time, in the growing season, young trees will be pushing vigorously, and as a general thing will have made growth enough to enable the orchardist to perceive what form they are about to assume—whether the young branches are from the right place, and in the right direction to reach the desired form. If they are not, they should be set right at once by rubbing off shoots that are not wanted, pinching the top off to retard such as are pushing too vigorously to the detriment of others. An equality of growth among the shoots intended for the main branches, or framework of the tree, should be maintained; and where a surplus of small branches in the interior are appearing, giving the tree a bushy or twiggy look, a sufficient number of them should be removed, as if by the others to acquire a full and vigorous growth. The ordinary mode of proceeding is to allow the trees to grow as nature and circumstances may direct during the Summer, and in Winter or Spring correct by pruning, etc., any defects or deformities that may have arisen. This is not what we call good culture.—*New York Herald.*

RULES FOR CHOOSING POULTRY.—In the choice of poultry, the age of the bird is the chief point to be attended to. A young turkey has a smooth, black skin; in an old one, the legs are rough and reddish. In domestic fowls, the combs and the legs are smooth when the bird is young; and rough when it is old. The bills and the feet of geese are yellow, and have few hairs upon them when the bird is young; but they are red if it be old. The feet of a goose are pliable when the bird is fresh killed; and dry and stiff when it has been some time killed. Geese are called green till they are two or three months old. Ducks should be chosen by the feet, which should be supple; and they should also have a plump and hard breast. The feet of a tame duck are yellowish—those of a wild one reddish. Pigeons should always be eaten while they are fresh; when they look flabby and discolored about the under part, they have been kept too long. The feet, like those of most other poultry, are pliable in the bird; and stiff and supple, if it is young; when stiff, it is old. Tame pigeons are larger than wild pigeons. Partridges have yellow legs, and a dark colored bill when young. They are not in season till after the first of September.—*Knapoak.*

THE EFFECT OF LIGHTNING ON TREES.—The theory that the striking of the trunk of a tree by lightning is the result of the sudden evaporation of the liquid in it, is sustained within them has received much confirmation from experiments made by Osborn Reynolds, who succeeded in splitting small sticks of wood by passing the electric spark through them after they had been impregnated with water. He also burnt small glass tubes, which were filled with water, although the same tubes, when empty, allowed the water to run through them without being split. It is stated, destroying them. The most striking experiment made by him was upon a tube three eighths of an inch exterior and one eighth interior diameter, which could stand a pressure of at least 200 atmospheres to the square inch; this tube was fourteen inches long, and bent at a right angle. A very large electric flash being sent through the tube, it was split by the direct discharge, and the pieces thrown to a distance of several feet. The tube was afterwards examined, and was, in fact, completely pulverized, as though it had been struck by a hammer. Reynolds estimates that the pressure must have been more than 1,000 atmospheres.

IS YOUR LAND POOR?—If so, it is because it lacks either phosphoric acid, potash, soda, or nitrogen, or perhaps all of these. The other elements which are required by plants as food are generally found in the soil in sufficient quantities to supply the plants, while the soil is generally lacking in those named above, and which are indispensable to their growth and vigor. And in proportion as you supply the deficient article to your poor land, so you add to the health and vigor of the plants, enabling them to draw a large proportion of their nutriment from the air, and thereby increasing your crops nearly three to one.

A PINEY WOODS HOG.—Of all the woe-be-gone-looking animals, nothing, we think, can be compared to the hogs that are generally seen on the farms in Florida. They are neither alligator nor deer, but partake of the characteristics of both in the snout of the one and the tail of the other. Food is completely thrown away on these wretched things, and it requires years to bring fat enough on them to grease a gun barrel.—*Florida Agriculturist.*

—A gentleman who lately visited Cape Breton, went to see a tree at Margaree which has obtained some notoriety on account of its great size, and is probably the largest known specimen in the Province. Its circumference, six feet from the ground, is twenty-four feet; four inches at a height of about twenty feet; it has three branches of six to nine feet circumference each. The branches overhang an area of about sixty feet diameter. This denizen is of the yellow birch species, and is situated in an alder swamp on the farm of Mr. Lauchlin McDonald.

FLORIDA LANDS.—Good land is selling off from one to five dollars per acre one mile back of Mandarin, Florida. This would be a good place for a hotel.

The Kennel.

DOG BREAKING.—No. 1.

ALL that is really necessary in the breaking of dogs is a thorough knowledge of what constitutes a first-class setter or pointer, and the manner in which they should work in the field, besides such a judgment of dogs as will enable the trainer to determine between the different dispositions and characters he has to deal with. Few can be handled precisely alike; some are timid and need encouragement, others are headstrong and want strictness and sometimes severity. An absolute command of temper should be observed by the instructor in his lessons to the beginner, that an unnecessary blow may not be given, for work done cheerfully and with a desire to serve and benefit the master, is a hundred fold better than service rendered by compulsion.

A puppy should never have but one teacher; no matter how close the methods of two trainers may be, he must learn *your voice, your manner, your word look*; therefore, if you determine to break your dog, do it entirely yourself; do not stop half way and have it finished by another.

You may safely begin in-door or house-breaking your dog when he is six or seven months old, but often we find puppies so precocious that they may be readily taught at four; as with a liver and white puppy of the writer's, that retrieved in a business-like manner before he reached the age of five months, besides being perfect in charging by motion of the hand, and ready, had to be kept for physical weakness, to be put into the field.

From the beginning attend to the feeding of your younger yourself, and if possible, let all food be taken from your lands. This we advise that the puppy may the sooner look to you alone as his master, and attach himself to you solely; for we argue that a setter or pointer should by no means ever be loaned or hunted by others than his trainer, and advocate the breaking of all field dogs by the sportsman himself, if he has the patience and time to devote to it.

The check cord is a far greater assistant to the breaker than the whip, as the most unruly and headstrong dogs are sufficiently brought to submission by it, and at the same time it can be so applied as not to intimidate. We should bear in mind that a dog should not be corrected for disobedience, unless it is certain he knows his fault. Punishment is absolutely necessary at times, and that of the most severe description, with certain dispositions, but we must be first satisfied that the act for which correction is administered was committed with a full knowledge that it was wrong. Show us a cringing and supplicating dog on being called, and we will find his master with an ungovernable temper, unfit to train or manage a puppy. Such a dog has been unmercifully flogged, perhaps kicked, before he has been taught and made to understand his line of duty, and fearful of a repetition of the lash—for what he knows not—obeys the summons crouching and cowering. How we detest such an exhibition, plying the servant and condemning the master!

A thoroughly broken dog should systematically range the field which he is hunting, and be staunch in his point when game is found, and back his companion, no matter how far distant he may be from him, as soon as his attention is called to the point; standing as it were by sight, charging at the report of the gun, or by verbal command, at all events not to break short and rush for the bird the moment it falls, but to retrieve only when so ordered.

We shall endeavor in a series of short articles to give the readers of the FOREST AND STREAM, who have never attempted the training of their own setters or pointers, simple plans of breaking which we have found successful.

CONDITION OF DOGS FOR THE SHOOTING SEASON.—It cannot be expected that hunting dogs of any description can be in condition to undergo the great labor called upon them to perform, when the shooting season first opens, without having gone through a systematic course of exercise that will harden them, or prepare them for the work. A dog that has had but little freedom for two or three months naturally becomes gross or soft, as it is called, and on being taken into the field may dash off in grand style, apparently as strong and vigorous as might be wished; but the first forenoon hunt soon tells on him, and by night he is completely fagged out. In the morning he is found with legs stiffened and sore, and although showing a desire to accompany you again, is often in no condition to be taken out. All setters and pointers for at least two weeks before the season opens should be allowed to run as much as possible, and if kept in cities where it is necessary to have them continually chained unless you are present, they must have at least two or three hours daily exercise in the fields or commons of the rural districts. They should be fed but once a day, and we recommend a regular hour in the evening as best, and the food ought to be of the most nourishing description. We have settled down finally, after trying everything else, to corn meal, finely ground, and scraps of meat thoroughly boiled together and properly seasoned, feeling satisfied we can give nothing more strengthening. The nearer the time approaches to the shooting season the oftener and more protracted the exercise should be, if possible, and you will find when you enter either the stubbles or the meadows, you will have dogs fit for work and plenty of it.

FOOT-SORENESS IN DOGS.—During the shooting season the feet of pointers and setters—especially pointers—often become sore and tender from continued ranging over short

cut stubbles and a stony country. To prevent this, and to remedy it, we would advise the sportsman to bathe the dog's feet twice a day for a few days before going into the field, with a solution of alum, say a piece the size of a walnut on a quart of common whiskey, adding to this an ounce of tannin. On returning from the day's work, if the dog appears at all lame, it will be best to examine his feet, and if they appear tender to the touch and do not contain a thorn, wash them thoroughly with the solution before he is put up for the night. It has the effect of greatly hardening the pads, when they have become soft from standing idle and want of exercise. We would also recommend a brisk rubbing of the limbs with plain whiskey after a hard day's hunt; such attention to your setter or pointer will add a great deal to his freshness in the morning.

DOGS AND PORPOISES.—Until reading the letters of your correspondents in the issue of 15th August last, I always thought that of the few accomplishments dogs were not *au fait* at, fishing was one. Their communications, however, (disclosed my mind, and I find their evidence corroborated in a most strange and amusing manner in one of the Cape Coast daily newspapers for May. A gentleman, walking along the beach with a large Newfoundland dog, noticing a drove of porpoises pursuing a shoal of fish close in shore, encouraged his dog to venture out amongst the drove. The dog instantly started off, and (to use the words of the journal) "on reaching the porpoises he set up a terrible yelping, to the consternation of the sea-pigs, for dog-barking among the sea residents is an unusual thing. Carlo now plunged, first for one porpoise and then for another, and so excited the whole company that a grand charge was made, and Carlo was obliged to beat a retreat, which he did in the best manner possible, by snorting, snorting, and tumbling about, evidently much delighted at putting the Newfoundland stranger to flight. The dog was chased close in shore, his pursuers only retiring after getting among the breakers. Upon an examination of Carlo after his novel venture, Mr. Carson (the owner) found that he had been severely lashed in the side, and had one ear partly bitten off. This, I believe, is the first instance on record of a dog getting out to battle with the hosts of the sea."—*Land and Water.*

CURIOS ANECDOTE OF A DOG.—A recent number of *Le Petit Journal*, of Paris, is responsible for a dog story, the circumstances of which are somewhat as follows:—"Not long since a gentleman, while driving down the Avenue de Neuilly on a dark night, was suddenly stopped in his course by a man who asked him for the loan of one of his lights to search for some money which the latter had lost through a hole in his pocket, the amount being a considerable sum in gold. Instead, however, of complying with the man's request, the traveler called up a large Danish dog, and, after taking a coin which the man still had remaining in his pocket, and holding it to the dog's nose he told the animal to "go seek." The intelligent animal understood what was required, and immediately commenced his search for the missing coins, which he found, bringing them back one by one to his master, who handed them over to the rightful owner. He, of course, was in ecstasies, having been taking a small business by his employers with the money he had just previously lost, and which he would probably never have got a sight of again had it not been for the extraordinary sagacity of the dog."

—The Montreal fox hounds have been lately having some good sport. On Saturday week they scored two kills in one day. The noble sport attracts plenty of volarities, and many of the fair sex not only grace the field by their presence, but ride well and holdily. The excellent hunt is decidedly in the ascendant.—*Canadian Sportsman.*

The Horse and Course.

—On the fourth day of the Fall meeting of the American Jockey Club six races were closely contested. The first was a dash of a mile for all ages, with penalties and allowances; seven entered, viz., T. G. Moore's b. g. O'Neil, 3 years; Lawrence and G. Lorillard's b. c. Resolute, 4 years; John Coffee's br. f. Ida Wells, 3 years; John P. Chamberlin's b. c. Survivor, 4 years; P. Lorillard's b. c. Stanford, 4 years; Dugald S. Bannatyne's b. c. Audubon, 4 years, and W. H. Strickland's b. c. Ravenna, 2 years. Survivor won the race in 1:46, Stanford being second, and Resolute third.

The second event was a dash of a mile and a quarter for three-year-olds, with allowances and penalties. The entries were James Thompson's ch. f. Emma, Thomas G. Moore's b. g. O'Neil, John Coffee's b. f. Nettie Norton, and John P. Chamberlin's b. c. The Hoaxer. Won by Nettie Norton, Hoaxer being second.

The third race was a dash of three quarters of a mile, for two-year-olds, which had eight entries; six started, viz., D. D. Withers' h. c. Athlete, Lawrence & Lorillard's b. c. Hyder Ali, H. P. McGrath's b. c. Aristides, Thomas Puryear's br. c. Leader, P. Lorillard's br. c. James A., and August Belmont's ch. c. Babylon. Four out of the six starters were Lexington colts, and the betting by the followers of the several stables was very exciting. James A. was the victor in 1:13, Aristides being second, and Hyder Ali third.

The fourth race was the most important of the day, being a mile and three quarters for all ages, three-year-olds to carry ninety pounds. For this there were seven entries, and five of them answered the judges' call, viz., M. A. Littell's b. h. Wildide, W. Cottrill's br. h. Litleton, Lawrence & G. Lorillard's b. h. Shylock, Thomas Puryear & Co.'s b. c. Grinstead, and P. Lorillard's b. c. Stanford. As Grinstead was the only three-year-old among the lot, he carried the light weight of ninety pounds, and the speed that he has lately shown tended to make him a great favorite. Grinstead led the field at the winning post in 3:10, Shylock being second, Litleton third, Wildide fourth, and Stanford fifth.

The fifth race was the Members' Cup, a piece of plate of the value of \$500, and \$250 in money, added to a sweepstakes of \$25 each, play or pay. Five were entered, but only three came to the post—L. A. Hitchcock's ch. c. Limestone, ridden by Mr. Clason; A. Belmont's g. h. Gray Planet, ridden by Mr. Purdy, and T. B. & W. R. Davis'

ch. h. Fadldeen, with Mr. Gleason on his back. Limestone won in 2:04 by a length, Fadldeen second.

Concluding so excellently, the day sport was a handicap steeple chase, which brought out four starters out of eight entries. These were A. H. Torrence's ch. g. Trouble, M. J. Tully's b. g. Vesuvius, M. A. Littell's gr. m. Mary Clark, and A. P. Green's h. m. Daylight. At the start Vesuvius took the lead, Daylight being second, Mary Clark third, and Trouble last. In these positions they remained over the first eight jumps. At the water jump in front of the grandstand Vesuvius was a length ahead of Daylight, and she six lengths ahead of Mary Clark, who was the same distance ahead of Trouble. The only change that occurred was at the hill, when Trouble took the third place from Mary Clark. The race at the finish was between Daylight, Trouble, and Mary Clark. Daylight was in the lead at the last hurdle, but fell and injured her jockey, giving Trouble the race, Mary Clark second, Vesuvius third.

—Last Saturday closed the Jerome Park Fall meeting, and the racing on that day was fully equal to the best of the previous days.

The first race of the day was a free handicap sweepstakes of \$30 each, one mile and five eighths, for which there were three starters, viz., Lawrence & G. Lorillard's b. h. Shylock, five years; A. M. Burton's ch. c. Jack Frost, four years, and John Coffee's b. f. Nettie Norton, three years. In the betting Shylock was the favorite, and he won in 2:37.

The second event of the day was a dash of three quarters of a mile for two-year-old maidens, for which there were the following four starters, viz.: Wood Stringfield's br. c. Ravenna, P. Lorillard's ch. f. Springlet, D. D. Withers' imp. ch. c. Athlete, and J. W. Hunt Reynolds' ch. f. Anicla. Springlet was a heavy favorite, but the knowing ones this time came to grief, as the filly was somewhat fractious, and got a bad start. She showed a great turn of speed, however, and had she got away even with Anicla she could not have lost it. Anicla was the winner in 1:09.

The card furnished for the third event was a pur of \$500 for three-year-olds which have not won this year; there were four entries: F. G. Moore's b. g. O'Neil, D. Desmond's b. f. Mollie Darling, James Thompson's ch. f. Emma, and D. J. Bannatyne's ch. c. The Ghost. Emma won a well-contested race in 1:54, distance 1 1/4 miles.

The fourth race was a handicap sweepstakes for all ages, one mile and an eighth, which brought out a field of seven starters, including J. W. Weldon's b. g. Kadl, five years; P. Lorillard's h. c. Stanford, four years; Lawrence & G. Lorillard's ch. c. Resolute, four years; John Coffee's br. c. B. F. Carver, four years, and b. f. Nettie Norton, three years; Thomas G. Moore's gr. h. London, five years, and D. D. Withers' b. c. Minstrel, four years. This was a good betting race, and notwithstanding that Kadl appeared for the first time in other colors than the favorite dark blue, he was the favorite, and well did he sustain his reputation, for he won in 2:04, Resolute being second, London third and Carver fourth.

The fifth affair of the day was a dash of two miles and a half for all ages, three-year-olds to carry ninety pounds. This had the following three starters: J. W. Weldon's b. g. Wildide, four years; P. Lorillard's gr. m. A. Littell's b. c. Aerobat, three years, and K. W. Sears' ch. c. Aerobat, three years. Of course Aerobat, with his light weight, was an immense favorite, and his running proved him to be the best colt on the turf, as he came in 4:34, within half a second of the fastest time on record.

The meeting was brought to a close with a handicap hurdle race of a mile and three eighths over seven hurdles. There were five entries, and the following four came to the post: L. A. Hitchcock's ch. c. Limestone, A. H. Torrence's b. h. Moonstone, J. S. Cattanach's b. g. Impecunious, and Hugh Gaffney's b. g. Gaffney. The race was a remarkable one, as three of the four starters came to grief, ending in the serious injury of one of the jockeys. Limestone won. No time taken.

—The following are the winnings of the different stables that competed at the last meeting:

M. H. Sandford	\$5,040 T. B. & W. R. Davis	\$600
A. M. Sears	4,875 W. Weldon	550
Governor Bowie	3,500 John Coffee	500
John Hunter	3,500 W. H. Reynolds	500
A. M. Burton	3,000 James Thompson	400
Lawrence and G. Lorillard	2,025 L. A. Hitchcock	375
A. B. Lewis & Co.	2,000 P. Lorillard	300
T. Puryear & Co.	1,456 W. H. Cottrill	200
A. H. Torrence	1,320 A. P. Green	200
J. W. Weldon	825 M. Burton	150
H. P. McGrath	800 R. W. Cameron	100
M. A. Littell	800 T. G. Moore	100
D. D. Withers	500 D. Desmond	50

—The Sea View Park Association, New Dorp, Staten Island, opened their half mile track on the 15th inst. The first trot, for a purse of \$500, brought out four competitors, but Belle of Richmond distanced all in the first heat in 2:44.

The second trot, for a purse of \$600, for horses that never beat three minutes, brought seven to the stand, but the race fell to Waterson's "Boy," he winning all but the first heat. Best time, 2:36 1/2.

—The extra day of the opening meeting at the Sea View Park Association, at New Dorp, Staten Island, last Saturday was well attended, although the program included only the unfinished race from Wednesday and the \$1,000 purse for the 2:30 class. In addition to these a scrub race was arranged, and sweepstakes of \$300, for which four heats were trotted, each being very closely contested by Sam and General Butler. The final heat in the unfinished race was won easily by Sweetmeat. For the \$1,000 purse Harry A. Whitcomb was the favorite, and after coming in third in the first heat won the race in three straight heats.

—At Goshen Park, last Thursday, two trotting contests came off, the first being between horses that had never trotted better than 2:50, and the other by horses that had never beaten 2:28. There were five starters in the first, consisting of M. Roden's b. g. Rutledge, A. J. Feek's b. g. George F. Smith, J. H. Hartbeck Jr.'s, br. g. Windemere, H. Casey's br. m. Agnes, and Edwin Thorne's b. s. Wild Oats. Rutledge was the favorite, and won the race by winning the first, third and fourth heats in capital time for a green horse, this being his second appearance on any track. Best time, 2:33 1/2.

The second trot had four starters, viz., Wm. H. Simmons' b. m. Bella, John S. Baker's b. g. Tom Keeler, Ben. Wilson's br. m. Carrie and H. Casey's blk. m. Lady Bron. Tom Keeler was the favorite before the start, but Bella

won the race in three straight heats, Tom Keeler second, Carrie third prize and Lady Byron fourth. Best time, 2:28.4.

—The closing day at Goshen Park was a delightful one, and the attendance was good. There were two races, the first being between horses that had never beaten 2:21. There were six starters in the first race and five in the second. The starters in the first were the ch. c. Bonner, b. Lady Annie, b. m. Lottie, blk. g. Black Crook, ch. g. Mountaineer and b. m. Lady Angie. Bonner was a great favorite over the field. He won the race very easily, taking the second, third and fourth heats. Best time, 2:32. The starters for the 2:21 trot were the gr. g. Hopful, ch. g. Thomas L. Young, b. m. Huntress, b. g. Kansas Chief and gr. g. Banner Boy. Hopful won the race, taking the second, third and fourth heats, the one being the fastest heat ever trotted on the Goshen Park track. Best time, 2:26.

—A "harness race," for a purse of \$1,000, \$700 to the first and \$300 to the second, mile heats, best three in five, came off at Deerfoot Park, Long Island, last Monday, between the trotter American Girl and the pacing gelding Copperbottom. In the contest the mare was the favorite before the start at 25 to 10, and after being beaten the first heat she was still the favorite at the same amount of odds. Copperbottom broke up in the second heat, and the mare beat him easily, and became a greater favorite than before, selling for 25 to 8. American Girl won the two subsequent heats quite easily, the pacer being evidently out of fix, as he seemed inclined to break when called on for speed.

—The match race for \$5,000 (mile heats, best three in five, in harness), between the stallions Jay Gould and Bashaw, Jr., took place at Baltimore on the 15th ult., over Bishop's Herring Run Course. The attendance of spectators was large, over 3,000 persons being present. At twenty minutes to four o'clock the horses were sent off to a good start, Jay Gould having the inside. Bashaw, Jr., broke down very soon after starting, and pulled up at the end of the heat, very lame, whereupon the judges allowed him to be withdrawn. The following is the time: Half mile, 1:15; mile, 2:40. The victor trotted a mile after this in 2:19, which is the best time ever made by a stallion.

—The races at Mutchmore Park, Canada, on the 16th, were largely attended. For the hurdle race, two miles and a half, the starters were Kelso, Helen Bennet, Jack on the Green, and Mitchell. The latter threw his rider, giving the lead to Kelso, who won the race. Jack on the Green coming in second, and Helen Bennet third. Time, 6:22. The second mile hurdle race, between the pair of \$250, mile heats, one minute won in two straight heats, Helen Bennet second, and Sarah G. third. Time—1:48 1/2, 1:49. The Moor threw his rider (Cooper), and it is feared he is fatally injured.

—The match race between Beatrice and Clip, twice around the steeplechase course, was won easily by the former. The meeting closed with a mile dash, which was won by Ottawa Belle, Colonel B. finishing second, and Halstone third.

—The fair at Raleigh, N. C., on the 16th inst, was a grand one, the visitors numbering at least 13,000. In the racing Billy Bowlegs won the first race in 1:52, beating Piney Woods. The hurdle race was won by Joe Davis in 1:55, defeating Jack Rouhace. The most exciting race of the day was between Mary Long, Notre Dame and Billy Bowlegs, mile heats, and was won by Mary Long in two straight heats. Time—1:52 and 1:51 1/2.

—In the races at New Haven, on the 15th inst., T. S. Foster's Harry Spanker won the 2:35 race in three straight heats, H. Gilbert's Harry Gilbert second, and P. B. Morton's Jimmy Morse third. Time—2:38, 2:37, 2:40. The race won by all special purses of \$2,000 was contested by American Girl and the pacer Copperbottom. The Girl won in three straight heats. Time—2:38 1/2, 2:37 1/2, 2:35 1/2.

—The October races at Beacon Park closed on the 16th. There was but one regular race on the card—that for a purse for \$600, for horses that had never beaten 2:29. Of seven entries, five started, and the race was won by Flora Belle in three straight heats. Best time, 2:29.

—The Carleton Park races, at Canada, promise to be very interesting, as steeple-chasing is one of the most prominent features.

—Neilson won the fifteen mile trot at Montreal, the other day, making the distance in 46:54.

Rational Pastimes.

Secretaries and Friends of Athletic, Base-Ball, Cricket and other outdoor clubs will kindly mail their contributions not later than Monday in each week.

—The Peninsular Cricket Club of Detroit lately defeated the St. Louis club at Chicago by a score of 147 to 94—58 and 89 to 53 and 36. On the part of St. Louis, double figures were scored by Duke, Miller and Sharp, and by Crosthwaite, Calvert, Irvine, Bamford, and Armstrong, of Detroit. They then played against a combined eleven of St. Louis and Chicago, and in the deciding innings won by 92 to 89, Calvert's 26 being the best score, Edgar Bamford and Hardinge also scoring double figures. White took the majority of wickets on the part of Chicago.

—The Bostons last week went to Baltimore and defeated the Baltimore of that city three successive games by the respective scores of 7 to 4, 14 to 7, and 15 to 2. The Baltimore disbanded immediately afterwards, and the Bostons are much elated in that that none of their victories over the Baltimore was due to a materially changed team not played them since June 1st, and it only needed a single game, and one with the Athletics to have made the Baltimore record legal.

—The Baltimore club were disbanded Oct 15, and their 47 games in the championship arena this season count for nothing, inasmuch as they had failed to play their quotas of five games with the Atlantic and Athletic clubs. They only had one each to play to complete their record, so that their games would count, and these were due them in Baltimore by the two clubs above named. By this disbandment the Bostons lose 9 won games, the Chicago 9 and the Mutuals 8. The result will be to materially change the championship record, the Chicago going from fourth to fifth position, while the Athletics are but four games behind the Mutuals for second place.

—The worst defeat sustained by the Mutual club since last July was that they received at the hands of the Athletics at Brooklyn on Oct. 17th in their ninth game together when the Athletics, by the totals of 9 to 2 of scored runs and 10 of earned runs, they getting 14 base hits to the Mutuals 5 only. Indeed, but two passed balls by Fleet in the first innings and a bad muff by Sweeney in the fourth, the Mutuals would have been handsomely "Chicagoed."

—The transfer process of players from one club to another will commence in November next. Several of the club managers have wisely retained men whom they have found to serve them faithfully. In this respect the retention of the whole of the Boston nine speaks volumes in favor of their players. Of the original nine of 1871 six have been retained in the club team each season. The nine for 1875, re-engaged, will be White, Spalding, O'Rourke, Barnes, Shaffer, George Wright, Leonard, H. Wright, and McVey.

—The new professional of St. Louis will be very strong in the individual strength of its players, but the element of harmony has not been duly considered, judging from some of the selections made. Bradley and Miller, of the Eastons, have been secured as pitcher and catcher, and Pike as one of the out-fielders; Dehman is to be their first baseman, and Cuthbert their left-fielder. Messrs. Bishop and Fowle, it is said, are opposed to the clubs playing matches on Sunday. This speaks well for the character of the new organization.

—It is said that the Hartfords have arranged to have Cummings for their pitcher and Higdon as catcher, with Carey at second, Palmer short-stop, Remsen at center-field, and Burdock at third base. The latter is the man to captivate the nine if they fail to secure Ferguson.

—The many friends of the veteran Peter O'Brien will be relieved to learn that the sad occurrence of his death was the result of accident, and not suicide, as erroneously reported. Open-hearted, enthusiastic and upright, he was a model of integrity for every ball player to copy from.

—On October 7th, Pittsfield was the scene of an interesting contest between the College nines of Amherst and Williams, the result of which was a signal victory for the Amherst nine by 21 to 7 in a full game. Recorded at the bat on the winning side and Ogdien on the part of Williams. The second base pitcher and Ogdien was very good, Storck's catching being noteworthy.

—In the game of base ball played at Prospect Park between the "Tribune" and "Wild Outs" nines, the former won by a score of 18 to 13. The "Wild Outs" nine challenge the "Tribune" nine to play another game, to be played by their (the Tribune's) own nine, the trophy to be a ball.

—The Hartfords will retain only Mills, Tippen and Brady of their nine of 1874.

—The Athletics retain Clapp, McBride—he could not play under any other colors—Anson and Sutton.

—The Chicagoes retain Malone, Zettlin, Glenn, Hines and Peters.

—The Mutuals retain Mathews and Start.

—A society formed this year for the purpose of increasing the interest in athletic sports at Harvard College, was formally organized last week. Contests have been decided upon which will occur on Jarvis Field at three o'clock Friday afternoon, Oct. 23. These contests will be as follows:—One hundred yards running race; high jump; one mile running race; running long jump; hurdle race of 120 yards over ten hurdles; throwing base ball; two miles running race; consolation race of one-half mile; a three-legged race and a three miles walking race. Gen. F. W. Lister has made an offer of two silver cups to be contested for in the spring races. One of the contests for the cups must be a high jump. The other is unrestricted.

—The Toronto foot races came off on last week on the grounds of the Toronto Cricket Club. In the 100 yard race, Burus was the successful competitor. In the 440 yards race the starters were reduced in the last heat to two, Lea and Jacobs, the former taking first prize. For the Challenge Cup, there were only three contestants, Toban of the Shamrocks Lacrosse Club, and two Indians, Quartz and Kaurahine; this race was easily won by the latter. Fastest time, 5 min. 4 sec., made during the first heat.

—The foot ball match at Dartmouth College last Friday between the Seniors and Sophomores on one side, and the Juniors and Freshmen on the other, resulted in a victory for the Juniors and Freshmen, they beating five out of the six games. The contest was the most exciting that has happened for a long time.

—In the walk between Edward Mullen and Richard Wallace, at Yonkers, recently, Mullen won the first heat, Wallace the second and third, and Mullen the fourth and fifth. Twenty-nine circuits of the half made a mile. Both men walked well in the best time, Mullen in seven minutes; the longest time eight minutes and ten seconds.

—The foot ball match, Old Countrymen vs. Canadians, came off last week on the grounds of the Toronto Lacrosse Club. After a close contest the game was decided in favor of the Old Country team, they making three touchdowns, neither side being able to obtain a goal.

—The Emperor William, we hear, has ordered in England ten million rounds of cartridges. This is doubtless owing to the well-founded rumor that Weston was going to Berlin to attempt a walk of 365,000 miles in 365 days.—Danbury News.

—A closely contested lacrosse match was played on the 14th ult. at Orillia, Canada, between the Collingwood and Orillia clubs, for the championship of the North and set of silk flags, resulting in a victory for the latter club.

—The championship lacrosse match on Thursday last between the Shamrocks and Montreals, resulted in favor of the former club in three straight games.

—The Canadian Curling clubs are organizing for the Winter.

—Boston is organizing frost clubs.

—In the midst of a dense forest near Fort Madison, Ia., are a large number of apple trees, which recent developments have shown were planted between 1795 and 1798 by one of the young braves of the Black Hawk tribe.

Answers To Correspondents.

T. W. E., Woburn, Mass.—We know nothing of the party referred to.

C. E. C., Mairkir.—Have not seen the paper you refer to, so cannot answer you.

F. R. H., Dover Station, Mich.—Your dog is good for nothing for sporting purposes, she being evidently a mongrel.

G. A. B., West Quincy.—Can you tell me of any pup near Boston that I could get to train a young pointer pup? Also where, near Boston, can I get a few day's shooting? Ans. We can only refer you to our Boston agent, C. F. Pezzer, P. O. box 4671.

S. D. S.—Please inform me whether it hurts a muzzle loading shot gun to let it stand without cleaning after having shot 10, say thirty or forty times, that is without a load in the gun. If not allowed to stand too long, No. Better, however, clean it as soon as possible after use.

F. S., Belts.—You state in this week's issue that Captain Bogardus uses five drachms powder and one and one-quarter oz. shot. I would like to know what shell he uses, as the ordinary one will not hold that charge? Ans. Will Captain Bogardus answer this?

J. H. P. D., Mystic River.—Would you please answer through your correspondent's column where I can get a good New England pump about six weeks ago and the price of such? Ans. We do not know; some of our numerous correspondents will undoubtedly give you the needed information.

A. B., Philadelphia.—Please inform me through the columns of your paper what will cure my dog of constipation, and you will relieve an anxious reader? Ans. Epsom salts or castor oil, or the following:—Barbadoes aloes, 10 to 15 grains; powdered jalap, 5 grains; ginger, 2 to 3 grains; soap, 10 grains; mix into one hein for a large dog, or divide into two for small ones.

N. C. Canningpaw, N. J.—Will you please inform me which are the best sporting materials manufactured, such as powder, shot, caps, flasks, punches, wads, &c., and if possible the best (and most reasonable) place I can procure them in the vicinity of New York? Ans. There are several standard brands, and each has its favorites. We cannot specify who sells them cheapest.

W. McN., City.—Where can I get the neatest trout fishing, also lake fishing? There are good pickers on the coast. Ans. The fishing bases in the State from September 15 to March 15, under penalty of \$25, most of the fresh water lakes, we believe, offer fair bass fishing. The Bronx is too much fished to afford much sport to the angler.

O. N. Spear, New York.—Being out of work and without means to live in the city all winter, do you think it would be advisable to take a tramp into some part of the country where there is plenty of game, and camp out? If you do, what part and how long would be best? I know something of the matter, have done the Adirondacks and other places of note when in better circumstances? Ans. To Alaska, or join Weston on his tramps.

F. J. F., Palestine, Ill.—I notice in No. 8, Vol. 3, FOREST AND STREAM, under head of Answers to Correspondents, that you recommend for quail shooting 4 drachms of powder and 14 oz. shot; for ducks, 4 drachms powder and 14 oz. shot. Will you please state in your next number whether I remember named the powder and shot by measure? Ans. By measure, as indicated on most powder flasks.

C. M. C., San Francisco, Cal.—What is the best thing to wear for marsh shooting? Our rubber stockings and waterproof boots are too heavy? Ans. If the water on the marshes is not more than three or four inches deep, Gault's meacans will suit; if the water is deeper, we know nothing better than Hindeman & Co.'s trouting pants or fishing stockings. Their address is 27 Market street.

J. S.—What is the most killing charge for a 12 bore Remington shot gun for medium sized birds? Ans. One and one-eighth oz. shot, three drachms powder. What quantity of powder and shot would be sufficient for one month's camping out in Northern Pennsylvania, for one person, using a double barrel Remington? This depends too much on the shooter's industry and marksmanship to be answered definitely. Always take enough.

W. H. S., Stafford Springs, Conn.—1. Is there any work in print that will tell me how to break a cocker's spindlet? 2. How can I exterminate dogs on my dog? 3. I get Stenchege. 2. Mix soft soap with as much carbonate of soda as will make it into a thick paste; rub this well into the roots of the hair all over the animal's body, add a little kerosene oil so as to saturate the skin. Let this oil remain on the skin for half an hour, then put the dog into a warm bath for ten minutes. Letting him soak occasionally dicking his head under. Wash the soap out and dry him before the fire. This remedy will prove thoroughly effective.

H. R. J., Philadelphia.—Will you please tell me in your Answers to Correspondents whether you can get me a copy of J. P. Gimlin's "Birds of Long Island," and what the price would be? Also what the best work on American birds is so as to saturate the skin. Let this oil remain on the skin; would the one now advertised in your columns by Prof. Baird, Brewer & Ridgway be preferable to any other of earlier date? Ans. The price of Gimlin's book is \$3; we can send it. Prof. Baird's book is considered the latest and best authority.

J. E. H., Philadelphia.—Can you inform me in regard to the best time for duck shooting on the Carolina coast? Is the early November shooting for ducks and geese the best time for getting the most profit? Is there any reason of the year? Do they shoot from ponds principally, or from sink-holes? Ans. Duck shooting is good through November and the entire Winter. Goose shooting depends entirely upon the state of the season north of the Carolinas, as the birds arrive in November and stay on the bays until very cold weather drives them South. Should say December is the best. Snipe shooting is good after the middle of the month, and in December. All methods are practiced in foot shooting there; shooting from ponds and sink-holes; few from sink-holes, many puddle on them.

P. E. R., City.—Can you tell me through your columns if you think that it would pay me to go down to Shinnecock Bay for one day (Thursdays) next? If it would pay me, what would it cost? Can you recommend to me a good home to stay at, at good grounds, and also a good day? If you can let me know in next week's number of your interesting paper you will confer a favor? This is deemed an excellent place for gunning, as the brants, black duck and broadbill are numerous there. We do not know what hayman to recommend. Cost of the day's sport very trifling.

W. A. K. R., City.—1. Is there a sportsmen's club or public resort in the city where game, fish and fowl are served in their season? 2. Where, in Westchester county, can I get a fair day's shooting of quail or partridge? 3. What is the best location around New York, say within fifty miles, in which to buy a farm with a view to good upland shooting, and also good fishing? Ans. 1. We know of none save the various restaurants. 2. Good duck shooting at Fort Jefferson, L. I. (North Side R.) about sixty miles. Colonel Crocker will furnish hosts. Good woodcock shooting on Thimble Island. Take New Haven Railroad to Stony Creek; boats plenty. There is good quail shooting near Babylon, on the South Side Railroad, L. I., and at Matineck, on the Central L. I. Road. Good accommodations and all necessary assistants to be had. Shinnecock Bay, for duck shooting. The cost of a trip to any of these places will be only a few dollars. There are many other desirable localities, but those are such as have been favorably mentioned by our friends who have recently tried them.

VARIOUS INQUIRIES.—Where can a good day's shooting be had within a few hours' ride of New York? There is good quail shooting at Lake-lake (L. I. R.), about fifty miles from New York. Inquire for George Raylor. Good duck shooting at Fort Jefferson, L. I. (North Side R.) about sixty miles. Colonel Crocker will furnish hosts. Good woodcock shooting on Thimble Island. Take New Haven Railroad to Stony Creek; boats plenty. There is good quail shooting near Babylon, on the South Side Railroad, L. I., and at Matineck, on the Central L. I. Road. Good accommodations and all necessary assistants to be had. Shinnecock Bay, for duck shooting. The cost of a trip to any of these places will be only a few dollars. There are many other desirable localities, but those are such as have been favorably mentioned by our friends who have recently tried them.

AN INTERESTING MISSION.

PROF. BAIRD, one of the most celebrated naturalists of the present age, and the United States Commissioner of Fisheries, will send one of his ablest assistants to the Pacific Coast next year to study the salmonidae of that region, with the primary view of classifying them specifically and noting the differences between them and their Eastern congeners. In no portion of the world are there so many varieties of this family as in Oregon and Washington Territory, but how far they differ from each other, and how much each variety is entitled to be elevated to the dignity of a species, is a matter yet undecided, as no special report has been made upon them since that of Suckley and Cooper was published in 1856-7. The belief among learned ichthyologists is that the classification made by these gentlemen is somewhat cumbersome, and that they have made a distinct species of what is really but a variety of the same species; the change in appearance being the effect of seasonal and sexual causes. If that is the case, the report of Prof. Baird will be looked for with much interest by naturalists, for they expect that he will treat his subject with the careful study and thorough analysis which are so essentially characteristic of him. The grounds for supposing that the number of distinct species in those waters has been made entirely too large is well founded, as it is deduced from experiment and observation. One instance of this is the change noted in the salmon (*S. ginnat*) placed in the ponds at Bucksport, Me. These had no means of becoming mingled with other varieties, yet some caught in the Fall differed materially in outline from those captured in the Spring; for, instead of the ordinary long and pointed head which they possessed in the latter period, they had the hook nose, which is the most marked peculiarity of the *Salmo souletii*, and even the flesh assumed a whitish hue. The inference to be drawn from this is, that the same species undergoes a decided metamorphosis in different seasons, that, therefore, such a change does not make a specific difference, and, as a sequence, that owing to want of careful study and observation, seasonal or sexual transformations have caused the same species to be classified into two distinct species, thus rendering our nomenclature cumbersome and our classification incorrect.

The rectification of this error is in itself quite important to science, but the mission will even have a higher result than this, as it will, undoubtedly, attempt to solve the cause for the destruction of so many millions of the salmon of that region during and after the spawning season, and the extent to which the fisheries can be utilized for commercial purposes.

Prof. Baird may even make a thorough examination of the entire ichthyofauna of the Pacific Coast, and, if so, he will, we doubt not, add some most interesting information to our present knowledge of the fish of that region. No thorough examination has been made of the fishes of the Pacific Ocean, for, although Richardson made an excellent collection, yet he did not by any means secure all indigenous to its waters. It is almost incumbent upon our Government to complete the work it commenced several years ago, in order that the treasures of the Pacific waters may be made known, so that they may be worked into commercial products, and our country thereby enriched.

AMERICA vs. EUROPE.

ONE of our English exchanges suggests that the annual winners of the Elcho Shield, the great honor badge of Wimbledon, meet our American riflemen in order to test the marksmanship of both teams, and the accuracy of the rifles used. It does not specify that if our men should win they would be entitled to the shield, nor refer to the conditions of the match, so we cannot consider that proposition until these matters are defined. It believes that some Americans are equal to the best English "cracks" at long range shooting. This is a sage conclusion to arrive at after the last match, when the Americans and their competitors made the highest score ever known in rifle contests. The fact of their being equal to any riflemen in the world is self-evident; so that matter being decided, renders all further reference to it unnecessary. We should like to see an international contest on a large scale, and would desire nothing better than to behold all the best riflemen in Europe, whether from the rocky Tyrols, the heathens of Scotland, the sunny vales of France, the green fields of Ireland, or the "tight little island" itself, meet our riflemen in friendly competition at any central locality, and there test their nerve and skill. If such a match were undertaken, it would set at rest all mental reserves as to which men and rifles are the best, and, with all due allowance for the skill of the others, we would have little fear of our riflemen coming out second.

A series of international matches between picked teams from any of the European nations and our own men would undoubtedly receive warm support from the public, as they would foster a most useful and important modern accomplishment, and arouse an emulation for supremacy between the different nations that would be enthusiastic in the highest degree.

If these matches were inaugurated, a challenge cup or shield, with appropriate devices, and of sufficient value to render it an object worth competing for, could be bought, each "team" or nation contributing a certain amount towards its purchase, and by this means making it a perpetual challenge badge.

If this subject were once broached by those who have

the power to organize such matters, the probability is that it would be warmly received in the United Kingdom at least, as that undoubtedly boasts of the most skillful marksmen in Europe. If a team of the best shots in Europe were organized for competition with an "All America," we would not fear the result, so those who so niggardly admit the success of our riflemen, if they have any interest in the matter, can now set this suggestion rolling, and if they can manage to infuse courage enough into their riflemen to act upon it, the Americans will, we think, not hesitate to go more than half way to meet them. Let the next contest be between an "All Europe" and an "All America," or between the best picked team in the United Kingdom and our men, and we can then decide which nation can claim superiority as riflemen and as manufacturers of accurate weapons.

THREE BARRELED SHOT GUN.

THE three barreled shot gun, mentioned in a late issue of the FOREST AND STREAM as being invented recently, is, it seems, after all, a rather ancient affair, it having been used in this city over forty years ago, having been introduced by an enterprising firm in Alsace. The first one in this city was used by Mr. Michael Schreyer, a native of Alsace, who had become acquainted with the weapon in his own country. He found it sadly deficient in all the elements of a good fire arm, so discarded it promptly for one more effective. This old gentleman still resides in this city, and takes much interest in all matters appertaining to *fusils de chasse*.

We have before us a patent or circular issued by the Brien Brothers, of Wissembourg, in 1834, in which they describe their celebrated new invention with all the pompous detail of the olden times. A cut of the gun decorates the circular, and this shows the old weapon to have been supplied with a small bayonet, cleaning apparatus, and other paraphernalia supposed to be necessary in the chase or in keeping the weapon clean. The third barrel occupies the upper surface of the other two; and from the way it sets one would suppose that accuracy would be the exception and not the rule with it. Modern improvements, however, may remedy this defect, so three barreled shot guns may become as common as our ordinary two barreled guns.

LONG RANGE SHOOTING.

THE month of September was a busy one among the volunteers and rifle clubs of England, Ireland, and Scotland, and, judging from their scores, we should say that our American riflemen are by far the best shots. The best long range shooting ever noted was done by Dr. Barnett, of the Ulster (Ireland) club, who made eight bull-eyes out of ten shots, at a distance of 1,100 yards. This is most remarkable work, and if it is not an exceptional case, the doctor must be entitled to premier championship at that distance. The following scores were made by the two clubs competing for the Irish Challenge Shield—

Dublin Shooting Club Team—1,000 yards, Twenty Shots.

J. K. Milner.....	65
Edward Johnson.....	67
W. Rigby.....	63
W. Waterhouse.....	59
Total.....	254

1,100 Yards.	
J. K. Milner.....	65
Edward Johnson.....	64
W. Rigby.....	60
W. Waterhouse.....	59
Total.....	248

Grand total.....	512
<i>Ulster Rifle Association Team—1,000 Yards.</i>	
J. McKeena.....	67
Dr. Barnett.....	64
H. Fulton.....	63
William Steele.....	54
Total.....	248

1,100 Yards.	
J. McKeena.....	67
Dr. Barnett.....	62
H. Fulton.....	63
William Steele.....	49
Total.....	241

Grand total..... 485

The Edinburgh Long Range Rifle Club, which contains the best shots in Scotland, and notably one of the winners of the Wimbledon badges, held their match recently, and their best men made the following score—

A. Menzies.....	800 Yds.	960 Yds.	1,100 Yds.	Total.
A. Logan.....	80	38	19	85
E. Millidge.....	27	33	21	81

We have introduced these scores to show what the European riflemen can do, and to prove therefrom that none of their clubs have made as good shooting as our Amateur Club, and that those who so feebly sustained the reputation of our riflemen lately need fear to meet no body of men.

A HEGIRA OF GAME.—Our advices from Michigan specify that bears and squirrels were never before known to be so plentiful as they are at the present time. The former are even visiting the towns on a tour of inspection, and three of them were killed in one town last week. A Grand Rapids correspondent states that swarms of squirrels passed through that way last week, and that they are now followed by the *ureus* family, the dam and cubs generally keeping together. The "oldest inhabitant" cannot account for this hegira; so many sage heads are predicting certain calamities in store for that region. We should be pleased if some of our correspondents would note the movements of the animals, their course and mode of procedure, as such matters will be interesting to our readers, and we may be able to deduce therefrom some facts in natural history.

A WEEKLY JOURNAL,
DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY,
FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS,
AND THE INCLUSION IN MEN AND WOMEN OF A HEALTHY INTEREST
IN OUT-DOOR RECREATION AND STUDY.
PUBLISHED BY
Forest and Stream Publishing Company,
17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
(POST OFFICE BOX 6382.)
125 SOUTH THIRD STREET, PHILADELPHIA.
COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.
A discount of twenty per cent, for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "FISHING TOURIST," postpaid free.
Advertising Rates.
In regular advertising columns, nonpareil type, 13 lines to the foot, 22 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, OCTOBER 22, 1874.
To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.
All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.
Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.
Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.
The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.
We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.
Advertisements should be sent in by Saturday of each week, if possible. WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

- FRIDAY, October 23d—Trotting at Massillon, Ohio, Poughkeepsie, N. Y., Paterson, N. J., Danville, N. Y., Denver, Col., Alleghany Valley, W. Va., and Peon, Cumberland Fair.
- SATURDAY, October 24th—Trotting at Denver, Colorado.
- MONDAY, October 26th—Racing at Fleetwood Park and Paterson, New Jersey.
- TUESDAY, October 27th—Trotting at Fort Wayne, Ind., Wooster, Ohio, Rinebeck, N. Y., Great Falls, N. H., Toledo, Ohio, and Prospect Park, N. Y.
- WEDNESDAY, October 28th—Trotting at Fort Wayne, Ind., Wooster, Ohio, Rinebeck, N. Y., Great Falls, N. H., Toledo, Ohio, Prospect Park, N. Y.
- THURSDAY, October 29th—Trotting at Fort Wayne, Ind., Wooster, Ohio, Rinebeck, N. Y., Great Falls, N. H., Toledo, Ohio, Prospect Park, N. Y.

HUNT OF THE IRISH TEAM.

The following special dispatch shows how and where the Irish riflemen have been enjoying themselves in the West. We are pleased to note that our distinguished visitors have been treated with the courtesy and hospitality so characteristic of our Western gentlemen—

HANNIBAL, Mo., October 15th, 1874.
Irish riflemen returned last night from week's hunt in Kansas and Indian Territory, bringing deer antlers and other trophies. Party included Rigby, Milner, Johnson, Kelly, and Bagnall of the team, Chas. Hallock, editor FOREST AND STREAM, New York, G. W. Dorman, of this city, and E. W. Hope, of La Grange, with servant, and six setters and hounds. Express themselves much gratified with success, and surprised at richness and immensity of country. Some 300 chickens and quail were brought to bag, although long continued drouth made game comparatively scarce, and water for camp use difficult to find. At Schell City, however, and all along the line of Missouri, Kansas, and Texas Railway, chickens and quail were very abundant. Party drove about twenty miles into Indian Territory, where the Indians and half breeds treated them with courtesy, loaned dogs, &c.

Officers of Toledo, Wabash, and Western Railway, and of Missouri, Kansas, and Texas Railway, passed party free over their lines, and contributed in every possible way to pleasure and comfort.

Whole trip was carried out according to programme of Messrs. Hallock and Dorman, whose efforts were seconded everywhere by officials, landlords and private parties.

Party go to St. Louis to-night. II.

A VALUABLE JOURNAL.—The FOREST AND STREAM has been the recipient of several compliments from exchanges throughout the country for the thoroughness of its Creed-mor reports, and the energy displayed in securing plates showing the shooting of both teams in the international rifle match. It is pleasant to receive these tributes, and to be reminded so pleasantly, and in such varied forms, of the good work of this journal in elevating the noble pursuit of the chase and the pleasures of angling to the high standard which they should occupy, and proving that elegant pastimes are always the accompaniments of refined and cultivated tastes. As it is the aim of the FOREST AND STREAM to extract the higher pastimes from any association with the low and coarse, with which they are often identified, we feel pleased to learn that its work has been recognized, and that it fills a journalistic niche to which our most cultivated ladies and gentlemen can go for exhilarating mental food. It shall ever be the aim of this journal to cater only to the pure in sentiment, for to such do we look for support and encouragement. We shall try to keep the lead in all topics appertaining to our sphere; and to do this is easy to us, as we have as contributors the leading naturalists of this country, and several eminent men in Europe.

As a work of reference on all current events in field literature, rifle practice, and kindred subjects, the FOREST AND STREAM will be found invaluable, as all such matters are treated of in a concise yet comprehensive manner. That this characteristic is appreciated is evident from the large number of orders sent us for the issue containing the Creed-mor matches. This interest in the welfare of the journal, by the public, we shall try to reciprocate by making it worthy of them and its own mission.

PERSONAL.—We received a visit this week from Messrs. Dougal and Gillmore, two gentlemen well known in the sporting world of England and America. The former is a member of one of the most celebrated gun manufacturing establishments in England, and his companion is the author of several highly interesting works on field sports in the United States and Europe. Mr. Dougal returns to London on the next steamer, and Captain Gillmore goes to Dakota for a hunt.

Sporting News from Abroad.

THE AUTUMN FIELD TRIALS.

[FROM OUR SPECIAL ENGLISH CORRESPONDENT.]

WE have only had one trial in the field for pointers, setters and retrievers ("this Fall," and the one in point took place in Lincolnshire on the estate of the Marquis of Bristol. The rules used were a new code furnished by the Kennel Club, and announce a new era in the sport. For the information and criticism of American sportsmen I give them at length, and I will proceed to show how they were applied last week:—

SCALE OF POINTS.

1. The number of points to decide a trial shall not be less than twenty-five; it may, however, be more than this number, but in this case the number must be specified in the conditions of the stake. As soon as the twenty-five (or more) points have been made, including the good and bad points made by both dogs, the dogs shall be taken up, and the dog which has the most good points, or the fewest bad ones, after deducting his bad good points, as the case may be, wins.

2. Every point at game to count four, a natural back two, and if drawn to the other dog or dropped, one only.

3. If a dog rushes into his game, he loses four; but if he finds it first, points, and then rushes in, he gains nothing by the find, and loses two for the flush.

4. A dog seeing the point and refusing to back, loses "two, and if he rushes into his opponent's point he loses four if he points and the birds do not rise, and six if he flushes them.

5. A dog not dropping the game loses one, but it does not otherwise detract from the merit of a find, and in the same way he can lose one for not dropping to shot; but he does not lose one for each fault, providing it is not dropping to wing or shot. If, however, he runs in the moment the birds are on the wing or the gun is fired, he loses all the merits of the find, one for not dropping, four for chasing, as he is out of the game, and loses four for the fault. Hares or rabbits to count the same as feather, both as regards merits and faults, except in cases of flushing, which are not noticed.

6. A dog who runs clean off at the discharge of the gun, to be put out of the stake directly; and if a dog blinks, to lose six for the first fault, and is out of the stake if it is repeated.

7. Every false point which the dog does not discover to be false, and move on without direction from his master, shall count two demerits.

8. Except in the case of the pointing and running up birds, every number of points penalty shall be doubled on repetition of the fault, and the last number given for that fault, shall, on every repetition of it, be still further doubled.

9. Whenever the dogs may do after the settled number of points are obtained shall not count.

10. In cases both dogs are found equal, the judges shall (unless the owners have some agreement to draw one of the dogs) select a further number of points to be obtained by the two; the number selected to be not less than ten.

11. The result of the points only to affect each separate brace; and when the stake has been gone through, the respective winners to run off the ties according to their order on the card, and the winners of these matches to be tried on until two winners only remain, when they must be tried, to decide the actual stake, the beaten dog in the final to be considered second. Or, when the owners have the option of dividing prior to a final, put the first and second money to be added together and equally divided.

The idea was—(the reader will readily gather)—to reduce the whole system of judging pointers and setters in the field to a sure and certain method of proving the best dog, as scoring the points made in a game of billiards, and to make the whole thing more like a consoling meeting. Under the new regulations a judge was scarcely wanted at all, except in cases of doubt, when he became a sort of arbitrator, and throughout the meeting a piece of chalk and a board would also, almost, have done all the judging. Presumably, this new arrangement was merely on trial, and whether successful or not, the Kennel Club deserve the thanks of the public for their originality and their obvious efforts to benefit "the course"—the only drawback being, that the designer was the only one of the competitors who had been able to try the rules as applied to his kennel; but this is irrespective of their merits or demerits.

This mechanical method appeared to me when I first heard the scheme, and the *Field* reporter bears me out in my opinion, much in favor of a slow dog, who, cautious and afraid of making mistakes, would be infinitely less liable to incur "points to the bad," and though really far inferior to his rash but faster rival, beat him out of time on the "Falias Cunctator" principle. Slow dogs have only to wait their time, avoid putting up game and win, and a clever breaker having them under his control can assist them very much by preventing their ranging wide in doubtful cover and running risks. Again, there is no reward for style, in my opinion one of the most essential qualifications of a pointer or setter. To see a dog range freely and merrily, with his head well up, lashing his stern, championing the seat, going for the wind, working in parallels independent of his companion, and drawing up to his game grand and picturesque, is to me more than half the pleasure of sport. And I must have pace also, and this is not allowed for. I want my dog fast as the wind, with a gallop like a thoroughbred, and "stamina" that can keep him going all day long. Another hole I can pick in the new code, is the absence of penalties for disobedience of the breaker's orders. A dog may disregard hand, voice and whistle with reckless impunity. A great deal of luck is admitted, too, that any one can readily see, and though it is a step in the right direction, yet, I prophesy that without a thorough revision, the new "articles of war" must inevitably "go to the dogs."

On the first day of the trials the meet was at Boughton, near Sleaford, and at 11 o'clock the first brace of setters were put down on a rough piece of fallow for the Lincolnshire stakes. They belonged to Mr. Purcell Llewellyn, and consisted of two red Irish dogs, Kite and Sanson. Working tolerably independently and well, they began by a false point, which Kite backed; for this they deserved penalties, but the judges did not like to begin too severely, and allowed them to go scot free. In a stubble field Sanson followed a hare until stopped by hand, and Kite appeared to be the best worker. They did not, however, turn out anything very wonderful, and after making three false points in some "roots," one of which led the guns and judges a field's length for nothing, they were taken up with a total of sixteen good marks and nine bad ones; or in other words, a score of seven. Mr. Llewellyn's Laura and Druid were the next on the card; the former being a lemon and white bitch, and the latter a handsome black and white dog of the Laverack strain. Druid had previously taken second prize at the Shrewsbury Spring Trials, but here he seems to have run up birds, and though fast and stylish, was guilty of a decided "blink," retiring with his kennel companion with the curious score of three points to the bad. At 1:40 Mr. Lloyd Price's celebrated pointer Drake, purchased but lately of Mr. Garth, the eminent Queen's Counsel, and Carch, started in a stubble field. They ranged grandly and well, the old dog showing a good deal of his wonderful turn of speed, which had served him so well before. The new code of rules left such a qualified reward, and Carch behaving in like manner, excellently. Later on they came rather to grief, Drake refusing to back, and Carch putting up his game, but they left off, having scored fifteen points to the good and ten to the bad, or a total of five. Beau and Mallard, some more of Mr. Price's dogs, did well amongst the hares, which were very numerous and behaved steadily, but at the last point, which was held by Beau, Mallard flushed the birds and spoilt an otherwise good performance. They left off with eleven to the good.

The so justly notorious Ranger, belonging to the Rev. J. Cumming Macdona, and a bitch named Lucy, were then thrown off, and the dog soon named what the *Field* reporter styles the longest and best point of the day, going with his old dash and vigor, but being hampered by his companion, (who, it seems, was only half broken and elated and flushed fur and feather,) he could not win the stakes and the brace was soon drawn, giving place to Mr. Whitehouse's beautiful lemon and white. Beau, a great winner of cups and prizes at dogshows, and Doncaster, a puppy of some eighteen months old. Had it not been for the unsteady behavior of the latter they would probably have won. As it was, Mr. Lloyd Price's Beau and Mallard took the cup for the best brace, and £11, and Mr. Purcell Llewellyn's Kite and Sanson won the first prize money for the best brace of setters.

In the Sleaford puppy stakes there were only two competitors, and Mr. Price's Queenie, a neat little bitch, beat Mr. Llewellyn's Sun, and won. There was then a total stake of little entries, and after that the Kennel Club Cup was contested for by several well known dogs. There were several "heats," but I will only give the concluding one, which is a fair sample of the way the new code worked, and how it proved the ruin of one of the best dogs ever seen in the field. Mr. Macdona's Ranger had made a "dreadful example" of Druid, who had been considered about the best setter in Mr. Llewellyn's kennel, and, according to the rules, he had to fight it out with Mr. Llewellyn's Laura for the Cup.

I take the words of the *Field*, as it may be said to be prejudiced in favor of Ranger:—"In a piece of seeds Ranger made a false point, but a hare having been seen to go away by the keeper, no penalty was awarded. Soon afterwards, however, he incurred one for the same fault, and the bitch stopping to hound and voice, (though not backing,) got one to the good. A false point similar to Ranger's first was made by the bitch, and also treated in the same way. The score now stood—Laura, five good; Ranger, four good, two bad. Moving to some turnips Laura was

kept very close in hand, but fortunately dropping on some herts, got a four. During this performance Ranger made a distant point, which turned out to be a Guinea fowl, and for this not being game, he was allowed nothing, though we all know that the scent is exactly like that of the pheasant. At the end of this field Laura made an unmistakable false point, and the score was then added up as follows, viz:—Laura, thirteen good, five bad; Ranger, four good, four bad. Laura thus got the cup, though it is absurd to suppose that anything more than luck gave it her." More of this anon. DROUSE, JR.

[From Our Special Correspondent.]

TENNESSE SPORTSMEN'S ASSOCIATION.

MEMPHIS, Tenn., October 10, 1874.

EDITOR FOREST AND STREAM:

ON Thursday the grand field trial for the best setter or pointer came off, the prize being an elegant silver service, and was won by H. C. Pritchett's setter, Knight, over nine competitors, the dogs being hunted in pairs and awarded points as to their respective qualities in nose, pace and style; breaking, pointing, style and staunchness; backing, roading—100 being the total standard. Messrs. J. W. Burton and J. H. Aiken were the judges, and furnish the following score:—H. C. Pritchett's setter dog, Knight, 89; Horsefall's Romp, 86; Wheatley's Guide, 80; Dew's Mack, 78; Wheatley's Addie, 72; Merriman's Rex, 67; Carroll's Bang, 64; Stevens' Frank, 63; Frauces' Dixie, 57, and his other entry, 46. The dogs were matched by lot and one brace hunted at a time by experienced gunners, the trial lasting from morning until night, and more interest was manifested in this trial than was expected, as each of the owners were confident of adorning their table, after the awards were made, with the very elegant silver service; consequently only nine of them were disappointed.

Several sweepstakes were shot during the day at the grounds of the Association. In the first, a match at 21, 26 and 31 yards rise, South and Pearson tied, killing ten straight birds each, leading Messrs. Watkins, Jones, Johnson, Green and Leland. In a match at three double birds Mr. Sherman, of Wisconsin, carried off the pool, scoring six and beating Messrs. Watkins, Johnson, Jones, South, Green, Pearson, and Leland. In the third Mr. Harvey McNeely, of Memphis, Tenn., who had not previously shot over a trap vanquished at single birds Messrs. Leland, Watkins, Jones, Johnson, Green, Bray, Allen, and Boyd; and in the next Mr. South was the victor in a field of eight at single birds, the contestants "barring" Mr. Sherman.

On Thursday night the State Association met at the parlors of the Peabody Hotel, where, after some preliminary business had been gone through with, an election was gone into for officers for the ensuing year with the following result:—

President, P. H. Bryson; 1st Vice-President, H. C. Pritchett; 2d Vice-President, T. F. Perkins; Secretary and Treasurer, W. A. Wheatley; and the Ex-Com. composed of J. K. Hughes, J. W. Alley, J. H. Dew, W. E. Watkins, and J. H. Aiken; and as honorary members, Hon. George W. Polk, of Columbia, Tenn.; Jas. Gordon, Pontotoc, Miss.; Colonel F. G. Skinner, of New York City; Luther E. Shinn, of Chicago; Charles Hallowell, of New York City; Wilbur F. Parker, West Meriden, Conn.; H. L. Smith, Memphis; Wilbur F. Johnson, Atlanta, Ga.; and Gen. W. H. Jackson, Franklin, Tenn. Subsequently the thanks of the Convention were tendered the various sporting papers for the interest shown, and Nashville was selected as the point at which the next annual tournament would be held, after which, and a vote of thanks to the retiring officers, the Convention adjourned *sine die*.

On Friday the attendance at the tournament exceeded that of any other day, there being present fully 600 spectators, enough to fill every inch of available space outside the railing, as well as the elevated seats behind. The first order of business was the contest for the Gold Badge, worth, perhaps, \$300, and open to all members of the State Association. For this there were nineteen entries, the following being the score:—

Prize—Gold Medal. Match, five double birds, 18 yards rise.

Name.	Score.	Total Name.	Score.	Total
P. Bryson	11 11 11 11 0	Bowles	11 11 11 11 10	8
Nicholson	01 11 11 11 10	Watkins	10 11 11 11 11	8
Aiken	11 10 11 11 10	Lighthart	10 11 00 10 10	8
Hughes	11 11 11 11 01	Wheatley	0 11 01 11 7	7
Davis	11 11 01 11 11	McNeely	11 10 10 10 11	6
Dew	11 11 01 11 11	Feland	11 11 00 11 10	6
Douglas	00 11 00	Walker	11 10 10 10 11	6
Cockrell	11 11 11 11 10	Merriman	11 10 11 11 11	9
Perkins	11 11 10 11 10	McNeely and Green	11 11 11 10 11	8
Laves	11 11 10 11 11			

In this nearly all of the best of our local gun talent participated, and, as will be seen, some very good pigeon popping was done. Mr. Wm. Bowles, Jr., the victor, is a young cotton buyer of this city, and he did some tall shooting to "got away" with many of those "older heads."

After the conclusion of the badge match, Wednesday's ties in seven were called to the score, with the following results:—

Ties on seven, three single birds, 30 and 31 yards.

Hughes	1 1—3	0 1—0	McNeely	1 1—3	0 1—2
Watkins	1 1—3	0 1—2	Walker	1 1—3	0 1—2
Davis	1 0	Leland	0		
Pearson	1 0	Hughes	1 1—0	2	
McNeely and Green	dividing the prize—\$20				

Wednesday's ties in six, three single birds, 33 yards rise.

Terry	0 0	Bowles	1 1 1	8
Merriman	1 0			

Next in order came the class match for \$175—\$100 to first, \$50 to second, and \$25 to third—entrance \$10, open

to all amateurs, at thirty yards rise, eighty yards boundary, and both barrels allowed. In this there were twenty-four entries, with the appended

Table with columns: Name, Score, Total, Name, Score, Total. Lists names like Watkins, Clark, Perkins, Acklen, etc., with their respective scores and totals.

Ties in eight, three single birds, 35 yards.
Ties in seven, three single birds, 35 and 40 yards.

This, as will be seen by the score, was the most exciting contest of the week's sport, Tim Davis and Perkins hanging with each other until the last, the former dropping his six birds in nine, even at forty yards. Messrs. Tate and Dockery, who were the only ties in six, divided their purse without a contest.

At the invitation of the President elect, Mr. P. A. Bryson, the members of the Association and a number of invited guests assembled at his house on Friday evening, and were banqueted in a style becoming the hospitality of Mr. Bryson and his accomplished lady.

On Saturday, the last day of the tournament, the programme began with the class match for a purse of \$500, divided in five prizes, \$150 to first, \$125 to second, \$100 to third, \$75 to fourth, and \$50 to fifth—entrance five per cent. of purse, open to all. In shooting off the ties in nine in Wednesday's class match, T. F. Perkins carried off the \$100, or second prize, by the following score:

Table with columns: Name, Score, Total, Name, Score, Total. Lists names like R. R. Flippo, T. F. Perkins, etc., with their scores and totals.

Table with columns: Name, Score, Total, Name, Score, Total. Lists names like Whentley, Acklen, etc., with their scores and totals.

Ties in eleven, three single birds.
Ties in ten, three single birds.

This closed the annual tournament, but immediately after the close a sweepstakes was shot for. Dew's setter, "Mack," which won the fourth place in the field trial, the terms being four double birds at 21 yards, and the field composed of Sherman, Dew, Hayes, Bowles, South, Walker, Acklen, and Bryson—Sherman and Acklen making a clean score and tying—after which the distance was increased five yards, where from the score Sherman dropped his first four birds, Acklen killing the first pair and missing both the next. Sherman then put up one of his excellent guns at \$150, Messrs. Davis, Leland, Burrows, Dew, McNeely, Watkins, Perkins, Bray, Bowles, and South contending for the coveted breech loader, at four double birds, at eighteen yards rise, Davis scoring seven of his first eight, making a tie with Dew. Davis then came to the scratch again, and dropped six in three shots, Dew killing his first two pair straight, and then compromised with Davis and became the owner of the gun. And then closed one of the most pleasant weeks of sport that perhaps has ever passed in the South. There were no contentions whatever, the judges' decisions in all cases giving entire satisfaction; and not even the first harsh word was uttered by any of the competitors to mar the pleasure of the sport. In closing, I cannot recommend too highly the excellent arrangements of the officers of the tournament and of the State Association. To sum up, the tournament was a success in every particular.

In my report of the field trial at the tournament last week, I did not include (as it was impossible for me to obtain it at the time) a complete scale of the points made by each entry. They are appended now, however, and in this connection I might properly state that although but ten dogs entered the field, there were double that number among the list that forfeited the entrance fee, which only goes to show conclusively that Tennessee can out-dog any other State in the Union.

SCALE OF POINTS GOVERNING FIELD TRIALS. Table with columns: Name and Owner of Entry, Pigeon and Snipe, Partridge, Duck, Quail, Total. Lists names like Prichett's Kullight, Horsefall's Romp, etc., with their scores.

At the next annual tournament we expect to show trap shooting that cannot be excelled.

KENTUCKY STATE SPORTSMEN'S ASSOCIATION.—We have received the minutes of the last meeting of the above association, held at Lexington the 23d of September. Some nine clubs were represented there, several of the delegates being gentlemen of the highest culture, and well known throughout the State for their love of field sports and genial hospitality. The address of the association is terse and pointed, and expresses exactly the duties and purposes of gentlemen sportsmen in connection with the protection of game and the display and improvement of our field dogs. The first annual tournament will be held at Paris, Bourbon county, on the third Tuesday in May, 1875.

ST. PAUL'S SPORTSMEN'S CLUB.—We have received from Mr. J. Y. Page, the constitution recently adopted by the above club. This is one of the best organizations in the West, as it is characterized by the esprit which belongs to a body of the true lovers of the chase. Under their vigilant surveillance the pothunters will soon be brought to grief, if they trespass on the game laws, for they are very explicit in warning sporting codgers against any violation of the statutes.

Shot Gun and Rifle.

GAME IN SEASON FOR OCTOBER.

- Moose, Alces Malalis. Snipe and Bay Birds, Willets. Elk or Wapiti, Cervus Canadensis. Caribou, Tarandus Rangifer. Hares, brown and grey. Lepus sylvaticus, Lepus Virginianus. Wild Turkey, Meleagris gallopavo. Buffalo. Woodcock, Scolopax vauclensis. Squirrel, red black and grey. Ruffed Grouse, Tetrao umbellus. Quail, Coturnix Virginianus. Esquimaux Curlew, Numenius borealis. Pinnated Grouse, Tetrao Cupido. Redpoll, Lanius borealis. Curlew, Numenius Argemuta. Plover, Charadrius. Sandpiper, Fringillina. Godwit, Limosa. Wilets. Tullis, Rallus Virginianus. Reed or Rice birds, Dolichopez oxyz Wild Pigeons. Wild Duck, Geese, Brant, &c.

Under the head of "Game, and Fowl in Sea. ..." we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those laws section by section to the birds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and we therefore could do no better to ourselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

GAME IN MARKET.—Game is very abundant just at present, and the Messrs. Robbins of Fulton market declare the sales to be quite brisk. The latest additions to the stock of game is quail, which came from Connecticut and the interior of New York State. Woodcock are getting more abundant, so that they now sell for \$1 per brace. All seem to be in excellent condition, so are appreciated by epicures. Ruffed grouse bring \$1 per brace, and prairie chickens \$1 25, but the latter are becoming quite rare. Canvas back ducks are arriving from the West, and retail at \$3 per brace, whilst red heads bring only \$1 50, teal seventy-five cents, wood ducks, the same price, and mallards \$1 25. Rabbits are becoming scarce at \$1 per brace. Snipe bring \$3 per dozen, upland plover \$4 50, black birds seventy-five cents, and robins \$1 50. Reed birds are entirely out of market. Venison is becoming more abundant and retails at thirty cents per pound.

PENNSYLVANIA—October 15th.—Black duck, mallard, teal, broadbills and widgeon are now numerous on Delaware bay and river. Snipe are beginning to come from the North in numbers, and we hear of big bags having been made on the meadow bordering the Delaware shore. Quail shooting does not begin in Pennsylvania or Delaware until November 1st, but many reports are reported as seen, indicating a good breeding season in the summer, and good prospects for November. Few woodcocks are coming into the market, nor will there be many this autumn, we fear. In Monroe, Pike, Luzerne, and Carbon counties, wild pigeons are more plentiful than for many years. Several flocks of wild geese passed over the last two districts of Philadelphia high in within the last two or three days, indicating cold weather northward, and early shooting for them on the Jersey coast, where they will tarry until compelled to move to Southern winter quarters. Last week some few rail were killed on the Delaware River in the neighborhood of Chester; the present winter snip, however, has no doubt caused them to pull up stakes and move.

Another report says: The prospect for partridge shooting is good. Woodcock have been very scarce. Gray squirrels also. Field plover were very abundant. They are very wary, and the experience is that a day's work generally consisted in bagging half a dozen.

MARYLAND—Fairfield, Oct. 19th.—Some good sport expected soon, birds are very plentiful, especially quail.

VIRGINIA—Wild pigeons are very abundant in the East of Culpepper county, and thousands are being daily killed by sportsmen.

Plover shooting was carried on to an excessive extent along the shores of Hunting creek last week, and to the great annoyance of the ladies who were strolling in those parts.—Alexandria Gazette.

Pigeons have been abundant in Loudoun county for the last week or so; one gentleman killed forty-seven in forty shots, and nearly all who went out bagged respectable numbers of these swiftly flying birds. T. W.

NORTH CAROLINA—Poplar Branch, Oct. 10th.—The shooting for geese, ducks, and partridges is good, and holds good until February.—G. S. V. S.

GEORGIA—Flocks of wild pigeons are passing over Georgia.

We have received the following information from our Chicago branch office:

Chicago, October 16, 1874. In answer to H. L. C., our friend, George Ayer, of Youngstown, sends the following as one of the best duck grounds in the country: Huntsville, Logan county, Ohio. Take P. F. & W. J. C. R. R. to Huntsville, and then five miles to the Reservoir, enquire for Wm. Hornherzer, mention Mr. Ayer, and the treatment will be good. Board \$1 per day. Mr. A. says he brought in one day 104; next day, morning and evening, 56; following day, returning at five o'clock, 121. Quail and snipe shooting excellent. Parties returning from the Calumet say the duck shooting never was better, or the birds so plentiful. All they require is a cold snap or a little frost. Parties are going in every direction, and all seem to meet with fair success. Twin Lakes, Wis., in the marshes on Illinois river, near Ottawa, and a number of places on the Mississippi River, in Iowa and Illinois, are becoming favorite resorts.

A letter from an Illinois correspondent contains the following bit of information: The late manifest approach of cold weather has brought down from the North vast flocks of water-fowl seeking Southern quarters. They are swarming by countless thousands in the bayous and sloughs of the Calumet region, and the sportsmen are beginning to make the most of a very brisk if brief season. The excursionists to South Chicago a day or two ago, during their little trip at the mouth of the Calumet, found large flocks of ducks on the lakes, but their favorite resorts are along the borders of the inland watercourses, where they make their feeding grounds among the wild rice. The numerous accessions to South Chicago and Sheffield on the Michigan Southern and Fort Wayne are crowded with hunters. One of these returned two days ago from the Sheffield house with eighty mallards. The little steamer Sheffield takes numerous parties from the Sheffield house to the favorite hunting stations on Lake Wolf, Hyde Lake, and Lake George, and the Grand Calumet, while Chittenden's, Bee's, and other points loved by the sportsmen, are greatly resorted to.

Parkville, Ill., Oct. 15th.—An attentive correspondent writes us to say: As regards game, I would say that prairie chickens are flocking, and very wild; good shooting of ruffed grouse and quail; lakes swarming with ducks, mostly Summer ducks; pigeons all gone; snipe and plover not here yet.—T. J. F.

INDIANA—Ducks and snipe are reported plentiful, but hard to get at, on the Kankakee marshes, Indiana.

WISCONSIN—Puckaway Lake.—The following letter from our correspondent shows how shooting is in Wisconsin:—

The sport has not been good. The weather has been—more than pleasant, almost too hot for comfort. The Northern birds have not come, and the local ones have all been killed off. We must have some frost and rough weather before we have much sport. The canvas-backs have just begun to put in an appearance. We have captured six and about 25 red heads. Small birds are more plenty. One or two guns more, and the far-famed Puckaway Lake for ducks will be among the things that were—hunted to death! The blinds or stands on the lake and rivers look like cocks on a hay field, and from one to three shooters in each blind. Ruffed grouse quite plentiful, and some snipe and woodcock. Gray fox and black squirrels abundant. E. O. D.

VINTA, Indian Territory, October 18th.—Long period of dry weather has made chickens unappetizing to-day, then a copious rain improved the shooting. The fish rifle team have just left. While here they bagged 102 chickens in one day, besides some quail, rabbits, &c. Deer are very abundant within five miles, and turkeys and antelope within ten miles. Vinta is on the Missouri, Kansas, and Texas Railway, about twenty miles from Kansas and Missouri State lines. Being in the latitude of upper Tennessee, the climate makes sport very pleasant for the who come. Parties intending to shoot here should hire wagons and guides at Chetopa, on the Kansas line. Robt. Orn is a fine guide and Indian hunter.

SHREVE CITY, Missouri, October 16th.—This is one of the best points for quail in southwestern Missouri. They abound in all the adjacent fields and prairies. A bag of twenty brace per diem for each man is nothing remarkable. A very fine house here, built for the M. K. and T. Railway, offers best of accommodation for both gentlemen and ladies.

ANNAPOLIS, October 10th.—Quail in this vicinity abundant. Parties out every day. Good bags. Teal and wood duck shooting has been good—now done. A little early yet for mallard and other ducks. Turkeys abundant at Salt River, thirty miles below. One of the best hunters here is Bob Reynolds. There are a score of others equally good.

CANADA—The Canadian Journal has the following: "The 'Commons' in the neighborhood of old Niagara, have this season been fairly alive with plover. Twenty and even thirty brace to a single gun, has been recorded, and never before in the memory of that respectable individual, the oldest inhabitant, has there been such capital sport.

Mr. Walter Macdonald, son of Judge Macdonald, of Guelph, was out plover shooting a few days ago, and knocked over eighteen birds at one discharge. Mr. Charles Sharpe, of the same borough, has also made some fine bags, from all sections of the country we receive accounts of splendid sport.

—Says the St. Catharines Times: "At the end of the close seasons for shooting quail, &c., quite a large number of our sporting citizens were out, and report that they found game plenty, and no opposition from the owners of property. It is believed, however, that the close season—for shooting quail, at least—should be extended for two or three years.

Plover have appeared in such countless numbers in and around Ottawa and Prescott that half the able-bodied population are reported to have been on the war-path.

CREEDMOOR.—The seventh competition for the Remington Diamond badge came off at Creedmoor last Saturday. This is open only to members of the National Rifle Association, and of them only the best shots engage in it, as the shooting is at long range. The badge must be won three times ere it becomes personal property, but up to this date it has been won only once by any rifleman. Lieutenant Fulton was the victor last Saturday, he beating Mr. Yale one point. At the conclusion of the match the latter gentleman entered a protest against Lieutenant Fulton being declared the winner of the present match, from the fact that, although shooting with a breech loading rifle, he did not use it as such, loading the piece in every instance at the muzzle, as in the case of a muzzle loader. The protest was received by the Secretary of the Rifle Association, Col. Gildersleeve, who announced that pending its consideration by the Executive Committee, Lieut. Fulton would be the custodian of the badge. The shooting commenced at 11 o'clock A. M., and was concluded about 4 P. M. The following is the score:

Name.	500 Yds.	800 Yds.	1000 Yds.	Total.
A. Campbell, Jr.	25	25	25	75
John Bodine	25	25	25	75
H. A. Gildersleeve	26	24	17	67
Henry Fulton	28	24	27	79
G. W. Yale	27	27	23	77
T. S. Dakin	25	19	26	71
L. H. Price	24	22	21	67
J. S. Conlin	25	20	20	65
W. T. Collins	25	24	15	64
F. W. Hoffee	24	20	19	63
J. W. Burton	25	16	12	53
B. Barton	23	19	8	51
A. V. Meserole	18	17	..	35
A. J. Hennion	13	17	..	30

It will be seen that this is excellent shooting, and that some who were not considered fit to compete in the international contest made fine scores. The highest total, 77, out of a possible 84, by Lieut. Fulton, is exceedingly good, as is also that by Mr. Yale; though Mr. Hephurn scored 78 in the last match. Colonel Bodine did some remarkable work at 500 yards, making 27 points out of a possible 28, and 25 at 800 yards. So all supposed he would claim the badge, as he had won it twice already; but at 1,000 yards he made five misses, which ruined his chances. The records of the last three men were lost on the ground; so their score is not given.

The competition for the *Turf, Field and Farm* badge comes off October 31. This, like the preceding, must be won three times ere it becomes the property of the victor. At an early day in November, the Leuch cup will be shot for, and this will close the principal matches for the present year.

THE INTERNATIONAL RIFLE CONTEST.—Our English exchanges just at hand deal exceedingly light with the international rifle contest. One might suppose that it had no interest whatever for them, as they give it less space than they would an ordinary horse race, or even a polo game in which nobody is interested except a few titled pony riders. What they have to say, however, is just to our rifleman, and we hope to see the suggestion of one of the journals carried out, so far as the winners of the Elcho Shield are concerned.

The *Volunteer Service Gazette* has this to say of the contest:—

"We have prophesied long since that if the citizens of the United States took to long range rifle shooting, they would be not unlikely to become formidable adversaries. But we must admit we did not anticipate that they would do so well as they have done. The States would not only beat a year's practice, the States would not only beat (though it be a small majority) a crack squad of Irishmen, but would do it with a score which has, in the competition for the Elcho Shield, never been approached. The scoring was 'old Wimbledon,' so that it may be compared with that of the Elcho Shield match of its commencement until last year. This year, of course, the new scoring prevents any comparison. The American score was 934, and the Irish 931, the H. P. S. being 1,080 points (153x4x6). This gives an average per man of no less than 155.66... for the Americans, and 155.166... for the Irish, the individual H. P. S. being 180. Now the highest average of any team for the Elcho Shield has been that of the English team in 1871 (150.39), and the next best that of the Irish in 1875 (149.375). With these exceptions, the average of a team has never reached 143 points. We may, however, expect the average of six men to be rather better than that of eight, but the individual scores in the Irish-American match are quite above criticism. We find the marvellous score of 171 out of 180 made by Mr. Fulton, America; another of 163 made by Mr. John Rigby, Ireland; Mr. Yale makes 163 for America, and Dr. Hamon and Mr. Wilson each 140 for Ireland. The best individual scores ever made in the Elcho match were those of Messrs. Joyce and Wilson, each 161, and of Mr. Wyatt, 159, all made in 1871; and the next to these is 138 made by Colonel Fenton last year. We can only heartily congratulate both the Americans and the Irish upon their magnificent shooting, and express our earnest hope that we shall have a team from the United States to give us our revenge at Wimbledon next July."

The Sporting Gazette says:—
"The average individual score of the American side is 157, considerably exceeding the average individual score in any winning eight for the Elcho Shield under the same system of scoring, viz., that adopted up to the end of 1873. Fulton's score of 171, out of a possible 180, at the three ranges, has never been approached, so far as we remember, in any public contest in England. It is evident that America possesses long-range shots who can compare with and perhaps eclipse of the very best of our 'cracks,' and an annual competition between the winners of the Elcho Shield and an American team would be an exceedingly interesting contest, both as a test of the marksmanship and of the rifles of the two countries. In the match just concluded the Irishmen shot with the muzzle-loading Rigby, whilst two of the Americans shot with Sharp's target rifle, and four with the Remington breech loader."

BENNETT PRIZE.—The following is the inscription on the above prize, won by Mr. Rigby, of the Irish rifle-club:—

PRESENTED TO
JOHN RIGBY
By the National Rifle Association, on behalf of
JAMES GORDON BENNETT, ESQ.
As the competitor making the highest score in the Bennett Long Range Match, Creedmoor Range, New York, U. S. A., Oct. 3, 1874.
SCORE.
800 yards..... 3 4 4 3 4 4 4 4 4 3 4 4—56
900 yards..... 3 4 4 3 2 4 3 3 4 4 4 2 4—51
1000 yards..... 4 4 4 3 2 3 4 1 5 3 4 4—52

CANADIANS AT CREEDMOOR.

HAMILTON, Ont., Oct. 12, 1874.
EDITOR FOREST AND STREAM:—
On looking over your issue of the Creedmoor matches, I notice a mistake, which you will pardon me for correcting, but as I consider your paper an authority on shooting, it is necessary to put you right. In the Press match at Creedmoor you have in your report J. O'Kelly as having won the third prize. It should have been James Adam, representative of the Hamilton Times. Again, I see that you make a comparison of the three teams in the Bennett match, which places me at a disadvantage. You have put two of our Canadians, who are not representative men, and who would not have been on our team had the Irishmen or the Americans accepted our challenge (I mean Messrs. Gilson and Cooper); but take the first four of our men and compare them with the four highest of the Americans, who would have been on our team, and you will see that we beat them by five points, or give us two more scores, equal to our lowest of the four who shot, and then we beat them by thirty points. Hoping you will pardon me for taking up your valuable space, I remain yours, respectfully,
Snoozer.
[The assertion of our correspondent is correct, for although Mr. O'Kelly was reported in all the papers as winner of the third prize, we find on investigating the score that Mr. Adam was the winner. The remarks about the Canadian rifleman are apropos, but as all mentioned came from the Dominion, we classified them for convenience in reference as a representative team.—Ed.]

SHOOTING IN CANADA.

TORONTO, Canada, October 12th, 1874.
EDITOR FOREST AND STREAM:—
The annual matches of the "Union Rifle Club" of this city, came off on Saturday the 10th inst., at the Carlton Race Track. There was a good attendance of members, and the shooting was very fair considering the weather, a pouring rain not being conducive to good scores. In consequence of the heavy rain the birds did not rise well, but the patient "agitation" in use by our club proved itself very useful, compelling the boys to take care. There were two matches, each at five birds, and 25 yards. I send you only the scores of the winners, not wishing to take up too much of your valuable space. There were four prizes in each match. General J. P. Major, of New Orleans, shot with the club in the second match, but did not compete for a prize.
WINNERS IN THE FIRST MATCH.
Name..... Score..... Prize.
J. James..... 0 1 1 1 1 1 1 1 1 1 1 1—14 1st prize, gold medal.
B. Moore..... 1 1 1 1 1 1 1 1 1 1 1 1—13 2d prize.
E. W. White..... 0 1 1 1 1 1 1 1 1 1 1 1—12 3d prize.
R. Killaly..... 1 0 1 0 1 0 1 0 1 1 1 1—10 4th prize.
A. T. Deacon..... 1 0 1 0 1 0 1 0 1 1 1 1—10 4th prize.
Killyall and Deacon shot off for the first prize, five shots at 30 yards.
Killyall..... 1 1 1 1 1 1 1 1 1 1 1 1—12
Deacon..... 1 0 1 1 1 1 1 1 1 1 1 1—12

SECOND MATCH.
Name..... Score..... Total.
Winfield..... 0 1 1 1 1 1 1 1 1 1 1 1—12
Deacon..... 1 1 1 1 1 1 1 1 1 1 1 1—12
Warren..... 0 1 1 1 1 1 1 1 1 1 1 1—12
Coen..... 1 1 1 1 1 1 1 1 1 1 1 1—11
Co. Shiers..... 1 1 1 1 1 1 1 1 1 1 1 1—11
Mr. Major..... 1 1 1 1 1 1 1 1 1 1 1 1—11
Winfield, Deacon and Major being tied, retired five yards and shot at five birds each for first and second prizes.
Winfield..... 1 1 1 1 1 1 1 1 1 1 1 1—11
Deacon..... 1 1 1 1 1 1 1 1 1 1 1 1—11
Major..... 1 1 1 1 1 1 1 1 1 1 1 1—11
Coen and Shiers still being tied, retired to 31 yards.
Coen..... 1 1 1 1 1 1 1 1 1 1 1 1—11
Shiers..... 1 1 1 1 1 1 1 1 1 1 1 1—11
It being too dark to continue shooting, they tossed for the fourth prize and Shiers won.
After the shooting was finished the club sat down to a very comfortable dinner at Wilson's Hotel, and spent a very pleasant evening.
Yours truly,
Grs. Club.

The following are the scores of the match between six men of the 66th Volunteer Battalion and the same number of the 63d Battalion, which came off at Bedford, Canada, last week:—

	Yards.			
	200	300	400	500
63d team	20	19	18	18
Lieutenant Waldie	15	15	13	13
Sergeant Egan	14	16	17	15
Sergeant Corbin	14	16	17	15
Sergeant Bishop	14	15	16	14
Sergeant Tapley	16	14	18	12
Lieutenant Melones	11	12	19	15
Total	113	112	111	111
66th team	13	16	16	15
Private Merson	17	11	17	18
Sergeant Fader	10	17	18	17
Private Smith	14	19	15	14
Major Watt	8	11	17	14
Sergeon Slayter	13	10	14	9
Total	113	112	111	111
63d team winning by 42 points.				

RETURNING THE COMPLIMENT.

PHILADELPHIA, October 18th, 1874.
EDITOR FOREST AND STREAM:—
"GROSS," of Lawrence, Kansas, sends a kind invitation to "Homo," through the *FOREST AND STREAM* of October 15th, to come and see how it will win him as regards game shooting, and remarks that "he hopes I may make it convenient at some future time, in order to save my hard-earned rams in Jersey, where I can only bag one or two brace." He evidently supposes that I refer to the pinnacled goose, or prairie hen, when I speak of only being able to bag such a small number, and seems ignorant of the fact that we have in the East a ruffed grouse, or pheasant—a totally different bird, frequenting woodland, and seldom, if ever, seen fields.
Thanking him for his kind invitation, which I hope some day to be able to accept, I would invite him in return to come East, where we have no "chickens," and tramp it with me over rocks and through laurels for two brace of the ruffed variety, which takes just as much sportsmanship to bag as twenty—yes fifty—of the pinnacled. "Homo."

SHOOTING OF A FAMED ADIRONDACK HUNTER.

NEW YORK, October 17th, 1874.
EDITOR FOREST AND STREAM:—
Many of your readers, and especially those who have frequented the mountain region of the Adirondacks, will be sorry to hear of the accident that came very nearly being the untimely end of that celebrated old hunter, John Bull. It occurred on the 13th inst., and was the result of a letter—that on the night of the 2d of October his youngest son, Johnny, who has for a number of years been harmlessly simple, was seized with a desire to shoot some deer, and snatching the shot gun, which stood in the corner always loaded, he rushed into the room where his father was sitting and discharged the contents of one barrel in his face and breast, wounding him badly. Completely carried away by the success of his first attempt, he tried to use the other barrel, and it was with difficulty he was prevented. Filled in this, he escaped from the room, and almost in an instant he had the house in a blaze. It was only after severe exertion that the inmates saved themselves, but their clothing and all their household goods, which they had loaded for so many years to get together, were in one short hour a pile of smoldering ashes. By the kindness of a neighbor, they were taken care of until the morning, when they were transferred to the home of their eldest son, where they now are. His son's letter holds out the hope that the father may survive his wounds, and still live to add many others to the already long list of "wild critters" that have fallen before his unerring aim, which, hope, I know, will be echoed by all who know him.
TARLEWTS.

DENVER, Col., October 11th, 1874.
EDITOR FOREST AND STREAM:—
Being at Leisure I send you a few lines relating to sporting, &c., in this town. Sixteen miles by train on the Denver, St. Park and Pacific Railroad, is the town of Morrison Springs, with half a dozen houses, and the Evergreen House, which is an A. No. 1 hotel. Through this town flows the most natural trout stream in the Territory—Bear Creek, which is about sixty miles long. It flows from the Rocky Mountains into the Platte. Trout fishing at Morrison is excellent. My chum took in forty-five trout in one hour, and I took in twenty-five in one hour from trout weighing from one-quarter to three pounds. Trout fishing in the Platte is also very good. There are a great number of artificial trout ponds in the Territory.
To the gunner excellent advantages are offered. Twenty miles up Cherry Creek, which flows through Denver, you will come across large quantities of "chickens," quail and jack rabbits, some of the latter weighing as much as twenty pounds. Further up the river are grouse, and quantities of duck, especially the teal. Along the mountain base you can get deer and bear, and in the plains, sixty miles west of Denver, you will find antelope and elk. Buffalo is scarce this season. In haste,
HENRY MARKERS.

THE SAFEST SHELLS.

JACKSONVILLE, Ill., Oct. 15, 1874.
EDITOR FOREST AND STREAM:—
I have noticed that a good deal has been said in your paper in relation to the safety of metallic shells for breech loading shot guns. My opinion is that the metallic shell with the percussion cap is the safest in use. I never knew one of these shells to explode unless the cap received a punch. It takes a punch about four pounds heavier to explode the Berdan cap than the Eley or Remington cap. The shells I use are made by the Union Metallic Cartridge Co., Bridgeport, Conn. In recapping these shells I always drive down the cap with a hammer. I never know one to explode while doing so, though using them for years.
GEORGE HAYDEN.

POWDER AND SHOT.

SHIREWSBURY, October 21st, 1874.
EDITOR FOREST AND STREAM:—
It has been my experience that there is a great difference in the quality of powder, and in using canisters of it, of the same brand purchased at the same time. I often have found a marked difference, both in regard to strength and cleanliness. My observations cover the higher brands made by Curtis & Harvey, Orange, Hazard, and Dupont Powder Companies. None, while new, have proved uniform. The best and also the poorest I ever used was Orange Lightning. In gun trials, I have no doubt but that the result of penetration would be found to be much more even was the powder intended to be used thoroughly mingled together before using. By this means a uniformity in strength might be gained, and each gun, so far, stand on an equality.
The above is what I have experienced by being adopted by parties when laying in a stock of powder for rifle practice. Poor powder may generally be improved by drying it, but this is not a safe or desirable occupation by means of the heat of an ordinary fire; but it can be thoroughly accomplished in the open air by exposing it to the heat of the sun, when there is a dry, west wind blowing; by spreading it out thin on paper in an open window with a southern exposure.
The questions are often asked through the columns of the *FOREST AND STREAM*—What are the correct proportions of powder and shot for certain sized guns? and what sized shot are best adapted to different kinds of guns? Taking into consideration the unevenness in the strength of powder, and the difference in the sort, weight, and proportions of gun loads, the necessary degree of experiment is required, and the sizes of shot that arrive at the proportions of powder and shot, and also the sizes of shot that suits best. For the two sizes of guns most used, Nos. 10 and 12, I would say use with the No. 12, 24 to 3 drachms of powder and one ounce of shot; with the No. 10, 32 to 4 drachms of powder and 11 ounces of shot.
In regard to the sizes of shot best adapted to game, I would recommend of the new scale of shot, known as the American Standard, for Wilson's snipe, No. 10; woodcock, No. 9; quail, No. 9; rail, No. 10; grouse, No. 7; ducks, No. 6 early in the Fall; No. 4 late, and in the Spring. The most desirable size of shot for general upland shooting I find to be No. 9, containing 560 pellets to the ounce.
CHUCK COBURN.

SMOOTH BORE LONG SHOTS.

PHILADELPHIA, October 21, 1874.
EDITOR FOREST AND STREAM:—
In a late issue of your paper is a letter from a correspondent in Alabama, mentioning some long shots at deer, made with a shot gun. I have known a good many deer killed at long distances with buckshot, and am therefore not surprised at the 170 yards shot. A few years ago I was hunting one Fall in the mountains of Virginia with a friend of mine—Mr. A. C. Clay, well known in Philadelphia as an expert fisherman and first-class shot on wild game, and during our hunt I was rather surprised by Mr. C.'s killing two deer at 125 yards each with buckshot. The outfit for some Persian whom they did not suit, and which were afterwards bought by Mr. C.'s father and taken to South America, finally exchanging the coast of Peru for the mountains of the Middle States. In killing large game a good many people seem to think that if the man does the hunting the gun will take care of the shooting. Now the man has more to do with the gun, or to make the gun do it. The man who does it in our Alabama friend, will kill deer with a shot gun at distances at which a good many common shots would miss with a rifle. As to the length of barrel, that is a matter that I will not discuss. I will give an instance of a short barrel used for buckshot: I have a 34 bore muzzle loader, originally 20 inches in the barrel, but now cut off to 18 inches. It has its gun cut off to make the muzzle loader, or as our boys call it, in November, 1872, I used this gun with buckshot, and killed a large buck, running, at 90 yards; driving the shot clear through him. I

FISHING SEASON CLOSED.

YAKOLITH, N. S., October 18th, 1874.

EDITOR FOREST AND STREAM:

Our trout fishing season closed on the 1st of October. Since that date I have had several persons from the "States" applying to me for information as to the best place for fishing in this vicinity. They appear to have an idea that there is no close season for fish in this country. Perhaps a word from you would enlighten some people on the subject, and be a benefit to the large number of the citizens of the Republic who visit this Province in the legitimate fishing season, and who find good sport here.

SAM. KILLMAN, JR.

A queer story is running the rounds of the Press in regard to a very fat fish found in the Alaska Rivers. You catch the fish and dry him, when he is found to be so fat that when you light an end of him the fish burns like an adamantium candle. The Alaska Indians are said to retire to their little beds with candles of his character. We have likewise heard of the sailor who caught a whale all by himself. Jack threaded the whale on a hawser, lit the tarred end of the rope and the oil in the whale burnt that way for five years and served as a light house!

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

Table with columns: Date, Boston, New York, Charleston. Rows for Oct. 22, 23, 24, 25, 26, 27, 28.

At a scrub yacht race at South Boston last week fifteen boats entered, the list being open to all boats measuring 21 feet and less, mooring inside of K street. Nine boats started, and seven went over the course. According to the rules of the race, schooners were allowed only to carry main and foremast and jib; sloops mainsail and jib; and cut-boats mainsails only. The difference in the allowance of time was thirty seconds to the foot, and centre-boards had to give an allowance of two feet to keels. The boats came in in the following order: Sloop Naïad Queen, Capt. E. Kilner; sloop Olive, Capt. J. Roach; Niagara, cat rig c. b., Capt. Dean; Annie, s. k., Capt. B. McKenna; Gypsis, s. c. b., Capt. J. Howe; M. Moore, cat rig, Capt. W. Chipman; and Dollie, s. k., Capt. J. Thomas. The Naïad Queen was 1 min. 35 sec. ahead of the Olive, and 2 min. 5 seconds ahead of the Niagara. Owing to the "Queen" having to make allowances to the others, the standing of the boats was not ascertained, the measurements not being taken. The prizes offered were gifts of Mr. J. F. Day, and consisted of a pair of elegant French vases worth \$35; a cup valued at \$15, and an \$8 meerschaum pipe. The first prize in water is a "T. D." clay pipe, which was awarded to the Dolly.

A GOOD RECORD.—The cat-rigged yacht Mabel, 19-5, belonging to Commander John N. Roberts, of the South Boston Yacht Club, has, during the past season, won the Champion prizes offered for her class, in all the clubs to which she belongs, viz: the South Boston, prize of a solid gold anchor; the Dorchester, solid silver cup, and in the Lynn another valuable prize. She also captured the first prize in her class at the Beverly Union regatta, a solid silver watch stand of nautical design.

Messrs. Lacy and Ferguson, who recently made a voyage to New Haven in a boat drawn by a large kite, have constructed another and larger one. This is 1200 feet, and will take a larger boat, containing three persons. The party will start with the first fair wind from Seaside Park, Bridgeport, and will endeavor to make a direct trip to New York City, landing at Castle Garden. Messrs. Lacy and Ferguson will make two of the party; the third has not yet been selected.

The fall regatta of the University came off at New Haven on the 14th ult. at Lake Saltonstall. For the first race, a single scull, course two miles, there were four entries. Going up, Hanson of '78 led, followed by Hall of '79, S. S., who eluded them soon after. Kennedy of '75 then S. S. turned the stake six minutes after starting, and led them all by several rods in passing the point on the return, and came in ahead at the end. The time made by each was as follows:

Table with columns: Name, Time. Rows for M. S. Kennedy, M. S. Hall, M. S. Kenney and Mr. Hall.

The bargic race was next in order, and attracted a deep interest, there being crews from each of the four departments—scientific, academic, law, and theology. The course was two miles, and the prize six silver medals. As they passed the point they presented a splendid appearance. They turned the stake at nearly the same time. The theologians here lost a few seconds, owing to the displacement of the oar of the stroke, though ahead before. As they passed the point, on the return, the scientific were ahead, the law crew next, and theologians third. The theological crew made a brilliant spurt, distancing the law crew, and pressing hard upon the scientific, who came in a few seconds ahead. The following is the time:

Table with columns: Name, Time. Rows for M. S. Theologians, M. S. Academic, M. S. Law.

The following are the names of the winning crew: G. W. Smith, bow; E. Gillette, T. H. Linsley, T. A. Yernon, C. L. Braze, stroke; G. D. Brown, coxswain. Next came the shell race, course three miles, for which there were two entries from the academic department, and one from the Sheffield Scientific School. In this race the scientific were the victors. The following was the time made:

Table with columns: Name, Time. Rows for M. S. Academic, M. S. Sheffield Scientific School.

Four of the Scientific crew rowed at Saratoga. Their stroke on this occasion was fine, winning universal admiration.

The names of the winning crew are as follows: G. L. Brownell, bow; W. C. Hall, C. W. Fenn, A. E. Wemple, S. Kennedy, P. Wood, stroke. Prize in this race six silver oars.

The Dartmouth College regatta came off at Hanover, N. H., on the 14th. The contestants were the "75" and "76" crews. The Seniors took the water first, and got two boat-lengths ahead. The Juniors soon picked up and were nearly even, when Mitchell broke his oar and lost the race; both crews, however, finished the course of two miles and a half, the Seniors coming in five minutes ahead; time, undecided. The accident prevented the trial between the Sophomore and Freshman crews, consequently the remainder of the regatta was postponed. The Juniors were laboring under many disadvantages, yet had they not broken an oar they might have won. Following are the names of the men competing in the crew: '75, Bow, Stimson, (2) Mitchell, (3) Mitchell, (4) Foster, (5) East, (6) Byr, stroke, '76—Bow, Easton, (2) Kingsbury, (3) Parkinson, (4) Westgate, (5) Hutchinson, (6) Sears, stroke, Saturday '75 and '77 will race for the colors, and this will end the first-class regatta.

The contest was suspended on the 15th, and nearly all business was suspended to enable the people to attend. The Sophomores and Freshmen were the competitors, and the latter bore yellow and the former red colors. Everything being made ready and the signal being given at 3:45, both crews started. The Sophomores gained slightly after a few strokes. Both pulled well, however, until the boats had gone a few lengths, when Freshman Gerould's rowlock partially broke away, though not so much injured as to prevent the finishing of the course. The Freshmen were unable to use their full strength on account of the accident, and gradually fell behind. The Sophomores continued steadily. Their stroke was excellent, and they passed the line at a little after four, making the two and a half miles in 16 min. 23 sec. The Freshmen, although rowing at a great disadvantage, came in in 19 min. 49 sec., thus beating the official time of the Senior crew yesterday by more than two minutes. The following men comprise the crews: Sophomore—Robinson, bow and captain; Campbell, second; Wallace, third; Stevens, fourth; Toombs, fifth; Eager, stroke; Freshman—Blair, bow; White, second and captain; Gerould, third; Johnson, fourth; Gregg, fifth; Duke, stroke.

The students of Harvard College are waking up wonderfully in boating matters. A large and enthusiastic meeting was held in Massachusetts Hall last week by the invitation of the President of the University Boat club, and before the audience left the hall about \$1,000 was pledged to the club. Several important amendments to the constitution were then read and accepted, after which the following officers were elected: President, Mr. Watson; Vice-President, Mr. Van Dusen; Treasurer, Mr. Roberts; Assistant Treasurer, Mr. Bradford; Secretary, Mr. Sherwood.

The fall club races for the graduates' cup will come off on Saturday, October 31, at 5 o'clock. There will be four races, which will be open to single scull, double scull, six and four-oared boats. Each club will be represented, their representatives being chosen by previous trials. The old style is fairly superseded by any of the club boats. A new and commodious house has been built adjoining the old one. Mr. Blakie has charge of this and its contents. Much interest is taken by the students in the matter, and the crews have already begun work in earnest.

The first of the series of local annual regattas on the Merrimack River took place at Lowell on the 14th inst. There were three prizes for single sculls, flat bottom and four-oared boats. The first race, over a two mile course for single sculls, for a gold medal, was won by Lawrence Rourke in 18:04. Michael Welch was second, E. L. Williams third, and John Quinn fourth. The flat bottom boat race, over a two mile course, for a silver opera glass, was won by Frank Ladd, Charles Forbush being his only competitor; time 18:02. The third race, a three mile course for a prize of a gold medal, was contested by the Merrimack, Lowell and Union crews, and was easily won by the Lovells in twenty minutes eight seconds. The winning crew is composed of quite young men, who pull an easy, graceful stroke, and give promise of making trouble for some of the best crews in the State. The same medals are to be contested for next year.

The return sculling match between Estano and McCarthy for stakes of \$100 a side came off last week at Halifax, and resulted in a handsome victory for the latter. McCarthy and his friends claim that his recent defeat by Estano was due to the water being rough; and on the evening of the same day he sent a challenge to Estano to row him again for double the stakes, which challenge was promptly accepted. The course was from stake boats moored off the Royal Halifax Yacht Club Pier to and around separate stake boats moored twenty yards apart off Section's wharf. McCarthy took the lead from the beginning and held it until the end, turning the stake boats ten lengths ahead and increasing his distance on the home stretch.

On the 14th the Washington Anolston Boat club beat the Nassau on Harlem river. The course was a little less than three miles from near Morris dock to the powder schooner above the Harlem railroad bridge. The Nassau took the water first, but they were soon overhauled and headed off by the Washington crew, who held the lead and won the race in 15m. 52s.

A regatta of the several crews of Amherst College is to take place on the 14th inst. The Nassau crew is expected to take the lead. The Freshman crew appears for the first time, and consists of Alfred Stone, Captain; Thomas Courtney, stroke; H. A. Hull, E. M. Kingsbury, Orrin B. Saunders, S. L. Folsber, bow. Selected from a class of over a hundred men, '78 is expected to give her adversaries a strong pull.

A Whaler race between four students of Belle Air College and four young men from the North end took place last week at Halifax. The "Blue Nose" crew took the lead, but one of them broke an oar, and before they could procure another their opponents passed them by several hundred yards.

The challenge of G. C. Mealey of Boston to row any man in the United States, except George Brown or Eben Morris, a five mile boat race for \$1,000 a side, was accepted

by John Biglin. He agrees to row Mealey at Springfield, Mass., for \$1000, the race to take place next month.

—Michael Burns of the Hibernia Club, and John Dorr of the Buffalo Club, competed for the championship of Buffalo. The former won it, making his two miles in 15:56, the fastest time ever made on that course.

—Brown, the oarsman, has received a challenge, professedly from the "Albert Boat Club, Vallejo, Cal.," to a single scull match for \$5,000 a side, at San Francisco. It is thought to be a hoax.

The friends of Plaixet are ready to match him against Mr. John A. Landers for \$500.

New Publications.

Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our Editorial Room will be promptly acknowledged in the next issue. Publishers will confer a favor by promptly advising us of any omission in this respect. Prices of books usually when desired.

BOOKS RECEIVED.

AMERICAN WILD FOWL SHOOTING. By J. W. Long; J. R. Ford & Co., New York, Publishers.

This handsome 12mo of 330 pages deals entirely with duck, geese and wild geese, their habits, and individual characteristics. Each bird is described technically, so that the sportsman may know what species he bags, and thus improve his Natural History lore. The subject of blinds, decoys, and guns also receive due attention, and boats, dogs, and the best methods for camping out are treated fully. The style is informal and free, so that the book makes pleasant reading. The suggestions and information are quite valuable to sportsmen, especially to amateurs, as it contains the species of knowledge which they need most. We can safely recommend the work to those fond of field sports. Price, \$2.00.

THE MUCUSCULOUS ANIMALS AND THEIR SHELLS. OF CHESTER COUNTY, PENN. By W. D. Hartman and E. C. Miehener: Chestnut Hill, Pa., H. C. Baird & Co., Publishers. This very neat volume enters into a thoroughly detailed description of the mucosculous animals of Chester county. Their positions in the order, family and genus are concisely arranged, so that one may note at a glance any information about them which may desire. Their habits, mode of growth and utility, are also treated quite generally. This volume is handsomely illustrated, and printed on good paper and of good type. It furnishes a most interesting chapter to the fauna of Pennsylvania, so will be appreciated by naturalists and those fond of such studies.

MAXIMS AND HINTS FOR ANGLERS. T. F. Bell: Philadelphia.

This little pocket volume is what its title expresses. It is written in paragraphs, and is illustrated with some humorous wood cuts. It will be highly appreciated, however, by those who prefer the honors of fishing to the stern search for information as to how to angle best.

THE MAGAZINES.

Harpur's Magazine for November is replete with good things. It embraces Moncreaf Newcomb's article on "Decorative Art and Architecture in England," Professor Newberry's "Talks of an Astronomer," papers by Senor Castelar, poems by Commander Gibson, Joaquin Garcia, and a full and complete list of the neighboring towns present. This year volume enters into a thoroughly detailed description of the mucosculous animals of Chester county. Their positions in the order, family and genus are concisely arranged, so that one may note at a glance any information about them which may desire. Their habits, mode of growth and utility, are also treated quite generally. This volume is handsomely illustrated, and printed on good paper and of good type. It furnishes a most interesting chapter to the fauna of Pennsylvania, so will be appreciated by naturalists and those fond of such studies.

For those flying the rigors of the North we can imagine no climate offering greater attractions and advantages within easy distance than that of Florida. Even the funds of a moderate fortune, in comparison, owing to its excessive rains and changeable temperature at the season most desirable for invalids, which, other things being equal, are upon a par with the main land, and then on a small island, where the air is equalized by the surrounding sea. It is fortunate for those who unhappily need such a resort that they can find in Nassau many accommodations. The houses are every essential. The most of the buildings were erected by the colonial government in 1861, at an expense of \$130,000, and has since then been visited by many of our first people. The rooms are cheerful and neatly kept, and is the aim of the government that it should be all that invalids, tourists and pleasure seekers could desire. The facilities for yachting and fishing at Nassau are admirable, upon yachts being always on hand, and the neighboring keys present charming resorts for picnic parties, and the variety, beauty and savage character of many of the fish, render fishing a sport of more than ordinary interest. The healthy and salubrious air, the beautiful scenery, Providence, abound with wild duck, and those who care to raise as far as Green Key, will find lots of pigeon shooting.

St. Nicholas. This most valuable contribution to juvenile literature teems with pleasant sketches. The opening sketch, "Thompson," a Russian tale, is particularly told in a style which our young folk admire so much. The "Travels of an eagle," which is a dozen "Young Rascals," "The Venus of Milo," and "East India Toys" are graphically written, and though prepared ostensibly for boys and girls, they may be read with much interest by older people. St. Nicholas must be a great favorite with the youngsters.

Scribner's Magazine is fully up to its usual high literary and artistic standard. Its table of contents is exceedingly large and varied. This also devotes a proper space to a description of Winter resort in Florida, and is full of interesting and valuable information most timely and interesting. The adaptability of the country for invalids is thus summarized by Mr. King:

"It is a perfectly equable climate, where a soothing warmth and moisture combined prevail, be desirable for consumption, it can be found no where in the Southern States. It is a fact that those who have a number of persons whom I saw during my journey, who had migrated to the eastern or southern sections of the State many years before, 'more than ten years ago,' and who had been in the habit of visiting Florida, had sufficient to convince us of the great benefits derived from a residence there. Physicians all agree that the conditions necessary to insure life to the consumptive are actually provided in the climatic resources of the peninsula. That great numbers of invalids find the localities along the St. John's River, and even on the coast, distressing to them, is said by some physicians to be due to the fact that those invalids go there after disease has become too deeply seated. The European medical men are beginning to send many patients to Florida, cautioning them where to go, and the result is seen in the fact that the localities have already been proved by a residence anywhere on the eastern or southeastern coast from St. Augustine down. For those who from various causes, and that each success of the winter, which is constantly shifting temperature, and its trying winds, for which even the healthy characterize as 'deadly,' says their vitality more and more, Florida may be safely recommended as a winter resort. For those who are constantly shifting temperature, it will become a Winter paradise; for the illing, it is a refuge and ease strength; for those severely invalided, its results depend entirely upon the location and the season of the year, and the climate is made. The perfection of the Florida Winter climate is said to be obtained in Miami, near Key Biscayne Bay, on the Miami River. There, among the cocoanut and the mangroves, invalids may certainly count on laying new hold upon life."

ANNOUNCEMENTS.

We have received from the Engineers Department of Washington two neat, and, to us, interesting pamphlets, one being a catalogue of the plants collected by Lieutenant Wheeler's expedition west of the hundredth meridian in 1871-2-3, and the other a report upon the ornithological specimens collected by the same expedition. Both are valuable contributions to the natural history of the country.

We are indebted to Dr. A. Wilson, U. S. A., for a copy of FOREST AND STREAM of February 12th.

N.Y., of Brooklyn, of Montreal, Can., Aug. 14th, 1874, with a "Remington Brech Loading, Long Range, Challenge Rifle," 34 inch barrel, 44-100 calibre, wt. 10 lbs., cartridge containing 40 grains powder, 530 grains bullet. Price of rifle, \$100, including pistol grip stock, vernier gauge orthopedic, and wind gauge fore sights; extra for spirit level, \$25; extra for disks for fore sight, \$2.50 each; cartridges \$4.50 per 100.

Special Telegram to "Continental Advertiser" dated Aug. 14, 1874. "Remington placed at long range, I have taken, 550 grains powder, 530 grains bullet. In one match I made a clean string of seven balls: 100, 100, 100, 100, 100, 100, 100. An all round for the aggregate. Canister load second, and the first four prizes taken by Remington rifle." Extract from the "Army and Navy Journal" of Oct. 3, 1874. "The match decides several disputed points, as near as they can be decided; first, that there is no perceptible difference in accuracy between breech loaders and muzzle loaders, but that if anything the former are the best, as they are certainly the quickest; second, that in our clear opinion we may look for even better shooting in the future; third, that the Remington rifle stands at the head of all others for accuracy, as it does in simplicity of mechanism. The Remington rifles in the match score thirteen points ahead of the same number of muzzle loaders, and twenty-two points ahead of the Sharp's breech loaders in the same team.

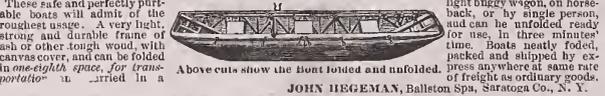

E. REMINGTON & SONS, Manufacturers of Brech Loading Guns, Rifles, Pistols, Ammunition, &c., ARMY, ILLON, N. Y., 283 BROADWAY, N. Y.

JOSEPH C. GRUBB & CO., 712 Market St., Philadelphia.

CELEBRATED CENTRAL-FIRE BRECH-LOADING GUNS. MADE BY James Purdey, No. 314 1/2 Oxford Street, London. Desire to inform Dealers and Sportsmen who may wish to purchase these Guns, unsurpassed for Finish, Durability and Power, that they have a supply of 10 and 12 bore, and will import special guns to order at short notice.

Hegeman's Patent Portable Folding Boat. For use as LIFE-BOATS, LIGHTERS, Dingies, DOYS, on board Steamers, Yachts and other Vessels. Also for Sportsmen, Tourists, Trappers, Explorers, Expeditions, Parties and Out, &c. &c.

POULNEY, TRIMBLE & CO. NO FROG NO FOOT, NO HORSE. Importers Brech and Muzzle Loading GUNS, and SHOOTING TACKLE. STOCK UNSURPASSED. QUALITY GUARANTEED. Prices Low, to Suit the Times. Send for Descriptive Price List. No. 200 W. Baltimore St., BALTIMORE, MD.

How to Shoe Horses. IN THE BEST AND CHEAPEST MANNER. How to Cure all Foot Ailments. RATIONAL HORSE-SHOING. Price One Dollar GOODENOUR HORSE SHOE, 31 Elizabeth Street, N. Y.

Pritchard Brothers, No. 94 Fulton St., N. Y. ALL KINDS OF Fishing Tackle. Made and repaired with the utmost despatch. ALSO, CONSTANTLY ON HAND, THE BEST SELECTION OF TROUT AND SALMON RODS, REELS, LINES AND FLIES. Medals awarded at the World's Fair and American Institute for our superior Artificial Flies.

HOMES! HEALTHFUL, CONVENIENT, LOVELY! Just think! Only 23 minutes, and seven cents fare, communication, to Liberty street, New York, from PATERSON, where scenery, such charming sunsets, and ocean views far in the distance, that for a week, one finds it in its every sense, of fancy and reality, in its lovely place. Removed from the noise and dust of the great city, yet so near that the time and expense of transit thereto is less than from Wall to Bowler street. Fishing, boating and bathing unsurpassable. Lots in the most beautiful locations rapidly sold; the choicest will soon be taken up, while second price at which it can now be obtained, owing to the rapid appreciation of property here. Delay loses two losses: First, the choice of a building site; second, the price at which it can now be obtained, owing to the rapid appreciation of property here. Delay loses two losses: First, the choice of a building site; second, the price at which it can now be obtained, owing to the rapid appreciation of property here.

HALL'S Plain Crosser Loader and Cap Expeller. FOR PAPER SHELLS. Price \$2.75. In moderate size of shell used. For sale by Gun Dealers. Send for Circular. Address: HALL & CO., Lanester, Penn. FOR SALE—IN PERFECT ORDER—A MANTON Gun, worth \$75, for \$50, and a Roper 4-shooter French loader, worth \$75, for \$50. Apply at office of Borest and Stream.

SEND AND receive by return mail a copy of HINTS TO ANGLERS. A little book of 12 brilliant of fun and useful points, 12 splendid, humorous illustrations, by Cushman, to which is added Hints for Chess Players, neatly bound in cloth. CLAXTON, REMSEN & HAFFLENER, Publishers, Philadelphia, Oct. 2.

Miscellaneous.

WARD BURTON'S MAGAZINE, SPORTING AND TARGET. This arm was abolished in competition with over one hundred different systems, American and European, to the Board of United States Officers, appointed by Act of Congress, July 1873, for the purpose of selecting the best arm for the service, and of which Brig. Gen. A. H. Terry was President. It successfully passed through all the tests. The following is the report of the Board: "Resolved, That the adoption of magazine guns for the military service by all nations is only a question of time; that whenever an arm shall be devised which shall be as effective as a single breech-loader, as the best of the existing breech-loading arms, and that it shall be simple, safe and easily manipulated, every consideration of public policy will require its adoption."

Resolved, further, That the experiments before the Board with the Ward-Burton Magazine System have so impressed the Board with the merits of this gun, that they consider it as more nearly fulfilling the conditions above specified than any other tried by them or of which they have any knowledge, and it does recommend that a number of magazine muskets be made on the plan for further trial in the field. (See Ordinance Report.) We are now receiving orders for these guns, and due notice will be given in this paper when they are ready for delivery.

The following is one scale of prices: Special Magazine for large game, carrying from 3 to 6 cartridges, 70 to 85 grs. of powder, 350 to 400 grs. of lead, 8 to 10 lbs. weight, from \$80 and upward, according to finish. Special Long-range Magazine Rifle for Creedmoor shooting, 60 grs. of powder, 480 grs. of lead, carrying 3 to 8 cartridges, weighing 10 lbs., from \$100 and upward. Magazine gun for general use, carrying 8 to 10 cartridges, 60 grs. powder, 350 grs. lead, from \$40 and upward. Single Breech-Loader for general use, carrying 10 lbs., 60 grs. powder, 350 grs. lead, from \$30 and upward. The calibre of all our rifles, unless otherwise ordered, will be 45-100, in.

W. G. BURTON, Care Ward & Co., 54 Wall St., N. Y. FISHERIES. --- MADE TO ORDER for the trade. Every variety of fish, Salmon, mackerel, &c. suited to Sea Lakes, Pond or River. AMERICAN FISHING TACKLE CO. Boston. 75-60

FANCY POLTRY. All the desirable birds for sale. Send stamp for illustrated catalogue. T. SMITH, Stony Brook, New York. Oct.

DRUG SHOOTING AT VAN SLICKS, SIXTY miles from Norfolk, Va. Steamer Cyclops, leaves Norfolk at 6:30 A. M. Mondays and Thursdays; runs direct to the house; skirts and stool ducks furnished. Address, Mr. VAN SLICK, Pooler, Virginia, C. C. Currituck county, N. C. Oct. 22

VETERINARY SURGEON.—DR. J. M. HEAD, (member of the Royal College of Veterinary Surgeons, London, No. 24 Lexington Avenue, N. Y.) attends, when requested, all cases requiring his professional skill. Special attention paid to the treatment of dogs. Oct. 22

A. D. VAGNER, Advertising and Purchasing Agent, No. 192, Broadway, N. Y. Sporting journals published in the United States and the weekly newspapers of New York City a specialty. Advertisements inserted at reasonable rates. Sent for sale by the Proprietors, FOREST AND STREAM.

FLORIDA. ILLUSTRATING THE SCENERY OF The East and West coast and Interior of Florida. A complete set of views of St. Augustine, Gainesville, Central Florida, and Cedar Keys, the terminus of the Florida Railroad on the West coast; New Smyrna, the great and beautiful bay, the largest lake and Indian River, the game and fish section of Florida—the hunter's Paradise; the only pictures ever given of the wonderful Lake Okechobee, the largest lake in the South; a few views of the Seminole Indians; characteristic pictures of people, and the peculiar scenery of Florida. 25 original points of interest along the St. John and Ocklawaha rivers. These views give one a correct idea of the most desirable portions of Florida. Sent, post-paid, on receipt of price, 25 cts. each; \$25 per dozen; \$10 for five dozen; \$18 per gross. For sale by Geo. C. OBER, Beverly, Mass.

HAVANA LOTTERY. Drawings every 17 days. 752 PRIZES, amounting to \$450,000. One prize of \$100,000. One prize of \$50,000. One prize of \$25,000. One prize of \$10,000. One prize of \$5,000 each. Ten prizes of \$1,000 each. Eighty-nine prizes of \$500 each. Six hundred and fifty-five prizes of \$300 each.

Circulars with full information sent free. Tickets for sale by Geo. C. OBER, Beverly, Mass. and General Agent, 100 Liberty street, New York.

THE CHURCH SPIDER.

Selected.

TWO spiders, so the story goes,
Upon a living bent,
Entered the meeting-house one day,
And hopefully were heard to say—
"Here we will have at least, fair play,
With nothing to prevent."

Each chose his place and went to work—
The light webs grew apace;
One on the altar spun his thread,
But shortly came the sexton dread,
And swept him off, and so half dead,
He sought another place.

"I'll try the pulpit next," said he,
"There, surely, is a prize;
The desk appears so neat and clean,
I'm sure no spider there has been—
Besides, how often have I seen
The pastor brushing dies."

He tried the pulpit, but alas!
His hopes proved visionary:
With dusting brush the sexton came,
And spalled his geometric game,
Nor gave him time or space to claim
The right of sanctuary.

At length, half starved and weak and lean,
He sought his former neighbor,
Who now had grown so sleek and round,
He weighed a fraction of a pound,
And looked as if the art he'd found
Of living without labor.

"How is it, friend," he asked, "that I
Endure such thumps and knocks,
While you have grown so very gross?"
" 'Tis plain," he answered—"not a loss
I've met, since first I spit across
The contribution box."

For Forest and Stream.

Santa Monica.

RANCHE LIFE IN SOUTHERN CALIFORNIA.

BY WM. M. TILSTON.

The Colonel went off to his sheep, and I was left with the young ladies to make our plans for the day, or, rather, with Miss Nita, for on her the charge of the guest seemed to devolve. Inez went to the gates and gazed off on the plain in search of the expected Pablo.

"What shall we do," said Nita, "would you like to ride?"

"Thank you, yesterday's experience was quite sufficient for the present. If agreeable to you I would rather remain quiet, or take a walk down the canon and look at the surf."

Miss Anita assented to this proposition, and offered me a gun, saying that there were numbers of eurlew and snipe on the beach; but being too indolent to carry the weight I declined. So we strolled out of the house and through the canon. The stream still rushed wildly over the huge boulders as we wandered along its bank and under the giant sycamores, and clearing the shadow of the glen reached the soft sandy shore of the ocean. Not the turbulent old monster of the previous day, but still with its great respirations rolling in and tumbling in foaming and sparkling masses on the beach. There is something in the climate of southern California which, while bracing and invigorating, is still strongly suggestive of the *dolce far niente* to which the dry and pure air and the bright Italian sky largely contribute. In the full enjoyment of the laziness born of the warm sun and the poetical surroundings of the place, I threw myself at full length on a little strip of turf under a tree, while my companion contented herself with a seat on a rock near by. The tide was at the full flood, and the little foam-edged waves rushed gaily up to the line of sea weed and other debris which marked the highest water line. Dozens of sea birds

were topping the breakers' crests in search of food, and, as Nita had prophesied, numbers of eurlew whistled over our heads, and little flocks of sand snipe, or *auauillos* (little friends), were now showing brown, and now flashing white, as they wheeled and turned in the sun.

"Don Guillermo"—the little witch had discovered my baptismal name, and addressed me accordingly—"do you see that great mound some distance down the beach?"

"Yes, senorita linda, I do see the mound, and to me it resembles nothing more than a giant's grave without the tombstone."

"Well, then, *illustrissime* senor yankee, your guess is quite correct; it is a grave, and of a giant. Under that heap of sand lie the remains of an immense whale, which was thrown up there during a storm two or three years ago. Gradually the surf lifted him higher and higher, and other gales blew the sand around him until he was entirely covered, as you see him now."

The Colonel afterwards told me that this monster, which was nearly one hundred feet in length, actually remained there until the sand had covered him without emitting any offensive effluvia. Such is the dryness and purity of the atmosphere that the natives cure their meat by enting it in strips and hanging it in the sun to dry.

"Miss Anita, you are telling me a fish story, but I believe you. In fact, I believe everything I'm told. I came a skeptic, and returned convinced. I can swallow anything now, from a thousand pound beet to a six inch strawberry, or even a whale. It is not exactly *veni, vedi, vici*, for I came, saw, and was conquered. Miss Nita, apropos of the wonders of this country, I want to ask you a question."

"Well, sir, proceed; I am all attention."

"Do you permit compliments?"

"Only in Spanish, sir; they are quite harmless in that language, but they might frighten me in English. So if you are preparing any pretty speeches, just remember my injunction."

"And have you laugh at me for my pains. No, Miss Nita, your 'trap to catch a sunbeam' won't work, and if I must not say it in English, the compliment is lost forever."

Over my head the flies were dancing coitions among the branches of the tree. A little ground squirrel had come out of his hole near by me, and was apparently cogitating whether it would be safe for him to make a visit to his neighbor over the way. After a long silence, "Miss Nita," said I, "won't you close that incongruity in the shape of a parasol, which you hold in your hand, and risk your complexion for a little while. I cannot get even a glimpse of your face."

Nita changed her position so as to face me, and threw the obnoxious parasol over her shoulder.

"There, sir, does that suit your lordship any better? But mind, you are not to stare at me in that manner, or I shall put the parasol between us again."

"Pardon me, please, Miss Nita, but you see you are such a different type of young lady to that I have been accustomed, that I cannot help looking at you in wonder and amazement."

"Am I to take that as a compliment, senor, or the reverse?"

"Can you doubt which? Of all the lovely productions of this remarkable country you are the loveliest I have yet seen."

Down came the parasol like a flash, and all I could see of my fair companion was the lower part of her brown dress. The startled flies broke up their coition, and escorted their partners back to seats on the boughs. The little squirrel was frightened, and whisking his tail tumbled back in his hole, and a woodpecker, who had been tapping assiduously for half an hour, stopped to listen.

"Miss Nita," no answer. "Miss Forester, are you angry with me?" Still no reply. "I am really sorry, Miss Nita; please forgive me."

This time the parasol was moved a little one side, and I

could see my companion's great brown eyes looking very solemnly at me.

"I am not angry, Mr. Irving, but it is very wicked and unkind in you to make fun of me. I am not quite so foolish as you imagine. But come, Mr. Laziness, we must go home now; you can finish your siesta after dinner. If the weather continues warm while you are here, we will all come down some day and have a glorious bath in the surf. Later in the Summer numbers of families come from far inland, and, camping under the trees, spend weeks in bathing and fishing."

We sauntered back to the house, and I was duly introduced to Miss Inez' lover. Senor Don Pablo de la Cruz was a splendid specimen of a race which, alas! is fast degenerating under the influence of the "Argonauts" into the typical gambling and cock-fighting Mexican. Fortunately, in this immediate neighborhood, there being little to attract the cupidity of the miner or money lender, a few of the old families still remained uncontaminated. Before the discovery of gold they lived in Arcadian simplicity, surrounded by their flocks and herds. Nature supplied nearly all their necessities, and the proceeds of the hides and tallow, sold at the ports of Santa Barbara, San Pedro, and San Diego, procured them luxuries in abundance. With vines growing almost without labor, the padres at the different missions taught them how to turn their grapes, (though by the most primitive process, into wine, and from the same source they learned the cultivation of many fruits and cereals, which added to their wealth and comfort.

Thirty years ago the traveler could go from one end of the State to the other, finding a welcome at every rancho, and a fresh horse or money, if he required either, to hold him on his journey. But now, fiery whiskey and *aguadiente* have taken the place of wine, and their lauds have been torn from them by unprincipled usurers, who, by fostering and encouraging the gambling instinct inherent in the race, have enriched themselves at their victims' expense. Even Nature, once so prodigal, seemed to have turned against them, for in 1862-3 two successive years of severe drought carried off almost the last remnant of their once immense herds of cattle. No wonder that they hate the "Gringos," or yankees, and curse the bitter day which brought the gold-seeking hordes to rob them of their inheritance. The old grace and courtesy of manner, the same fondness for amusement and love of dress, still remained, and the slightest pretence was seized upon as an occasion for a *baile*, or fandango. Don Pablo informed us that on the following day there was to be a *rodero* at his father's rancho, to be followed by a *baile* in the evening, and gave us all a cordial invitation to attend.

A *rodero*, explained Col. Forrester to me at dinner, is a general meeting of rancheros, held once a year, for the purpose of recovering and restoring lost stock. Notice is sent weeks before, giving the time and place of meeting. All owners of horses and cattle frequently find among their *ganados* (bands of cattle), *manadas* (bands of mares), and *cavadas* (bands of horses), animals belonging to other rancheros, or distant proprietors, whose brands, perhaps, are unknown. On the appointed day, all who have received notice assemble with their *vagueros* and select the animals which have their private mark branded on the hindquarter. This *fierra* is the only proof of ownership required, and when a horse or cow is sold, the original owner brands him again on the forehead, which constitutes the *venta*, or bill of sale. The purchaser then affixes his brand on the hindquarter, and an animal which has frequently changed owners becomes so scared with numerous hieroglyphics that it requires a person well versed in this species of heraldry to tell who the present owner is. All animals unclaimed at the end of the day are delivered to a pound keeper, or judge of the plains, as he is termed, who posts a description of them on the court house door of the county town. Many mares will have foals running by their sides, or cows will be followed by their calves, and the wet things are branded on the spot for future recogni-

tion. Sometimes a horse will be recovered after being lost for years, his whereabouts a mystery, but the saddle marks will show that he has been in use, and has probably taken advantage of the first moment of liberty to return to the ranch where he was foaled.

We had scarcely finished dinner when the clatter of the harness and the arrival of the driver announced the arrival of a new owner, and a few moments afterward he entered the room.

"Ah, Bill," said the Colonel, "you're just the man I wanted."

"Well, here I am Colonel," responded the individual so addressed.

"Scuritas, a su servicio; Don Pablo, como te va; stranger, I'm glad to know you," and about six feet six inches of attenuated humanity crossed the room, and a hand of rough parchment grasped my poor fingers like a vice.

"Well, Bill," continued the Colonel, "what's the news from the mountains; how are the bees and the honey?"

"All serene up yonder," said Bill, jerking his finger over his shoulder in the direction indicated. "The bees are as lively as crickets, and makin' lots of honey; I've brought down a pair full for the sears. But the wild cats are gettin' awful troublesome—two or three chickens carried off every night, and I'm afraid the hawks are going to bring a bar down the gulch some of these days, and the varmint will do a sight of damage among the hives."

"Been along the foot hills lately?" said the Colonel.

"Are there many deer there now?"

"I haven't killed a venison in a week," replied Bill, "but there's a smart sprinklin' of deer. I saw a buck and two does this morning as I came through the chaparral."

"Well, I want you to take Mr. Irving for a hunt, and perhaps we may all go up and camp for a night or two at your place. I should like to catch a few trout myself. Do you think you could show our guest a grizzly?"

"No grizzly in mine, thank you, Colonel. I haven't lost any of them bears lately, and don't go huntin' them. Now a black bear, or a cinnamon, I don't mind takin', but I've had my allowance of grizzlies. The stream is alive with trout; I caught forty or fifty in an hour the other day, with nothing but a little red-bait, and a few of them are big."

"Bill, or Grizzly, as he was commonly called, was not a handsome man to look at, and might have carried the jack knife for a life time against all comers; but his bronzed skin, his huge joints, and great muscular development, indicated wonderful strength and endurance. The lower part of his face, which was surmounted by a crop of thick grizzled hair, was one huge ear, and looked as though some accident had flung a musket ball through it, and he had died by his jaws. It was, indeed, the result of an encounter with the bear from whom he derived his sobriquet. His deeply sunken blue eye was soft and pleasant, and its expression indicated a warm heart and the greatest simplicity of character. Bill was a fair specimen of a type of men only to be met with in California and the border States. Wanderers from youth, with apparently no home ties, or even a name, he had become a habitué of the excursion companies. Hardened by contact with the roughest side of the world, but with an under current of warm humanity hidden by a rough exterior. Living independent lives, happy in having more than sufficient for their wants, and fearing neither dun or creditor.

It was finally arranged that on the day succeeding the *rodero*, we were all to go to Bill's rancho and remain there for a day or two hunting and fishing. Don Pablo consented to the plan, and he and I mounted our horses splendidly of a chance, and even the stately sears declined to unsend a little and express approval of the arrangements.

The next day was cloudless and bright, as twenty-nine out of every thirty days are in this climate, and after an early breakfast the Colonel, Don Pablo and myself started for the scene of action. Pablo in his picturesque riding costume of *chacueta*, or jacket of velvet profusely ornamented with silver buttons; *calzoneras*, or pantaloons of the same material, lined in place by a rich scarlet sash, and broad brimmed hat, and mounted on a horse which was a perfect specimen of the Mexican Caballero. His saddle trappings and bridle were so covered with silver as almost to conceal the leather. His prancing and perfectly trained mustang, showed strong marks of his *barb*, or Moorish origin, and was probably a lineal descendant of one of the horses ridden by some of Hernando Cortez's fiery followers.

Don Pablo remained in the pasture enjoying his well-earned rest, but the Colonel and myself mounted splendidly from his own stable. All horses brought from the Eastern States, or bred from such, are called American horses, to distinguish them from the native animals, and for draught purposes, owing to their greater weight, they are far superior; but for riding, or for long journeys, give me the very little mustang. No road is too long for him, and having never been punished, he is by no means particular as to his diet. Our route, running parallel with the mountains, carried us over twelve or fifteen miles of plain and undulating country; across an occasional *arroyo*, or water course, cut by the mountain streams. The ranch, when reached, was found to possess a *casa*, or house like Colonel Forrester's in size and shape, but entirely without the adornments, both interior and exterior, which were the result of his more luxurious ideas of comfort, as well as the fruits of his greater pecuniary success. There was a vineyard, a peach orchard, and numbers of old olive trees shading the house, and from the courtyard rose a magnificent palm, topping the roof and serving as a landmark for miles; but large flakes of plaster had peeled from the walls without being renewed; the barred windows reminded one of a prison, and the floors, instead of being polished and of some fine wood, were of the native mud pounded dry and scraped smooth. A few game cocks were tied by the leg to the pillars of the verandah, and without, a string of horses tethered by their lariats, indicated that the company were already assembled.

Entering the house we found fifteen or twenty persons who, from their all talking and gesticulating at once, a stranger would have supposed were engaged in a violent altercation. So surrounded were they in smoke from the cigarette which each was smoking that it was difficult to distinguish faces. Remarkably handsome were some of the men, particularly the older ones, who, with white whiskers and moustaches, and air of great dignity, were unusually distasteful looking. All were in riding costume, and some wore *chacueta* of the skin of the wild cat or leopard. One old *rodeo* had a silver hilted sword across the pommel of his saddle, and an indication of what was the custom to go so armed, more than an indication of what than through any necessity for protection. There was a

constant clicking, as little glasses of *aguardiente*, or native wine, were quaffed to each other's health. The arrival of our party was the signal of adjournment, and mounting their horses the whole party cantered off to where two large corcels, guarded by a number of vaqueros, contained the horses and cattle. A fire was burning near, in which the branding irons were being heated for the benefit of the poor little colts and calves. And now the scene became intensely interesting and exciting. A *ranchero* discovering in the crowded corral an animal marked with his brand would direct his vaquero to bring him out. Nothing loth, the vaquero, taking his *lazo*, or lariat, in his hand, would enter the gates and drive the affrighted crowd before him around the corral, until he had succeeded in separating the particular animal a little from his fellows, when, swinging the lariat two or three times around his head to give it impetus, it leaves his hand, and with unerring precision the noose falls over the animal's head, and he is led away a captive. Sometimes an old mare, who had been caught too often, would be up to a very bright trick. At the moment the *lazo* was thrown she would duck her head to her knees and allow the noose to pass over her amid shouts of "*bueno gusto*" from the crowd. The knowing mare would then be separated from the band, and driven to the open plain she was unable to dodge.

But it was at the corral containing the cattle that the fun was growing fast and furious. Such feats of horsemanship, and such narrow escapes, I am sure were never witnessed before. In a little while the cows, calves and steers in the corral became perfectly wild with fear and excitement, and it was anything but a joke to enter this den of wild beasts. A man on foot would have been instantly gored, and I am almost certain that an angry Mexican cow with a young calf, such as were then a dozen bulls. Yet the vaqueros rode among them with perfect fearlessness, now dodging a horn on one side, and now one on the other. And the training of the horses was marvelous; turning to the right or to the left at the slightest pressure of the rein upon the neck, or sometimes, when both the rider's hands were engaged, with the lariat, guided by the knee, and stopping suddenly when at full gallop, the rider remained firm. Such was their docility and speed there. One poor fellow had his arm broken by being jammed against the fence as the crowd of angry beasts rushed at him and fairly took his horse off his feet. He managed to regain his seat and escape from the corral, but was *hors de combat* for the day. Not unfrequently men are killed by these *roderos*, particularly after imbibing sufficient *aguardiente* to render them careless. Occasionally a particularly vicious cow or steer would be turned out on the plain and several vaqueros started after her. It was almost equal to a bull fight. One *hombre* would throw his lariat dexterously over her horns, when she would charge him furiously. Meanwhile, while he was dodging her, another would throw a noose on top of the first one, so that as she charged one man the other would jerk her in a contrary direction, and her strength being exhausted she would submit to be led away.

The last claimant for horse or cow had appeared, and those remaining had been handed over to the *maestro de los llanos* for future recognition, or, after a specified time, to be sold to pay the expense of keeping them; but the sports of the day were by no means at an end. One *ranchero* bantering another regarding the speed of their respective horses, a race between them would be immediately arranged.

Judging that my horse had been appointed and the distance marked off, the horses were at the start. Their riders, who have handkerchiefs tied tightly around their heads, dismount with saddles and are fastened to the horse by a *cinch*, or girth, passing over their thighs and buckled under the horse's belly. After considerable jockeying for the lead the word is at length given. In a minute the decision is announced, the loser hands his *pesos*, more *now* is counted, and every man lights a fresh cigarette. Now the vaqueros exhibit manly feats of horsemanship, such as picking a dollar from the ground while at full gallop, and rolling and lighting a cigarette while at the same rapid speed. Even some of the *Tadrones* do not decline to take part in the fun, although they preferred to show off the high stepping paces of their horses by making them prance and curvet in front of the house where the ladies were gathered, and thus being careful maintaining an air of the utmost gravity and patience. And now we are returned to the *casa*, and upon entering the *casa*, or parlor, found the ladies of the house assembled, together with those of Colonel Forrester's and some of the other neighboring families. A perfect babel of sounds ensued, all talking volubly Spanish at the same time. I sought out Anita and related to her the events of the day.

"Did you lasso any horses?" she asked.

"No, Miss Nita," I replied, "I think I shall be more successful in capturing the deer. It's none in more in my line, you know." Whereupon I was favored with a beautiful smiling smile, and was about saying something sweet, when a boy appeared at the door and announced "*la seña*," and the whole party moved off towards the dining room. Before supper was finished the tuning of a violin and the twanging of guitar strings indicated that the *baile* was about commencing. Contrary to the custom elsewhere, it is not fashionable there to be late, and when we returned to the dining room a person had been seated at all anxious for the dancing to begin. Miss Nita invited me to a seat by her side and explained that I was about to witness one of the customs of the country, which would probably appear new and strange to me. "You must know," she said, "that annually on this day a number of persons assemble for a dance and to select their *compadres* and *comadres* for the ensuing year. You will see how it is done directly after the *baile* is over, but I will tell you that those whose names are drawn together shall address each other afterwards as *Compadre* and *Comadre*. It means nothing, but sometimes serves as a tie to bring people closer together, and at others affords much amusement."

The drawing was about to commence. An equal number of names of ladies and gentlemen were written on slips of paper and deposited in two hats held by children. A person selected to draw a name drew from one hat a slip and read out the name of a lady; then drawing from the other hat announced the name of a gentleman, and that the couple were *comadre* and *compadre* for the ensuing year. When the names of persons varying greatly in age, or of two supposed already to be lovers, or of husband and wife, were drawn, much amusement was created, and many jokes made at their expense. Nearly all had been drawn, and as each lady's name was called I was in terror lest mine should

come with it, and I should be compelled to attempt a speech in Spanish in acknowledgment of the honor. "Deserita Anita Forrester," announced the drawer. A moment of breathless expectation. "Don Guim-mo Irving!" "You see it is fate, Miss Nita," I said, and the lovely girl turned her head to hide her blushes and escape the significant glances which were cast from every part of the room.

"We must shake hands, *comadre*. I notice that all the rest have done so. And the soft, plump little hand of my *comadre* was put in mine and very affectionately grasped. The drawing being over, the guitars and violins struck up one of the slow measured Spanish waltzes, and each *compadre* taking his *comadre* for a partner, whirled her off, not with the rapid step of the deuteemps or the long glide of the "dip," but in slow and stately measure. Brown's young men would probably have found much to be amused at in the manner of some of the dancers. Many were very graceful and moved their bodies in unison with the music, while others were as stiff as ramrods and moving nothing but their feet resembled for all the world the waltzing figures on an old-fashioned hand organ. Quadrilles followed, and other dances that were unknown to me by name. One—the *jota*—was very peculiar. A lady stepping on the piano placed a knotted handkerchief around her ankles and holding it tight, the handkerchief being pulled as she began to dance with a shuffling step. The crowd formed in a circle around her and encouraged her to greater exertions. Faster they played the music and quicker moved the little feet, until the dancer steps out of the handkerchief and bows to some gentleman in the circle who is to take her place. To dance into the handkerchief and get it around his ankles is the difficult part of the performance, and he sometimes three or four times in a row without success. The fortunate one, after dancing his measure, gives his arm to the lady and they promenade off to make room for another couple.

The correct costume for men at a *baile* is full riding dress, from hat to jingling spurs. The ladies wore old-fashioned heavy brocades or simple muslins, and some of the *donnas* were ornamented with a profusion of heavy and substantial looking gold jewelry, such as rings of Mexican manufacture. All of the men and many of the ladies were constantly smoking cigars, not trying them inside even while dancing. Coffee, wine and *panicoles*, or little cakes, were offered to the guests during the evening, and in an adjoining room *aguardiente* and milk punch were provided for those who preferred them, but no one showed the slightest signs of intoxication, and the utmost courtesy and decorum prevailed.

[Concluded next week.]

For Forest and Stream.

OCTOBER SPORT IN THE BRITISH ISLES.

BY FARRAN WYDE.

THE wholesome hard work which a man can find with gun and setter in the British Isles in the month of October, is, to the true sportsman, as superior to the more otiose grouse potting of August as is the variegated glow of the autumnal landscape to the unvaried green of Summer. At this season there is a certain amount of dubiety as to the result of any gunning expedition, which tends considerably to enhance the sport in the esteem of every practical sportsman, and which is a veritable relief to a man weary and a little disgusted with hares and hot corners, and that kind of constant, cruel, popping which bran breech loaders keep up on a well-stocked moor in August. The August business, as most English sportsmen would readily admit, is little better than a pageant, ordered by a master of ceremonies, in which the heathery heights and hollows are circumnavigated as methodically according to a prearranged plan, as if men and dogs together were treading the figures of a quadrille. But in the month of October the prospect before the sportsman on an October morning, and how much worthier of the name of "sportsman" he feels himself to be, as he lounges out of doors after breakfast into the cool and bracing atmosphere. There may have been a white frost in the night, but whether or not either rime or dew lies thick in the morning, and in the open spaces where the sun strikes, they may be seen rising in wreaths of vapor into the region of upper air, and in fact, I would think a setter likes an October morning better than any other, for the fellow seems to enjoy the dew under foot, and apparently glories in scattering the spray from every bush into which he dives with shaggy front. A delightful uncertainty, such as one may feel on a Western prairie, or in a Florida thicket, reigns in the sportsman's mind as to the result of his day's work, and especially as to the size of the bag he will bring home, and the nature of its contents. But this uncertainty, as I have said, to every real sportsman the chief and crowning charm of sport. I suppose it is because of this doubt as to what kind of living creature may come within range first, that some people have acquired the queer practice of mixing two sizes of shot; but if one has a close throwing eye there is no need for this, and a single size of shot being suitable enough for all the varieties of game to be found in an October bag. It is just possible the sportsman has not to go very far before he gets a proof of this fact, as well as an indication of the kind of sport he may expect during the day. A field of turnips is not unlikely to be worn his base of operations, and a field of turnips is a field of exploration on an October morning. In this month the sportsman is not likely to meet the turkeys in the furrows, making each furrow an arade under which all sorts of devastators may steal and run concealed. The dog is tolerably sure to wind game as soon as he enters the green crop, and not unlikely a partridge will get up under the sportsman's feet before he has penetrated very far. He appropriates the bird with one barrel, the report of which startles scattering in his rear, and he turns quickly, just in time to catch a glimpse of the hare bounding up a furrow. Not much more than the tips of the ears are visible, but the tips of the ears are a good place to aim at, for in that neighborhood poor puss may generally be killed without much loss of blood—a precaution to be observed, for no cock will thank you for a hare badly shot. It is not what might be called a common occurrence to bag a hare with a partridge with one simultaneous discharge of both barrels, yet I have seen such a double shot repeatedly. Having picked up almost hare and partridge, the sportsman very naturally turns his attention to the dog; but at his approach to the wary brood of partridges takes alarm, and wings its flight over the fence to some adjacent stubble. There is sometimes a laggard, however, who waits to be shot before he leaves

the turnips, and as for the rest of the covey, the sportsman is scarcely in a mood to follow them into the open stubble field, where they have too good an opportunity to see him, and too obvious an intention to avoid him. It suits better the whim of the moment to cross the road into the neighboring plantation. The trees—chiefly Scotch firs and larches—stand in thin, thin lines, the sun shining in upon the glades throws the thickets into dark shadow by contrast. The undulating character of the ground, too, emphasizes the light and shade, and more definitely impresses the general effect. How calm, how beautiful, how soul-subtling is Nature in such a place—the stillness all undisturbed by any sound save the very musical chirping of some lonely bird. A slender little creature, brown on the back and white beneath, runs quickly over, comes on a withered leaf not far off, and looks itself not unlike a dry and withered leaf tossed onward by the wind. But not a breath is stirring, and the sportsman very well knows that this small creature is a wren, which has doubtless harried many a nest, and destroyed many an unfledged bird on the adjacent moor. The wren is therefore unhesitatingly shot at the moment when it comes into distinct relief on the light gray surface of a sunken granite rock. Nevertheless, the wren's first cousin, the ferret, is sometimes pressed into the sportsman's service, as I may take occasion to show the readers of FOREST AND STREAM at some future time. The larches make a favorite shelter for that shy bird, the woodcock, and, indeed, one's dog is almost certain to put up an awkward fellow, that will dart for me out of a bush as green as the emerald of the tasselled goldfinch, or into the sunlight in the open, there to be precipitately knocked over. Taking a cut across the moor, one finds the grouse in large packs, few and far between, and somewhat wild—though that is not to be wondered at. Two brace are almost as hard to get in October as two dozen in August, but by dint of walking, and with the help of a good steady dog, one can get them in an hour's time, and possibly a snipe, also. The sportsman does not seem to care to confine his peregrinations to the hill and meadow, however, so in a free, adventurous, and somewhat fickle mood he weans down towards the woodland, bagging on the way another hare, and ignoring a multitude of those vermin, the rabbits, that honeycomb the soil with their excavations, and break the hearts of the farmers. Before eleven o'clock the dew has disappeared in vapor, and the softness wears away as ever was a sportsman who could not care to confine his recreation, spare time to mull over the features of a landscape. To do so becomes a habit with every intelligent man who is wont to bask himself frequently to Nature's solitudes. The emotions of such an habitual admirer of Nature are not so demonstrative as are those of the occasional neurotist from the city, who has exclamations of wonder, superlatives of delight, and exclamations of complaint, or, at times, indignation, concerning every mountain, stream, or tree that his eye may fall upon. These loud and ostentatious expressions of quasi-admiration too often seem to tumble out of the mouth somehow for the sake of effect, and seldom have the ring of true metal; but, indeed, the effect which a page of Nature has on any man's mind is perhaps to be judged of better by his silence than by his articulate speech, by monosyllables rather than by long sentences. To descend a hill after half an hour's musing on the landscape beneath, is like coming down from cloudland or dreamland; but at such a moment even the gambols of his dog help to recall a man to the business before him. Coming suddenly to the edge of a small pond in the hollow, a mallard leaves the rushes with a mighty splashing, which somewhat shakes the nerve of the sportsman, and yet awakes from his drowsiness. As the water splashes, it takes a second barrel to make sure of the bird, but the occasion is sufficient to recall Nimrod to his work, and the pheasant that comes within range immediately afterwards is bagged without extra charge of gunpowder. At this season it is not unusual to come upon the grouse in pairs, but the sportsman, as a rule, leaves such amatory couples alone. On some shootings, however, he may be faced by the little blackcock, which makes a very fine addition to the bag, and whose flesh, of a wild, gamey flavor, is regarded by gourmets as a *bonne bouche* fit for the palate of an Apicinus. Outside of legitimate game, there are some birds which the sportsman seldom cares to pass by. The kestrel he sacrifices without compunction, as that bird is a prowler that preys not only in the barnyard, but also in the game preserves, among the young grouse, and partridge broods. The heron, a bird most difficult to stalk, sometimes sails within range, and as he has some feathers in his wings which are rather prized, he often falls a victim, like many a human hiped, to the possession of an external charm. But though random shooting among the feathered tribe is discouraged, and properly so, in the British Isles, nevertheless several species of birds, which it seems unreasonable and inhuman to exterminate, are hunted for the sake of becoming altogether extinct. When the sportsman leaves the heather and the gorse, and emerges from the woodland, and draws near the hay, stubble, and turnip fields that he around some faru-steadling, he may keep his eye open for partridges, or maybe a hare, or two, that have ventured down from the higher ground. Crossing a pasture, the covey stops before him, and he may find a pair of bushies. The yellow broom makes a very bright bit of color in the Sunner landscape, but at this season its blossoms are all shed, and save for the interest his dog manifests in it, the sportsman would pass it by unheeded. A covey of partridges gets up on very strong wings, and disappears over a hedge row, but with the exception of—well, that depends on whether the sportsman be a good or a bad marksman. If he has taken advantage of all the chances of his life up to game in the course of a long forenoon, and particularly if he is unattended by a gillie, the sportsman ought to be getting sensible soon after midday of the weight of his bag, and to be not indisposed on the whole to turn his face homeward. But when he does so, rest assured it will be with a calm and thorough satisfaction, such as no twelfth of August experience ever can or is worthy to afford.

It has been discovered that the jointed fishing-rod was invented because one can't hide a long cane pole under his coat Sundaays.

ON THE BIG PIECE,

For Forest and Stream.

EVERY one of your readers in this vicinity is, I am sure, acquainted with the locality known by the above title. The paradise of snipe-shooters, it is the spot to which all sportsmen vend their way to worship at the shrines of the migrating *sculpus Wilsonii*. For six weeks in the Spring, and for the same length of time in the Fall, the meadows are covered with shooters, and oftentimes a hunter to a bird. In the Fall flight it frequently happens that large numbers stop to feed on the mud and muddly flats and remain a day or two. Abundance of food soon feeds them fat and luscious, and although the birds first stop only to rest, they find so good cover and so fine feed, they hesitate about continuing their flight and remain for weeks. Not easy of access to pothunters, the shooting is as fine now as it was forty years ago, and the fortunate hunter who happens to reach the meadows while the flight is at its height, finds most famous sport. It is so uncommon a thing to secure a bag of from thirty to fifty birds. Lying mid-way between Paterson and Newark it is still secluded ground, for both the Big and Little Pieces are a dozen miles away from any depot house, and only those who possess or can command a horse and wagon or excellent pedestrian accommodation, ever reach these meadows. This season the remarkably heavy rains flooded both Pieces, and the waters have not yet entirely run off. This has not made much difference to sportsmen, on the fact that the Fall always had an exceedingly mild one, the birds have not come on in any force. A few stragglers, the advance guard of the "grand army," are the only birds to be found as yet.

Last Thursday Fred Underhill and myself, with Nel Ferris, a veteran sport and an old freizee shot, started for Pine Brook. The heavy rain of the night before, together with the young moon, were in hopes would bring the birds along, and we anticipated glorious sport. We reached Steve Coulter's, the gentleman and obliging landlord of the Pine Brook Hotel, in time for a late supper. We found there the veteran sport, Scott Rodman. The lands were still wet, but the water had run off greatly, leaving the ground soft and in exceedingly good condition for the long day. "Ear to bed and early to rise" is a good maxim, and one which we always try to follow. We had everything arranged speedily for the morrow and retired to our rooms. Sleep we wanted, sleep we needed, but sleep we did not get. A jovial party of sports tenanted the lounging room of the hotel, and the clink of dominoes mingling with the clink of something else, kept us awake until long after midnight.

Daybreak found us all astir, and Coulter had a hot and excellent breakfast ready for us at sharp six. That finished, we got in the waiting wagon and started for the Little Piece. Stopping in front of Arnold's and hitching one horse, we stepped over the fence and struck the snipe ground. Rodman had Mr. Pentz's Belle and his two young pups. Nel Ferris had a grand-daughter of Old Dash named Lize, and Steve Coulter had his dog Scotty, an own son of Dash. We found the ground very wet, in fact covered with about four inches of water on the level, with a slauk hole here and there with at least two feet on it. However, we had come for snipe, and a little water—something, I acknowledge, we were all afraid of—was not to stop us on this occasion. Rodman turned off to the right, and with Underhill and Nel hunted along and parallel to the Little Piece, and I and Scotty went boldly on for the whole length of the Little Piece. Belle and Lize did well, considering they hardly knew what a snipe was, but Scotty was a snipe. Blood will tell, whether in horse or dog. To see him ranging over these meadows at race-horse speed, splashing along through water knee deep and throwing up a shower of splashing drops as he fairly eluded his way through the flood, he left a trail behind him, like a yacht in a breeze, and he left a trail behind him, like a yacht in a breeze, and he left a trail behind him, like a yacht in a breeze. Obedient to wave of hand, and as docile as a kitten, he ranged over acres of ground in a trice and found nothing until we struck the second slauk. Here he struck the scent, when at least a hundred yards from the bird, and crawled slowly up until he suddenly stopped with a jerk. There he stood a picture for a camera. Coulter waded through the slauk and saw the bird, and Scotty, on the instant. Getting to within a few feet of the dog, the snipe, say Coulter made as he waded along started Mr. Snipe, and with a s-k-a-a-k-k, like a blast on a trombone, he got up wild and broke for safer quarters. Although not in fair shooting distance, Steve pulled his gun up and pressed first one trigger then the other. Naught was the response, save the bursting of a couple of caps, and faster and faster went Wilson. From the speed at which he started I think he must be going yet. With a savage imprecation on all muzzle loaders he proceeded to prime the tubes and adjust fresh caps. Poor Scotty was all this time at a charge in water half covering him. I felt sorry for the dog, but still more so, when but a few moments after, in picking my way most gingerly through and across a slauk, I made a misstep and went down with a gasp half way up to my thighs. The water was so deep, and so muddy, that I could not get my feet out, and I lay there for some time, and I felt a most intense chill after chill up and along my spine. I felt, then, as if I was a lightning rod, with the searching subtle electric fluid playing the length of my aching back as drop after drop flowed in till it poured out again over the rubber tops. Here was a mess; only the commencement of the day, and wet through. No use crying over spilled milk, so I waded to the edge of high slauk, and I set them on and kicking off those two feet covering my legs, emptied them out, squeezed out my socks and then ploughed my feet back again in the wet boots. Friends of the STREAM, fancy my feelings. Delicately brought up and nurtured, one to whom a wet foot was as disagreeable as to a cat, and then to have it for a whole day; nice, wasn't it?

"What you would be a sniper; how do you like it as far as you've got?" said Underhill.

That added fuel to the fire. As Coulter talked with his gun, so did I to myself, only more so. Not another bird did we find on the Little Piece, and after hunting it thoroughly we started for the Big. A mile's ride brought us to the Sand Patch road, and riding for a few moments longer brought us to the Big Piece. Driving well out on the meadow we bit our way through the lying brush, and in twenty-four inch through black oak, and adjusting cartridges started to hunt the ground. The Big Piece deserves especial mention. Running Northeast and Southwest it stretches out a broad level patch of meadow land for miles

and miles. Thousands of acres in extent, nothing relieves its vast expansive flatness save here and there a gigantic moss-covered black oak. On its edges a few scattered bunches of short silver-leaved willows relieve somewhat the flat monotony of the view. The oaks are covered with moss down their massive trunks to about three feet above the ground. To this height the bark is clean and shows with blackened line the mark of the frequent floods. Standing on the neighboring hills and looking over this meadow where it is water-covered, it resembles an inland sea. As far as the eye can reach nothing can be seen but water. To add to the strangeness of the scene, the flood-irrigated trees stand out in bold relief, as light-houses on a dark sea. In many places the water shows the Big Piece in a lake for weeks on a stretch. Strains of very malarial fevers appear to be unknown. The smell of the damp soil, when the floods have abated and the ground once more appears, is anything but pleasant to the unaccustomed nose.

This day, however, we found the ground in superb order. Wet enough to give easy boring to the migrating birds, it was yet dry enough to furnish them with good cover. Rodman turned to the right with Belle and the pups; myself came next, then Nel with Lize, then Coulter with Scotty and between Coulter and the woods, Fred Underhill. We hoped by moving in line to keep the birds from going between us and making for the lower end of the Big Piece, miles away, when we would have lost them indeed. Stepping one ahead of the other, *en echelon* in fact, we swept up the meadow. We were first on the ground and the dogs were working beautifully. In fact, they were following the smell of the tainted footsteps and drew up quickly, sharply followed by Lize. They had scarce struck a steady point, when s-k-a-a-k-k repeated strongly struck upon our ears and the birds upon our sights. They were high-flyers, indeed. No zig-zagging flight for these fellows. Five in the air in a second, and not one moving to the right or the left. Screaming savagely in their flight, like high-flier pigeons, they soon shot aloft like a flock of ducks, and we were

Mark! Mark! we all shouted in chorus, for not a gun was fired, and there we all stood, with mouths agape, watching the swift flight of these wary beggars. While we were yet star and snipe-gazing, up from under our very noses got a couple. If they had only kept their mouths shut, not one of us would have noticed them, so intent were we on the first lot, but that resonant snipe presentation, that saw us star action on a sudden, and we were all up and brought us suddenly from the skies to earth. Up went Nel's gun, and with the report down dropped the bird he had covered. The other dodging along struck Underhill, who, cool as a "cucumber on ice," raised his muzzle loader and instead of a savage report, we heard, as with Coulter on the Little Piece, the snap, snap of two bursting caps. Underhill's face was a study.

Not a Methodist camp meeting ever gained a convert quicker than the change wrought in Fred's opinions regarding muzzle versus breech loaders. More printing *la Coulter* was done, and once again we measure the Big Piece. We found birds in plenty, but all wild as hawks, and but one lying to the dogs, and he laid like a stone, and paid with his life for his temerity. At the report of Coulter the Big Piece flew on one of the ducks, and Lize and I got shot, it was calling in the extreme to see them get up and away, and not one of us on hand to bid them goodbye. Twenty-five we counted, and they loomed up against the light blue of the sky, as a flock of dark-winged yachts skimming the lower blue.

Once more we move along. We found the water pond thence to four inches deep everywhere. The tufts of coarse meadow grass growing in bunches, showed just above the water, and here on these miniature hummocks sat the snipe warming themselves in the sun. Wild and wary, the birds gave us but little chance for large bags. When they got up they were off indeed, and seemed to be flying for the South without a thought of stopping till they got there. This sort of shooting soon becomes monotonous, decidedly so. Some twenty or thirty birds got up, and we were all half dozen poor shots in all. Some of these did not, like old Rip's ruck, count, and on our show for a good day looked bad. Hearing the report of guns away to the Southwest, far down on the Big Piece, we turned and retraced our steps, spreading out as before. Scarce turned when a bird got up in front of Nelse and was missed clean. Marking him down to catch, we moved on, and he was flying peacefully. Some thirty or thirty birds got up, and we were all half dozen poor shots in all. Some of these did not, like old Rip's ruck, count, and on our show for a good day looked bad. Hearing the report of guns away to the Southwest, far down on the Big Piece, we turned and retraced our steps, spreading out as before. Hearing the report of guns away to the Southwest, far down on the Big Piece, we turned and retraced our steps, spreading out as before. Scarce turned when a bird got up in front of Nelse and was missed clean. Marking him down to catch, we moved on, and he was flying peacefully. Some thirty or thirty birds got up, and we were all half dozen poor shots in all. Some of these did not, like old Rip's ruck, count, and on our show for a good day looked bad. Hearing the report of guns away to the Southwest, far down on the Big Piece, we turned and retraced our steps, spreading out as before. Hearing the report of guns away to

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

INDIANA FISH COMMISSION.—We learn that the State of Indiana is soon to establish a State Fishery Commission, for the protection and improvement of the lakes and rivers of that State, and that our correspondent, W. H. Holbird, of Valparaiso, has been designated as one of the commissioners. Efforts will at once be made to restock the principal waters with improved varieties of fish.

PROPAGATION IN CONNECTICUT.—Black bass weighing four pounds have been taken in considerable numbers throughout the present season from a small lake near Granby, Connecticut. They are the progeny of some 250 stock fish planted there six years ago. There is no doubt but that from insignificant beginnings any suitable water will give the most satisfactory returns within a very few years thereafter. There are few fish more prolific than black bass, which, being palatable fish, a most excellent game fish, and well adapted to protect their progeny, are certainly to be preferred for restocking such depleted waters as are not suitable for speckled trout or other fish of more aristocratic strains.

HATCHING FISH IN TRANSIT.—Fred Mather, of the U. S. Fish Commission, has invented a can in which to hatch shad eggs while travelling. It consists of one small can inside a large one. The small one has eight arms terminating in rubber balls, which press against the outer can and allow it to slide up and down as required to get any depth of immersion, and yet will hold it in any desired position. The bottom of the interior can is of wire cloth, and there are places for one or more trays of the same material above it. There is a four-inch space between the cans, and the motion of the surface water while the cans are running is expected to agitate the water below the wire sufficiently to cause a proper amount of circulation, and to agitate the eggs. When there is but little motion the interior can is raised, to bring the eggs up near the surface where the greatest agitation is found, and when the train is at a higher rate of speed it is lowered. Mr. Mather has a well-known aversion to patenting what he calls "trifles," and has given this to the U. S. Commission, who have had one made.

PROPOSED FISH FARM.

LEESBURG, Va., October 23rd, 1874.

EDMON FOREST AND STREAM.—

The plover fever has died away, and our sportsmen are beginning to try the Bob Whites. Very few birds have been killed as yet by even the best shots. There is some probability of a fish farm being established near our little town. Maj. Ferguson, who is an accomplished angler and an energetic officer, is trying to come to terms for the use of the Big Spring tract between Leesburg and the Point of Rocks for the purpose of fish culture. This spring is near the residence of the Hon. Thomas Swan, and is therefore convenient to the Major, Mr. Swan's son-in-law. The Major has been liberal in his efforts, and all sportsmen wish him success. He at first offered to put in the capital necessary to make a first-class fish farm, and allow them to hatch some salmon for Maryland. This was not agreed to. Now he wants to lease the land for ten years. They have not yet come to terms. It will probably be some time before this here in London, and we hope the Maryland commissioner will gain his point.

—Mr. C. G. Atkins, of Bucksport, employed by the United States and Maine, Massachusetts, Vermont, Rhode Island and Connecticut, to collect the eggs of fish, has at present in his building erected for the purpose (28x70 feet in size), about 2,500,000 eggs, obtained from 500 salmon. The estimated number of eggs obtained from each female fish is about 9,000, of which about 8,000 mature under favorable circumstances.

STOCKING OUR LAKES AND STREAMS.—We find in the *Rochester Union and Advertiser* the report of an interview with the noted Seth Green on the subject of stocking our lakes and streams with fish. He stated that on inspecting recently some of the streams which had been stocked with young shad and salmon, he found those of two years' growth fine and healthy, but complained bitterly of the contrivances used for catching fish at wholesale, big and little, of course, destroying those not large enough to serve their cupidity. The "eel weir" was especially destructive, and the most wicked of all the traps employed. In Oswego River as many as one hundred young shad have been caught in one of these weirs in a single night. He said it was preposterous to buy fish as long as these practices are allowed to prevail. Of the three hundred thousand fish of all kinds put into this river, it was impossible to say how many were left. One thing was to be borne in mind, that either all unlawful modes of taking fish must be suppressed, or fish-stocking of the streams must cease. Mr. Green said, however, that he believed laws would ere long be provided and officers appointed to execute them, and that they would be executed in all cases as strictly as severely as in times of burglary and horse-stealing.

In reference to the practical benefit of the State Fish Commission, Mr. Green said it was rather early to expect any enlarged benefits. The Commission was not established until 1869, and two or three years were then spent in looking over the ground and laying out plans. "In no case where small fish were deposited in large numbers have they remained long enough yet to attain full size. In many waters, however, goodsized fish of artificial hatching and planting have become very abundant, and soon will become so plenty as to attract much attention. The Commission have had much to contend against in the greed of the net and trap fishers. Shad were put in the Hudson as early as 1857, and have been continually added to, at the proper season, since that time. Their abundance at present is a matter of frequent comment. Many will remember that

shad weighing four pounds each were sold here last season at fifty cents a pair. As a result of a stocking of the Hudson and other streams the price of this fish has been reduced fully three-quarters."

The commissioners expect to distribute to all applying parties in the State during the coming three winter months, three millions of fish, and in four years expect to supply every lake and stream in the State with a regular supply of fish. It will be that fish as an article of food will become so abundant and cheap as to reduce all other necessities of life proportionately; and will afford a permanent supply if the protective laws are enforced.

BROOK TROUT.—A. Palmer, Boscobel, Wis., says:—"While this is not the fish for the million, as the amount which can be raised is limited, yet it is a great favorite with the angler and epicure, and is better adapted to cultivation in private ponds than any other fish yet experimented with. Although naturally very wild, it is easily domesticated, and with a little petting becomes as tame as a kitten. "They are easily bred, and grow rapidly, and when all this don't produce as much spawn as some fish, yet a sufficient amount to trouble the breeder to find water to raise the fish in, each female producing from five to eight hundred spawn at two years old, and about double that amount at three years old; but they cannot be raised to advantage in any other than spring or brook water. This may be either hard or soft, but not largely impregnated with minerals.

"Trout, in their natural state, prefer active water of even temperature, but still they do well in pond water if there is a continual supply of fresh water running into them, and will stand a temperature of sixty-five or seventy degrees; but water which runs up to a high temperature will not raise as many trout as that of more even temperature. The same applies to still water. They are great consumers of oxygen, and cold water contains more than warm water, and running water than pond water. In breeding ponds we try to have a fall from one pond to another to carry this property into the water. We find in transporting trout that as long as the cars are moving they need but little attention, but if they stop for a short time the water must be agitated.

"They are cheaply raised. Being cold blooded, they waste no food in keeping up the heat of the body, and ponds which are best stocked with brook trout will produce a large amount of insects and crustaceans, and nearly enough to feed what trout the water will bear.

"I am feeding about fifty thousand, ranging from two to eighteen inches in length, the larger portion small, and they will not eat a beef liver a day. Milk curds, any lean meat that is fresh, or other kinds of fish, make good food for them.

"In connection with other farming, a small spring that is perpetual will pay to improve, while many farms in the State contain water enough to raise more pounds of meat than all the arable land would, if cultivated, and the products of it fed to cattle and hogs, and the building of the ponds would not cost as much as the necessary buildings to make the stock comfortable. The stock to start with would cost less; the necessary seed for the farm would not cost more than the labor of feeding and caring for the cattle and hogs would be much greater than that of the trout; then if I am right, and I think I have been liberal, the trout will pay the best by the difference of fencing, ploughing, seeding, harvesting, and thrashing, and will come into market in less time than the cattle, and pretty near as soon as the hogs.

"While there is much to be learned by the beginner to learn, I think he can get a knowledge of it as easily as he could of other nature and habits. And while in one case he would apply to the cattle breeders for information, in the other he would go to some well informed fish breeder."

ACCLIMATIZATION OF TROUT IN OTAGO, NEW ZEALAND.

—About seven years ago Mr. G. P. Clifford, the manager of the Acclimatization Society of Otago, undertook the conveyance of a lot of trout ova from Tasmania to Otago, which he safely landed and hatched out at the society's grounds in Dunedin. When the young were ready for transport, they were distributed in several of the likeliest streams in the province. In one of those, the Slag River, at Palmerston, he put, if I recollect right, 100 fry. These were looked after, and I may say, nursed by Mr. W. A. Young, an energetic and enthusiastic gentleman, through whose property the river runs. Mr. Young, taking a lively interest in the stocking of the river, determined to increase the quantity of trout on the river by sending fry to the head he anxious to increase the fish in his river, but wished to get all the rivers in the province also stocked, and therefore he has watched their growth from their infancy, and prepared places for breeding purposes. At his own expense he excavated a pond on his property, the water to supply which is taken from his mill-lade. At the head of the pond there is a small race about thirty feet long by three feet wide and one foot deep, or thereabouts, the head regulating a continuous stream of water which passes into the pond. On the property there is also a fine spring, having a temperature of forty-eight degrees Summer and Winter; it is at this spring his breeding boxes are placed. Last year was the first in which he began operations. Having procured nets, so as to be ready on the approach of Winter, he waited, until in July, when the large trout were running up the river, they loughed up in reds like salmon, and then sent for Mr. Deane, the present manager of the Acclimatization Society, to help him. I also was present on the occasion, and with the nets, twelve fish were captured, the largest weighing twelve pounds, the rest being nine pounds, eight pounds, and down to three pounds. These were placed in the small lade above referred to, and kept in it until they were ready for grating at the mill, and then they were sent to the mill, where they were treated by the American dry process. They hatched out over ninety per cent. The same fish were stripped three times at different dates, which was found to be the best way, as only the ova which came away readily was taken. The young fish were distributed in nearly every river in the province successfully. This week I have had a letter from Mr. Young, which he mentions that he has caught eighteen fish this year, one of which was of the extraordinary weight of sixteen and a half pounds. This fish he intended killing and sending to the museum in Dunedin, which already contains specimens of trout and other fish. From his trout this year he has obtained a large supply of ova, which with this time will be hatched out. The Slag River is small, but has the deep pools and gravelly streams, and has good shelter for the trout. It

also teems with food, which may account for their rapid growth. In other streams trout have been seen of a large size; but there are very few persons who take such a lively interest in them as Mr. Young.—*Land and Water.*

THE BLACK BASS.—We doubt if as gamy a fish swims as the black bass. Hooking him is the least of catching him, and no bungler can land a three pounder. When hooked he dives for the bottom, then runs and swims like an arrow to the top, sometimes leaping three or four feet in the air, then down he goes again like a bullet, turning, shaking, and twisting, hending or breaking a stout pole like a reed, snapping a silk line like a thread, and jerking the strongest looks from his tough gills. If you are expert and wary enough to prevent this, after three or four plunges he becomes exhausted, and you may haul him in. The manner of fishing black bass is generally by trolling with a long line, though sinking in ten or fifteen feet of water with worms or minnow for bait is a favorite method with some, especially in the Fall.

The bass pair and spawn in May, and arc said to make their beds very much like the roach, only in deeper water and on a much more extensive scale. They select a bed of coarse gravel, and after scouring the pebbles smooth and bright with their fins and tails, deposit their eggs. It is supposed that two or three weeks elapse before the eggs hatch. The hatching is almost instantaneous, the young bursting the egg and coming out a perfect fish about three eighths of an inch in length. After hatching, the young remain several days hovering over the spawning beds, thus old ones keeping close by to protect them.

In about a week the young scatter into deep water, and are not seen again until September, when they come inshore, having grown to about two inches in length. When they are well supplied with food, they grow about four inches the first season. At two years old they reach a pound in weight, and after that will grow about a pound each year until they weigh six or seven pounds, though few are caught weighing over four pounds. They are enormously prolific, a fish yielding nearly a third of her entire weight in spawn.

Natural History.

A HORNED TOAD.—Through the kindness of Mr. Wm. M. Thleston, one of our most valued correspondents, and the author of several breezy sketches of adventures in the Orient and California, we have been enabled to glance at the horned toad (*Rhombophryne Douglasii*), a species of the Saurian family quite abundant in the Pacific States and Territories. This is most common on the dry and elevated plateaus, and like its congeners is an excellent adept at catching flies. Its most marked peculiarity is the two small and hard excrescences which put out from the head above the eyes and give it its cognomen. This creature has a temper not the sweetest, for in its natural state it is quite pugnacious, and will promptly oppose any enemy, yet it is perfectly harmless. The specimen shown to us came through the mails from San Diego, California, so that it is now quite an experienced traveler. It is quite a curiosity to those who have never seen the species.

A WANDERER.

CATSKILL, N. Y., October 23rd, 1874.

EDMON FOREST AND STREAM.—

A bird which tallies precisely with Leach's Petrel—*genus Gynochora*—(Cone) was shot one day last week in or about the bay above Westport, New York, just below the junction there of the Catskill Creek. The dimensions, as measured by J. Robert Green, Esq., of this village, are as follows: Length, 8 inches; wings, 4½ inches; tail, forked, 2½ inches, white upper tail coverts, &c. Very respectfully,

GEO. B. DAY.

P. S.—I have often seen the stormy Petrel, but never observed one closely. This specimen of the Petrel family is, I should judge, quite as large as the common species. We are 120 miles or more from the ocean. G. B. D.

THE ORIGINAL CAUSE OR CAUSES OF THE MIGRATION OF BIRDS.—In some cases scarcity of food would seem to be a sufficient cause, and it is undoubtedly the most obvious one that presents itself to our mind. As food grows scarce toward the end of the season, the most northern limits of the range of a species, the individuals affected thereby seek it in other countries. Thus doing, they press upon the haunt of other individuals; these in like manner upon that of yet others, and so on, until the movement which began in the far north is communicated to the individuals occupying the extreme southern range of the species at that season; though, had not such an invasion, these latter would have remained in the same place, longer in the enjoyment of their existing quarters. When we consider, however, the return movement, at the end of Winter, it is doubtful, I think, whether scarcity of food can be assigned as its sole or sufficient cause. But here we feel the want of knowledge. At present we are far too little acquainted with the physical peculiarities of those more equatorial regions, which in Winter are crowded with emigrants from the north, to come to any final decision. It seems not too violent an assumption to suppose that though such regions are well fitted for the Winter resort of the bird population of the north, they may be deficient in certain necessities for the nursery; and it seems still less of an assumption to suppose that even if such necessities are not wanting, yet that the regions in question would not supply food in the right amount, but in so many instances such is not the case, that we are led to believe in the existence of a real partiality, while there are quite enough exceptions to show that a choice is exercised. The same may equally be said of the most migrant of birds, and perhaps the strongest instance that has ever come to my knowledge refers to one of the latter. A pair of stone curlews (*Chimenes oregonus*)—a very migratory species, affecting almost exclusively the most open country—were in the habit of resort-

ing for many years to the same spot, though its character was entirely changed. It had been part of an extensive rabbit warren, and was become the centre of a large and flourishing plantation. It seems to me, therefore, that among the causes of migration the desire of returning to old haunts must be included.

That all birds do not migrate in the same manner is pretty plain. Some, as the swallows, conspicuously congregate in vast flocks, and leave our shores in a large company, while the majority of our summer visitors slip away almost unobserved, each apparently without concert with others.

It is also pretty nearly certain that the same species of bird does not migrate in the same manner at all times. Mr. St. John tells us of the arrival of skylarks on the coast of Norway—"They come fitting over in a constant stream, and in compact flocks." Yet it is notorious that a little later these same birds collect in enormous flocks, which prosecute their voyage in company. As tending to the same conclusion, I need hardly do more than refer to the excellent observations of Mr. Knox on the movements of the pied wagtail ("Ornithological Rambles," third edition, pp. 81-86), and, indeed, to the whole of his remarks on migration, because they must be ought to be known to every one who has any interest in the subject. More than this, it is pretty nearly certain that the majority of northward migrants in Spring the males take the lead, and anticipate the advent of their mates by some days, not to say weeks—a fact which may possibly indicate the existence of another cause of migration to which I have not before alluded—while this peculiarity has never been observed in the autumnal movement.—*Nature.*

BIRDS.—The *Daily Telegraph* notes that "of late a singularly beautiful theory of the migration of birds has been suggested by the aged poet Linneberg, who, lying on his sick bed at Helsingfors, in Finland, has watched day after day through the open window the habits of the feathered visitors. He believes that what draws birds southwards is the longing after light. Beautiful as the fancy is, but as soon as the Northern nights set in, with all their luminous and long-drawn hours, the wanderers return to their old haunts." "The same instinct," he asks us to believe, "that works in plants—which, although firmly rooted in ground, yet strain towards the light, spreading upwards in search of it—works also in birds, who, on their free wings, fly after and follow it." Beautiful as the fancy is, it yet unfortunately must be rejected by those who follow the terrible logic of facts. The coming and going of birds is in no way coincident with the shortening of the days, but is later in some years and earlier in others, from causes at which from the present we can only guess. "That want of food has in some cases a great deal to do with it can hardly be questioned. The sea-birds which winter on our coasts follow the southward passage of the herring and pilchard, and are not so numerous when the ground within the Arctic circle is iron bound with the bitter frost, the snipe and the snow-bunting pass down towards the South. But, on the other hand, it is impossible to explain the Spring passage of the swallow from Africa to Southern Europe by any want of food, or to say why so many of the warbler tribe should leave us long before the insects on which they feed have disappeared."

THARNED BIRDS.—The *Baltimore American* gives the following account of a troupe of trained Java sparrows and paroquets now exhibiting in the streets of that city:—"When a suitable place is found, a circular table is opened, and the birds are all turned loose upon it; they manifest no fear at the crowd, and do not offer to escape. The performance consists of singing, bells, trundling small wheelbarrows, slack wire walking, firing off pistols, dancing, swinging each other in small swings, an excellent imitation of a trapeze performance, and a number of other equally interesting tricks. The most wonderful part of the performance, however, is done by a paroquet. The bird walks to the centre of the table, and, after owing to the crowd, seats himself in a small chair, attached to a small cord, and another in the crown is allowed to ask the bird to strike any number of times upon the bell. If asked to strike ten times, he leaves the chair, seizes the bell rope, and pulls it ten times, after which he bows and returns to his seat. This was repeated a great many times, and with one exception, the bird made no mistake. The bird will count twenty-seven times, but it appears that his memory goes out at that point, and he is unable to count further. A collection is of course taken up after each exhibition."

—The expedition sent out under the auspices of the Treasury Department for the investigation of the fur-seal rookeries of the North Pacific, and especially on the Pribilof Islands, consisting of Mr. Henry W. Elliot and Lieutenant McClure, of the navy, has been heard from to the date of the 15th of July. The party was then at the island of St. George, which they had reached from Alaska. During the year which had elapsed since Mr. Elliott's last visit he was satisfied that there had been no material diminution or alteration otherwise of the numbers of the fur seals. He and his companion expected to leave St. George in a few days, and proceed to the islands of St. Matthew, St. Lawrence, and St. Diomedes, St. Michael, and to Naniwak, after which they would return to San Francisco.

—A pet fox in Leavenworth, Kansas, though pretending to be entirely regenerated, still retained his penchant for chicken meat. A pet wolf in the same neighborhood had the same taste. One night it happened to both to feel hungry simultaneously, and they met in a hen-house, each with homicidal thoughts intent. "The wolf," says Webster in his *Great Unbridled*, "is crafty, greedy, and ravenous." "The fox," says the same indisputable authority, "is remarkable for his cunning and preys on hens." Similarity of tastes in this case led to single combat. The poor fox showed fight to the last, but the wolf was too much for him, and not only killed but afterward ate him, all but his tail, after the manner of South Sea warriors.

—A paper was read by Professor Panceri before the Egyptian Institute of Cairo, relating to his experiments on the action of the poison of Egyptian serpents, in which he presented the conclusion that two animals only, the ichneumon and *Meloides*, are able to resist large doses of the poison of the usja and the ceraste, so that in ordinary cases they may be considered as invulnerable to these serpents. These results are thought possibly to account for the veneration in which the ichneumon is held by the ancient Egyptians.

—The Zoological Garden, of Cincinnati, was recently the recipient of a package weighing 650 pounds, containing live specimens of all but three kinds of native American snakes.

—A horse raised in the town of Concord, Me., but sold to a person living fifty miles distant, recently got loose and brought up in his old quarters, though he had not been there for ten years.

—The Alaska fur trade is not a bad thing for the United States Treasury. The Government receives \$262,000 direct. The skins of the seals are taken to London, cured, and brought to the United States, and the duties paid amount to \$200,000 more.

THE ENGLISH AND MICHIGAN GRAYLING.

EDITOR FOREST AND STREAM!

Sir Humphrey Day considers the grayling of Northern Europe a different species from ours, for many reasons, which I condense for your information. In England they have been taken eight to nine pounds in weight. In the Baltic Sea two or three pounds weight and eighteen inches length is the common size, being about the proportions of a large English fish. It is noteworthy that our English fish cannot stand the slightest taste of even haddock water. A fish above two pounds is a very large specimen; far more are taken below ten ounces than above it. In looking at the lithograph of your Michigan grayling I do not observe the peculiarity of the pupil which distinguishes ours, which is, that the pupil of our fish, instead of being circular, is shaped like a pear, with the small end, or stalk, pointed towards the snout.

The northern grayling found by Back and Captain Franklin's companions has much larger dorsal fins than our English fish. This seems to apply to your lithograph, and I am now inclined to think that your Michigan fish is not identical with our grayling, but very likely the same as Back's. Our best anglers are anxious to secure that our fish is not Indian game, but imported by the old moose, so that these old gazelles might have an excellent substitute for trout and salmon in the Autumnal and Winter months, when it is in best season.

The question may be asked "Why is it not then found in all fine streams near old abbeys and monastic institutions?" My answer is that doubtless they were put there, but the water not salting their nature and habits, they dropped down stream and disappeared, as they have done in many cases in my time. The brilliancy of color of the grayling seems to vary much, as with our common trout. Sir Humphrey writes that he caught some on the Conifent with the back fin an highly colored as a "damask rose or an anemone." A gentleman in Worcestershire, in the west of England, describes the fish he took in the month of August. A grayling in the best of condition, which is in October or November, laid upon the hand and looked at horizontally, presents the most beautiful purple and violet he can from snout to tail; snout, sharp; eyes, lozenge shaped; hog-backed; under part of lower jaw and belly touch the ground together; latter brilliant white with narrow lacing of gold; dorsal fin very large, covered with scart waves and spots intermingled with purple. Adipose fin also dark purple, and the fish smells like a cucumber. JACKSON GILBEANS.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, NEW YORK, OCT. 25, 1874.

- Animals received at Central Park Menagerie for the week ending October 23rd, 1874:
- Four Black Snakes, *Bascantion constrictor*. Presented by Mr. H. N. Strong.
- Two Gray Foxes, *Vulpes virginianus*. Presented by Mr. Lyman Flisk.
- One Badger, *Taxidea americana*. Presented by Mr. F. G. Skinner, editor *Trav. Field and Fur-trade*.
- One Crow, *Corvus corax*. Presented by Mr. John Thibos.
- Two Horned Toads. Presented by Mr. D. A. Freer.

W. A. CONKLIN.

Woodland, Lawn and Garden.

ANSWERS TO CORRESPONDENTS.

ELLEN MAY, Gloucester, Mass.—Your note received. The specimen branch you send is the tamarix, and is quite a hardy shrub, not so much in cultivation as it should be.

There is a legend connected with this unpretending little shrub, which gives it its name. In ancient times there were a race of men called the Tamarisee, who dwelt upon the side of the Pyrenees, and were known to the Spaniards as the Tamarites. They gave much time to the culture of this plant, and developed its beauty to its fullest extent.

When once seen, it will ever be remembered for the peculiarity of its foliage, which consists of a series of thread-like leaves, very slender and of a feathery appearance. The pink blossoms of the tamarix make their appearance early in the Spring before the foliage, and give to the plant a curious as well as uncommon appearance. This plant delights in a deep, sandy soil, and when not placed in too rich a place will flower twice in the season—early in Spring and late in Autumn.

Having once well planted your tamarix, you have it for all time, if you take good care of it. To have a good appearance, this plant should be set upon a lawn, as it requires space to develop itself. It will thrive well in this country yet. The same has not been found in America such superior specimens as may be found in England. In some parts of England trees may be seen from twenty to thirty feet in height, and measuring at the ground twelve inches in diameter. Imagine the rare beauty of such a tree when in full bloom. Some fine specimens may be seen in France; and it only needs special cultivation to give grand effect. This plant may be cultivated from cuttings, or bits of the roots.

OLLIPHOD QUILL.

VAN ANDERSON, Milo, Me.—Your preparations for the future orchard may be stated as follows, viz.: Plow deeply your ground, and subsoil same. Turn under a large quantity of good manure. Mellow your ground completely three feet deep. The trees can be planted without any more manure. Make the holes for the same large, and use finely pulverized manure, carefully sifted, about the roots. If you have on hand, and wish to use in the hole beneath the tree old well-rotted manure with it, it will do no harm. Place the trees as deep as they stood in the nursery row, stake them firmly, and patiently await for them to grow.

OLLIPHOD QUILL.

ORCHARD MANAGEMENT.—A successful Michigan orchardist gives his method of cultivation, in a communication to the Pomological Society, as follows:

I manage the field as though there were no trees—plowing, cropping, seeding to grass, mowing, pasturing, &c.;

but I do not forget my trees nor allow them to take care of themselves. I do not allow a living thing to grow under them—grass, weeds, or grain.

When the field is plowed, the plow is allowed to skim lightly over the roots, with care not to cut many if any of them. I am also particular to keep the trees well mulched with straw litter, either from the barnyard or straw-stack; the latter is preferable, as it is not apt to be mixed with weed seeds, and not so rich as the former. Too much manure can be applied to fruit trees for their good; but straw, entirely clean and unbroken, is a capital application.—If a little fine and slightly mixed with the droppings of stock as they feed on it, all the better. Beneath each tree, and as wide as the branches spread above (wider if the trees are young) apply the clean straw eight to twelve inches deep—one half to two thirds in this depth if the mulching is finer or richer, as from straw-stack feeding.

In this practice, here is my theory for success in raising fruit: Plentiful mulching serves the tree in many ways. First, it is a fertilizer; second, it always keeps the root-sock mellow and moist; third, it operates as a sponge, by catching and retaining the water which falls off times in Summer in heavy, dashing showers, until it gradually sinks away beneath the tree root-sock, where it is always much needed in the hot and drying season, but where it settles down, where the turf is allowed to form often and nearly always running off, and not wetting half an inch deep during a good average shower the little knoll on which an apple tree is too apt to stand, so the roots do not get a taste of that for which they are the most thirsting, and must have, to do well.

Lastly, I think in some way it favors the destruction of the apple worm, which thrives by thousands and millions in some orchards. I have not seen a single cest or worm in my orchard this season, nor do I remember of seeing any in any year, though I have had a few years ago, but never many. I have seen this year in a neighboring orchard ten to thirty nests to a tree throughout the orchard, and it looked nearly ruined. This orchard is often cropped, but never mulched.

I have never uniformly in bearing, and enough in abundance to occasionally break the branches.

CULTURE OF THE CACTUS.—This genus of plants is divided into cacti, chino-cacti, and epiphyllums, many of which are remarkable for their showy flowers, while others, such as melo-cactus or Turk's-cap-cactus are cultivated more for their peculiar shape than for their flowers. To see a collection of cactuses, consisting of a large number of different genera, gives one some idea of the many ways nature exhibits herself; they convey a repulsive feeling, and also an attractive one at the same time. The idea of having to travel through a thicket of them makes one shudder, but to study their different shapes, and to admire the gorgeous flowers of some of them, make them a very attractive part of the vegetable creation.

They are mostly of easy cultivation—more especially those in general cultivation—some of them being also well adapted for house culture, especially some species of the genera cereus and epiphyllum; they require for soil a good turfy loam and a little well-rotted cow manure giving plenty of drainage to the pots, with either pieces of broken rock or charcoal. During their growing season, give them plenty of water and a high temperature, but when at rest keep them dry, and most of them will endure very low temperature. If these points are attended to, no fear but success will follow. I have never seen or had any difficulty with them when treated so. The greatest cause of failure of growing cactus which I have met with has been in keeping too wet and too shady when ripening their wood and at rest. No class of plants I know of better endures extreme temperatures, if given at the proper time and properly attended with water. I have seen some folk keep plants of *Epiphyllum truncatum* year after year without their showing any flower buds, while others with the same conveniences have them flower regularly, the trouble always being in keeping too wet, and not enough of sun to ripen the wood.

GRAFTING FROM BEARING TREES.—Nurserymen have made many discoveries of late years, as to the tendency of plants to "sport." They will take one branch of a tree or shrub, well variegated with foliage, or some other peculiarity, propagate this by cuttings till they have secured a large stock, and then send it out as a distinct variety, and call it a "sport." These peculiarities of branch or leaf, seem almost as permanent as those of new varieties originated from the seed.

We must acknowledge that all experience of this sort is delusive, or we must admit that a great and almost universal mistake is made in grafting nursery stock with scions cut from young, non-bearing trees in the nursery rows. This is continued year after year, scions always cut from young, rapidly growing stocks, and scions more or more removed from a bearing tree. Is not this one reason why young orchards are so long coming into bearing; especially of new varieties, where the supply of scions is small, compared with the demand? In the olden time, farmers who took grafts from the bearing trees in their orchards, found no difficulty in changing the wilding to a productive tree of good fruit, often gathering some specimens the second season after the graft was set. True, it is not so easy to cut grafts from bearing trees as from bearing trees as from nursery stock, but if the former make more productive heads, they should be generally preferred.

I understand very well that grafts are not selected with blossom buds, but if a tendency or "sport" in a single branch can be perpetuated into a distinct variety, is it not best to cut grafts from trees and branches having some tendency to fruitfulness?

—The bottom fell out of the Conshocken reservoir, in Pennsylvania, the other day, and one million gallons of water wholly disappeared. A hole twenty-five feet deep and thirty feet in diameter was left. As the region is of limestone formation, it is conjectured that the country is underlain with great caves, into one of which the water of the reservoir has disappeared. Evidence of the existence of such caves has been observed at different times in the Past.

—The last number of the *Gardener's Chronicle* gives a drawing of four lopped elms growing near Datchet, the tops of which have naturally grown with the outline of a horse.

The Kennel.

DOG BREAKING.—No. 2.

FROM the moment you come into possession of your puppy—we will say at three or four months old—lessons of obedience can be given at feeding time, before you begin the more difficult part of yard or indoor breaking; in fact, whenever you may choose to offer him food, by placing it before him and not allowing him to touch it until ordered, slightly tapping him when greediness or a non-regard of your command is observed, persisting in it until you feel he knows he can gain nothing by disobedience.

We have said that it is desirable that the trainer should take the entire charge of the youngster himself. This is important if we wish a more easy task, for we certainly gain complete affection more readily there, and create in the dog a greater desire to please his master.

The first important lesson we give the puppy is that of charging or dropping to the ground at command, and remaining so until permitted to rise by the order "hold up." Very few dogs in this country are trained absolutely to go down at the report of the gun, or as it is called, dropping to shot, the sportsman feeling satisfied if his setter or pointer does not break shot and rush for the bird the moment it is killed, but charges at the word, and remains so until commanded to fetch, if a retriever, or to keep the position upright until the gun is reloaded, and he is ordered to move on again.

Notwithstanding so few dogs are broken to drop to shot with us, we think it should be done, as undoubtedly it tends to give steadiness in every active point, and acts as a check on any desire the animal may have to break in and mouth game when it falls, for, in the excitement of the moment, the sportsman may neglect to give the order to drop or charge when he has brought down a bird, and the dog being left to act as he chooses, naturally moves toward it also, which, if too often repeated, will certainly unsteady him. Therefore, we advise the teaching of dropping to shot, and, with very little trouble it can be readily accomplished by the following method.

Fasten to your dog's collar a strong cord thirty or forty feet long, and take him into a yard or lot where no one will be present, and secure one end of the cord to a short stake firmly driven into the ground. Place him in a crouching position in front of you and keep him there, pressing on him and saying down, drop, or charge, as you see fit. The moment you take your hand from him he will, of course, attempt to get up, which you must meet with a sharp jerk of the cord and a determined "charge," until he obeys, after which encourage and caress him and allow him to rise, using the words "hold up." You can now make use of the cord in a more forcible manner, as a reminder that your command must be obeyed. Take the dog to the stake and make him charge there, and do not allow him to move while you walk from him. Go a few steps beyond the distance the rope will allow him to come, and tell him to hold up. He will naturally run toward you, and just as he reaches the end of his tether and receives the jerk, cry charge. This, we find, teaches quick and prompt obedience to the order.

It is time now, supposing that you have thoroughly taught this lesson, to have the dog learn that the holding of the hand aloft is equivalent to the verbal order to drop, and from the start it might be better to always uplift the hand when the command is given, practising him until the signal only is required to cause him to go down promptly.

In the same manner can dropping to shot be taught by firing off a pistol and instantly jerking the cord and saying charge; but we advise commencing with a cap only, then very small loads, and gradually increasing to full charges. The dog must fully understand to be entirely broken in this particular, that the uplifted hand means he should drop, no matter how far he may be from you in the field, and that the report of the gun is likewise the same command.

In these lessons patience must be studied, and the dog forcibly impressed with the necessity of obedience without being cruelly treated. On the contrary, praise and caress him when he does well, but then only.

THE BENCH SHOW AT MINEOLA.

THE first regular bench show of dogs we have ever had in this country in connection with agricultural fairs took place at Mineola, Long Island, on the 7th of October, and proved a success beyond the most sanguine expectations. In fact, the interesting feature of the Queens County Agricultural Exhibition was the department for setters and pointers, and attracted many that would not otherwise have attended.

The entries were more numerous than it was supposed they would be, and comprised the red Irish setters, the black and tan Gordon, and others which came under the class of setters, of any breed. We noticed that few pointers were shown, and although greatly outnumbered by the setters, they were remarkably fine specimens of the breed, the pair from the kennels of the Duke of Beaufort especially so.

Of dogs of other breed than setter and pointer, we were particularly attracted by Mr. Raab's Dachshund, or German beagle, and Mr. S. M. Barlow's Scottish stag hounds.

The spaniel class was thinly represented, while not a few well-bred terriers, both black and tan, and skye, were exhibited.

The rules of the Kennel Club of London, as regards points in judging, were taken, and the premiums awarded to pointers and setters were as follows, Messrs. E. S. Carman, A. Gulner and Charles H. Raymond acting as judges:

Red Irish Setters—Dogs: Duke, exhibited by Mr. Hamilton Thompson, of Jersey City, a special premium cup valued at \$20; second best dog, Pilot, exhibited by R. L. Lawrence, Esq., diploma.

Red Irish Setters—Bitches: Lady, exhibited by Mr. H. S. Parke, a special premium cup valued at \$20; second best bitch, Fannie, exhibited by R. W. Reid, Esq., diploma.

Gordon Setter—Dogs: Shot, exhibited by Thomas A. Jerome, a special premium cup valued at \$20; second best Gordon setter, Ponto, exhibited by C. O. Doherty, diploma.

Gordon Setter—Bitches: Di, exhibited by James R. Filley, a special premium cup valued at \$20; second best Gordon, Kate, exhibited by A. C. Waddell, diploma.

Setters of any Breed—Dogs: Dash, exhibited by A. C. Waddell, a special premium cup valued at \$20; second best, Count, exhibited by M. Leavitt, diploma.

Setters of any Breed—Bitches: Maggie, exhibited by Mr. Nelson, a special premium cup valued at \$20; second best, Nelly, exhibited by E. Orgill, Esq., diploma.

Best Pointer—Dogs: Phil, exhibited by A. C. Waddell, a special premium cup valued at \$20; second best pointer, Bang, exhibited by J. Smith, diploma.

Best Pointer—Bitches: Fannie, exhibited by Mr. C. Porter, a special premium cup valued at \$20; second best, Belle, exhibited by A. C. Waddell, diploma.

We trust that our sportsmen interested in the improvement of American field dogs will continue in the good work they have inaugurated, and that in every prominent agricultural exhibition a space is set apart for the display of well-bred dogs, as it is in Great Britain.

PORTABLE REMEDY FOR RAPID DOG BITES.—Amongst the new inventions submitted for inspection, says the *Lancet*, "is a remedy against the bite of rabid animals." It consists of a few small glass tubes and a blunt probe in a case. Some of the tubes are charged with nitric acid, and the others with subcarbonate of potash. The object of the caustic is to give an immediate and thorough cauterization to the wound before any of the poison can circulate through the blood. The application of the subcarbonate of potash immediately afterwards is to destroy the further action of the caustic, and the probe is used to spread and destroy every part of the wound with the liquids. After these operations have been performed, a bread and water poultice should be applied, and then the wound should be treated in the ordinary way.

A CHILD ATTACKED BY BLOODHOUNDS.—A little girl named Wilshin, in the service of a gentleman residing at Hillingdon, near Uxbridge, was fearfully worried by four bloodhounds on Saturday afternoon. It appears that she had been left alone in the house with the animals, and, while she was in the act of attending to some food which she was cooking for them, they suddenly turned upon her. Her cries attracted the attention of the passers-by, and on some neighbors entering the house they found the dogs literally tearing her to pieces. After a good deal of trouble they succeeded in getting the young girl off; but the girl had by this time become so frightfully mangled, especially about the face, that it was thought she would not recover. —*Fancier's Gazette*.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

PORT FLORIDA.—Sportsmen intending to visit Florida, and who are anxious to practice economy, will be pleased to learn that schooners are now running weekly from New York and Boston to New Smyrna, Florida. Captains of vessels able to sail for Florida will do well to notify us in season, as it will be greatly to their interest.

Last Friday afternoon a large number of the members of the Manhattan Yacht Club and their friends assembled at their club house, at the foot of Eighty-ninth street, East River, to witness a scrub race and enjoy a clam bake and chowder. The course selected for the race was from a stake-boat off the club house to and around a stake-boat anchored one mile up the Harlem River, five times over the course, which made the distance to be run ten miles. Two pieces of plume were offered, one for first-class boats and one for second-class boats. The first-class boat, the *Orion*, captained by J. D. Brasington, and the second-class boat, the *Zephyr*, captained by H. H. Hays, were the judges awarded the race to the *Orion*, she having beat the *Carrie* 35m. and 40s. Times of race, 5h. 03m. 30s.

In the second race the *Skipjack* and *Zephyr* were the competitors. The former made the distance in 5h. 33m. 10s. Time of the latter not taken, as it was after dark when she came to the stake-boat. Commodore Jacob Cooper presented the prizes, in which the yachtmen and their friends felt to be a delicious chowder and roast clams and yachting. The race winds up the sport for the season with the Manhattan Club as an organization.

The annual yacht race of the Hamilton (Canada) Yacht Club took place on the 21st. The entries were—The Brunette, Cuthbert, and Lady Stanley, in the first-class, and the Jaquetteine, Saunterer, and Water Lily in the second. A fine start was made at 10:07 A. M., and after an exciting contest, lasting nearly four hours, the Cuthbert came in first, at 3:44 P. M., followed by the Brunette at 4:38, and the Stanley at 5:03. Making tonnage allowance, the Brunette won by seven minutes. In the second-class race, the Jaquetteine came in at 1:50, and the Saunterer at 1:52. The wind blew half a gale from the Southwest part of the time.

At a meeting of the Halfax Rowing Club, held at the Pictou House last week, the financial matters connected with the late Brown-Norris race were wound up. A small assessment on the members to square some minor accounts was agreed to. A purse of \$30 was made up for Mr. Daniel Kennedy, Brown's trainer, and a committee was appointed to solicit further subscriptions from members for Mr. Kennedy. The following challenge from Vallejo, California, was read:

"You cannot beat Long Steve in single sculls for \$5,000 a side, in San Francisco, California, within six months. Yours, ALERT BOAT CLUB, Vallejo, Cal."

The Secretary of the Club replied per postal card to-day: "We accept. You bet. He also sent a letter informing them of the receipt of the challenge, and of the readiness of Brown's backers to match him against 'Long Steve,' or 'any other man.'"

Congressman Kellogg relates the following incident of his college days, brought to his mind by some casual reference to college boating. He was a member of '46 at Yale, and in those days boat races were few and far between. The classes of '46 and '45 decided to pull one, however, and the race occurred in the harbor. He was a member of the '46 crew, and his friend, A. P. Hyde, the well known Hartford sculler, was in the '45 crew. To the astonishment and chagrin of the crew of '46 they were badly beaten. At the conclusion of the race, they took their boat ashore and examined it. On the bottom, not far from the stern, had been securely fastened a stone, weighing four or five pounds. Their curiosity was satisfied.

The Harvard scratch races Saturday were quite interesting. The six oared race, a half mile and return, drew four contestants—the Wetmore, Bacon, Otis, and Appleton crews. The Wetmores were awarded the prize, though the Appletons were an eight length in advance, a foul having been proved. The four oared race was won by the Freshmen over Holworthy, Matthews, Weld, and Holyoke. The double scull race resulted in favor of James, of the Scientific School, and Wiley, of 77. These two gentlemen subsequently contested in single scull wherries, James being the winner.

A whaler race took place last week between four students of Belle Air College, of Nova Scotia, in the "Blue Nose," and a crew from the North end. The college crew took the lead from the start, and came in a length ahead of their opponents.

A boat race between the Sophomores and Seniors, for colors, took place last Saturday afternoon at Hanover, N. H., and was won by the former. Time—15:23, 16:10.

The Winnisimmet Boat Club of Boston want the Harbor Commissioners to protect them in the right of teaching Revere Beach by water.

LOSS OF A FAMOUS CLIPPER.

NEW YORK, October, 1874.

EDITOR FOREST AND STREAM:—

The *Shipping News* recently announced the loss of the ship Flying Cloud, of St. John's, N. B., by her cargo of lumber. This vessel was the once celebrated clipper Flying Cloud, built by Donald McKay, at Boston, and which for many years during the clipper *syrore* flew the champion pennant for the fastest passage on record to San Francisco.

Many of your readers will recollect the excitement and interest felt in this city in the great races between the rival clippers of New York and Boston, twenty years ago. The Flying Cloud and the Westward were leading favorites, while from Boston and the East came gallant competitors for the pennant. At last McKay sent forth the Flying Cloud, the most beautiful vessel ever floated. So exquisite were her lines, that although a ship of great tonnage—1700 tons—she looked, when under way, hardly larger than one of the daily craft which cross a crowded harbor. The Flying Cloud ran to Valparaiso in sixty-nine days and a few hours. This passage has never been excelled. It is a question whether it has been equaled, although Malloy's wonderful clipper, the Andrew Jackson, claims to have beaten the Cloud a few hours. Webb's clipper ship, the Challenge and Young America, never came within two weeks of the Cloud's time, and cost their New York backers lots of money by their failure.

The Flying Cloud was sold a number of years ago to a party in England, where she went into the Australian and China trade. There she always distinguished herself for rapid passages, till at last grown old she changed her rig into a bark, and put her into last refuge for worn-out ships—the St. John's lumber trade. Now for the scenes of her triumphs, her poor old bones repose in the Canadian harbor.

NEW YORK.

EVERLASTING FLOWERS.—Very many amateur culturists have devoted considerable time and money to obtain a fine collection of everlasting flowers; but in arranging them in suitable bouquets for parlor ornamentation is where many fail to produce results that are even satisfactory to themselves. The plan I have adopted for making a very symmetrical and pleasing, yet cheap, light and airy bouquet of everlasting flowers, is to gather late in August, or early in September, a sufficient quantity of expanded, bushy bunches from the ornamental and common trines of smoke tree, suspended by their stems in a dark room until thoroughly dry. Then I tie five or more bunches firmly together at their stems, and with shears trim them in the form of a balloon; when this is quite smoothly done, cover the entire surface with the dried flowers, placing the stems in the spongy mass. The following-named varieties I use early in September, as being a sufficient quantity of effect is produced with flowers of brightest light: *Gomphrena*, *Heliotropium*, *Azoreum*, *Xanthoxanthum* and *Polygama*. If possible, when gathering, leave the stem two inches in length for better adjustment. When the tringe is trimmed in the form of a cone, half sphere, or any of one of the many symmetrical forms, and covered with a miscellaneous, yet nearly uniform-sized collection of bright everlasting flowers, the best will be obtained. Most interesting siren a beautiful parlor ornament at little expense will please try this plan.

Rational Pastimes.

Secretaries and friends of Athletics, Base-Ball, Cricket and other outdoor Clubs will kindly mail their contributions not later than Monday in each week.

The Metropolitan cricket clubs have done nothing of note during the fine weather of September and October. In fact there appears to have been no life in them during the latter part of the season. The Prospect Park club will play a match among themselves at the Park on election day, and the organizers will also gather in force on that day at the St. George grounds, if the weather be fine.

The Knickerbocker club have not yet played their annual game of cricket with the Manhattan. They ought to finish up with a one-innings game of cricket in the morning and a game of base base in the afternoon, and Tuesday—election day—would be a grand day for the sport.

The following is the list of championship games played since the 13th instant, up to which our last record was dated:—

Table with 3 columns: Date, Match, Score. Includes entries for October 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31.

The professional championship season closes on Oct. 31st, after which date exhibition games, under the 200 runs innings rule, will be in order. From the appended record of games won and lost up to October 20th, inclusive, it will be seen that the Boston stand first—winning the pennant—the Mutuals second and the Athletics third. The table is as follows:—

Table with 3 columns: Club, Games won, Games lost. Lists Boston, Mutuals, Athletics, Philadelphia, Chicago, Atlantic, Hartford.

An exhibition match, under the ten men and ten innings rule was played on the Union Grounds, Brooklyn, October 24th, between the Mutuals and Atlantic, which resulted in an upset of the Mutuals in a ten innings game, played in the hour and three-quarters, with a score of 7 to 1. West, of the Chelseas, played right short for the Atlantic and made a splendid double play, Geer, of the Fly Aways, assisting the Mutuals. The Atlantic earned the only run earned in the game.

On October 31st a match is to be played in Philadelphia, New York vs. Philadelphia, in which Hicks, Cummings, Marman, Craver, Sutton, Haldsworth, York, Egger and Godley, will play for New York, and McGarry, McBride, Mack, Fisher, Anson, Palmer, Bacon, McManis and Bechtel, will represent Philadelphia. Egger and Hall were two of the Athletics' out-fielders in 1875, so the Athletic will not be all Philadelphians, as it ought to be.

The Athletics closed play with the Philadelphians in the championship arena on October 24th, when they defeated them by a score of 7 to 3. Last season the Philadelphia nine won the first seven games of the series of nine, lost the eighth and won the ninth, thereby winning eight out of nine. This year the Athletics reversed this order by winning the first eight games, closing the ninth and winning the tenth.

The Boston game the Philadelphias a very bad whipping at Boston, on Oct. 19, by a score of 15 to 3. They played again Tuesday, and on Wednesday, went to Hartford. On Thursday and Friday they played their last games with the Athletics and Mutuals in Brooklyn.

The Staten Island club play the Eastons at Easton, October 31st, the Bridgeport club at Bridgeport, November 3d, the Reliance at Brooklyn, November 7th, and the Confidence at New Rochelle, November 10th.

The last championship match of the Philadelphia club this season will be their game with the Athletics, October 29th, in Brooklyn. The same night the Athletics go West to play in Chicago and St. Louis.

The Chicago team for 1875 is announced to be Snyder, Zettler, Glenn, Peters, Burdack, Captain, Force, York, Hastings, Stearns, Hines and Dealen. Strong except in pitching and catching.

The Troy and Resolute clubs of Fall river had a close game together Oct. 17, the score being 7 to 6, a decision of the umpires preventing the full game being played, and so neither side won.

The Boston club is the only one on the professional arena this season which has not lost games with every other club, the Hartford not having won a game from the Reds.

On Oct. 26, the Staten Island club defeated the New York Fly Aways at the Union grounds, by a score of 13 to 7, thereby winning the series of best two out of three.

The Fly Aways of New York visited Princeton Oct. 22, and they came home minus the ball they went to get, the Princeton defeating them by 10 to 3.

On Oct. 21, Meadville, Pa. was the scene of a finely contested game between the Mutual and Oil City clubs, the former winning by 5 to 4 only.

A pretty game was played at Prospect Park, October 20th, between the Mystic and Frontier clubs, the former winning by 7 to 6 only.

The Reliance club, of Brooklyn, whipped the Staten Islanders, October 23d, by 10 to 5, at the Capitoline Grounds.

The Nassans and Staten Island clubs had a close contest October 24th, at the Island, the score being 7 to 7, tie game.

The Athletics and Hartford had a close game together on Oct. 20, at Hartford, the former winning by 5 to 2 only.

On October 24th the Chelseas won their second victory over the Concord, at the Capitoline Grounds, by 9 to 5.

The Waverly club defeated a strong field nine at Hoboken, October 23d, by the small score of 7 to 0.

The Athletics play the Boston in Boston October 28, and the two clubs play in Worcester on the 29th.

On October 19th the Fly Aways defeated the Olympics of Manhattanville, at Melrose, by 9 to 7.

The last foot ball match at Dartmouth College, between the Seniors and Sophomores on one side and the Juniors and Freshmen on the other, resulted in a victory for the Juniors and Freshmen, they beating five out of the six games. The contest was the most exciting that has happened for a long time.

In a division foot ball trial last Tuesday at Hanover, W. H., the Seniors and Sophomores were victorious in four out of five games played. The score, including the result of Friday's game, stands seven to five in favor of the Juniors and Freshmen. Freshman Darling had a rib broken in the rush.

The foot ball match between the officers of the Halifax garrison and H. M. S. "Bellerophon," was played last week on the Common, and ended in a victory for the garrison by a goal and one touchdown, to nothing. Collaring was indulged in a little too much.

The Rutgers College foot ball club defeated the Columbia College team, of New York, last Saturday, by a total of 6 games to 1. The contests came off at New Brunswick, N. J.

The Harvard College Foot Ball eleven, after a close contest with the McGill College, eleven at Montreal, Oct. 23, defeated the Canadians and bore off the international honors.

The lacrosse match, at London, Canada, on the 21st ult., for the championship of the city and the Walker challenge cup, was very stirring, and witnessed by the London and Victoria clubs. There was a large attendance of spectators, and an unusual interest was manifested in the result. The Victorias won the first game in less than ten minutes. London took the following in 5, 35 and 40 minutes, respectively, thereby winning the cup.

A wrestling match will take place in Sacramento, California, November 1st, between Thomas Harris and Michael Whalen (alias Corduroy), for \$1,000. Four hundred dollars is already up, another deposit will be made on the 17th, and the balance on the 24th inst.

The annual athletic games of the University College, of Toronto, Canada, were held on the 20th. The exercises embraced running, walking, jumping, kicking foot ball, fencing, the hammer &c. and the same class nine of were both handsome and valuable.

One hundred miles walking match for the championship of America will commence in Bangor, Maine, next Friday evening between Charles S. Cushing, a Massachusetts pedestrian, and Avery of Bangor.

Mr. George F. Avery, the pedestrian, walked fifty miles in nine hours and sixteen minutes, at Bangor, Me., recently.

The amateur billiard tournament at the three ball French game was commenced at Samuells Billiard House, Brooklyn, on Oct. 26, on which occasion the tourney was opened by Messrs. Vanderwerken and Griffiths, who with Messrs. Clark, Dorlon, Ferris, Buckhart, Reiss, Kavanah, Knight, Picket, Latorre and Panukuchen will compose the contestants. The games will be 200 points up. The prizes consist, first, an elegant gold mounted cane and \$50 cash; second, \$50, cash; third, \$25 cash. The tourney will commence at 9 P. M., on Monday, Oct. 26.

Mr. Griffiths defeated Mr. Vanderwerken by 200 to 176, and Mr. Kavanaugh defeated Mr. Reiss by 200 to 182. The tourney games will be played at Samuells Billiard House every afternoon at 3 o'clock, and evening at 7, for the next three weeks.

PRINCETON, October 23rd, 1874.

EDITOR OF FOREST AND STREAM.—Base ball, of late, has received more attention from the college generally, than any other outdoor sport. The class nine of '77 has paid a visit to New Brunswick and Easton, respectively, and met with success at both places. At N. B. they achieved a victory over the Rutgers college nine by the score of 17 to 10. The next game was played here between the '77 nine of Lafayette college and the same class nine of this institution. Again, the Sophs were victorious by the score of 9 to 8, the liner caught by the Lafayette short stop, Adamson, with his left hand, being the most brilliant play of the game. The next game was played at Easton, between the same nine, and resulted as before, in favor of Princeton, by the score of 11 to 10.

Since their defeat by the Staten Islanders, the University nine have endeavored to defend themselves, and, in a great measure, have been successful. The second game of the season was played here on Saturday, the 17th inst., with the Trenton nine. Though laboring under a great disadvantage, there being four substitutes on the nine, the University gained an easy victory, the score being 12 to 5 in their favor.

One of the best games ever played here took place on Thursday the 22nd inst., between the Fly Aways of New York, and the University nine. During the first half of the fifth inning, Princeton made two runs, which were the first made up to this period in the game. At the close of the 8th inning, the score was 10 to 0, in favor of Princeton; and, if it had not been for a bad throw on the part of Loughlin, our short stop, this would probably have been the score of the entire game. As it was, however, the Fly Aways managed to score three runs during the last inning, thus saving themselves from a Chicago. The game, altogether, was truly a magnificent one, and the best one witnessed here for some time. The Fly Aways are to be commended for possessing so fine a catcher, as well as such excellent first and second base-men. Jacober and Woodo on the Princeton nine, acquitted themselves in

quite a distinguished manner, as usual; the hot liner caught by the former being especially praiseworthy.

The Philadelphias favored us with a visit this (Friday) afternoon. The Philadelphia nine won the game by the score of 12 to 2. One of the most remarkable features of the game was exhibited by Ma-n, pitcher of the University nine. He succeeded in batting Cummings easily, making two second base and two first base hits in four successive innings. The only earned run in the game was scored by the Princeton nine. The great number of errors which occurred in the first half of the game, and, in fact, throughout the whole nine innings, on the Princeton side, were due to the absence of our valuable short stop, Loughlin, which caused a disastrous change among the players.

The Fly Aways have agreed to return here next week, and it is thought that our old opponents, the Chelseas, whom we have beaten twice, will also favor us with their presence within a few days. QUIDVIS.

Answers To Correspondents.

ANSW.—Good duck shooting can be enjoyed at Amityville, Oyster Bay, or Shinnecock Bay.

LEM.—You can find an abundance of black and grey squirrels now in the vicinity of Lovellon, Pa.

LEPES.—Good rabbit shooting can be found in Monmouth county, New Jersey. Take the boat to Keyport, thence go to Mataway by wagon.

H. Montreal.—Is it true that the rattlesnake or moccasin cannot strike above the knee? Please answer to initials through correspondent's column. ANS. No.

H. G. Thirt.—Answer.—Please inform me through this week's issue if it is allowed to shoot quail in Kings, Queens and Suffolk counties, N. Y.? ANS. Yes.

O. F. S., Chicago.—What is good for sprains or inflammation? ANS. Spirits of turpentine, 1 oz.; liquor of ammonia, 1 oz.; unanated, 3 oz.; mix well and rub in hard.

M. T. T., City.—You gave a recipe recently for expiring vermin from dogs. Is there any other recipe more simple, but equally effective? ANS. Carbolic soap is said to be very effective. Make into a suds and use freely.

P. P. S.—Do you think it would pay to introduce the Romington and Sharp rifles into the Dominion? They do not seem to be known much here only by a few marksmen. I ask this question confidentially? ANS. We believe so.

J. B. C., Hartford.—Can you inform a subscriber where he can purchase a deer head with antlers, all complete, ready to hang up, or even not prepared? ANS. At the office of J. Wallace, 19 North William street, New York, or of most any taxidermist.

L. S., Mansfield, Pa.—I have a dog, or some correspondent, tell me through your journal the best breed of dog for hunting partridge or snipe; one that will trace them and bark at the tree? ANS. The best dog we ever had for that purpose was a small very terrier, trained for that purpose.

E. J., Omaha.—Have you an imported breed loader you could recommend? ANS. Yes. We have a breed loader, 10 lb, 32 inch barrels, central fire, under lever action, bar locks; has been hit little used by the finest workmanship, made by William Powell of Liverpool, price \$200; would cost and freight \$300.

A. F. & Co.—A friend of mine and myself have been in the habit of spending election day in fishing at the Central R. R. Co's "Loag Bridge," Newark Bay. I was informed the other day by one who pretended to know, that we would not be allowed to fish there this year on account of the stocking of the Hackensack with new fish. Is this true? ANS. At Hooksett Bay, in the Hackensack River, it is reported by the fisher, that there is no law to prevent your catching striped bass or estuary fish.

C. E. C., Merrick Furnace, Md.—Please say what would be considered good penetration at forty yards (measured) with No. 7 shot, using the paper enclosed for a 10 bore gun? ANS. To answer this properly is somewhat difficult, as we have no precedence for a guide. The inappreciable use of the soft and cephalized paper, and from forty to sixty fathoms is considered good penetration at thirty yards. The penetration also varies much with the quantity of powder and shot used; so we would state that with the usual charge penetrating twenty-five fathoms of the paper sent at forty yards would be good work.

J. S. R., Philadelphia.—In a recent issue, in an article headed "Brass and Paper Shells," in which Joseph T. A. asks for information in regard to the best kind of brass shells, in reply to him, you say: "We have sent our correspondent samples of the brass shell" &c. (the safety). Now this may be very well for J. T. A., but I am sure that many others beside myself are much interested in this question, and you would confer a favor by giving on the benefit of your opinion on this subject. I know the principles of the editor of the FOREST AND STREAM too well to think that pecuniary loss in the way of advertising, &c., would deter him from giving his true opinion in regard to so important a question, where a mistake might occasion loss of limb or life. I carry my shells (which I use in a 12 bore, double barrel Remington) heads down, in a belt, and have never had an accident happen with them, but still, I want to use the best and safest? ANS. The shell referred to can be obtained of Fowler & Co., 300 Broadway. It is considered safest because it is not burrished.

REFLEXAN, City.—Considering your paper the best authority on rifle topics, I would ask you to publish what the other papers have omitted in the report of the recent International rifle match, viz: the quantity of powder used, the name of the manufacturer, the number or size of grain, weight of rifle, calibre of rifle, &c. This will be very interesting to your readers. ANS. In the International match, matches all the rifles used weighed about 10 lbs. each, and were of 4 calibre. The Rigby rifles are 33 inches long, the Metfords, 32, the Sharps, 32 or 31, the Remingtons, 34. The Rigby and Metfords are muzzle loaders, and 90 grains of Curtin & Harvey's No. 6 powder is the usual charge. The Sharps use from 90 to 95 grains of the American Powder Company's powder, and the Remingtons from about 90 to 95 grains of Hazard's P. O. The bullets of the latter are hardened, and weigh from 48 to 55 grains.

J. M. T., City.—In croquet, if three balls are in a line with each other and a playing ball, and the playing ball wishes to roquet the middle ball, can the obstructing ball be removed by the hand till the stroke is made, if immediately replaced? ANS. In such a case a thing as a "frozen" ball, or if a ball hits another ball, and "freezes" to it, i. e. does not separate from it) can be a matter of dispute. These two questions are fair samples of the inquiries that are constantly being addressed to editors and authors of croquet manuals. The first seems too senseless to require an answer. A croquet manual might as well be increased indefinitely with rules forbidding the removal of rings and stops, the digging of holes, or building of obstructing mounds, the sliding of a mallet in the middle of a player's feet, or other outlandish practices, all of which are naturally supposed to be forbidden, unless allowed by some definite rule. The second question is definitely answered in section 1, rule 5, Croquet Manual: "If, on commencing a tour of play the playing ball is in contact with another ball, the player has the same privileges of his stroke and subsequent play, exactly as would have had if the balls had been separated one each half inch more." The case here provided for is the only one in which the question can possibly arise, because if a playing ball hits another and freezes to it, the rules for a playing ball fully decide its rights. Such questions as the above are continued evidences of the carelessness with which players study the rules of the game.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT MEN AND WOMEN OF A HEALTHY INTEREST IN OUT DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
(Post Office Box 2321.)
125 SOUTH THIRD STREET, PHILADELPHIA,
CUBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallcock's "Fishing Tourism," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double columns 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, OCTOBER 29, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be recorded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentleman sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will endeavor to do depraved tastes, nor prevent the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Managing Editor.
WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, October 30th.—Trotting at Prospect Park, N. Y.
SATURDAY, October 31st.—Trotting at Lexington, Ky.—Racing at Jerome Park, N. Y.—Regatta of Harvard University—Competition at Creedmoor for the Turf, Field and Farm hedge.
MONDAY, November 2d.—Wrestling for the championship of California at Sacramento—Trotting at Lexington, Ky.—Fair at Los Angeles, Cal.
TUESDAY, November 3d.—Trotting at Deerfoot Park, L. I.
THURSDAY, November 5th.—Trotting at White Plains, N. Y.

THE FUTURE HUNTING FIELD.

THE disease among the grouse in the United Kingdom has caused a perfect panic among the lovers of the dog and gun, and the moaning for departed pleasure is, as a consequence, long and loud, for they have now to rely upon the red-legged French partridges, or the almost domesticated pheasant, for their fowling. The slaying of the former among the turnips is very easy work, but the bagging of the pheasant requires no skill whatsoever, for with the modern style of hattes, so common in England, one might as well try his gun on the chickens and hens of the barnyard as on the pheasant. If the disease among the grouse continues for any length of time, that proud and sturdy bird will be among the species of the past in Scotland, and that being the case, the sportsmen of Great Britain must hie away to Lapland, Norway, Sweden, Albania, or Corfu to get anything like good shooting, and even these regions are comparatively barren in the best species of game birds, so that large bags must be the exception and not the rule. European sportsmen who would, then, enjoy the pleasures to be gained with the gun and dog, must seek the shores of the United States, for in this broad country they have a wide range of birds to select from, besides the large numbers of game quadrupeds.

It would, apparently, be much cheaper for those gentlemen who have to rent shooting moors at prices ranging from five hundred to two thousand pounds sterling per annum, to come to this country for a hunting tour, for, besides the saving in expense, which ought to be some consideration, they will behold grandeur of scenery unapproachable in Europe, and partake of such shooting as no other country on earth can offer. It is not necessary to enumerate the various species which offer them pleasure to prove this latter assertion. They can also enjoy a style of sport which they can never behold at home, one which combines both ease and pleasure, that is, if they prefer

large bags and the epicurean ease of a carriage to long tramps and severe fatigue. On the prairies of the West one can ride over the shooting ground in his dog cart or pony phaeton, and shoot his coveys as they rise before his dogs, or, if he prefers exercise, he has the option of rambling over meadows which in luxuriance of grass and picturesque scenery equal the best English park, while they excel the best moors in the abundance of game. For these reasons America will, ere long, become the Mecca of all the leading European sportsmen.

NATURAL HISTORY COLLECTIONS.

FEW studies are more interesting than that of natural history when once its attractiveness is made known, for we are led by it to an analysis of the great varieties of life, and are made cognizant of the bounteous resources of Nature in fitting each animal for its special sphere, and importing to it such hues as most become it, so that every step in this study reveals to us new and varied beauties, and teaches us most important lessons in the economy of creation. The more attention we pay to this subject the more do we appreciate the great work of Nature, admire her versatility and power, and enjoy this planet of ours, which is generally accredited with being only a region on which we are placed to suffer hardships, pains, and sorrows.

If the highest purpose of life is to know the arcanæ of Nature, then those who devote their leisure time to the study of the natural sciences reach the most exalted position, as Nature is to them an open book, from which they can extract lessons of knowledge, that charm while they instruct. The lovers of these studies find beauties where others see naught but a dreary blank, for every shrub and tree, hill and vale, copse and plain, reveals to them phases of creation which are concealed to others, because they do not bring to their aid that key of knowledge which unlocks the portals that conceal the treasures which Nature contains. The more we know this world the greater our appreciation of its mechanism and variety of life and color, and, therefore, the more happily do we pass through it, as we receive delightful pleasures from sources which to others yield nothing higher than arousing a dull curiosity. Such being the case, those who would enjoy the varied beauties and pleasures of life should pay some attention to natural history, as it repays in manifold forms all the time devoted to its study. Let the student in this school of knowledge enter the fields, and he will find objects of interest everywhere, so that a walk for health or recreation will prove doubly useful to him.

Few persons have a finer appreciation of the beauties of bird or beast, flower or landscape, than the intelligent, cultivated sportsman; hence, we should suppose that our sporting clubs would devote more attention than they do to making collections of the animals indigenous to the region in which they are shot, and by this means rendering their own halls or rooms more attractive, besides making themselves thoroughly acquainted with the natural history of their section of the country.

The time and expense required to prepare the specimens in a proper manner are trifling, compared with the pleasure they afterward impart, for few objects give so cultured and animated an expression to a room as a good case of birds, or a few wild quadrupeds postured in the most natural manner. Being especially adapted to the rooms of our sportsmen, we can scarcely give these places an air of reality without supposing them to contain such a collection, something to show that the animals have an abstract interest beside their edible qualities. A few of the best clubs in this State have made some fine collections, and as the members shot the animals they are attractive in more ways than one.

If all the clubs throughout the country would follow this example, they would afford themselves a new pleasure, and increase their knowledge of natural history; and this is a species of knowledge that every one pretending a love for the chase should possess, if he would hunt with discrimination; for no person can be a good sportsman unless he knows the habits of animals and the peculiarities which characterize each species. We should be pleased to hear of the clubs that have made such collections, and the animals represented therein.

SCARCITY OF THE WOODCOCK.

OUR reports from nearly all portions of the country specify that the woodcock is exceedingly scarce, and that places where it was very abundant a few years ago know it no more. Many reasons are advanced for this decrease, such as the severity of frosts and snows, the bad effects of a rainy Spring, and the barrenness of the eggs owing to atmospheric causes; but to neither of these, nor to all of them, should we attribute the unusual scarcity, though they may have exercised a secondary influence. The primary reason is the want of protection afforded the bird, and the hungry, savage greediness of a certain class of pseudo sportsmen, who destroy it in every way possible, and in nearly all seasons. These pot hunters commence the work of destruction the very moment the protecting statutes expire, and continue it until they have killed all the birds in their vicinity, or driven them to seek protection in isolated and distant localities. By this dastardly species of hunting, the greedy savages have punished themselves; but we should not care how much punishment were meted out to them if the innocent did not suffer equally with the guilty. To the true sportsman, game is only a means of alluring him to seek health and recrea-

tion, and for this reason he only destroys a limited quantity, enough to give zest to his walking exercise; but the pot hunter looks upon it only as a providential means of furnishing him a feast, or increasing his coffers by its sale. The only way to check the total destruction of the woodcock is to extend the statute for its protection, so that it may have an equal chance of life with other species of game. The present law, which allows Summer shooting, is radically at fault, as it permits the foes of this bird to kill the chickens ere they have attained strength enough to fly with such rapidity as to give them any chance of escaping with their life. The only remedy that presents itself to us at present, is to have the sporting clubs in each State petition the legislatures to change the game laws, so that woodcock cannot be killed before the 1st of September at least. It would be still better if they could be so amended as to impose a severe penalty upon all who kill any woodcock for the next two years. This would give the birds an opportunity of increasing numerically, and would give us an opportunity of again enjoying this interesting species of fowling. Something must be done, and that quickly, or we shall soon know this bird only as an extinct species.

For the purpose of testing to what extent woodcock has decreased, we should be pleased to receive reports from our correspondents throughout the country, and we would especially ask of them to be specific in contrasting the present abundance with that of former times, and the ratio of young birds in the total number killed. Any information as to the localities in which the chickens were found would also prove interesting, as our idea is that they were found near springs, in the earlier portion of the season.

By securing this information, we may be enabled to prove that prompt action is required to preserve the bird, and thereby enlist the co-operation of the sporting clubs in the crusade against the pot hunters and others who are so actively engaged in this work of destruction.

REVIVAL OF AN ANCIENT SPORT.

THE revival of falconry in Ireland would seem to prove that sports move in circles like other matters peculiar to this planet. This pastime, which formed one of the most engrossing sports in the catalogue of our ancestors, has been discarded in Europe for many years; in fact, we do not know of any country, except Persia, where it still attracts the attention it merits. We have read somewhere that the Shah has the only large cage of hunting hawks in the world, and that these birds are models of docility and training. His Oriental majesty, it seems, has a sharp rival now in the person of the Hon. G. Lascelles, of Wexford, Ireland, who is said to possess falcons that approach in thoroughness of education those which existed when the royal sport was patronized by the crowned heads of Europe, and "hood and tinkling bells" were the principal themes in the sporting conversation of mighty Nimrods, and even effeminate courtiers. The care of Mr. Lascelles is flown principally at magpies, those being the only large birds frequenting the interior of the country that are not protected by game laws.

If falconry can be made interesting in the Green Isle, where game birds are comparatively scarce, it ought to be made both interesting and profitable in this country, where we have so many birds at which the hawks can be flown. It is well adapted to those whose frames will not permit them to engage in the sturdier sports of the field, and on this account it should prove attractive to ladies, who could then ride to a meet in their carriages, or if desirous of more vigorous exercise, take a gallop on horseback after the quarry.

It would be difficult to originate any field sport more interesting to the softer sex than this, as it affords them recreation in such modes as best suit the temper of their mind and the vigor of their frame. It may, on this account, be revived in this country by those who have the means and leisure to inaugurate it. The expense of a cage is comparatively trivial, when contrasted with other pleasures, and it certainly yields a most piquant pleasure, so that it fulfills duties now occupied by other and more expensive forms of the Muses. We have in this country hawks well adapted for the purpose of falconry, and many species of birds at which they can be flown, so that if the sport were introduced here it would never lag from want of material or even enthusiasts.

—In the Far West it is intimated that the grasshopper pest is a retributive visitation for the reckless slaughter of the buffalo, which in their constant migrations across the plains, kept the country thoroughly scoured by trampling out the eggs and incipient young, consuming the grass, &c. It is more probable, however, that the reclamation and cultivation of the waste prairie, has fostered the grasshoppers, providing them with food and cover; whereas in former years the practice of annual burning over vast tracts must have been direct and efficacious in destroying them.

MUSCULAR CHRISTIANS.—REV. E. C. Gordon, in an essay read before the Savannah, Ga., Christian Association, said:—"Christianity applauds all that is genuine on the playground, in the gymnasium, the boat race, and the hunting field. It believes in bright eyes and a merry laugh. It approves of the arms that can strike straight out from the shoulder; of legs that can do their twenty miles a day without fatigue, as well as of hearts that know no fear, and lips that speak no guile. Muscular christianity repudiates as a travesty on nature, and an insult to nature's God, those miserable weaklings of our drawing rooms, born of a system that puts at defiance every law of health, and disregards every principle of beauty."

GAME PROTECTION.

By the courtesy of Chas. E. Whitehead, Esq., counsel for the New York Society for the Protection of Game, we have been favored with the subjoined important opinion, General Term Marine Court, which will doubtless be read with interest by our subscribers all over the country:—

MARINE COURT—GENERAL TERM.

ROYAL PHELPS, Plaintiff and Respondent,

against

HENRY C. ROBBE and THOMAS S. ROBBES, Defendants and Appellants.

SPALLING.

Section 31 of the Act, passed April 25th, 1871, for the preservation of game, provides that no person shall kill or expell for sale, or have in his or her possession after the same has been killed, any salmon trout or lake trout in the months of October, November, December, January and February, under a penalty of ten dollars for each fish.

The complaint charges the defendants with a violation of the provisions of this section, in carrying and selling, or causing to be carried and sold, on the 17th February, 1877, whereby they became liable in the aggregate penalties to the sum of \$1,000.

The fourth sub-division of the answer sets up that the said twenty-first section is in violation of the Constitution of the United States and the State of New York, and therefore void; the fifth sub-division that the whole of said Act, in the particular of game is unconstitutional, and in conflict with the laws of the United States and the constitution of the State, and therefore void; the sixth sub-division avers that fish is property within the meaning of the laws of the United States and of the State of New York, and when caught or killed in or out of season, according to my game laws in any State or Territory of the United States, exist in conflict with the laws of the State from any other State, or foreign country, can be brought into this State from any other State, or foreign country, and be the subject of an article of merchandise without violating any law which the State of New York has a right to make. The plaintiff demurred in each of these defenses, and the Court ordered judgment on such demurrer. From this order the defendants appealed to the General Term.

The first question presented upon these pleadings is this: Has the Legislature of this State the power to protect wild game, within its territorial limits, by preventing the killing thereof?

The deer, wolf and fish embraced within the prohibitions of the Act referred to, all come within the category of animals *feræ naturæ*. I merely, in their own terms and ends with possession. When abandoned, or when they escape and return to their natural liberty, the property in them ceases. According to the common law, no property whatever can exist in lani, unless they are so circumstanced that they can be regarded as either actually or constructively in possession of the party claiming it.

A statute prohibiting the killing or taking of such animals cannot be construed as interfering with any rights of property. Blackstone (2d Ed. Blackstone, com. 41) says of these prohibitions: "There is an natural injustice in them, for such animals are not taken to be the property of any man, or what was already his own, but barely abridges him of one means of acquiring a future property, that of occupancy, which, indeed, the laws of nature would allow him, but of which the laws of society have in most instances, very justly and reasonably deprived him. It cannot be denied that, by the laws of nature, every man, from the prince to the peasant, has an equal right to the use of the earth, and that, in such creatures as are *feræ naturæ*, and therefore the property of nobody, but liable to be seized by the first occupant. But it follows from the very end and constitution of society that this natural right, as well as many others belonging to man as an individual, may be restrained by positive laws, for reasons of State, or for the supposed benefit of the community." "These restraints may be more or less extensive, with respect to places in which they may or may not be exercised, with respect to the animals that are the subject of this right, or with respect to the persons allowed or forbidden to exercise it."

The restrictions and prohibitions referred to are said to be imposed by municipal laws for the purpose, among other reasons, of preserving the several species of wild game, and the laws of England illustrate by a general theory. The forest and game laws of England illustrate both the frequency and persistency of legislative interference and control on this subject in that country, and the adjudicated cases in the English Reports show how unscrupulously the courts have upheld and sustained such enactments.

And in this State, almost from the very organization of the State Government, game laws of the general character of that now questioned have been existing on the statute books.

In the year 1816 the Legislature enacted a prohibition, under penalties, against taking *salmon* in any of the waters of this State, between the 20th day of October and the 1st day of February thereafter. This Act was incorporated into the laws of this State by the Legislature in 1825, (S. S., 688).

In 1831, by a similar enactment, it was made unlawful for any person, in any manner, to take oysters in the Hudson River, north of New York county, in the months of May, June, July or August in any year. In 1845 the fish known as *carp* were prohibited from being taken from the Hudson River for a period of five years, under a penalty of fifty dollars for each offense. In the same year a similar prohibition was enacted in the Hudson River, for the months of June, July, or August in any year.

In 1857 it was enacted that no person should kill, within this State, any wild deer during the months of February, March, April, May, June, or July, under penalty of \$25 for each offense; and in 1862 an Act for the preservation of moose, wild deer, birds and fresh water fish was passed, which the Act under consideration is a continuation of.

These are but few of the many instances—as will be seen by reference to the statutes of this State—in which the Legislature has seen fit to interfere with the destruction of fish and wild game.

No case can be found in the reports of this State, in which the general powers of the Legislature, as exercised in the adoption of the enactments referred to, has been challenged or questioned. Without referring to this series of statutes as an argument in favor of the legislative power to regulate game, it would be sufficient, as to this branch of inquiry, to say that their enactment is an exercise of sovereignty upon which neither the Federal nor State Constitution has imposed any limitation whatever.

In cases where animals, *feræ naturæ*, are captured, killed and reduced to possession within this State, the Legislature power to declare such possession an offense and subject the offender to penalties? In such cases the provision of the Federal Constitution giving Congress the power to regulate Commerce among the States, can have no bearing on the question, for the law operates solely upon citizens of the State, and on property, or more properly speaking, on things sought to be made property within our territorial limits, and which are not the subject of this class of cases. It may be said that the power to regulate the Commerce of the Federal Constitution, in our own State Constitution.

Article 14, Sec. 1, of the Constitution of the United States, provides that no State shall deprive any person of life, liberty or property, without due process of law, and our State Constitution at Article 1, Sec. 6, contains a clause in almost the same language. It is said, in argument, that the right of a man to his life, liberty and property, is not absolute, but that it is subject to the power of the State to regulate the Commerce among the States, and that the power to regulate the Commerce among the States, can have no bearing on the question, for the law operates solely upon citizens of the State, and on property, or more properly speaking, on things sought to be made property within our territorial limits, and which are not the subject of this class of cases. It may be said that the power to regulate the Commerce of the Federal Constitution, in our own State Constitution.

Story on Constitution, Sec. 1783, that this Act prevents the selling, and is in violation to the fish, in other words, that of its own free will it ships the fish thus held over the attributes of property, and that, thereby, it is deprived of his property lawfully acquired. (Wyschamer vs. the People, Sec. 3 Kernan, 306.) These propositions, when properly applied, are doubtless the law, but they do not cover the facts of this case.

It has been said that according to fundamental principles there can be no property in animals, *feræ naturæ*, until reduced to possession. In the exercise of its sovereignty the State, through its Legislative functions has the right to declare that no person shall hereafter acquire property in this class of animals, by killing and taking possession of them within its borders, or, in other words, that its citizens shall not kill, sell and have in possession any of them within its limits, except in a law that a regular trade, commerce, or one of internal police. It is simply the exercise of the power to govern men and things within the limits of its own dominions. It would affect no man's present property, but would merely abridge him of one means of acquiring future property, as Blackstone expresses it. It would not deprive of property, but would prevent the acquisition of it. It is not, therefore, within the constitutional prohibitions. To declare one's right to acquire any species of property for all time, includes the right to limit the abridgment a given number of years or months. This law says to the citizens of this State, *for the future* you shall not kill, sell or possess lake trout, within the jurisdiction of this State, during the months of October, November, December, January and February, or, in other words, during these five months of the year you shall not have the right of acquisition of this kind of property under a penalty of ten dollars for each offense. For the reasons above stated an clearly of opinion that the 21st section of the Act in question can be upheld so far as it affects fish caught, killed and reduced to possession within this State.

Still another question is presented by the pleadings upon the assumption that the law is void, and that the defendants are entitled to offer proof that the trout in question were killed in another State where such killing was lawful, and purchased and reduced to possession by them therein. Would they have the right, under the Constitution of the United States, to hold and sell as property to this State after having thus acquired them, notwithstanding the prohibitions and penalties of the Act under consideration? It will be recalled that in the case of *Wheat*, the defendant was a citizen in certain articles to be illegal, one, or any number of them, may nullify the law by going outside its limits to possess themselves of the means of defying and violating it. What would become of our cities, in which the storage and sale of gunpowder is generally prohibited, if the lawful acquisition of that article in New Jersey or Canada might be pleaded in this State as a bar to the enforcement of our laws? What would become of our markets for foreign goods, if the defendant might be permitted for heretofore or vendible obscene books, would the defence that they had been purchased where obscenity was legalized justify the offence or be maintained in mitigation of punishment? Burglarious tools in this way might become lawful merchandise, and the possession of them the badge of a lawful citizen.

Not would it be considered if the fish in question had been introduced into the State by a citizen of another State; for under sec. 2 of article 4, of the Constitution of the United States, on entering our jurisdiction, he would be entitled to the same privileges and immunities as our own citizens—no more, no less. Our municipal legislation operates equally and alike upon all persons found within our borders, with the single exception of Diplomatic Representatives of foreign nations.

Article 1, section 8, of the Constitution of the United States vests Congress with the power of regulating commerce with foreign nations and among the States. In construing this provision it has been repeatedly held that every State sovereignty has unlimited control over its own internal commerce. (Gibbons vs. Ogden, 9 Wheat, 1; City of New York vs. Miln, 11 Peters, 31; Brown vs. Maryland, 12 Wheat, 419; License Cases, 5 Peters, 514.) It is well settled that the power of Congress, when it trenches upon and conflicts with a law of Congress, enacted in pursuance of its control of foreign commerce or commerce among the States. A State may, therefore, subject to this limitation, declare what shall and what shall not be articles of property among its citizens. The history of slavery in this country furnishes a marked illustration on this subject. Slavery is a property in the persons of others recognized and protected it. But it has never adjudicated by any court that the slaves of Virginia, for instance, could be domiciled and held as property in New York, after it had been declared by its statutes that slavery and involuntary servitude should no longer exist.

It is not contended that Congress has made any regulation of commerce among the States, or any hearing on the question, that it has ever declared, by any Act, that the wild game and fresh fish of the several States, when killed and reduced to possession, may be bought and sold, or that they have become the subject of any tax or assessment, or in any way recognized as property. It is entirely safe to affirm, that if Congress has any control over these animals in their wild state, or otherwise, the power of the State to regulate the trade and commerce of the States with each other is concerned.

But if the Game Act of this State can be considered a regulation of commerce among the States because it operates upon and destroys when brought into New York, what may be property in other States, it is not invalid for that reason. Such laws are not invalid, unless they come in conflict with the laws of Congress. This is expressly held in the *Renee* case above cited, and in the opinion of Chief Justice Marshall in *Gibbons vs. Ogden*, (supra), and *Wilson vs. Blackbird Creek Transit Co.*, 5 Peters, 251, in support of this position.

But this Act is not in any sense an Act for the regulation of commerce. It is purely a police regulation, as much so as any which can be affected at the health and safety of human beings. The wild animals of this State are as much within the keeping of the State's sovereignty as human lives. The very title of the Act declares its character. It is for the preservation of moose, wild deer, birds, and fish. Most of these animals, during the proper season, are articles of diet, and contribute, in no small degree, to the luxuries and even to the necessities of the table of every family in the land. The extirpation of either species would be little short of a public calamity and a considerable diminution of the general wealth of the State, and would be a serious injury to the interests of the husbandman until the summer rains and sunshine can ripen them for the harvest. The State would be deficient in the duty which it owes to its citizens, if during the breeding season, it allowed the work of destruction to go on. Inference, as a matter of State policy, has been too long delayed. The proper care had been exercised, there would now be no necessity of making any further provision for their preservation. They are abundant, but now extinct. A feeling of indifference, which has hunted almost every wild animal from our forests and every fish worth catching from our streams, is happily succeeded by the policy of active protection. The husbanding and nurturing the great source of wealth, involved in the preservation of these animals, is a proper subject of State regulation, and such a law is not in violation of the Constitution. It is not to be the difference of opinion as to the power of the State to legislate on a subject not an article of commerce, there never has been any doubt as to the control of the State in all matters of internal police. (See cases above cited. *Lutz's case*, 6 Greenleaf, 413; *Beal vs. State of Indiana*, 4 Blackf. 307; *Commonwealth vs. Kimball*, 21 Fed. 303; 1 Kent Com. 437, 1 Story on Com. Sec. 107; *Wardwell vs. Adams*, 7 Com. 383.) These laws den directly with foreign commerce, and from their very nature, often assert absolute control over it for certain purposes which are connected with the public welfare. Such are inspection laws. These authorize the detention and examination of merchandise and the imposition of marks and seals, and the taking of internal police. These laws den directly with foreign commerce, and from their very nature, often assert

on the immense reservoir between Altonna and Holdregeburg, and check the sport for those who have not time to run off to the lakes. About Hopedale, on the Broad Top R. Railroad and adjacent are abundant, as few hunters have been there. The birds are tame and the well to dogs.

ASATEUR.

A SUGGESTION.

NEW YORK, October 19th, 1871.

EDITOR FOREST AND STREAM.

An article in a recent number of your valuable paper, explaining how a three months' trip in Florida could be accomplished for \$100, will doubtless induce many invalids of limited means to visit that State this Winter, who will miss Mr. Beverly and Forest and Stream when they return in the Spring, for the good they have received indirectly from the article referred to. But there are many in need of recreation who can only devote a few weeks in Summer to it, at who would be very thankful for the information which could be given in a few articles, written in a similar manner, entitled "Three Weeks on the Black Water for \$50," "A Month on the Seashore for \$60," and "Six Weeks in the Adirondacks for \$25." You recommend "poor humanity" to go to the forest and stream, and doubtless do more or less good thereby, but I believe one single article, telling P. H. where to go, the expense of going, and what to take with him, will do more good than my editorials upon the benefits to be derived from such trips. Let us hear from your statistical commissioner again. Yours, G. G. We have those who have the knowledge required by our correspondent will impart it, and we shall cheerfully publish it for the benefit of our readers.—Ed.

GOOD HUNTING GROUND.

PLINT, Mich., October 23d, 1871.

EDITOR FOREST AND STREAM.

In reading your last issue I observed it in, as well as in previous numbers, that your admirers frequently forward you notes descriptive of localities, where bear and wild turkey can be found in great numbers, but in almost all instances the distance is so far removed from the haunts of man as to preclude the idea of an ordinary being ever having a chance to do them. Now I propose to point out a locality twenty-two hours' ride from your city, where as many as four black bear have been killed in one day by a single hunter, and twice as many turkeys, with a double fowling piece. I know where I speak. So I will close by saying if your friends want to get a glance at Bruin, without a long tramp in a dismal forest before getting to where the monarch can be found, come to Flint, Genesee county, Mich., sixty miles north of Detroit, on the Flint and Pere Marquette R. R. Bear have within the week been shot inside of the town limits. B. F. S. C.

A NEW TARGET INDICATOR.—The Belgian rifleman now use an electrical apparatus for indicating the score on targets so that the shot is signalled promptly the moment it strikes. The Belgian 'Franc-Tirour' in speaking of it says:—

"The work went on without a hitch; the markers were well trained in working the targets and the electrical apparatus, the register-keepers and officers in charge performed their duties admirably, and there were no serious mistakes. The bells and the electrical indicating dials, specially constructed for the Belgian Tir National, worked very accurately, and the whistles of the few companies that were heard, and the motives which actuated these, were well known."

THE WIMBLEDON COMPETITION.—The following are the competitors who stood highest in the recent firing at Bedford, Canada, (in which there were twenty-five competitors, for the Wimbledon team of next year).—Sergt. Bishop, Sixty-third; Bull, Sergt. Heals, First G. A. C. P. Sixty-sixth; Sergt. Corbitt, Sixty-third; Capt. Graham, H. F. B.; Pte. R. Nelson, Sixty-third; Ensign Fitch, Seventy-eighth; Capt. Peiser, Seventy-eighth; Sergt. Ward, Sixty-third; Corp. Paulin, Sixty-third; Lieut. T. Walsh, Sixty-third.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

Black Bass, *Micropterus salmoides*, *micropterus nigricans*.
Striped Bass, *Morone saxatilis*.
Gibbet, *Limnodynastes sultator*.
Sheepshead.

SOUTHERN WATERS.

Pompano, Trout (black bass), Sheepshead.
Snapper, Drum (gray species), Tailorfish.
Grouper, Kingfish, Sea Bass.
Rockfish, Striped Bass.

FISH IN MARKET.—Smelts are abundant and retail at from twenty-five to thirty cents per pound; king fish is scarce and brings twenty-five cent; striped bass is quite common and varies from twelve and a half to twenty-five cents, and fresh mackerel from New England is worth fifteen cents. The bill-fish, so called from its soft hook-like mouth, is unusually abundant; more so than it ever before was, yet it sells at ten cents per pound. Salmon trout from the Western lakes bring fifteen cents; whitefish from the same locality, bring eighteen cents; sheepshead from the coast of Virginia and Maryland twenty-five cents, and weakfish twelve and a half cents. Flounders are quite abundant and retail at ten cents per pound; blue fish at eight cents and the pretty strawberry-backs at fifteen cents. The principal species are profusely represented, and considering the season are sold at very reasonable rates.

—A correspondent in this city says: "I am pleased to inform you the bass fishing has been very good in Hell Gate for the last few days; my men have taken out several persons who have been very successful. Mr. Foley, of Washington market, caught eight weighing from ten to five pounds, and Mr. Wilson caught three last night, the largest weighing twenty-two pounds."

—The Anglers' Association of Boston, congratulated themselves on Monday evening upon the good effect of the law prohibiting the seining of smelt, and propose to take measures to stop the seining of mackerel.

NEW JERSEY—Barnegat Inlet, Oct. 26th.—Your correspondent was rather hasty in stating in his last that fishing was done for the season. I have this week to report two days capital sport among the blue fish and striped bass. On Monday with a favorable wind from the West and a fleet of some nine yachts caught not less than 900

blue fish weighing 4,500 pounds. Among the fortunate captains were Jessie Birdsall, 150 fish, Joel Ridgeway, 110, Joseph Ridgeway 200 blue fish, twenty-eight striped bass. On Tuesday forty-eight striped bass, average four pounds, one weighing eighteen pounds, caught off the point of the beach. Col. Parker and my humble servant, 150 blue fish; Joel Ridgeway sixty-one blue fish. This is not quoted with the intention of inducing parties to come and take a hand. As I before stated, it is only a chance day at this time of the year when we have such fishing. One party killed sixty-seven ducks on Great Sedge this week. We have been catching blue fish all the week, from fifty to 100 per boat. BEZOKER.

MASSACHUSETTS—Oct. 26th.—For the past two weeks large schools of whales have been seen from Noman's Land, Gay Head and Cuttyhunk. In Vineyard Sound large numbers were near the shores and the light boat of Sow and Pigs. Several first-class whalers took a whaleboat, with tow lines, harpoons, lances, bomb guns, and all the other necessary implements, and went in search of the monsters. The whales were seen off Canapisset and one—a sulphur bottom, was shot by a hoab line and sunk.

Another whale, a finback, was shot with a bomb lance near Cuttyhunk, and immediately sank.

An interesting four feet four inches in length, and weighing four hundred pounds, was caught off Seconnet Point, Mass., Wednesday last, and was on exhibition at Keith's fish market, Fall River.

SMELTING.—As evidence of the popularity and attraction of smelt fishing to our Eastern friends, it is on record that ninety-five smelters were counted on one wharf in Marblehead, Mass., at one time, on Friday of last week, successfully engaged in this exciting sport. Large numbers are reported as being caught at Marblehead, Gloucester, Hull, Peabody's Island, Hingham, Weymouth, Quincy Point, Inner Brewster, and at Spectacle and Thompson's Island and other places in Boston harbor. The marked increase of this excellent food fish affords so much sport to anglers when catching them in the lawful manner with hook and line, is attributed to the law introduced by the Massachusetts Anglers' Association and passed by the Massachusetts Legislature last Winter, making it unlawful to seine or net them at any season.

The spotting of ten was counted at one time Friday last. Four in all have been shot, and have sunk, but none have been recovered. These whales are attracted by the large quantity of English herring in the sound, upon which they feed.

—We collate the following from the *Cape Ann Advertiser*:—

TONNAGE.—The total number of vessels belonging to the district, up to September 30th, was 508, a total tonnage of 31,409.72 tons; of this number 404 are employed in fishing, 160 in coasting, two in foreign trade, and two in yachting.

FISHING MATTERS.—The shore mackerel fleet are still trying their luck at Cape Cod, but few mackerel have been taken the past fortnight, and the season is virtually over. As a whole it has been more successful than last in point of catch, but prices have ruled considerably lower and the stocks will average light, not much more than half of the fish having made a paying season's work.

The Baymen are beginning to come along from their second trips. Mackerel have been very scarce during the past two months. The early catch will turn out rather poorly. The early catch averaged very good fares on their first trips, but prices ruling low, light stocks were realized, and the failure of the Fall catch will cause a slim ending up of the season. Notwithstanding the small quantity of mackerel landed, the market continues dull and prices rule considerably lower than last season at this time. Bay's selling for \$10 and 28 \$8 50 per barrel.

The Grand Bankers are arriving from their second trips with good fares, which will advance over those brought in earlier in the season. The market for both Georges and Bank fish is quite active, and in view of the light catch prices are steadily advancing, sales of Georges having been made this week at \$8.78 per qtl., and Grand Bank \$6, with a good prospect of still further advance. Should the vessels now absent at the Banks bring in full fares, the season will close much more auspiciously than was anticipated a few months since.

—A shoal of upwards of one hundred seals were at play in the waters of West Quoddy Bay last week.

The salt bankers are arriving from their second trips, averaging very good fares.

—The fishing fleet from Orleans has met with indifferent success this season; in fact throughout the Cape. The average catch in most localities will not amount to \$50 per share.

—The prolonged neglect of Great Britain to notify this government whether or not Labrador is considered a part of the Dominion of Canada or of the colony of Newfoundland, is causing great embarrassment to business, and especially to fish dealers, as on the decision depends the settlement of the question whether or not fish brought from that country shall be admitted free of duty. A Washington dispatch says the question has been before the English cabinet, but thus far no solution has been reached. The United States government is willing to accept the decision of England on the question, but it just now waiting to know what the decision will be. In the meantime the fish dealers are unable to know just where they stand with reference to fish brought from Labrador, and the Treasury Department cannot act until some notification is received from the State Department.

—A party of six Concord fishermen in two and a half days last week took from Suncok pond in Northwood 200 pickerel (one weighing five and a half pounds), 200 hornpouts and 150 pounds of perch.

—A singular blindness prevails among the salmon in York River, which flows into the Gulf of St. Lawrence, so that the fishermen can drop down in a birch canoe right over the fish, and whip them out with a gaff.

—Codfish sells at one cent per pound in Halifax, Nova Scotia.

—A curious fish caught by Mr. Wees, of Sarnia, in April last, was described in these columns. Since then it has been examined by several naturalists, who declare they have never seen anything like it. A drawing of it has been sent to the British Museum.

—Halifax, last week, rejoiced in a mackerel measuring nine feet in length and weighing over 500 pounds. This wonderful fish was caught near the mouth of Halifax harbor.

—The mackerel caught at Prince Edward's Island is now twice as great as in former years.

—Twenty thousand barrels of porgies were taken by the porgy steamers in and about Provincetown week before last. Fortunes are being made by this one harvest of the sea. A factory is in Rhode Island and near Newport, where there are two large schooners, chartered as they are needed by the fishermen.

—There are queer fish in Galveston Bay. Our readers have heard of saw fish? Well, our Galveston correspondent J. L., who is a dealer in nets, and seines, and other devices for toilers of the sea, sends us the following dimensions of a "saw" that was recently captured there in one of his seines by two fishermen. "It was eighteen feet long, three feet wide, two feet through, saw four feet in length, weight 1,000 pounds, and it took eight men to put him on a wagon. It was exhibited, and is now skinned and stuffed and for sale. Singular to say not a mesh of the seine was broken."

Mr. L. says he can send us still stranger fish stories, all strictly true, if he thought we could only believe them. We are convinced that the waters of Galveston Bay will at some day, not far distant, afford a rich and most attractive field for the United States Fishery Commission.

—The Boston Traveller tells the following story of an old gentleman who passes his summer days at a favorite resort in Boston harbor.

"The other morning before four o'clock he took his fishing rod and basket and went gravely the does everything gravely down to the landing, to fish an hour or two before breakfast. The sport was not over-exciting, and after he had caught one smelt he took a short nap, the smelt meanwhile having been deposited in the basket. Another bite came, and another smelt was caught and placed in the basket. "Two," says the old gentleman, laconically, but to his surprise his first fish was gone. He wondered a little, but took another nap. Then caught another smelt. "Two now," said the old man; but wonder again, the second fish had disappeared. He tried one more nap with the same result, and after catching his fourth determined to watch his basket while the fifth smelt was biting. The bait was discovered, and an immense rat, about the size of a wharf rat—not a human wharf rat, but a rodent. He had been feeding during the pleasant sleep of the ancient fisherman, and no doubt went off to tell his friends what a kind old fellow had been roosting on the landing.

The Horse and Course.

—The Excelsior Stake and Prospect Park Colt Stake took place at Prospect Park Fair Grounds last week. For the first event there were twenty seven entries, each to pay \$50 entrance, and \$100 October 1st. Seven started, Ryder's b. c. Killarney, Steele's b. c. Milton Medium, Wheaton's b. f. Ledt, Bachman's h. f. Glenrose, Cecil's c. c. Quartette, Finney's c. b. Frank Ellis and Marton's f. Alameda. First heat won by Killarney in 2:41. Milton Medium second. Ledt third. Second heat won by Killarney. Time—2:43. In the Prospect Park Stake there were thirty-seven entries, only five of which complied with the conditions to start; these were Burks's McClure and Marathon, Simmon's b. f., by Geo. Wilkes, Kingswold's b. c. Antioneer, and Van Wyck's b. f. Belle of Griss. Won by the Wilkes filly in two straight heats. Time—2:50, 2:50.

—The second Fall meeting of the Fleetwood Park Association began last Saturday. There were two races, the first being for horses that never beaten 2:30. Each had one entry and eight starters, including Little Dan, Gill Edge, Cheston, Zephyr, T. G. Stevens, J. N. Mansuay, Brown Prince, and Pauline. Zephyr won in three straight heats. Best time—2:34.

—The trotting at Fleetwood Park on the 24th ult. was well contested. After several close contests Vanity Fair won the 2:29 race, but not before six heats were run. Best time—2:26. For the purse of \$500 the best 2:44 horses competed, but W. Sargent's Entledge was declared victor. Best time—2:33.

—The second Fall meeting of the Fleetwood Park Association was brought to a close last Monday, with three magnificent contests, fast time being the order of the day. The first race for horses that never beaten 2:34 race. The first heat Everett Kay had won two heats, and Barney Kelly and Music one each. These three appeared to decide the race. Music developed great speed, and won in two heats in the fast time of 2:30, 2:25.

The first regular race of the day was for a purse of \$500, for horses that had never beaten 2:50, which had seven entries, and the following five starters, viz., Rutledge, Privateer, Catkill Girl, Melissa, T. C. Gordon, and Alexis. The race was no betting as Rutledge was known to possess more speed than any of his competitors, and he won in three straight heats. Best time, 2:33.

The great race of the day and meeting was for a purse of \$3,000, and of the seven entries five came to the post. These were Thomas L. Young, Kansas Chief, Young Bruno, Sensation and Hopeful. Speculation on the race was quite heavy, and Hopeful was a great favorite. The first hat was won by Young Bruno in 2:24, but Hopeful won the other three. Best time, 2:21.

—A trot for a purse and stake of \$400 came off last week at Fleetwood Park. The contestants were Lady Dahman, Frank Wood and Bully Lewis. The contest was very spirited, and was won by Frank Wood in four heats. Time—2:31, 2:31, 2:28, 2:29.

—The first Pair of the Hudson River Agricultural Association opened last Tuesday, about 3,000 persons being in attendance. The racing was very fine.

The first race was for three minute horses for a purse of \$600; to the first \$350, to the second \$175, to the third \$75. Catkill Girl, Rutledge, George F. Smith and Alexis. The Rutledge won the first and fourth heats, Catkill Girl the second and third and George T. Smith the fifth and sixth. Catkill Girl was distanced in the sixth heat. Best time—2:28.

The second race was for 2:26 horses. May Bird, Lotie, Rosa Lonberg, Adelaide, Farmer Bane, Sweetmeat and

Bonner started. The first, third and fourth heats were won by Bonner, and the second by May Bird. Best time—2:30.

The Hudson River Fair was attended by over 6,000 on the second day. The first trot, for a purse of \$1,000 for 2:40 horses, brought out four competitors, but Lady White won in three straight heats. Best time—2:35. The next race, for a purse of \$1,250, was contested by four horses, and was won by Nellie Walton in three straight heats. Best time—2:33.

A vast crowd attended the last day of the Fair of Hudson River Agricultural Society. The first trot, for horses that never beat 2:50, was won by Catskill Girl in three straight heats. Best time—2:34. The second race, for a purse of \$1,500, for horses that never beat 2:37, was won by Tom Kicker in three straight heats. Best time—2:26.

About 8,000 people witnessed the third day's races at the Weldon (N. C.) Fair. The first race (trotting) was won by Stratton's Susie Kurtz in 2:33, the best time ever made in this State by four seconds. In the second race Herod's Henry Clay won. The third race was won by James Grant's Bill in 2:39. In the running race Dozier Hope went half a mile in fifty-three seconds.

The first regular meeting at the Gentlemen's Driving Park, in Bergen County, N. J., was held on the 21st. The first race was for a purse of \$700, for horses that have never beaten 2:35. The entries were A. B. Snyder's s. v. Andrew, Thomas Lee's jr. g. Judge Bede, J. J. Anderson's h. m. Fanny W. J. S. Snellen's blk. g. Frank, and J. Wilson's hr. m. Mand. Snyder won the first purse in 2:42, 2:43 and 2:43. The second was for a purse of \$800, for horses that have never beaten 2:35. The entries were ten entries. Mr. I. Gilbert's s. g. Harry Gilbert, came in first, and A. A. Einstein's blk. g. Black Crook, second.

The races at Paterson last week were quite spirited. The first for a purse of \$700 for three-minute horses was won by Andrew in three straight heats. Best time—2:42. The second race for a purse of \$500 brought eight to the starting post. Won by Harry Gilbert. Best time—2:38.

The racing of the Gentlemen's Driving Park Association, near Paterson, New Jersey, was continued last Friday. The first race, for a purse of \$700, for horses that have never beaten 2:40, was won by W. S. Tom's b. g. Phil O'Neil, Jr. The second race, for a purse of \$900 for horses that have never beaten 2:29, gained by John Splan's b. m. Bella. The race for all teams for a purse of \$500 was won by William B. Best time—2:46.

The unfinished 2:33 race, at the Rochester Park, was won by Colbourne last week; the 2:45 race by Bay Jimmy, and the 2:38 race by Charlie Howe.

The trotting at the West Side Park last Tuesday was witnessed by 500 persons. The first trot was for a purse of \$400, for horses that never beat three minutes; mile heats, best three in five, in harness; \$250 to the first, \$100 to the second, and \$50 to the third horse. Nine horses started, but Thomas' horse Marzio Daly won in three straight heats. Time—2:49, 2:43, 2:46. The second race was for a purse of \$600, for horses that never beat 2:40; mile heats, best three in five, in harness; \$550 to the first, \$175 to the second, \$75 to the third horse. Manse, Adeline, Phil O'Neil and Nelly Murray were the contestants. The former won in three straight heats. Time—2:42, 2:42, 2:43.

At Washington Park, Providence, the race for 2:50 horses was won by Johnnie Balcock, Hamlet second and Harry Whitford third. The race for 2:38 horses, purse \$400, was won by Ned Forrest, Proves, second, Belle of Hudson third. Time—2:36, 2:37, 2:38.

The most exciting event of the past week at Deerfoot Park was the contest between American Girl and Copperbottom for a purse of \$1,000. The latter won the first heat in 2:38; the former the next in 2:47; the one following in 2:39, and the fourth in 2:38. Mr. J. M. Lovell offered to match American Girl against Goldsmith Maid, any other trotter or pacer in the country for \$2,500 a side, mile heats, best three in five in harness.

A large crowd witnessed a trot at Boston last Saturday afternoon by Dan Mace's stallion Jay Gould, against Goldsmith Maid's time of 2:14. The following is the result: First heat..... 2:21 Second heat..... 2:21 This horse was withdrawn at this point, having scratched himself on the second heat.

The races at the Pinlico (Baltimore) course opened last week with a mile dash for all ages not winners since July 1—\$350 for the first horse, \$50 for second. There were fifteen entries—Harry Bassett, Gray Planet, Lottie Moon, Resolute, Carina, Rosebud, First Chance, Keene Richards, Hattie O'Neill, Chief Engineer, Boz, Audubon, Frank, Stanford and Jury. Harry Bassett came in a winner, Gray Planet second and Lottie Moon third. Time—1:44.

The second race was the Dixie Stakes for three-year-olds, two miles, \$500 subscription, \$100 for each. Colonel MacDaniel to add \$2,000; the second horse to receive \$1,000 from the Maryland Jockey Club; the third horse to receive \$500 out of the stakes; closed January 1, 1878, with sixty-eight nominations. The value of the stakes to the winner is \$1,300. The following horses started—Picolo, Rutherford, Brigand, Aaron Pennington, Paladui, Vandallite, Dublin, Moses Parson, Judge Thurman, Madge, Josie B., Carliha, Bonaventure, Ed. Breaker and Grinard. Five started. Won by Vandallite, Madge second, Brigand third, Rutherford fourth. Time—3:52.

The third event was a two-mile heat for all ages; \$500 to first horse, \$100 to second. Mate, Bessie Lee, Bannerette and Colouel Nelligan started. Sandford's Mate won in three heats. Bannerette second, Bessie Lee third. Time—3:57. Then came a hurdle race, two miles over eight hurdles; \$400 to first, \$75 to second and \$50 to third. Five started. Won by Limestone, Daylight second, Moonstone third, First Chance fourth, and Ausine fifth. Time—3:59.

The second day of the Baltimore races was an exceedingly brilliant one, as the contestants embraced the best horses in the Union. The first race, for two-year-olds, closed with twenty-eight nominations. Eight horses started, as follows:—P. Lorillard's James A.; H. P. McCurt's Chesapeake and Calvin; E. A. Clabaugh's chestnut colt by Vanhall; J. W. Hunt Reynolds's Antella; Colonel McCduie's Betty Ward colt; A. Hancock's Rhadamanthus, and M. H. Sandford's Finewick. Finewick was the win-

ner by two lengths, Antella second, James A. third, and Rhadamanthus fourth. Time—1:45. The second event was a selling race for all ages; one and three-quarters miles; horses entered to be sold at auction immediately after the race. Purse, \$400 to first horse, \$100 to the second. The starters were—Prenkness, carrying 125, and not to be sold, having 7 pounds excess. Cariboo, 108 pounds; Allie Hunt, 104 pounds; Galway, 103 pounds; Resolute, 103 pounds; Carliha, 87 pounds, and Rauche Wa-Me, 89 pounds. The horses were started at the quarter-mile pole, and got off well together. Prenkness won the race by a neck, Resolute second, Galway third, and Cariboo fourth. Time—3:08. The third event was a mile-heat race for three-year-olds that have not won a two-species race at Jerome Park, song breed, Cariboo, or Baltimore; purse, \$400 to first horse; \$100 to the second. Ten horses started. Botany Bay, Larry Hart, Lottie Moon, Josie B., Bettie Clapham, The Hoaxer, Boz, Paladui, Judge Thurman, and Rutherford. Lottie Moon won the heat by two lengths, Josie B. second, Botany Bay third, Boz fourth, Judge Thurman fifth, Rutherford sixth, Larry Hart seventh, The Hoaxer eighth, and Paladui and Bettie Clapham distanced. Time—1:45. The fourth race was a free handicap sweepstakes for all ages; purse, \$400 to first horse, \$100 to the second, \$50 to the third, Botany Bay fourth, Boz fifth, Rutherford sixth, The Hoaxer seventh, and Larry Hart distanced. Time—1:45. The fourth race was the Gentlemen's post stakes of \$25 each, play or pay, welter weights; 1 1/4 mile; the club to add \$400; second horse to receive stakes to the amount of \$100. The entries were—Limestone, Robert Carter, rider; Fadladec, R. H. Dugh, rider; Belmont Purdy entered and rode Dublin. Limestone won, coming in one length ahead of Fadladec, with Dublin four or five lengths behind the latter. Time—2:19.

The third day of the Baltimore races was equally interesting as the previous ones. The first race was for a purse of \$400, one mile, for two-year-olds; the winner of the Central Stakes to carry five pounds extra. The race was won by Aristides, the Betty Ward colt second, and Antella third. Time—1:44. The second race was a free handicap sweepstakes for all ages; purse, \$400 to first horse, \$100 to the second, \$50 to the third, Botany Bay fourth, Boz fifth, Rutherford sixth, The Hoaxer seventh, and Larry Hart distanced. Time—1:45. Grinsted also won the second heat and the race. Time—1:45. The fourth event was a match race for \$100 a side, between Captain Moore's O'Neill and D. Desmond's Mollie Darling. O'Neill won by four lengths. Time—1:46. The fifth and last race was a grand steeplechase for post stakes; about two and a half miles; closed with eight starters, but only two started—namely, Trouble, entered by D. Vanevick, and Austrine, entered by Lawrence and G. Lorillard. Trouble took the lead at the start, and gradually increased the gap to about one-eighth of a mile, going under a strong pull. It taking the last hurdle, below the grand stand, he stumbled and threw his rider over his head. Austrine then passed him, and, before Trouble's rider could remount, was about fifty lengths ahead, and won the race in a canter. He was very exciting. Time—6:34. The rider of Trouble had his collar-horn broken and his head cut by the fall, but was not seriously hurt. In the second race, two and a half miles, Ballancked made the fastest time on record, beating Helmbold's time at Monmouth by one and a half seconds.

The last day of the Baltimore races was the best attended of any. The first race of the day was the Breckridge Stakes, for three-year-olds; two miles; \$500 subscription; half forfeit; the club to add \$1,000, of which \$500 to the second horse; closed with eighteen nominations.

The starters were three in number—Sandford's Brigand, Lewis & Co.'s Vandate, and Chamberlin's The Hoaxer. At the start Vandate immediately went in front, and came in an easy winner by fully ten lengths, Brigand second, and The Hoaxer a bad third. There was really no contest in the race, Vandate making the race to suit herself and winning in 2:14. Time—2:14.

The second race was for a handicap purse of \$400, for all horses that have run during the meeting; one mile and a quarter; weights to be announced immediately after the last race on the third day; acceptances to be made at that time. Eleven horses started as follows:—P. Lorillard's Stanford, 4 years, carrying 95 pounds; Bannatyne's Audubon, 4 years, 101 pounds, and Stockwood, 6 years, 93 pounds; Carina's Paladui, 3 years, 75 pounds; Bethune's Rosebud, 4 years, 87 pounds; Weldon's Radi, 5 years, 111 pounds; Wilson & Co.'s Bettie Clapham, 3 years, 75 pounds; Davis' Fadladec, 7 years, 111 pounds; Deauhe's Cariboo, 4 years, 87 pounds; Cottrill's Lottie Moon, 3 years, 95 pounds, and Chamberlin's The Hoaxer, 3 years, 75 pounds. Kadi won, Audubon being second, Rosebud third. Time—2:11.

The third race was the Bowke Stakes, for all ages, for \$2,200. Five horses started, Bowke's Picolo, 3 years, carrying 95 pounds; Lewis & Co.'s Bessie Lee, 5 years, 111 pounds; Jennings' Silent Friend, 5 years, 114 pounds; Hunt Reynolds' Whisper, 4 years, 108 pounds, and Burton's Jack Frost, 4 years, 108 pounds. The race was won by Jack Frost, who took the second and third heats, Bessie Lee winning the first heat. Best time—7:33.

The following are the winning stables:—

THE WINNING STABLES.
M. B. Lewis & Co..... \$17,800
A. H. Sandford..... 3,300
A. M. Burton..... 2,450
D. McCduie..... 1,450
W. Cottrell..... 1,100
L. A. Hitchcock..... 850
H. Lawrence..... 800
W. Jennings..... 575
Thomas Fryer & Co..... 500
H. Weldon..... 400
H. P. McCurt..... 400
Lawrence & G. Lorillard..... 300
T. Moore..... 250
J. W. H. Reynolds..... 100
T. B. & W. H. Davis..... 100
A. B. Brown..... 100
A. P. Green..... 75
A. Belmont..... 50

The noted trotters Occident, Judge Pullerton, and Gloster have been entered for the \$8,000 purse race which is to come off at San Francisco November 7th.

A great four-mile race for \$25,000 is to come off Nov. 14th under the auspices of the Pacific Jockey club. Thad. Stevens, Joe Daniels, Katie Pense, Hubbard, Henry, Alpha, Hocking, and Hardwood have entered. Other parties East and in Oregon have sent entries and money by mail and telegraph.

The Newmarket Houghton meeting began in London on the 26th. The race for the Criterion stakes was won easily by Garterly Bell by three lengths. Lady Love coming in second, the same distance ahead of Balfie. The betting just before the start was 8 to 1 against Garterly Bell, 14 to 1 against Lady Love, and 5 to 2 against Balfie. There were nine starters.

At the Carlton Park races, at Toronto, last Saturday, the attendance was good, Lieut-Gov. Crawford, and many prominent sportsmen being present. The hurdle race was won by Heleu Bennett, Frank Hans being second. The haudicap race, for Dominion-bred horses only, was won by Jim Christie. The steeplechase was won by Gladiator. The next race was a heat race, the second heat of which was won by Moonlight.

New Publications.

Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all such works for editorial rooms will be promptly acknowledged in the next issue. Publishers will confer a favor by promptly advising us of any omission in this respect. Prices of books inserted when desired.

BOOKS RECEIVED.

PRAIRIE AND FOREST. By Parker Gilmore. N. Y.: Harper.

Our friend Parker Gilmore is just the man to proudly and discreetly bear the name "bible." His stories of, game and fish, together with a full account of the game of North America, a concise history of the habits, habits and peculiar traits, make this a work of much value to every American sportsman. One seems to work with him the mighty prairies of the Northwest, as well as the numerous meadows of smaller game. He is as familiar with the Hudson Bay country as the Adirondacks. He knows the red and gun, and we can give to our many readers no better recommendation of the value of this book than to say in their good faith that no sportsman's library is complete without Gilmore's "Prairie and Forest."

LOSING TO WIN. By Theodore Davies; Sheldon & Co., New York, Publishers.

This is a tale of American social life, which deals with the prominent tubers on the fat face of our sociology. The special correspondent, the strong-minded woman—if only declamation for ideal wrong entire her to such a term—and kindred subjects are sketched with fluency if not with depth.

LINLEY ROCHFORD. By Justin McCarthy; Sheldon & Co., New York.

Any work from the pen of Justin McCarthy is sure to possess force and individuality and to have a purpose in view, so that readers are not only regaled with graphic writing, but also presented with a picture of life founded on the most pure and healthy moral sentiments. The present work is no exception to the rule, so readers will find it a pleasure to follow the career of its personages.

MY LIFE ON THE PRAIRIES. By GUL. G. A. Custer, U. S. A. Sheldon & Co., New York, Publishers.

This book is a compilation of the various sketches published by the author in the Galaxy from time to time, the only changes being the addition of some Indian portraits and that of the General. The style is concise and informal, there being no effort at what is called "fine writing." This is an advantage in works of this sort, for persons prefer the simple narrative to any literary effects. The tales are interesting, as they give a graphic idea of Indian character and mode of warfare, and a sketch of the captivity of some pale-faces spaces them with romance. The remarks on the best mode of dealing with the red men and the causes that lead to their taking to the warpath occasionally are apropos, and give us an idea of the rascallies of the Indian agents.

THE MAGAZINES.

The Galaxy for November contains a capital assortment of concise articles which are both varied and interesting. "Dean Stanley," "The American Woodlands," "Salmon Fishing in Canada," "The Jewish Passover," "Pentecost," and the "Barry of Great Singers," which are only a few of its table of contents, show the excellent material from which one may call mental pleasure.

We find the following pleasant bit in the article on salmon fishing in Canada, and think it too good to be lost to such of our readers as may not take the magazine, especially as it is thoroughly characteristic of enthusiastic anglers:—

"There is a story of a Highlander whose wife was seriously ill, but who tempted by the lure play in which the river was, had slipped down by her bedside, and walked down to 'take a cast or two.' He had just risen and looked a splendid salmon, which was affording him magnificent sport, when a faithful retriever came running toward him, wringing his hands and crying, 'Fudge, Irid, the mistress is deoin—deoin—deoin!' 'Ah, about ye dillan say! I'm away back, however.' The words were scarcely out of his mouth when, as if to punish his inhumanity, the salmon flew himself five feet and struck the retriever on the head with a bar of silver, splashed back in the water and broke the line. 'Did ye ever see the like of that? His judgment,' was the laird's exclamation, as he hurried back to his wife's bedside in season to receive her dying blessing. Great and sincere was his grief, and many friends and neighbors called to console him. His old comrade in the Crimea, Major Macallister, ministered to his grief, and said, 'I'll give ye a guide wife, Irid.' The laird answered with a sad shake of the head. 'But we're a dust, Irid.' 'Ye're the one who's deoin deoin deoin,' said the retriever, in a low response. 'And ye've that her, Irid.' At this the laird brightened up. 'It's verra true, Macallister; but did ye hear of the bonnie lass the news of it had lost? It's the morn. They men, that was a famous tussle!'

MARRIED.

SANFORD-BAXTER.—On Wednesday, October 21st, at Trinity Church, Rutland, Vt., by the Rev. Wm. A. Harris, H. D., E. H. HANSEN SANFORD, of New York, to MARY W., daughter of JOHN R. BAXTER, Esq., of Rutland.

It is asserted that five hundred pounds of frogs are consumed daily in New York. They are caught chiefly in Canada, and are sent here in salt sacks, flat flat on the floors of freight cars, and containing each about a hundred frogs. An average of five per cent die in the train. Each female frog is said to spawn over a thousand at a time, but no more than fifty of that number live to attain full growth. They are often eaten by their own species, or by birds and snakes. They are usually taken with the hook, but bite at it only when their heads are above water. A bait is often unnecessary. The frog-eater frequently brings his hook under the jaw of the frog without creating alarm, and jerks its point into the flesh. He is then easily lifted into the boat.

J. & W. TOLLEY'S BREECH LOADING GUNS.

Manufactory, Pioneer Works, Birmingham, Eng.

These guns are built with every improvement for American sport, and are the cheapest guns of guaranteed quality and shooting powers sold in the United States. They are made in six qualities, each gun being branded with one of the under mentioned names, which denotes its quality:

- Pioneer, \$65 Gold. Tolley, 90 " Standard, 115 " National, 140 " Challenge, 180 " Paragon, 225 "

Any one of the above may be selected with confidence, as no gun bears our name which we cannot thoroughly guarantee in every respect.

Send for reduced illustrated descriptive price list. BRANCH HOUSE, 29 Maiden Lane, Corner Nassau street, New York.

WALL STREET A 48 Page pam. various methods of operating with small sums of money. Sent free by H. HUCKLING & CO., bankers and brokers, 72 Broadway, N. Y., Oct. 22

HAVANA LOTTERY. Drawings every 17 days. \$50,000 one prize of, \$100,000 one prize of, 50,000 One prize of, 25,000 One prize of, 10,000 Two prizes of \$5,000 each, 10,000 Ten prizes of \$1,000 each, 40,000 Eighty-nine prizes of \$500 each, 45,500 Six hundred and fifty-five prizes of \$300 each, 165,500 Circulars with full information, sent free. Tickets for sale and prizes cashed by P. C. DEVLIN, Stationer and General Agent, 30 Liberty street, New York.

Remington's Long Range, Breech Loading Target Rifle.

No. 2. Diagram of Second target made by Henry Fulton, Civil Engineer, Lieut. 1st Regt. N.G.S. N.Y., of Brooklyn, N.Y., Aug. 14th, 1874, with a Remington Breech Loading Long Range Target Rifle, No. 23 inch barrel, 44-100 calibre, wt. 10 lbs., cartridge containing 30 grains powder, 550 grains bullet. Price of rifle, \$150, including photo-graphic stock, vertical gauge, and wind gauge fore sight; extra for spirit level, \$5; extra for dial for fore sight, \$2.50 each; engravings, \$1.50 per 100.

Special Telegram to "Commercial Advertiser," Montreal, Can., Aug. 14, 1874. "Remington alone I have taken one first and one second prize to-day at 800 and 600 yards. In one match I made a clean string of seven bullseyes, and in another fifty-four out of a possible fifty-six; and an ahead for the aggregate. I carried took second and Grand fourth prize in one match at 500 yards. Three of the first four prizes taken by Remington rifles. To-morrow we shoot the small-bore championship match." (Signed) HENRY FULTON.

AGENTS FOR THE SALE OF THE CELEBRATED CENTRAL-FIRE BREECH-LOADING GUNS MADE BY

James Purdey, No. 314 1/2 Oxford Street, London.

Desire to inform Dealers and Sportsmen who may wish to purchase these Guns, untramped for Finish, Durability and Power, that they have a supply of 10 and 12 bore, and will import special guns to order at short notice. They have also in store the largest and finest assortment in the United States of Breech-Loaders made by R. M. REILLY & CO., WESTLEY RICHARDS, W. & C. SCOTT & SON, W. GREENER, P. WEBLEY & SON, and other well-known English makers, besides those of American makers. An extensive assortment of everything appertaining to the use of Breech-Loaders. Also, Bussell's Patent Gyro Pigeon and Trap, a perfect substitute for live pigeons in shooting matches. SEND FOR PRICELIST.

Hegeman's Patent Portable Folding Boat.

For use as LIFE-BOATS, LIGHTERS, Dingies, Dories, on board Steamers, Yachts and other Vessels. Also for Sportsmen, Tourists, Trappers, Exploring Expeditions, Parties camping Cut, &c. These safe and perfectly portable boats will admit of the roughest usage. A very light, strong and durable frame of ash or other tough wood, with canvas cover, and can be folded in one-eighth space, for transportation as carried in a light boggy wagon, on horseback, or by single person, for use in three minutes' time. Boats neatly folded, packed and shipped by express anywhere at same rate of freight as ordinary goods.

JOHN HEGEMAN, Ballston Spa, Saratoga Co., N. Y.

POULTNEY, TRIMBLE & CO. FOR SPORTSMEN.

Breech and Muzzle Loading GUNS, And SHOOTING TACKLE. STOCK UNSURPASSED. QUALITY GUARANTEED. Prices Low, to Suit the Times. Send for Descriptive Price List.

No. 200 W. Baltimore St., BALTIMORE, MD. \$10 to \$1,000 Invested in Stocks and Bonds, and other securities, on a month. Pamphlet free. Tuinbridge & Co., Bankers, 2 Wall street, N. Y.

Climate Creaser, HALL'S PATENT Creaser, Plain Creaser. Price \$2.75. SHELLS. Price \$2.25. In getting five size of shell used. For sale by Gun Dealers. Send for Circular. Address: HALL & CO., Lancaster, Penn.

Pritchard Brothers, No. 94 Fulton St., N. Y. ALL KINDS OF Fishing Tackle Made and repaired with the utmost despatch. ALSO, CONSTANTLY ON HAND THE BEST SELECTION OF TROUT AND SALMON RODS, REELS, LINES AND FLIES. Medals awarded at the World's Fair and American Institute for our superior Artificial Flies.

GEO. C. HENNING, Clothier, Tailor, and Furrier, No. 410 SEVENTH STREET, N. W., WASHINGTON, D. C.

HENRY GARDNER, M. D., HAS CONSTANTLY ON HAND and for sale, medicines adapted to the cure of all diseases. Dealer in sporting dogs of every variety. Dogs trained for reasonable compensation. No. 111 South Fifth ave. N. Y. Oct 22

Miscellaneous.

This arm was exhibited in competition with over one hundred different systems, American and European, to the Board of United States Officers, appointed by Act of Congress, 6th June, 1873, for the purpose of selecting the best arm for the service, and of which Brig. Gen. A. H. Perry was President. It successfully passed through all the tests. The following is the report of the Board: "Resolved, That the adoption of magazine guns for the military service by all nations is only a question of time; that whenever an arm shall be devised which shall be as effective as a single breech-loader, as the best of the existing breech-loading arms, and shall at the same time possess a safe and easily manipulated magazine, every consideration of public policy will require its adoption."

Resolved, further, That the experiments before the Board with the Ward-Burton Magazine System have so impressed the Board with the merits of this gun, that they consider it as more nearly fulfilling the conditions here specified than any other rifle by them or of which they have any knowledge, and it does recommend that a number of magazine muskets be made on the plan for further trial in the field." (See Ordinance Report.)

We are now receiving orders for these guns, and due notice will be given in this paper when they are ready for delivery.

The following is our scale of prices: Special Magazine for large game, starting from 3 to 8 cartridges, 70 to 85 grs. of powder, 350 to 400 grs. of lead, 8 to 10 lbs. weight, from \$60 and upwards, according to finish. Special Long-range Magazine Rifle for Creedmoor shooting, 90 grs. of powder, 480 grs. of lead, carrying 3 to 8 cartridges, weighing 10 lbs. from \$100 and upward. Magazine Rifle for general use, carrying 3 to 9 cartridges, 60 grs. powder, 350 grs. lead from \$40 and upward. Single Breech-Loader, Creedmoor shooting, for long range, 90 grs. powder, 480 grs. lead, from \$40 and upward. Single Breech-Loader for general use, 70 to 75 lbs., 60 grs. powder, 350 grs. lead, from \$30 and upward. The calibre of all our rifles, unless otherwise ordered, will be 45-100 in.

All communications should be addressed to W. G. BURTON, Care Ward & Co., 84 Wall St., N. Y.

THREE NEW BOOKS BY

Gen'l G. A. CUSTER, JUSTIN MCCARTHY, THEODORE DAVIES.

Gen'l G. A. CUSTER'S GREAT BOOK, MY LIFE ON THE PLAINS!

One vol. 8vo. Printed on laid tinted paper and elegantly illustrated and with fancy black and gold stamping. Price \$5.00.

This book by our greatest Indian fighter, containing facts stranger than fiction, will be eagerly welcomed by thousands of readers.

JUSTIN MCCARTHY'S BRILLIANT STORY, LINLEY ROCHFORD. One vol. 8vo. cloth, fancy book stamping... \$1.75 paper... 1.00

LOSING TO WIN! A Novel by THEODORE DAVIES, one of the brightest of the sketch writers of the New York dailies. One vol. 12mo. paper, cloth... \$1.50 paper... 1.00

RECENTLY PUBLISHED. THEODORE MITTON'S NEW NOVEL, TEMPEST-TOSSED!

One vol. large 12mo. tinted paper. Price, \$1.75. THE TEMPEST-TOSSED is a novel of the highest quality. Mr. MITTON wields a very graceful pen, and possesses a vivid imagination.

THE WETHEREL AFFAIR! By Col. J. W. DeForest. \$1.00.

Selected.
THE SWALLOW'S FAREWELL.

WITH songs and flowers we follow the Spring,
Queen Spring, as she flies to her distant lands;
Over land, over sea, our restless wing
Tarrys not, save where her footstep treads.

The sunbeams flash on our flitting breasts,
To lighten our beautiful Mistress' way;
And, when for a moment her feet foot rests,
Over her head we hover and play.

Men cannot see our beautiful Queen,
But they think Spring follows wherever we fly;
And they cry to us—Stay, that the woods may be green!
And—Rest, that the Winter may not come night!

But the beautiful Spring is flying, and we
Must fly with her—fly with her over the land;
And follow her—follow her over the sea,
For her guard, in a vast, invincible band.

For see! the Autumn with fiery hand
Is touching our haunts in the tall green trees;
And ruthlessly soon his flaming brand
Shall hid our bright homes flare in the breeze.

And soon the armies of Winter shall march,
The legions frosts, o'er the lands below;
Whose feet the fountains and rivers perch,
Whose hands hurl arrowy hail and snow.

Poor men! your beautiful Spring shall die,
Stricken and slain by the Winter, if we
Did not shield her flying, and with her fly
Where never a Winter's breath may he.

But fear not, far tho' she fly from you,
Long tho' the tyrant Winter reign,
For his forces vainly her feet pursue,
And safe shall she come to you yet again.

Far in the lands where you weep her gone,
She shall gather armies and mighty bands,
She shall borrow the arrowy shafts of the sun,
To drive the Winter out of your lands.

The west wind and south shall her chariot be,
When with force invincible on the track
Of the pallid Winter she march, and we
And Summer and joy in her train come back.

For Forest and Stream.

Santa Monica.

RANCHE LIFE IN SOUTHERN CALIFORNIA.

BY WM. M. TILESTON.

[Continued.]

Shortly after midnight our party, all but Don Pablo, took their leave, but most of the dancers remained until daylight, and some even stayed to breakfast. Colonel Forrester leaving taken charge of the spring wagon, which had conveyed his wife and daughters, I was reduced to the companionship of a sleepy vaquero for my ride. Perhaps the best I could have had under the circumstances, as it involved no conversation. The night, like all nights in Southern California, was very cool, almost cold, indeed, and brilliant in starlight. The great mountains in their deep shade looked weird and strange. The far off sea horizon, indicated only by a line of light in the West, appeared illimitable in distance. The dark shadows of the oaks dancing on the sward as their branches were swayed by the night wind, seemed ghastlike. The mournful wailing of the coyote as he prowled around a sheep fold, the occasional hoot, hoot, of a night owl, and the rapid pounding of the horses' feet on the hard road, were the only sounds. I followed closely behind the wagon, where my little *comradita*, well wrapped in shawls, was riding beside her father, and occasionally looking back to see, as she said, if the coyotes were carrying off her *compadre*. What a welcome change from the glare and dust of the ball room to the luxuriously appointed parlor of Colonel Forrester's house, where the faithful *servienta*, Juana, not content with

keeping up the fire, had prepared a repast of steaming cups of chocolate and sponge cakes, which was followed by the charming little gossip about the company at the dance, and a good deal of joking about the *compadres* and *comadres*, of which Miss Nita received such a share that she vowed she would stand it no longer, and rushed off to her room.

"Now, Mr. Irving," said Colonel Forrester to me at breakfast the next morning, "we do not start for the mountains until after dinner, so if you would like to learn something about sheep raising you had better join me on my round to the stations. Here I was like the Alderman, between two civic dinners, or the jackass between two trusses of hay. I had expressed to the Colonel a desire to learn something about this great source of his wealth, and here was the opportunity. On the other hand, Miss Nita, I knew, expected me to help her tie up some flowers, and to make believe assist in the preparations for the camping expedition, but duty prevailed over inclination. Miss Nita pouted, and said that if I preferred a lot of sheep to her society, I was welcome to them. "Ah, but *Comradita*," said I, "if I am ever to have a ranch of my own, you know I must learn something about the business."

As we rode along to the first band, which we found in the canon, the Colonel imparted to me much valuable information. Said he: "The greatest risk we run in our business is in having two or three successive droughts, or dry seasons, without rain enough in the winter to make a heavy crop of grass. This *alfileria*, which you see growing everywhere on the plain, is an indigenous species of clover, which, in the spring, after the rains have ceased, makes itself into hay by becoming detached from its roots at the ground. This furnishes the summer food for the sheep, during which season, however, they must have water, hence, the necessity, in securing a sheep range, to be certain of a sufficient and unfailing supply of this article. The great drawback to this country is the want of water. From May until October, or sometimes as late as December, no rain falls, and all fruit trees, vegetables and flowers must be artificially irrigated to keep them alive and in bearing. Many persons from the East come here during the winter, when the rainfall has made everything green and bright, and commence their operations as though this state of things was to continue. The result is loss and disappointment, which might have been avoided had they looked at the country when at its worst. A large portion of our immigrants have so far been a class of poor whites from the Southern States, who are content with just a sufficiency of corn and pork, and beyond procuring this, make no effort to improve or embellish the 160 acres which Uncle Sam and the pre-emption laws gives them free of cost. The want of good society for his wife and children is another drawback to the Eastern man. The better class of natives, than whom, although ignorant and uneducated, no people could be more simple-minded and hospitable, are fast dying out, or their descendants are amalgamating with the American population. These lower counties have always been a Botany Bay for the whole United States, that is, since the discovery of gold, but this state of things is changing, and we only want railroads to bring us a class of people who have both enterprise and capital to develop the wonderful resources of the country."

"What breed of sheep do you find to suit the climate best?" I asked.

"The Spanish Merino, by far; some cross them with the Cotswold, and others prefer the French Merino, but I prefer the pure Spanish. We shear twice a year, but owing to the presence of a great deal of burr clover on the ranges, the fleeces are nearly all "burry." Our wool is looked upon as about the poorest in the Eastern Market, but it varies greatly in grade as the producers are varied in their endeavors to improve the breed of sheep. But it is in the wonderful increase that the real profit lies. We look for a band of ewes to double in number each year; the number of twins born compensating for losses of lambs by accident or otherwise. A large portion of our shepherds are *Basques*, from that province at the foot of the Pyrenees.

They have the advantage over the native Mexican or Indian in being accustomed to the work, and in being fond of neither drinking *aguardiente*, gambling, or cockfighting. Most of them become proprietors themselves and return to their native country rich men." Observing a number of goats with each band of sheep, I asked the Colonel the reason of their being there. Said he: "There appears to be something in the peculiar odor exuded by the goat, which is conducive to health in the sheep. Whether this is the true explanation I am not prepared to assert, but certain it is that they do not thrive so well without their companion. On many ranches the goat's milk is used exclusively, both for drinking and making cheese."

Returning to the house, we found that the preparations for the coming trip were concluded, and, after dinner, the cavalcade started for the mountains. The Senora and Miss Inez, with old Juana to assist in the cooking and dish-washing, occupied the spring wagon, and behind them came a rougher vehicle, drawn by mules, and filled with the bedding, etc. The Colonel, Miss Anita, Don Pablo, and myself were on horseback, and, not confined to any regular order of marching, dashed here and there over the plain; now chasing a rabbit from his form among the *tuñas*, or prickly pears, and now jumping our horses over the gulleys which the rains had washed in the soft earth. Entering the thick belt of oaks, the trail carried us for awhile under their cool shade. Emerging from them on to a sloping bench at the foot of the mountain, we looked back over the tree tops and obtained a magnificent view of valley and ocean. Santa Monica and the buildings of the mission were far below, and looked like little card houses, the bright tints of the vineyard contrasting strongly with the darker green of the orange and olive orchards. Off to seaward the island of Santa Rosa, opposite Santa Barbara, looked like a dim cloud resting upon the ocean. Leaving the wagons to follow more leisurely, we spurred our horses up the hill, and a short ride carried us to the mouth of the canon, and in sight of the rough board shanty of our friend, Grizzly Bill. One can hardly imagine a wilder spot. From up the dark recesses of the canon a stream came dashing down over its bed of rocks, forming here and there pools of clear water large enough for one to swim in. Bill's house was ornamented with two rows of bee hives in front of it, from the entrances to which a constant stream of busy little workers were entering, laden with the spoil of many a wild flower on the plain below, or departing for a fresh load. The proprietor had turned a piece of land adjoining into a vegetable garden, and, being entirely free from frosts, could regale himself with green peas or tomatoes at almost any season of the year, but watermelons were his specialty. The ladies, arriving soon after us, took possession of the house, while we were shown to an oak tree, under which we were to find shelter for the night. Bill always cooked out of doors in fine weather, and we found an elegant fire ready for our culinary attempts; not a "white man's fire," blazing and smoking over the tree tops, but a bed of hot coals, at which Juana, in a few moments, had prepared the afternoon's tea. The Colonel took his fishing rod and went off up the stream to catch some trout for supper. Bill was making preparations to empty a hive in order to procure a supply of honey. Don Pablo was assisting in unloading the wagons, and getting the house ready for the ladies' occupancy, and as I seemed to be like a landsman afloat, "in every one's mess and nobody's watch," I took a gun and went off alone on the side of the hill, where every little patch of chaparral seemed alive with quail. At sunset all had returned—the Colonel with a goodly string of speckled beauties, and I with a dozen or more birds, which Miss Nita assisted me to pluck. Bill's cooking apparatus consisted of an immense gridiron, which was stretched over the fire, and not only supported the indispensable coffee pot, but left plenty of room for either broiling or placing the frying pan. The latter, filled with freshly caught trout, was sizzling away merrily. Great slices of venison, cut from a haunch suspended in the tree overhead, were broiling on the coals, and my contribution was

GUNNING IN THE DISTRICT OF COLUMBIA.

I WAS out shooting about ten days ago (the laws of the District allow quail to be shot from October 1st) and put up two beaves of quail, one of which were full grown birds, and the other a little over half grown. Both went to a piece of woods, the large birds taking to the pine trees, and the smaller to the ground. I shot three of the large birds, one of which was a hen, when up got the small birds, one and two at a time. As the place was open I marked one of the birds which I saw right aside of a fence. I had a young dog with me, and I thought that this was a good opportunity to try him, but did not succeed in getting him to me until I had reached the fence, where I found the quail in the exact spot I saw it alight, but it was dead. Now I had not shot at any of those small birds, nor had any one else this season, and my gun was, I am sure, the first these quail had ever heard. The bird flew strong. It did not hit itself against any limb, for it was an open space from the place I put it up to where it alighted. I examined the ground around, but put up no other bird. The ground was perfectly bare, so that no other bird could coocele itself. Now, I would like to know if any of your readers have seen any similar case of a quail being killed by fright. To satisfy your readers, I should say that I had the bird picked, but could not find any wound or mark whatever. I regret to say our birds have commenced to travel. I hope since I will lose mine that you will persuade some one North to send me some to take their place.

Real neck ducks have made their appearance, and I saw some very fine that had been shot at Hunting Creek, just below Alexandria. I regret to say that the big game (shooting from one to three pounds of shot) are increasing rapidly every year, and unless our laws are enforced out duck shooting will be ruined in a few years. With a little unity and determination on the part of the various shooting clubs of Maryland, Virginia, and the District of Columbia, I think that these big guns could be exterminated.

Mr. Howard, of the English Legation went shooting this morning at Marlborough Point, on the Potomac and the Fredericksburg Railroad. He ought to have good sport as I know of no better place for quail, or for mallard shooting for mallard ducks.

Wild geese have been going South in vast numbers for the last two days. Canvas backs have not as yet made their appearance, but will in all probability come down at the next full of the moon.

More plovers have been killed this year than for a number of years back. The best shooting has been on the Eastern Branch, near the vicinity of Pennin's Bridge, where, in addition, there will be found plenty of mallard, sprigtail, and teal ducks. Oriolan (rail) are still abundant, or at least were so two days ago.

To your numerous readers I should say, that the veteran sportsman of the Chesapeake, W. W. Levy, is a resident of this city. I know of no better duck shot. Of course I earnestly hope that he will soon get his knowledge in print, for we have no one, I am sure, who is as well posted on water fowl shooting as he is.

I learn that Dr. Gautier's setter Ruby (Laverack) had a fine litter a few days ago. D. C. Duke.

A WEEK AT BLOOMING GROVE PARK.

A CERTAIN amount of exercise is essential to good health. Labor of some sort must be performed by all who would preserve the body and mind in a satisfactory condition. To obtain the means of support we labor; to retain health we must exercise the body. Of amusements which have a mitigating variety, but although every taste may be gratified, and the mind cultivated, amusement may be neglected.

It is in the country that we find occupations which combine the exercise of mental and bodily faculties in perfection, and in field sports, especially in hunting and fishing, which sport require the highest combinations of skill and physical endurance, and which afford the most congenial enjoyment, which never pass from youth to old age.

Budjell, in the *Spelator*, describes a day's hunting with Sir Roger De Coverly, who, when too old to follow the hounds after foxes, turned his attention to hunting hares with a pack whose voices were tuned to a certain blending of chords so as to produce perfect harmony when in full cry. He was known to have returned a dog which had been sent to him as a gift because he had a bass voice, and he needed, as she said, a tenor.

Instead of killing poor puss, the huntsman throws down his pole before the dogs who have overtaken the hare, and Sir Roger dismounts and takes her carefully up to be turfed into his orchard. Such self-denial would not be expected here, where the number of beads of game is often the principal object of the hunt. A similar sport has been followed at the Grove Park, where the hounds are driven into the lakes and captured alive as additional stock for the breeding park.

National conventions which will make the enforcement of the game laws possible in any part of the country, and sportsmen's associations, will do much to promote a taste for the enjoyments of the chase.

Base ball matches and university foot races are well calculated to develop a spirit of muscle, but lacking in all that lends a charm to country sports.

Perhaps a few notes from Blooming Grove may serve to illustrate the foregoing. Our party of four—myself, wife, nurse and child—just filled the park phaeton, with Joe, the driver, and a trunk on the box. Leaving Williamson's hotel at Lackawanna, at 2 P. M., the ride was delightful, as basking in the warmth of an October sun we passed over a hill through a dense overhanging with Autumn foliage of brightest colors, orange chestnut, red and yellow maples, poplars and pines in their deep green. In sport we smelted handfuls of leaves from branches that brushed the carriage as we passed. Over deep brooks, where in June we waded the trout from their hiding places, we dash on. A partridge started from the roadside tops the underbrush and skinned away. Pigeons were flying over their roosting places, and a great rustling of wings, and the hopes of our sportsmen are excited by visions of the tramp to-morrow. At the club house our friends are awaiting us with good cheer, and the ladies (our park is for ladies as well as sportsmen) compare notes and bestow themselves and their impedimenta in their rooms.

After a dinner of deliciously cooked game, the evening is spent around the spacious hearth, and the prospects for

sending out a most savory odor. For the convenience of the ladies, we took our supper indoors, but after the meal all gathered around the camp fire, the gentler ones well wrapped in shawls for protection against the cool evening air. Far above us, their sides and summits covered with the low, wide-spreading branches of the manzanita, or the straight trunk of the sugar pine, towered the Sierra Madre. At a short distance the stream, rushing on its journey oceanward, sang its everlasting song. Occasionally a quail, perhaps a bevy, seeking their roosts in the almost impenetrable branches of a scrub oak, would rush past us with the rapidity of bullets. The mournful cry of the dove, calling its mate from yonder cottonwood, was echoed by the shriller whistle of the little ground owl, as he hovered over the appropriated narrow of some larch-like tree, and from the distant plain came the almost human cry of the coyote, prowling about a sheep corral. The setting sun, although lost to us, still faintly lighted the lofty summits of the peaks overhead, while below us wood and plain were shrouded in the darkness of night. Around the camp the gloom of forest twilight was dispelled by the bright gleam of the fire, about which we were grouped in the most picturesque confusion. Pipes were smoked and lighted, the men and the horses picketed near by duly looked to, and everything made snug for the night.

"Bill," said the Colonel, "what ever became of your old partner, Holt? I saw him once in Los Angeles, and he struck me as being a man likely to die a violent death."

"Right enough, Colonel," said Bill; "poor Ned, it's a matter of five year now since he passed in his checks. If the ladies won't mind an old fellow's yarn, I will tell you how it happened."

Bill took a long pull at his pipe, and stuffing the ashes down with a finger, apparently made up of some leather and cow horn, commenced his narrative.

"Ned, when I first knew him, was fresh from Kentucky, and a warmer hearted fellow, or a better *compañero*, better liquor and a woman turned his head and drove him mad, you won't find twist here and Shasta. It was all bad rock with him; no tailings or deep digging, but everything open and on the surface. Ned and I had become pals in a claim up in the Gahow region, and we were bound and light, the most of the day, and I was beginning to think that some night I might get back to the old woman and the little white haired youngsters I had left behind in Arkansas, when, as luck would have it, the claim petered out, and it was shufflo for a new deal again. About this time Ned had got into the habit of going down to the *puello* pretty often, and had got acquainted with old Simpson's daughter, who lived on the claim, and she was over the hills, and out that that it was all up with him. I had been there, and know'd how it were myself. Ned didn't work with the will he had shown before, and most every other night he'd catch the old mule and saddle her and start off for a ride of twenty miles to see the girl; and she weren't much to look at when he got there. Well, gentlemen and ladies, when a man gets foolish with a woman, and goes around chewing hay all the time, and you know it, and you know pretty far gone, and you save him, and, like the chicken pox, it's got to come out. There's only one thing that will cure him—he's got to be married or be jilted, and, asking your pardon, ladies, I don't know but what the last is the best thing that could happen to him. I kinder thought the girl was a foolin' him, and it worried me a good deal, because Ned wasn't a safe man to play with one of your kind, and he'd be sure to get a good savin' your presence. Don Pablo was pretty quick about pullin' in a light, and wouldn't stand no nonsense from man or woman. What made it worse was, that I noticed he had took to drinkin' of late, and sometimes brought a bottle of liquor back to camp with him. So things went on for a month or two. We had given up the claim, and gone down to Los Angeles, and I was thinkin' of going to Arizona to one of the articles, and he was over there, and he was tryin' hard to persuade Ned to go with me; but it wasn't of no use; he was just that foolish that he hung around the monte bank all day dropping his dust, and at night going to see Melindy. I talked and argued with him, and he was as good natured as ever about it, but I couldn't get him away. "All right, Bill, old pard," he used to say, "don't worry about me," and then he'd go off to the girl again. What then, I asked, had he done to make a fool of him? Ned told himself away, I couldn't make out. She was passably good looking, one of your big, bold kind, but no more brains than a turkey hen. One day I saw her sailin' down Main street, all smiles and ribbons, with a new man in tow; a great, long fellow, in store clothes, and his hair slicked down with goose grease. Ned stood in the door of the Bella Union as she passed, and I saw by the way he eyed her, that he was over the hills, and in a light, and a fine race before long. She kinder looked at Ned as they passed him, as much as to say, "Here's a handsome man than you, my boy," and I crossed the street and got him by the arm and tided him off to where we were a boardin', and tried to reason with him agin; but Lor' bless you, you might just as well try to talk to this mountain. I lost sight of Ned that evening, but heard afterwards that he went down to old Simpson's, and that the stranger was there, and that Melindy she put on a sight of airs, and treated poor Ned worse nor a dog. He came in towards morning pretty drunk, and kept in bed most all day; but towards evening, while I had gone out for a little walk, he dressed himself and went out. I searched high and low, but could n't get track of him. There was a great crowd in town that night. Two wagon trains had come in from Yucatan, and the teamsters and the women and the saloons were all crowded. "About midnight I went into the Blue Wing, and there, at one end of the faro table, with a great pile of chips before him, was Ned. I got as close to him as I could for the crowd, and was watchin' him pretty closely, when who should come in and push his way to the other end of the table but the long legged stranger. I saw a wicked glance in Ned's eye, and tried to close in on him, but the crowd pushed me back, and I didn't want to fight on my own hauds; there was plenty of chance of that without my clipping in. The dealer commenced a new deal, and the stranger, who appeared to have been drinkin', as luck would have it, pushed some chips onto a card where Ned had just placed a bet, and somehow or other the chips got scattered a little. "My bet all goes on the eight," said Ned. "You he, d—n you," said the stranger, apparently misunderstanding what he said. The crowd all jumped back from the table pretty quick, for that kind of talk nixed flight in those days, and the two pistols were in the air in a minute. They got to shootin' about the same time, but I don't think the stranger got more nor one in before Ned had him square in the forehead, and he tum-

bled down all in a heap alongside the table. I got to Ned as soon as I could, and with my own six shooter in my hand made my way through the crowd, for I didn't know but what the stranger might have had some friends around who would take the thing up. So I took him off to the calaboose as the safest place for him, and handed him over to the sheriff. Well, to make a long story short, Ned had to stand a trial, but it was a fair fight, and every one knew he would be acquitted, and I had engaged the smartest lawyer in the place—old Corpus Christi, the boys called him—to defend him, when one day they told me Ned was dead; faked so in jail. He must have had the stuff about him for a long time before the shootin', but I'd never suspected it, he was so quiet and gentle like. So I lost my pard, and a good fellow was ruined by a woman. She married some other fellow in less than three months, and I heard that he killed himself, too."

A little later the ladies retired to the cabin, and we, abandoning ourselves in our blankets with feet to the fire, abandoned ourselves to sleep. Overhead the narrow strip of sky visible between the mountain tops was bright with stars; the only sound the gentle murmur of the wind soughing through the pines, the soft splash of the water in the stream, and the occasional croaking of the watery wren around the fire. Just before daybreak I was awakened from a dream, in which grizzly bears, Indians, and revolvers were mixed in inextricable confusion, by a scream so loud, and apparently so near, that I jumped to my feet and seized my gun, which was close at hand.

"Wild cat," said Bill, turning over for another nap; but there was no more sleep for me, and in a short time, as the first rays of the new born day came struggling down the mountain side, all in the camp were astrid drinking the coffee, which is the first thing in order in this mountain life.

"Now, Mr. Irving," said Bill, "if you want to kill that deer it is time we were off."

So before the tenants of the cabin had appeared we had started for our hunt in the foot hills. It was successful, and we returned to camp in time for a breakfast, and to find the scenerias looking as fresh and bright as the morning glories.

But why attempt to describe those three days of freedom and camp life, each one more charming than the last. The delightful trips up the canon with Nita for a companion, made ostensibly for the purpose of fishing, but in reality to sit on the rocks, by the side of the stream, and while away the tedious hours in her sweet company. Day by day the lovely girl was weaving her spells closer and closer about me, and when we returned to Santa Monica, in the language of Grizzly Bill, I was a "gone coon."

But the brightest and best hours of our existence must fade away before the decrees of inexorable fate, and the day had come when I was to leave my kind friends and to resume my journey. It was arranged that Pinto was to be left behind for a season of well earned rest in his present comfortable quarters, and the Colonel was to drive me to San Buenaventura, where I was to take a stage for Los Angeles. The adieu had been said, and I was standing alone in the doorway with Nita, while the Colonel fastened a trace that had come unhooked.

"Adieu when will you return, Guillermo?" "In a month, or so, perhaps, God willing."

The Colonel snatched his whip, the horses jumped off with a rush, and the waving of a little white handkerchief was the last I saw of Santa Monica—for a month.

THE END.

SPORT AT NOYAC BAY.

FOR a quiet, retired sporting locality, especially at this season of the year, commend me to Noyac and its beautiful bay, situated about four miles to the northwest of the old town of Sag Harbor. For wild duck shooting, from October 20th to the close of November, no place on the island affords better sport or more game, and then, if you prefer other game, the woods and fields adjacent yield plenty of quail and snipe, and a few ducks. I came up here, on a few days, the first week in October, but the weather was too warm for duck shooting, a cold snap being required to bring them into the bay, and when Jack Frost puts in an appearance I tell you things are lively here. But first, let me inform you how to get here, and what the outlay is, as that is what your readers will want to know, especially those seeking for a nice unfrequented spot for a week's sport in October or November. One of the finest residents of Noyac—Mr. Pierson—has recently transformed his farm house into a cosy boarding place for Summer visitors and sportsmen—not a hotel, mind you, but merely a country-house resort, and a letter to him, telling him what day you expect to arrive, will find him with his wagon ready at either the steamboat wharf at seven in the morning, or at the railroad depot at two or eight in the evening, according to the way you propose to reach the island in the boat. W. W. Cot—leaving foot of Wall Street Mondays and Thursdays at five in the evening for Sag Harbor (fare, \$1 50) and the cars from Hunter's Point at half past seven in the morning, and at half past three in the afternoon (fare, \$2 75). The charge for board at Mr. Pierson's is but a dollar a day, or seven dollars a week, for which excellent fare is provided, and the use of a boat, the *modus operandi* for Noyac Bay is either to go on the long wharf on Jessup's Neck, take your station at daylight, and await your chances for shots at the flights of ducks which regularly cross the neck from Noyac Bay to the Little Peconic Bay, or by taking a sail boat out in the bay, or a small boat, get in among the thousands of ducks to be seen early in the day floating on the surface of the bay. After a morning's work, and you can't wait for your gun and dog and go into the thick woods of the back country and get partridges and rabbits. In fact, with the enjoyable retirement of this unfrequented spot, and the facilities for sport, one can thoroughly take his pleasure here for weeks at this season of the year, and that, too, without spending heaps of money, as you have to do at the noted sporting resorts of the Island. Seeing so few here, I thought I would read you a bit about it. By the way, the regular old residents of the place are very socially inclined, and courteous to gentlemanly sportsmen, especially the Edwards', Eldridge's, etc., who have resided here for the past century, father and son. Mr. Hallock, too, a neighbor of Mr. Pierson's, is equally well disposed towards genuine sportsmen, though they look sharply after pot hunters. Yours, H. C.

Noyac, near Sag Harbor, October 6th, 1874.

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

FISH CULTURE IN CALIFORNIA.

By favor of Livingston Stone, Esq., Deputy United States Fishery Commissioner, who has been for four years past engaged in extensive fish-hatching operations on the McCloud River, California, we are enabled to lay before our readers the following summary of the work accomplished during the season just now closed. Mr. Stone's letter is dated

EDITOR FOREST AND STREAM.— I beg permission to inclose you a summary of the work done here this season. Very truly yours, LIVINGSTONE STONE.

DAILY LIST OF SALMON EGGS TAKEN AT THE UNITED STATES SALMON BREEDING ESTABLISHMENT, McCLOUD RIVER, REDDING, CALIFORNIA, 1874.

Table with columns: Date, Eggs taken each Day, Total. Rows from August 31 to September 28.

Table with columns: D. BREEDING OF SALMON EGGS FROM THE UNITED STATES SALMON BREEDING ESTABLISHMENT ON THE McCLOUD RIVER, CALIFORNIA, 1874. Lists names and egg counts.

FISH CULTURE IN VIRGINIA.

LEESBURG, Va., October 28th, 1874.

EDITOR FOREST AND STREAM.— A small beginning in fish culture has been started in this town. About two dozen or more brook trout have been secured alive from a stream flowing into the Potomac near town, and lodged in a spring in town preparatory to making an inexpensive experiment in hatching. An ample supply of water for hatching at hand, and the best method of introducing them is enough water to raise any considerable quantity of fish. If, however, we succeed in hatching out fish that we cannot raise, we mean to put them in the Tuscaraora or Town Branch, close to the spring, as we are now using. Our object is to demonstrate to the farmers the feasibility of the plan. If we succeed, we will let you know. A few black bass are caught here and then by our anglers. Mr. W. B. C. and Dr. M. each have a fish of this size and the best method of introducing them. Some inquiry for the spawn, supposing that they are propagated like the salmonidae. But all attempts to take spawn from this fish have been failures, so far as we are informed. Some ponds have been stocked with the fry, but it remains to be seen whether this will prove successful. The fry are very small, and remain but a few days over the hatching, and then are hatched, so that it requires very close watching to capture them. They are removed just at the time when they are said to have the protection of the parent fish, and they are all liable to perish in new water among other species of fish. The common and the most reliable method of introducing the bass, is to transport adult fish from well stocked ponds to new localities. This, when properly done, has never been known to fail. In most of the States there is legal protection to the fish for three years, generally granted by special act of the legislature. But this is not tough enough to secure the object. It should be in all cases five years. The fish do not live freely until after the spawning is over in May and June, and they do not usually reach their new home until July or later, so that there is no fry from them until the second year. The fish generally selected for transfer are from one to three years old, measuring from three to twelve inches in length. Fish of this size are not only more numerous, but they bear transportation better, and are more readily acclimated, than when larger. They are

moved with a good deal of difficulty in hot weather, especially when the journey requires more than twelve or fifteen hours. With the most skillful management, there will be a considerable loss. In the Fall months there is much less loss.

There is a great want of information in regard to the character of the water suitable to this fish. We have many letters from the owners of horse-ponds, a half acre or less in extent, having neither springs nor water running through them for a portion of the year. The bass wants clear lively water with rocky or gravelly bottom, and the more of the better. It wants room for itself, and for the poorer kinds of fish upon which it feeds voraciously. It does well in the mill-ponds upon manufacturing streams, and if the head waters and reservoirs are stocked, they will in a few years be found in all the waters below. They flourish also in natural ponds of twenty acres or more. Some decline to stock these ponds or lakes because they are generally free to the public. But this is short sighted policy. A large pond or lake stocked at a cost of one or two hundred dollars, and protected by law for five years, will furnish better sport to the gentlemen or company who undertake the enterprise than they could find in any small pond of their own. In suitable water black bass multiply very fast, and after they once gain possession, their numbers can never be very seriously reduced by hook fishing. The annual spawning will more than keep up the supply. There are thousands of ponds and lakes in the Northern and Middle States of from one hundred to a thousand acres, producing only the poorer kinds of fish, that might easily be stocked with bass, and add largely to the food supply of the people.—American Agriculturist.

TROUT.—In the latitude of New York brook trout commence to run up the streams to spawn in October. Further North they are later, according to the temperature of the water and the climate. The males go up a week or ten days before the females to prepare the beds, then return and choose their mates, in the doing of which they have many battles. At this time the fins of the males are very bright with white and red; their abdomen is dark brown, so that they are easily distinguished. As they spawn from 1,000 to 2,000 eggs a pair, it is very evident that if some plan is adopted to protect the eggs and young fry they would increase very fast. As the largest and oldest go up and spawn and return before the younger and smaller ones, the tendency is to lose the best eggs being taken up by the last run. Trout will not eat their own eggs, but in clearing the bed will eat each others' eggs.

—The success of salmon culture at Newcastle has now become fully demonstrated. A few years ago these fish were almost unknown. The artificial process of breeding has been applied upon about a mile and a quarter of Wilmont's Creek, with the following results. The numbers of adult salmon which have entered the reception house during the past few days are as follows:—Previous to the 20th ultimo ninety-eight had been secured; on the 20th, nineteen; on the 21st, twenty-one; on the 22d, forty-five; on the 23d, seventy-three; on the 24th, sixty-eight; on the 25th, sixty-six; on the 26th, 141; on the 27th, 212; total, 743. Over and above this score in the fish house, a still greater number have been observed in the open creek engaged in spawning. Hundreds can now be seen daily in the ponds and breeding ground of the establishment.—Canadian Monthly.

—A fishway of the most approved pattern has just been built at Baring, Maine.

—Prof. Baird is endeavoring to obtain permission from the Government to erect a building at Wood's Hole, Mass., for the purpose of making collections of fish and examining the spawn.

—About 50,000 salmon eggs, brought from California, have been placed in the hatching house of Dr. Pratt at Elgin, Illinois.

—Twin Lakes, Wisconsin, will soon be stocked with 25,000 salmon fry. For this most necessary improvement it is indebted to the Waltonian Club.

—Mr. Wilmot, of Canada, having decided upon erecting a fish house on Soper's Creek, for the propagation and protection of salmon, a neat and suitable one has been put up. The place is under the supervision of Councilor H. J. Foster. There are at present nineteen salmon spawning in the house.

Natural History.

THE BIRDS OF NEWFOUNDLAND.

(Continued from Vol. 3, No. 4.)

THE THRUSHES.

The migratory thrush, or American robin, is the commonest of all the thrushes in Newfoundland. From its red breast and familiar note, it is frequently called the "Robin." It arrives in April, and in May its eggs are found in the nest. These are of an unspotted blue, and resemble those of the fieldfare.

Mr. Reek enumerates no less than thirteen species of warblers in Newfoundland, all of them being migrants. The most common is the yellow warbler, called by the inhabitants "yellow hammer." It makes a very pretty little nest in bushes, somewhat resembling that of the English goldfinch. One of the earliest Spring migrants is the yellow, red-poll warbler, and the black and yellow warbler is also tolerably common. The Canada flycatcher and the American redstart arrive in the end of May, or beginning of June. The latter is called "goldfinch" by our settlers. The American tit lark and the Maryland yellow throat are found in considerable numbers.

THE SWALLOWS.

The white-bellied swallow is the only species of swallow seen throughout the Summer; while few specimens of the cliff and barn swallow are met with. The sand martin and the purple martin are occasionally met with.

The American butcher bird visits Newfoundland in its periodical migrations, but it is doubtful whether it breeds here. The yellow-throated flycatcher is tolerably common, and arrives in June. The black-cap titmouse and the Hudsonian titmouse are both non-migratory, and breed in the holes of trees.

FRINGILLIDÆ.

The American pine grosbeak is common throughout the year, but most abundant in Winter, when they get together in small flocks. The American crossbill is common throughout the year, and an early breeder. The pretty little bird called the white-winged crossbill is very abundant in Winter, and is called here the "spruce bird," from the fact that it feeds on the cones of the white spruce. The snow bunting is very common, but does not breed here, as also is the snow bird, both being Summer migrants. There is a fine species of sparrow, called here the "hedge sparrow," but is really the fox-colored sparrow. It sometimes breeds on the ground, and at others in the woods. The rusty blackbird and the crow blackbird are both Summer migrants.

CROWS.

The Canada jay is very common here, and remains throughout the year. "Whiskey jack," as it is often called, is almost as tame and familiar in its habits as the English robin redbreast. When in the vicinity of houses it will eat raw meat, fish, potatoes, bread, etc., and is said to store away cranberries for Winter use. The American crow is a common Summer migrant, frequents the sea coast, breeds in trees, and lays four or five eggs. The blue jay, or "silken jay," as it is called here, is not common.

PARTRIDGE.

Having in a previous paper described the ptarmigan, I shall only now enumerate the different species found here. These are the Canada grouse, or spruce partridge, a rare visitor, and the willow grouse, the only lowland, or sub-alpine species indigenous to Newfoundland. They invariably roost on the ground, although they are shot sometimes when feeding on the tops of birch or alder trees, more especially when the ground is covered with deep and light snow. Their food consists chiefly of the buds and tender shoots of birch, alder, black spruce, and juniper; but they are especially fond of the partridge berry and cranberry. Another species called rock ptarmigan, or, as the settlers call it, "mountain partridge," is rarely found below the line of stunted black spruce, except in the depth of Winter, when they descend to the lowlands for food.

HITTERS.

The only species of the heron family met with here is the American bittern, a Summer migrant. Generally a pair of bitterns are found frequenting the margins of wooded lakes and ponds throughout the Summer. They arrive in May, and depart in September. The American bittern makes a curious thumping noise, very much resembling the noise made by fishermen when driving oakum into the sea, or their "boobies" (probably) into the water. Its name of "stake driver," in the United States, and "corker" (aulker), in Newfoundland.

POULTERS.

The American golden plover is very abundant in Autumn, and the ring plover, the piping plover, and the grey plover are all pretty common in the Fall of the year. They are not seen in Spring, so that they must take some more direct route than via Newfoundland to the breeding grounds in the far north.

SNIPES, SANDPEPPERS, CURLEWS, ETC.

Wilson's snipe is a Summer migrant, arriving in the end of April, and it soon commences to breed. When the female is sitting on her nest, she makes frequent noises in the air, drumming and making a peculiar noise with its tail which may be heard a considerable distance. The grey snipe and the American jack snipe are also periodical visitors. Of sandpeppers, we have a large variety. Bonaparte's sandpiper is very common, and may be seen collecting in flocks in the Fall of the year at the seaside, and generally so tame that a dozen or twenty may be killed at a shot. The yellow-shanked sandpiper arrives in May and departs in October. From their incessant cry of "twillick" they get that name here, and in the south of the island they are sometimes called "nasary." The Esquimaux curlew is by far the most common species, arriving by thousands in the Fall, but rarely in the Spring. They feed on the wortleberries ("huzzit"), which stain their feathers posteriorly a rich dark purple. They arrive here in the first of August, and remain a month. They are exceedingly fat at this time, and most delicious eating. (To be Continued.)

—The British ship Scindia arrived here a few days since from Calcutta, having on board one of the most remarkable natural curiosities the world has ever seen. It consists of a short horned, sacred Brahmin bull, born in Nepal, north of Calcutta, in 1871, and brought here by Capt. William Denison Foster, formerly of the city, but latterly a resident of Calcutta. The bull itself is a curiosity, and is one of that description of animals held in great reverence by the natives of India on account of its traditional sacred character. But in this case a novel bonus nature renders it a most singular creature. The brute portion is symmetrically formed with a glossy coat of fawn colored hair and well shaped horns. But protruding, as it were, from the left side of the hump on the back of the neck of the animal is a wonderful and regularly shaped, in nearly all respects, human arm. The deltoid and tripeps and biceps muscles are well developed, particularly the latter; the joint at the elbow is flexible, the forearm rather attenuated, the wrist as fully flexible as in the human arm proper, while the hand is composed of four distinctly marked fingers, two of them connected together. This extraordinary appendage to an otherwise well formed body does not appear to give the creature any inconvenience or pain, generally hanging listlessly by its side, except when it is angered or annoyed, when its arm rises as if the possessor felt inclined to "strike from the shoulder." The animal is quite healthy, enjoys a ravenous appetite, the nice grass of its native climate being its favorite food, and does not seem to have any objection to being fed by its long sea voyage. If not disposed of in this country, it is the intention of the importer to take the creature to England, and secure it a place in the London Zoological Gardens, where such novelties are highly prized. It would prove a unique attraction to the natural curiosities in our Central Park. It has already been visited on the Scindia by several scientific gentlemen of this city and Brooklyn, where the ship lies, near the Fulton ferry.—Herald.

—It is on record that simultaneously with the outbreak of an epidemic, like the cholera, birds desert the fated town. This phenomenon has been observed in St. Petersburg, Riga, and in cities of Prussia, in Hanover, Galicia, and Southern Germany. Some scientific men suppose the birds are warned by the poison in the atmosphere, and instinctively fly from it.

—Mr. Klippart, of Ohio, at a recent Hartford meeting of the American Association, gave the details of his discovery of a large number of skeletons of the fossil hog of America, to which brief reference had been previously made by Professor Newberry, in his report on the geology of Ohio. These were found while digging the Artesian well of the city of Columbus, and were obtained at a depth of from twenty to thirty feet. Several skeletons were complete, and the whole series is one that furnishes the means heretofore wanting for determining the true osteology of the animal. This hog is the *Platygus compressus* of Le Conte, and is closely allied to the peccary, although with a longer and very slender snout.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, }
NEW YORK, Nov. 1, 1874.

Animals received at Central Park Menagerie for the week ending October 31st, 1874:

Four Ring Doves, *Turtur risorius*. Presented by Mr. L. H. Stedwell.
One Cayuchin Monkey, *Cebus capuchinus*. Presented by Mr. Henry S. Gibson.

One Oot, *Felina Americana*. Presented by Mr. J. C. Conroy.
One Zebu and Jack. *Bos indicus*.
One common Calf, *capra ovina*. Hab. India.
Four common Goats, *Bos constrictor*. Hab. South America.

W. A. CONKLIN.

Woodland, Lawn and Garden.

NOVEMBER AND ITS LABORS.

PREPARATION OF BEDS—SELECTIONS OF SHRUBS AND TREES—HINTS FOR PURCHASING.

THE autumnal tints are beginning to change; the purple of the chestnuts, and the harlequin colors of the liquidambar, are scarcely seen, unless lying at the foot of the trees. The glowing beauty of the flower garden has gone; the last roses, and the last flowers, are gone; their glory has departed, and left you with a clean slate, upon which you can, if you please, write a still more glorious remembrance for the next Autumn's review. Your month of labor is not gone, neither have you filled out your fall season unless you have cleared off the rubbish, removed the old and decayed leaves from your flower beds, dug up deeply, manured fully, and mixed in the soil, sand, peat, manures, and fertilizers (of all kinds), such as your beds require. Fold not up your hands to rest, Mr. Periwinkle, or Mr. Cowslip, unless you have put in the most ample order your preparatory bed for the growth of your best and most choice tulips. Do not talk of going "gunning" until after you have spaded up the currant bed and well manured the same; cut out, while you are about it, all the superfluous wood, and burn it, with the old debris and leaves, at one end of the bed. While you are doing this work, which is fitting for the three months of September, October, and November, you are to a very considerable extent gaining much time to do at comparative ease what you would do very badly in the Spring months of April and May. In those months you are of necessity very much hurried, and consequently cannot do this kind of work so well as you can in the Fall. You know how great a difference you find in the quality of nursery trees lifted in the Fall, or the Spring. If you have your trees lifted with good, unbroken roots, and in good condition, you will get them cheaper in the Fall than in the Spring. In the Fall the season's sales are over, and the trees for the early season's orders are now nicely heeled in, or in the capacious cellars of the nurseryman awaiting the Spring orders. At the first breaking of the Spring planting months you are not hurried to make your selections for the Spring. You accomplished this work in the Fall, and now you rejoice over it. You can now leisurely visit the nurseryman and take your time in making selections of trees. In the hurry of Spring every one desires to be served first, and is often served the worst. You have only to spend in looking on, as we have done in Spring time at more than one of our large nurseries, to see the manner in which Michael and Patrick "snake him up" to believe in the splitting and splitting and cutting off of the main roots. If many of the trees we have seen lifted from the ground, by what were called careful nurserymen, could speak, they would cry out with anguish at the rough usage they often receive. And could you reasonably expect to have your order put up as orders should be, and as the nurseryman's printed circulars promise they shall be. You will not believe too highly the accuracy of the printed circulars of even our best nurserymen, for as honest and high principled as we know some of them to be, they cannot oversee the taking up, matting, and delivering of half their plants.

When you are ready to set out your shrubs or trees, either fruit or ornamental, go to the nursery yourself, or send an agent you can trust, and select the trees you desire. Have them lifted carefully without heaving the roots, and pay for them only when they are satisfactory. Or, if you do not take your trees in the Fall, at the time of your purchase, tie a white tape around them; and having made your purchase be sure you pay for it; at the same time making a memorandum of the trees you have bought. This will be found a good plan to pursue, even if you do not wish to set out the trees in the Fall. Much of the real loss accruing from trees dying in the Spring may be justly laid at the door of careless, careless, or negligent handling of knowledge of the business by the operatives and employees of our nurseries. By selecting your trees in the Fall you will scarcely ever fail in getting your money's worth, and have the satisfaction of knowing your trees are really in fitting condition to be set out.

We shall refer to the subject of nurseries at some length in a future number of FOREST AND STREAM, when we shall endeavor to answer the enquiries of quite a number of our valued correspondents.

OLLIPOD QUILL.

THE LAST DAYS OF AUTUMN.

IF you propose any new alterations or improvements in your lawn or flower garden, now is the time for making them. Lay out anew your walks, cut evenly the grass, and gather with care the leaves, and place in heaps under your barns or outhouses. Sprinkle over them lime and ashes. You will find this Fall labor a gain for the Spring. Give good drainage to all undrained grounds. You will find your account in doing this work well.

HOUSE PLANTS.—Of such plants as you desire to save for next year you will cut back both root and branch, and let them lie in a shady place for a week, when they will be well established in pots; and be careful to fit the earth well into the pots previous to putting the same into the cellar or cold frame. Make your cuttings at this time of all such choice plants as you desire to propagate.

CANNAS.—Take up these roots very carefully; otherwise you will not have any luck with them.

CHRYSANTHEMUMS.—To those who love these late blooming plants, we say, just as soon as they have found good strong buds you can put for the Fall and Winter blooms. Those not taken up should be staked well, and they will bloom finely, even in quite cool weather.

PERENNIALS.—These plants are sometimes left out in their beds for two, three, and even more years, but this we deem to be quite objectionable, for the reason that when lifted, and their roots divided and reset in charcoal, they will produce much finer flowers.

DALLIS.—This is the time to lift and label your dallis root, first drying them thoroughly. Choose a good, dry, warm, sunny day, and do the work leisurely, and be sure you do not break any of the roots.

BELLS.—All the hardy kinds, I mean, such as tulips, hyacinths, jonquils, crocus, crown imperials, should be planted by November 15th, sure. The more tender bulbs, like the gladiolus, the tiger flower, etc., should be removed after the frost has nipped their leaves, and be dried off and stored for the next season in a cool, dry situation, where they will not freeze.

PROTECTION.—Give protection to half hardy plants, shrubs, etc., by laying coarse sedge grass in small quantities over them. An excellent covering for the same will be found in the boughs of the red cedar; it lays closely, and yet gives necessary passage to the air.

Do not cut the turf, unless the day may be hot and hot. They will when in the earth, stand a tolerable cold night. Plants of the hardy kinds, as well as the tender, more delicate kinds, should always have some protection, as they develop a handsomer and finer flower.

OLLIPOD QUILL.

WILD SHEEP IN CALIFORNIA.—In Spring and Summer the males form separate bands. They are usually met in small flocks, numbering from three to twenty, feeding along the edges of glacier meadows, or resting among the cattle-like crags of lofty summits; and, whether feeding or resting, or scaling wild cliffs for pleasure, their noble forms, the very embodiment of muscular beauty, never fail to strike the beholder with liveliest admiration. Their resting places seem to be chosen with reference to such a thing and wide outlook, and, most of all, to safety from the attacks of wolves. Their feeding-grounds are among the most beautiful of the wild Sierra gardens, bright with daisies and gentians, and mats of blooming shrubs. The wild sheep eats little besides the spiny leaves and shoots of the various shrubs and bushes, perhaps relishing both their taste and beauty. When winter storms fall, decking their Summer pastures in the lavish bloom of snow; then, like the blue birds and robins, of the white sheep, rather and go to warmer climates, usually descending the eastern flank of the range to the narrow, birch-filled gorges that open into the sage plains, where snow never falls to any great depth, the elevation above the sea being about from 5,000 to 7,000 feet. Here they sojourn until Spring sunshine unlocks the cañons and warms the pastures of their glorious Alps.

In the months of June and July they bring forth their young, in the most solitary and inaccessible crags, far above the nest of the eagle. I have frequently come upon the beds of the ewes and lambs at an elevation of from 12,000 to 13,000 feet above sea level. These beds consist simply of an oval-shaped hollow, paved out among loose, disintegrating rock chips and sand, upon some sunny spot commanding a good lookout at partially sheltered from the winds that sweep passionately across those lofty crags almost without intermission. Such is the cradle of the little mountaineer, aloft in the sky, rocked in storms, enshrouded in clouds, sleeping in thin, icy air; but, wrapped in his hairy coat, cherished by a warm, strong mother, defended from the talons of the eagle and teeth of the sly coyote, the homie lamb grows apace. He learns to nuzzle the purple daisy and leaves of the white spire; his horns begin to shoot, and ere Summer is done he is strong and agile, and goes forth with the flock, shepherded by the same divine love that tends the more helpless human lamb in its warm cradle by the fireside.—*Overland Monthly*.

FLORIDA WEATHER.—The Press says:—

"The weather is now perfectly charming. We have had a week or so of heavy blowing, but this has calmed down, and we are now enjoying the Indian Summer of the region—cool and refreshing at night, balmy and delightful in the day. The gardens are flourishing, and we have never seen a finer display of oranges. The blows seem to have driven the fish, especially the big fish, into the harbor. The garrulous are enjoying themselves with the sport of catching bass off the rock battery. The city is perfectly healthy; the doctors have a careworn and melancholy expression of countenance, and the only time that a sickly smile glimmers on the features is when a horse runs away with a cart, or they look up at the workmen on the giddy scaffold."

At the botanic garden, Oxford, the Mexican *Dasylirion acrotrichum* recently threw up a flower stem which, when twelve feet high, grew at the rate of six inches in twenty-four hours. The *Nelumbium latium* (the sacred bean) is reported this season as producing perfect seeds.

James Scannell, a young farmer residing in the township of Deunholm, was treed by wolves in Edge's swanp, about thirty miles north of Ottawa last week. He had a gun with him, and killed one and wounded two others with partridge shot, the only ammunition he had with him. The killed animal was torn to pieces by his comrades.

The Kennel.

DOG BREAKING.—No. 3.

IN order to more readily teach our pupil to back another dog's point when he is taken into the field and hunted on game, he should know that "Toho" is the command to stop or halt, which we teach him after he has become prompt in charging, using the check cord as in the first lessons. Provide yourself with some morsels of food when the dog is hungry, and having fastened the cord in his collar, as before, take him into an apartment or yard, where no one can attract his attention, and throw a piece of the food where he can see it fall. It will naturally run for it. Let him do so, but when he comes near to it pull the cord sharply and cry out "Toho" in a loud tone. He will probably drop or charge, remembering the lesson you first taught him. This is what we desire, so long as he stops. Continue this until the use of the cord is not required, and he will halt to the verbal command, and at the same time keep him perfectly familiar with the down charge by dog, and to dropping to shot if you have determined to teach it, and have begun it.

In order to encourage our young dog to quick movement, and to cultivate in him a free and speedy gait, we should take him with us in our walks as often as possible, extending our rambles to the suburbs of the city, where there are open fields and plenty of room. For a time keep the cord attached to his collar, and let it trail after him as he moves about; it will not impede him as much as might be expected, especially if you select a strong one about the diameter of an ordinary lead pencil, and "poia" the end with thread to keep it from fraying. You will find it will greatly aid to the control you may have to exercise over him, and have the effect of impressing him while he is at liberty that you are still master. On these walks, accustom your dog to the sound of the whistle you intend using for him, summoning him from time to time that he may become perfectly familiar with it. Practice him, while you are out, in the same lessons you began at home, until every lesson is obeyed promptly; and when he charges walk away from him, each time extending the distance, insisting upon his remaining so until ordered to hold up.

No doubt he will notice, and perhaps show an eagerness to hunt the sparrows and other small birds you may come across in your walks, and probably point when he sees them, from natural instinct. This we do not check, but rather encourage for a short time, as it will give a greater desire for the chase, and when ready to be put on game, and once shown to him, he will soon choose between the two, and readily distinguish the difference.

Your walks should be more frequent the nearer you approach the shooting season, when you shall want to go into the field, and confirm and put to use the lessons you have imparted to your dog. We have thus far said nothing in regard to breaking setters and pointers to retrieve, intending to give our views and experience upon that branch of training in some future article, and can only now say we have shot over both, and greatly prefer the retriever, feeling confident in our individual case that the lifting of dead game by our dogs in no wise detracted from their live birds, nor lessened their staunchness in pointing them, which was equal to that of most setters, albeit we did not insist upon pointing dead before the order fetch was given, but gave the command directly after the dog had charged.

We shall now want to enter the field with our beginner, and give his first lesson in actual work.

THE DASCHHUND.

THE dachhund, or German heagle, bids fair to soon become a favorite dog in this country, as we are daily heaving inquiries in reference to where and how the species can be had. We only know of one gentleman who breeds this variety of hound, and his stock is too limited to supply even the smallest portion of the demand that is made upon him. Within a few days we have learned that several persons have ordered, or are about to order, them from Europe, where the breed is found in all its purity. In the neighborhood of our cities feathered game is becoming so scarce that those who are fond of field sports, and who can only find time to be absent from home for a day or two, feel that setters and pointers are of no use to them. Hence the demand for the interesting heagle, for the purpose of hunting the small American hare, which is still comparatively abundant in our suburbs. We doubt not that before long regular foot packs will be organized, as they exist in England, and that much enjoyment can be found in following the slow but certain trailing of the dachhund.

We will take this opportunity of requesting our foreign correspondent to give us the names of some of the breeders of reliable strains in both Great Britain and the Continent, so that our readers who desire good breeds may procure them.

The dachhund would not only be sure on the trail of our small hare, but would follow and unearth it when it seeks the burrows of other animals for safety. In some portions of Europe this little hound is used for deer driving, and on account of its intensely crooked and short legs its gait is so slow that the game moves gradually before it, offering better shots and greater chances to kill.

Great objections have always been made to the use of our larger hound for the driving of deer to the gun in

many portions of the Middle and Eastern States, as it renders the game wild, and if not brought down run great distances, making the attempt for a second drive useless. In some counties of Pennsylvania and New York still hunting is only allowed, but we have no doubt the objection could be overcome in the use of the dachshund, as its movements are so slow that it can easily be followed on foot. The Gormea beagle not only possesses a remarkable nose, but is also a hard fighter, a good ratler, and is often employed in Europe for the pursuit of the badger. It is almost the counterpart, in shape and color, of the black and tan hound, and, if not for its deformed, short, and crooked legs, would be taken as a dwarfed specimen of the breed. The *Chasse Illustrée* of Paris, for July, contained a fine cut of several of these hounds, and we doubt not it will be the coming dog.

IRISH WATER SPANIELS.

THIS celebrated breed of dogs, for retrieving ducks or any kind of game on land or in water, seems to be scarce in the Western country. I am somewhat surprised at this, as, in my opinion, for retrieving ducks they have no superior. Their color (liver) is particularly adapted for the purpose; they are large, strong, and remarkably handsome and affectionate, with great courage. I regret to notice in the different bench shows inaugurated this season, they have not been included in the special premiums, as to the sportsman who delights in duck shooting there is no more valuable auxiliary in securing game than this breed. They are bred in great purity by J. S. Skidmore, Nantwick, England, and some few specimens from his stock have, during the past year, been imported into Canada and the United States. I have recently seen a dog of his breed, although not directly imported from him, at work in the West, and a better retriever of ducks I never saw. No sooner is the gun raised than his eyes are on the birds, and if one falls he is almost sure to recover it. In water, rice, or mud he is equally as good, never refusing to go even in the worst places, from which many dogs would balk. I once owned one of this breed which was a remarkable dog. He would not remain in a bough house located on land, preferring always to station himself on the outside, close to the house, where he could watch the passing birds. If a flock was going by without notice he would give a low whine, as much as to say, "don't you see them." He was remarkable for marking where game fell, and if, in shooting, birds fell into the water dead, he never went for them unless bid to do so. But let one fall wounded, and he will swim off, and he would make a rush for it. If birds dove, he would stand in the water and look until he saw the ripples they made, and follow them until they showed their bills above the water; then, when getting close enough, would dive, and invariably secure the birds. As he did not retrieve birds that fell dead in the water, unless bidden, he would always, when the day's sport was over, and all ready to start home, take his stand in the bow of the boat, and as the boat approached dead birds pick them up and place them safely in the boat.

Now, if such dogs as these can be had, let it be made an inducement for parties to breed them. Let them be entitled to the same chance for premiums at our bench shows as pointers or setters, and the day is not far distant when the pleasure of duck shooting will be greatly enhanced by the recovery of a large number of wounded duck, which are now entirely lost.

Bench shows, recently inaugurated in this country, will create a desire for the best breeds of dogs, and tend to greatly improve the stock; but let all breeds of hunting dogs have equal privileges in these shows, and many of the mongrels now used for sporting purposes will become extinct.

SHAMROCK.

Chicago, Ill., October 27th, 1874.

ALLOWING POINTS.—A correspondent writing about the recent dog trials at Sleaford, England, makes the following remarks about the number of points allowed, and from these we should say that the system recently adopted at the Tennessee tournament is far superior to that in vogue across the Atlantic:—

"Now as to reckoning points. It has been said in some English journals that it appears to be an anomaly for a dog to win a trial without obtaining a single positive score, but only through the negative score of his adversary. I can't say I see this line of reasoning. It may apply to the individuals before them at Sleaford, but it is quite possible, to my imagination, for a very bad dog, put down with a very good one, to so bother him, that in half an hour all the points may be negative instead of positive. For instance, a bad dog with a turn of speed, and a propensity for running in, might put up every bird in a country before his better educated opponent can make the requisite number of positive points to pay him. I say that if you have two dogs down together you must judge them by a certain scale of points, whether they be positive or negative. There is the same difference between them at the finish, whether the points be all positive, or whether the extreme points of both be positive and negative, or both negative. In a greyhound trial, which is a quicker business altogether, and much more difficult to be calculated, the judge, when judging after his dogs, only reckons the score of the winning dog (i. e., the dog which is ahead), though each dog may win and lose the course twenty times over. Thus, a dog, A, makes 3 for a run up, and 1 for first turn—4; his opponent, B, gets 1, and makes a couple, that is 2 still to A; not 4 to A and 2 to B. A then makes a couple; 4 to A. B makes a wrench and a kill, say 3, leaving A winner by one point. This is much more quickly and readily done; it would be impossible for the runner to count the number of points got by each in a long course, and to blot out them at the finish. In field trials of pointers and set-

ters, which are comparatively slow, there is nothing to prevent the positive and negative system of reckoning from continuing, besides it is much more satisfactory, and admits of a more ready comparison between dogs that are not actually "antagonized," or in the same stake. This is a point of interest with some.

"Now, as to the value of points. The most difficult problem of all! The simpler it is made the better.

"Of positive points. I think a point should be 3, a bark 2, a drop 1, all being natural. A forced bark or drop by the hand or voice of the trainer, I think, should go for nothing in this part of the score; good roading (on a sliding scale) from 1 to 3.

"Of negative points. Simply flushing 2 (demerit), refusing to bark 2, false pointing from 1 to 3 (according to circumstances), breaking fence and run 2 (according to circumstances), breaking point and running in 4, chasing 4, blinking 4.

"Disqualifications. Absolute gun shyness, chasing wing or feather out of the field.

"Additional points, to be added to the score of one or both competitors at the conclusion of the trial, to be left, of course, to the discrimination of the judge or majority of judges.

"From 1 to 10 extra—for pace.

"From 1 to 10 extra—natural style.

"From 1 to 10 extra—breaking.

"On reviewing the above, it will be seen that the negative points are in greatest abundance, and properly so. In like manner, it is very probable that negatives will preponderate in the majority of the trials, but the actual difference between the opponents will be quite as easily determined, though, by this system the actual excellence, judged by a standard of perfection, will not be so readily given."

EXTENSION OF RABIES.—In the *Veterinarian* for September, Mr. G. Fleming, M. R. C. V. S. (H. E.), says that so little was known of the geographical limits of rabies until within a few years that we are often in doubt whether it has been recently imported into regions where it is now witnessed, or whether it was always prevalent there. Earlier travelers have stated that it was unknown in Asia Minor, Egypt, Algeria, and Arabia, but now there is abundant evidence of its presence in these regions. How far the malady may owe its extension to its contagious properties, or to the importation of dogs from countries where it exists, is difficult to decide. It is certain, however, that rabies has not been witnessed in Australia (where nevertheless considerable alarm is beginning to be felt, owing to the present large importations of English greyhounds), nor in New Zealand, nor does it appear in South Africa and Madeira, though European dogs must have been largely imported at various times. Why have these countries escaped exemption from the scourge? The contagion breaks out sometimes in an alarming and truly epidemic form in countries where it has not been previously noted, as in the West Indies in 1783, and Peru in 1803, without any reasonable cause being assigned. It was imported into La Plata, in 1806, by dogs belonging to English officers; and in 1818 by English dogs from the Bay of Bengal. With regard to Sweden, the malady has been frequently noted in Sodermanland, Norway, Northern Russia, and Lapland, but there seems to be some doubt as to Siberia, Kamchatka, and Greenland. From the descriptions given by Drs. Kane and Hayes of a disease amongst the sledge dogs of these countries, however, it would appear highly probable that it is also prevalent there at times. From the symptoms detailed by Hayes, this disease certainly bears the greatest resemblance to rabies, but as the initial symptoms do not appear to have attracted attention, and it was only when the more violent indications appeared that its existence was noted, it would be difficult to speak decidedly as to the actual nature of the malady.

—The mean annual death rate from hydrophobia for fifteen years to every million of inhabitants is only 5. There is good reason to believe, however, that in recent years that rate has rather increased. Up to 1866 the mortality for England for any one year, through the malady, has not exceeded twenty-five. In 1866, however, when there was an extensive outbreak of the disease, the death returns from it were thirty-six, and when active measures were adopted, the number fell in 1870 to thirty-two; but in 1871 it reached the unparalleled number of fifty-six. All persons bitten by rabid dogs did not become infected, though the number who escaped varied. The most recent French statistics give 49.31 per cent. of the number given who were not infected, and a previous estimate gave the number at thirty-three per cent. of the disease, and especially in Austria, the mortality was somewhat higher, and in Bavaria from 1863 to 1867, 863 persons were bitten, sixty-nine of whom died. Much depends on the susceptibility of the person or animal bitten, and the frequency of the bites. Dogs and cats are most susceptible to the malady; next in order come maulkaid and pigs; then ruminating animals, the sheep and goat being more susceptible to the disease than the ox.—*Veterinarian*.

RECIPE FOR DOGS.—The following recipe may be found useful to some of our readers, or their dogs:—

PERKS, October 23d, 1874.

EDITOR FOREST AND STREAM:

I see in your last issue Cobb of Bridgeport wants a recipe for his pointer pup that one effected the same as I cured him by giving him a pint of Tobacco Juice boiled with tobacco leaf and boil it for half hour make it pretty strong I gave my pup the whole dose at once for I had no idea it would cure him but I think half of this is plenty for one dose.

B. E.

—A fox hunting club has been organized in Baltimore, which will keep a pack of sixty hounds.

—A fair at which dried fish was exhibited was held recently at Eastport, Maine. The Fishing Society, after enjoying the odor of the display, partook of a dinner together in the evening.

—Assistant Surgeon Elliott Coates, U. S. A., our correspondent, has been ordered to appear before the examining board in New York, for examination for promotion to the grade of surgeon.

—Not a horse can be ridden in Lake City, Florida. Good sign.

The Horse and Course.

—The managers of the Jerome Park are entitled to the thanks of all gentlemen who frequent the race course for pleasure for their action in two cases last Saturday. This was to rule Hugh Gaffney and John Coffee from the track for fraud in throwing races. This is a most timely movement, and one which will meet the approbation of every true lover of the horse. The throwing of races is of too frequent occurrence to be tolerated any longer, and if our managers would preserve the course from the vile offence of gambling and speculation, they should in all instances follow the lead of Jerome when such flagrant outrages are brought to their attention. The lesson imparted will bring wholesome results—which will prove of great benefit to the morale of racing.

—The extra day given at Jerome Park last Saturday was one of the most enjoyable of the season, as a splendid field of horses competed, so that the races were in vast instances contested with spirit.

—The first race there was thirteen entries, twelve of which were colored on the cards as starters; but when called to face the flagman only five responded to the summons. These were George Ayre's brown horse Blind Tom, carrying 148 pounds; Lawrence and G. Lorillard's chestnut colt Resolute, with 140 pounds in 'saddle; M. A. Littell's gray mare Mary Clark, with 145 pounds; M. J. Tully's bay gelding Vesuvius, with 145 pounds, and A. H. Torrence's bay horse Moonstone, with 148 pounds.

Owing to the action of Gaffney, the rider of Resolute, Moonstone won the steeplechase. Time, 4:25. Gaffney was ruled off the course forever by this action.

The second event was a selling race, with three starters, a mile and an eighth. Those that came to the post were R. W. Walden's bay gelding Mildew, to be sold for \$300, carrying 95 pounds; J. G. Bellucci's bay gelding, by Hurry \$200, 85 pounds; John Coffee's brown colt B. F. Carver, \$1,000, 105 pounds. The latter was pulled at the drop of the flag, and all the way was never suffered to near the other horses, and was beaten fifty yards. The judges called the jockey of Carver into the stand, and being fully satisfied that the jockey had orders from the owner to pull the horse, John Coffee, the jockey, and the horse were ruled off the course forever. Mildew won the race by a neck in 1:54.

The third race was a handicap, for all ages, one mile and a half, and had for starters Lawrence and G. Lorillard's bay horse Shylcock, with 114 pounds up; Thomas Parker & Co.'s bay colt Grinstead, carrying 98 pounds; J. W. Weldoos's bay gelding Kadi, 108 pounds, and James Thompson's chestnut filly Emma, with 86 pounds up. Grinstead was a great favorite, Shylcock the second choice. Shylcock ran a grand race, winning in the best time ever made, less a quarter of a second than that recorded to Glenn, with 100 pounds up, at four years old, at Monument Park, in August, 1870. Shylcock was such a better race than Glenn's, as he carried his full weight (114 pounds), while Glenn had eight pounds off. Time, 2:38.

The fourth race was between hacks, gentlemen riders. The starters were Girl of the Period, five years old, ridden by Peters, carrying 151 pounds; White Horse, five years old, ridden by Mr. L. Center, weighing 151 pounds, and Satchel, five years old, carrying 144 pounds up, having a saddle 145 pounds. Girl of the Period was the great favorite over the field. She won the race very easily, having galloped away from the others at the fall of the flag. All the gentlemen rode gracefully, and were neatly dressed. Distance, half a mile. Time, 5:03 seconds.

The closing event of the day was the Grand Handicap Steeplechase, for which ten horses came to the post. These were A. H. Torrence's chestnut gelding, with 155 pounds up; George Ayre's bay colt Diavolo, 140 pounds; Lawrence and G. Lorillard's chestnut colt Resolute, with 140 pounds; A. P. Green's brown horse Harry Booth, 140 pounds; Geo. Ayre's brown horse Blind Tom, 148 pounds; Lawrence and G. Lorillard's chestnut filly Austrine, 135 pounds; M. A. Littell's gray mare Mary Clark, 145 pounds; M. J. Tully's bay gelding Vesuvius, 148 pounds, and A. S. Cattaneo's favorite over the field at 2 to 1 in many instances. The favorite won the race, Diavolo second, Resolute a good third. Time, 4:18.

—About 300 persons attended the Fleetwood Park races last Monday. First in the programme was a sweepstakes for \$1,000, mile heats, best three in five, in harness, between Thomas Tremble's bay mare Lady Tremble, John Hasset's bay mare Maria, John Murphy's sorrel gelding Sorrel Jake, and P. Fleming's gray gelding Willie. Willie won the first heat, Sorrel Jake the second, Willie the third, Lady Tremble the fourth, and Willie the fifth heat and the race. Best time, 2:41.

The second event was a match for \$200, mile and repeat, in harness, between John George's sorrel gelding Red Cloud and Owner's bay mare Lady Kate. It required three heats to decide it, Red Cloud proving the victor. Best time, 3:54.

The next race, also a match for \$200, mile heats, best three in five, was between D. Kelly's bay gelding, carrying, to weigh, and T. Walker's bay gelding, in harness. Four heats were ridden, Knapp winning the first, third, and fourth of the race. Best time, 2:52.

—Two contests came off at Prospect Park on the 37th, the first being between horses that had never beaten three minutes previous to making their entries. There were twenty-one horses named, but only nine came to the post. These were:—Black mare Catskill Girl, brown gelding Fulmouth Boy, bay gelding New Dorp, sorrel gelding T. J. Stevens, bay mare Elie Deaus, bay gelding Cheston, bay gelding Hampton, brown horse Comper and black gelding Annet. The latter was the favorite previous to the start. Afterward Catskill Maid became the choice. She won the race in three straight heats.—Best time, 2:38.

The second race had ten starters of the twelve entries, and was between horses that had never beaten 2:38. The starters were brown mare Carrie, gray gelding Royal George, bay mare Lady Bayes, bay mare Ella Madden, bay mare Lady Morrison, bay mare Lady Annie, bay mare Adelaide, gray mare Horas P., bay gelding Hecarock, brown gelding Lady Woodcock, bay mare Carrie was the favorite and won the race. Best time, 2:34.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
OFFICE BOX 2832.
135 SOUTH THIRD STREET, PHILADELPHIA,
COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent, for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tackle," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 40 cents per line. Advertisements in double column 25 per cent extra. Where advertisements are inserted over 1 month, a discount of 10 per cent, will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, NOVEMBER 6, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising advertisements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and confidence of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, November 6th.—Trotting at Dexter Park—Billiard Tournament at Tammany Hall, N. Y., for the National championship.

SATURDAY, November 6th.—Trotting at Dexter Park—Billiard Tournament—Trotting at Bay District Fair Grounds, San Francisco, Cal.

MONDAY, November 9th.—Billiard Tournament.

TUESDAY, November 10th.—Billiard Tournament.

WEDNESDAY, November 11th.—Billiard Tournament.

THURSDAY, November 12th.—Billiard Tournament.

A CHALLENGE FROM THE PACIFIC.

WE have received a letter from San Francisco, in which Company E of the First Regiment, California National Guard, express a desire to shoot against any equal number of men belonging to the "crack" regiments of the N. Y. N. G., at 200 and 500 yards; the conditions to be the same as those at the recent military match at Creedmore. They will shoot either for friendly supremacy or for a trophy to be furnished by the losing "team." As the object of this challenge is to arouse an interest in rifle practice in the Golden State, it is to be hoped that one of our regiments will accept it, and by this means enhance its own reputation and foster a most desirable exercise. If international contests are interesting, those between various sections of our own country should not be less so, as they cause an emulation which yields the most satisfactory results, by bringing out the best shots, and encouraging all in the attempt to attain an honorable distinction in so manly and honorable an accomplishment. Each "team" can shoot on its own grounds, and by this means save the expense of a trip across the continent. If this challenge is accepted by a New York company the terms of agreement can be readily arranged, as each "team" can shoot the same day and then telegraph the scores. This would simplify the matter and leave our city regiments no excuse for refusing the challenge, and permitting the Californians to boast that they could find no "team" in our National Guard that would dare to contest with them for the supremacy. We hope, therefore, that the gauntlet will be taken up ere the winter sets in. Any communication relative to the matter, addressed to the office of the FOREST AND STREAM, or to Captain H. J. Burns, Sheriff's Office, San Francisco, will receive prompt attention.

RIFLE CLUBS.

THE recent International match has accomplished a most important result in this country, as it has caused all matters pertaining to rifle practice to receive the consideration they deserve. We are in receipt of letters from various portions of the Western Atlantic and the Pacific States in reference to the subject, and all the correspondents make inquiries about the Creedmore rules, so that they may follow them literally, and reap whatever advantages they may possess over others.

Many of the writers express the patriotic desire to organize clubs on no other grounds than that they may reveal the best marksmen in the country, so that there can be no possibility of the Americans returning from their next contest without the laurel wreath of victory. This is a most excellent motive to prompt the action, and we hope it will become general throughout the whole Union. Some give as a reason for the organization of clubs, the advantage which it would give our men in war, by teaching them steadiness, coolness and accuracy of aim, while others argue that it imparts vigor to the frame, and elevates into a science a study which is now deemed little more than guess work. All these assertions are good enough in their way, and have some weight, but we hope that our riflemen will never be called upon to test their weapons on anything more important than a target or fleeing game.

Calls have been issued in one or two cities in this State, in Chicago, and in towns in Minnesota and California, for the establishment of rifle clubs, and all have been received with marked approbation, not only by sportsmen, but by the leading citizens, prominent among whom are the officers of the National Guards; and from this we should infer that ere the Winter is over these clubs will be quite numerous in several States. The representative of the FOREST AND STREAM in Chicago, General Webster, Major Brand, and other gentlemen of the same city, have already discussed the project of a club, and from present indications it seems as if that Western metropolis would soon boast one second to none, except our own celebrated Amateur Club.

In Scott County, Minnesota, a region of hunters, an organization will be established ere long, and as the members express a desire to practice throughout the Winter, we shall, no doubt, hear some good reports from them early in the season.

California is also paying a fair share of attention to the subject, and this is a strong indication of its general interest, for if the men of that Eldorado, who are supposed to be wrapped up in naught but the procuring of gold, can be aroused into action, it seems plausible to suppose that the citizens of our Eastern States, who have more leisure time to spare, and more opportunity and convenience for practice, will not lack in enthusiasm.

The first step for popularizing rifle exercises in the Golden State has been taken recently by the military authorities, they having offered some excellent prizes for competition between the various company and regimental organizations. This will have a most salutary effect, so we should not be surprised if our next International "team" contained a representative of the Pacific riflemen.

This general interest in rifle practice is a good indication of the result of the recent contests at Creedmore, and reflects much credit on our Amateur and National Clubs, who, unaided, aroused our people from their lethargy, and gained us a victory from the accredited best marksmen in the world, and thus enhanced the reputation of our country, and proved that it was pre-eminently the land of riflemen.

If this enthusiasm continues, our next "team" to the Green Isle will be a national one, in the most literal sense, and if they should return victorious, then will the whole country be entitled to share in the honor.

PARISIAN SPORTS.

THE nobility and other gentlemen of Paris, who are attached to the sturdy pleasures which always characterize nations in the most advanced civilization, and who sport with enthusiasm all exercises that tend to mental and physical progression, have undertaken the project recently, of establishing at Billancourt an institution in which all the national sports are to be represented. This will be founded on the broadest basis, so that no pastime worthy of receiving the support of ladies and gentlemen will be omitted. Many of the sports are a necessity, if the gay Frenchmen would equal their Saxon or American kindred in equestrian, rifle practice, natation, or rowing, and all are interesting from their high standard as educators of physical prowess and endurance. According to our Paris exchanges, this grand sporting centre will contain a hippodrome so arranged as to be adapted to trotting, running and steeple chasing, a school of equestrian, a stand for rifle practice, and to which will be annexed a shooting gallery for exercise with the pistol and shot gun, a grand stand for pigeon tournaments, a school of natation and rowing, a skating pond, a fencing, boxing and gymnastic academy, a course for hunting hares with greyhounds, and having field trials of pointers and setters, and all hunting dogs in fact, and a large space where polo, cricket, croquet and tennis can be played.

This grand institute will also contain a large covered pavilion for various pastimes, a reading and *conversazione* rooms, and a restaurant complete in all appointments, and presided over by a famous *chef de cuisine*.

This arrangement omits no national sport worthy of

mention, so that it possesses all the necessary elements of success.

The gay Parisians with their usual enthusiasm will undoubtedly make this aggregation of courses and buildings the finest of its kind in the world; indeed we do not know of any country that boasts so complete a circle of sports, so that we must give our Gallic neighbors the credit of being the first to inaugurate a complete school of physical education and blending business and pleasure most happily together. This proves that our Gallic kindred are more interested in these manly accomplishments than they generally receive credit for, and that the higher classes are second to none as lovers of refined sports.

If such an institution were established in the vicinity of the City of New York it would fulfill a high purpose, and, no doubt, receive the support of our most prominent and influential citizens, at least all who are interested in those exercises which are always supposed to grace the virile gentleman and sturdy soldier. We need something of this sort to educate our young men in accomplishments which are necessary to their health, and of use to them in every-day life.

The hoarding of money does not constitute the whole purpose of life; indeed its use is very limited if one has not the physical health to enjoy the comforts it brings, so that the first duty is to gain sturdy, bounding health, by engaging in manly exercises, then one can appreciate the value of the yellow metal. It is a very radical defect in our sociology that effeminaey is not deemed a defect in our young men, for if it were, they would then pay more attention to gaining strength as well as money, and instead of indulging in sybaritical pleasures they would devote their time to attaining distinction in those accomplishments which ever characterize virile natures, and which are the most marked characteristics in all conquering nations.

ANTICOSTI.—In the first three published numbers of this journal, August 1873, will be found the only description extant, we believe, of the Island of Anticosti, in the Gulf of St. Lawrence. Something more than a year ago its colonization was attempted by a company which seems not to have acted in good faith in all respects; or else its judgment was unfortunate. At all events reports against its honorable and financial integrity have been freely printed. The condition of the settlers who located under its auspices has also been represented as deplorable. In view thereof, Mr. J. U. Gregory, Government Agent at Quebec, was dispatched in a thoroughly provisioned steamer to ascertain the condition and judge of the prospects of the settlers. The report of his investigations, as furnished to the Minister of Marine and Fisheries, is printed in the Quebec *Chronicle* of 27th October. From it we learn that, however justifiable the reports of desolation may have been last Spring, it appears that, save in one instance, there is no absolute want existing now. So long as the settlers depended upon the promises of the Company for assistance they were in a deplorable condition, homeless, hungry and discouraged. The arrival of the stores of the *Napoleon III.*, in the Fall of 1873, was a God-send which enabled them to struggle through the Winter, and as soon as they began to work for themselves, they experienced comfort. There are some 250 families upon the island. At English Bay are 210 families, chiefly Newfoundlanders. They were comfortably housed, and had cultivated patches of land very successfully. At Ellis Bay was found a farming establishment where the agent saw "fine horned cattle that would do credit to any stock raiser." At South West Point of the Island, families were found in great want, owing to their having placed reliance upon the promises of the Company, and the failure of the fisheries in their vicinity. In fact wherever the promises of the Company were depended upon by the settlers, they suffered want and privation. It is plain that the most reckless mismanagement must have prevailed. If the Company is crippled to-day the incapacity of the agents who undertook to prepare the settlements must be held accountable, for the settlers have done their utmost to fulfil their obligations. Anticosti is not the howling waste it has been pictured, but a fitting home for a particular class of the population of the Gulf of the St. Lawrence. It is vastly more inviting than Labrador or the North Shore, to whose people the condition of the settlers of Anticosti is opulence itself.

FIRES EVERYWHERE.—Seldom has the country experienced such a general and wide spread drought as during the three months past. With the exception of infrequent local showers, there has been no rain since August over an area of territory that stretches from Maine to Texas, and from Minnesota to the Gulf of Mexico. Fortunately the drought came too late to materially curtail the crops; but the death of water in certain sections is most seriously felt by mill owners and those who use it as a beverage. In those States West of the Missouri River, especially, the suffering for water to drink is really painful. Lately we made a tour Westward through ten States into the Indian Territory, and throughout the whole route, we found the water courses nearly dry. Through beds of rivers that usually flow in ample volume, rivulets barely trickled. In southwestern Missouri, Kansas, and the Indian Territory, the beds of creeks were totally dry, and the game deserted the country. Those farmers who bad water in their wells sold it by the barrel to those who travelled a dozen miles to get it. Vegetation is everywhere parched; the prairie grass is dry as tinder, and when set on fire consumes in a flash. Over the limitless expanse dense clouds of smoke rolled up all day in all directions, and the blaze of a dozen running fires lit

up the night. The damage done in various ways on these vast plains is very considerable, but small when compared with the results that follow fires in the woods, such as we find are raging in a dozen different States at once. In the Dismal Swamp, Virginia, among the "knobs" of Pennsylvania, along the Paw Handle of West Virginia, in a dozen counties of Ohio, Indiana, Illinois, and Kentucky, on the Highlands of the Hudson River, in this State, in the Southern part of Alabama, in Wisconsin, in Canada, and in fact, *all over*, fires are burning in greater or less degree, in some cases attaining the magnitude of almost uncontrollable conflagrations, destroying vast areas of valuable timber, barns, dwellings, and stock, impoverishing farmers and scattering destruction. The Peshigo conflagration and fires that raged two years ago on the borders of the great lakes, were more terrible in the loss of life they entailed, but we believe that such general and widespread fires never before consumed simultaneously so much of the wealth of this country.

CANADIAN SPORTSMAN.—We have received some copies of a paper bearing this title, from the Dominion, and from its tone and style, we have no doubt, but it will receive a warm welcome among the lovers of the rod and gun. Canada is one of the finest game and fish regions in the world, and, therefore, needs a journal devoted specially to these and kindred sports, one that will look after their interests, and be the exponent of all that tends to preserve the first, and graphically sketch the others.

If the new paper fulfills its mission, it will be to Canada what the FOREST AND STREAM is to the United States, and will, therefore, accomplish much good. We wish our contemporary the most unbounded success.

CONNELIAL.—At Port Chester on Saturday morning our worthy and esteemed friend J. W. Warren, the gentlemanly and energetic Superintendent at Lord & Taylor's, Twentieth street and Broadway, took unto himself a lovely companion for better or worse, for the better we believe, as his genial disposition will ever make him what his wife would most desire.

Shot Gun and Rifle.

GAME IN SEASON FOR NOVEMBER.

Moose, <i>Alces Maltch.</i>	Snipe and Bay Birds, Willets.
Elk or Wapiti, <i>Cervus Canadensis.</i>	Caribou, <i>Tarandus Rangifer.</i>
Hares, brown and grey.	Red head, <i>Capreolus Virginianus.</i>
Wild Turkey, <i>Meleagris gallopavo.</i>	Squirrels, red, black and grey.
Woodcock, <i>Scolopax vesicifera.</i>	Quail, <i>Quercus Virginianus.</i>
Birds of Grouse, <i>Tetrao umbellus.</i>	Wild Duck, <i>Geese, Brant, &c.</i>
Wild Pigeons.	

Under the head of "Game, and Birds in Season," we mean to specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish these entire sections that relate to the birds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

GAME IN MARKET.—The market has a fair quantity of game at present. Baltimore and the counties along the Chesapeake send large numbers of red-head and canvas-back ducks, and Long Island is the principal depot for duck-geese, mallards and widgeons. Teals are abundant, and generally fall from the West. Ruffed grouse and prairie chickens are comparatively plentiful; but woodcock are scarcer than they should be at this season. Quails are also limited in number, New York State and Connecticut furnish all that are in market, as the weather has been too warm in the West for some time to allow good shooting. Canada ships nearly all the snipe and plover, so they are scarce. Venison is quite abundant for this season. It comes principally from the interior of this State and from Michigan. Rabbits and squirrels are very profuse, and hail from Connecticut and Long Island. The prices paid are the same as last week.

—Frost in this vicinity this week, with snow and ice along the Canada border, will drive our dilatory migratory birds to Southern climes; and consequently we may expect to hear of wild fowl shooting "all along the line" from now to the end of the season. There is another flight of woodcock still to come. These are small, hardy birds which have been lingering in Canada, usually very fat and strong of wing, and difficult to hit. They are expected daily, and Humphrey Hartshorn, the veteran sportsman of Long Island, is on the *qui vive* for them. He despises any kind of game less trying to one's skill. They will tarry but a day or two when they come. Very few bags of quail are reported from Long Island. Nevertheless, birds must be in the cover somewhere, and we know of certain sportsmen who are going out to find them. Ducks are numerous in the Great Peconic and Noank bays, and vicinity. After the present cold spell, until the middle of December, the sport will be splendid. Those who wish to hunt deer on the Island will have to do their business before the 15th of November, at which time the close season begins.

MAINE.—Portland, Oct. 30th.—Partridges (ruffed grouse) absolutely swarm in Maine; I never knew them so abundant. Black ducks and green-winged teal have also been unusually abundant. We intend to have a law passed this Winter prohibiting the killing of moose for from three to five years. It is about time, as moose are nearly extinct in Maine. **MAC.**

MASSACHUSETTS.—Shooting wild ducks is now the most popular amusement. Around Gloucester the sportsmen are paying their attention to sea birds, which are now plenty in the harbor and Squam River.

ADIRONDACKS, Oct. 30.—In the course of eighteen visits

to the North Woods within the past twenty years, I have never found partridge (ruffed grouse) so abundant as it is this season.

—The young men of Mount Vernon, N. Y., are talking of getting up a rifle club according to the Creedmoor rules, and to practice regularly.

ILLINOIS, Peotone, Oct. 28.—Snipe plenty round here. I have seen two flocks, one of six, and the other containing as many as twenty birds. **D. H. E.**

—Fox Lake, Illinois, is becoming a perfect Mecca for sportsmen, especially those fond of duck shooting. Two men killed 420 there in two days.

WISCONSIN, Madison, Oct. 28th.—The weather during the past month has been charming. I think it could not be exceeded in any country. Shooting, in consequence, has been poor. Several parties have been camping in the marshes of the "Upper Cat Fish," beyond Lake Mendota, all so far, with indifferent success. Very few ducks and geese have been bagged. We must have rough weather before good shooting can be had. Fishing during the entire month has been unusually good, and large numbers of black bass, white catfishes, have been captured. Lake Mendota is now full of ducks, geese and brant, but they are beyond the reach of sportsmen—they only fly to their feeding grounds on the distant prairies and return. The marshes and fly-away places are not visited by them to any extent. **T.**

—All pinnated grouse shooting is over for the season, as the birds are packing and very wild.

DISTRICT OF COLUMBIA.—The law prohibiting the shooting of partridges having expired, the woods are crowded with gunners, the greater portion of whom are negroes. Small game is plentiful, but with such destruction as is going on there will not much longer be any left.

FLORIDA.—The Florida Press says that wild ducks and sea birds are coming in daily. The markets, both the meat and fish, are well supplied. Some of the finest beef we have ever seen near is offered, and in the fish market, every variety of fish, fat and fish. A string of a dozen fat mullets for five cents; other varieties in the same proportion. Fine green turtle abound in the harbor. On Tuesday two were captured which weighed respectively 101 and 69 pounds.

CALIFORNIA.—Deer are very plentiful in the mountains around Gilroy, and the hunters are slaying them in large numbers and shipping them to the San Francisco market.

—Over three thousand deer have been killed near the head waters of Mad River, within a year, the skins only being used. Legislative action is called for to put a stop to such wholesale slaughter.

—One of those very rare animals, a silver grey fox, was killed about half mile above Washington, Yolo county, California, recently. It is the first of the kind seen there for a long time, and is quite a large specimen, measuring from nose to tip of tail three feet and a half.

—Game is reported exceedingly abundant in Humboldt county at present, as myriads of ducks and geese are swarming on the lakes and tiles.

OREGON.—Game of all kinds is exceedingly profuse, and hundreds of sportsmen are out daily after wild geese, ducks, snipe, quail, and even bears. Two boys near Corvallis killed a large cinnamon bear of the fiercest persuasion one evening last week. The bruins, three in number, were raiding upon the swine pens, when a well-directed shot from a needle-gun brought down the largest one, when the others fled. A number of hogs had been killed by bears in that vicinity this Fall.

VIRGINIA—Alexandria, October 29th.—Black bass have been caught at the old coal wharf and in the canal above the basin, the anglers using grasshoppers for bait.

An immense rock fish was caught on Friday last in the canal, above the water gate, weighing over fifty pounds.

Partridges are said to be scarcer than ever known before at this season of the year. They are either driven away or killed off by the numerous gunners in this vicinity. Eighteen colored men and boys were counted at one time last week returning over the creek bridge from hunting.

Two gentlemen with a pair of five pointers hunted nearly through Jefferson Township, over some beautiful fields, and only succeeded in starting two small covrers of birds, one of seven and the other of five. Their entire day sport consisted of five partridges, two larks, and one venerable rabbit.

A gentleman who went hunting, last night, on the south shore of Hunting Creek, returned this morning with six fat mississippis.—**Gazette.**

MISSISSIPPI—Corinth, Oct. 28th.—I have only tried "bob white" once; it is too hot as yet, and too much high grass, weeds, and leaves on the brush. I slept last night with a window open, and without any covering except a sheet until nearly daylight. And the days are quite warm. My friend "Junior" Capt. John A. Duncan—who always shoots straight powder—has bagged three or four deer and a dozen and a half bobs, killed one afternoon since the season opened. I made a raid on "Scirmis" the day before yesterday and bagged eight, and one pigeon, when I had to stop on account of a most fearful headache, superinduced by looking up in those infernal high trees, and the jar of the gun. Squirrels are very numerous, Junior killing twelve yesterday in a short time. A few pigeons have made their appearance, but they never come now as they did in the long ago, when you could stand on any hill, morning or afternoon, and shoot until you were tired at the passing legions of them as they went to and returned from the feeding grounds. No ducks, a very few turkeys, some deer six or eight miles from town, and I fear me that the supply of quail miles is not as abundant as was thought in the Summer.

TEXAS.—Hunters are out now every day after game. A perfectly white deer was killed not far from Clarksville on the 9th inst. There was not a spot of any color except white upon him, even the hoofs being of that color.

MONTANA.—Game of all kinds is exceedingly abundant, but the buffalo, deer and bear above all. The cervus family is slaughtered in large numbers. Hounds are now used freely in hunting, so that chasing the fox and stag is a sport often enjoyed. Pigeon shooting from traps is receiving marked attention from the best shots in the Territory.

CANADA.—I spent two months in Canada this season in the vicinity of the quaint old city of Quebec, was too late for Mr. *Salmo Salar*, but had capital trout fishing. Woodcock are curiosities this year in Lower Canada and Maine, and my brother brings the same report from Nova Scotia. There were no English snipe in the St. Lawrence Valley from Sorel to Crane Island up to October 4th, and even the great Tantremer Marsh in New Brunswick was nearly bare this year. **MAC.**

—Hunters who have returned from the north of France report an abundance of deer and other game.

—We understand that a pigeon match has been made between Carroll Livingston, of this city, and Mr. Peters, of Philadelphia, for \$1,000, to shoot fifty birds each, English rules.

—A match took place at Tom Stagg's, Chicago, October 29th and 30th, for a Parker gun, owned by J. Butler & Co., valued at \$250; \$10 entrance; 15 single birds; 21 yards; 30 yards boundary; Kennicut Club rules. Wind blowing a gale, weather very cold and disagreeable; birds quick and strong. The wind blowing the birds away from the shooters, it required quick work to secure any. Two thirds were carried outside of bounds by force of wind.

CREEDMOOR.—The ninth competition for the *Turf, Field and Farm* badge was held at Creedmoor last Saturday. The day was exceedingly windy, yet the general shooting was good. It was generally thought that this contest would decide the ownership of the badge—the terms of the competition requiring that the trophy be won three times before becoming the final property of the winner—*as Messrs. Wingate, Collins and Madison* had each been successful in two competitions. Messrs. Collins and Madison took part, Madison making but 14 points and Collins 16. In this latter Mr. Collins was tied by Mr. J. O'Kelly, who made a precisely similar score, 16. The conclusion of the match, these two gentlemen decided the terms of any shot each, Mr. Collins making an outer, receiving 2, while Mr. Kelly made a center 3, winning the badge and first entrance money by one point. The next competition for the badge will take place Saturday, November 28. The following is the score:—

EVERY reader of the FOREST AND STREAM will receive free of copy of the best Agricultural and Family Newspaper in this country by addressing Moore's Rural New Yorker, 78 Duane street, New York.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Striped Bass, *Zocon lineatus*, Weakfish.

SOUTHERN WATERS.		
Pompano.	Trout (black bass).	Sheepshead.
Snapper.	Drum (two species).	Tallfish.
Groopier.	Kingfish.	Sea Bass.
Rockfish.	Striped Bass.	

FISH IN MARKET.—Fish has been scarcer within the past few days than it was last week. The Southern waters are furnishing a large supply of blue fish, which sell at eight cents a pound. Snelts are abundant and retail at from twenty-five to thirty cents per pound; king fish is common and varies from twelve and a half to twenty-five cents, and fresh mackerel from New England is worth fifteen cents. Salmon trout from the Western lakes brings fifteen cents; whitefish from the same locality, bring eighteen cents; sheepshead from the coast of Virginia and Maryland twenty-five cents, and weakfish twelve and a half cents. Flounders are quite abundant, and retail at ten cents per pound.

—The fishermen on the South side of Long Island are having remarkable good luck this Fall. Large shoals of blue fish have recently passed along the shores and great numbers have been taken off Freeport, Islip, Babylon and Southampton. Several tons were caught at the latter place during the past week and shipped to New York. At Westhampton a fishing company caught nearly 4,000 and another company took about 2,000. The fish average about five pounds apiece and are very fat. The oyster season, too, is now fairly under way and bids fair to be very successful, and to give employment to a large number of men at good wages. They find a ready sale at from fifty cents to \$1 25 a bushel.

—A strange fish was washed ashore at the east end of Staten Island one day last week. It was from four to five feet long, and weighed about sixty pounds. It has neither dorsal nor ventral fins, but large flippers, under which were the gills, and above them two pairs of bony thorns. The mouth was very large, and furnished with formidable teeth above and below. The head was about two thirds the entire length. Hundreds of people viewed it, but nobody could tell what it was.

—A petition is in circulation in Sayville, in this State, in the interest of the oyster planters of the neighborhood, asking the Legislature to amend the laws, or rather to enforce the provisions of such as are now in force, regulating the taking of oysters in the Great South Bay.

—Large quantities of lobsters and crabs are now being caught along the shores of Staten Island, and fishing with hook and line for striped bass and blackfish is unusually good, in consequence of the continued fine weather.

—There was a fine specimen of a muscalonge on exhibition at Sullivan's last Monday, sent by Charles E. Whitehead, Esq. It was caught in Lake Huron, and weighed thirty-eight pounds.

THE PROVINCETOWN FISHERMEN.—Forty sail of cod fishermen have arrived from the banks and the bay with 38,500 quintals, and there are ten more sails to come. The latter have been reported, and their catch will increase the aggregate to 50,000 quintals, being an average of 1,000 quintals to a vessel. Last year, at this date, fifty-six sails had brought in 71,710 quintals, and this quantity was subsequently increased, by the arrival of second fares, to a total of 80,000 quintals, giving an average of 1,329 2/3 quintals to a vessel, and a net catch of 29,000 quintals more than the entire products of this year. One vessel only, the Camilla, has this season returned to the bank for a second fare.

Notwithstanding this large decrease in the catch, there is nevertheless compensation in the prevailing higher prices. A year ago to date sales for larger cod had averaged less than \$4 30 per quintal, and the market is still active and promising. While several vessels have come in without incurring serious loss for owners and shermen, the majority of the fleet will realize more net profit from their voyages than was obtained last year from an unprecedentedly large catch.

—The Georgesmen are bringing in very good fares of halibut late.

—According to the Cape Ann Advertiser, the shore mackereling fleet have mostly abandoned the business. Some of the vessels have hauled up, and others are fitting out for haddock fishing, which will be quite extensively prosecuted through the Fall and Winter season. Messrs. Judson, Tarr & Co., of Rockport, have leased a wharf at the Fort, and will have four steamers employed in this branch of the fishery. The Newfoundland and Grand Mennan herring fisheries will also be extensively engaged in the coming season. Four vessels have already sailed for the former port for cargoes of salt herring, and others will soon follow. The frozen herring fleet will be off the latter part of next month and early in December, and some forty or fifty sail will engage in its prosecution. The bay fleet are coming in slowly, five vessels having arrived the past week, and several others are on the homeward passage. Most of the fleet will probably be along by the middle of November. There have also been ten arrivals from the Grand Banks the past week, second trips, the vessels averaging good fares of codfish.

—A Washington correspondent sends us the following notes, which will prove gratifying to State Fish Commissioners and encouraging to resident anglers:—

Great Falls of the Potomac, Oct. 26th.—The Great Falls Club has been made illustrious. Mr. John Hancock, the scion of a house noted for its skill in angling, has accomplished the biggest feat of the kind ever known on the Upper Potomac. He fished a half a day (Thursday, the 22d of October), and took thirteen black bass, beauties every one. On Friday he captured twenty-four more; on Saturday fifty-eight accepted the tempting bait and found a hook in their noses; and on Sunday thirty-three more were booked for a journey to Washington, making in all one hundred and thirty-eight, more black bass than any one man ever caught before in the same time in the Great Falls Fishing Grounds. In weight they averaged about two and

a half pounds and were as fat as pigs. The Club propose to have a grand celebration in honor of the event and to crown Mr. Hancock "King of Fishermen" for the ensuing year.

—It seems that sharks are beginning to become numerous in those parts of the St. Lawrence which are now being fished for porpoise. The fish, though dangerous to man, are not wholly useless. The skin may be converted into a sort of leather of considerable value; a good deal of very tolerable oil can be obtained from the liver, and though the flesh is coarse and poor, it is by no means absolutely un-eatable. Not only is shark occasionally eaten at sea for a change from salt provisions, it is employed as food in some parts of northern Europe, and its fins are preserved in some places for the Chinese market, where they are sold as a delicacy.

THE LABRADOR FISHERIES.—The following letter from the Secretary of State relative to the discussion as to the status of Labrador in the Washington Treaty, and which involved the whole of its commerce in fish, has been published:—

DEPARTMENT OF STATE, WASHINGTON, D. C., Oct. 29, 1874.

To Hon. R. H. Bristol, Secretary of the Treasury:

SIR: Referring to your letter of the 14th of October, and to previous correspondence, on the question of the relations of Labrador to the Dominion of Canada or to the Colony of Newfoundland, and particularly to the question in your note of the 14th inst., whether Labrador is or is not accepted as a part of the Dominion of Canada or of the Colony of Newfoundland, from which the fish are admitted free of duty under the Treaty of Washington, I have the honor to inclose you a copy of a note from Sir Edward Thornton, Her Britannic Majesty's representative, dated the 26th of October, upon that question, in which he informs the department that the whole of Labrador, outside of the Province of Quebec, is under the jurisdiction and government of the Colony of Newfoundland, and is actually included in the terms of that treaty. In the absence of this information, now communicated, it has not been possible to furnish an earlier answer to your letter. I have, therefore, the honor to inform you that the whole of Labrador being included in and forming a part of Newfoundland, the provisions of article 13 to 25 of the Treaty of Washington have been extended thereto, in pursuance of article 23 of the same treaty, and that the exemptions which are by these articles extended to the Dominion of Canada are equally applicable to Newfoundland, including Labrador.

—By the arrival of the steam tug Cabot, from Labrador, bringing dates to the 21st ult., from that coast, the Harbor Grace Standard is enabled to lay the following particulars before its readers:—

"The sailing fleet from the north had returned thence, the larger crews having caught from 350 to 600 quintals each, and the smaller ones from 250 to 300 quintals. From Cape Harrison to Indian Harbor a good improvement had taken place in the cod fishery since last reports, and from that locality southward a little improvement had also been made. The boats were catching occasionally from two to four quintals per day. The likeness of the season will soon wind up the cod fishing operations, so that we may estimate this year's catch at an average of 110 quintals per boat on the coast, which, combined with the herring catch on the southern part of the shore, will give a fair average voyage. Herring operations had commenced on the 6th ult., when, up to the 11th, the netting was pretty general. A storm from the northeast then interfered with the catching for a few days, causing damage to nets, and forcing the herring into deep water. After the gale had subsided netting commenced again, and fair catches were being made. In scaling, very few bars have been secured, and most of them lost, owing to the seines having been overturned by the sea and tide. However, with another good week's success, it may be safely calculated that our usual herring cargoes will be secured. The quality of the fish is reported as very fine, and, with strict attention given to this year, our customers may be certain of a good article in their market this Fall."

—A seventy-eight pound codfish was shown in the Halifax fish market last week. It was the largest seen for many years.

—The American fishing fleet of Cape Breton, are reported doing poorly lately. Some vessels have made fair catches of mackerel, but the majority have taken but few.

—Large bass have been caught during the past few days from off the battery, near the fort, at St. Augustine, Fla. Mr. Francis Rautec one day caught a bass which weighed forty-five pounds, and measured about four feet in length. Some fifteen of these monster bass have been caught at that locality.

—There is very good trout fishing, in its season, in the vicinity of Granby, Connecticut.

—English herring, fish seldom seen in our waters, were taken quite plentifully from the river at Pawtucket, R. I., last week.

THE FISH OF IOWA.

DAVENPORT, IOWA, October 15th, 1874.

EDITOR FOREST AND STREAM.—Excepting black bass, perhaps the finest table fish of the inland waters of the West is the pike perch, whose misnomer is white salmon, and in some places half-eyed pike. This fish has the same name in Ohio and on the Susquehanna. In the latter stream it attains a large growth, sometimes reaching even twenty pounds weight, or more. Yours says the writer has seen them taken in that country, but as described, not the largest he has seen taken from the Mississippi as he described eleven pounds. He has himself killed quite a number from five to ten pounds in weight. The greatest destruction of this fish is by seining in the Spring, when they are exposed for sale in the market for ten cents a pound. At the last session of the Legislature of Iowa, an act was passed making a small appropriation for fish culture, and the appointment of three commissioners. In his act there was some protection provided against the wanton destruction and wholesale extermination of different varieties of fish. But, unfortunately, neither Iowa or Illinois has such exclusive jurisdiction over the waters of the Mississippi that the fish therein can be properly protected. Possibly Congressional legislation might be invoked to prevent the killing of the white salmon, or pike perch, and other species in the midst of their spawning season.

On Saturday, 10th instant, I hooked four pretty specimens of pike perch, and, after some play, succeeded in landing two, one weighing three pounds, and the other seven and a half, which made a glorious Sunday morning breakfast.

—The Executive Committee of the National Rifle Association met at the office of the association, No. 93 Nassau street, last Thursday afternoon to listen to several protests which had been raised on several points. Colonel Church, president, Generals Shaler and Woodward, and Lieutenant-General Giltner were present. The case of Private Irwin, of the Seventy-ninth Regiment, in the Gulling gun match, was first taken up, and after much talk, referred to the full board for settlement. The matter between Messrs. Fulton and Yales as to what constitutes a breach loading rifle, was then taken up. Lieutenant Fulton had placed a cartridge in his breach loader, and then completed the charge by putting the powder-wad and bullet down from the muzzle. He explained that he did it to save time from loading cartridges at home. He insisted, however, that his was a breach loader, and the particular mode of loading did not affect the conditions of the match. General Shaler thought his mode was simply loading the cartridge and not the gun. It was finally unanimously determined to award the contested prize to Lieutenant Fulton. An attempt was then made to fix upon a definition of a breach loading gun, but the hour being late, the previous motion was reconsidered, and the whole matter referred to the full board.

—To encourage rifle practice among the members of the California National Guard, \$1,000 has been given to the Major General Commanding by the State authorities, and he has allowed the following sums for each competition:—For the best regimental target practice, \$100; for the best cavalry company target practice, \$50; for the best infantry company target practice, \$50. Competition for said prizes will take place in May and June next, before a Board of three United States Army officers, and the awards will be made on the 4th of July following.

—The rifle tournament of the Second Connecticut regiment was held on the 23rd at New Haven. The teams shot at 200 and 500 yards for team prizes, and individuals at 200 for the Col. Smith gold medal. A team from the First regiment was beaten by a team from the Second. A medal was also shot for by commissioned officers. Owing to the fog in the morning the shoot was not concluded at night. This was the second annual tournament, and the average shooting was much better than last year. The Peabody rifle was used.

—The Rifle Tournament of the Second Regiment, Col. S. R. Smith, closed on Wednesday. The first prize for company teams, at 200 and 500 yards, was won by Company K, of Wallingford; second, by Company L, of Meriden, and third by Company E. Colonel J. M. Lane, of Meriden, won the first prize for individual excellence at both ranges, making 33 out of a possible 40. The Colonel Smith medal was won by Quartermaster-Sergeant S. Park Brown, who made 18 out of a possible 20, at 200 yards. The Dacie medal was won by Adjutant J. S. A. Baker. The shooting has been much better than last year, the winning team scoring 201 out of a possible 320. The twelve best scores, five shots each at 200 and 500 yards, sum up 377, an average of over 28 out of a possible 40, surpassing the corresponding twelve best scores of the Twenty-second regiment of New York at Creedmoor, which summed up 295, an average of 24 1/2 out of a possible 40.

—We have been shown a double barreled, muzzle loading shot gun, made for Mr. Norman Elmore, of Granby, Conn., by Messrs. Cooper, Harris & Hodgkins, of Broadway, about two years ago—length, 28 inches; 11 bore; 8 1/2 pounds weight; 4 1/2 inches drop; 12 1/2 inches from beehive to front trigger; laminated steel; walnut stock. Its greatest peculiarity is its extreme drop and the shortness of the stock; but those who might at first be tempted to guffaw at the awkward-looking tool, cannot but feel how mechanically and with what readiness and comfort it fits the shoulder, arm and eye when brought to bead. We hear of several gentlemen who purpose ordering stocks of the same pattern, and we ourselves shall lose no time in putting in our application, for we cannot but feel convinced that its use will practically explain away many muffed shots which have reluctantly been credited to nervousness or bad marksmanship. Mr. Elwood prefers a 11 bore gun for general shooting.

SAN FRANCISCO, Cal., Oct. 26th, 1874.

EDITOR FOREST AND STREAM.—The regular monthly match of Co. E., First Regiment N. G. C., was held at Bay View, October 17th. Fifteen members shot in the first class at 200 and 500 yards, 5 shots each distance. Target at 200 yards 2 feet and 6 feet. 500 yard target, usual size, 6 feet by 6 feet. Rifle, Sharp's military, .50 cal. Weather, rainy in the forenoon, afterwards clear. Wind, hardly perceptible. I append the scores of the best 12 in the first class.

Names.	200 yds.	500 yds.	Total.	Grand Total.

PISTOL PRACTICE.—We are pleased to acknowledge the receipt of the following complimentary note from Mr. J. S. Conlin. Fond of pistol practice ourselves, we naturally feel interested in imparting such information to our readers as can be obtained relative to the science or art, —Ed.,

890 BROADWAY, NEW YORK, Oct. 21, 1874.

EDITOR FOREST AND STREAM.—In an posted Mr. Editor, to notice the interest you manifest in practice with small pistols, as the popularizing of small-arm shooting will do away in a great measure with the numerous accidents that attend the handling of pocket fire-arms by those unskilled in their use. It is a well known fact that not more than one in fifty knows anything either as to accuracy of aim or the manner of holding a pistol.

By keeping the attention of the public called to this fact, your reputation as a public benefactor will be established. —The Delaware County Republican says:—A movement will shortly be made by a number of persons in this city and its vicinity, to organize a rifle and pistol shooting association, auxiliary to the Sportsmen's Club of Philadelphia. Such a society is greatly needed.

I am told that this fish is not found below the upper rapids of the Mississippi, which terminates here at Davenport, though I cannot give reliable information upon this point. I think the habitat is the rocky bottom of the stream, where the water is cold and the weeds are sparse. My principal object, however, in this communication, is to direct attention to another fish, a near relative to the foregoing. It is what is popularly called the black, or jack salmon, but in reality a different species of pike perch. It seldom attains over four pounds in weight, and is caught in abundance down to half a pound. This fish is not common to Eastern waters, as far as the writer knows, it is confined to the West. It is sweet and delicious as a table fish, but should receive protection. The writer and a friend one afternoon took thirty-four of these fish in the Mississippi, where they abound, though the books give but little notice of it. In Frank Forester there is a reference to it, but not from personal observation, his description being taken from De Kay. In your interesting Journal I noticed that the grayling of Michigan was first introduced called the jack salmon, and on this account had my attention more particularly directed to the same named fish in our waters; but I am satisfied that it is simply a variety of the pike perch. Perhaps this is the same fish named Richardson's pike perch—the Canadian sandre—described on page 191 of Forester's Fish and Fishing. An officer of the army, now located at Rock Island Arsenal, a most enthusiastic devotee of the rod, informed me that he threw away the first fish of this kind caught by him, thinking it kindred to the mullet, or stone roller, a species of fresh water sucker. The fish in question is, to my eye, a beauty; dark olive patches on the back, white ventral fins, tipped with red, dorsal fin large, prominent and spines, and caudal fin wavy with rays of light and olive. The writer regards it as one of the sweetest and most delicious fish that inhabits our waters, and then it is in goodly numbers, a ready biter, and a vigorous puller, and is more gamey than its larger cousin.

It is quite a trisession to pass from the above fish to the brook trout, yet I cannot resist a few remarks touching this gem of the tumbler water, the most joyous of our angling objects. There are no trout streams in Iowa, except in the extreme northern part of the State, the streams being too sluggish for them in prairie land. The writer, in early July last, explored some of the tributaries that empty into Root River, in southern Minnesota, which, at La Crecente, empties into the Mississippi. His first excursion from a mill dam well stocked with black bass at Hoka up to Indian Lake, the source of the stream, was rewarded with no success. With rod and fly exploring, he found no chance for a cast amid the overhanging brush, but saw and started many fine trout. Adopting the style of the country, he tried the common angle worm, and caught between thirty and forty, one thirteen inches long, not fifty yards from the spring. There are some three or four trout streams close in this vicinity justly noted, which the writer contemplates exploring as soon as the month of August blooms next season. While touching upon trout, permit me to narrate an incident that may possibly be interesting to some fishermen. It is strictly genuine, as the lawyers say, to the subject matter before us.

The writer was, many years ago, challenged by Squire Quigley, a resident of Young Woman's Town, above Lock Haven, Pennsylvania, to fish for trout in Young Woman's Creek. Eagerly dashing into the stream, a few miles from its mouth, he secured some seven or eight pretty fine trout before the Squire had adjusted his rod. Meantime the latter was busy in lifting the rocks along the shore of the creek, and when he did get to work the trout were caught so rapidly that the fisher was obliged to abandon his intention, and adopt the bait used by the Squire, who lifted a stone which he found it lying beneath as still as an image. It was about the length of a little finger, cylindrical in form, and when disturbed darted from one stone to another. This bait is tough and white, and the trout leap for it as though accustomed to the food. I have since taken the same image fish in other waters, in the West, and thought the mention of it would be of service to fishermen. I am informed, on pretty good authority, that this little fish is known and used as bait in English waters, and is there called the loach. Yours, truly, J. H. B.

MURKIN FURNACE, November 24, 1874.

EDITOR FOREST AND STREAM.—

I read with interest an article entitled "New material for fly rod," in FOREST AND STREAM of July 29th, page 371. The writer promised to report the test of his rod on large trout. For one should be glad to hear how the rod worked, as, if it was satisfactory, I want to make one of the same material. O. C. C.

Rational Pastimes.

Secretaries and friends of ATHLETIC, Base-Ball, Cricket and other outdoor Clubs will kindly mail their contributions not later than Monday in each week.

—On Oct. 31st the Germantown and Moreau cricket clubs had a match—one innings a side—on the Germantown grounds, which resulted in the success of the former by 119 to 61. Weekham's 24, John Large's 24, Tom Hargreave's 22, and Cooper's and Fox's 16 each, were the leading scores.

—Mr. Outerbridge has added to the Cricket literature of America another of his ably written pamphlets, the last work of the same kind being a pamphlet on the subject of the proceedings of the Halifax Cricket Tournament in August last, containing the full scores of the games and complete statistics of this noted tourney. The book is a presentation work and it can be had by enclosing address with a postal stamp for postage on application to Box 2764, Philadelphia post office.

—In the match at Philadelphia between the "Foreigners" and the "Natives" of the Athletic and Philadelphia clubs, the latter won in a seven innings game by 11 to 4. The "Foreigners" included Hicks, Beutell, Craver, Egger, Sutton, Holdsworth, Godney, Murnan, and York. The "Natives" were—Miller, McBride, Batin, Reach, Anson, McGeary, McMullin, Fulmer, and Donnelly.

—The death of John Lillywhite will give into other hands the compiling of Lillywhite's Guide, of which John had charge. It can be greatly improved by an explanatory appendix to each rule. Lillywhite was a strong bat and good bowler, but a fielder. He was highly esteemed by the cricket fraternity.

—Mr. David L. Reed of the Philadelphia club has resigned from his position. They will miss the services of an ardent partizan and an able secretary. Frank McBride, too, who started the club, has left it.

—The Boston "team" for 1875 will be White, Spalding, O'Rourke, Barnes, Schafer, George Wright, Leonard H. Wright, McEvoy, Beals, and Manning, all gentlemanly and reliable, as well as skillful, professional players.

—The professional contests since our last issue were as follows:—

October 27—Hartford vs. Athletic, at Hartford.....	10 to 8
October 27—Boston vs. Philadelphia, at Boston.....	11 to 4
October 28—Boston vs. Athletic, at Boston.....	10 to 7
October 28—Hartford vs. Philadelphia at Hartford.....	9 to 4
October 29—Boston vs. Athletic, at Worcester.....	19 to 12
October 29—Atlantic vs. Philadelphia, at Brooklyn.....	9 to 6
October 30—Hartford vs. Boston, at Worcester.....	17 to 11
October 30—Philadelphia vs. Hartford, at Philadelphia.....	14 to 12
October 27—Boston vs. Hartford, at Boston.....	13 to 5

—The professional championship ended Saturday, Oct. 31st, and the result of the series of contests for the whip pen is in the success of the Red Stocking nine of Boston as champions for 1874, with the right to fly the pennant during 1875. The Mutuals occupy second position in the race, and the Athletics third. The full record of games played won and lost up to Oct. 31st is as follows:—

Clubs.	Athletic.....	Baltimore.....	Chicago.....	Hartford.....	Philadelphia.....	Games Won.....	Games Lost.....
Athletic.....	6	2	3	5	6	33	56
Atlantic.....	1	4	3	2	3	22	55
Baltimore.....	1	1	1	1	1	9	47
Boston.....	6	9	9	9	5	1	70
Chicago.....	4	9	9	4	1	24	59
Hartford.....	4	8	5	9	8	1	54
Mutual.....	4	8	5	9	8	1	65
Philadelphia.....	1	4	2	7	4	29	53
Games Lost.....	23	33	18	31	37	23	333

Out of the 280 games which formed the full series to be played between May and November, 232 had been played, leaving 68 games to be played up to Oct. 31st, the Boston club being the only contestant to complete their full series of ten games each. The disbandment of the Baltimore nine threw out all their 47 games, and left the other seven contesting nines occupying the following positions in the race:—

Club.	Games won.	Games Lost.	To Play.
Athletic.....	43	17	0
Atlantic.....	22	22	4
Athletic.....	31	21	8
Philadelphia.....	25	23	3
Chicago.....	29	19	10
Atlantic.....	19	32	8
Hartford.....	19	35	11
Totals.....	185	185	48

The average of runs to a match for the winning nines in October was 9.16, and for the losing, 4.37. For September the average was 9.5 and 4.25. This last was the best average since May. Except in April, the average has not been nine and a half in any month of the season. This shows very fine play.

—A Chicago paper says:—"Meyers, Cuthbert, Treacy, and Malone will undoubtedly connect themselves with the new St. Louis club. Joe Simmons is also an applicant for a fielder's position in that nine. Cummings' demand of \$3,000 will be acceded to by the St. Louis directory, it is said, if he will agree to cut loose from Hieks, who is not wanted." If this is so, unquestionably the St. Louis club are paying dear for their whist.

—On Oct. 30th the Stars of Newark visited Paterson, and in a game with the Olympics they were defeated by score of 18 to 4. Foran led the score, as he did in the Resolute match, with the West Ends. In this game Brown, Bunce and Roberts of the Nassans, and McCabe of a New York nine, took part on the Star side. In fact it was a picked nine against the Olympics.

—On Oct. 29th the Staten Island club defeated the Silver Stars at the Capitoline Grounds by 21 to 3.

—On Oct. 23d the Resolutes of New York played a pretty game with the West Ends of Jersey City at the latter place and won by a score of 8 to 1.

—The Staten Island club's match with the Eastons has been postponed by the latter club, and the Bridgeport game will not be played until the 10th inst.

—On Oct. 31st Hoboken was the scene of a lively contest at foot ball between contesting sides of Rutgers and the Stevens' Institute. The result, after six games had been played, was a "Chicago" for the Stevens' boys, Rutgers winning all six games.

—Warren White goes to Chicago with Hastings, and Stevens and Fleet, Dehman and Pike to St. Louis; The Chicago club retain Glenn, Devlin, Peters, Zaitin, and Ford, and they are to have the Canadian player Keurl, and Snyder.

—The professional clubs for 1875 will include the Athletic, Boston, Chicago, Hartford, Mutual, Philadelphia, and St. Louis; besides which there will be the Atlantics, the Westerns of Keokuk, and the Reds of St. Louis.

—An Atlantic "team" is talked of composed of Rule and West of the Chelseas, Smith of the Concord, Booth and Sweasy of this season's Atlantics, Treacy of the Arlingtons, and Duescher, Redman and Rogers of the Nassaus.

—The Hartford "team" for 1875 will consist of Allison, Bond, Mills, Carey, Ferguson, Burdack, York, Remsen, and Tipper, with a new change pitcher and catcher to be added.

—The Boston cricket club defeated Harvard by 150 to 53 in a match played at Cambridge, Mass., October 24th. Pettit led the Boston score with 55, Clarke scoring 23, Dwight's 27 being the best on the other side.

—On Oct. 26th the White Stockings played the Franklin a close game, winning by 3 to 0 in a full game. The Whites, the same week, defeated the Westerns by 7 to 0. On Oct. 24th they defeated the Franklins by 5 to 1.

—On Oct. 29th the Reliance club of Brooklyn defeated the Jasper College nine by 11 to 5 at Manhattanville. The Reliance "team" included Larkie, Kosbern, Swandell, Powell, Dover, Hodes, Hibben, Bradford, and Clinton.

—Egler and Hall will strengthen the Athletics for 1875, and with Clapp, McBride, Anson, Fiesler, Sutton, Reach, Sensenderfer, and two new men, a fine "team" will be raised.

—McGeary of the Athletics—says a Chicago paper—and not Snyder, is to be catcher of the White Stockings. It happens, however, that they have engaged Higham at \$2,000.

—At Weymouth, Mass., on Oct. 24th, the White Stockings and Fleetfoots played a pretty game, marked by a score of 5 to 4 only in favor of the Fleetfoots.

—The Atlantics were to have "gone West" on Oct. 30th for a few weeks play with the Chicago nine, but the latter would not guarantee expenses, and so they did not leave.

—The Mutual "team" will include Mathews, Start, Nelson, Daescher, Pearce, Hatfield, Geer, and McGeer.

—The St. Louis "team" take Miller and Bradley, from Easton, and Fulmer, McMullin, Cuthbert, and Treacy.

—Brainard is to be the pitcher of the Westerns next year. A good and reliable man.

—The Philadelphians retain Cummings, Craver, Mack, Haldsworth, and Bechtel.

—During the last visit of the Westerns to Chicago they were defeated by the "Whites" by 10 to 2.

—Notwithstanding the lateness of the season athletic exercises are still vigorously prosecuted at Boston. A handicap came off at Beacon Park on the 25th instant, the prize being \$100, \$50 and \$20. The distance was 40 yards, and the peculiar form of the sport had never before been witnessed in that section of the country. The several runners were classed off for three heats; John Graham of Lawrence and John Melrose of Boston in the first heat; the first to have 114 yards from the scratch and the other 154; Bart. Tinnache of Boston 183 yards and Christy Blank of East Boston 164 in the second; Edward McEvoy of Boston 15 yards, Andy Tufts of Lynn 15 yards, John Hourihan of Boston 18 yards. Each of the heats were run in their order, the allowances from 140 yards being made. In the first Melrose was the victor, in the second Tinnache, and in the third McEvoy. The handicap was accordingly made up by those last named, and the result was Tinnache won the \$100, Melrose the second money and McEvoy the third.

—The velocipede race on the Westchester County Fair Grounds, near White Plains, last Wednesday, between Frank Shaw, champion of the United States, and Henry Naylor, champion of England, which was to decide the championship of the world, was won by Shaw.

—O'Leary is bound to make a name for himself. He has already made a remarkable record, if all accounts are true, but he is anxious to get the sporting men of Chicago to recognize his peculiar abilities, and to champion him against more famous, but, perhaps, inferior pedestrians. He claims that he can out walk Weston or any other disciple of this sort of exercise, and he is doing all he may to induce Chicago betting men to think likewise. Recently, in the presence of several of them, he undertook a twenty-five mile tramp at Dexter park. He had stated that he could accomplish that distance in four hours and thirty minutes. The assertion was doubted, and in proof of it the trial was made. He finished his task in four hours and twenty-five minutes, coming home on the 25th circuit of the track perfectly fresh, and apparently ready for a similar undertaking. The achievement was, however, considerable in his ability. There is some prospect of negotiations for a match between him and Weston. He also offers to bet \$1,000 that he can walk fifty miles in eight hours and forty-five minutes; and that he can besides beat the best time made in Europe or America during the present century. The Hibernian is evidently in earnest.

—E. Daniels arrived from Boston last Saturday, and L. Newhall has reduced himself down to 126 pounds, which will place him in proper condition for the tournament.

Billiards.

—The Brooklyn Amateur Tournament, now in progress at Sackett's Billiard House, near the post office, Brooklyn, is increasing in interest as the games progress, and the coming week's play promises to be quite exciting, as the result will be to indicate the coming champions. Indeed, one of the contestants, Mr. Knight, has secured such a winning position already that it will be difficult for any of his adversaries to reach him. Next to him stands Mr. Pfannkuehn. The record up to Nov. 2—no games being played on the 3d, election day—is as follows:—

Player.	Games Played.	Games Won.	Games Lost.
Knight.....	9	7	2
Pfannkuehn.....	4	3	1
Lozier.....	1	1	0
Dorfan.....	3	2	1
Tietz.....	2	1	1
Wright.....	1	1	0
La Torre.....	2	2	0
Buckhart.....	5	1	4
Kneaght.....	4	2	2
Vanderwerker.....	1	0	1
Ferris.....	3	0	3
Clark.....	0	0	0
Totals.....	46	23	23

The best average made to date was 2.62, by Knight, he also making the best runs. The games played in the afternoon are open to lady visitors, for whom special seats are reserved free.

THE FRENCH GAME TOURNAMENT.—The gathering of billiard experts in contests at the three-ball French carom game, which was commenced at Tammany Hall on Nov. 4, promises to be a very fine display of the beauties of the most scientific billiards. There are to be thirty-six games played in all—exclusive of ties and games to decide them—and in these contests Messrs. Ubassy, Garnier, Vignaux and Rudolph will represent France; Messrs. Daly, Slosson and Daniels, America, and the Dion brothers, Canada. Ladies are admitted free, and every arrangement has been made, calculated to make the tournament a creditable success. Mr. Daniel E. Gavitt will conduct the tourney.

—The great National Billiard Tournament for the championship of America, and \$2,500 presented by M. Delany, the patroner of the wire cushions, commenced last Wednesday evening at Tammany Hall. The following prominent billiard players take part in it, viz.—A. P. Rudolph, M. Vignaux, P. Ubassy, A. Garnier, C. Dion, J. Dion, G. Slosson, M. Daly, being an array of Knights of the Cue that have never before tilted on the same field, so we may expect some remarkable playing, and, perhaps, the longest runs ever made before in any tournament.

—Monsieur Tivag has prepared a very excellent speech for the opening of the tournament, and it will, no doubt, be appreciated, as his oratorical abilities are well known to his many friends.

—Mr. Slosson is the only one representing the West in the billiard tournament now going on in this city. Slosson, in practice with an amateur, recently played a game of 300 points, French, winning by 300 to 30, and making the fine average of 20.

—Ubassy & Vignaux, with the assistance of the players mentioned, gave an exhibition in their rooms, corner 14th street and Broadway, which was largely attended by the lovers of billiards. Some very fine play was developed.

—The pools at Maurice Daly's have been very lively, with Vignaux the favorite for the championship.

Monaghan, Keefe and Hopewell, and a crew from the North end of the city—(Brown, Mullin, Coon, and Graham), the former won by about five lengths.

The annual athletic sports of the Toronto Lacrosse Club came off on their grounds, corner of Wellesley and Jarvis streets, on the 26th. The attendance was not large, but fine weather favored the occasion, and the proceedings passed off very pleasantly. The exercises embraced hurdle and foot racing.

The match between Captain Graham's and Captain Herbin's teams, (10 men each,) 66th Halifax Volunteer Battalion of Infantry, for \$40 a side and the championship of the regiment, came off on the 26th. The result was a victory for Captain Graham's team by 13 points, the score standing 336 to 983. Ranges 200, 400, 500 and 600 yards, 5 rounds at each.

The foot ball match last week between the Navy and Civilians, came off on the Common at Halifax. The game was fought out until time was called, without either side winning a goal. The odds, if any, were in favor of the Navy, who were composed of heavier metal than their opponents.

The Ontario players won the inter-province foot ball match in the recent contest with the Montreal Club.

THE MIRIMICHI RIVER.

St. JOHN, N. B., October, 1874.

EDITOR FOREST AND STREAM.—In your issue of the 1st Inst. appeared the letter of a correspondent, giving an account of his visit to the Southwest Mirimichi. From internal evidence I judge that both the gentlemen forming the party are interested in the lease, and as much concerned in the protection of the river as he is himself. Your correspondent's letter, if true, reveals a most extraordinary state of affairs, and not at all creditable to the lessee, or to the gentlemen associated with him.

The object of this letter is plainly to throw blame on the fishery officers appointed by the Department of Marine and Fisheries to protect the river, and in his eagerness to do this your correspondent has entirely overlooked the fact that a special clause in the lease requires them to keep "private and confidential" as to the names of the persons who are to be employed, and to make good any damage done by the trespassers in the manner in which the lessee perform their duties.

Your correspondent states that his party "came upon two men with all the appliances for spearing." Why was not a formal complaint, giving names, date, place and offense, made to the local officer, to enable him to punish these offenders caught in the very act? Or why did these gentlemen themselves not take proper steps to punish those trespassers on their leasehold? Above all, why was the river left "entirely destitute of protection," so that "spearing and netting was going on everywhere," when the lessee was specially bound by his lease to provide it? Your correspondent's heart may "beat fast with indignation," but he will probably find it more difficult to give a satisfactory answer to these questions than to make good and general complaints against fishery officers, which is too much the fashion of unsuccessful anglers.

I wish now to mention a few facts connected with the Southwest Mirimichi, which are well known both to the lessee and your correspondent.

Previous to the appointment of the present fishery officers, the Southwest, in common with all our salmon streams, was almost depleted by illegal fishing, since we are obliged to sail to the coast, and to the Fisheries Act of 1863 were fairly got into working order, there has been a steady and rapid improvement, year by year, in that river, as well as in all others. Last season the catch in the Mirimichi was the best known in twenty previous years, while that just closed was even better, the canning establishments being unable to handle all the fish daily brought to them, so that they were obliged to salt and export the remainder. For the last three years the angling in the Southwest has steadily improved, and where, a few years since, a week's angling was rarely rewarded by half a dozen salmon and grilse, there has been for the last two seasons splendid sport for all who have visited it in the proper time for fly-fishing, one gentleman having taken in June last nearly one hundred fish from one stream, and another gentleman, on another stream, in the time spent on the stream. While this improvement has taken place in the Southwest, our other well known streams—the Nepisiguit, the Restigouche, the Metapedia, and the Upswich have regained all their former renown, and are now quite equal to angling streams to their most palmy days. The catch in the Nepisiguit this season has never been so good, while in the Upswich the fish are much larger than ever, and the water is so clear that the fish are much better sport than your issue of September 24th describes on the Restigouche and Metapedia.

With facts like these, patent to all who know anything about the past and present state of our rivers, what sheer nonsense to charge our overseers and wardens with negligence or connivance with poachers, when there existed no means of detecting them, and when the greatest improvement is wholly to their exertions in enforcing the law.

I have just returned from a visit to both branches of the Mirimichi, and although I regret to say that much illegal fishing is yet done, which, with our present help, cannot be wholly detected or prevented, I am gratified to find so great and so undeniable an improvement in a river which you represent as being so nearly depleted, and I am only too glad to find that so much good has been done with such insufficient means. The duties of fishing officers are of a most onerous and unpleasant kind, and I know, to my sorrow, how little support they receive from those who benefit by their exertions. If men like your correspondent "C. S. R." would take some little trouble to assist them, by placing them in a position to prosecute such offenders as they detect, and if an only one were pressed that so much good has been done with such insufficient means. The duties of fishing officers are of a most onerous and unpleasant kind, and I know, to my sorrow, how little support they receive from those who benefit by their exertions. If men like your correspondent "C. S. R." would take some little trouble to assist them, by placing them in a position to prosecute such offenders as they detect, and if an only one were pressed that so much good has been done with such insufficient means.

As an inspector of Fisheries for Nova Scotia and New Brunswick, I can point with some degree of extensibility pride to the great improvement evident in the fisheries of both Provinces, since I have filled the onerous and thankless office; but I feel that to the local overseers and wardens, much more than to my own efforts, is this gratifying result to be attributed. I am, very respectfully, W. H. VENNING.

CANADIANS AT CREEDMOOR.

TOBACCO, ONTARIO, October 26th, 1874.

EDITOR FOREST AND STREAM.—I find in your valuable paper a communication from "Shooter," of Hamilton, who seems much grieved at our American friends comparing the scores in the Bennett match of the six men who left Canada with such team of the American and Irish, who shot the great International match at Creedmoor. I wish to inform you that all left Canada independent of each other, and not as a team, (though out of courtesy and compliment they are called a team by our American friends.) The object of some was to see New York, and improve their acquaintance with our friends on the other side. It is to say that when a match is settled upon between our friends, the Americans, a proper action should be made on the same basis as the Wimbledon team. This would include the whole of the Dominion of Canada, and not Provincial clubs. Had this been done when the challenge was given by Ontario to the Irish team, no doubt it would have been accepted. The cause for some of the scores of the Canadians being below their general average was owing, to a certain extent, to the fact that they did not get the shooting in the dark, as several shots at 100 yards were fired from the shoulder, the man

not being able to see through the sights. Several of the Canadians finding it was impossible to see the targets, refused to finish their scores that night, and therefore were allowed by the Council to shoot them off the next morning. If this favor had not been granted, they would have had but little show on the prize list. By inserting this, I just think you will oblige. A CONSTANT READER.

THE SHELL QUESTION.

EDITOR FOREST AND STREAM.—I crave your indulgence and permission to further discuss the metal shell question, even though you say it has been discussed *ad fandum* by the London Field, in which I think you are in error; but if you are not, its discussion in the Field would present it to but a small number of American sportsmen.

The principal objection seems to be on the score of safety, and while it might be proper to call attention to that point alone, I wish to notice some other objections that have been made, even though they scarcely deserve refutation; yet there are some sportsmen who write very pleasant letters for the papers, and appear to be well posted in matters that pertain to a gun, who suppose that metal shells are the vile of cylinders sent them by their gun maker to convert their gun into a *mauvais fusil*. One such case came under my personal observation, and that was in the case of a well known sportsman in the city of Montreal, who when he actually did not know what they were. If in any other case may be yours. You would be astonished were I to give you my name, for his shadow often falls across your sanctum door. Our friend "Check Cord" does not see any reason to change his mind about what he states in regard to the difference in diameter of the paper and metal shell, and although it is of small moment, I will state for his benefit that Greener gives the gauge of a 12 paper shell as exactly eleven bore, or .751 of an inch. A letter from the U. M. C. Co. gives the diameter of a 12 A metal shell as .772 of an inch. Now the difference between eleven and ten gauge is .024 of an inch. *Verbum eiq.* The answer to "Check Cord's" request about boring guns is already in print.

It is a little difficult to explain in such a way that makes it patent to all that his mind is fully made up about the shell matter, makes some statements which I desire to call attention. His first objection to metal shells is uniformly in shooting, stating that he has made numerous experiments, &c. I wish to ask if they were not made with a gun that was built without any reference to the use of metal shells. If such was the case—and I have no doubt it was—then the gun was not made for three times larger than the shell, thus getting more force out of the same amount of powder? The writer has made numerous tests with both kinds of shells, using them in guns built to use either kind of shell, and the result has been in favor of the metal.

The second point mentioned is the quality of the paper shell, and, I will add, its perfect safety. The correspondent states that the "explosion of a paper shell is as harmless as that of a fire-cracker." I quote from the London Field to show that the experiences of others do not agree with that of the correspondent. The Field says: "Two or three times it happened that when fired (Ely's) line shell the rim at the base of the cartridge was blown off and the remainder of the case was driven back up the barrel of the gun, causing a delay of ten minutes to a quarter of an hour each time in ramming out the empty case." Field, Oct. 11th, 1873: "A servant of mine was ordered to take a few plain fire cartridges from the house to the gun room. He dropped one of them on the stone cover of a dead wall; it exploded. By the greatest piece of good luck it did not shoot him; or the servants who were standing up close by. The explosion was so violent that it blew the brick wall which received the shot was scored off and chipped as if it had been struck and scratched with a graven rake." From another: "Out of every six I may say that five burst at the rim, causing, on several occasions, painful wounds on my left wrist, by the powder being blown into it. Several times after firing (we will say the right barrel), on opening the breech I found the powder was blown back, and the metal into the bent neck so that the hammer would not strike it, and the rim burst, the whole cartridge looking as if it had gone off, and on one occasion it did go off a second or two after the right barrel, before the gun left my shoulder. The cartridge could not be taken out with the extractor, but I had to open a hole in the base and shake the powder out, when I got a shower of iron and just as much lead as I could get out of the gun. I am fully satisfied with the driven in grupper." Another correspondent, in a paper of same date, speaking of cartridges bursting at the base (Ely's best gauge) says: "Two years ago my gun was injured by one of these explosions." From the Field, October 18th, 1873: "I am happy to give you my experience of a green gas tight cartridge (Ely's) exploding suddenly by a neck or two and having my gun burst, and my brother to carry. In handling me a couple he one drop on the stone floor; it went off. I was standing about two yards off. Two shot struck me on the knee, penetrating my trousers and rising up the skin underneath. The remainder of the charge, I am happy to say, missed me, and was blown against the door about *five yards* off, which I think considerable." The same sportsman, who only the brass part remaining, and that was split and bent up."

Ely's best cases are at present metal lined; as far as a usual charge of powder comes, no doubt they are harmless. The statement that the shot from an exploded metal shell will "go through my body of reasonable thickness," is rather ambiguous. If the shell itself will go through any other body that happens to be behind it," needs to be confirmed, for an unsupported statement is not sufficient.

I would like to ask if the above statements about metal shells are made in the light of experience, or are reckless statements, made to frighten some grandmother sportsman? I have no doubt that damage would very likely be done, but I must confess that I have never seen a premature explosion of a metal shell, but I have seen many of the sportsmen who portray so graphically the injury that would be caused had done so either. The argument about economy is based mostly on the supposed theory of accident or premature explosions, and fails entirely, if the reasonable safety of the metal is true. Therefore no to "inking brasses" nearly tempts me to say that good sportsmen do not carry their cartridges in metal shells, but I have seen many of the sportsmen who do so, and who seem to me to be a muzzle loader. The assertion that "in carrying loaded brass shells you are, to all intents and purposes, carrying an arsenal of loaded pistol barrels, capped, and with no protection over the tube to guard against an accidental blow," is so absurd as to scarcely merit a refutation; but as it is about as correct as some of the other statements, I will leave it to you to decide.

A Sturtevant or Berdan primer is below the base of the shells, when in position, and in the case of the Berdan the edge of the cap rest on the bottom of the cap recess, thereby holding the flammable area in the point of the shell until the cap is struck a powerful blow with some pointed instrument. I have taken a Sturtevant primer and driven the cap down with a hammer, and pointed an iron nail as I did. I have capped one, put three ounces of lead in it and dropped it repeatedly a distance of from eight to ten feet, not only on the floor, but on the brick pavement. I have thrown it but foremost against a solid wall time and again, and have never had an explosion, the cap being so thoroughly protected by the base of the shell. Will you say man say that the same thing could be done with a pistol barrel with an exposed case? Isn't that just a trifle overdrawn?

A gentleman who is connected with the U. M. C. Co. writes me that "shot shell are no more dangerous than rifle cartridges" (dead ammunition), and that during the past eight years they have handled tens of millions of them, put them in and out of their guns, and they are not only not dangerous, but are a safe and reliable manner, and do not in one single explosion endanger any one. I have yet to hear of one man

discharge by carrying them about the person, and I do not believe the gentlemen who write so alarmingly about them have heard of one either. The statement that Mr. M. H. Sanford "had a shell accidentally go off and sever the fingers at the same time, and that he was carrying a metal shell which shows a lamentable ignorance of the facts in the case, and if the rest of the statements are as far out of the way as this one they are not very reliable. I have a letter before me from the party who said Mr. Sanford the gun, stating that the nail and extreme end of one finger was all that was lost, and that Mr. Sanford still uses the same gun that he did then, and *metal shells*. The gun was made to use metal shells exclusively. I will write you again in a few days, as long as you are, among an ordinary tree was entered as belonging to Mr. Sanford, and I have every reason to believe that my information is correct. The gentleman further states that he has now the identical shell in his possession, and that it is burst open. Would a pistol barrel have burst open under such circumstances? How did Mr. Sanford meet with the accident? He was using an old-fashioned shell (now out of use) with a recess in the base, using an ordinary tree and cap. The shell was loaded and held in one hand by Mr. S., while he was trying to force on a cap; he thinks by pushing, bystanders say by pounding—a piece of foolhardiness. If I must say it, that admits of no excuse, and there is little doubt Mr. S. himself will not deny.

I have not seen the exact cause of the accident to Mr. F. Farrar stated, but a letter from a well known sportsman, who was in New York, says, "The accident to Mr. Farrar was through sheer carelessness, as he will tell you himself." From what I have learned from other sources I judge that the same might have happened with a paper shell.

The correspondent further states that "you have as much trouble to keep the brass shell clean as you would a muzzle loader." Capt. Rogard states that he "reloads shells one hundred times and does nothing to them but scrape off the dirt."

The writer has used them for years, and knows of his own knowledge that this statement "won't wash." The correspondent does not know "one good point that can be claimed for the brass shell." Prejudice has probably too much blinded the gentleman to attempt to convince him one good point can be claimed; but many others, if they don't "shoot with both eyes open," can readily see the good points, as well as the bad ones in a metal shell. I have seen a man who has used metal shells few days since was standing out in a lake, when the ducks were coming in so fast that he could not fight them out. Did he kill any? If one or two, why not more? He was using paper shells, and about every other one stuck and the extractor slipped past the shell, and he had to wade across to a companion who was shooting a muzzle loader to get his ramrings struck on the fast running water. The muzzle loader was again another shell would stick. In a short time the ducks had quit coming, so the luckless shooter had no ducks, had broken several comments, had threatened to break his gun, had nearly exhausted himself wading back and forth to get the use of the ramrod, and had become disgusted generally. All of which would not have happened had he been using metal shells. They inserted a ramrod, and the ducks were again another shell would stick. "KENTUCKY RIFLE," in 1 lb. and 5 lb. canisters. "KENTUCKY RIFLE," in 1 lb. and 5 lb. canisters. "SEA SHOOTING," FG in kegs of 25, 12 1/2, and 6 lbs. and canisters of 5 lbs.

Superior Mining and Blasting Powder. The above well-known Gunpowders are supplied by the company's agents in every prominent city, and in the various mining districts of the United States and by all dealers in Guns and Sporting materials, or wholesale at the office of the Company.

88 Wall Street, New York. A. G. HAZARD, President. Thos. S. Pope, Secretary.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER. The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes especially are recommended to owners of fine blue bird-hunting guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER. For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 64 lbs. each, and in canisters of 1 and 5 lbs.

AUDUBON POWDER. Very quick. For woodcock and quail Nos. 1 to 4. Packed in metal kegs of 12 1/2 lbs. and 64 lbs., and in pound canisters.

ORANGE RIFLE POWDER. The best for rifles and for all other purposes. Sizes F, F.G., F.F.G., the last being the finest and most used. Packed in wood and metal kegs of 25 lbs., 10 lbs., and 64 lbs., and in canisters of 1 lb. and 5 lbs.

All of the above give high velocities and less residuum than any other brand made.

J. WALLACE,

Naturalist & Taxidermist

IMPORTER OF FOREIGN BIRD SKINS AND ARTIFICIAL EYES, 19 N. William Street New York

VIENNA, 1873

For Merit. Vanity Fair.

VIENNA, AUSTRIA, Nov. 30, 1873. Messrs. Wm. S. Kimball & Co.:

Sir—A friend of mine sent me, with a transport of Indian Snipe, two boxes of Vanity Fair, which I desire to be the best Tobacco I ever smoked. I have very good tobacco in Vienna—Turkey and Hungarian. "Vanity Fair" is the King of all, by its aromatic flavor and the right sort of strength, in my opinion. New York got a box of Vanity Fair, in last season. I apply immediately to you, begging you to send me the enclosed, for a box of Vanity Fair, and send with this next steamer to Germany. If there is any more of the enclosed, your excellent "Vanity Fair" beg you to enclose me the address. Dr. Jas. H. Hays.

Professor of Anatomy in the University of Vienna.

It is manufactured from the best Virginia and North Carolina Leaf. It is particularly adapted to Meer-schaum and Cigarette smoking—does not bite or make the tongue sore—is therefore unlike any other tobacco in these respects.

W. S. KIMBALL & CO.,

Manufacturers, ROCHESTER, N. Y.

FRAGRANT WATER.—WITH LIVING SPRING WATER, or small pond. Address with description, stating location, distance from railroad, size, price, &c. W. S. KIMBALL and Street, N. Y. Oct 24

Sportsmen's Goods.

SCHUYLER, HARTLEY & GRAHAM, 19 Maiden Lane, 20 & 22 John street, N. Y. BREECH LOADING GUNS A SPECIALTY.

We would call the attention of the public to our large assortment of Breech-Loading Shot Guns, Manufactured by the following celebrated makers: Messrs. V. & C. SCOTT & SONS, Winchester at the International Gun Trial of 1873; P. WEBLEY & SON, W. W. GREENEY, WESTLEY RICHARDS, J. HOLLIS & SONS, and other makers.

A full line of the PISTOLS AND RIFLES CONSTANTLY ON HAND. DEAN'S & HAWKLEY'S SHOOTING TACKLE. To insure good shooting from Breech-loading Guns, we would recommend the use of the STURTEVANT BRASS SHOT SHELLS, manufactured by the Union Metallic Cartridge Co., Bridgeport, Conn.

Black's Patent Cartridge Vest. This Vest affords the best arrangement yet in carrying cartridges, so evenly distributed as to feel, that it can be carried with the vest, which is fastened across the chest as when carrying the weight on the forepart of the head when had shooting is the result.

AGENTS FOR THE Union Metallic Cartridge Company's Ammunition, WARRANTED THE BEST IN THE MARKET. SINGLTON CIRCULARS.

WE BOND CLEVELAND ON EXPLORING, TRAVELING, FISHING, TRAPPING & HUNTING. Martin Pat. Imp. Safety Bit. The Martin bit is designed to be easiest bit made for a tender-mouthed horse, warranted to prevent any horse from rearing away, Pulling, Lunging, Bolting, Hoisting, Leaping, or driving out of the driver's hands from three to ten times.

A Valuable Handbook. THE AMERICAN SPORTSMAN. CONTAINING HINTS TO SPORTSMEN, NOTES ON THE SILENT AND THE HABITS OF THE GAME BIRDS AND WILD FOWL, &c., OF AMERICA. By Elisha J. Lewis, M. D. Elegantly Illustrated with Nearly 200 Engravings.

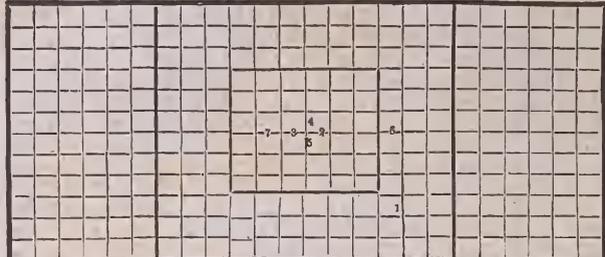

Treatment of the Horse. A Handbook on the Treatment of the Horse in the Stable and on the Road, or Hints to Horse Owners. By CHARLES WILKINSON, M. D. Extra cloth, \$1.25. This is the soundest, most complete and practical work of the kind that has ever been presented to the public in a manner at once so brief, thorough, yet suited to popular comprehension.

J. B. LIPPINCOTT & CO., Philadelphia. WALL STREET. A 48 Page pamphlet, showing the various methods of operating with small sums of money. Sent free by J. HICKLING & CO., bankers and brokers, 72 Broadway, N. Y. Oct. 22.

Pritchard Brothers, No. 94 Fulton St., N. Y. Fishing Tackle. Made and repaired with the utmost despatch. ALSO CONSTANTLY ON HAND THE BEST SELECTION OF TROUT AND SALMON RODS, REELS, LINES AND FLIES. Medals awarded at the World's Fair and American Institute for our superior Artificial Flies.

Remington's Long Range, Breech Loading Target Rifle.

No. 3. Diagram of Second target made by Henry Fulton, Civil Engineer, Lieut. 12th Regt. N.G.S. N.Y., of Brooklyn, at Montreal, Can., Aug. 14th, 1874, with a Remington Breech Loading, Long Range, Chalmers Rifle, 24 inch barrel, 44-100 calibre, wt. 10 lbs., cartridge containing 40 grains powder, 50 grain bullet. Price of rifle, \$100, including pistol grip stock, veneer gauge, otoscope, and wind gauge fore sights; extra for split level, \$5; extra for disks for fore sight, \$2.50 each; cartridges, \$1.50 per 100.

Distance, 1,000 yards; No rest; Position, lying. Special Telegram to "Commercial Advertiser," Montreal, Can., Aug. 14, 1874. "Remington aimed at long range. I have taken one first and one second prize to-day at 800 and 900 yards. In one match I made a clean string of seven bullseyes, and in another fifty-four out of a possible fifty-six; and am ahead for the aggregate. Camfield took second and Omand fourth prize in one match at 800 yards. Three of the first four prizes taken by Remington rifles. To-morrow we shoot the smaller chess championship match." (Signed) HENRY FULTON. Extract from the "Army and Navy Journal," Official Report, Dated Oct. 8, 1874.

E. REMINGTON & SONS, Manufacturers of Breech Loading Guns, Rifles, Pistols, Ammunition, &c., ARMORY, ILION, N. Y. 283 BROADWAY, N. Y. JOSEPH C. GRUBB & CO., 712 Market St., Philadelphia.

CELEBRATED CENTRAL-FIRE BREECH-LOADING GUNS. MADE BY James Purdey, No. 314 1/2 Oxford Street, London. Desire to inform Dealers and Sportsmen who may wish to purchase these Guns, unexpressed for Finish, Durability and Power, that they have a supply of 10 and 12 bore, and will import special guns to order at short notice.

Hegeman's Patent Portable Folding Boat. For use as LIFE-BOATS, LIGHTERS, Dingies, Dories, on board Steamers, Yachts and other Vessels. Also for Sportsmen, Tourists, Trappers, Exploring Expeditions, Parties camping Out, &c. &c. light buggy wagon, on horseback, or by single person, and can be unfolded ready for use, in three minutes time. Boats never folded, packed and shipped by express anywhere at same rate of freight as ordinary goods.

POULTNEY, TRIMBLE & CO. FOR SPORTSMEN. Breech and Muzzle Loading GUNS, And SHOOTING TACKLE. STOCK UNSURPASSED. QUALITY GUARANTEED. Prices Low, to Suit the Times. Send for Descriptive Price List. No. 200 W. Baltimore St., BALTIMORE, MD.

Invested in Stocks and Gold pays 200 per cent a month. Pamphlet free. Tumbridge & Co., Bankers, 2 Wall street, N. Y. Climax Creaser and Plain Creaser. Price \$2.75. SHELLS. Price \$2.25. In ordering give name of shell used. For sale by Gen Dealers. Send for Circular. Address: HALL & CO., Lancaster, Penn.

HAVANA LOTTERY. \$450,000 Dollars distributed in prizes every 12 days. 1 Prize of \$100,000. 1 Prize of 50,000. 1 Prize of 25,000. 1 Prize of 10,000. 10 Prizes each of \$1,000. 200 Prizes, amounting to \$200,000. Circulars of information furnished free. Orders filled. Prizes cashed. Spanish Bank Notes, Donations and Governments purchased. TAYLOR & CO., Bankers, 11 Wall street, New York.

Miscellaneous.

This arm was exhibited in competition with over one hundred different systems, American and European, to the Board of United States Officers, appointed by Act of Congress, 6th June, 1874, for the purpose of selecting the best arm for the service, and of which Brig. Gen. A. H. Terry was President. It successfully passed through all the tests. The following is the report of the Board: "Resolved, That the adoption of magazine guns for the military service by all nations is only a question of time; that whenever an arm shall be devised which shall be as effective as a single breech-loader, so as to be the best of the existing breech-loading arms, and shall at the same time possess a safe and easily manipulated magazine, every consideration of public policy will require its adoption."

W. G. BURTON, Care Ward & Co., 54 Wall St., N. Y. THREE NEW BOOKS BY Gen'l G. A. CUSTER, JUSTIN MCCARTHY, THEODORE DAVIES. Gen'l G. A. CUSTER'S GREAT BOOK, MY LIFE ON THE PLAINS! One vol. 8vo. Printed on laid tinted paper and elegantly illustrated and bound with fancy black and gold stamping. Price, \$2.00.

JUSTIN MCCARTHY'S BRILLIANT STORY, LINLEY ROCHFORD. One vol. 8vo, cloth, fancy hock stamping. \$1.75. Paper. \$1.00. LOSING TO WIN! A Novel by THEODORE DAVIES, one of the brightest of the sketch writers of the New York dailies. One vol. 12mo, fancy cloth. \$1.50. Paper. \$1.00.

RECENTLY PUBLISHED. THEODORE TILTON'S NEW NOVEL, TEMPEST-TOSSED! One vol. large 12mo, tinted paper. Price, \$1.75. The story is one of our best. Popularized by Mr. Terry's wield a very graceful pen, and possesses a vivid imagination. THE WETHERLY AFFAIR! By Col. J. W. DeForest. \$1.00. By Justin McCarthy, A Fair Saxon. \$1.00. For Forest and Stream.
LA NOCHE TRISTE.

A SKELETON sat on a mouldering tomb
And he laughed with his rusty jaws,
As he wiped the dew of the humid grave
From his skull with his bony claws.

He laughed, "Ho! ho!" The air is cold,
And the midnight breeze is fresh;
But my bones are stout, for the worms were kind,
And I feel no cold in my flesh!"

The glow-worm gleamed in each cavernous orb,
And the phosphorus glowed in each bone,
And the moonlight's cold and pallid beams
O'er the sepulchre were thrown.

And the skeleton sang, "I love the light
Of the cold and ghastly moon;
I love the smell of the graveyard dank
And I love the night owl's tone.

"Oh! 'tis merry to sit in the still churchyard,
To lounge at the sons of men,
Poor worms who toil for a narrow grave
That the worms may feed again.

"For the good and the bad shall fare alike
And shall feed the crawling crew;
The prince with the crown shall lay him down,
And the false with the brave and true."

The night owl hooted a hoarse refrain
To the skeleton's dismal tone;
A vampire's wing swept darkly by,
Blighting the crescent moon.

All hideous things that love the night
Joined in the goblin rout,
Toads, bats, and snakes, and shining shapes,
Which danced my couch about.

Oh! woudest thou that ghoulish feast
Wouldst face those spectres pallid?
Then sup, like me, too sumptuously,
On the soothing lobster salad.

J. J. Roemer.

For Forest and Stream.

Three Weeks on the Magnetawan

SOME of your readers have heard of the Magnetawan River, but no doubt the majority of those who indulge in the pleasures of the rod and gun have never done so! There are plenty of those who believe in, and "swear by," that imagined paradise, the Adirondacks. Very good! If four dollars per day to a guide, few deer and a leaky boat, be paradise, I'll have no more of it! One can have good sport, both with the deer and trout, and at far less expense, in Pennsylvania, either in Pike or Elk counties, or in some parts of Maine, or New Hampshire, but is restricted more in regard to time and extent of grounds. I speak from experience, for I know them all; but expense, the cost of the fun, is with me to be taken into consideration, as I suppose it is with others as ardent as myself. The largest trout I ever killed was taken out of the Saco River, within sight of the Kearsarge House, at North Conway, N. H., a place fished to death, and Frank Lucy, at whose house I was staying at a much cheaper rate than on the fashionable side, knows that we started a herd of seven deer the next day, when up at the headquarters of the Swift River. That was my favorite stamping ground for a long time, until the infection of high charges spread, and as friend Van Wyck, of Brooklyn, had killed all the trout but a few to sample by, I looked out for a new field to operate in, and am happy to state have found it.

If you have the courage to accept this manuscript, and my fellow fishermen and gunners the patience to read it, you and they will find a true, unembellished account of a spot one hundred miles, or nearly so, square, that is little known to the public as if it were situated in Florida or California. I allude to the country lying North of Lake Rosseau, East of Georgian Bay, in Lake Superior, and North as far as you care to go. My estimate of its extent is merely a conjecture; look on any map of the Dominion

of Canada West and judge for yourself; with Lake Simcoe, or Rosseau for a starting point, you cannot help finding it. It is known in Canada as the Magnetawan District and Free Lands of Muskoka!

There were two of us who left Philadelphia one Sunday night at 11:35 on the Pennsylvania Railroad for Niagara; tickets there and return, good until Nov. 1st, \$13.50. From there to Hamilton, Ontario, to spend Monday night. Up and away early Tuesday morning for Toronto, reaching that city Tuesday at 11 A. M. Here came up our first difficulties—money value. We had to have our Yankee trash discounted into the equally hard looking Canadian paper money, which we preferred to silver, as being lighter. My bright looking, crisp \$100 greenback left me, and in its place I received \$90 in the raggedest, dirtiest looking money I ever saw, resembling the Confederate paper of the late war for all the world.

Dinner was procured at a regular English chop house for thirty cents each, including a bottle of genuine Bass & Co., (think of it, Horatio!) and then off on the 2 P. M. train for Orillia. What curious people our English cousins are? They sneer at us Americans on account of our easy familiarity in strange places, but of the two, their habits of exclusiveness and "keep-your-own-distance-young-fellow" style, was so strange to us that we hardly knew whether to laugh at them or be angry. My companion is accustomed to be answered when he puts a question to a stranger, but when on one or two occasions the only answer he received to his queries was a "stony British stare," as Tennyson calls it, the American wrath was aroused; and later, when we were going from Gravenhurst to Washago, via stage, he confided to me his intention of picking a quarrel with a young Englishman who was aboard, in order, as he expressed it, to "take it out of him for the nation!"

We reached Orillia at 9 P. M. and put up at the Queen's Hotel. Every town in Canada has a Queens, if it is only a shanty with two rooms on a floor, and two floors, it is still The Queen's! After supper we, heaping the click of ivory, strolled into the billiard room to find a carom and a pocket table in full swing. Watching our chance we each picked up a Canuck for opponents, and to my friend's intense gratification, succeeded in laying them out; whereas the cues were put up and all gathered around to see those Yankees work the three-ball game. They seemed as if they had never heard of either Joe or Cyllille Dion!

Wednesday at 9 A. M. we started behind a fine pair of black ponies to fish Sturgeon River; why so called no one can tell, except it may be that trout have been seen there that have been thought to be something else from their size. We had "Doc" Lawrence, of Orillia, for a guide, the fisherman and horse doctor of the place; drove twenty-one miles, put up at a log cabin, and came back in time for dinner the next day, with three hundred and ten fine trout. I cannot tell the incidents of that day, for I must get on with my story. We stayed at Orillia until Saturday, during which time we saw a salmon-trout brought in from one of the neighboring lakes that weighed seventeen pounds and three quarters. There is good trolling to be had in Lake Couchiching for bass and muskallonge. Orillia is on the extreme Southern end of this lake, and Rama, the Indian town, is five miles northward. Harper Bros., of New York, have lately published a book, "Forest and Prairie," in which mention is made of the hunting in this vicinity; but of that I can say nothing, as we were there for fishing in June.

I have seen as many as eleven Indians on the lake, within sight, at once, and as their dresses were of all colors, the sight was as pretty as it was novel.

On Saturday we said farewell to Orillia and took the train for Washago to spend the Sabbath on Lake Rosseau, from which point I was to push still further into the wilderness, and my companion to return to Saratoga, as he expressed it, to where he could once more see a New York Herald, and feel that he was an equal with his fellow men! From Washago to Gravenhurst is a stage ride of fourteen miles. From Gravenhurst to Rosseau you go via steamer,

a most delightful ride through numerous islands, resembling Lake George; here and there rocky bluffs rising straight out of the clear water. No clearings except at long intervals, and that to us was the greatest novelty of all. Lake George and Winnepesiogee are both fine in their way, but few persons have ever known what it was to ride from 5 P. M. until 12 M. on a moonlight night, as we did, and see the shores of the lakes covered with forests down to the very edge, just as they have stood for hundreds of years. No break or sign of civilization, except at long intervals. No house on the shores, no boats on the water, except here and there a canoe with an Indian in the stern. Here and there we turn into a cove wherein would be two or three coveys of ducks, who would scatter and dive at the sight of our great boat. I cannot say how long the steamer Nipissing has been running on those lakes, but certainly not over two or three years, and even if the marvellous ride up and down the Muskoka River were omitted, it would be worth the while of a over of nature to make the trip to Canada for that alone, even if there were no deer or trout. We reached Rosseau at midnight and stayed at Pratt's. Now Pratt is a Yankee, or he would have called his house The Queen's. He came from Pennsylvania some years ago. He has traveled all over the world in his time, and has settled in that out-of-the-way spot with his wife and daughter, as he says, for his life; he is a queer case, but a capital fellow if taken in his humor; and as the English people who stop there have a horror of jokes and detest the joker, Pratt has a rather hard row to hoe; but his independence protects rather than injures him, for a more independent, thorough Yankee never lived. He is an enthusiastic sportsman, and as soon as he discovered that among the arrivals were two fishermen from the States, English stock was unsettled until Pennsylvania and New York were comfortable!

On Sunday two ladies objected to going to church, as a bear had been seen to cross the road near the hotel. At dinner one of the gentlemen said that while taking his morning walk he had seen a deer in a potato patch near the house, and a real wild one at that, and it excited little comment.

On Tuesday we parted; my friend for Saratoga and New York; I for the wilderness in its glory. Taking my passage on a buck-board, politely called the stage, I rode thirty-four miles, reaching the end of the road at 9 P. M., having dined on fresh venison at a log-house at noon. Venison for supper and then to bed in a loft of Miller's log-house—no saw mill within forty miles—sleeping on straw, with three other men in the room, as soundly as if at home. The Onic Falls sang me to sleep, for the Magnetawan runs within ten rods of the house. I was up early, and out into the chill air, traveling with my split bamboo rod in the direction of the falling water. There were two falls on my side of the river, where the water foamed and eddied like miniature whirlpools. The bank was steep, and as some brush prevented my obtaining a good cast at the lower fall, I made a detour through the woods and came out at the upper one. Here was good casting room, and here I knew would be some big fish. Joining my rod and noosing on two flies I stepped out on a little ledge and away they went to where the water was coming round in a second eddy. A dark object turned over on the tail fly and made for the bank on my side, the line being thirty feet out. Heavy trout, thought I, but before I could think anything else, there was a terrific rush, and up came a black bass out of the current, shaking his head like a terrier to free himself of the hook. He succeeded, and reeling up and casting again, I hooked another. I landed him, and as soon as possible pitched him in again, for I wanted trout and not bass. I suppose I caught eight or ten as fast as I could disengage them and cast again. I knew there were trout in the pool, and big ones, too, for I had seen one rise, and there were no indications why there should not be others, but it seemed as if the bass were out in force and kept the trout away. So, instead of throwing out into the middle of the pool, I drew the line in and let

the drifts down to where an old log lay lengthwise against the bank. They were tumbling along, when out came a grand slab-sided fellow, and sucked in the second fly, doing it as he had probably done the same to thousands of the real insect. Hooks were evidently unknown to him, and as he was going under his kennel again, he looked as a dog does when he comes out to pick up a bone and then crawls back dragging his chain. I have sometimes seen the same lazy motions repeated in private ponds, and I know from the circumstances that he would be quick. Of course I struck this fellow hard, for as he turned I had seen his yellow and crimson spots, and he was a fish to work for. But if I had followed or tried to follow that fish when he went for the falls again, Philadelphia would have lost one of her most ardent citizens, albeit he is an obscure one. It was like fishing in a gigantic wash basin with one outlet. If you fell in, there was no getting out, except through that outlet, and you would necessarily be carried over the lower fall. If I wanted that trout, I must drown him where I stood, or I would get drowned myself; so I lowered the butt again, and although the rod bent like a whip, he swayed around again, and the water running swiftly through his open gills brought him up to the surface gasping. Then, just as I supposed him safe enough, a bass of about a pound and a half got the last fly from me, and the trout was gone. I was angry. I played those two fish for nearly half an hour; I gave my trout up once entirely, but he hung on as if glued, and at last reeled them into the shore. I unjointed the rod, and taking only the trout, started back for breakfast. Out came one of my fellow room-mates of the night before, looked up at the clouds, spit, scratched a little, but never a word about the fish. Miller came next, and never a word about the fish. I was about to call their attention to my fish when I heard "Good morning" from my rear, and there was lumberman number two.

"Had any luck?" then, as he saw my trout, "Well, you did get one small one, anyway," said he.

"Small?" said I. "If you call a trout that weighs a pound and three quarters, if an ounce, small, what in the name of sense do you call large or here?"

"Why, sir," replied he, "we ketch 'em here as big as six inch and plenty of 'em. We ketch 'em in a little bit like that," (picking up my bamboo), "We takes a stout line and a bit of pork or fish and go in a canoe under them falls," (pointing to the lower Omie), "and hold the line in our hands and ketch as many as we want; but you're a little late for the big 'uns."

"Good enough," thought I, "if there are any there they'll come out."

On Thursday around the falls one day, fishing with good luck, and on Thursday we set out for the upper lakes. When I was down at Orillia a lively stambler, Jackson by name, told me if I went up the Magnetewan to get a hunter by the name of Ed. Jenkins to go along as guide, whom I succeeded in finding after some difficulty. I told him my desire to start on the morrow for a ten days camp, and that I wished to secure his services. He readily agreed to go, and promised to be at the post office (Miller's) the following morning.

Prompt to time he came, carrying on his head, inverted, the bark canoe that was to carry us many a watery mile. In the canoe we put our small stock of stores, viz.—nine pounds of pork to fry our venison with, twelve pounds of bread and crackers, one pound of black tea, and some pepper and salt; then we had in addition each a Ballard rifle, the best of the kind, but not so good as a Baker's, and a coffee pot, two small tin dishes for the tea, one bottle of Hennessy's "best"—which old John Macquabe, the chief, and his squaw, nearly emptied at one drink—a frying pan, and our precious box of matches. Our kit was not large, but when you have to load and carry it over the portages, every ounce tells. People must not suppose, when going on a trip like this, that they will be waited on and the guide do all the work. The pilot over lake and through forest, but never does he expect you to sit with folded hands while he sweats under double loads over errands, and cooks all the meals. Each man for himself, and the lucky one first. But I wonder!

Launching our frail canoe above where I caught my fish of yesterday, we balanced her and got aboard. Although Ned held her while I got in, my partner certainly expected I should be compelled to do so. Whoever has tried his hand in a shell for the first time will understand me. Ned directed me to the bow, and giving me a paddle said that if I wanted to sleep in dry clothes that night to keep still, and not try to balance her alone. You can very seldom sit down in a lurch canoe. All the paddling is done in a kneeling position, and passengers are not to do anything else. It is easy enough to paddle a skiff, or any wooden boat, in comparison to a canoe. It is all done on one side of the craft; a turn of the wrist at the end of the stroke neutralizes the force that would otherwise send the canoe spinning around in a circle, but the "kink" is to get that same turn in when it is wanted, and not before, or you will make little headway. It can only be acquired by constant practice. Yes, I have seen Ned Jenkins send that same canoe up to a very close place that I could almost "tail" him without taking his paddle out of the water, and doing it so quietly that I, who was sitting in the bow, could not hear a ripple. But then, little force is required, for even a lily pad will turn the craft aside—so easily is it influenced.

A few rods above where we started there was a rapid. I expected a "carry," but Ned sent the canoe for it, and as we shot into the roaring, descending water, I thought it madness to try to ascend, but although we were almost stationary for some seconds, muscle triumphed, and we glided out into the broad bosom of the Upper Magnetewan. The stream broadened until I thought we were in Shesleep Lake, but Ned said it was beyond; so having settled myself for another stretch, we went. Here and there was a small clearing, for we were yet in the domain of occasional civilization. The river banks receded gradually, and with few exceptions there were no elevations to be seen.

The dense forest came down to the very edge of the water, and to think of being in that forest alone was to me not very pleasant, for I knew it extended Northeast to an unknown extent, and Southward for at least fifty miles, with very few breaks, and if a man were once bewildered and lost success would be almost hopeless. On both sides of the bank we saw very low and sandy ridges, and a full of lily pads and water lily sprouts. Ducks would stand out when we brushed along, and for we kept close to shore to avoid the stronger mid current. Rounding a woody point to the right, we started up from the marsh

beyond, a black bear, who, no doubt, had come down to rid himself from flies, etc., in the water, and went off through the brush at a lumbering gait that soon took him out of sight and sound.

"Those fellows lose no time in getting away, I tell you," said Ned, in reply to my stare of surprise. "A buck might have waited a second, taken so at a start, but these bears seem to run without even a snort."

Twenty minutes paddling brought us to Lake Shesleep. This lake covers about a thousand acres, and means, at first, to be but a widening of the river; but afterward, it is found that there were long reaches or bays extending in different directions, very deep and generally very calm, with white, sandy beaches. Here and there are reedy, marshy spots, never over thirty rods long, wherein the deer come day and night to feed, drink and bathe. It was nearly noon, and I wanted very much to stop and rest; but Ned knew of a spring further on, and seeming insensible to the grandeur of what to me was almost paradise, kept the canoe headed for the upper end, and we glided on.

After a fast of twelve months from the rod and gun, after the grind of worry and toil in the struggle for existence in the past year, the reward of my three weeks' release, short as it was, came over me then like new wine. I knelt in the canoe, and looking at the glimmering water, I was reminded of the moonlight glades, it seemed as if all care and anxiety was shut out. I could have shouted for joy, and as the water rippled from the delicate point of our canoe, the sound thrilled through me as only nature's music can. For three weeks what to me were friends, business cares, or the pulsations of the life behind me? I was behind the curtain of the play, not to be nearer the machinery of the farce or tragedy, but to rest and forget my part, and to dream, and have achieved, to succeed, I would go on as before, but thinking of my rest as of a Summer's dream. You understand it, and can express the feeling better, but how delightful it is to forget the day of the week and month, and feel for even a few days that none are richer than you.

At the head of the lake I saw a great smoke, and near it Taylor's small log cabin. He lives there all alone, Summer and Winter. I was in the boat, but found no one near.

"He's set fire to his 'farron' and gone hunting," said Ned. "I'll see him to-morrow."

On we went, turned to the left, struck the Magnetewan again, and after an hour's paddling, stopped to fry some bass for dinner, which we had caught on the way up with a troll.

"I'll be at the upper fall to-night and sleep there. You'll ketch some big trout, and if you like we can stay there a week, or come to Shesleep," said Ned; "or if you like we can cut over to Horn Lake and get some salmon-trout."

Kicking out our fire we started again. The river winds like a snake, and the turns are so sharp that expectancy was kept alive in the hope of getting an unexpected shot; but as we high noon, and except some black ducks toward the lower end, I saw nothing. The pads were in some places eaten off, and the bank plunged up. Ned would nod in that direction, and say: "Deers!" He always used the plural. Mile after mile was paddled, and I began to feel tired, although the "dip 'n' dip" behind me was kept up as if by machinery. Two o'clock, four o'clock, slipped around, and from weariness my rifle was laid down, and I was dozing and restless, and except some black ducks toward the lower end, I saw nothing. I was foolishly I turned to Ned without looking around. With his body bent double, paddle still in the water, and finger pointing ahead of me, he directed my attention to the front, and—Shade of Diana! What did I see! In a little cove just around the point, with the water up to his belly, stood a buck, and on the bank a doe. Neither saw us, and they were within eight or ten rods of the canoe. Taking up my rifle, I struck the edge of the canoe, and the buck turned his head full around on us, the doe bounding into the brush. I could see the surprised look in the buck's eyes for a second, and then as the water flew as he leaped for the bank, I fired, and missed him clean!

My first thought was that he had got it. Ned never moved, but knelt looking very much puzzled at me.

"Did I hit him?" I asked.

"No, sir, and he wer'n't no more than eight or ten rod off, neither; what's the matter with you?"

"Don't say anything, Ned, or I'll jump overboard. That was the worst shot I ever made; and to think I missed the first one." I was mortified to death at my chum'sness. I wished Ned had shot, for then I wouldn't have had some fresh meat for supper, and now it's all in the water.

"No," said Ned, "I saw the deer, and the doe, and you must kill them. We'll see others soon; for there's plenty more."

But no more did we see that day, for soon after a rumbling sound could be heard, and Ned said: "Falls," so we had reached them at last, and what a place for trout! A long succession of rapids, full of pools and eddies, and ending in a sudden pit into a great basin wherein we were now riding, and the water was so shallow that five or twenty black ducks at the further end next to the fall, and when we shot into the basin how they did "quack" and scramble around in the water. Where the foam allowed a sight, I could see innumerable bass and trout. Carefully landing our kit, Ned proceeded to start the fire and get our things under cover of an old trapping hut, while I jointed my rod and made for the shore, and then the fall. The water was so shallow, and just as the last could not hear Ned speaking to me from the hut. As I expected, the bass were out in force again, and for a time I was kept busy taking them off my line. They took the fly eagerly, and were large and strong. I saved four or five for Ned, and went further up the rapid, for I had seen several trout rise that were worth all the bass in the river to me, and I was determined to get them. The sun went down while we were fishing around, and just as the last rays were glimmering through the dark foreground of pine branches, the trout came out in force, and I soon had enough. Supper was soon ready and eaten, amid regrets on my part that my aim had not been truer at the deer a few hours ago. Wrapping ourselves in our blankets—for the July night had become quite cold—we slept soundly in spite of the mosquitoes, and the howling of the wolves in that vicinity.

On the next morning we returned to Shesleep Lake, to camp on one of its beautiful islands, and daily away ten days in exploring its surroundings. There was a small island near the Western side, and within full view of the best marsh for the deer. Here we made our rustic house,

and spreading our blankets, prepared to stay. The island, with one or two alders, was covered with most delicious wild huckleberries. From that island I have never seen some of the most pleasant excursions of my life. I have seen as many as eleven deer in one day, without any more exertion in finding them than that of paddling around the lake, trolling for the immense bass and pickerel therein. One day I shot a three year old buck on the open beach, and on the following afternoon, while inspecting a beaver dam full of beavers, about three quarters of a mile back from the lake, I saw Ned kill a buck. Ned tried to get me to open into the woods on the other side—one of the best shots I ever saw. Ten minutes after that I started up another, and let him "lope" away without shooting, for we had two deer, and I held it to be wickedness to shoot another when we had plenty. This was in July, when the deer come down to the water. When you remember that Shesleep is but one lake among almost thousands, and that about one deer out of twenty that goes down to water is seen, you can form some estimate of their abundance. On the day mentioned, the deer seemed like rabbits in the brush, but Ned said eleven was no uncommon sight in Summer. These deer were all seen singly, and not in a drove. When we returned from the beaver dam with our venison, after a hearty meal we lay stretched on our backs, and while the deer were still in the water, attention to the loons and ravens, the latter birds keeping up a fearful croaking. I spoke of what seemed to me to be an abundance of deer, and asked him to tell me some of the sights he must have seen during his life. I have no reason to distrust Ned's veracity, and believe what he told me about the game of his region, fanciful as it seems.

"I tell you," he began, "what you have seen to-day ain't nothing to our Winter and Fall hunting up here two Winteago. I shot for Dodge & Co.'s lumbering gangs at three cents a pound for the venison and eighty cents for the hides, and killed a hundred and thirty-six deer, not to speak of other game, all from December to March, and some days I never went out at all. If I had had my knee loader, (looking admiringly at his Ballard,) I could have got lots more."

"How often did you ever kill in a day, Ned," said I.

"I just what you saw to-day, eleven," said he, "and six of them I shot out of one drove from behind a tree, before they started to run, and if I had had my new gun, then I could easily have made it twelve, they were so tame. After that year I sent down to Toronto for a good breech loading rifle, and the man sent me this, and a good one it is. When you travel around in these woods you want a gun that you can load quick and depend on."

"Don't you ever run into danger, Ned?" said I. "I should think you would be afraid to tramp the woods all day and then lay down and sleep where night overtakes you. Don't you ever run against these wolves and bears in Winter?"

"Well," replied he, "I've travelled these woods a good many times, and never was in close to a wolf as you are last night of the point, altho' to an advantage. They never bite, and they never hurt. They are afraid of fire, and they never come round me many a time in Winter under howled, but never nearer than the shadow of my fire, and that gray chap was within ten feet of you; I never feel skeart when I have a fire, but if I had none, I should certainly climb a tree. As for bears, I don't care no more for them than I do for owls."

"As about these Indians?" said I. "I suppose you have no trouble with them?" A party had been camping near us on the mainland for a couple of nights, and I mistrusted them, as John the chief had reduced my whiskey ketch considerably, and his squaw had finished it.

"Nary bit of trouble from them," laughed he. "John is the only one I can talk to, and I'd trust him with anything of mine if he has no man. But he'd like them all, and if you were to come up here four or five years from now he would remember your drink of whiskey, and let you know it. I don't pay much attention to them, and never had my traps stolen but once. So they leave me pretty well alone; but they are a lazy, worthless set. In the Spring, when deers are poor, then fellows will ketch mice and insects and eat them, but when they get a deer they eat a fearful lot of meat."

"They are good hunters, I suppose," said I. "Do they ever run into any of the animals around here?"

"Oh, yes," answered he. "An Iujna will run from a wolf on sight in Winter, or let him alone at least. They call them 'Porogues,' and never shoot at them, for they know them by experience. They hunt the bears and moose a good deal, but kill more deer than anything else. But I never saw the Indian ever fire at a bear, or a moose. They don't use guns and buckshot, and stand no show again a rifle. But let's see, you're three gangs ahead—suppose we play cards?"

Three weeks soon slipped away, and I was forced to think of city life again. So turning our canoe down stream we started on the back track.

Now a word about that region, and the way to get there. Very few go, and few come, as far as I know, and if you can start out-of-door and live on venison, trout, bass, partridges, ducks, pork, tea, and crackers, there is no better place to go in America that is as accessible. I do not want to see the country overrun with hunters and fishermen, and do not believe it soon will be, for the difficulty of getting there is great. There are only two Americans besides the writer, who have ever been there, as far as I know, and they are from Cleveland, and they were the only competent guide, told me they were the only ones. A very few Canadians have been in. The majority of those who are inclined that way make the long, tedious trip to the Nepigon, and one gentleman from Toronto, whom I met on the cars going home, asked me about the country as if I had been hunting Livingston, a la Stanley.

A man can go there in July, August, September or October, and if you are fit, you will find it in the right way, and shoot deer and catch trout to heart's content. June or May for trout, after that for deer. Jenkins told me that trout of four or five pounds are common there, and he once caught one that weighed over nine! Remember that the Magnetewan is as large as the Schuylkill at Philadelphia, or considerably wider and deeper than the Harlem at the High Bridge, and that the trout have an unlimited range and are seldom disturbed, so they have a chance to grow. The day we killed two deer on the lakes old John Macquabe, the Indian, lay in his camp asleep, but when the moon came up that night I saw him bring in three deer, all bucks, killed by hunting, and heard him shoot twice after that, and believe he *bigged* another, if not both. Any season of the year except Spring you can kill deer in large numbers,

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

CALIFORNIA FISH CULTURE ILLUSTRATED.

WE have to thank Mr. E. Conkling, of Morrisania, who has been with the United States Fish Commissioners in California all Summer, for some very fine photographs of the commissioners, their encampment, the hatching house, and the species of salmon indigenous to the California waters. The first photograph shows the members of the commission arriving at camp, with all their paraphernalia of blankets, rifles, and knapsacks. The background is formed by a steep hill, which supports a profuse growth of small coniferous trees.

The next gives a picturesque view of their home on the McCloud River. This home is a rude board cabin, perched on the bank of the river, at the base of a whitish rocky bluff, and almost buried in foliage. The third shows the hatching tent, a mammoth stretch of canvass, where the eggs are prepared for propagation, and the fourth sketches the rustic bridge which crosses the stream, and the quaint wheel used to pump water into the troughs. The fifth imparts a vivid idea of the character of the headquarters and the primitive wilderness which surrounds it.

A second series of smaller photographs shows the salmon of the region in various conditions. The first displays the female after spawning, when she is attenuated by her severe labor and tedious journey over cascades and through rapid currents, and the next shows the male and female together. A splendid photograph of the heads of these gives us an excellent idea of their supreme ugliness, for they do not at all resemble their Eastern congeners in beauty of outline. The upper maxillary, which is broad and pointed, curves downward at the anterior termination, and this gives the visage quite a fierce aspect. The head of the female is more regular than that of the male, yet that, also, is ungloriously enough to entitle it to be ranked as rather ugly. Other photographs show the dorsal outlines of the species, and the form of the salmon grille.

All the pictures are interesting as works of art, let alone their importance to naturalists and fish culturists. A full account of this expedition was published in **FOREST AND STREAM** about six weeks ago, so we think it unnecessary to refer further to it at present.

THE CALIFORNIA SALMON.

Last week we printed a summary of the distribution made of the salmon ova obtained in California. Herewith we give the sequel, in part.—Ed.]

ACQUINO SEMBROS, NEW YORK, Pa., Nov. 9th, 1874.

EDITOR FOREST AND STREAM.—Through the kindness of Prof. S. F. Baird, Mr. Livingston Stone shipped me on the 14th of October, from California, 150,000 salmon eggs, which arrived in splendid order on the 21st. They were immediately placed on floating screens in water 52° Fahrenheit, and to-day are all hatched, with a loss of less than 9,000, or 2.50 per cent. As they are intended for the Aqueduct Lake, and the Delaware River, I shall use the greatest care to rear them, and hope to see rare sport for the lovers of the rod. J. B. THOMPSON.

CALIFORNIA LOBSTERS.—Some months ago—June, we believe it was—the aquarium car transported some cans of Eastern lobster eggs to California for propagation there. The result is shown in the following letter from Mr. Redding, State Fish Commissioner of California, which has been mailed to us by Livingston Stone, Esq. Our readers will at once perceive the importance of this little item of news. If lobsters have obtained a foothold in the Pacific Ocean, think of the commercial consequences and results!

SAN FRANCISCO, CAL., October 27th, 1874.

MR. STONE:—Let me congratulate you. Mr. Throckmorton has just brought in fifteen young lobsters for me to see. They are one and a half to two inches long, and were taken this morning in the bay in a catch of ten pounds of shrimp, and selected from the catch. So those lobsters lived and have hatched. They will be preserved in alcohol, and you can see them when you come down. B. B. REDDING, California Commissioner of Fisheries.

ENFORCING THE FISH LAWS IN NEW HAMPSHIRE.—The subjoined article, taken from the Manchester *Mirror*, shows that the conservators of game and fish in that State are in earnest:—

"We doubt not that more or less trout have been illegally taken from Lake Winnepesaukee during the present spawning season, but there is no question that mainly through the efforts of Commissioner Wadleigh, the slaughter by the barbarous spear has been essentially checked. The Commissioner has acted firmly yet judiciously. Giving full warning that all offenders would be prosecuted to the full extent of the law, he has, by personal solicitation and influence, interested many fishermen, to whom the 'spear and jack' are not unknown, in seeing that the laws for the protection of fish are respected. In Laconia this sentiment took the form of a 'mass meeting' of fishermen, presided over by the veteran Nate Wadleigh, which took strong grounds in favor of observing the laws.

"A force of fish wardens has been appointed, many of whom have zealously entered upon their duties. Two arrests have been made for spearing trout upon Sanbornston Bay, and one upon the lake. We would appeal to the better feelings and judgment of fishermen, to abandon the infamous and illegal system of 'mass meetings' degrading the lake of trout. The public do not look upon them as heroes, nor upon the law as oppressive, and will back the officers in giving all violators who may be captured the full benefit of the law."

—The California Fish Commissioners have spent half of their next year's State appropriation (this year's was used up by the aqueduct car) in the procuring of young salmon from the United States fishery on McCloud River, to be planted in the Sacramento, and the number thus to be planted, including the State's proportion from the hatching at the fishery, will be about 1,500,000. Some of the black bass and catfish imported in the aquarium car have been frequently seen in the streams in which they were placed, and appear to be thriving.

—We see a statement ascribed to our old friend Seth Green as to the proper care and treatment of gold fish, to which we do not altogether subscribe. We have had a pond of gold fish for some twenty years, and find them harder than even catfish. They will live with less food than any fish of which we have any knowledge, or in muddy water, and they will bear as much handling or rough usage as any, without any perceptible effect. We have taken hundreds of large sized specimens with the hook, played them for some time, drew them out, and then threw them back again without any injury. Seventy-five were caught for the fair; four of the great sanitary fair held in Philadelphia during the war, were dropped in a barrel and hauled to the city, and if any of them died we did not hear of it; but we did hear that they were sold at the end of the fair at a dollar apiece. Among other things, in another statement, Mr. Green is made to say that while fish have sharp sight, and are sensitive as to any jarring of the earth, as by stamping, or of the air by the discharge of a gun, they are not deaf. We have published this fact from our own experience nearly or quite a quarter of a century ago.—*Germantown Telegraph.*

—The Fish Commissioners of Maine have located fishways on the dams on the Presumpscot River, but the owners of the dams refuse to build them, and the county commissioners have the matter under consideration.

WHEN BLACK BASS SPAWN.

LAGOONSTOWN, MD., November 7, 1874.

EDITOR FOREST AND STREAM.—A recent fishing excursion, otherwise almost fruitless, developed the fact, hardly accidental, that the black bass (*Micropterus salmoides*) do not spawn uniformly in the Spring. Because of a fearful fog, my catch—on the Potomac, near Williamsport, Md.—was limited to four fish, two males, weighing each twelve ounces, and two females, a pound each. While examining the gill covers of one of the latter, holding her securely, I noticed the pressure caused the expulsion of a number of ova; and by "stripping," quite a quantity was expelled. I then "stripped" the males, and got from each a few drops of milt. Upon my return I opened them all carefully, and while finding no special fecundity in the males, found each female having two fully developed sacs of ova, one of them apparently entirely ripe. I estimate the number in each at twelve thousand ova. Inquiry on the spot fails to find any similar cases, yet no one that I have met has given attention to the point. I am pushing inquiry wherever I can, to learn of other similar cases. These fish were taken in water which for a mile or more runs from six to twelve feet in depth, with shallows a mile distant either way, the bottom rocky throughout, and where they apparently gather for Winter quarters.

I hope any of your readers having information will give it; and those interested may make inquiry. If there be other seasons for spawning than Spring, it is well that the habit be definitely known. You will note that all of the catches were prepared; hence, it can scarcely be that so well developed ova would occur so far in advance of the usual season.

The above suggests inquiry, which is full of interest to us all, in view of the positive value of the bass. The bass of the Potomac seem to be far more uncertain than elsewhere. I have fished on the loveliest of days over ground on which a week before, or a week after, yielded no grand sport, and that, too, under adverse circumstances, when the best of bait and tackle would not lure a single one of those capricious individuals I couldn't help catching. Do you find it so elsewhere?

Very truly yours,

ALBERT SMALL.

Natural History.

THE ENEMY OF THE RATTLESNAKE.

THE hog has never been the recipient of many compliments from writers of natural history, nor have they given it the honor of being useful as a destroyer of noxious vermin; yet it is entitled to more respect than is usually allowed it in the latter category, especially when in pursuit of rattlesnakes and kindred reptiles. A correspondent in a late issue of the **FOREST AND STREAM** mentioned the fact of hogs trailing a rattlesnake, as hounds would a fox or hare, and finally overtaking and killing it. This power of scent is a quality the suidæ were not supposed to possess, yet the fact is true that no animal can excel it in pursuit of the reptilia, for it seems to be the fiercest enemy and most determined hunter the latter has to contend with. The perseverance and sagacity displayed in following the trail of the serpent to its burrow is very remarkable; but it is not less so than the apparent enthusiasm with which the chase is carried on, and the pleasure expressed at the death of the foe. Turning droves of hogs among the haunts of the rattlesnake was formerly the most common method in several portions of this country of extirpating the vermin, and it is yet the most successful that can be devised. The contest between these adversaries is very interesting, as each displays its peculiar mode of attack and defence, and enters into the struggle with all the fierce vehemence of its nature. Neither ever refuses a challenge to combat, for they apparently understand that they are natural foes, and that the sooner the battle is over the better, as come it must on some occasion. In preparing for the struggle, the hog raises its bristles until they seem one mass of quills, like those of a porcupine, and cautiously approaches the enemy; the snake at the same time creeps its head, and, assuming a vigilant attitude, prepares for defence. The hog then falls on its knees, and by slow movements crawls by side-long motion toward its foe. When within reach the snake darts forward, and the hog dexterously catches the fangs in the fat of the jaws; the blow is repeated, and the hog, having been smitten on

one cheek, deliberately turns the other. This the animal continues to do until the snake has not only exhausted, for the time being, its poison, but also its strength. The hog then deliberately rises from its knees, and regardless of consequences, seizes the serpent near the head, and putting its forefeet upon its squirming body, strips the reptile through its teeth, and thus tears it to pieces. If the hog, as is sometimes the case, happens to be very lean, and the poison fangs thereby strike the circulation, its death is the result, but this event is of rare occurrence.

THE BELSA ANTELOPE.—The antelopes are a numerous family. Their principal characteristics is the cylindrical and annulated form of their horns; which in the antelopes are never angular or ridged longitudinally. The various species comprise animals which greatly differ in size; one species, which is the smallest of all horned creatures, being no larger than a hare; others stand from 3½ to 4 feet in height at the shoulders, and weigh some 800 to 900 pounds. One species inhabits our Western plains, the Prong-horn Antelope, which is perhaps the most elegant and graceful of all our wild animals. It is only since the English invasion of Abyssinia, that the Oryx Belsa, a new species, has been observed by naturalists, and until recently no living individual had been captured. A specimen has within a short time been added to the magnificent collection of the Zoological Gardens of Regents Park, London.

The Belsa Antelope differs from a well known, closely allied species, the Leucoryx of Northern Africa, in having straight horns, and by its peculiar markings. It is of a cream color, with black bands upon the face and legs. Its length of face is 17 inches, from its ears to the root of the tail it measures 4 feet 7 inches, the tail is 26 inches in length, including the brush, which measures 11 inches. The height at the shoulders is 3 feet 7 inches, and the length of the horns is 2 feet 6 inches. The courage and strength of this graceful beast is such that it readily attacks and frequently vanquishes and kills the lion, and when wounded it charges the hunter with great fierceness. These animals feed upon coarse grasses, and occasionally browse upon the shoots of acacias and other trees. They feed in the morning and evening only, and drink at mid-day. They run in herds of ten and less in number, although single animals are occasionally met with. They are exceedingly cautious and wary, and ever ready to flee at the least difficulty. By the capture of this rare animal the natural history of Africa, of which we have so much yet to learn, has been enriched in a notable degree.

—Advices have been received from Professor E. D. Cope, paleontologist of Lieutenant Wheeler's surveys, of the discovery of a vast bed of eocene vertebrate fossils in New Mexico. The Professor had discovered no less than twenty-five or thirty new species, embracing eight or ten new genera.

A large lot of natural history specimens, collected by Mr. Charles E. Aiken, has been received at the office of the Wheeler surveys. They number over fifteen hundred, one hundred and fifty of which are of birds alone.—*Washington Sunday Herald.*

—Upon a ranche in Nevada, on the Carson River, there is a herd of twenty-six camels, all but two of which were bred and raised in Nevada. Some years ago nine or ten camels were imported into that State, but of these only two lived to be acclimated, and from this pair have been raised twenty-four. The camel may now be said to be thoroughly acclimated in that State.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, NEW YORK, Nov. 8, 1874.

Animals received at Central Park Menagerie for the week ending November 7th, 1874:

- One Ring-necked Monkey, *Macaca mulatta*. Hab. Ceylon. Presented by Dr. H. A. C. Anderson.
- One Black-headed Spider Monkey, *Ateles melanocher*. Hab. Costa Rica.
- One red-billed Tree Duck, *Dendrocygna autumnalis*. Hab. South America. Presented by Rear Admiral Napoleon Collins, U. S. N.

W. A. COVELLIN.

Woodland, Lawn and Garden.

THE ENGLISH SPARROW.

A Red Hook farmer asks us if we can recommend the propagation of the English sparrow; if they are destructive to grain, etc.

We know that, notwithstanding the great value placed upon the English sparrow as an insect exterminator, there are sober sides to this question. They are, we allow, pretty, social birds, and by the demizens of the sunshiny city thoroughfares deemed good company, and no one must deprive them of their daily crumbe. That they have done good service in exterminating the mother miller moth, which deposits the eggs of the worms that eat the naples of our large cities, we have no doubt; but this is not all these English sparrows do. They increase and multiply with exceeding rapidity, and have already become a pest in some portions of the country—notably in New Jersey. They are by no means content with feeding on household gardens, but they do not feel great respect for the worms or tree insects and moths. They will not, unless extremely hungry, eat the canker worm of the elm and apple trees, and there are some four or five other insects common to the garden that the English sparrow has too nice an appetite and stomach to digest.

It is very well to romance upon these birds; but when we have a clear, prosaic letter asking us an agricultural authority whether they are a benefit or a pest to the great agricultural community, it spoils the romance, destroys the poetry, and reduces all the fine stories to a simple question, Do they do good or harm in the end?

We have opened one of the sparrows occasionally, and found its crop filled not with the most noxious of insects, but with by far the greater proportion of the little black cricket, the green chaffer and others of the most harmless kind of insects. We never found in the crops of the sparrows opened and examined a single roe bug, or any other bugs of the hard scale, or shelled beetles.

In concluding this article, we would certainly say, that we do not hesitate to urge the necessity of keeping them away from grain fields, particularly rye and wheat. In our large wheat fields they would prove the greatest enemies, and if suffered to breed unmolested for a few years would, we fear, prove more damaging to the Western farmer than even the occasional grasshopper visitation.

In a future paper we shall speak of our native birds as the friends of man, and give some reasons why they should be carefully protected.

OLLIFOD QUILL.

WILD FLOWERS IN OUR WOODS.—There are numerous wild flowers in almost any of our woods that are the objects of our admiration. We have made a list of quite a number of these, which we know by careful experiments to be admirably well suited to cultivation in the garden.

We mention first the *Antennaria margaritacea*, or the pearly everlasting, which is one of the well known wild flowers of our pastures and woods. It is a modest, unassuming little flower, of pearly scales, covering a tiny yellow centre. Who has not seen its little golden eye peeping up from its quiet home? Do we not consecrate the tombs of our loved ones with these blossoms of the "immortal flower"? Surely, let us love it, for its memory we would ever perpetuate, hence we plant it in our gardens, and make it an object of our tenderest regard.

We often pass by as insignificant and unworthy our attention flowers that in other countries are held in the highest estimation. Our humble pasture and woodland friend—a flower that comes the nearest to what are called the English balsam pride, is an everlasting flower in its wild state. It is well known in all our Northern States as "pearly everlasting," from its very peculiar shade of color, being a beautiful pearl, not to be seen in any of the other plants. The strictly botanical name of this plant I find to be *Antennaria*. Though closely related to the "life everlasting," or balsam, it is not the same plant, and should not be confounded with it.

The little annual *Grapholium polycephalum* is a good plant, but less of globe shape, and its flower heads are of a dingy grey, and no botanist would confound it with its pretty friend, the perennial everlasting, which throws up a beautiful head of a foot in height, and is finely branched. These stems are downy, with long, narrow woolly leaves, green on the upper surface, woolly on the under, and when once seen are ever remembered. The flowers grow in what are termed corymbs, or heads. These heads, though not larger than a common pea, are composed of many florets and pearly white scales, which give the flower its beauty, and add much to its value as a Winter curiosity in its dried state. This flower so much resembles the French immortelle, that it is often gathered from our American pastures and woods to meet a ready sale at a high price in Parisian markets. To collect and dry these flowers may yet develop their market value, and we would like to suggest to some of our lady readers this pleasant recreation, which may be made quite profitable to them. We have met with good success in our transplanting experiments, the flowers growing larger, more stocky, and more fragrant. Will not some of our friends collect and color some of these flowers, and give us the result of their experiments?

Many other forest flowers are worthy of attention, and our experiments with them may be noted hereafter.

OLLIFOD QUILL.

AGRICULTURAL THEORY.—In looking over a copy of an English agricultural gazette, we were strikingly impressed with the want of successful training of those who are destined by choice and inclination to save themselves up entirely to the exercise of practical education, and a knowledge of husbandry." Our American schools also fall immensely below the standard wants of what constitutes a thoroughly educated and practical agriculturist. And we find that very few of those who have become quite successful as agriculturists in Europe had anything approaching what is called a liberal education. On the contrary, very few of those cited adopted this as their calling until late in life.

Farmers' sons and laborers of common intelligence have nearly always supplied this important field of labor. It demonstrates to our own mind that farming is a business which requires no small share of energy, attention, and skill—that it cannot be set up as a tin shop, or with any hope of success with no other education than our common schools give upon the subject, or after one or two years of labor in a common farmer. It requires an ingrained love for the pursuits of agriculture, taught, as they should be, in the most thorough manner, every branch being fully understood and loved, not because the young man has some capital, and has become disgusted with city life, or is sentimental upon green fields and rustic life; but any young man of only ordinary intellect, without any training at schools, or in any other way, if he will work and study at the same time the best appliances of his field of labor, will be safe to stay upon the ground and occupy it, as he is just the man to reap the reward of his vocation.

OLLIFOD QUILL.

SLIP PROPAGATION.—Our lady friends may with a little care save themselves quite an outlay for plants, especially if their garden is a large one and calls for the use of many varieties. Procure shallow pans or saucers, in number sufficient for your plant slips; fill these full of coarse sand, and keep the same quite damp. Place these saucers in a warm situation, and do not let the sand become dry. Into this place the cuttings of the desired plants. All that is necessary to success is to keep the saucer in full light in a warm place in the sitting room, near a window, and the ordinary heat of the room will do all the rest. As soon as the plants have rooted they should be placed in earth, and will then grow well.

OLLIFOD QUILL.

ANSWERS TO CORRESPONDENTS.

E. B. P., Salem, Mass., writes:—I am almost discouraged in my attempts at cultivation of small plants, fruits, and even flowers, much as I love them. I am almost ready to believe what I have heard said, that "horticulture is only a fight with weeds and insects." From your abundant knowledge can you give me a word of consolation?

*Never give up to the insects. Go to work at once. Hand pick and kill what you can; give a decoction of quassia and quinine chips through a fine syringe to one lot; administer sulphur in fine flower form to another, and to others a dose of strong soap suds and tobacco water. Keep on the watch and the slaughter for a week with persevering industry. Hire the boys in the neighborhood to kill the big bugs by the hundred, and the small ones by the pint. You will by these means be sure to clean them out, and you will have as fat a crop as any of your neighbors.

As an aid to your efforts in the blossoming season of the peach, the apricot, and plum, hang upon the limbs of the trees open mouthed preserve bottles, half filled with honey water, or molasses and water, and you will catch quarts of all kinds of wasps and evil disposed insects. I always use such precautions, and find my pay for my labor. Do the same, and report your success.

OLLIFOD QUILL.

JOSEPH OMEN, Illinois, writes to know whether quails eat the early corn.

Quails do not deprecate upon corn, although seen in our corn fields near the woods at all seasons. Having the same erroneous idea when quite a lad, I often wondered what so many quails found to eat in the corn field, and thought I would watch them carefully. I supposed they pulled up the corn for the sweet kernels. I had observed a large flock of quails busily at work in the corn field near the woods day after day, and noticed them very carefully. I found their habits were just like the incidents related in a former number of FOREST AND STREAM of a farmer boy's experiment and observation in Ohio. His notice was particularly called to the regularity of their operations in taking row after row, and working the field, as it were. This incident recalled vividly to mind my own observation and experience. On killing three of these quails, and opening their crops, I found no corn, but innumerable striped and chinch bugs, though not a single cut worm. I have since that time made several experiments to test this fact, and have found it true with one or two very trifling exceptions. That the quail does not eat corn at some seasons I do not say; but generally, when other food is abundant, I believe corn to be the food least appreciated by them.

OLLIFOD QUILL.

THE COCOANUT TREE.

PHILADELPHIA, November 6th, 1874.

EDITOR FOREST AND STREAM:—

In your Answers to Correspondents about the cocoanut tree, is there not a mistake? I have seen many a one, and never saw one a bit like a cherry tree in form, and think them very ugly. Those that I saw were some of them fifty feet high, and not a branch for thirty feet. They grow like a palm—a bunch at the top, the nuts growing amongst the leaves, and neither branch nor leaf for many feet from the ground. The tree is girdled from root to branches with rings, and I think anything but handsome.

B. W. II.

Your description is quite correct. The cocoanut belongs to the family of palms. The editor of this paper is unable to ascertain how such an improper description as is referred to was admitted to these columns.—Ed.]

The Kennel.

DOG BREAKING.—No. 4.—RETRIEVING.

IN England it is considered damaging to a setter or pointer to allow them to retrieve, and it is argued that the contact of dead game with the nose of either has the effect of diminishing their susceptibility in scenting live birds. In America few broken dogs can be sold unless they can retrieve, and almost the first question asked, is: "Can he fetch?"

We confess we much prefer shooting over a retrieving setter, and always train one of a brace to this usefulness, and in our individual case have never had steadiness at point or charge one particle lessened by it. Probably it may be attributed to our strictness in breaking our dogs to perfect obedience in dropping or charging and remaining so until the order fetch was given. It is also held by trainers abroad, that if a dog is taught to retrieve he should be made first to point dead before being allowed to lift it. This is considered unnecessary by Colonel Hutchinon, from whose admirable treatise on dog-breaking we quote:

"Some good sportsmen maintain that a retrieving setter or pointer, on finding a dead bird, ought to point it until desired to lift it. This training they hold to be advisable on the ground that it conduces to the dog's steadiness by diminishing his wish to run forward on seeing a bird fall; but the plan has necessarily this evil consequence, that should the setter when searching for the dead bird come across and point as he ought, any fresh game, on your telling him to fetch it—as you naturally will—he must spring if he attempts to obey you. Surely this would tend more to unsteady him than the habit of lifting birds as soon as found?"

We believe, also, that the ordering of a dog to fetch while standing a live bird which, in mistake, is thought to be the one just killed, would tend to puzzle in a great measure; but we likewise know that an intelligent animal soon learns that after the report of the gun he is expected to seek dead and fetch it, and if properly trained awaits the command to do so, and in a majority of cases sees where or about the direction of the bird's fall, and while going for it, if he winds a fresh bird, will point it, owing to the difference and nature of the scent, and likewise its situation.

In this country the sportsman, as a rule, owns but one

dog, and it must be his setter and retriever combined, and therefore the most useful.

We begin as soon as possible with our puppy, if we wish to teach him to retrieve, by allowing him to play with a ball, or an old glove thrown first a short distance from him, each time allowing him to tug and pull at it when he brings it. Increasing the distance gradually as you throw the glove, and after he fetches, giving him a reward in the shape of a morsel of food. The most difficult part of the task, however, is when we wish and command him to fetch when he has not the inclination to do so. Determination, and probably severity, will be required at this point, and we have adopted this plan with success. When he refuses the order, drag him to where the object lies, saying fetch in a distinct tone, place it in his month, and by holding your hand under his jaws and forcing him to retain it, lead him back to where you first stood, all the while saying fetch. This may have to be repeated many times before you succeed in gaining perfect obedience, and the patience of the calmest temper is apt to be tried. We follow the plan of rewarding again just as soon as the order is obeyed, and we have stated our adoption of this plan from the training of a six months old puppy alluded to before. Having become successful in teaching him to fetch, as in play, we one day commanded him in a rather severe tone, which he did not comprehend in the least, and would not answer to; taking him by the neck we shook him rather roughly, forced the object into his mouth and pulled him after us. Feeling we had been too severe on the young dog, we gave him a piece of biscuit, and in a few minutes attempted the ordering again; he obeyed at once, and ever afterwards we experienced no trouble whatever. A good plan to confirm your dog to retrieving birds is to take him to a pigeon match and allow him to witness the whole proceedings; but we advise that he should be taken into the field on game first, and be thoroughly broken to charge and to remain so until you order him to fetch; if he is not, nothing would be more damaging.

DYING OF GRIEF.—About two weeks ago a man named Parcels, a blacksmith residing near Dobb's Ferry, went hunting "coons" at night. His companions consisted of a neighbor, residing close by, and a faithful dog, apparently a cross between the setter and fox hound. While searching for game at Sneedon's Landing, on the Hudson River, Parcels approached the brink of the Palisades, and by some mishap lost his balance and fell down a distance of thirty feet. His friend having missed him sought him, and by diligent search found him lying where he had fallen, and his faithful dog by his side moaning piteously. On attempting to approach the body, the usually friendly animal strongly protested by growls and threatening attitudes, and even jumping forward whenever the effort at drawing him was essayed. The man seeing that his companion was seriously injured, went for aid, and in a short time returned with a surgeon and some friends, but the dog, which lay with its head across the body, refused to let them touch the treasure it so faithfully guarded. They were at length compelled to cluh him most unmercifully to drive him away from his post. An examination proved that life was extinct, so the remains were placed in a boat and a piece of canvas thrown over them. The dog, half dead from the beating, on seeing the disposal made, jumped into the boat also, and seeking shelter under the cover, placed his head across his master's face, and remained there until a lauding was effected. The body was then placed in a wagon and conveyed home; but no sooner had it been covered than the loving friend again sought his old post. After the burial the dog became much depressed, refused its food, and wandered listlessly about, moaning in a low, nervous tone, and heedless of everything. He would pay no attention to any of the inmates of the house, and all their efforts could not cause him to manifest any signs of recognition. After dragging along for a week, apparently without food or water, and suffering from a severe nervous prostration, he finally died—a martyr to his own love.

PORTABLE FOOD FOR DOGS.—Our readers may remember that not long since we advised the use of a portable food for dogs, especially where Western trips are taken by the sportsman, when it is often very difficult to obtain proper nourishment for pointers and setters. In response to our recommendation Mr. John Krieger, of Philadelphia, has lately imported from England a large invoice of Spratt's celebrated dog biscuit, a sample of which was handed us for our inspection. It is manufactured in cakes of about a quarter of a pound each, and composed of proportionate parts of animal and vegetable matter, submitted to great pressure; it is claimed to be proof against fermentation and putrefaction and is extensively used by sportsmen abroad. Three or four of the biscuit, soaked for two or three hours in warm water, will make an ample meal for a dog doing hard work during the shooting season, and the cost per pound is about equal, if not less, than that of rebus beef. We are particularly pleased that a portable food can now be procured by sportsmen, and should advise again, that a similar article be manufactured in America, feeling confident it would meet with a ready sale. The Spratt dog biscuit has been tried by many Philadelphia sportsmen, and we daily hear much in its praise.

ADVICE TO PURCHASERS OF DOGS.—After purchasing a setter or pointer do not be discouraged, and do not condemn, if after he has been sent from a distance to you, he will not at once work as you desire and expected in the field. No matter how well a dog has been broken, it is

not reasonable to suppose he can immediately transfer his affections, nor do for you as he had done for his former master, until he becomes thoroughly reconciled to his new home. We remember a case where a fine setter, splendidly broken, was purchased by a gentleman at a distance, and after two days journey by express, the dog reached him. Anxious to try the animal at once the buyer drove up to the train on its arrival, and the setter was immediately transferred to the wagon and taken to the field that his merits might be tested. Of course the poor dog failed in every respect, through the fatigue he had undergone by railroad and on account of the total strangeness of the surroundings, and was returned forthwith with the information that he was worthless. He was purchased shortly afterward by a sportsman more judicious and rational than the first, and thoroughly satisfied with him, he often refused double the price he gave for him. Such cases occur frequently, and our advice is, become first acquainted with your new dog before condemning him and the seller, and only after perfect rest and acquaintance with him, take him into the field.

THE POINTS OF SHOW DOGS.

THE BEAGLE.

Head intelligent, eyes most expressive and ladylike, the head much finer in all proportions than that of the harrier which it somewhat resembles; sharp-nosed; body very compact and muscular; short legs; height from twelve to fifteen inches; color same as harriers. This class is judged almost similarly to the harrier, but so few come under the eyes of the judges, that the breed has not been taken so much notice of as some others; and to find all the separate points required is very difficult. The above will give an idea of what is really wanted for the show yard in the beagle class.

POINTS IN JUDGING.

Table with 2 columns: Point, Value. Head...15, Neck...5, Ears...10, Legs...10, Feet...5, Shoulders...30.

FOX TERRIER.

Head long; forehead flat; ears thin, fine, and pendant, carried flat to face and almost V-shaped; eyes sharp; but not prominent, or too large; cheeks lean, with a large, sharp, powerful jaw; nose black, with a good mouthful of sound teeth, not undershot; neck fine but muscular, not throaty, set into the shoulders lightly and elegantly, with proportioned depth of chest, neither too thick nor too wide; fore-legs straight, but muscular arms, with a nice round strong lower leg with a round cat-like foot; back straight, not too long, with well rounded ribs, short, well developed loin; hips wide; stifles muscular; hock not too straight, or so as to give a stiff bull-dog-like appearance, with a nice substance of bone and muscle on the lower leg; stern set on straight, not carried over the back, although carried gaily.

Fancier's Gazette.

A FOX CHASE.—A correspondent writing to us from distant Deer Lodge, Montana, sends the following sketch of a regular old-fashioned chase after Reynard. It seems that the West is after all the home of true sportsmen, for though defying all dangers to amass a fortune, yet they spare their life quite frequently with a dash after the buffalo, deer, antelope or fox, and receive new vigor from their many sallies after the game with which their country abounds.

The knights of the saddle and spur gave the hounds another long run on Saturday afternoon as a "farewell" to Mr. John Pemberton, who left for Missouri on Tuesday. Among other trophies brought in were two splendid foxes. The one first flushed was a scrub out of luck, and was easily overtaken; but the second was a "mocking" fox, and proved so "jogged his pack" that a run of over three hours before they "bayed him." As an instance of the sagacity of Reynard, we give the following incident of the chase: After a two hours run, on coming to a stream, both dogs and fox were badly jaded—the fox but a short distance ahead and wheezing at every jump. After crossing, Reynard slowly jogged up the bank, and, turning square about, stopped to see what the hot track at his heels would do in crossing. The little general reckoned the cool stream would prove too inviting to be resisted by his pursuers, and he was right; for as they plunged into the water they came to a dead halt. Some laid down, others looked wistfully up the bank, but all preferred the water to the trail. Seeing this, his lordship of the brush leisurely walked into the shade of a friendly tree, faced the tired hounds, and quietly stretched himself on the grass, as much as to say "I'll take a little rest myself; so you shall have now the best of it." And there the rogue lay with an eye on the pack until they got rested—perhaps five minutes—and were urged up the bank to the scent again. At the first note Reynard, as fresh as a daisy and with a look of defiance at the hungry band behind, sprang up nimbly and sped away like the wind—over hill, down ravine and through thicket he flew, with the music of the pack hurrying him to his best, and the clatter of hoofs telling him that some one would be in at the death. But in vain the game little fellow ran; in another hour he was forced into his castle, there capitulated to the spade, and was brought into town alive.

The first grand fox hunt of the season, under the auspices of the Staten Island Shooting Association, took place on Wednesday. The meeting, which was called for half past nine o'clock A. M., met at Mr. Jaycock's farm, at Butcherville, between Bull's Head and Graniticville, on the north side of the island. All gentlemen in Richmond county and vicinity owning hounds were invited to participate in the chase.

IS THE TORTOISE A GAME BIRD?

LAWRENCE, KAN., November 5th, 1874.

EDITOR FOREST AND STREAM:—I have to add my testimony to that of the gentlemen who have, so far, noticed that game dogs will work on and point the land turtle. I saw a goodish dog do it a few days since. "In the months of many witnesses shall all things be established." On the bosom of the stream shall many things flow into the light. I have also noticed a cat catching grasshoppers and eat them, and have seen a rat do the same. B.

—We see in the New York Sunday Herald the advertisement of a "Dan Demon" terrier. What breed of pups can this be? Perhaps it is one that is very 'de'il' for rats.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

Table with 4 columns: Date, Boston, New York, Charleston. Shows high water times for various dates from Nov. 12 to Nov. 18.

LIST OF RACES AND WINNERS FOR 1874.

—We print herewith a list of the yacht races for 1874. This list was prepared by a gentleman in Boston, who is so modest to allow his name to be used, as his efforts are devoted only to this journal, and he does the work on no other ground than the desire to have the calendar properly represented, and enable inquirers to know the winning boats by a reference to dates. This gentleman occupies one of the highest positions in the yachting circles of this country; and from the thoroughness of his labor one can readily surmise his acquaintance with the matter under consideration, and his close attention to the subject.

This document will be found of very high importance by all yachtsmen, and the lovers of their sports, as it is the only one prepared on the subject; and even this has been done as a special compliment to the FOREST AND STREAM for its devotion to yachting, and the usual completeness of its reports on all these subjects. Thus while we are enabled to lay before our readers a valuable document, we are, at the same time, complimented by the very warm letter accompanying it, and the many queries sent us relative to the matter. We are pleased to learn that the effort of this journal in this class of elegant pastimes has been recognized by the best authorities in the land, and that they feel it their duty to sustain our efforts in every way possible. For this kind consideration we beg leave to tender thanks to the gentlemen who have so freely and ably aided us in making our yachting reports the models of completeness and thoroughness they have been deemed to be.

- May 15.—Charleston regatta, Emmie wins.
May 18.—Philadelphia, Philadelphia Yacht Club regatta, first class, Willie Kleintz, first prize; Albert Duger, second prize; Albert Eggleston, third prize; second class, Richard Kiddle, first prize; J. B. Brewer, second prize; S. A. Standford, third prize.
May 21.—South Boston, Match, Mabel beats Lizzie.
May 21.—South Boston, Dorchester Y. C., first regatta; winners, schr. Curlew; C. B.'s, first class, Kelly; second class, Firefly; third class, Water Witch; fourth class, Tulip; second class keel, Fearless.
May 30.—Fall River, Alpheus beats Lackawanna and Ghid.
May 30.—Sip Punt, Arlington Y. C. regatta, Clara wins.
June 2.—Detroit, International Y. C. regatta for third class; Nettie, first prize; Lula West, second prize.
June 3.—Detroit, I. Y. C. regatta for second class; Adelaide, first prize; Fleeting, second prize.
June 3.—Tom's River, T. R. Y. C. regatta; Oscar Robinson, first prize, Lula, second prize; Hazel, third prize.
June 3.—Governor Day, Match, beat stars Crown.
June 4.—South Boston, S. B. Y. C., first regatta, Keels; first class—Starlight, first prize. Second class—Fearless, first prize; Ucla Moses, second prize. C. B.'s First Class—Queen Mab, first prize; Popsy, second prize. Second class—Maud, first prize; Mabel, second prize.
June 6.—Dorchester, D. Y. C., Third Championship regatta; Keels, first class, Sunbeam; second class, Fearless; C. B.'s, first class, Nimbus; second class, Mabel; third class, Maud; fourth class, Tulip wins.
June 10.—New York, A. Y. C. regatta, second class sloop Flyaway wins.
June 11.—New York, N. Y. C. regatta; Tidal Wave takes first class schr. prize and Nannet Challenge Cup, Mable takes second class sloop schr. prize, Grace first class sloop prize, Wayward second class sloop prize.
June 15.—New York, Columbia Y. C. regatta; winners, Cabin Sloop; Commodore, Open Sloops, first class, Journeyman; second class, G. B. Deane; third class, Tough.
June 15.—New York, Brooklyn Y. C. regatta; schr. Tidal Wave, sloop, first class, Caduce; second class, Schoner; third class, Wm. T. Lee; win first prizes with and without allowances. Schr. Comet, sloop, first class, T. B. Aston; second class, Kalsar; third class, Brooklyn, win second prizes with allowances.
June 15.—Washington, Americas Y. C. regatta; winners, first class, Americas; second class, Columbian; third class, Spry.
June 15.—Philadelphia, Pa. Y. C. regatta; first class, George Hoff, first prize; C. S. Anand, second prize; second class, A. F. Biddle, first prize; J. B. Brewer, second prize.
June 15.—Tarrytown, Tarrytown Y. C. regatta; Phantom, first prize; Annie, second prize.
June 17.—Boston, East Boston Y. C. regatta; winners, Keels, first class, Guel; second class, Lidou; O. B.'s, first class, Mabel; second class, Sunbeam.
June 17.—Savannah regatta; first class, Coquette; third class, Nannette, win; second class, Hattie Hull and Emma, tie.
June 17.—Lynn, L. Y. C. regatta; first prizes, first class, Mable; second class, Expert; third class, Mabel; second prizes, first class, Lillie; second class, Kate; third class, Lizzie.
June 17.—Salem regatta; first prize, Phil Sheridan; second prize, Venus.
June 17.—Marblehead regatta; first prize, Fearless, Jr.; second prize, Leader; third prize, Rambler.

- June 17.—Williamsburgh, W. Y. C. regatta; winners, first class, Melville; second class, Storoce; third class, Dolly Varden; fourth class, Orient; fifth class, S. M. Bodger; sixth class, N. Jackhie.
June 18.—South Boston, S. B. Y. C., First Championship regatta; Keels, second class, Fearless, first; C. B.'s, first class, Ripple, first; Nalad Queen, second; second class, Maud, first; Unique, second.
June 20.—San Francisco, Match, Freda beats Mimic.
June 20.—Dorchester, D. Y. C., Second Championship regatta; the following classes were sailed, and take the cups: Keels, first class, Sunbeam; second class, Fearless; C. B.'s, first class, Nimbus; second class, Mabel, and fourth class, Tulip; Water Witch, third class C. B. wins, tying Maud.
June 22.—Halifax, R. H. Y. C. match for challenge cups; Kate wins in second class.
June 25.—New York, N. Y. Y. C. Ladies' regatta; winners, C. B. Schra's, first class, Tidal Wave; second class, Comet; sloop Viscon.
June 27.—Brooklyn, Long Island Y. C. regatta; sloops, J. S. Gage, Union Pr.; Phoebe D., Club Pr.; Open Boats, first class, Brooklyn U. and C. Pr.'s; second class, Joe Saunders, U. and C. Pr.'s; third class, Ouly Daughter, U. and C. Pr.'s.
June 28.—Putt Bay, I. Y. C. regatta for first class; first prize, Cora; second prize, Annie Culbert; third prize, Lena.
June 29.—Washington, Match, Fannie Bell beats Spry.
June 29.—Jersey City, Oceanic Y. C. regatta; first class, Brooklyn; second class, Emily P.; third class, first prize, Tough; second prize, Alpey.
June 30.—Jersey City, J. C. Y. C. regatta; first class, Inengatta; third class, Irene; fourth class, Annie.
July 1.—Swampscott, Eastern Y. C. regatta; first class schr's, first prize, Foam; second prize, Halycon; second class schr., Fearless; second class sloop, Nimbus.
July 1.—Halifax, Royal Halifax Y. C. Corinthian Matches.
July 1.—Grosse Ile, I. Y. C. regatta for third class; Emma wins first prize, with and without allowance; Kittle takes second prize.
July 1.—Southport regatta; winners, first class, first prize, Mystery; second prize, Adm; second class, first prize, Rippe; second prize, Gracie; third class, first prize, Peerless; second prize, Ella.
July 3.—Oyster Bay, Savannah Y. C. Corinthian Sloop Match, Viscon wins.
July 4.—Oyster Bay, S. Y. C. regatta; winners, schooners, Triton; sloops, first class, Vindex; second class, Fd Sen; third class, Mary Emma.
July 4.—Detroit, I. Y. C. regatta; first class, first prize, Cora; second prize, Annie Culbert; third prize, Ida; second class, Fleeting; first prize.
July 4.—Lynn, L. Y. C. regatta; first class, first prize, Lillie; second prize, George Manson; second class, first prize, Mule; second prize, Expert; third prize, Fleeting; third class, Curlew, first prize; Lucy, second prize; Georgie, third prize; fourth class, June Bug, first prize; Hamburg, second prize.
July 4.—Portland, P. Y. C. regatta; first class, Ray; second class, Gracie, third class, Frolic.
July 4.—Perth Amboy, P. A. Y. C. regatta; first class, first prize, Brooklyn; second prize, J. M. Chapman; second class, Emily P., first prize; Chl Pl, second prize.
July 4.—Wilmington, Carolina Y. C. regatta; Little Walter, first prize; Reta, second prize.
July 4.—Albany, Albany Y. C. regatta; C. B. Knowles wins.
July 4.—Long Beach regatta; first prize, Infant; second prize, Nellie Squire; third prize, G. W. Ruby.

Oct. 21.—Heron, Hm. Y. C. regatta; Brunette, first class, and Jaqueline; second class, win.

Oct. 22.—New York, M. Y. C. regatta; Oriole, first class, and Skip Jack, second class, win.

—The East Boston Yacht Club on Wednesday evening 4th inst. dedicated their new headquarters in Central square, East Boston, Mass. There are four rooms, reception and committee rooms, dining hall and cook room, which are furnished with neatness and with a view to comfort. At 8 o'clock the members with the invited guests, Commodore J. J. Pittman, Vice Commodore, A. A. Lawrence, fleet Captain Lobdell, W. Hanford of the Bunker Hill Club, and many others, sat down to an old-fashioned chowder supper which was well served by the cook of the club. The visitors were introduced by Commodore E. B. Curran, who made some very entertaining remarks.

—Intelligence from England leads to the belief that Sadler will row Brown before the end of the year, in accordance with the latter's original challenge for a five mile race.

—The Oceanic Yacht Club, of Jersey City, Commodore E. F. Taylor, held a meeting at their club house, foot of Van Vorst street, last Thursday evening, for the purpose of presenting prizes to the winning yachts of last spring's races. The prizes were presented by Mr. John Peckier, who also acted as President of the meeting. The following were the yachts honored on the occasion and the prizes awarded them:—Yacht Brooklyn, James Smith captain, a magnificent opera glass; yacht Emily F., Commodore J. S. Taylor, a new bed, handcar and properly inlaid boot; both of these yachts belong to the Long Island Yacht Club; yacht Charles F. Taylor, Captain —, a handsome gold badge, Oceanic Yacht Club; yacht Tough, Captain Ben Carr, a fine opera glass, Columbia Yacht Club. The comfortable club house was prettily decorated, and the attendance large, many members from other clubs having been invited by the hospitable Oceanic Yacht Club.

—Messrs. Keegan and Mallory bent Hartenstein and Fry in the contest for the championship of New Haven. The course, which was three miles long, was rowed over in 25m. 18s.

—Wm. R. Jacobs, of Stapleton, rowed around Staten Island on Tuesday against time, accomplishing the distance of thirty-seven miles in six hours and twenty minutes, beating the fastest time on record by seventeen minutes.

Answers To Correspondents.

F. S., City.—Boddingon terriers should weigh from 18 to 20 pounds.

Snow.—The first dog show of any importance was held in Birmingham, Eng., in 1852.

J. H. F. D., Mystic River.—Ferguson Haines, of Biddeford, Maine, says he has a good Newfoundland pup, ten weeks old, for sale.

P. L. W., Deer Park, Ind.—Thanks for favor. Shall be pleased to receive the information you offer.

SCOTTY, Camden.—A trip to the Blackwater, Virginia, cannot be made for less than \$65 to \$75.

L. S., Portland.—Common salt is the best emetic for dogs. We have already given several recipes for the mange and distemper. Look at your old files and see them.

REFUS AND CAMERON.—Our correspondents "Rufus" and "Cameron," Dartmouth College, will oblige us by sending their addresses, which have been mislaid.

S., Jersey City.—The best breeders give their dogs a small ball of tar and natural every alternate day, and then wash to impart a gloss to their coat. Exercise the animals also, and groom them.

B., Shelburne, Vt.—I would like the address of one or more responsible dealers in fish, such as black bass, perch, pike, &c., in your city. Middleton, Carman & Co., or Eugenio Blackwell, Fulton Market.

SHOPEAKERS.—G. D. Stillwell, of Barrie, Ontario, Canada, sells the genuine Canadian beakline shoepeak. For information such as you ask for, write to Saml. L. Loust, lawyer of Barrie, who is a subscriber to FOREST AND STREAM.

Box 507, Boston.—If you desire such a dog as you describe, you can

best secure it by advertising through our columns, or answering advertisement which you find there. Gratulatioes on our part do not pay tribute to your dog races, teach to work class.

D. S. S. Francisco.—I have a rule for cryobound consisting in this country. Can get English rules from any of the London sporting papers. We know of no portion of the country, except yours, where greyhounds are used for regular matches.

W. S. G., Napolton.—We often refuse MSS because it is written in such a slovenly style, and on both sides of the sheet, as we have not the time to attend to its re-preparation. Any article containing information we cheerfully publish.

S. W. S., Annetonic.—See last week's FOREST AND STREAM in answer to correspondents. If section of lead will not cure weeping, try four grains of nitrate of silver dissolved in an ounce of water. Apply three times a day.

MURKIN.—Where can I buy bird's eggs? Is Baird's book on "Birds of North America" a book for one who wishes to know the color and measurement of eggs, and where birds build? Ans. Address Chas. J. Maynard, Ipswich, or Fred A. Ober, Beverly, Mass. No. Inquire of him for a gentleman for the work you wish.

ELIZABETH.—Will you please answer the following: 1. Who are the Fish Commissioners for the State of New Jersey? Ans. R. P. Howell, Woodbury, and J. B. Showell, Rahway. 2. What course of procedure is necessary to secure the stocking of Lake Hopatcong with black bass and lake trout? Ans. Write to the above. 3. Since this lake abounds in pickerel, what are the proper means of exterminating them? Ans. Black bass would thrive and trout would be destroyed.

G. W. H., Philadelphia.—A party living in Camden, N. J., asked me if I would go gunning with him on Thanksgiving day in Jersey. If he gets the permission of the Mayor of Camden, and we go shooting on the farm of a party with his permission, can the West Jersey Game Protective Society interfere with my carrying to Philadelphia any game I may shoot? Ans. Not unless the Secretary of Philadelphia sends the bag out to you. 4. Black bass would thrive and trout would be destroyed.

O. N. G., N. Y.—Will you have the kindness to let me through your paper if there is good duck shooting at Rockaway Beach, and when the best time to go for them. I am much obliged to you for recommending me to George Raynor, Lakeland, L. I. I called at his place with some friends and had a splendid time. Ans. There is good duck shooting now at Rockaway Beach (Comrade Bay), but lower down the Island it is better. You can get a good runner at Chaucer; by applying at the Sea View House, or Uncle Sam's.

A. B., New York.—You would oblige a constant reader of your paper by letting me know what a brace of setter pups will cost, how old must they be before you can commence to train them, and what it would cost me to have them trained? What proportions of powder and shot must I use for a 10 bore brace loader? Which do you consider best to use, brass or paper shells? Ans. L. Cost from fifty to six hundred dollars. 2. Best to use an English set, making a distinct and prominent mark for shooting at, and at the same time so regulating the motion of the wings as to make them the counterpart of each movement made by the living bird in its swiftest and slowest flight. A box of 100 birds weighs only eight ounces.

H. A. R., New Britain, Conn.—What kind of powder will give the best results with a 40 calibre rifle, 30-inch barrel, central fire cartridge, class 19 grain? Ans. 2. Ans. 2. Ans. 2. Ans. 2. Ans. 2. Ans. 2. It depends a great deal on what sort of game you hunt. See FOREST AND STREAM of 28d ul.

HOPEWELL.—What is Glahn's Improved Gyro, noticed in last number of FOREST AND STREAM? Ans. The Glahn's Improved Gyro Bird consists of a cone-shaped parachute, which is attached to the ordinary Bassy wing with a small delicate nut and bolt, and represents the body of a bird or an English set, making a distinct and prominent mark for shooting at, and at the same time so regulating the motion of the wings as to make them the counterpart of each movement made by the living bird in its swiftest and slowest flight. A box of 100 birds weighs only eight ounces.

H. A. R., New Britain, Conn.—What kind of powder will give the best results with a 40 calibre rifle, 30-inch barrel, central fire cartridge, class 19 grain? Ans. 2. Ans. 2. Ans. 2. Ans. 2. Ans. 2. Ans. 2. It depends a great deal on what sort of game you hunt. See FOREST AND STREAM of 28d ul.

F. H., Biddeford, Me.—Please inform me, through the columns of your valuable paper, where I can obtain young black bass for stocking a pond in this vicinity. We are 95 miles from Boston, on the Eastern R. R. 2. Give me the nearest place. Ans. Don't think any parties have black bass in any quantity to sell. 3. Ans. 2. Ans. 2. Ans. 2. Ans. 2. Ans. 2. It depends a great deal on what sort of game you hunt. See FOREST AND STREAM of 28d ul.

T. M., City.—Will you please give me through your answers in correspondents your opinion of the *face simile* target—on back of this letter—made with (old) revolver pistol, calibre 32-100, 23s 223-100 feet, 23 consecutive shots. Also, give account of best pistol shooting you can find on revolver or pistol, or that you have ever seen done, and obliget Ans. We append the opinion of S. C. Coole, Esq., whose answer, as a professional expert, has full value: "To the best of my knowledge and belief, there is no public record of pistol shooting with such small calibre (32-100) firearm, and I am therefore unable to make the statement you require. Candor compels me to acknowledge that the target before us is very good, and fully equal to any shooting I have seen made with pocket weapons. If you have no objection, I will retain the *face simile* copy of target inclosed, and place it in a conspicuous position in my gallery as a stimulus to others to emulate his success with the same calibre of weapon." These 23 consecutive shots are all within a target five and a quarter inches in diameter.

SPRING, Philadelphia.—The Game Protective Society was chartered in New Jersey April 30, 1878. That society claims to have the right in its own resident and non-member for gunning and killing quail, &c., in Camden, Gloucester, and three or four other counties. Can such a law be enforced, and is such a law constitutional? or is it only to serve sportsmen? Ans. The State of New Jersey, through its Legislature, unquestionably has the right to forbid the killing of quail for game purposes, whether in any portion of its territory, and the West Jersey Game Protective Society, or any body else, acting in conformity with a law so created, has the right to prosecute those killing such prohibited game. So, also, the Legislature has the right to confer upon any society or individual, as constituted wardens, jurisdiction over any part of its territory, wild game (*ferae naturae*) being the property of the State. If you game birds, you hold the property of the State, and the West Jersey Game Protective Society, when killed out of season, even though it be killed on one's own land. Neither is wild game private property when found on one's land, so long as it has its natural liberty, but landowners have always the right to exclude gamesters from their territory, under the laws of trespass. If the State law of New Jersey does not prohibit the killing of quail, in the counties indicated by our correspondent, the West Jersey Society certainly has no jurisdiction, unless it owns the land. A State Legislature may grant a corporation a corporation owning outside lands, or may exempt its own game lands, *independently of any State law*; as in the case of the Blooming Grove Park Association of Pennsylvania. But a Legislature cannot grant to any persons power to restrict the property in which they themselves have no ownership, except by the other's consent, for by so doing it would deprive the latter of those "indefeasible" rights which are guaranteed by the Constitution. It is unconstitutional to permit residents to sell quail. It is also unconstitutional to permit residents to sell quail. It is also unconstitutional to permit non-residents from doing so, under the general laws of the land and birds of the State. Do you have the same rights and privileges in our State? In another,

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INTERESTS IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

NEW YORK, THURSDAY, NOVEMBER 12, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will wander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible. CHARLES H. HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, 12th.—Billiard Tournament at Tammany Hall, New York. Trotting at West Side Driving Park.

SATURDAY, 13th.—Trotting at the New Dorp Club grounds, Staten Island.

MONDAY, 15th.—Billiard Tournament.

TUESDAY, 17th.—Billiard Tournament.

WEDNESDAY, 18th.—Billiard Tournament.

THURSDAY, 19th.—Billiard Tournament.

THE IRISH TEAM.—Major Arthur B. Loech, captain of the famous Irish Team, has lately been making an extended tour (perhaps we should call it a long range) over the West and South, from which he returned last Monday in jovial spirits, fine form, and much improved in weight, calibre, and penetration. His purpose is to remain in the city until the 15th, when he will aim to reach the other side of the Atlantic and home. While at New Orleans he was the recipient of a beautiful gold medal from the New Orleans Rifle Association, which is now being engraved by Tiffany & Co. It is very massive, say one and a quarter inches in diameter, and displays the United States and German flags in enamel. The Rifle Club is composed largely of Germans. Wherever the gallant Major went, he was tendered hospitalities of the most liberal and graceful description, the most public of which he felt constrained to decline. Indeed, he expresses himself with enthusiastic affection toward America, and promises to return again. Meanwhile, he will publish, and has already partly written a history of the visit of himself and his comrades to America, detailing all the incidents of the Rifle Match and Tournament, the adventures of the hunters in the West, and his own individual jaunt across the country. The book will be of 200 pages 12 mo., and will undoubtedly meet with a marvellous sale. But four of the Irishmen now remain in the country. Milner is hunting in Colorado, and Bagnall and Kelly remain in Chicago, the former as nurse, and the latter as invalid, he having probably contracted his sickness on the Western prairies. Rigby left on the 4th.

Next week we shall print a sketch of the Hunting Trip of the Team in the Indian Territory, which circumstances have compelled us to defer thus long.

A variety of interesting matter—especially in the department of Rational Pastimes—is crowded out of this issue.

WOODCOCK SHOOTING.

OUR recent article on woodcock has received the approbation of a large number of our correspondents, and its principles have been supported by several journals which devote a portion of their space to sketching the work of the Nimrods and Waltons. We have found, thus far, only one who objects to slaughtering the birds in Summer, and his article will be found on another page. From the numerous communications received, all of which argue on the steps necessary to the preservation of the bird, we should deduce that the work of the hungry pot hunters was the principal cause for the scarcity of this pet of the sportsman, and next to that the indiscriminate destruction of both the old and young birds early in the season by persons who think more of the silly boast of making a large bag than in doing good shooting. We can admire the spirit of the man who scorns to kill mere fledglings on economic as well as sportsmanlike grounds, as much as we detest the vanity of him who slaughters them for the purpose of displaying his prowess and vaunting of it to his friends.

Our assertion that the only way to preserve this game was to enact statutes forbidding the destruction for a certain number of years, has already been taken up by some clubs, who will take prompt action at an early day to have the Legislature of their respective States pass laws forbidding any assaults upon it for a specified period, and suppressing all Summer shooting. If this work is prosecuted vigorously, the legislators will not dare to oppose it; and the consequence of this will be that woodcock will become quite numerous again, and will give our sportsmen an opportunity of testing their skill, and a very important member of our family of birds will be preserved on this continent.

In framing laws for the action of the State Legislatures, the clubs should remember that those suitable for one portion of the country are not adapted to others, owing to the difference in the seasons and the migratory habits of the bird.

Two general statutes could, however, be framed, and these would be broad enough to apply to the whole country, if they were based on climatic influences; for, owing to the various phases of temperature in different sections of the country, the bird is a stranger in one place when it is very abundant in another, so the laws must be framed on these distinctions if they would not be injudicious and oppressive.

We know of States where a woodcock cannot be found in October; so to prevent shooting them in this region before that month would be wrong, as it would not allow sportsmen to enjoy the pleasure of such exercise, whereas in other places any attempt upon them previous to that time would be a radical folly, as they tarry there long enough to give persons all the shooting they should need.

If our Eastern and Western clubs will unite in the effort for the preservation of this fine representative of game birds, they will be enabled to preserve it from extinction, and enjoy for many years hence the pleasure of bagging it, but if they do not, they will have to go far afield ere they can obtain the sensation of fastidiously delicious flavor.

This effort of protection is needed; so we hope to hear before long that the true sportsmen of the country have taken some action in the matter, and that they have preserved the bird from extinction.

THE INTERNATIONAL RIFLE MATCH.—The following criticism on the International Rifle Match at Creedmoor, appears in an English contemporary:—

"Between each shot careful cleaning of the barrel was a general rule; the Americans bestowing a longer time than the Irish to this business, and, as the end shows, obtaining a certain benefit for their pains. It may be now fairly conceded, notwithstanding the difference of opinion concerning loading at the muzzle or breech, that under equal conditions, a breech loader has been found quite capable of holding its own with its rival muzzle loader. Concerning the bore, length of barrel, fore and back sights, weight of bullet, and charge of powder, we have yet to be informed; and these are all interesting points. We are, however, told that Mr. Fulton used 95 grains of powder, every charge having been carefully weighed into a glass basket. During the match there seems to have been the usual disaster of a bull's eye by Mr. Milner on the wrong target, and of a defective cartridge fired by General Dakin—incidents which led to the natural "his" and "had its" of disappointment, but, in this case of such worthy competitors, free of rancor.

May we now turn our attention to the work done at the match, which appears to be of a class worthy to be termed "magnificent." The men in action have been sufficiently lauded for their possession of sustaining power through so long and arduous a task, calling into exertion the keenest faculties of the brain, nerve and eye; demanding constant and extreme tension of mental and physical forces. With the details of the scores your readers are already fully acquainted, so it will now be sufficient to simply generalize them.

Each team fired 270 shots, and each missed only seven times. In ordinary circumstances double this number might have been looked for. The Irish team obtained, in 263 hits, 149 bull's eyes, 107 centres, and 7 outers; while the Americans got in 263 hits, 150 bull's eyes, 96 centres, and 11 outers, the target being 12 feet wide and 6 feet high. The actual scores were, respectively, 931, 934.

Now, if this work be compared with that which, theoretically, or on the system of averages, could be expected from small-bore weapons of known superior workmanship and character, we shall find that six steady good men would probably obtain 108 bull's eyes, 95 centres, 54 outers, 12 misses, and score 828. Also, that if all the six rifles were put into such good fixed rests, that nothing but the natural deviation of the rifle could disturb the accuracy of

aim at the central point, we shall find that they would probably register 128 bull's eyes, 133 centres, 24 outers, without misses, scoring 934, with the same ranges and rounds, and all defects of cartridges being excluded. The work, therefore, of these two teams is justly to be styled "magnificent;" for these men—with all their variations of temperament, imperfections of sight, of nerve, and other disturbing influences which dash in upon the most formed better work than the mechanical fixed rest could record. Yet, before stating this too decidedly, it may be a question whether, when the fixed rest has been used to test the merits of a valuable rifle, the human precautions of cleaning the barrel between each shot, the careful weighing of ball and powder, are really adopted; for if these things be neglected, the register of the rest cannot be taken as the final measure of the accuracy of the rifle. But the work done at this match appears to have been surpassed by both teams at the trial practice two days previous. We have not detailed scores before us, but the total scores, for the same men, are given: for the Irish, 938 marks; for the Americans, 944—work which was sufficiently a measure of the bitter strength to be put forth in the contest to ensue after the next forty-eight hours.

ASSOCIATION FOR THE PROTECTION OF GAME.

OPENING MEETING FOR THE ENSUING SEASON—THE POACHERS TO BE VIGOROUSLY PROSECUTED.

THE first Fall meeting of the Association for the Protection of Game was held Monday night at the residence of the President, Royal Phelps, Esq. A large number of members were in attendance, and the chair was occupied by Mr. Phelps. After the reading of the minutes of the last meeting, held in May, the Secretary read the correspondence which had taken place in the interim with different game protecting societies throughout the country, particularly the Game and Fish League of New Hampshire, Maryland Association for the Protection and Preservation of Game and Fish, the New Jersey Commissioners of Fisheries, and the Worcester (Mass.) Sportsmen's Club.

Robt. Furey, Esq., of Brooklyn, complained of violations of law by use of set nets in Gravesend Bay that had meshes of less than two inches; but as Gravesend was beyond the jurisdiction of this society, the formation of a protective club and the appointment of a constable were suggested as the first preventive steps to be taken, after which the society would assist at Albany in procuring requisite legislation.

The President reported that, in compliance with the resolution of the club, the committee to whom was referred the subject of uniformity of game laws in different States, had had the documents in relation thereto printed and sent to ninety-three game protecting organizations in different parts of the country, suggesting the holding of a national convention in this city in the month of November. Very soon after they had done this, however, the State Association called a convention for the 9th of September, at Niagara Falls, for the same purpose, and the committee thereupon felt constrained, as a subordinate organization, to suspend all further action, not doubting that the State organization would realize the responsibility which now rests on its shoulders, to see suggested an important subject properly attended to until it is carried to a successful issue.

Mr. Charles Hallock, of FOREST AND STREAM, said that the Association did not think the Niagara Convention was composed of the very best material in the country, and inasmuch as the representation and the number of voters for officers was so small (being only thirty-two), while the number of States and Territories was forty-six, it could scarcely be considered a national convention. While they considered the President and several of the officers men of high intelligence, they thought the matter might be placed in better hands, but did not want to appear antagonistic to the other body. He therefore begged to concur in the remarks of the Chairman, recommending that the committee be discharged. The committee were then discharged, on motion of the Chair.

The President reported that the jury in the suit against Cappell and Storer, charged with having in possession forty trout during the closed season, had rendered a verdict against the association, and that an appeal had been taken to a higher court. The President stated that he had good reason for believing that the jury gave a verdict for the defendants simply because of the severity of the penalty, viz. \$1,000 for the forty trout, or, in case of failure to pay the fine, one thousand days imprisonment.

The President then arose, and said that he was confident that many parties were smuggling trout regularly to New York markets contrary to law, and suggested the propriety of placing private detectives on the cars in order to arrest the professional sportsmen, who were habitually violating the statutes. The suggestion of the President was enthusiastically received, and the Treasurer was ordered to place \$3,500 at the disposal of the Executive Committee, to employ a number of detectives, rewards, and prosecutions during the present season.

The following gentlemen were unanimously elected members of the association:—Messrs. Gouverneur Morris, Dr. Walter R. F. Day, Benjamin H. Bonney, Henry C. Carey, Martin Van Buren, Mathias Nichol, and Gov. Dix, (honorary member.) The by-laws were amended so as to make the entrance fee for the year 1875, \$25, and to reduce the annual dues (\$10) remaining the same, and limiting the number of members to 100.

A list of cases was then read showing the number of persons prosecuted for infringing the game laws, and the verdicts which had been rendered in favor of the association.

The organization determined by a unanimous vote to submit to the next Legislature the following proposed amendment to the game law, respecting fish and game. The amendment reads as follows:—

REASON FOR THE AMENDMENT.

1. The first object of the amendment is to prevent the destruction of valuable trout ponds by putting pickle, pickeed or other voracious fish therein to eat up and destroy the trout. This is done only out of pure greed, and is entirely contrary to the law. The proposed amendment is to make it a misdemeanor to put any such substance in a trout pond, and to make it a misdemeanor to destroy a trout pond worth \$1,000. The action, as it now reads, covers only the poisoning of trout.
2. The second object of the amendment is to make the offence one of malicious mischief under the Revised Statutes (2 R. S. 634, sec. 15, 2 Edmonds' Stat. at Large, 711, sec. 16), and punishable in the same man-

CREDMOOR.—The regular monthly meeting of the Board of Directors of the National Rifle Association was held last Thursday afternoon at No. 93 Nassau street, Col. Church, the President, in the chair. The report of the Treasurer was read, showing the receipts to have been \$6,992.14; disbursements \$2,900.33. On motion of Col. Wingate, the action of the statistical officer in disallowing the score of Private Irwin, of the Seventy-ninth Regiment, in the "Gatling" match, at the Fall meeting, was sustained. The Gatling gun was, therefore, awarded to the team of the Twelfth Regiment, which will hold it until the next annual meeting, when it will again be contested, according to the terms of the match, which specify that it must be won twice by a team from the same regiment in order to obtain absolute possession. A resolution, emanating from Col. Gildersleeve, was adopted, disallowing the protest made by Mr. Yale against the score of Lieut. Fulton in the sixth competition for the Remington diamond badge. The question of what constitutes a breech loading gun was discussed at length and finally laid over until the next meeting. On motion of Col. Wingate the chairman appointed a committee, consisting of Col. Wingate and Gen. McMahon, to decide upon what days the range should be at the disposal of the National Guard, and to entertain applications for that purpose.

RIFLE CLUB.—The Chicago Times of the 1st ultimo contains the following item relative to the formation of a rifle club in that city:

"Mr. J. G. True, the representative of the Forest and Stream in this city, is bearing himself very actively in the matter of forming a rifle range and team for this city. He has the names of 35 persons favorably interested, who are ready to subscribe from \$50 to \$500. Gen. Webster and others who are anxious that the project should be carried out, have already visited the suburbs in either direction in search of suitable land. It is probable that a meeting will soon be called to afford a chance for a public expression of interest."

Company C, of the 1st Regiment, San Francisco, after a very pompous resolution, in which the qualities of different arms are discussed, challenges Company E to a contest at rifle practice. The latter is the organization that sent the challenge recently to shoot against any member of the National Guard of this State.

According to a writer for the Daily News, the noble sportsman recently assembled at the Duc des Roches, four sportsmen, developed the powers of the rifle far beyond anything yet known at Wimbledon or Creedmoor. Describing the partridge driving, he says: "Then instantly the scarred covey lowered high, flying wild as hawks. There was a huge proportion of misses and many wild shots, but the rifles brought many down at almost incredible distances." A well-known lady novelist, some years ago foresaw this kind of thing, and her hero out-patridge or pheasant shooting with a breech-loading rifle or revolver, we forget which.

SUMMER WOODCOCK SHOOTING.

EDITOR FOREST AND STREAM.—In a recent number of your gem of a paper I find an article from the pen of our mutual friend "Homo," in which he argues that woodcock never be shot in summer. Now, let me say that I am intimately acquainted with "Homo," he has had some shooting with him, and I have to much more in future, for though he is comparatively a young man, yet it has very rarely ever fallen to my lot to meet with a more skillful man with dog and gun than he: and to annoy your correspondents you have few, in my opinion, whose articles afford more instruction and pleasure. But the question arises in my mind, "Is the head of our friend 'Homo' level when he opposes shooting woodcock in summer?" Now, if this is the case, you have a question to do not to do, but to hatch out your wits about the middle of April? What bird of any kind matures with greater rapidity? Are they not nearly, or quite full grown, by the 4th of July, when the season opens? Is it not as difficult to make a good bag in summer, when every eye and bush is in full leaf, as it is in the fall, when the trees and branches have lost their foliage? What game is more delicious than a summer woodcock when properly treated, a shade underdone, and served up on toast—as "Homo" frequently had then served up last summer by Mrs. Dixon, with whom he was sojourning at Newton, N. J. Oh, "Homo!" "Homo!" and at your age, too! Have you forgotten that last Summer's woodcock shooting and Mrs. Dixon's untimely skill saved your life? It must justify the Messrs. Norton, Keyes, and "Czar," "Bob," and "Buck" rendered important assistance. Have you forgotten that just before the 4th of July you was prostrated on a bed of excessive illness, with one leg approaching the "happy hunting grounds," the other lying around loose, while your hands were filling imaginary shells for use when you should go there? Have you forgotten that when you dragged yourself up to Newton, at my suggestion, a few days before the 4th of July, and how was someone you looked and felt, when you say the gentleman allowed to lead, and the lady preparing for the opening day of the season, when with shaking head, feeble voice, and a dull, heavy eye, you said: "Boys, he called us boys then; another evidence that his head is not always level, for I was the only boy of the party) I fear I can not forget that I am able to set the hind leg of a woodcock." And then, "Homo," do you not remember that I called upon you early on the morning of the 4th, and urged you to put on your armor and jump into the wagon with our friend Mr. James L. Northrop, and his famous setter Bob, and try to do a little shooting in one direction, while Tom, Morford and I shot out Chantrelles and Snooks' Swansons and other things? Have you forgotten that I was right there when your step was first your eye clear and bright, and I said to you: "Homo, how is this? 'Oh! Gent in sea you looking so well. How is it?' "Why," says you, "'I am Centennial, you should have been with us yesterday, just to have seen young Bob point and retrieve woodcock. We had a most delightful drive of five or six miles over one of those undulating, smooth, ash roads, along which a merriment stream, and the air was delightfully refreshing, and then you went off again on sprints about the splendid shooting of Mr. Northrop," &c. &c. "Bat hold on!" says I, "no moment, and let me have a say. How did you sleep last night? How was your appetite this morning? How did you feel after your tramp?" "Why," says you, "I am certain that I was right tired when I went home last night, but I had a breakfast this morning just at a whole woodcock and I had another under my bit, with a large slice or two of toast, but then you know they were got up by Mrs. Dixon." "And now," says I, "'Homo, how about the innumerable swarms of mosquitoes, those droves of green-headed flies, and the hollering hot sun? And how many woodcock spoiled before you got home? And what do you think he

said? Why, just that: 'Old fellow, I must return to the city to-morrow to attend to business. I am all right now; but I will return again on Friday evening; have a good place spotted where we can kill a few woodcock on Saturday, and then you may take breakfast this morning, for that is more delicious than a broiled Summer woodcock or trout?' 'Bat then," said I, "'Homo, you are opposed to Summer woodcock shooting. How's this?' and what do you think he said? 'Why, Smith, it is getting late; you had better go home and to bed.'" And so did yours truly, HONORE.

SHOOTING IN BUCKS COUNTY, PA.

PHILADELPHIA, November, 1874.

EDITOR FOREST AND STREAM.—Anxious to inspect the domain of the Business Manager of the Forest and Stream, as well as to pass among the coveys of quail on his farm in Bucks county, Pa., we—the "Centennial" Squire, W. C. Harris, Esq., and your humble servant—took the only train starting for Sellersville, Pa., from Philadelphia, on Sunday, Nov. 1st. That we might be ready to sally forth on the 2d of the month, bright and early in the morning. Reaching Sellersville about midday, where we were to spend the night, it was proposed that, after dinner, we walk to the farm, two or three miles distant, in order to tame down our dogs that were then showing too much eagerness, and entirely too brash to be strictly depended upon, as they had not been used since last Autumn. Our walk over in the afternoon was highly amusing from the fact that Harris became perfectly puzzled as to the location of his farm, and planted some small distance out of the rear course, and then, after a long and fruitless search, the Squire that he would not know his own property when he reached it.

We were met at last, however, by Herr Kugler, the tenant on the farm, who understood that little English, but by the aid of a second Dutchman that accompanied him, we managed to make our wants known. We certainly did not expect to find so fine a country, nor such a variety of game, for during the afternoon we put up dozens of quail, several ruffed grouse, and not a few woodcock, besides a number of hares, putting us in high good humor with our prospects for the morrow. Returning to the farm were entertained until late by the jargon of the Pennsylvania Dutchman, which resembles no language we have yet heard, unless it be the Japanese, a sample of which your correspondent gave his companions, Americanizing it by the use of the words "Borax, borax, all-pierp elm, borax, grasshoppers, grasshoppers in the grass."

In the morning we drove to our shooting grounds, and soon found a covey of quail, which were but half grown and were not persecuted. While passing through a piece of woodland on our way towards a stubble field which Kugler made us understand was frequented by a large covey, for he was hunting, we saw Harris and Harris carefully hunt the northern portion of the same woods for more long bills, crossing two with Frank, a liver and white setter they were using. In bugzing a hill where we expected to find the quail, two artifice ruffed grouse were put up out of gun shot from among the short cedars, which we did not follow. We soon found the quail, which on being shot at took to a most extraordinary scattering in every direction, and in the stones. Very few remained after we left the ground, and our bag began to make a respectable appearance. Harris doing right well with all birds going directly from him, and the Squire making a beautiful blind and left shot, while your correspondent did nothing remarkable or brilliant.

During the day we ran across five more coveys, leaving them each time smaller in number of birds, and in all with them all of us dog-fair shooting, and knocking over a rabbit now and then for Herr Kugler. On our way home, while I was working out some black alders for woodcock, Frank, who was busy in his endeavors for the Squire and Harris, came to a point on which was thought to be a running covey, but which proved to be a pair of ruffed grouse, that spring with his feet, and so he shot. We were all anxious to spend a second day in this portion of Bucks county, for we had but partially hunted the farm, and did not then that our voices were wanted on the 3d of Nov., we should have certainly remained. As it was, we returned home with a very full bag, feeling satisfied that by a proper regulation of the Dutch farmers in the neighborhood, a splendid covey of the other getting out of this region, capital sport could be depended upon each year by a club wishing to entertain into an enterprise. The county is directly in the line of flight of migratory Fall woodcock, and just such a country where they would stop, and the region could be regularly stocked with quail when it was found that birds for breeding were in the present month, and are promised a successful season in the present month, and are anxious that your chief officer should be one of us. "Homo."

LOADING GUNS.

NEW YORK, October 30, 1874.

EDITOR FOREST AND STREAM.—In an answer to a correspondent (Bedford, Shelbyville, Tenn.) in the issue of last, I notice that you said, in regard to cutting long shells down to the length of the chamber, "we question whether it makes any material difference."

I suppose you are not unwilling to hear suggestions, so I beg leave to advance the following opinions, the result of a number of experiments: These were made with two guns—an \$11. 10 bore, 30 inch shot, and a 6 lb. 14 bore, 30 inch Party—a greater difference than which can hardly be found among a party of sportsmen, and of the present time, so that I suppose you might take my experiments as somewhat of a test, because the results were the same in each. I have found that the cartridge case should be invariably of the same length as the chamber, if that has a shoulder (those without a shoulder I do not consider worth taking into consideration). The reason for this is that, if the shell is longer, there is a corner, or jamb, to the right of the chamber, in which the shell will lodge, and it will not fire. If it is shorter, it will not fire. If it does not, the gas evolved from the explosion will escape all round, thus weakening the force which is requisite for the proper propulsion of the shot. More especially is this the case when the wind is in the rear or stiff; but it is more or less so with each kind. I think the Messrs. Ely are convinced of the truth of this, for they make a very thick and short shell for use in this kind of gun. Their thick wall obviates, to a considerable extent, this escape of gas, but not sufficiently. If the shell is too short, there will be a double corner, this escape— which increases the difficulty.

A correspondent of the *Troy, Field and Farm* ("Engineer," I think) says that "the center gauge used to true the cylinder the inside of the gun is, from the breech end of the shell to the muzzle of the barrel, so much the better will be the shooting." Mind, I don't charge "Engineer" with making the assertion, but I have seen it somewhere, and my impression is it is his. At any rate such is my experience, excepting that I am a complete convert to the manner of boring practiced by the Messrs. Noe, and I think all their guns are spotted slightly for a short distance above the chamber. The other gun I referred in besides the Sent, is a straight bore, and the shoulder of the chamber is, I think, a little too high.

I have already remarked that those guns without a square shoulder I do not think worth taking into consideration, and I can explain what I mean. The corner at the end of the shell allows the gas to escape as the web passes it (the shell being too long for the square chamber, does it not stand to reason that the same escape will take place if the shell is put in upward made the same size as the inside of the shell from the muzzle to within about 3/4 inches of breech face, and then opened sufficiently to be the size of the outside? It makes the same jagged edge.

At a heavy price (some \$300) a breech loader, the maker's name of which has slipped my memory. His gun was bored on the opened plan, and so diagnosed was he at its performance that he had it draw-bored with a square foot, at the breech, cutting out this open boring, thus making a square shoulder, and then had metal shells made, long enough to fill this lengthened chamber. The gun, I understand, is now all its owner could wish.

Many have been the complaints against breech loaders, that though they sometimes shoot well, they cannot always be depended on. Is this the kind of gun we want? Do we not want a gun that when we miss, we know it is our fault, not the gun's? If we are to have the breech loader a gun that shoots after its own sweet will, hit or miss, had we not better discard so unwillful and unreliable a servant and betake ourselves to the old-fashioned, slower and better gun, the muzzle loader, and with pockets and stichels filled with tools, nipple wrench, powder flask, &c. go upon the war path loaded down with a small gunsmith's shop, instead of the few shells which the modern arm requires? Part of this dissatisfaction against the breech loader arises from the fact that their owners do not take the trouble to find out the best ammunition for them, and what quantity of it to use. They reason somewhat like this: "Jack's gun is a bully one, and he loads his shells with 41 drachms of powder (of course no brand or size is taken into consideration) and 12 oz. shot. I guess that is about the right charge." "Bill has a 21-inch 10-bore, muzzle loader. He loads with 24 drachms C. & H. No. 2 powder and 14 oz. shot." They think that it is about right for their 20-fah, 12-bore, Parker breech loader. And after following Bill's leading off they say: "Don't like a Parker; kicks enough to knock a man's head off." Isn't this about the style?

Let every man who has a gun he has never tried before, give a little time for actual experiment with it, and not pay any attention to the loading quantities given in the books. How much of your time and space, Messrs. Editors, would be saved, if people would experiment more? Every week some one asks—"I have a 10-bore Scott gun," &c. Really it seems I know these correspondents by heart, and what is to follow the words "I have," in regard to the loading tables given in the books. One authority says 11 drachms powder, 11 oz. shot; another, being a heavy weight, says 6 drachms powder, 11 oz. shot, and so on, *ad infinitum*, and the non-experimentalists swallow it all, without regard to the fact that the first of these authorities killed his birds in heavy cover, and as soon as he thinned them, while the other used a gun of 12 pounds weight.

To coincide with a little advice, some of my new breech loaders have all the shells the exact length of the chamber in the gun. If you cannot get them the right length, get them longer, and cut them off with the little machine sold for the purpose, and which may be bought at any respectable gun store for about \$3. Make targets of thick paper, or paste-board, 30 inches in diameter, with a centre of 3 inches of, say 30 thickness of paper. Mark on each target four circles, giving the amount in inches of the shell that was fired in it. Try small loads at first, and if you hear the shot strike—the targets should be between thirty and forty yards off—put in more powder. If the pattern is not good, put in more shot. Increase the loads in this way until the recoil is as much as you care to stand all day. Pick out the best target, and charge your gun in game shooting with the same charge you shot at it. The correct powder is the better for a breech loader. There is hardly any choice in quality between the brands of any good make.

If you follow these above hints, take my word for it you will find no necessity for taking the FOREST AND STREAM chapters with questions, and when you take Dash out for a day with Messrs. Bob White and Long Bill, your description to the FOREST AND STREAM for the first volume will come back to you many times, in the satisfaction of displaying big bags to the admiring eyes of Bill and Jack. Yours truly, SIDE LEVER.

WHAT IS A DRACHM?

PERKINSVILLE, N. Y., October 30th, 1874.

EDITOR FOREST AND STREAM.—About the term drachm, I find so much dispute about powder measurements, and having been asked on this about it, I feel that the FOREST AND STREAM editors should be made any mistake on this question. In consulting the United States Dispensary you will find comparative weights and measures, which might give some information on that point. Avoirdupois—7,000 grains—350 drachms. Apothecaries—5,760 grains—36 drachms. Ditch—7,000 grains—35 drachms. One Lb. Troy—5,760 grains—36 drachms. One Lb. Avoirdupois—7,000 grains—35 drachms. Troy. Horace Smith said the powder drachm was merely arbitrary, whereas Dr. Mead, in whose drug store I am now, says the weight is an avoirdupois, but in which there are no grains. Finding this a mooted question, I challenge the truth. Will the FOREST AND STREAM ventilate this? BARKER.

GRANBY, CONN., November 7th, 1874.

EDITOR FOREST AND STREAM.—I noticed an error in the description of my gun. The length from front trigger to heel-plate should be 34 inches instead of 33, as stated. I presume the error was my own, as I gave it from memory.

Yours respectfully, NORMAN FLEMING.

[FROM OUR OWN CORRESPONDENT.]

MEMPHIS, Tenn., November 1st, 1874.

EDITOR FOREST AND STREAM.—An occasional private match at trap shooting and "woodies" of field sport is all that just now enlivens the circle. A weekspass was spent a few days since by several members of the State Association, with the following result. Five double birds, 18 yards rise, 100 yards boundary:—
P. Bryson..... 11 11 10 11—33. H. Acklen..... 11 10 11 11—33
C. P. Walker..... 11 11 11 11—33
D. Bryson..... 11 11 10 11—32. A. Whealey..... 11 10 10 11—31
W. Gates..... 11 10 11 10—31. F. Walker..... 10 10 10 10—40
Ties in 100 yards—33 birds rise.
P. Bryson..... 10 11 10—31. H. Acklen..... 10 10 11—31
Class Leland..... 11 11 10—31
Weekspass, 8 single birds, 31 yards rise, one barrel allowed.
P. Bryson..... 10 9—21D. Bryson..... 11 10—31
C. P. Walker..... 11 10—31. Class Leland..... 11 10—31
S. P. Walker..... 11 10—31. Class Leland..... 11 10—31
*Withdrawn. Ties at 81 yards.

Davis..... 11 10—31. Acklen..... 11 10—31
*Firearms out.
I learn by a private letter that several crack pistol shots of Mississippi are about to get up a match at Jackson, with pistols.

NEW YORK, September 10th, 1874.

EDITOR FOREST AND STREAM.—Reading in Bogardus's book of the remarkable shooting qualities of his gun, I should like to know what pattern his gun makes at forty yards with five drachms of powder and one ounce of No. 6 shot. This being the charge stated as used by him. R. D. W.

(Perhaps Mr. Bogardus will answer.)
—The St. Louis *Globe* thus speculates on the obituary of the future: "Charles Pupker, three and three quarter pounds; cremated July 9, 1873. For wife of the above see third pickle bottle on next shelf. Little Tonny; burnt up September 16th, 1862. Jane Matilda Perkins; Oct. 3d, 1869; put up by the Alden Corcoran Creaming Company; none genuine without signature."

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Siripud Bass, Zocune in fish. SOLENN WASTERS. Trout, Black bass, Sheephead, Drum (two species), Tullidfish, Sea Bass, Kingfish, Siripud Bass.

FISH IN MARKET.—The only change noticeable in the fish markets from last week is the comparative scarcity of blue fish, which retails at twelve cents per pound, and the absence, in a modified form of smelts, which now bring twenty-five cents per pound. The South is contributing the highly edible red-snapper and grouper. These come principally from Florida where they are caught in large numbers. Lobsters are also getting scarce, the greater portion of those in the market hailing from Boston. They bring ten cents per pound at present. Bass is quite plentiful and sells at the usual rate. Oysters are very abundant and some of them are exceeding large, many of those from the Chesapeake being monstrous in size.

—There is an unprecedented demand at present for Blue Point oysters, they being considered the finest variety in the market.

—We learn from Virginia that some few days ago about sixty large vessels were dredging the mouths of the Rappahannock and Potomac rivers, and that all the canoes that could rig up a scrape or dredge were about going into the bottom. At the rate the oysters are being taken up by this means the oyster rocks will soon be naked. Most of the vessels are from other States.

—A large shark has been captured at Cape May. It measured eight feet in length, and on being opened it was found to contain twenty pound mackerel, besides a number of small fish, all alive and apparently well.

—Mullet are very abundant at Biloxi, Mississippi, and other points. The flavor of the mullet when cooked is superior to the famous mackerel, making a much more delicate dish. We understand that the fishermen of Biloxi propose to catch and pickle them for the New Orleans and other markets.

LOUISIANA.—Mandrill, November 3.—Red fish are biting in Lake Ponchartraine now. Angling for these fish with rod, reel and cork from a boat at anchor is the finest sport in the world. It is equal to casting the fly for the far famed salmon. The red fish is full of pluck, and will take out the line a long distance, and when reeled up is off with it again and again until exhausted. Nothing can surpass his beauty when just hauled out with his glistening copper coat set with spots of black, and when broiled, with butter sauce, few fish rival him in the delicacy and excellence of his flavor. Green trout (black bass) fishing in all our shores is at its zenith upon the appearance of frost, and red fish, sheephead, croakers, and sea trout are taken with hook and line in large numbers in Lake Ponchartraine. J. E. L.

—A few days since a school of black fish were driven ashore and captured at North Truro, which numbered 616. The next day they were sold by auction, bringing \$577.55. The purchasers expect to realize for the oil at least \$200,000. The captors numbered at least 300 men, women and children, and 100 boats, all sharing the snm realized from the sale. The fish were mostly large, weighing from two to four thousand pounds. There were three or four little littens, weighing from 150 to 400 pounds. This is a welcome contribution from the sea to the pockets of the fishermen and others, for every one who took part in the driving in has a share. The number previously driven ashore this fall on the Truro coast was 1,165, making a total of 1,305, and yielding 27,900 gallons of oil.

—A correspondent of the St. John's Telegraph, writing from Pubnico, N. S., states that there are 136 French families, owning 65 schooners engaged in fishing on the Banks of Newfoundland, and all well to do, and it is estimated that two-thirds of the Gloucester fishing captains are natives of this part of Nova Scotia. Of the value of these fisheries we may form an idea, when, from the little settlement of Lockport alone, there will be sent this season 70,000 quintals, valued at \$250,000. During the season just closed, 17,400 barrels of porgy oil have been manufactured in Lockport, Me., or about 435,000 gallons, amounting to the handsome sum of \$157,700. The fish have also yielded a residuum of about 5,800 tons of "chum," valued at \$53,800, making a total of \$221,000. The value of the oil made in the adjoining town of Bristol is about \$500,000—making \$721,000 in the two towns. Quite a number of barrels of live cels, embedded in wet seaweed, have been sent from Nantucket lately, for the Boston and New York markets. Bringing in the neighborhood of \$20 a barrel, they are quite a profitable article to export. So says the Mirror. Quite a business is now being done some nights catching herring in Ipswich river and bay. Some dozen boats, with three men in each, take from eight to fourteen barrels nightly. Schooner S. C. Noyes, of Newburyport, is high line of the mackerel fleet from that port this season, having landed 1240 barrels.

—A sturgeon, weighing 75 pounds, was caught in Lake Simcoe last week.

—The fish weirs in the vicinity of Yarnmouth, Mass., have taken large quantities of bass during the past two weeks. They have been very successful this season.

TWIN LAKES TROUT FARM, NEW CANAAN, CONN., NOVEMBER 24, 1871.

EDWIN FOREST AND STREAM.—While about it, I may as well say that the story of five barrels of bass being seized on our Twins is evidently a canard, and a very large one at that, as after diligent inquiry, no such streak of bad luck can be traced to its source or its author—at least by any one hereabout. Yours, &c., E. S. FEASE.

The Colleges.

—The students of Tufts College had a splendid field day on the 14th inst., and enjoyed it exceedingly well. The most important event was the mile race. The contestants were F. E. Harrington, 77, W. W. Dodge, 78; J. H. Bradley, 78. Harrington led from the outset, and made the score in five minutes and thirty-eight seconds, which beats Harvard by three seconds. The principal pedestrian sport was the 100 yards race for silver vases. For this B. L. Dwinell, 76; E. C. Churchill, 77; H. L. Whitehead, 77; P. N. March, 77; T. H. Rogers, 77. The "College of '76" were brought into competition. Dwinell finished first in 104, Guerin in 112 seconds, and these respectively received the two vases offered. Harvard's time was 11-3-10 seconds, and that made at Saratoga 104. The wheelchair race afforded a deal of sport, and the two harness trophies of victory were awarded to H. L. Whitehead and J. Q. Frost. No prizes had been offered for jumping, and the late mention made that it would be a part of the program was detracted somewhat from the merit of the exhibition. However, several entered at the last moment, and the biggest stalling jump was made by Harrington—9 feet and 7 inches. Perry ran and jumped 17 feet 6 1/2 inches, which is a long way ahead of any of the colleges. H. L. Whitehead won the sack race, and the sport concluded with a three legged race.

CONNELL UNIVERSITY, ITHACA, NOVEMBER 24, 1871.

EDWIN FOREST AND STREAM.—Notwithstanding the poor position which our crew held at the finish at the regatta at Saratoga last July, the interest in athletic sports was never so manifest as at present. Perhaps detail is necessary in order to teach people to be more careful and thorough in all future preparations. Whatever the reason, the fact remains that nearly every member of the University at present abates in some kind of athletic sport. The club sports have united into a single club, under the name of the Sprague Boat Club, thus giving us, in place of the old cumbersome machinery, two clubs—the Tom Hughes and Sprague—with which to conduct boating in the future at the University. It is believed that this will be much better than the old plan. It certainly cannot be worse.

It must not be thought that boating is confined exclusively to the sterner sex, for during the past year a crew of ladies, under the instruction of one of the professors, have made rowing their "specialty," and right well have they, through pleasant and stormy weather, performed their exercise. Well may they put to shame many of the club crews, who fear to venture out if the weather is bad, or there are indications of a storm. A week two ago this crew took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 24. From these classes the University nine was selected, and without rest they took a Hike pull down the lake of twenty-four miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 24 to 2

hours, or four days, four nights and nine hours, resting only twenty-eight minutes in every twenty-four hours; that is to say, in the whole time about two hours. This is probably the most remarkable exhibition of mere endurance that has ever been made. On several occasions he has walked 100 hours, with only a cessation of thirty-eight minutes in every twenty-four hours, and he for thirty minutes in every twelve hours carried an anvil weighing 115 pounds on his shoulders. As far as distance is concerned, he has made 100 miles in 19m. 47n. 32s., walking time, and in doing this he carried the anvil once every twenty-two hours for a distance of half a mile, which he made in six minutes. These facts demonstrate that Judd may possibly succeed in accomplishing the feat in which Weston and so many others failed. The effort will be commenced at the Third Avenue Rink the first or second Monday of December, and instead of commencing at midnight, as Westio has done, he will begin early in the morning fresh from his couch. The professor, if successful, will have accomplished a wonderful feat, and will not be forgotten by gentlemen interested in physical prowess and endurance.

A game of quoits was played a few days since in the town of Middleton, near Madison, Wisconsin, between John Brown, of Madison, the champion quoit player of the "Dane county Caledonia Club," and John Flick, of Middleton, for \$10 a side, twenty-five being the game. The game was won by John Brown. Score—Brown, 23; Flick, 14.

Edward Mullen won the championship walking match from New York to Philadelphia, coming in two minutes ahead of W. E. Harding. Time—23 hours and 55 minutes. They were met in Chesnut street by a band of music, and escorted by about 10,000 persons to the Grand Central Theatre. The pedestrians left New York at 12:15 P. M., on Tuesday.

On November 3d Riverdale was the scene of a lively contest at base ball between the Gentlemen and Boys, the latter winning by the score of 32 to 20.

The Troy and Resolute clubs, of Fall River, very creditably to themselves, had a difference and played a match together to decide the disputed game on October 31st, the result being the signal success of the Resolutes by a score of 23 to 10.

The Reliance club of Brooklyn defeated the Chelsea in their third game together on November 5th by a score of 10 to 5, thereby winning the local championship pennant for 1874.

The Nassaus whipped the Staten Islanders November 7th, by 13 to 11, in Brooklyn.

On November 6th the Directors of the Boston Club gave a complimentary dinner to their players, on which occasion a very festive time was enjoyed, at which nearly a hundred people sat down, including several of the first merchants of the city, members of the press, &c.

On November 3 the Nassaus were defeated at Prospect Park by the Concord, the score being 11 to 9.

The Bostons and King Phillips played at Rockland, Mass., November 5th, the Red Stockings defeating the amateurs by 16 to 0.

On November 3 the Staten Island men had a close and exciting contest with the Reliance of Brooklyn, the result being the success of the Island team by 4 to 1. The Reliance won the first game by 10 to 5.

Billiards.

The National Billiard Congress for 1874, for the championship of the United States, at the three-ball carom game, 300 points up, each with two and three-eighth balls, was inaugurated on Monday evening, 4th instant, at Tammany Hall, with Daniel B. Carr, Esq., as General Manager, Neil Bryant, Esq., as referee, and Mr. Knight as marker. The following players composed the contestants for the honors:—A. P. Rudolph, Maurice Day, Joseph Dion, Francois Ubassy, Cyrille Dion, Maurice Vignaux, Albert Garnier, Edward Daniels, George F. Slosson. The Hall was arranged in a very perfect manner, so that all of the spectators could overlook the game, and see every shot made distinctly. The games were played on a five by ten table, manufactured by W. H. Griffith and fitted with Deloey wire cushions. The table was gotten up in the best style of the art, and was a credit to the firm. The prizes—the cubmen and \$3,500 cash—divided into different prizes, were presented by Matthew Delaney, Esq. The Hall opened with a numerous and respectable audience, which included many of the fair sex, who occupied a prominent position on the platform. The game opened with the Brothers Dion. Joseph Dion took the lead, playing with his usual energy and nerve. Cyrille did not play with his usual good fortune. Joseph Dion ran out in his 12th inning, his highest score being 106; his average, which was 25, was unusual. The second game was between Albert Garnier and A. P. Rudolph. The latter annoyed the audience for some time by his refusal to play.

After being unjustly the game began. Both men played well; the result was the defeat of Rudolph, who scored 186 to Garnier's 300, which was not distasteful to the audience. The second day opened at 3 o'clock in the afternoon, with Joseph Dion and Daniels of Boston. Dion won the game in the 36th inning. His best runs were 30, 42, 65 and 76. Daniels, 14, 20 and 43. The game closed with a score for Dion of 300 to Daniels' 117. Average—Dion, 11 7/13; Daniels, 4 1/13. The next game was between Paul Maurice Day and Slosson. Day ran out in his 14th inning. Highest runs—26, 25, 45, 61, and 90; Slosson, 15, 18 and 19. Day's average—21 3/7; Slosson, 5 11/13. The evening session proved by the large attendance the interest that was felt by all lovers of the game. It opened with Garnier and Daniels. The latter played well, but was no match for his opponent. Garnier's highest runs, 24, 25, 30, 73; average, 9 3/20. Daniels' highest runs, 22, 23, 40; average, 5 1/13. Next in order was the game between the new star, Vignaux, and Ubassy. Vignaux is very easy and graceful in his manner, and is very brilliant in his shots around the table; but in this tournament he will find foes who will contest his advance for the championship inch by inch. Ubassy played with excellent judgment and skill, but Vignaux proved too strong for him in this game, he having made 300 points to Ubassy's 223. Vignaux's highest runs were, 30, 35, 36, 42, 63; average, 14 2/7.

Ubassy's highest runs, 26, 44, 88; average, 11 1/20. On the third day the game commenced at the usual hour in the afternoon, opening with C. Dion and Rudolph. Dion played with marked effect and scored rapidly—ending the game in 22 runs. But the mark for himself in disporting a shot that did not count, and caused an unpleasant feeling towards him by the audience. Dion's highest run, 73; average, 14 2/7. Rudolph scored but 117 points in this game. The next game was between Vignaux and Daniels. The latter in this game made some very difficult shots, which the audience appreciated. He made but 175 points when Vignaux closed the game, but did not play as strong as usual. His highest run was 93; average, 12 2/3. The evening game opened with a well filled house, and a representative one. The contestants were, J. Dion and Slosson, who made excellent efforts to defeat Dion, rolling up a well fought 54; but when Dion closed the game his count was 138. Dion made the largest run, 111, that has been made thus far in the tournament. Dion's highest run, 111; average, 15. Slosson's highest run, 54; average, 9 3/20. The next in order was between Daly and Vignaux, two worthy knights to be fitted against each other. Both made many superior shots, but failed in counting several times, which a very tyro might have made. The game was won by Vignaux after a very exciting contest, in which the audience manifested intense interest. Vignaux's highest runs, 41, 36; Daly's highest runs, 53, 60.

The fourth day, Ubassy and Daniels opened play, the former winning by 300 to 104. His average was 12-13, and best run, 104, obtained by some beautiful caroms and careful "nursing." Daniels' highest run was 28. The next game proved noteworthy, from the fact of its being marked by the highest run of the tourney. The contestants were Vignaux and Slosson, and despite the uphill work, the Frenchman gave the Chicago champion to do, Slosson rallied with such spirit as to give Vignaux quite a check-up. The score at the close of the 6th innings, stood at 174 to 12 only in favor of Vignaux, and yet he won by 300 to 275 only, Slosson making a pretty rally for 83. The best average was but a little over 11. At night Joe Dion defeated Daly by 300 to 260, a beautiful run of 150 being the feature of the Canadian's play, while Daly's best run was 68. The average did not reach 12, despite the large runs. The last game of the first week's play was a contest between the two French experts, Ubassy and Rudolph, who, either specially trained for themselves, the best average not reaching 8. Rudolph won after a lengthy contest by 300 to 296, Ubassy tripping up on a run of 24, when he had the game almost in his hands.

On Monday afternoon—the fifth day—three games were played, Cyrille Dion defeating Daniels by 300 to 128. The average was small, the winner's game being 7.3, and the best run 58. Then came the defeat of Rudolph by young Slosson, the latter obtaining a winning lead in the game by a beautiful run of 83, Rudolph's best run not exceeding 49. Slosson averaged 9 and over in this game. The game of the afternoon was between Ubassy and Garnier, and the game went by default as it were, for Ubassy, when Garnier had scored 273 and had but 27 points to get to win, he also having the balls in excellent position for a long time, disporting the cue with the most accurate and spread the balls over the table with the butt of his cue. One result of this ungentlemanly action was the refusal of Mr. Bryant to act further as referee, and the election of Mr. Isadore Gayrand in his place, Ubassy necessarily forfeiting the game to Garnier by the score of 273 to 241. Garnier's average was 10.20.

In the evening two exciting games took place, Daly playing Rudolph under disadvantageous circumstances, inasmuch as the American was suffering from a boil under his arm; still he managed to defeat the Frenchman after an exciting contest, in which Rudolph held the advantage up to the 36th innings, when Daly by a brilliant rally scored double figures in three innings, and finished with a score of 300 to 271. His average was 10.20, and his two best runs 56 and 51. Rudolph's best being 74.

The last game on Monday was between Garnier and Cyrille Dion, the former being an easy task to win by 300 to 138, though Dion led off promisingly with 23. Garnier's runs of 76, 53 and 58 were rapidly scored. His average was 15. Dion's best run was 39. The appended score of the tourney up to November 9th, inclusive, gives a concise view of the position, the figures showing the won games, the cyphers the defeats, and the . . . the games yet to be played:

Players.	Vignaux	Garnier	J. Dion	C. Dion	Ubassy	Slosson	Rudolph	Daniels	Gama Vaux	Games Played	To Play
Vignaux	1	1	1	1	1	1	4	4	0

Daniels	0	0	0	0	0	0	1	1	3
Games lost	0	0	0	0	0	0	0	0	0	0	4

THE BROOKLYN AMATEUR TOURNAMENT.—There will be but three games played here, one at 6 P. M., one at 8 P. M., and one at 10 P. M. Mr. Knight still holds the list of won games up to date. By the appended record, the list of games won and lost by each player is given, as also the games each have played with every other contestant. The won games are recorded by the figure 1, the lost games by 0, and those yet to be played by a . . .

Chess.

THE CHESS SEASON OF 1874-75.—The chess season in the metropolis is now in full operation, and things promise to be more than ordinarily lively and interesting, inasmuch as two chess tournaments are now in progress—one at the Cafe International, 204 Bowery, in which over thirty contestants take part, and one at the Brooklyn Chess Club, in which there are nearly twenty players, the former being open to all comers, and the latter to all players residents of Brooklyn. Besides the two chess resorts above named, there is the Knickerbocker Cottage, at 467 Sixth avenue; the Cafe Cosmopolitan, 14 Second avenue; the Turner Hall, 66 and 68 East Fourth street, and the chess room corner of Fulton and Nassau streets, which has recently been re-opened. In Jersey city, too, the club of that suburb have rooms at 81 Montgomery street. In Brooklyn, besides the club room in the Mercantile Library building, there are chess tables, free of access to all, at the rooms of the Christian Union, in Fulton avenue, opposite Elm Place. It will be seen, therefore, that ample facilities for practicing the noble game are presented in and around the metropolis this season.

We have in type an interesting score of a closely contested game recently played between Mr. Perrin and Dr. Barnett, at the Brooklyn chess rooms.

The handicap chess tournament, open to all comers, and the first which has been held in this city since the one of 1869 is attracting considerable attention among New York chess players. The tournament is being held at the Cafe International, and at its conclusion five prizes will be distributed. Before this happens upwards of five hundred games will have been played and about four weeks more will have elapsed. The most notable feature thus far is the defeat of Mr. Delmar, in two well contested games, by M. Alborn, a French army officer. There are thirty-four entries for the tournament, but it is not probable that all will play. The first-class players are Messrs. Delmar, Barnett and Mason; second class, Messrs. Dill, Barnes, Perrin, McCutcheon, B. Lisner and Alborn; third class, Messrs. Sanger, J. Lisner, Frankel, W. Townsend, Schultz, Goldman, Stanberry, Peck, Filday, Murray, O'Neill, Pryor; fourth class, Messrs. Garrahan, Nonos, Ferguson, Koeh, Elwell, Matheson, Lünbeck and Whitaker; fifth class, Messrs. Spear, Townsend and Edwards. The foregoing thirty-four players have been handicapped by Mr. G. H. Mackenzie, the champion chess player of the United States, and the tournament is governed by the laws laid down in Staunton's chess praxis. The following is the method adopted by Mr. Mackenzie in the handicapping of the players:—The players in the first class will give to the second class the odds of the drawn game; to the third class, the odds of pawn and two moves; to the fourth class, the odds of the knight, and to the fifth class the odds of the rook. The players in the second class will give pawn and move to the third class, pawn and two moves to the fourth class, and knight to the fifth class. The players in the third class will give pawn and move to the fourth class, and pawn and two moves to the fifth class. The players in the fourth class will give pawn and move to the fifth class.

THE BROOKLYN CLUB TOURNAMENT.—The contests in the tournament now in progress at the chess parlor of this club up to date, present the appended record of games won and lost.

Players.	Games Won.	Games Lost.	To Play.
Dr. Barnett	2	2	0
Alborn	2	1	1
Perrin	2	1	1
Mayer	2	1	1
Seaver	2	0	1
Elwell	2	0	3

THE CAPE COSMOPOLITAN TOURNAMENT.—Twenty-two of the sixty odd members of the "Down Town Chess Club" of New York, have entered the lists in the chess tourney of the club which was commenced at the Cafe Cosmopolitan, No. 14 Second avenue, on November 9th. The leading prize is a beautiful chess table, presented to the club by Mr. H. H. Hasnock.

The rules of the game will be those observed by the last great chess tournament at the Vienna Exposition in 1873, and each competitor will have to play three games with each of the other twenty-one competitors.

The score of won games to date is as follows: Lipman 2; Totler 2; Rosenbaum, 2; Federor, 1; Schrader, 1; Gueppe, 1; Spencer, 1; Rosenbatt, 1.

THE CAPE INTERNATIONAL TOURNAMENT.—The thirty odd contestants in the tournament in progress at the Cafe International, 204 Bowery, are rapidly running up the scores of victories and defeats in the series of contests, and thus far Messrs. Mason, Delmar, Perrin, and Dr. Barnett take the lead.

The score of games won and lost to date by those who are credited with more victories than defeats, are as follows:

Players.	Games Won.	Games Lost.
Mason	25	5
Delmar	23	5
Perrin	22	5
Dell	17	7
Peck	16	9
Murray	17	7
Peck	16	9
Townsend	16	11
Alborn	13	11
McCutcheon	13	11
Elwell	13	11
Lünbeck	13	11
Barnett	12	10
Sanger	10	9

New Publications.

HANDBOOK ON THE TREATMENT OF THE HORSE IN THE STABLE AND ON THE ROAD. By Charles Wharton; J. B. Lippincott & Co., Philadelphia, Publishers. This is a very convenient volume for all interested in the management of horses. The information imparted is practical and necessary to all who would know the diseases of the equine race, and become graceful and expert riders. The style is free and friendly; and by this conversational method the information is imparted in a pleasing, unobtrusive manner, so that the child even could readily understand it. This is a work that we can thoroughly recommend to all interested in the care of horses, or those who wish to become graceful equestrians.

The Horse and Course.

Three sweepstake races came off at Fleetwood Park last Thursday, which were all closely contested, particularly the first race. The sweepstakes were for road horses, owners to drive. Out of six entries three faced the judges. After six heats, Lady Dally was declared victor. Best time, 2:30. The second race was for a purse of \$250, mile heats, best three in five, in harness, was competed for by Betsy King and Sorrel Jake. The former won in three straight heats. Best time, 2:45.

A match for \$500, best three in five, in harness, was contested at the Prospect Park Fair Ground last Thursday by Lady Veola and Ruby. The former was the victor. Best time, 2:50.

Deerfoot Park witnessed four races last Thursday, but owing to the sharp competition only two were finished. The \$300 purse was won by Murphy's Jay Collyer, and the \$300 purse by Howe's Prince. Best time of the former, 2:37; of the latter, 2:34.

The events on the card at Deerfoot Park last Friday drew together a very fair attendance. The races were 2:45 and 2:43 contests were first called, the former taking precedence. Four heats had been trotted on Thursday, Willie having two and Logan a like number, and when the horses were called upon the track for the fifth heat Willie was the favorite in the pools. He won the heat and race, Logan taking second money. Best time, 2:38.

Three heats had been decided in the 2:33 race at the time of postponement, Daly having two, so that when the horses came for the word he was a long favorite. Lady Annie won the fourth heat, and Daly the fifth and race.

At the first of the regular programme was the purse of \$200, for horses that had never beaten three minutes. Of eight starters, but three came to the score, viz., I. W. Howe's gray gelding Henry Miller, J. Wilson's brown mare Maud, and John Murphy's roan mare Lady Collyer. The latter was the favorite two to one over the others. She won the race in three straight heats, distancing the field in the third.

The unfinished races of the previous day were completed last Saturday at Deerfoot Park. After a most exciting contest, which included two dead heats, Murphy and Campbell's Pauline was decided victor, O'Neil having won two heats in eight.

Two interesting trots were run over the Westchester County Fair Grounds at White Plains last Thursday. That for horses that had not beaten thirty required eight heats to decide it. Fek's Bonner finally won. Best time, 2:31. The thirty-two race was won by Lady White with but little exertion. Best time, 2:37.

The trotting stallion Manhattan, while being driven to a buggy last Saturday, ran away and had the cords of both hind legs cut, and is probably ruined. He was valued at \$20,000, and owned by Tallman & Meyers, of Dutchess county.

The St. View Park Association had a very interesting occasion last Saturday, the weather being good and the attendance large. The trotting race was won by New Dorp, the best time made being 2:48, and the winning race by Mickey Free. Best time, 5:43. Distance, half a mile.

The racing at Beacon Park was resumed last Saturday. The unfinished races of Friday were completed. After running six heats in all, Frank Palmer won the best time being 2:31.

Two races were run at Mystic Park last Saturday. The first was won by Daniel Knox, whose best time was 2:33, and the second by Baby Girl, who finished her work in 2:48.

At the Fall meeting at New Haven on the 4th inst., the race in the 2:40 class was won by Washington D. Vaughan Surprise, of Worcester, in three straight heats. H. B. Winship's Jasper, of Providence, was second, and Lady Bonner third.

The three minute class race was won by E. Ripley's Surprise, of Springfield. Sea Foam, of Hartford, won the first heat, the fourth was the heat between Surprise and Rip Top, of Holyoke, and the second, third, and fifth heats were won by Surprise.

In the double team race, Julia Hayes and mate won the first heat in 2:03, Princess and mate the second and third in 2:53 and 3:03.

The Fall meeting at Point Breeze Park began on the 4th inst. The weather was favorable, and the attendance large. The first race, for three minute horses, was won by Honest Mac in three straight heats. The other horses in the race were Katy S., Sally B., Amanda O., Maude, Maggie M., Lady Goodwin, Jim, and Hampton. Time, 2:34.

The second race was for 2:29 horses, with six entries. The starters were Annie Collins, Royal George, Snowball, Arthur, Adelaide, and Lizzie Keller. Royal George won. Best time, 2:29.

fine, and the track in good condition. The unfinished race of Friday was finished Saturday. Ella Madden won the sixth heat and the race. The first race of Saturday was for a purse of \$1,000, mile heats, best three in five, in harness, \$750 to first, \$250 to second. American Girl and Copperbottom entered. At the start the Girl was two lengths ahead; at the quarter ten lengths, and this was increased at the three quarter pole, the Girl distancing Copperbottom, who moved slowly; time, 2:35. The Girl made the circuit without a break. The result created dissatisfaction. The last race was for a purse of \$750, mile heats, best three in five, to wagon; \$400 to first, \$250 to second, and \$100 to third. Bella, Annie Collins, and Barney Kelly entered. Bella was the favorite, and she won. Best time, 2:34.

Goldsmith Maid was trotted at the Point Breeze Park last Friday to beat her best time, 2:14, but she failed in the attempt. Her best effort was 2:18.

The races at Dexter Park, Chicago, on November 6th, for horses that never beat 2:50, was won by Lady Linn. Best time, 2:43. The next trot, for horses that never beat 2:40, was won by Frank Holbrook. Time, 2:42.

Dexter Park last Saturday, in the trotting match for a purse of \$1,000, there were six entries and four starters. Observer won in three straight heats, Badger Girl second, John H. third, and Ohio Boy fourth. Best time, 2:27. In the running race, mile dash, for a purse of \$300, Little Frank won, Lancer second, China Boy third. Best time, 2:51.

The first meeting of the Lagrange Trotting Association closed on the 6th instant. The day's sport commenced with a trotting race, mile heats, best two in three, for horses that never beat three minutes, for a purse of \$100. Quickest stop in three straight heats. Best time, 2:30.

The day closed with a running race for a purse of \$200. Nellie Bush won in two straight heats.

At the fair of the Muscatine (Iowa) Agricultural Association, a young miss rode a fiery and untamed steed, blindless, round the ring, only guiding the animal with her whip.

MEMPHIS, November 2d, 1874.

At the State Fair at Jackson, under the management of the Jackson Jockey Club, the first day's trotting race, mile heats, best two in three, for a purse of \$100, found two entries, viz., Sugar-in-the-Gourd and Kitty, the latter winning the first and last heats and the race. Best time, 2:43.

The running race, mile dash, for a purse of \$50, brought out Carrie P., Bob Britton, Sedan, and Nellie Matthew, the first named winning in 1:43.

Third day, running race, mile heats, best two in three, for which Mary L. and Pat-two entered, and the latter won. Best time, 1:46. Same day, trotting race, mile dash, for a purse of \$50. Kitty, Sugar, and Haymaker entered. Won by Kitty in 2:41.

The racing at the Fair of the Carolinas at Charlotteville was good. Hitchcock's Mollic Darling won the mile dash; time, 1:47. Jim Hinton won the one mile race in two straight heats; time, 1:43 and 1:50.

Mr. Stanford gave the stakes won by Occident to Budd Doble, the driver.

The great event in the sporting circles of Sydney, Australia, last month was the great Metropolitan stakes, valued at over \$5,000.

Nineteen horses, including six from Victoria, faced the starter, the winner turning up in the Sydney horse, St. King. Five in the second and third, with Goldsborough and Maid of Avenal. Distance, two miles; time, 3:34.

For Forest and Stream.

HORSES IN ANCIENT TIMES.

THE love of the ancients for the horse is abundantly apparent. Idolatry, especially was such the case among the Greeks and Arabians, whose admiration for man's noblest friend led them to deify him. Neptune or Posidon was regarded as his creator, and consequently the horse was looked upon as an offspring of the gods. He had for his patron saint a being who lived most remote in a remote island, far down in the depths of the sea. His steels were compared with the richest fabrics—their hoofs brazen and their manes golden—and when their master, the great Neptune, rode over the sea in his jewelled chariot, the waves became smooth at his approach, and the deep, recognizing him, dispersed in his foaming wake.

But in mythology there are different stories told concerning the creation of the horse, one of which, written in all the sober earnestness of truthful history, says that Minerva and Neptune disputed with each other who should have the honor of naming him, and that Olympus, the supreme deity, decided that he would give the preference to the god who should create the most useful thing for the benefit of mankind. It is said that Minerva created the olive tree, and that to her was awarded the privilege of giving a name to the capital. But Neptune gave to the world a horse, and a parliament of gods decided that to him

should have been the award of Olympus. Most certainly the verdict of man would have been in favor of Neptune.

There is still another story, similar in effect, that Athena and Posidon were the contestants before Olympus, and that to Posidon is due the credit of creating the horse of the blessed.

The ancient Greeks have also a fragmentary history of the horse, in which they say he first appeared in Tessaaly, and that he was a gift from heaven to Peleus. In this account the horses of Helios and Selene are mentioned as animals living alone on herbs, and which finally became inhabitants in the islands of the blessed.

Those who have given much attention to mythology will remember how badly poor Pheton fared when he attempted to drive a span of celestial horses; how his track became a blaze of fire; how he smoked the Ethiopians—which the Greeks say accounts for the dusky color of that race—and how at last he was thrown into the river Po and drowned.

Two thousand years ago Xenophon gave some admirable instructions concerning the breaking of colts, which shows how well the subject was understood in his day; in fact, in our modern times, no sounder advice could be given than the following, from the great Athenian general. He says:—"W. should take care that the colt be delivered to the breaker gentle, tractable, and submissive to man; for such a disposition may generally be produced in him by the groom at home, if he knows how to manage him, so that hunger, thirst, and uneasiness, may be felt by the colt when alone, and that food, drink, and relief from uneasiness may come to him from man, for if things are thus ordered man must not only be liked, but longed for by the colt."

The ancients always treated their horses with the greatest affection. The Orientals considered them as members of their families; they slept with them, as well as with wife and children, and the same fondness may be seen to him from man, for if things are thus ordered man must not only be liked, but longed for by the colt."

It would seem that in ancient times the horse was much more hardy—certainly longer lived, than with us. We find Aristotle saying that the horse improves in body and strength until he is twenty years of age; that he is used at thirty, and lives until thirty-five; one was known to live to seventy-five years, and Aristotle thought that the life of the average horse might be extended to fifty years if properly treated.

In olden times, in Upper Germany, they had some strange customs, one of which is observed at the present day. With the ancient Germans the patron saint of the horse was the holy St. George, and on the 23rd of April a grand festival was held. The priests and the peasantry assembled around some consecrated chapel, in their immediate district, or, in the absence of a chapel, around an old tree, and preached a sermon and blessed the horses. The young men then mounted their animals and rode three times round the chapel or tree, while the priests sprinkled the horses with holy water. This ceremony it was believed would preserve the horses from sickness and death during the year.

There is but little doubt that the religion of the ancients had much to do with their regard for the horse, and their kindly treatment of him. How beautifully Homer describes this noble animal, and how splendidly the carvings of Phidias, taken from the Parthenon, and which now adorn the walls of the British Museum, portray the lineaments of the horses of ancient times.

FOR SALE—A SPLENDID IMPORT—DOG GATE setter; good on all game; retrieves on land and water; first class in every respect; sold only for cash or by address G. H. WALLACE, 807 Arch street, Philadelphia. Nov 12

FLORIDA.

Illustrating the Scenery of Florida. The East and West coast and interior of Florida. A full view of St. Augustine, Gainesville, Central Florida, and Cedar Keys, the terminus of the Florida Railroad on the West coast; New Smyrna, the great game preserve, Mosquito Lagoon and Indian River, the game and fish section of Florida—the hunter's Paradise; the only pictures ever given of the wonderful Lake Okechobee, the largest lake in the South; a few views of the Seminoe Indians; characteristic pictures of people, and the peculiarities of the country, and the points of interest along the St. John and Ocklawaha rivers. These views give one a correct idea of the most desirable portions of Florida.

Sent, post-paid, on receipt of price. 25 cts. each; \$25 per dozen; \$10 for five dozen; \$18 per gross. J. S. CHAS. J. OBER, Beverly, Mass.

FISHERIES.—MADE TO ORDER

For the trade. Every variety of Net, Seine, Draze, &c., suited to Sea, Fresh Water or River, AMERICAN NET AND TWINE CO., Boston. '76-6m

FOR SALE—IN PERFECT ORDER—A MANTON Gun, worth \$85, for \$50, and a Roper 4-shooter Fish wader, worth \$70, for \$32. Apply at office of Forest and Stream

HURST'S STEREOSCOPIC PARLOR ENTERTAINMENT.

Natural History For Object Teaching in Schools, AND PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various Animals and Birds of unusual attainments, never however violating their natural instincts. We offer these views, not as pictures only, but as studies from nature. One of the great objects of students in our modern system of education is object teaching. The marvellous fidelity of the stereoscope transfers the animals and birds from their natural habitat to the rooms of the student, and the friends of our homes, where they cannot fail to leave a lasting impression of their form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and in gathering his large collection of native and foreign specimens, enables Mr. Hurst to compare in every view and locality of the specimen with its appropriate rocks, woods or water, and coloring from the original.

- 1. Bay Lynx. Lynx Erp.
2. Snowy Owl. Bubo Nyct.
3. American Wolf. Canis Am.
4. Wild Pigeon. Columba Virgin.
5. Northern Flicker. Colaptes Aur.
6. Black Crowned Night Heron. Nycticorax.
7. Blue Jay. Cyanus Am.
8. Red Necked Grebe. Podiceps Rubricollis.
9. Great Blue Heron. Ardea Herodias.
10. American Osprey. Pandion Halia.
11. Red Shouldered Buzzard. Buteo Lineatus.
12. American Woodcock. Scolopax Virg.
13. White Fronted Parula. Parula Am.
14. Long Eared Owl. Otus Am.
15. Golden-crowned Kinglet. Troglodytes.
16. Hated Green Heron. Butorides.
17. Golden Eagle. Aquila Chrysaetos.
18. Ferris.
19. Spotted Sand Plover. Actitis Macularia.
20. Marsh Harrier. Circus Uguiculatus.
21. American Crow. Corvus Am.
22. Great Horned Owl. Bubo Virginicus.
23. Great Loo. or Diver. Colymbus Boeck.
24. American Kingbird. Tyrannus Am.
25. The American Bittern. Ardeola Am.
26. Old Wife, or Senaw Duck. Fuligula Glauca.

RESTIMONIALS. CORNELL UNIVERSITY, ITHACA, March 14th, 1870.

I must congratulate you upon your great success in this very educational and interesting work, and your amusements so as to make them impart instruction to the mind, it will be a step towards civilization. S. Z. CONNELL

WASHINGTON, D. C., March 15th, 1870. I am much pleased with the success you have met with in giving to the student specimens a very decided appearance of life.

Hope you will be able to continue the Series, and I have no doubt they will furnish interesting means of information and instruction in regard to the world's animals and birds. S. B. BAIRD

STATE HOUSE, BOSTON, Mass., March 15th, 1870. I have examined carefully the "Stereoscopic Studies of Natural History," and judging by the first ten numbers, should say they are a very good and most interesting set for the parlor Stereoscope. The directions, position, and color of the different groups, and the general treatment are most perfect, and cordially recommend them to the public attention, and trust you will meet their approval. EDWARD A. SAMUEL, Curator of Zoology in Mass. State Cabinet.

PEABODY ACADEMY OF SCIENCE, SALEM, Mass., March 19th, 1870. I have shown your Stereoscopic Studies to the Directors of the Academy and the editors of the American Naturalist, Dr. Packard and Mr. Morse.

They are all of great truthfulness and the taste which you have displayed in surrounding the specimens with natural objects and scenery of their respective countries, are very well executed, not only as parlor and drawing room illustrations, but as educational illustrations for the use of schools and colleges, than anything we have yet seen. A. HYATT, Cornell University, President's Rooms.

I have received the Stereoscopic Views of objects in Natural History, and have enjoyed them greatly. They have afforded me a very correct and interesting view of the objects, and I think they can not fail to be of great service to the study of Nature, and to be first by attracting students to it, and next by perfecting them in it. ANDREW D. WHITE

These Stereoscopic sets are wholesale and retail by FOREST AND STREAM PUBL. CO., 17 Chatham St., (City Hall Squ.) P. O. box 3833.

J. WALLACE, Naturalist & Taxidermist

EXPORTER OF FOREIGN BIRD SKINS AND ARTIFICIAL EYES, 19 N. William Street, New York

VIENNA, 1873 For Merit. Vanity Fair.

VIENNA, AUSTRIA, Nov. 30, 1873. Messrs. Wm. S. Kimball & Co.: Sir—A friend of mine sent me, with a transport of Italian shells, two boxes of "Vanity Fair" (which I declare to be the best Tobacco I ever smoked. We have very good tobacco in Vienna—Turkish and Hungarian, but "Vanity Fair" is the King of all, by its aromatic flavor and the right sort of strength. My friend sent me a box of it, and I am in California, by that reason I apply immediately to you, begging you to send me further boxes, not less than a quantity of "Vanity Fair," and send with the next steamer to Germany, if there is a chance from there to New York, calling on "Vanity Fair" to beg you to enclose me the address. Dr. Jas. Hyatt, Professor of Anatomy in the University of Vienna

It is manufactured from the best Virginia and North Carolina leaf. It is particularly adapted to Meerschaum and Cigarette smoking; does not bite or make the tongue sore—is therefore unlike any other tobacco in these respects.

W. S. KIMBALL & CO., Manufacturers, ROCHESTER, N. Y.

WINTER.

HAIL! monarch of the leafless crown,
Rare seen save with a gloomy frown,
With ice for sceptre, robes of snow,
Thy throne, the stream's arrested flow;
Stern tyrant! Whom the hallowing sun
Doth loathe to serve, by vapors dim
Begirt, a melancholy train,
O'er nature holding a doddle reign.
Lo! of thy rigor birds make plaint,
And all things "neath thy beak faint;
Nor cleared are they by message cold,
In answer by the north wind told,
The envoy of thy grievous sway,
When thou wouldst drive all hope away
From nature, yearning to restore
To earth the bliss it knew before,
When Summer roled with empire mild,
And Autumn, "with a ruddy child,
Lay cradled 'neath the greenery
Of whiperidge grove and laden tree.
The brook that prattled to the air
Of golden harvests, ceases as fair
As post wraps in fancy's maze,
Could scarce enshrine in mortal lays,
Now rind and angry, hurls along
The hearns of his Summer song—
The branch and leaf that once repaid
His music with their tender shade—
And catches zephyr's honeyed tone,
To his sweet tuning, joined their own.
Or bound, perchance, in distance slow,
Fall faint he wends, and moaning low,
Fit dirge he makes o'er freedom lost,
In joy of which he wanton tossed
The falling blossom on his wave,
The water-nymphs to catch and save.
Now strip of his green bravery,
In piteous plight the weedy tree
Is blown upon by mocking winds,
Whom changed now he sighing bids
From those gay playmates welcomed erst
In glee by his young leaves when first
They wove their merry breeze-tantrance,
And broke their feathered lodger's trance,
What time the eastern wave did gleam
'Neath fore-feet of the golden leam.
Not loth now with tender care,
For coming brood the birds prepare
Their airy cradle, rock'd unseem
By Dryad hands behind the screen
Of leafy curtains, where no eye
Of mischief curious may pry.
The thrush that erst with wailing voice
Made all the tangled brake rejoice
In echoes of his mellowed strain,
To mope in silence now is fain;
Nor ever pipes from straining throat
The varied wonders of his note.
So bleak the scene, so sad the day,
Too harsh, O Winter, is thy sway!

Selected.

appointment and such general wretchedness as to make life a burthen, and sued the old man for damages for having begat him.

California has ever been the paradise of the sportsman, and although by no means equal to what it was in earlier days, consequent upon an increased population and the march of improvement, it still affords a most faithful field for him. I am at the present writing sitting at my desk in a brick building of vast proportions, built upon ground that in 1855 was a favorite spot for English snipe. I have snuk to my boot tops in the marsh that was then a waste, but which to-day would sell at \$300 per front foot. The one hundred vara lot on which the building stands was then worth perhaps \$200—to day it would sell for two hundred thousand. It is no place for a snipe now, certainly. We must go farther away to get good shooting; but still, I can reach ground in two hours that gives a good day's sport—quail, and perhaps a deer. Wild fowl are still abundant within an hour's sail, and many a unalard and canvass back I have bagged latterly within five miles of town.

Speaking of shooting, let me quote here a letter received by an acquaintance from a friend of his who had borrowed his rifle, going to prove that a man may be enthusiastic on the question of guns and shooting, even if he can't spell. My friend sent for his rifle, which came with the letter aforesaid, as follows:—

"DEAR GEORGE:—I received your letter wishing me to send down our mangle Friend, the Rifle, George. I must tell you, for fear you won't fade it out, as I believe you are better to bid cars and Rule Rodes than you are to hunt or shoot. I am in doubt of your going a huntun at all. Now about the Gun—it is one of the finest pieces I ever fired. I can kill 6 grouse out of 7, 100 yards of hand, *scarten*. While I was out on my last hunt I killed 68 grouse, and all over 50 yards. Had or no Burde. I astonished the Ble Stomdors to sea no slute. I have taken many a head of Squards from 50 to 75 yards, and a Black Bird can't get too his for me with that Gun. Don't you part with this Gun, and send it bac, for I want too take a tripe in the mountings, and I can't stir a fish without that Ar. George. No moor from yours truly.
"P. S.—Send the gun back, george, asect share." *****

This is certainly a good account of the gun, and the party seems to shoot better than he can spell.

It may not be generally known that the salmon fishing on our coast is magnificent, although it was for years generally conceded that they would not bite at the hook, and the belief passed to a proverb. My official duties so absorbed my time that it was not until about six years ago that I was able to accept the repeated invitation of a friend, owing large lumber mills on the coast above, to accompany him on his usual October trip to his property. We drove our own teams, and a most delightful drive it was along the coast, and over the coast range of mountains, occupying a day and a half. As we approached the mills, our road for a mile lay along the banks of the river. I observed some fish, breaking with the unmistakable swirl of the trout family.

I said, "Hello, Harry, do you see that; are they large trout?"

He replied, "No; they are salmon."

"The dence you say; you never told me that you had salmon in the river, and here I am unprepared, with no tackle but my little eight ounce rod and light trout gear."

"Well, you don't want any other, for you can't catch those fellows; they won't bite."

"Won't bite; did you ever try them?"

"Oh, yes, I have, and never got a raise."

"Did you try a fly?"

"No."

"Well, old boy, I will show you that they will bite before you are an hour older."

"You will fool away your time on those fellows. You can catch plenty of half pound trout, but nary salmon."

"A box of cigars that I had a salmon within an hour."

"Done. Firstly, they won't bite, and secondly, what would you do with one of those chaps with your tackle?"

"You shall see."

I made a hasty lunch, for I was eager for the fray, and I soon had my rod put together, and my slight hair and silk line on the reel, and we started for the river, only a hundred feet distant. A skiff was moored at a log, into

which I stepped, and giving it a shove was soon in the middle of the river, which, at this point was tide water, and perhaps a quarter of a mile from its mouth, where it emptied into the ocean. Selecting the largest fly I had, I bent it on, and planting myself firmly in the frail skiff prepared to cast. My heart beat violently, for although an old stager at fishing, I felt that I had worked before me. My friend stood on a pile of lumber, smoking his cigar contentedly, and several idlers gathered around, with suppressed chuckles, to see the city chap "fool away his time" in trying to catch a salmon with a hook, with a feather on it. They had lived three years, and never knew of one being taken with anything but a seine. Overhauling a good length of line, I made a cast. The fly lit lightly on the water, and danced along the surface, with no results. My friend smiled, and the stauding committee guffawed. Paying no attention, I made a second cast at a good distance. My fly had scarcely touched the water before there was a flash, a swirl, and, as I threw up the point of my rod, I felt a weight as if I had hooked a saw log; but it was only for an instant; the next my little rod made an obeisance that brought its tip to the water, and my little reel fairly hummed as the line sped out at a fearful rate, and up into the air six feet sprang the silver sided and astonished fish! Away he dashed up the river, my line hissing as it cut the water, I vainly attempted to turn him, but by bearing steadily and as hard as I dare with such light tackle, I finally got his head around. When nearly so, he made a shoot for the opposite bank, which was steep and rocky. Bang! he went, head first into the oank, which seemed to stun him a little; but he soon recovered, and then down stream he went, taking all the line I had been able to reel in. All this time the skeptics on the shore were shouting:—"There he goes; hold onto him!" I felt that I required all the skill and coolness that was in me. For one hour and ten minutes did the fight last; but at the end of that time I had him alongside the skiff on his side, with just life enough apparently to wag his tail feebly. Watching my chance, I reached down, slid my fingers into his gills, and raised him, and held up as handsome a fifteen pound salmon as ever mistook a Courroy's imitation for a genuine insect. I paddled ashore and laid him on the bank, with the hook still in his mouth, while my audience gathered around and expressed their astonishment as they examined the thread of a line and single gut snell, my friend, as much astonished as any of them, exclaiming, "Dog my cats, if I would have believed my own father if he had told me you caught that fish with this tackle, if I had not seen it myself!"

During the two days that I remained there I landed thirty-five more of the same sort, and had I been provided with strong tackle the number would have been a hundred. Of course I lost many, for my line got badly chafed with such severe work, and, shall I confess it, I dodged the big ones, jerking my fly away when I saw that the chap coming for my fly was too much for me. This was, I believe, the first time a salmon had ever been caught on this coast with a fly, and I think with a hook. I have taken many a one since, and now everybody fishes with rod and reel, generally using, however, the feather spoon and large, strong hooks. Courroy sent me out a ten foot bamboo three joint rod, a big reel, a Cuttyhunk bass line, and a dozen or two large flies, with double gut snells, and the way I walk the twenty-five pounders with that tackle is a caution. Last Fall I was up there with this rig, and a large, strong landing net, and caught them until my arms ached. I stripped down a thousand pounds, besides as many as I could squeeze into my wagon. My friend, who is up at his mills, writes me, "The river is full of salmon; come up. Alas! I can't go. Inevitable business chains me to this spot."

Why don't some of your gentlemen of elegant leisure come out and enjoy such fishing as they never had, and never will have elsewhere? They should be here now. The river I speak of—the Navara—is one of many that empty into the Pacific along the coast, all teeming with salmon. The distance is about a hundred miles—fifty by rail, and the bal

For Forest and Stream.

My Fishing for Salmon in California.

SOME months since I read in your most excellent paper a splendidly written article on salmon fishing at Humboldt Bay, by a gentleman of the army, whom I think I met here about those days, being myself, at the time, "one of the boys in blue." Had I known that he was a fisherman, I should have cultivated a closer intimacy, on the ground of a "fellow feeling," for fishing is one of my weaknesses. I might add shooting as another, and my greatest of all, yachting. They are all of a kidney, and hinge together so harmoniously that either afford that enjoyment that only a true sportsman can fully appreciate. I am sorry for those who have no liking for either. As the song runeth—

Some people we is this world discover,
Far too frigid for friend or for lover,

To think that there are many who neither shoot, fish, or sail! Such, certainly, don't get their share of the enjoyment this world affords, and have just cause to quarrel with fate that so shaped them. They have as good grounds for complaint as the chap who met with little else but dis-

sance by stage or team. The ride is charming, good quail and pigeon shooting all along the road, and passable accommodations. At the Navara there is an excellent country hotel—neat, airy, and charges moderate, (\$3 per day). Ten miles above Navara comes Big River, equally good fishing; ten miles further the Noyo, and so on. The salmon run in the rivers after the first rain, and remain until the heavy rains raise the streams, and that ends the sport; but for a period of say two months it is the finest salmon fishing in the world. During the Summer months the head waters of the Stanislaus and St. Cloud rivers afford splendid salmon and river trout fishing, easily accessible by rail and stage in eighteen hours. The scenery beautiful, climate delicate, a paradise for the sportsman. Mr. Stone, the United States Fish Commissioner, makes his headquarters at this point for collecting the spawn which he ships East. A visit to his camp is very interesting. At the Soda Springs Hotel, kept by Fry, an enthusiastic sportsman, the accommodations are all that could be desired, and charges very moderate. If you want to camp out, an Indian will pack your blankets, and you can spread yourself under a big tree, with no fear of a ducking from a passing shower. In my next I will tell you more of our sports, our fish, and our game. It is jolly to think of, and better, still, to enjoy.

San Francisco, California, Nov. 3d, 1874.

For Forest and Stream.

TROUTING UNDER DIFFICULTIES.

A TRUE EXPERIENCE.

I ALWAYS read FOREST AND STREAM with interest, especially the adventures of trout fishermen, and having been myself a devotee of the sport for the past fifteen years, and during the time met with various adventures, I may be pardoned if I relate my experience in "trespassing" on the meadow of a well-to-do farmer. The farmer referred to, for many years lived in the town of W., County of York, State of Maine. From a neighboring mill pond flows a good-sized brook, for years past abounding in the "speckled beauties." The first quarter of a mile the brook flows through alder wood and meadows, and is thoroughly good fishing season in this part. After fishing in this distance the sportsman comes to a fence, beyond which lies a broad, open meadow of another quarter of a mile in length, the farmer's house standing on elevated ground some thirty rods from the brook, and overlooking the entire meadow below. Jumping the fence the eye of the trouter would at once rest upon a board sign posted near the brook on which was the following "notice":—"Trespassing on this meadow is forbidden." My first visit to this brook was some ten years since. I had heard of the brook, had seen baskets and "strings" of beautiful trout said to have been caught above and below, but had never heard of anyone being allowed to fish through the old man's meadow. The universal story was that "Old C—", as he was familiarly known among fishermen, was at home to-day and drove us out, because forsook we at neighboring sportsmen to fish that meadow. The temptation was very strong, increased fourfold by the good hook attending us above and below, as well as at the immediate entrance to the meadow, and what fishermen could resist the temptation to have a quarter of a mile of such fishing? The old farmer would sometimes be seen in our city, some one or two fishermen would be on their way to the brook, hoping to be able to fish it during his absence, but he invariably left his son at home to keep guard!

As I said before, it was about ten years ago that I had my first experience on the forbidden ground. With three others I drove to the town of W., where we divided two and two, one party commencing at the mill pond and fishing down stream, and the other two going instead of fishing up to the brook, and then crossing the brook instead of up. It was mutually understood that only one should enter the meadow at a time and each should appear entirely ignorant of the other's presence, in order that if we could not fish the enclosure, we might gain some satisfaction in seeing the old gentleman travel the length and breadth of his meadow to drive us out. I happened to be one of the party who fished from the brook down, (I always prefer fishing a trout brook down instead of up.) My companion reached the meadow first and entered the forbidden territory. I remained cooped in the bushes just above, within hearing and seeing distance of what was going on. He had scarcely baited his hook and thrown it into the stream when a big, burly man came at full speed across the field from the house, and asked if he did not observe the sign forbidding fishing in his "meadow." At the same instant my friend pulled out a trout of enviable size and placed it in his basket. Words did not seem to have the desired effect, so the old gentleman commenced throwing sticks and stoups into the brook, entangling the line and of course putting a sudden stop to my farther fishing. This soon convinced my friend that he had better retire, which he did, and related his experience to me. The poor old man had scarcely reached his house when we saw one of our party enter the meadow from below, and immediately the farmer was seen to rush for the opposite corner of his field to go through similar proceedings, which, of course, resulted in his being a second time the victor. It was now my turn, and with inconceivable boldness I left my hiding place and in a moment more was landing a good-sized trout, having been particular to have my hook baited and in readiness in order to make the most of my allotted time, which, at least, must be short. I had scarcely placed the second trout in my basket when I discovered the same burly form making his way toward me, with vengeance stamped upon his countenance.

"I allow no fishing here, sir; you are the third one I have driven out to-day."

"Ah! Is that so? Why don't you allow it?"

"Because you tread down my grass."

"But if I will pay for all the grass I damage, can I not fish?"

"No; you can't pay for it, and you cannot fish."

"But I will wade the brook and not touch your grass at all; now can't I fish?"

"No; I won't have any fishing here, anyway; I do not allow even my own boy to fish here, neither do I fish myself."

"Then you are not passionately fond of trout, as some of the boys are?"

"No; I would sooner go up to the mill pond and catch pickerel."

"There is no accounting for tastes," said I, and as I slowly retraced my steps to the woods above, I thought to myself what a man he must be, not to fish himself or allow his own boy to fish, and yet to be so particular as to make me judge of the enviable feelings I had of that meadow brook, abounding, as it naturally must, with noble trout that had never been even pricked with a hook or frightened by the approach of a fisherman. What a feast was there, if one could only get at it! While meditating over the situation, I observed the fourth man put in an appearance at the opposite side of the meadow, and he, too, was in similar manner about to enter the forbidden territory. He came with half-filled baskets, sat down by the roadside near his horse and lunched. Presently the old man came along and took notes of each and every one of us, asking our names (of course we gave our right names), and endeavoring to fix our countenances so as to remember them a second time. One of the party on giving his name as "James Jenks, of Portland," was rather taken back by hearing the farmer reply:—"Now, Mr. E—, what is the use for you to lie; me and my darter traded high forty dollars worth at your store in B— only last week," showing that fictitious names would not work as well near home as they might elsewhere.

My second adventure with this farmer was the following year. In company with an elderly gentleman, who has undoubtedly proved a devotee of trout fishing, and who very nearly three score years and ten, and with whom I have the present season driven twice from ten to fifteen miles trouting, and tramped for miles in the broiling sun, a man who is to-day as sprightly and youthful as he was at twenty; in company with this gentleman I went to the same brook, and after fishing the meadow below, we together, climbed over the fence and commenced fishing. Scarcely had we thrown a line when I heard a stentorian voice shouting from the neighboring hillside:—"Get out of my meadow." My aged friend being quite deaf could not hear the orders, and being disposed myself to "light it out on that line" as long as possible, I paid no attention to his shouting and continued my fishing till his legs took the place of his lungs, and he presently made himself the third member of our party. My companion pleaded his inability to hear his orders, but seeing me evidently fond that his credit was good enough to read the "notice" posted at the entrance. I was, of course, recognized as having been there before, and for me there was only two alternatives; "pay me five dollars, Mr. I—, or I shall commence an action of trespass against you." Having never as yet been party to an action at law, and thinking it might be somewhat of a novelty, I concluded to tell him that he "better commence his action against me, for we withdrew, and renewed our fishing on the forbidden territory of his neighbors, and I may add, we met with fair success. But the more I went there and was driven away, the more was my curiosity excited to know and realize the contents of that brook, and I resolved a third time to fish the meadow before the season was over.

Accordingly I made a third attempt shortly after, and went alone. Leaving my horse at the mill above, I fished down through the woods till I came to his fence, when I adopted a little strategy, hoping to be more successful than before. The meadow grass was quite high, and I concluded rather than lose the anticipated sport, I would crawl through the entire meadow. So lying down flat on my belly, I crawled under the fence, joined my rod and there lay in the tall grass, waiting my way along beside the brook, and patiently waiting for another. After some time I succeeded in capturing eight beauties and crawled perhaps ten rods, when probably my pole exposed my strategy, for on looking up I saw the old man approaching with a huge fence rail in his hand, followed by his son, a strapping, great country boy, with a club in his hand also. To me, just about that time, "discretion was the better part of valor," and in less time "I had to write to him, I had my pole and bait, and my full pole and basket. I started for the woods as fast as my legs would carry me. Being a good runner I got quite the start of them, still I could hear them giving chase in the distance. Knowing the woods thoroughly they had the advantage of me. I ran till I was quite tired out, and then sat down in a thicket beneath some huge brakes, which quite concealed me, and taking out my lunch was quietly enjoying a fisherman's meal when they both passed and left me undiscovered me, and I felt quite easy over my supposed escape. Presently, however, they commenced a return, and on the way back struck my trail and discovered my ambush. They at once made themselves acquainted. I found I needed no introduction this time. Their threats were entirely with words, not with clubs, and I soon ascertained that my bill of damages had suddenly doubled itself, and ten dollars instead of five was the smallest amount which I could save myself from the clutches of the law. I reasoned with them, and expressed a willingness to pay for all damage to the grass, (and if my memory serves me aright, I thought fifty cents would liberally pay for the amount I had injured.) Nothing, however, would satisfy them but ten dollars, and having but a small portion of that sum with me, I had to submit to his second threat of prosecution. With no other alternative, I returned to the brook with them, and with an excessively covetous look at the meadow (in which I fear I broke the tenth commandment), I a third time "re-treated in good order" to the woods above. As we parted I politely asked the "time o' day," and suggested that if their dinner was about ready I would gladly accept an invitation to dine with them, since I had lost a large portion of my lunch in my hurried run to the woods. My proposals were not accepted, and we thereupon parted.

Not hearing of the proposed "action," I thought perhaps a fourth trial might be made on the same favorable terms, and perhaps with better success. This time I decided to try the brook very early in the morning, perhaps before the farmer was up. Accordingly I drove one evening eight or nine miles after dark, put my horse in a neighboring barn, and camped myself on the hay-mow for a short rest. At two o'clock I turned out in readiness for the brook, but found myself in a pouring rain-storm, which had come on during the night, and not being prepared for any such emergency I abandoned the undertaking and retrained home without making the attempt.

And now comes the sequel to this series of adventures, which I think will be read with more interest than what I have already written. A few weeks after my fourth unsuccessful excursion, I received, through the mail, a letter bearing the postmark W—, and, of course, eagerly devoured its contents. I have preserved that letter to this day as a reminder of by-gone days, and to show to my

trouting friends. Thinking this curiosity may prove of interest in connection with my story, I will copy it *verbatim et liberatim*, with the exception of the names:—

W—, June 7, 1867.

Mr. I—, Dear Sir:—I am compelled to either lose my hay crop in my meadow or protect it from men who go a fishing. You made a trespass upon me on the 28th of August last, & another on the 21st of last month after being forbidden both times. you are liable to 2 actions on each day besides calling your name & place of residence that which it was not. I have called at your office to see you twice, but you was gone from home both times I was told. I have made no noise & said nothing to any one about it did not intend to tell I saw you, now all I have to say about it Sir is if you wish no prosecution & the thing to stop where it is just put a \$10.00 bill into a letter & direct it to J— C—, W— M.E. & when I get it this shall be your receipt in full for both offences, otherwise I shall certain prosecute soon.

Yours with respect— J— C—

Here, Mr. Editor, was a subject for thought, for reflection, and for careful consideration. I consulted our "Revised Statutes" of Maine, and received such consolation as I could find in reading the following sections:—

"Whoever willfully counts any trespass by entering the garden, orchard, pasture or improved land of another with intent to take, carry away, destroy or injure the trees, shrubs, grain, grass, hay, fruit, turf or soil thereof, shall be punished by a fine not exceeding twenty dollars, and imprisonment not more than thirty days.

"Whoever willfully enters and passes over any garden, yard or other improved field after being expressly forbidden so to do by the owner thereof, shall be punished by fine not exceeding five dollars, or imprisonment not more than ten days."

Reading the first section above I felt clear as to my intention not being to injure or destroy his grass, and reading the second section, I thought the "fine" could not kill me, and as to the "imprisonment," I concluded if the judge should think I could serve the county better for ten days than I could my own private interests, I would accept the situation. I therefore resolved to let the action begin at once, if he saw fit to commence it. I read and re-read his letter, showed it to my trouting friends, who seemed to enjoy it with me, and all expressed a desire to have the matter tested, even if I was to be the victim of circumstances. All at once a novel thought struck me, and I concluded to have some sport out of it, if nothing more, I had in my possession a lot of Confederate money, bills, scrip, bonds, etc., which had been given me as relics of the late war. It occurred to me to enclose to his address, as above, a ten dollar bill of this kind and see how it would strike the old gentleman. I did so, directing it as requested, without word or comment. The result of this was not known to me until a year afterward. Suffice it to say, that no prosecution was ever begun against me. The following season I was asked by a distinguished citizen, now living, to accompany him on a trouting excursion the next day. I accepted his invitation, and before four o'clock in the morning were on our way into the country. Inquiring of my friend, I learned that his destination was the very brook on which I had so often tried so unsuccessfully to fish. He said he was going to fish "right through the meadow." I related to him my previous experience there, and said of course I must not be caught there again. He replied: "I have a little understanding with this man, and he has recently told me I could fish his meadow." "But of course he will not allow me to fish, with our old matter as yet unsettled."

"I think I can fix it so you can," was my friend's reply. When we reached the brook it was decided that I should remain in the meadow below, fishing, while my friend drove directly to the old farmer's door and put his horse in his barn. I afterward learned that the following conversation ensued between farmer and fisherman:—

"Mr. C—, I have come up this morning to accept your invitation to fish this brook."

"You know I told you, if you would come alone sometime you might fish a mile while in the meadow after my grass was cut. Are you alone?"

"No; I have not come alone; I have a friend with me; he is down below, fishing."

"Who is he?"

"My friend Mr. I—"

"What, the one I have driven out from my meadow three times?"

"Yes, Mr. C—, he is the very same fellow, and you need be no more afraid of having him fish here than of having me."

It required a good deal of persuasion on the part of my companion to gain consent for me to enter the meadow, but it was finally arranged (just how I never knew) that we should both enjoy a little sport in a brook never before fished. When told that I was to fish the meadow, I could hardly believe my own eyes when I saw myself climbing the fence, this time without fear of molestation. We joined our rods, and decided to make thorough work of it, and thorough work I think we did make. Never before or since have I enjoyed such downright sport. We fished till noon, when our baskets were more than full, and then, at the call of the farmer's horse, we went to the house, where I once more stood face to face with my old friend, the farmer himself. We shook hands cordially, I remarking:—"I think I have met you, Mr. C—, on one or two occasions before."

"Yes, I think your face is familiar, and I believe I have a little note in my pocket-book which I take if you sent me."

"Then, you received my note, did you?"

"Yes, and here it is, producing the identical ten dollar Confederate bill; I thought it such a good joke that I concluded to let the matter drop. You got the better of me that time, Mr. I—"

"Well, Mr. C—, you did not say what kind of a note I must send, so I sent a Confederate note, thinking it might be a curiosity, if nothing more."

"Now, Mr. I—, whenever you want to fish, come right here and put up your horse and fish, only be careful not to bring with you; now come into dinner, wife is waiting."

To dinner we went, and seldom have I sat down to a better meal than was given us there. After dinner we renewed our fishing, and again filled our baskets, and again the horse was blown, and we were invited to supper. After the supper was over, and the handsomest string started for home, bringing with us the handsomest string of trout ever brought into the City of B—. They

numbered ninety-two, and weighed from one quarter of a pound to upwards of one pound each.

I think we must have been the first ones to fish that entire meadow for many years. I went there again a short time after, during the summer of 1863, but had no such sport as the first time, and I have fished the brook many times since, but it never disappointed so handsomely as the first time. The gentleman has, within a couple of years, sold his farm and moved away, and that the brook is now open to all, and it has had such a "run" upon it that the present season it is considered worthless as a fishing ground. I often see my former friend, and he seems to enjoy a hearty laugh over the Confederate bill now as much as ever.

Another practical joke, once played upon him by one of our fishermen will bear repetition here. He had trespassed like the rest of us, and had been threatened with prosecution. The farmer came down one day and called at the gentleman's office to see if he would not prefer to settle the matter without an action. He found the gentleman in his office, who asked him to be seated a few moments while he went to the post office. The farmer took a chair and waited some twenty minutes for his return, and finally made inquiries where he was, and learned that he had taken the train for New York shortly after he came into the office.

Such, Mr. Editor, are the not infrequent experiences of trout fishermen, and while, perhaps, the sportsman may oftentimes be at fault, I am of the opinion that if farmers would be willing to accept a moderate compensation for permission for crossing their meadows, they would be doubtfully paid for all grass that is damaged, and save many hard words on both sides. F. I.

Biddeford, Maine, Sept. 1, 1874.

For Forest and Stream.

A BEAR HUNT.

MY friend, Dr. B., and myself, sat on his veranda in the afternoon of a glorious Autumn day, lazily smoking long-stemmed pipes. It was one of those days when the air is just cool enough to brace up the whole system, and make every nerve and fibre in the body thrill with exuberant life. The frost had touched the forest, and the trees,

"as doomed in Arctice story, ere the dreadful sacrifice,
stood arrayed in vesture glowing with the rainbow's richest dyes."

We had just returned from a deer hunt, and the antlered monarch—the trophy of the morning's chase—was being relieved of his hide in the back yard.

"This is getting monotonous," said the doctor; "we have hunted deer until I am tired of it. I move an expedition against 'brain'."

And even as he was speaking, a clamor amongst the hounds and a rush by them to the front gate, gave evidence that some one was there. Going out we found an adolescent Arkansian mounted on a mustang. This youth was of the one "gallus," copperas-breeches breed, red-headed, and otherwise embellished with a cork skin cap and a brass spur. He opened his mouth and spoke thusly—

"Don't mind says he wants you to come down and bring some help, and all the dogs you can raise, and kill a bear that is about to ruin us. You see," he explained, "we plauted late and our corn 'nint quite hard; that ar bar took it by the time it was just in roasting-ear, and he haint left it yet. He is about the size of this hoss, and his track is a durned sight bigger than any nigger's on this plantation. He comes in every night reglar."

"You are just the boys we wanted to see," said the doctor; "we will be down to-morrow evening."

Messengers were immediately sent to three gentlemen who lived near, who owned some good bear dogs. The doctor and I went to work to get everything in readiness for a start the next day at noon, so as to reach the place where the bear was committing his depredations—fifteen miles low on the river—before night fall. The gentleman sent word that there would be on hand at the appointed hour, with about twenty-five good dogs that were "up to bear." Punctually at the time agreed upon, we heard their horns, announcing their approach. First rode our friend "Col. John," as fine a specimen of vigorous manhood as could be found; he was mounted on a powerful horse, and his whole "rig" proclaimed him a mighty slayer of the black bear.

"He was a stalwart knight and keen,
And had in many a battle been."

—with the brin family. He was armed with a short, single-barreled rifle,

"On which deep scars of wounds did remain—
The cruel marks of many a bloody day."

I think he called it a *ghager*; anyway, it was about the size of an old-fashioned, round, pine match box. If a ball, driven from it with a small howitzer load of powder, did not make *ursa major* his everlasting quietus—take, he then went for him with his knife, and though the stab from it might not be altogether as wide as a church door, nor deep as a well, it was enough to do its work. The other two gentlemen were armed with double guns, from which they shot "back and ball," and all carried the traditional "tooth-pick." The dogs, grand and grizzly, were of a mongrel breed, a mixture of several breeds, including a bull dog. They were scarted and mangy, and some of them were as gutless of hair as any of the largest *Pachydermata*, except on their flanks. The doctor had eight bear dogs, which increased the pack to over thirty, as ugly and savage brutes as ever gave chase to anything.

After lunch we were all off, amidst a baying and yelping that was almost deafening. We had an hour before sunset reached the place where the manager was disposing of his "crap" without the intervention of a middleman. His cabin stood near the river bank, in a field of some twenty acres. The river made a detour of ten or fifteen miles, and then back to within a mile of the same place. Within this bend the cane grew rankly and thick-set; in many places the ground was covered with drift wood and debris from the overlow. Vines and briars obstructed the way in all directions. Here brin had his house, and here we were to hunt him. While the rest fixed for camping, the Colonel and I walked out to the field to reconnoitre. We found signs all over the clearing, and the havoc the bear had made in the corn was something amazing.

"He is a whopper," said the Colonel, "and will lead us a lively run out here to the birouase we found a smoking supper and a pot of coffee, hot enough to curl a moustache, and strong enough to float an iron weight. We ate as only

hunters can, then after divers puffs at our pipes, some songs and stories, and a cup of potent "mountain dew," by the camp fire's ruddy light we turned in, wrapped in our blankets, on a bed of cane, with only the starry sky above us, but a blazing fire at our feet, and slept the sleep of the blessed. In the middle of the night a little cold, I awoke, and found the dogs lying around promiscuously, some comfortably curled up close to a hunter, but I did not disturb them. After replenishing the fire with some dry cottonwood I lay down. High in air I could hear the rustle of wings of the wild fowl, and the snoring of the doctor and Colonel John mingled soothingly with the puff of a far-away steamboat. Lulled by the sounds I slept again, in a dream of following stumpy-tailed mastigridges through interminable swamps, and trying vainly to shoot them with guns that would never fire. At daybreak we were astir, and after a hearty breakfast, loaded our guns and prepared for action.

"There must be no snapping," said the Colonel; "aim close behind the shoulder and low down."

The sun rose bright and gloriously as we mounted; a slight wind was blowing from the North, and everything seemed propitious. While the rest were sent to different points to intercept the bear, if possible, Colonel John and I went to put on the dogs. The hounds soon gave tongue on brin's trail and worked it up in a brisk walk. This leads directly away from the field through the "eu sedest" brake of drifted cane on the river. As we advanced the trail grew warmer, the cuts occasionally putting in a yell; then came a burst of canine noises, yelps, roars and bayings, that made each particle of cane on my head stand on end, and every nerve and fibre in my frame thrill with wild excitement. "He's up," cried the Colonel, and uttering a yell that would have astonished Shaeknasty Jack, he plunged into the thickest of the cane, as if he had been riding through a weed prairie. The bear led straight off, and I followed, as best I could, picking my way through the thickest cane.

"The Colonel will have him skinned before we catch up," said Jim, "if he follows on as he was going when he passed me."

The dogs had never stopped the bear for a moment, and he was leading them a tearing race.

"Let's renew our spiritual strength," said Jim, "and take a fresh start after him."

By this time we had settled deep and still on the forest where we were, but we followed on in the direction that the chase had swept; finally we heard the bayings of the pack faintly borne to our ears, until it grew loud and boisterous.

"They are coming right back this way; let us cross that slash," said Jim, "I'll meet him if he comes this side."

So I rode up to the plank, which was very steep, and tried in vain to urge my horse to take it. I got off and tried to lead him down the bank, but he would not go. The pack was coming nearer and nearer; they were almost opposite, when, suddenly, with a crash, brin came tearing down the bank on the opposite side; my horse, wild with fright, reared and pulled back, making it impossible for me to shoot; so brin, with a right about, rushed back up the bank amidst the dogs. Well, that a yell was there, my countrymen! Charging through the pack he lead off up the river.

"Why the thunder didn't you shoot?" cried Jim.

"Dow the deuce could I with this infernal horse dragging me backwards through the brush?" said I.

We finally followed on as best we could. Brin was getting tired, and would stop occasionally and fight off the dogs. We narrowly open ridge, and were riding hard when my horse stepped into a hole, executed some remarkable feats in ground and lofty tumbling, which caused me to leave my seat in the saddle and "walk off on my ears," and by the time that I could repair damages and get about half a pound of the sacred soil of Arkansas out of my gun barrels, the bear, dogs, Jim, and all had gone clear out of bearing. I mounted and rode on desperately, but soon heard the pack coming toward the river, near which I was riding. The bear was now fighting as he went into an almost impenetrable cane brake. Sometime he would stop for several minutes—as I could tell by the baying of the dogs—and then come on in the direction of the water. I rode on towards him until within about a hundred yards. I could tell that he had stopped and was at bay. I waited for him to come nearer; but he did not, and fearing that the pack would get in and kill him, I dismounted, and tying my bridle to a limb, walked towards the dogs; as I advanced the cane grew thicker, as it was "drifted" by the great overflow, so I found it difficult to make my way through it. Finally, I came near to where the pursued and pursuers were engaged in a sanguinary fight, for in every few minutes I could hear some of the pack yell in agony as he got it hot from brin's paw. My heart beat violently, and I could feel the blood coursing through the arteries in my neck, as advancing a little further I saw the immense beast, who was on a fallen tree six or eight feet in diameter, slowly walking up and down, with the dogs on each side of him. They could not do much with him as long as he held that position. I stopped a moment to collect myself and get my nerves steady, and just as I was about to advance, the bear got off the tree on my side and came slowly towards me. He had not seen me, and came on swinging his head from side to side. I stood at the foot of a large tree and he came directly toward me. When about ten or fifteen feet intervened, he turned a little to the right and made a rush forward at a dog. I stood with both hammers at a cock from the moment he got on the ground, and as he rushed, I let one of my side and came slowly towards me. He had not seen me, and came on swinging his head from side to side. I stood at the foot of a large tree and he came directly toward me. When about ten or fifteen feet intervened, he turned a little to the right and made a rush forward at a dog. I stood with both hammers at a cock from the moment he got on the ground, and as he rushed, I let one of my side and came slowly towards me. He had not seen me, and came on swinging his head from side to side. I stood at the foot of a large tree and he came directly toward me. Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

THE STATE HATCH-HOUSE.

Seth Green, Esq., informs us that he has had great success in gathering salmon trout and white fish spawn this Fall. The State Hatching-House at Caledonia is full to superfluity, and Mr. Green is hatching a great many out of doors. Under these circumstances, he renews his offer of a few months past, in the shape of the card appended, which is really liberal, and no doubt will be thoughtfully and eagerly accepted by many persons wishing to stock depleted waters:

Rochester, November 12th, 1874.

Any parties in the United States or Canada wishing to experiment in hatching salmon trout or white fish spawn, will be sent a few hundred on receipt of fifty cents (to pay for the package) by addressing the undersigned. Also parties desiring to experiment in rearing the young of the California salmon, will be given a few hundred, by going to the New York State Hatching House for them. All applications to be made during the month of December. All kinds of fish will be distributed to the public waters of this State the same as years before. SETH GREEN, Rochester, N. Y.

It will be perceived on perusal of the circular that is appended herewith, that this offer is exceptional to the rules which make the Hatching-House products available only to public waters. The directions that are included in this circular will prove useful to applicants, and convey information which we are often called upon to give:

DIRECTIONS.

In delivering spawn and living fish from the State Hatching-House, the following rules have to be obeyed exactly:

1. Only public waters, and no private ponds, can be supplied.

2. The impregnated spawn of salmon trout and white fish can be sent, in October, to such places as have conveniences for hatching it. Living salmon trout and white fish, can only be delivered at Caledonia, and all persons wanting living fish of any kind must send a man for them, as there are six hundred and forty-six lakes in this State, and not to speak of streams and rivers, and the means at the disposal of the Commissioners are too small to justify the attempt to deliver fish at the expense of the State. To avoid jealousy and dissatisfaction, no exception will be made to this rule. The expenses of the person coming for the fish will be fifty cents at Caledonia, and two dollars at Rochester, for cartage, besides their traveling expenses.

3. Young white fish are in condition to transport from the first to the tenth of February; salmon trout from the tenth to the twentieth.

4. Oswego bass, strawberry bass, white bass, rock bass, black bass, yellow perch, pike, perch or wall-eyed pike and bull heads can be delivered at Rochester at any time during the Winter months. Application to be made at 16 Mortimer street.

5. Milk cans are used to carry all kinds of fish. A five gallon milk can will hold two thousand white fish or one thousand salmon trout; or from ten to twenty of the other fish above named, according to their size.

6. All communications must be addressed to the undersigned, and must describe particularly the waters to be stocked, giving their names, locations and size, and stating whether the ponds have rocky or muddy bottoms, or have eel-grass, flags and pond lilies. The wall-eyed pike, rock bass, white bass, black bass, white fish and salmon trout are suited to clear waters with rocky bottoms, where the crawfish is to be found, and Oswego bass, perch, strawberry bass and bull heads will only live on muddy bottoms with flags and pond lilies. It should also be stated what kinds of fish are found in the lake.

7. It is almost useless to stock rivers which overflow their banks and flood much extent of country, as the fish are stranded by the receding waters and get into pond holes, where they perish in dry weather.

8. All fish should be deposited as near the head of the lake as possible, so they will not go into the outlet before they become familiar with the waters. The young fish should be deposited during the night, when most large fish do not feed, and will find hiding places before morning.

9. Signatures, Superintendent.

Office, 16 Mortimer street, Rochester, N. Y. Office hours from 7 to 8 A. M.; 12 M. to 1 P. M.; 6 to 7 P. M.

BLUE BACKED TROUT OF MAINE.

[Accompanying the following interesting note from G. Shepard Page, Esq., who is one of the officers of the American Fish Culturists' Association, was a box of trout of the nearly uniform length of eight inches, with backs of dark blue velvet pile, and sides liberally sprinkled with vermilion spots from gills to caudal fin. While in general appearance they resembled the common *salmo fontinalis*, an examination showed their form and markings to be decidedly different. There was no steel blue halo around the carmine spots, as in the familiar brook trout, and in shape they nearly approached the capelin or the smelt, being very narrow at the shoulders, and of uniform width throughout. The flesh had a yellowish tinge, and was rather insipid, we thought. Of a dozen which we opened a few had spawn in them.

We shall much value all information that our correspondent and the Maine Fish Commissioners shall favor us with. Meanwhile our thanks are bestowed for the gift of these interesting specimens.—Ed.]

New York, November 15th, 1874.

EDITOR FOREST AND STREAM.—

Of course you have heard of the famous "blue back" trout of Rangeley Lake, Maine. They are never seen until the 10th of October, when

they swarm the different streams in countless myriads. They remain for 30 days, and then leave, returning the following year at almost the exact day, and always the exact place. Another most singular fact is that they are never taken larger or smaller than this I send you. The countrymen gather them by barrels and barrels, smoking and salting them for home use. They are especially exempted from the provisions of the Maine game law. I have received a large box of them, which I believe is only the second lot that ever came to New York. They were sent by my cousin, Henry C. Stanley, one of the Commissioners of Fisheries, who has taken 30,000 eggs, and will hatch them and stock other streams in Maine. If you desire, I will send you an article on them, giving many singular facts. We have taken at our hatching house on Bena stream, Rangeley, to the present time, 300,000 eggs of the six and eight pounders. Sincerely yours,
Geo. SHEPARD PAGE.

THE FISHERIES OF FRANCE IN 1872.

[From the *Revue Maritime et Coloniale*, August, 1874.]

The Commissioners of Customs have just published a *General Exhibit of the Commerce of France with her Colonies and Foreign Powers in 1872*. From this document we see that the total commerce of France with her colonies and foreign countries during the year 1872 (imports and exports of every kind) is estimated at a total of \$1,928,750,000, being an increase of \$422,292,500 over the previous year, and of \$340,000,000 over the year 1871 (21 per cent.) over the average of the quinquennial period prior to 1873.

This exhibit shows that the share which the French flag had in maritime commerce—its total value being \$1,288,958,333 including exports and imports—was \$605,625,000. Of these \$605,625,000, \$106,250,000 went to commerce with the French colonies and the great fisheries, and \$499,375,000 to international maritime commerce. The portion falling to the share of foreign navies was \$583,333,333.

The vessels which were engaged in codfisheries in 1872 reported 418,299 quintals of fresh and dried cod, oil, roe, &c., which is a decrease of 84,684 quintals from the year 1871.

The export of dried cod, with the benefit of a premium, amounted to 36,534 quintals, instead of 23,578 quintals in 1871.

The accompanying table has been published by the Ministry of Agriculture and Commerce; it contains statistics for the last few years, as follows:

1. Number of vessels engaged in the cod fisheries.
2. Direct export from the fishing stations to the colonies and to foreign countries.
3. Exports from French ports to the colonies and foreign countries.
4. The sums paid as premiums.

Year.	No. of Vessels.	No. of Crew.	Amount of Premiums.	From the Fishing Stations.	From French Ports.	Total No. of Vessels Exported.	Total amount of Premiums.

1817	679	11,419	10,946	12,000,140	2,972,898	1,044,439	58,919,815

764 vessels, with a total tonnage of 27,843, have in 1872 been sent out to the herring fisheries; the crews of these vessels numbered 11,093 men. In 1871 there were 791 vessels, with a tonnage of 25,102.

The quantity of herrings, fresh and salted, brought into our ports was 177,715 quintals less than in 1871, (210,359 quintals in 1872 against 308,074 quintals in 1871.)

The number of voyages which have been made under all flags, both by sailing vessels and steamers between France, its colonies the great fisheries, and foreign countries, was 52,104 in 1872, and the total tonnage of all the vessels engaged was 11,891,000. Comparing these figures with the statistics of 1871, we find an increase of 5,388 voyages, and of 1,437,000 tons.

Our merchant navy has taken part in these movements at the rate of 33 per cent. as regards the tonnage, whilst in the previous year the percentage was 35. Making a distinction between sailing vessels and steamers, we find that the percentage of France in the former is 33, and in the latter 37 1-3.

The countries with which France has had maritime relations present themselves in the following order: England, Algiers, Italy, United States, Germany, Spain, Turkey,

Russia, Sweden, Rio de la Plata, Norway, Egypt, Peru, Brazil, Belgium, Austria, Holland, Uruguay, Spanish American Colonies, Portugal, British Indies, West Coast of Africa, Hayti, San Domingo, Mexico, Tunis, Morocco, British Possessions in the Mediterranean.

To the courtesy of Professor Baird, of the Smithsonian Institute, we are indebted for the foregoing valuable excerpt.—Ed.]

SALMON CULTURE—A correspondent writing of a visit to an establishment in Canada, thus refers to the success of the undertaking:

"A visit to Mr. S. Wilmot's establishment devoted to the propagation of fish proved of unusual interest. The operations of the past few years. The creek with which the breeding-houses and ponds are connected, which previous to his operations had become almost completely denuded of salmon, has for the past week been swarming with these choice fish, of from one to three feet in length. The small quantity of water in the creek prevented the ascent of some of the largest salmon, but a sufficient number of large ones, over 800 in all, entered the fish pen, and from these over 800 eggs were secured and impregnated, and are now on hatching trays; from which it is estimated that about 80 per cent. will come to maturity and be liberated into the streams throughout the Province in the early part of May next. Hundreds of fine large salmon may now be seen in the ponds connected with the establishment, where they were placed after being manipulated by the pisciculturists. In a day or two these will be liberated, and will at once go down the creek into the lake.

Besides those secured in the fish pen, a very large number spawned in the bed of the creek, which is literally covered with bright spawning beds. As the natural proportion of this deposit will likewise come to maturity, the fish produced from the salmon which have this Fall visited Wilmot's creek alone will be of immense value—proving that all that is necessary to a plentiful supply of the choicest fish can be placed upon a table, is artificial culture and protection.

In addition to the establishment on Mr. Wilmot's premises, similar ones have been erected under his superintendence in different parts of the Lower Provinces, and intelligence which he has received from those points discloses the fact that, from the ova secured at all points, about two millions salmon fry will be liberated next Spring. This is certainly an industry of great importance, demanding public countenance and support. Mr. Wilmot may well feel proud of the success which has attended his endeavors, for he has demonstrated that the breeding of fish need only be limited, with proper care, by the means placed at the disposal of those so engaged.

Under Mr. Wilmot's directions a fish pen has been erected on Soper's Creek, and a considerable number of salmon have entered therein. By some means most of them escaped, so that the ova which were wanted were not obtained. It has been proved, however, that the salmon fry liberated in this creek has already very largely increased the number of salmon coming up the creek to spawn.

SPAWNING OF BLACK BASS.

PHILADELPHIA, November 14th, 1874.

EDITOR FOREST AND STREAM.

Your correspondent from Hagerstown, in your issue of the 12th, calls attention to the irregularity of the spawning of the black bass. A great many of the fish have been caught during the season in the Schuylkill, and an old angler tells me that he found ripe spawn in fish caught in July. On October 30th I caught one weighing a little less than a pound, having two fully developed sacs of ova, but neither of them ripe. As the open season begins here June 1st, I had supposed the spawning season was over before that date. Very truly yours,
SCULLA.

About 2,100,000 eggs have been taken from the fish-hatching works at Bucksport, Maine, within seven days lately.

VIOLATION OF THE MASSACHUSETTS LOBSTER LAW.—Benjamin Hatchfield, a vendor of lobsters on Causeway street, Boston, was before the Municipal Court Friday last, charged with selling lobsters less than ten and a half inches in length. He was found guilty of having sixteen such lobsters in his possession, and a fine of \$5 for each was imposed, making a sum of \$80, which Hatchfield had to pay.

Natural History.

THE METATARSAL GLAND OF THE CERVIDÆ AS DETERMINING SPECIES.

IN a late issue of FOREST AND STREAM we referred to the scientific work of Judge Caton, of Illinois, in noting if any difference existed between our moose and caribou and the European species, especially those indigenous to Norway, Sweden, and Denmark. One of the most important steps was to learn if the metatarsal gland was the same in the European and American species; so to decide this matter the Judge visited the northern districts of Europe to study the living subjects, and note any distinctions that might exist. This long and necessarily tedious work was undertaken by this pains-taking, close-reasoning American student of natural history on no other grounds than in the cause of science, and to prove thoroughly a point heretofore disputed by naturalists. This action readily proves how far the students of Nature will go to develop a truth which, in the abstract, might be a matter of indifference to the world at large, but not to the naturalist, who must have a thoroughly logical premise from which to make deductions. The work of Judge Caton has been eminently successful, and being the first who has undertaken to prove the relationship of the various species, he is entitled to great credit, so we freely offer him the tribute he so richly deserves.

The following letter will show the labor of this truth-

oving naturalist, and his efforts in deducing the kinship of all the higher species of the cervidae. That he has accomplished his work in the most complete manner is quite evident from his communication:—

LONDON, ENGLAND, October, 1874.

EDITOR FOREST AND STREAM.—

Some months ago you had the kindness to publish a short communication from me describing the glandular system on the hind legs of the deer, in which I pointed out some of its characteristics, and its great importance in determining species. In that paper I spoke of the absence of the metatarsal gland on our moose and caribou, and remarked that Dr. Gray had stated in "Knowledge Menajira" that those glands are present on the European elk and the reindeer, which, if true, would go far to establish that they were distinct species. I should probably have accepted the statement of that learned zoologist as establishing the fact, and proceeded accordingly, had not the more considerate caution of Professor Baird suggested that possibly Dr. Gray was mistaken in his statement, and that it was better to wait for a confirmation or refutation of that statement. One great object of that paper was to elicit positive information on the subject.

As my hopes in this direction were disappointed, I determined in May last to examine the matter for myself, which could only be done by a study of living subjects. I accordingly sailed for Norwegian Lapland, and in the last of June found myself in latitude 70° 40' north, near the northern continental limit of the reindeer range, and then proceeded to establish the facts of the matter. Norway, Sweden, Denmark and Germany, and now find myself in London, on my way home, having finished my researches with very satisfactory results.

While I find slight differences between our moose and the Scandinavian elk, and also between the European reindeer and our woodland caribou, which I will not now detail you to point out, there is not a shade of difference in their glands. On the metatarsal gland, extending two-fifths of the breadth of the hind leg of the European elk, there is no more vestige of a gland, or of a tuft of hair than there is on our moose, or on an ox. But on the inside of the hock there is the same dunnal gland of exactly the same size, form, location, and structure as on our moose, and it is covered with the same black tuft of hair, occupying the same horizontal position, small at the base, and widening to the point of the tuft, extending two-fifths of the breadth of the leg at that point, forward, being much broader at the forward end, the hairs meeting together from above and below over the outer of the tuft, there forming a sharp comb. In every subject which I examined I found this tuft precisely the same, both in color, form, position, and structure, as it is on our moose, while in all these particulars it is totally unlike that found on the European reindeer, or the deer family. So much for the moose and elk of Europe.

I was enabled to study many more specimens of the reindeer, both wild and tame, with results entirely satisfactory, yet no more so than in the former case. I found the metatarsal gland entirely wanting on them, as it is on our woodland caribou, while the gland and tuft of hair covering that on the inside of the hock are present, of the same size, location, and form as on the American variety. From the color to a little darker than it is on ours, and so is the whole generally of a darker color, while on the tame the color varies with the general coat.

During my investigations, I had many opportunities of studying the red deer, or stag, of Europe (*C. Elaphus*), and was interested to observe that the glandular system on his hind leg corresponds precisely with that on our elk (*C. Canadensis*). The corresponding size is the same, the location is the same, the tufts of hair and surroundings are the same, and it has the same peculiarity, that there is no naked place over the gland within the tuft, but the whole surface of the gland is entirely covered with the hair. This tuft is surrounded with the same belt of tan which extends over the top of the hock, and the posterior edge of the tuft to the necessary hoofs, and this too, is just as consistent and invariable on every individual as on our elk. Again, I find the extraordinary fact that on the red deer the dunnal gland is entirely wanting, which is also the case with our elk, and it is the only American species, at least, on which it is not conspicuously present.

I find many other points of similitude between our elk and its European cousin. If indeed they are not entitled to claim a closer relationship, with which, however, it is not necessary to trouble you now.

J. D. CATON.

× A HUNTING CAT.

NEW YORK, November 12th, 1874.

EDITOR FOREST AND STREAM.—

Your reference to hunting cats, in No. 14, reminds me of a very interesting feline in Henry French's Kenosha House, South Park Road, Colorado. His name is Webster; his color white, marked with gray, and he was originally a Thomas. On one occasion he brought in a chipmunk and a small bird, both at once, alive and unharmed. He wanted to tease them both, so after due consideration he let the squirrel go, played with the bird, and ate it. Then he caught the chipmunk and repeated the amusement. And he let the bird go first. It would, of course, have flown away. It sometimes plays with his mice, which his mistress confiscates for supper. At weathens, or when hungry, this cat invariably sits up erect like a prairie dog, with his forepaws hanging down.

W. A. COCKRIN.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
NEW YORK, Nov. 15, 1874.

Antelope received at Central Park Menagerie for the week ending November 14th, 1874:

- One Brazilian Tree Porcupine, *Cercopithecus pyrenhesiae*. Hab. Brazil. Presented by Mr. Wm. H. Baruch.
- One Red Fox, *Vulpes fulvus*. Presented by Mr. F. S. Webster.
- One Racoon, *Procyon lotor*. Presented by Mr. Lavallette.
- Two Boas, *Bon concolor*. W. A. COCKRIN.

THE SEA SERPENT.—A representative of FOREST AND STREAM went up to Hell Gate on Saturday to see the great sea serpent, whose capture had been reported in a morning paper. He records the result of his investigations as follows:—

EDITOR FOREST AND STREAM:—

The wonderful serpent discovered in the Ferry Slip at this place on Wednesday last, proves on investigation to be only a dead *Bon Coueriflor*, which had probably been thrown over from one of the many vessels passing through the Gate. It would have been impossible that such a snake could live any time in our waters at their present temperature.

F. BENNER.

RATHER SUSPICIOUS.—First Passenger: "Had pretty good sport?" Second Passenger: "No—very poor. Birds wild—rain in torrents—dogs no use. Only got fifty brace." First Passenger: "Make birds dear, won't it?" Second Passenger (off his guard): "You're right. I assure you I paid \$1 a brace all round this morning!"

In a Bog.—The landlord of the hotel at the foot of Ben Nevis told a story of an English tourist stumbling into a bog between the mountain and the inn, and sinking up to his armpits. In danger of his life, he called out to a tall Highlander who was passing by, "How can I get out of this?" To which the Scotchman replied: "I dinna think ye can," and coolly walked on.

Woodland, Lawn and Garden.

HOT BEDS AND COLD FRAMES.

WE have before us at this writing four letters from three different States inquiring about hot beds—how to make and manage them—and our answer to one will be found equally well suited to all.

If you would have early seedlings of either plants or flowers, you must take the necessary care to obtain them. The principal requisites for your frame will consist, in the first place, of an excavated bed or pit for the reception of your manure or fertilizer. The glass may be of any size you choose, providing you accommodate the same to your frame. After selecting a well drained situation, facing the South, you should set some cedar posts six feet above the ground in height, to which you will nail boards for a shelter against you, and to receive the manure, and protection can be found on the south side of a stable, or fence, or a brick wall, so much the better.

Now make your excavation or pit, accommodating it to the size heretofore determined upon. Drive down stakes, and board up the pit on sides and ends. The boards at the rear should be eighteen inches, and those at the front twelve inches above the surface of the ground. Your pit is now in condition to receive the manure, which should be composed from good stable manure, to make which you will turn the same over, throwing lightly into a heap such quantity as may be necessary for your bed. This may be done three or four times at intervals of two or three days, as may be somewhat determined by the temperature of the season, or the dryness of the manure, which, if very dry, should be wet with a little water. I have found it also best to prepare manure to be formed the same into a compact, conical heap, much like a cock of hay, and let it remain until it smokes well, and then turn it over into another heap of the same form. This gives a good heat, as it is termed. I now fill up the pit with this manure until it is even with the ground, or nearly so, treading the same firmly and evenly all over the bed. Then I add good, rich, light soil, well mellowed, six inches in depth, over the manure already placed in the pit, and place the glass sashes over the same.

You will find upon examination that it will not be a long time before your heat will rise to over one hundred degrees. Now carefully watch your bed, and when the heat has fallen, as it will, to ninety-five, you may with safety plant your seeds. You will need to place a thermometer in front of the bed, to indicate the temperature of the manure. The temperature of the heat, as much will depend upon the right temperature in growing good plants, and it will be found very easy for you to do after a few trials. Besides many kinds of flower seeds, you may sow the seeds of the tomato, egg plant, cabbage, pepper, cucumber, melon, etc.

In a future paper we shall tell you how to care for your seedlings and plants, how to conduct them through the different stages, from raising to plant perfection, and much other information necessary to be known by successful plant cultivators.

COLD FRAMES.—A properly arranged cold frame is not made quite as efficient as a hot bed, after you have used it for the security of your plants from frosts during the severity of the winter months. I have made them sufficiently large to utilize a hot bed and cold frame in one sash. Make your frame as you have for your hot bed, with a good exposure to sun, and place your sash over the portion you wish to use for plant-growing over good, well prepared soil. You will find it necessary to keep your glasses over the same all day, particularly in the afternoon, before the heat declines. At night cover the glass with mats, etc. By so doing, you will easily have at hand a bed of warm soil, into which you can put seeds that germinate quickly, and it will be found of great benefit to all such as would hurry up the backward seeds. You will air and treat your cold plants much like your hot bed plants, only one fact you must bear in mind—keep out the frost. In one portion of your cold frame you can place on the bottom six inches of coal ashes, and upon these ashes you can set your plants, which have been covered with mats, and keeping out cold weather you will keep your plants in good condition.

OLLIFOD QUILL.

RENOVATING OLD ORCHARDS.—In many old orchards the ground needs more renovating than the trees. During the war an orchard in one of our States was occupied and used as a camping ground for a long period. This orchard, formerly a good one, was old and unfruitful. We recommended deep ploughing, root, and top turning, and good manuring, with careful attention to the trees. Two years ago another orchard in the same State was in a similar condition. In pruning, cover all large cuts with grafting wax. The amount of pruning will always depend upon the condition of your trees. If much old dead wood remains on the trees remove it, cutting it off smoothly with a sharp saw. Never use a dull saw in pruning trees. Remove, also, all the old limbs that cross each other, or rub one against the other. Leave the tops open and light. Much depends upon the soil, and in some cases, the treatment of old orchards, apply a good quantity of stable manure. Lime and wood ashes, applied before the manure around the trees, and well dug in, will be found of great benefit, and will stimulate the growth. Do not in any case allow weeds, or briars, or snickers of any kind to accumulate around your trees, or in the corners or around the walls of your orchard. It is, strictly, a good rule to have a good farm.

Sheep grazing in one of our States has been deemed beneficial to orchards, but we do not agree with the idea, believing that sheep do no good to an orchard, particularly in Autumn. They will browse the trees as well as shrubs. We admit the droppings are as good as a fertilizer; but we prefer the droppings without the sheep. Sheep will often gnaw the bark of orchard trees. We have thus given you the careful result of our experience in the treatment of old orchards, and our success has been entirely satisfactory.

OLLIFOD QUILL.

ANSWERS TO CORRESPONDENTS.

B., of Illinois, writes to know what books he shall use to obtain a good knowledge of agriculture. We can recommend to your aid good works upon theoretical and practical cultivation of grasses, of rotations of crops, etc. Yet you must think, study, and bring forth fruits meet for the table. Of all men, the farmer should

be a cultivated man, and we know not why he should not be an intellectual man. To every intelligent farmer we need only point to the Hon. Marshall P. Wilder as to one who for many years has been known as the farmer, the scholar, and the finished gentleman. We say, therefore, the successful farmer must do his own thinking, as well as improving his land. While the great principles of agriculture remain the same nearly all over the United States, the modes of applying agricultural chemistry may differ. With different States come different modifications. Illinois and Wisconsin give us one soil, and New York and New Hampshire another; Vermont and Massachusetts their own peculiar features, and all in a certain manner of making the earth yield her most generous increase. Last Summer I was recommending a gentleman who had a very large crop of weeds upon his ground, and five boys, from ten to seventeen years of age, living in the sun, to set these weeds the other end up. "Well," said he, "I am going to do so; the crop will not be much (the crop was potatoes); I think I shall turn the hogs in and let them root." You had better turn your boys in and let them pull." We were reply; "these weeds will root out all your crop if you do not do so." I pointed to his neighbor's ground, a fine field of thrifty potatoes adjoining his own. I said not a word, only pointed. His answer was "Oh, Tom has got weeds on the brain." Now if a man has this disease on the brain, the sooner he goes into his field and goes to work the sooner he will get well of it. OLLIFOD QUILL.

MILTON, Gloucester, Mass.—How shall I plant and take care of the evergreen seeds?

The reason of your repeated failures, and which others will explain to you if you wish, we think, is your own lack of necessary care rather than that of the seeds. Evergreen seeds generally germinate well. It is true that they require a peculiar kind of treatment to insure success in raising a fair crop. Where a very large quantity is not desired, I have found the following among the best means of securing a good crop of evergreens. This plan may be extended from a small bed to a larger one, or three or four may be used, as necessary. Dig a trench in your grounds as though you would lay out a hot bed. Fill with carefully prepared light soil, and cover this frame with common hot bed sash. Raise this frame by placing half a brick under each corner, raising it three inches from the surface. This will give you a moist temperature, without which it is useless to think of raising evergreens from the seed. You will be quite careful to protect your seedlings from the frost, and to shade them from the sun, until you are able to see that your bed has a free, clear circulation of air through the plants. I have found this treatment to be the best I ever used, and I have treated imported plants of the Norway spruce, of four inches in height, after a similar plan, with some slight modifications, with perfect success. OLLIFOD QUILL.

J. J. Shelby, Ill.—Do not be at all afraid of the mining operations of your "thousands of moles." It matters not if they do run their underground trenches all over your prairie plats, as they do for your good, and for the preservation of the very grass roots you think they eat. The common moles are of the kind of which I have spoken before. So far from its being hurtful to the products of the earth, it is one of their most effective protectors, for it is in pursuit of earth grubs of every kind. This daily and nightly mining is for these insects, which are found in such great numbers at the roots of many of our grass fields. It is the presence and action of myriads of cut worms, etc., that cause grass in many fields to die and turn white at the top. The moles eat these little worms whenever they can gain a ready access to them. Let them pursue their labors unmolested, for they are among the good geni of the garden. It is stated upon good authority that a single mole devours annually 20,000 grubs, and it is sure death upon every earth worm. It is one of the most voracious of earth burrowing animals, and is always hungry. Take every care to preserve your moles. Do not trap or hunt them with dogs, but let them live to kill the insects. OLLIFOD QUILL.

W. S., of Virginia.—What is the name and nature of the two insects I mention in this paper? I find them quite numerous in a small grove of very tall pine trees, many of the leaves of the tops of these trees being entirely eaten off by them, and the cuttings appear like saw dust. I have never seen them before in any of our Virginia or Southern pines. They are new comers here.

We have rarely seen this insect in our own section of country, and what there are of them specially perish from the visitation of different kinds of birds, who eagerly seek them as food. One of them is the *Phalena*, the night moth of the pine woods, and justly classed among the most destructive ravagers of the forests. The other is the *Bombix manacha*, which are bad insects when found in myriads, as they are in the great pine forests of Germany, where they cause a general turning out of the peasant husbandmen to destroy them. They are so numerous, and so terribly destructive, at times in Germany that they have burnt whole acres of large pine forests for the sole purpose of destroying them. When in the caterpillar state they multiply with exceeding rapidity, and make terrible havoc among the pines. They are not very plenty as yet in America. OLLIFOD QUILL.

LICK ON CATTLE.—The *North British Agriculturist*, in an article on vermin on cattle, gives some suggestions as to how to treat the pest. It would take time by the foretop, and at the slightest indication of their presence make a prompt examination, and if lice are detected apply a remedy. It is useless to await until the unfortunate wretch has removed the hair from his own skin, and spread his tormentors among his fellows. The pediculi, or lice, of which almost every animal has its own peculiar species, are not difficult to kill. A good scrubbing with soft soap and water will remove them. Linsced, or any other oil, prevents their migrating, and destroys them; but the efficiency of the oil is increased when to every pint is added one ounce of impure carbolic acid, or of Burnett's zinc chloro-ride solution. Decoctions of tobacco and stavesacre are also potent vermin, an ounce to the pint of water being generally used. Where the animals have been much infested, a second dressing should take place about a week after the first, and brushing, cleanliness, and usually a more liberal dietry also enjoyed.

THE COCOANUT TREE ONCE MORE.

PHILADELPHIA, November 12th, 1874.

EDITOR FOREST AND STREAM:

The mistake regarding the cocoanut tree, made in your Answers to Correspondents, is easily explained as an oversight. The description given answers perfectly, if not to the nuttree of the cocoanut, at least of the conoa tree. The latter resembles a cherry tree very much in shape and foliage; its blossom of a dingy, light yellow color, is not handsomely shaped nor fragrant, but appears at almost any season of the year, and what is quite strange, sometimes breaks through the bark of the trunk a short distance from the ground. The fruit which yields us the luxury of chocolate for our breakfast table, resembles in shape, size and color, our manik melon; the heas of which the chocolate is made lay imbedded in a white, oily pulp, resembling fresh lard, arranged around a central seeding like the seeds of the melon. The heas are freed of the pulp by washing in water, and dried in the sun, when they are ready for the market. The shell of the cocoa bean makes, in the shape of cocoa tea, a very wholesome morning drink for persons of feeble digestion. Another preparation of the fruit of this tree is cocoa butter, a well known remedy for sore eyes, as well as some diseases of the skin. The wood of the cocoa tree, although very hard, is not used for other purposes than fuel.

The conoa palm, or cocoanut tree, is correctly described by "H. W. H.," but I disagree with that correspondent when he calls the tree "anything but handsome," although *de gustibus, you know*. The tall, slender shaft, with its crown of some ten or twelve feet long, feathery leaves of brilliant green, is certainly a pleasant sight to the traveler in the tropics; a group of them appears like an antique temple, with lofty, graceful columns, and is to the weary wanderer the promise of a cool resting-place and delicious refreshment, while the constant motion of the arched, plumelike leaves, gives the sensation of a soft breeze, and their low whippers invite to slumber. Both trees—the cocoa tree, as well as the cocoa palm—are denizens of the tropic and semi-tropic zones, and the former especially is found wherever the Spaniards have got at least a temporary hold on the land. I have no doubt, therefore, that "T. T. G." has the best chance in the world to inform himself, by a trip to Lower California, of the nature and usefulness of both the palm yielding the cocoanut, and the true furnishing one of the most nutritious articles of the breakfast table. A. V. L.

The Kennel.

DOG BREAKING.—No. 5.

WHEN we have perfectly broken our setter or pointer to the charge by verbal command, raising of the hand, and to dropping to shot, which we advise by all means if the trainer has the time and patience to teach, and the dog is obedient to the order, "toho," we desire for the first day or two when he is taken into the field on game, to have the companionship of a fellow sportsman with a thoroughly broken and experienced setter or pointer. Attach a long cord to the collar of your beginner, say fifteen yards in length, and allow it to trail after him. He will naturally watch the movements of the old dog, and when game is seen will be eager and perhaps headstrong. When the old dog draws on the birds and points, the youngster may of his own accord back at once; if he does not, endeavor to be near enough to have command of him by the cord and check him with a sharp jerk saying, "toho," holding him firmly. Have your companion flush the bird, (we advise that the quail should be the first bird upon which he is hunted), and as they rise, and at the report of the gun jerk the cord again smartly, say, charge, and make him drop. If a bird has been killed and you have taught retrieving indoors, command him to fetch, after *insisting* upon his keeping the down charge for a minute or so. He may not be successful in finding it for a time, if so, assist him in searching for it, saying continually, fetch. If you discover the bird before he does, call him to you and have him lift it from the ground, and after you take it from him reward him by notice and caress. By this plan, repeated for several times, you gradually impress upon your dog the utility of that which has been insisted of him before taking him into the field.

During the day you will no doubt have many opportunities of confirming in the puppy the backing of another dog, using "toho" always as the command to stop, punishing with the cord for disobedience and non-observance of the order. A puppy that has the example set him in ranging by a quick dog is wonderfully improved in speed always, but we are opposed to a continued companionship of the young and old dog, for fear the beginner will be satisfied with only backing, and finally grow into a lack of independence when used in the field with other dogs. Therefore after you have succeeded in merging the lessons taught at home into actual obedience and utility on game, hunt him the balance of the first season alone.

At different times while he is ranging in the field, move in the direction you wish him to take, waving your hand towards it also, then suddenly take an opposite course, waving that way also. In this manner you can soon teach him that he must go to whichever portion of the field you desire, by motion of your hand.

You cannot be too particular in the first season on game in insisting upon absolute obedience. Give your dog an inch and he will take advantage of a mile, and he always looking for an opportunity to have his own way. Never allow him to flush for you; it will grow upon him and when he has a chance will do it while out of your sight.

We recommended in a former paper the taking of your dog to a pigeon match in order to perfect him in retrieving. This we have done with advantage, but unless great care is observed it will do more harm than good, and it must by no means be repeated, nor should it be attempted unless he has been worked on game.

—A hound belonging to one Scudder (last name) was tied to the end of a rear car on a Canada Southern train during the stop at Wyandotte. His owner bet that the dog would keep up with the train and come into Detroit all right; and he did, not being pulled a foot of the way. Was it a slow train or a fast dog?

SORE EYES IN DOGS.—After hunting setters and pointers in countries which abound in Indian grass, their eyes become affected and inflamed on account of the small particles of fuzz and seed which drop from the tops and fall into them, causing an irritation which if not attended to is often very difficult to allay.

On returning from a day's hunt in such localities it is well to wash the eyes of your dog with luke warm water and castile soap. This little attention may save you an immense amount of trouble.

We know of a setter whose eyes from this neglect are suffering from such an inflammation that has now grown to be chronic. An application of a weak solution of nitrate of silver, or acetate of lead morning and evening will remedy, when the eyes are greatly affected.

ENGLISH GREYHOUNDS IN AMERICA.—Our readers may not be aware that the coursing of the Western hare, or what is called the jackass rabbit, by greyhounds, is fast becoming a favorite amusement with our army officers located at frontier posts, especially in Texas, where ground well adapted to the sport is couventant.

We learn that shortly after the civil war a party of English sportsmen visited Texas with a retinue of servants in charge of a number of setters, pointers, retrievers and greyhounds, and during their stay in the country were hospitably entertained by some of our army officers at one of the forts, who before the departure of the sportsmen home ward were presented with the greyhounds they had brought with them. The breed has been carefully kept up, and many courses are now run in proper season, giving entertainment to the officers while not engaged in the more exciting and dangerous sport of Indian hunting.

We doubt not that the Scottish stag hound might also give great sport in running down and bringing to bay the larger game of the West, and furnish additional amusement to our representatives of the army while in their border homes.

TALLY-HO!

[From Our Own Correspondent.]

MEMPHIS, Tenn., November 14, 1874.

SPORTSMEN are just now reaping rich harvests with the dog and gun, as well as the rod, both in this State and in Arkansas, where the prairies abound with game, such as chickens and quail, and plenty of deer can be found in the cane, while the lakes abound with game fish, and the bayous and river bottom afford ample amusement for those who are fond of burning powder behind huge flocks of ducks, mallards, teal, and almost every other known species, as well as wild geese, which have just begun their Southward flight. But for the warm weather that has prevailed for the past week, the shores of the Mississippi would have been literally "lined" with the "honkers." Another sport enjoyed here by a few is fox chasing, and hardly a week passes but that a chase is gotten up and participated in by about a dozen worthies, who when they cannot get a trail to start on in the country, "import" their stock from the middle portion of the State or from Mississippi, and after being turned loose, generally enjoy a chase of from three to seven hours, always returning with their game, although wearied by the labor. In this connection, I might state that in the way of fox hounds, there are half a dozen packs owned here in the city, one pack of which, owned by Mr. J. W. Alley, are said to be the finest and keenest in the State; as an illustration of which fact I need only state that on a recent chase one or two of them took a trail known to be eighteen hours' old, and followed it, making a day of splendid sport for their followers. Generally, however, as I mentioned before, the "birds" are imported from the country districts, where they are trapped at the den; and cost laid down here about five dollars each, and at that rate one man living at Centreville, Hickman county, proposes to supply the hunters with all they desire to chase, and in his letter guarantees each and every one of his dogs and live! As yet the chases have not resulted in any broken limbs or heads to the hunters, from the fact that fences are not over five or six miles high, and ditches not over four feet wide, and in nearly all cases there is a convenient gate or pair of bars by the former, and a neat little bridge to the latter, and then you know the horses are not yet in this section four clusers jumping; but in due course of time the amateur ditch or an eight rail fence, and likely will then appreciate a first-class chase more fully perhaps than did the guest of Davy Crockett, when the latter individual had his abode in Middle Tennessee. Years ago, as the story goes, he invited an eastern gentleman to visit him, and upon his arrival could think of no better method of entertainment than to give him a fox chase; while, as he did, his pack soon started a lively red animal some distance from the hunters, who took their stand upon a hill and waited, the dogs in the meantime coming nearer and nearer until their loud baying could be plainly heard, when old Davy, almost wild with excitement, asked his guest if that wasn't splendid music—meaning the baying of the hounds—and getting no reply, repeated the question, when his guest placed his hand to the back of his ear, and listening attentively, he murmured, declared that he couldn't hear any music for the noise the dogs made! Davy was satisfied—and so will our hunters be.

IN ARTICULO MORITIS.—We regret to learn from a correspondent of the following afflictive dispensation:—

NEW YORK, Nov. 13, 1874.

EDITOR FOREST AND STREAM:

Mr. Reat, the owner of the Beschland, which took the prize at the Mincola Bench Show, has had the fortune to lose him. After killing eleven rabbits with his on the 9th instant, in Morris County, N. J., he placed him in the freight room at the depot for safe keeping, where he accidentally found some rat poison, from the effects of which he died on Thursday the 12th. A. J. H.

Shot Gun and Rifle.

GAME IN SEASON FOR NOVEMBER.

Moone, <i>Alcea Malchba.</i>	Snake and Bay Birds, Willets,
Elk or Wapiti, <i>Cervus Canadensis.</i>	Carlson, <i>Turdus</i> <i>Thryothorus.</i>
Hares, brown and grey.	Red Fox, <i>Citellus Tripartitus.</i>
Wild Turkey, <i>Meleagris gallopavo.</i>	Squirrels, red black and grey.
Woodcock, <i>Sceloporus gutturosa.</i>	Quail, <i>Oryx Tetrax.</i>
Blue Jay, <i>Cyanus cristatus.</i>	Wild Geese, <i>Branta</i> , <i>Capila.</i>
Wild Pigeons.	Wild Duck, Geese, Brant, &c.

Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that we were to attempt to particularize we could do no less than publish these entire sections first relative to the State of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to review themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

GAME IN MAHET.—The game market is fairly stocked at present, and some species of game are, as a consequence, cheaper than they were a week or two ago. The first wild turkeys of the season have come from Illinois, but they are not yet abundant enough to make them fit for the tables of any but those who have the means to pay for such *bonnes bottles*. Ruffed grouse is one of the most common birds on the table, and that retails at \$1 25 per brace. All received are in good condition. It hails principally from Connecticut, New York, and Illinois. Prairie chickens are rather scarce, but all received are in prime condition, fat and succulent. They retail at \$1 50 per brace. Quails are becoming more numerous, and as a sequence have descended from \$4 50 to \$3 75 per dozen. The West is the largest shipper. Ducks are quite abundant and hail from nearly all portions of the country, but the best are those found along the Chesapeake Bay and the waters in its vicinity, and they bring a higher price than those from any other section. Canvas backs retail at \$3 50 per brace, red heads at \$1 50, black heads at \$1 and butter balls at seventy-five cents. Venison is scarce yet, so brings twenty-five cents per pound. Minnesota is the largest shipper. Canadian hens which are very abundant, bring \$1 per brace, and Connecticut rabbits fifty cents. Wild pigeons stall fed are worth \$3 per dozen, while flight pigeons bring only \$2 25, but this difference is more than compensated for by the excellent condition of the former. Grey squirrels are so cheap that they can be purchased for five cents each, and robins bring only \$1 per dozen. The latter are used principally by invalids, and occasionally they decorate a hotel table.

LONG ISLAND.—The following information respecting one of the best duck-shooting regions on Long Island will be valued by our readers. We have more than once called attention to this locality:

Good Ground, Nov. 18th.—On account of the very warm weather during October and part of November, the ducks have not been killed in the same abundance as heretofore during that time of the year, but now the cool weather has set in, and the duck shooting is good. We claim to have the best duck and goose shooting at this place of any on the island, and we have every reason for the belief that Shinn cock Bay is the first shooting ground for birds after they leave their breeding place. The geese have made their appearance, and gentlemen can get geese or ducks at this place any day when the weather is favorable for shooting. We have gentlemen from all parts of the country. We have had numbers from Boston that come here to get game birds, such as ducks, redheads, &c. Our shooting is best during the cool weather, mostly from points and shore. The cooler the weather the more the birds come in under the land for a lee. I presume we have as good outfits for the accommodation of gentlemen as can be found at any shooting place. When we go for geese we use live stools invariably, as dead stools are of not much account at the present time. We have about two hundred live geese that will use as decoys. Our guides are experienced men, and will make everything pleasant for gentlemen visiting the place. We have had numbers of gentlemen from New York and Brooklyn, and not one of them has left this place without a big bag of birds, and many times more than they wish to take away with them. If you wish a list of the number of birds killed at this place, I can forward it to you at any time. Gentlemen visiting the Bay View House will be sure and buy tickets for Good Ground station, where they will find stage for the House. The hotel affords good accommodation. Address Mr. V. B. Squires, Good Ground P. O.

MAINE.—*Culivis*, Nov. 9th.—You ask your correspondents about woodcock; I would say, they have been very scarce. I commenced to shoot some last of July, and when I had shot forty-six, I had only found three birds of this season. After the wing quills got hard, I could not tell, certainly, the young from the old; an sure very few young were raised about here this season. Snipe and ruffed grouse breed later and have been abundant. G. A. B.

Late letters from Moosehead Lake, Me., state that partridges are as thick now as black flies in August.

MASSACHUSETTS.—*Shinn*, Nov. 14.—Cover shooting this season has been rather poor. Woodcock are scarce; ruffed grouse, partridges are found scatteringly; rail have been quite plenty, and held on late. Quail shooting is now about all that is left, and is very good, though the dry weather makes it bad for the dogs. R. L. N.

RHODE ISLAND.—Canvas-back ducks are getting more abundant, so they sell now for \$3 per brace.

Wild geese are passing over the State on their way to their Southern home, so sportsmen are reaping a harvest. Thirteen covies rewarded one man in Fayette county for one night's labor last week. The animals must be very abundant.

PENNSYLVANIA.—According to a Pittsburgh newspaper, the grey squirrels in the Alleghany Valley are engaged in a general migration. They draw their recruits from all points, and may be seen daily swimming the river in large numbers and pursuing an easterly course. Old farmers

say that such a migration has not taken place before since 1816, and regard it as the forerunner of an extremely severe winter.

Messrs. Dimars, Birdseye, and another gentleman visited Blooming Grove Park last week, and bagged twenty brace of ruffed grouse.

A Reading hunter recently returned from a week's gunning in Bedford county with one wild turkey, one coon, one large black duck, two long-billed snipe, three woodcocks, fourteen pheasants, twenty-six wild pigeons, and twenty-eight gray squirrels.

Y. Hamburg, Berks County, Pa., Nov. 12.—Partridges are abundant, but the strict laws in vogue prevent their slaughter. Cotton tails are being reduced considerably by the many sportsmen of this section. Squirrels are scarce, and this is attributed to the wholesale slaughter of former seasons. Other game scarce also. O. D. S.

MARYLAND.—Washington, D. C., Nov. 12th.—Three friends shooting last week, one near Sparrowsville, Md., about twelve miles from Washington, killed 11 rabbits, 6 partridges, 3 grouse squirrels. The other two guns near Broad Creek, on Potomac, killed 38 partridges. Another on White Oak Bar, between Alexandria and Washington, killed 13 ducks, black and red heads. A few crows hawks seen in lower river, but still scarce. Rabbits and partridges very plentiful. L. A. B.

—Quail are plentiful in Delaware and Maryland, but owing to the present Autumn drought, the birds keep almost entirely near the water-courses, and as there has been no rain, the coveys are not contented to seek the stubbles for food. Hence complaints are heard on all sides of the difficulty dogs have had in finding or scenting birds. We predict that after a rain and some cool weather, more satisfactory reports will reach us. The Autumn flight of snipe has just arrived in the section of the country near Dover and Milford, Delaware, and we notice not a few woodcocks in the bays from these regions. As a rule, the land owners of this country prohibit promiscuous shooting on their plantations, reserving their coveys for their friends only. Wild fowls of all varieties are plentiful in the waters of Delaware and Maryland, and big guns are cracking continually.

NORTH CAROLINA.—Judge Tufts, C. P. Keeler, and B. F. Ricker, Esqs., of Boston, have gone to their headquarters at Monkey Isle, Currituck Sound, on their annual fall shoot, where they always meet with success in inducing large numbers of water fowl to make a permanent stop in waters to their leased invitations. N. Curtis, Esq., a member of the club, will soon join them. We hope to be advised of their experiences and success.

IOWA.—Messrs. Wilmarth, Taylor and Brice, of Chicago, report very fine duck shooting near West Liberty, Iowa. The marsh and lake are almost covered with the different varieties of water fowl.

WISCONSIN.—E. O. Dory, at Puckaway Lake, Wisconsin, reports much better shooting since the cold snap, and birds not as wild, many hunters having left during the warm weather.

ILLINOIS.—Chicago, November 12.—The cold weather of the last few days has made duck shooting much better than at any time this year in this vicinity. Parties have gone in nearly every direction, and are anticipating "good times." Most of the birds in market are very fat and large. Quail numbers very numerous in the State. The autumn season, as usual, has been over-run so far this season, and the weather having been so pleasant, very few have made their usual large scores.

MISSISSIPPI.—Corinth, Nov. 13.—Since my last I have been after Bob White once, with Duane. The birds did well, and the dogs were fearfully headstrong and unmanageable, as some of them had not been in the field since last season. However, we managed by heavy doses of dog whip and some talk to get them in some sort of subjection, and although the wind was blowing almost a gale, we brought to bag two dozen out of three small coveys, and were in the field only three hours. Birds are very scarce, and as there is no "mast" on the pin oaks, we will have but few ducks. Yours, GUXON.

LOUISIANA.—New Orleans, Nov. 10.—A party of choice sportsmen, amateur sportsmen with the rod and gun, visited Chief Mentour on Sunday and enjoyed a splendid day's sport. Dividing into two squads, they separated, one to try the water and the other the feeding grounds of the wild game. The fishermen, first in order, secured ninety-three large crabs, weighing over ten pounds each, besides a number of redfish and flounders. The hunters were equally successful, one of the number bagging thirty-seven ducks. During their stay they were well cared for by Nick Shaneville, at the New Club House, who not only supplied them with boats, but provided well for the inner man.—Piscivore.

FLORIDA, New Smyrna, Nov. 2d.—The thermometer this morning 59°. Ducks coming in clouds. We shall soon have sport.—G. J.

CANADA.—A party of five Canadian gentlemen killed six deer and one hundred and fifty partridges one day last week. A large moose was recently shot in Halliburton. Deer and game of all descriptions are reported as being very plentiful in this vicinity.

CANADA.—Toronto, Nov. 14.—Our "Gun Club" held their annual meeting at their club room on Yonge street, on Tuesday evening last. The following are the officers for the ensuing year: Clifton Shears, President; George Crawford, Vice President; Wm. McNabb, Secretary and Treasurer; F. H. Marsh, W. H. S. Coen, G. F. Shears, Executive Committee. Had a lively "shoot" this evening. A member of our club, Mr. James, bagged he killed fifty pigeons in an hour from a plunge trap, and to-day tested the "say" of ye Niurod. Result: fifty-one birds killed and fifty-nine shot at in twenty-one minutes; rather rapid work, and first-class shooting. After the fifty bird test, eight of the members present at the match shot at five birds each, and the following is the result:

Table with 3 columns: Name, Score, Total. Includes Mr. Marsh (1110), Mr. White (0111), Mr. Moore (1110), Mr. Crawford (1110).

While blowing strong and quite cold, and birds went like the wind. The club are in a most prosperous condition, and will hold their usual weekly shoots during the winter, snw birds and pigeons. I have been so circumstanced this Fall that I have not had my usual trip to the Plains, and

the shooting of most every description has been very poor so far, with the one exception of quail, which are very abundant. CLIFTON SNEARS, President.

—Mr. J. K. Miller, of the Irish Team, recently returned from the Plains, and reports plenty of game of all kinds. He killed a few buffalo, deer, &c. Lord Massereene and Miller have been hunting game sport in Chicago during the last few days under the escort of Messrs. Sherman, Thomas, Abhey, Foley, and others.

—John Ripby, Esq., of Dublin, the celebrated muzzle loading rifle maker, has left with J. S. Conlin, at his shooting gallery, No. 930 Broadway, Lord Massereene's rifle, for examination or for sale. Those who wish to see a fine piece of workmanship will do well to give Conlin a call. This gallery has added to its many kinds of arms a Remington military rifle, 23 calibre, so that the National Guard will have an opportunity of practicing during the winter months, and improve themselves in the accuracy of their aim, and be prepared for Creedmore in the Spring.

—Our regular Chicago correspondent sends the following notes of pigeon matches, etc.:

Quite an interesting pigeon shoot was had at the Gun Club grounds, for the purpose of entertaining the distinguished visitor, J. K. Miller, of the Irish rifle company, who also participated in the sport. Appended is the score of the first match, shot at 20 yards rise, according to the English rules:

Table with 2 columns: Name, Score. Includes J. K. Miller (111011111-9), A. D. O'Neill (111111101-8), E. Thomas (110101011-8).

Another match was between Eddie Thomas and George Sherman, the latter shooting doubles to the former's singles. Thomas won by a single bird.

Afterward a sweepstakes was shot, most of those present taking part. Abe Kleiman came out first winner. It is proposed to hold matinees of this sort at Stagg's every Tuesday as long as the weather will admit.

At the regular monthly meeting of the Kennicott club, held last evening at No. 87 Washington street, it was decided to hold a club shoot for the handicapped medal as soon as the birds can be procured, and a committee was appointed to handpick the members.

WINTER FIELDS FOR SPORT.

It will be seen by the following correspondence that our friends in North Carolina have tendered to the readers of FOREST AND STREAM a very generous offer, which we doubt not some of them will be glad to accept.—

WELDON, N. C., November 5th, 1874.

EDITOR FOREST AND STREAM:—

We enclose a copy of a letter from Mr. Randolph, and recognizing the value of "printer's ink," send you a little information in regard to this section of the South. We have leased the old "Envy House" in this place, and knowing that the traveling public like, especially from the North, we are now prepared to accommodate them. We will take charge of our cooks as from New York City, and our servants will be public and attentive. To the sportsman we can offer many attractions, deer, turkey, quail and squirrels being abundant, and within a short distance of the town. Weldon is at the junction of four important railroads, and on the direct line to Florida. The Richmond, Petersburg, and Weldon, the Seaboard and Norfolk, from Norfolk to Weldon, the Wilmington and Weldon to Wilmington, and the Raleigh and Gaston railroads, connect here. Travelers leaving New York at 9 P. M. breakfast here at 9:30 next morning, and leaving New York at 9 P. M. take supper here the next evening at 6:30, and connect with the sleeping car for Savannah, Ga.

Pollock's Ferry is eighteen miles from Weldon, on the Roanoke River, with steamboat communication every other day. We will take charge of any party who wish to come for sport, and guarantee satisfaction in all cases. Will send competent cooks and servants whenever desired. Yours respectfully, MCLAURE & RUSSELL.

FOLLOWS FERRY, N. C., November 5th, 1874.

EDITOR FOREST AND STREAM:—

As it has been suggested to me that you have Northern friends who are fond of hunting, I enclose you a few acres of the privilege of 20,000 acres on either side of the river will be at your disposal.

We have an abundance of wild turkey, duck, and quail, and sometimes quail and pigeons. We have also an expert huntsman, with good dogs, who will accompany any party you may see fit to send down, free of charge. Good horses free, provided saddles and traps furnished. Yours respectfully, J. G. RANDOLPH.

SUMMER WOODCOCK SHOOTING, &C.

THE BETTONWOODS, November 24, 1874.

EDITOR FOREST AND STREAM:—

In the issue of Oct. 22nd you publish an article on the scarcity of that "so plus ultra" game bird—the woodcock—and the probable causes leading thereto, and the remedy—I, e., make the close season from Jan. 1st to Sep. 1st, or better yet, have a general State law passed prohibiting their being killed for two years, (five would be better).

The experience of the writer is that Summer woodcock shooting will surely and quickly make them scarce and finally exterminated, when one day the dogs came to a stand, handsomely backed by the others, when, having been ordered to "go on," up jumped a woodcock, which was speedily knocked down, and found to be a fine, full grown hen bird. This was followed by a stare and talk all round. What was the bird doing there? &c. It was in quite an open field of rag and smart weed, some two hundred yards from any brush, thicket, or timber of any kind, the nearest being full two hundred yards away, composed of chestnut and oak aprons. It was decided to hunt the field, thinking there might be more, but not finding others we concluded to try the chestnuts. The first dog on the ground (my old Count, who has since gone where all good and bad dogs go—peace to his ashes, for he was a good one) straightened, backed by the others, and then, as if by magic, he sprang up, and for two hours and a half we had everything our own way; then, as it was growing dusk, we started for home, arrived there, and upon counting heads found that we had killed seventeen and one-half brace of woodcock, twenty-one pair of quail, three teal ducks, and one grey squirrel. The following year we visited the same place and killed twelve brace. Again in '56 we killed five brace in '59 seven brace, '70, two and one-half brace; in '71, one single woodcock; over the same ground in '72, two brace.

Did not visit the locality in '73, but was speaking to a gentleman residing near there this past summer, and he informed the writer that since there was such a demand for Summer woodcock in the large cities, had been but few birds killed, and that the Atlantic coast, that there was a party of market sportsmen, who, as soon as the season was in fairly full, came there and swept everything in the shape of a woodcock before them, killing chertups just able to fly, as well as old birds; that one day they killed over thirty brace, a majority of which were brine not over

half grown. That was in 1870. That they again visited the locality in 1871 and killed eighteen brace. In '72 they again tried it, were warned off, and did not return. It is to be regretted that locality again they would be prosecuted for trespass.

The spot was not low, but slightly springy, and more open than otherwise, in some places quite rocky, but mostly covered to a depth of five or six inches with leaves from the chestnuts and oaks. I intend visiting the ground to-morrow, and will in a future letter inform you of the result. "Nox."

Answers To Correspondents.

We shall endeavor in this department to impart and hope to receive such information as may be of service to amateur and professional sportsmen. We will cheerfully answer all reasonable questions that fall within the scope of this paper, designating letters for good handling, telling, out trapping, and giving advice and instructions as to outfits, implements, routes, distances, seasons, expenses, remedies, trials, species, prevailing winds, and other matters. Letters of a craft will receive attention. Anonymous Communications not Noticed.

E. K. Taunton.—The best way to get a good dog is to advertise for one in our columns.

B. W. Fitzburg.—Read Answers to Correspondents in the last two numbers of FOREST AND STREAM, and you will find recipes for curing your dog's eyes.

A. H. Amington.—Your reason for dogs not being able to scent the coveys is right. The cause is self-evident. 2. The probability is in favor of your dog recovering his normal condition.

E. B. M. New Haven.—The makers of the Winchester cartridge claim that the proof charge for their shells is 12 drachms powder and 2 oz. bullet, and warrant the soundness of their shells. They affirm that they never have a shell burst.

H. C. Cambridge.—Where can one get the best partridge (quail) shoot, in North Carolina in December, and when the best duck shooting is at that time? Answer:—In abundance around Newbern and Norfolk and Currituck Sound. What game gun had one better take? Ans. Ten here.

G. W. B. Worcester.—The Ditto Bassett is but little known in this country specifically. The Dandio Himmason is one of the most celebrated breeds of terriers. Some assert that it is a product of the Scotch terrier and the bull terrier, and others hold that its extraction arises from the above terrier and the Walsh harrier.

A. A. M. Putnam, Conn.—Do the eggs of toads, as of frogs, when hatched, produce indolent, or perfectly formed toads? Ans. The development of the toad is much like that of the frog, except that the eggs are not laid in masses, but in long strings, containing a double series of eggs placed alternately. The reptiles which are smaller and earlier than the frog larvae do not assume their perfect form until August or September.

C. H. C. New York.—I have a 25 cent 10 bore Remington shot gun made by G. & W. S. Wood, and would like to profit by your experience in loading, sizes of wads, and arrangement of same, shot, powder, &c. Also as to whether there is any good locality for shooting within fifty miles of here? Ans. We use different charges of powder and shot for different species of game. For a general answer, see last three numbers of FOREST AND STREAM. 2. Yes, in Ulster, Sullivan, and Delaware counties.

J. M. E. Elmira.—Will you give me size and description of targets used at Elmira for 200 and 500 yards? Ans. The targets at Elmira are made of heavy slabs of cast iron, 2 x 6 feet, which are bolted together to form the requisite size; two slabs making the target used up to 200 yards; three that used up to 600 yards, and six that used over that distance. Each target has a hubbsey and centre, and the remainder is called the outer.

Belmont, Mass.—Can you give me any information concerning the breeding of the gray squirrel in cages, for I have had them from two up to six, but could not get any young from them? Ans. Separate them into pairs, keep in separate wire cages, the larger the better, and provide them with curled hair, cotton wool, hay, and other material for making nests. The place for the nest should be out of sight, with an aperture large enough to admit but one squirrel at a time. Keep cage clean and feed liberally, but not abundantly.

S. S. S. New York.—I have a young dog, Newfoundland, which I am just learning to retrieve; has never been in the water; now about nine months old. I am told it will give him the mange to send him in cold weather. Is this so? Ans. Have never heard such a statement before. It may chill him and lead to sickness. 2. Why were the Creedmore targets made square instead of circular? Ans. We cannot tell, each target was stamped at Wimbledon some time ago. Is not shot No. 2 in the enclosed diagram better entitled to count than No. 1? Ans. It is; but not according to the Creedmore rules, for one is a centre and the other an outlier. This mistake arises from the form of the targets.

ENGLAND.—Can you give me the name of a book telling when game can be shot in the different seasons of the year? Ans. Not the nearest approach to it is the Table of Close Seasons published by FOREST AND STREAM Company. 2. Is there any volunteer company in New York, which any one, not being a citizen, can join? Ans. Several. 3. Is the Romington rifle the best for a hunter to use? Ans. It is hard to beat. 4. Can you inform me where I can buy buckskin suits? Ans. O. Field, 739 Broadway. 5. Are there any woods in New York, where I can shoot for a few hours' shooting can be had? Ans. Yes; at Fishling, and further down Long Island.

Palmetto.—Of whom shall I inquire about securing passage to Florida by sailing vessel, and what would the fare be, say to New Smyrna? Ans. Apply to Yas Brant & Bro., shipping merchants, 75 South street, Fair, \$15.

Philadelphia.—Please make room for this in your column of Answers to Correspondents. Do you know of any good shooting locality on the line of the Philadelphia and Trenton Railroad? Ans. There is no shooting of any consequence on the line of the Philadelphia and Trenton Railroad.

Elkton.—Will you favor us by answering the following (through your valuable paper): What is the fastest time on record made by steamships from New York to Queenstown, and name the steamer? Ans. The quickest steamship passage ever made from Queenstown to New York was in May, 1873, in 7 days, 15 hours and 55 minutes, by the White Star steamer Adriatic; from New York to Queenstown, White Star steamer Baltic, in January, 1874, made the trip in 7 days, 30 hours and 9 minutes; Imman steamer City of Brussels made the same trip in December, 1869, in 7 days, 20 hours and 10 minutes.

—I would like to know whether, if a scamp pup picked out my private property, have I not a legal right to poison it, so as to remove all the fish, and then restock it? Ans. We do not think a prosecution could be sustained. 2. If so, what substance would entail the least after effects? Would it do to put in lime and afterward neutralize the same with its equivalent of sulphuric acid, and would the resulting gypsum injure the trout, &c., on their subsequent return? Ans. The usual and best method is to restock and most efficacious way is to lime the pond.

Skillery, Providence.—A complete cooking outfit should have the following utensils. Tin plates, cups and spoons, a little bowl for turning fish, chops, pancakes, and doughboys, copper camp kettles lined with tin made to fit inside each other, an ax, hatchet, spade, fire-irons, knives and forks, coffee steamer. Trivets, pans, small Dutch oven, if camped near the seashore, a clam hole will be found useful. The man is the most essential article of all. It will bake bread and leams, and roast meat and fish, as a frying pan it cannot be beaten. The pot being thick, keeps a more steady heat, thus preventing things from burning, and is far superior to the ordinary frying pan. To bake with an oven take a specially full of hot coals, and put them in a fire box, to hold them in the lid. Set the oven over them, and cover the top of it with hot coals. Occasionally lift the cover with a sharp stick put through the handle of the lid, to prevent things from burning. Increase the heat of the oven when needed by adding new coals from the camp fire.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, THE PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

(POST OFFICE BOX 2832.)
126 SOUTH THIRD STREET, PHILADELPHIA,
COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly In Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tackle," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. When advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, NOVEMBER 19, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted. All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentleman sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and confidence of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will endeavor to do depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost. Advertisements should be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Managing Editor. WILLIAM C. HARRIS, Business Manager.

INTERNATIONAL COURTESIES.

AN English exchange devotes a column of its space to prove that international contests for supremacy in physical exercises do not produce kindly feelings, and that they accomplish nothing more than to suppress jealousy for a brief period. It cites for proof of this premises the matches between Americans and Englishmen, and those between the Au-Italians and a cricket "team" from the Motherland. Making a general deduction from a particular assertion; is not very logical; nor will the comparisons made prove the reverse of the opinion so prevalent, that pleasant meetings between representatives of different nations are productive of much good, and cause the people to be attracted toward each other by their sympathy with the contestants.

So far as England alone is concerned, this argument might hold good, for it is, we believe, an axiom that Americans were never received there with anything warmer than a frosty courtesy whenever they went there to test the prowess of her sons. The last visitors, the base ball players, did not receive even a decent welcome, so as a matter of course they are not ecstatic about the hospitality of their Saxon cousins.

Now the case is entirely different in the United States, for here we never permit those who cross the Atlantic to meet our men in honorable competition to return home with the opinion that we are either cold, churlish or inhospitable; so the consequence is that visitors leave us with feelings of regret, and ever after speak of our nation in the warmest terms of praise.

The distinguished Irish gentlemen who have returned to their own shores will certainly deny the assertion that these contests produce quarrels instead of courtesies, and bitter animosities instead of kindly feelings. When gallant men cross the sea to meet ours in a friendly struggle for honorable distinction, our code of ethics specifies that they should be treated with the distinction due to worthy and welcome guests, so we escape causes for being deemed inhospitable, by this action.

Neither are we constantly debating whether our visitors are of the pure *and sanguis* or not, and whether our dignity ought to be so flexible as to bend enough to recognize them so far as to extend them a kindly greeting. Not being handicapped by such ponderous importance as our English

kindred assume, we can afford to send our guests home in pleasant moods, and cause them to remember our country with pleasure; for their social status is lost to us in their skill or gallantry. If the English people would be more natural, and not assume so much rigid dignity that every bow and word is measured, they would find that those who visit their shores to engage in tournaments of strength or skill, would always remember them with pleasure; and the assumption that international contests are more a source of strife and hickering than ought else, could never be made with any shadow of truth, whereas, now, it can, so far as England alone is concerned, be proved to a certain extent.

THE DEER OF LONG ISLAND.

THE brief period, two weeks, in which deer may be lawfully hunted on Long Island, expired by limitation on the 15th instant. During all the open season, the pic and scrub oak barrens where the deer range, literally swarmed with hunters and dogs, so that from dawn till even tide each day the persecuted animals had no rest. The result of the battle, from the best data we have, shows about two dozen killed. The country where the deer run embraces a tract nearly central, about twenty-five miles long by six wide, extending from West of Babylon to a point East of Patchogue. In no part of the United States, except in the "knobs" of Pennsylvania and West Virginia, do the deer attain such great weight, 200 lbs. being the average for a full grown buck; and certainly no section is better adapted to their natural propagation or to the comfort of the hunter, it being undulating, well covered, and interspersed throughout with ponds and running brooks of purest water. There is no limit to the feed; for, when it is scanty in the oak forests, the surrounding farms, fields, and hayricks afford abundant sustenance. The Winter's are mild, the soil sandy, and the thickets along some of the creeks so dense as to be absolutely impenetrable. In these the fawns may lie secure. It is on account of these natural advantages, no doubt, that deer still exist here, surrounded as they are by a cordon of civilization, with three lines of railways traversing their range at intervals only three miles apart! The partial protection of the law of course materially assists. No doubt if the hunting were wholly prohibited for a period of three to five years, and a stock of twenty-five to fifty does were turned loose on the preserve, Long Island would remain for an indefinite period the favorite and most prolific hunting ground easily accessible. In five years fifty does, by natural increase, would multiply to eight hundred head, allowing for casualties; for does often drop two fawns than one. We would fain encourage the passage of a law at once by our legislature, involving total prohibition for a specified time, and we know of the requisite number of gentlemen who would gladly contribute two or three animals apiece toward stocking the Island. Nevertheless, we are convinced, after carefully sounding the opinion of sportsmen, that while nearly all would accede, there are still a few influential gentlemen who are unwilling to forego for a brief period their annual romp among the scrub oaks, and the possibility of winning a trophy from this delectable hunting ground; and that these gentlemen would combine to prevent the passage of such a law, or to revoke it the next year after its passage.

We confess to a fascination attending a deer hunt on Long Island that is irresistible, and we would rather boast one trophy here than a score elsewhere. That we felt short of our effort and ambition this year, reflects no discredit upon our woodcraft. We spent three days on the hunting ground in company with the Rev. Dr. Duryea, whose gun often cracks among the Adirondacks, and with Col. Wagstaffer of Babylon, who is familiar with every inch of the territory. We listened intently to the bay of the hounds, and stood patiently at the favorite runways of the deer, but none came near, and those persons who bagged the game had reason to bless only their remarkable luck. So precarious are the chances here of taking a deer, when so many dogs are out and the cover is so thoroughly beaten, that it has become the law of the chase that whoever kills an animal must divide with other claimants. Sometimes the carcass is cut up and distributed, but it is more generally sold at auction to highest bidder.

Right glorious and exciting sport is it, on a bright November day like those just past, when the game is afoot, to watch or participate in the scurry through the "open," or into the thicket, with hunters on horseback and wagons at full tilt after the quarry; the bay of the hounds in all directions—far in the distance or close at hand! Such a promising babel of bell-mouthed tongues is seldom heard at a deer hunt elsewhere; but we fear that the last echo will soon die away and be heard no more on the precincts of Long Island. Who will demand a prohibitory law?

A KNOT FOR THE LAWYERS.

WE print in another column a letter from G. Shepard Page, Esq., an officer of the American Fish Culturists' Association, descriptive of a variety of trout little known outside of the precincts of Rangle Lake, in Maine. It is called the "blue-backed trout," and makes its appearance only for a short period in October and November, and at a time when the killing of trout is prohibited by the State laws; but because of its peculiarities, when we explained to the law makers of Maine when they drafted and passed the existing law, this variety of fish is specially exempted from those provisions which impose a penalty for capturing trout out of season.

Being made aware of these facts, it seems, Mr. Eugene Blackford, of Fulton Market, received a consignment of these trout and offered them for sale openly on his slabs. Now, it happens that the laws of New York forbid the sale here of TROUT out of season, no matter where they come from, and suits are now pending to test their validity; and inasmuch as *brook trout*, the naturalists and the Maine law in this case to the contrary notwithstanding, it becomes an interesting question as to how far the action of our courts here is to be affected by the exception in Maine. Of course, the exhibition of these sparkling trout upon the market slabs could not escape the vigilant eye of the officers employed by the New York Society for the Protection of Game, who at once proceeded to interdict their sale, and notified Mr. Blackford of his offence. The dealer protested, and pleaded the peculiar conditions referred to above, as calculated to relieve him from any liability to arrest or prosecution for selling trout out of season. The officer, who is eminent in legal matters, at once took some specimens of the fish to the best authorities in the city, and after fullest investigation and subsequent acquaintance with the facts as set forth regarding the peculiarities of this variety of trout, admitted his doubt as to whether an action in this case could be sustained.

As we have intimated, the case is an intricate one, and involves most delicate legal points, or, perhaps, we should say opinions; for certainly it is covered by no precedent. The object of laws for protecting fish is to ensure and increase the supply of food; and laws for different States are made co-operative in order to prevent evasion of their intent and purpose. Hence the law of one State prohibits the sale of fish coming from another State. If it did not, fish might be caught in one State, and then be clandestinely carried into and sold with impunity in another; and thus the object of the law—which is the preservation of fish—would be defeated. But, it so happens, in the case in question, that this particular kind of fish is available for food only when the law of New York prohibits trout from being sold in the markets of the State; so that the law really goes back upon itself and defeats its own ostensible object, by preventing the use, *as food*, of fish which it assumes to preserve as food. If this variety of trout could be caught at any other time than in October and November, the case would assume a different phase.

One of the stroogest points that underlie the case is the fact that the Maine law does not recognize these fish as speckled brook trout, but specially designates and excepts them as a different variety. If, being such, they are not included in the New York State enumeration of prohibited fish, then the law of this State cannot touch them or their vendors.

We are not disposed to argue the question now, nor are we anxious to make out a case for an imaginary defendant. Our instincts are opposed to any relaxation in the law as it stands. We consider that there are economic interests involved of paramount importance, and we apprehend only trouble and detriment to arise from the occurrence of this anomalous case. Admit the exemption of these Maine trout in our markets, and the slabs will at once swarm with the common brook trout which none but an expert can distinguish from "blue backs;" and thus the object of our law will be defeated by leaving the door wide open for evasion.

THE COLLEGE ROWING CONVENTION.

THE Convention of the Rowing Association of America Colleges which met at Hartford last January, adjourned until January, 1875. There is a desire on the part of some of the colleges to hold the Convention at an earlier day, in order to determine upon the locality and programme, so that crews may be chosen and go into training as soon as possible; but the time appointed is already so near, that no change for an earlier date is likely to be made. New colleges are talking of joining the Association, and these especially will require every advantage and opportunity for instruction and practice to enable them to compete with the older crews.

Meanwhile the proposed secession or segregation of the New England Colleges continues to be urged in some quarters, and particularly by those colleges that were last year disaffected as respects the selection of Saratoga for the regatta course, and such a secession seems by no means improbable. Aside from any personal feeling that may remain from differences that obtained on grounds of morality, jealousy or expediency, it seems to us that much more serious considerations are involved. There is danger that the Rowing Association, already unwieldy from numbers, may become unmanageable. There is scarcely a straight-away course in the country of the regulation length, that will comfortably accommodate the present number of competing boats and give reasonable guarantee against fouling when under way. Fouling always produces hard feelings and recrimination, and fouls accidental are more than apt to be charged as designed. Besides, fouls mar a race, and render the result unsatisfactory to both the winners and the defeated. If the Intercollegiate Navy, already so large, is to be increased, not only can no regatta be held where all the crews can compete simultaneously, but the lack of requisite sea room in most waters, will confine the annual competitions to two or three localities; and this holding of the regattas always in the same places, would detract much from the interest that would otherwise be felt in them if a different locality were to be selected each year. Moreover, the multiplying of crews and the juxta-

position of rival interests, are not at all likely to promote harmony. They would rather engender animosities. At the same time the labors of the Regatta Committee would not only be rendered laborious, but almost hopeless.

From a still more prudential standpoint, it is evident that if the Rowing Association were to include memberships from colleges geographically wide apart, much time and expense, which could hardly be spared, would be involved in attending meetings, keeping up the necessary communication with each other, transporting boats to the annual place of the regatta, and the like. We are not disposed to be censorious in this matter; yet, while we heartily advocate physical culture and daily exercise for the sedentary, as tending to promote health and stimulate the mind, we shall always be conservative enough to oppose any encroachment upon the studies of the college course and those duties for the thorough performance of which colleges were specially instituted. The book and pen are the insignia of the student; not the oar and pennant. The claims of the first ought not to be usurped by the last. Already does the interest in boating matters so largely absorb the attention of students that, only a few days since, the facts as they exist provoked the serious discussion of the Faculty of a New England College. If this interest is to be stimulated and largely increased by the emulation of two dozen rival institutions, there can be no doubt that lessons will proportionately suffer, and the usefulness of the college course be seriously impaired. Our judgment is decidedly in favor of dividing the ranks of the Rowing Association, and not adding new recruits. Let the eight Colleges of New England constitute a navy by themselves, and the other colleges that affect boating form a separate organization. Eight boats is as large a number as can conveniently row together in competition. It is more than probable, if such a division were made, that the annual Intercollegiate regatta would be confined to New England alone, inasmuch as the best courses lie within her territory. There being but one available course outside of her borders, and the other colleges being so wide apart geographically, annual competitions would be abandoned elsewhere.

NATIONAL SPORTSMEN'S ASSOCIATION.—The organization of this body was effected on Sept. 10th. It would hardly be expected that much could be accomplished within the two months that have since elapsed, except to get into working form; nevertheless, some interest is manifested to know what has been, or is being done, the more especially since the action of the New York City Society for the Protection of Game, taken last week, in relinquishing to the National Association the field of effort which it had occupied with some prominence, and certainly with precedence, looking to the general improvement of the game laws of the country. The precise status of this body at present is no doubt accurately defined in the *American Sportsman*, which says, with regard to the future action of the National Association:—

"To all enquirers we answer in a general way that the Executive Committee has the matter under advisement, and before long the course for the Association will be mapped out, and the work will be commenced. The Executive Committee are men of standing, not little-minded by any means, and have a sense of their duties. In due time sportsmen may be sure that the business of the Association will have their attention, and meanwhile we may urge sportsmen themselves not to cool off and become indifferent, but to do their part in making the National Association useful, powerful and respectable. The Executive Committee cannot do everything; the spirit of movement must really come from outside, and unless the Executive be supported by the whole body of sportsmen, they are in the position of a government that is not backed by the people.

Sportsmen must organize. All sections admit this necessity, but very few take any pains to buttress their faith by their works. To ensure protection for our game and continuance of our sport we must have united and uniform action. We have got beyond that first proposition. The National is for the very purpose of carrying it out. Now, gentlemen sportsmen, comes your part in the play. Call your neighbors together, form county clubs, two or three can form a club as well as two or three hundred. Clubs, form yourselves into State Associations. The more members, the better and more widely your executive men are known and trusted, the more value will your Association have; but a few can begin as well as many. In your clubs and constitutions remember that there is a National Sportsmen's Association, instituted for your benefit, and to whose affiliation is invited, and which without your support will be voiceless and of no effect. The National will require to be sustained by members' dues. Take order for your subscriptions; they need not be heavy; finally send in your application for membership.

Having thus put themselves in right shape, sportsmen will be in order when they enquire what is the National doing?"

This statement, we are loth to say, will hardly be satisfactory to those who have looked to a National Association as the grand lever to accomplish long hoped for results. The organization is effected, but it lacks body and mechanical force. It seems to be in the anomalous predicament of a general about to undertake a battle without having recruited his army.

FLY FISHING FOR SALMON IN CALIFORNIA.—If any of our readers doubt that the salmon of California will take the fly, let them read the lively sketch of our correspondent "Podgers," in another column. Podgers is an old-time correspondent, who is well known to the readers of our leading magazines and journals, and is reliable as clear grit. We are proud to introduce him to our patrons, for we shall now learn of things that we have never heard or dreamed of, philosophy or no philosophy.

CREEDMOOR.—The seventh competition for the Remington diamond badge took place at Creedmoor, Long Island, on Saturday. The match began at 11 A. M., at the 500 yards range. The number of entries was smaller than usual, but included nearly all of the crack shots. A strong, clobbering wind blew during the early part of the day, which interfered very much with the calculations of the marksmen. Mr. Hepburn, one of the members of the American "team" during the late international match, lost his reckoning at the 1,000 yards range, and retired after scoring five misses at that distance. Lieut. Fulton was somewhat affected by the uncertainty of the wind, yet he made a very handsome score at 500 yards—twenty seven out of a possible twenty-eight. At the 800 yards range, his score was twenty-six, and at 1,000 yards twenty, forming a total of seventy-three, upon which he was awarded the badge for the second time. Should he be so fortunate as to win at the next contest, he will become absolute possessor. As it is, he will be afforded the satisfaction of wearing it during the Winter. The following is a list of the best scores in detail:

Lieutenant Henry Fulton.		
Yards.	Score.	Total.
500	4 3 4 4 3 4	27
800	3 4 4 4 3 3	26

1000	2 0 2 2 0 0	8-41

GOOD SHOOTING.—Election day was celebrated by some of our riflemen at Creedmoor by shooting a friendly match. This was an impromptu affair, but it was made remarkable by the good shooting done. Mr. Rigby, of the Irish team, made some splendid scores, having put ten bullets in the bulls' eye, at 500 yards, in ten shots. This is the highest kind of work, and proves what a thorough marksman Mr. Rigby is by nature. Mr. B. Burton, with a 7 1/2 Ward-Burton gun, made 33 out of a possible forty, at the same distance, and Col. Gildersleeve, with a Rigby rifle, reached the same score. Mr. W. G. Barton, with the Ward-Burton magazine rifle, made 30 at the preceding distance. This score would prove that the magazine rifle is capable of excellent work. Colonel Winzate and several other gentlemen tried their rifles on the target also, but we have been unable to get their score, as the match was a purely private one, that is, so far as it was a pre-meditated affair.

—On the 23rd instant the last regular match of the Creedmoor season will take place, being the day set down for the ninth *Turf, Field and Farm* badge competition. The Range Committee have resolved to keep a range officer during the winter, and riflemen may shoot at any time. Stoves are to be placed in the tents and shelters erected at the firing points.

GAME ASSOCIATION IN FLORIDA.—We are gratified to observe the alacrity with which our friends in Florida are combining to arrest the wholesale destruction of game in that State. The formation of the club indicated below, with several prominent citizens for its officers, is an earnest of much good to be accomplished at once, and we feel no doubt that the State Association herewith foreshadowed will soon be created. Its good offices are certainly much needed. For the very friendly compliment conveyed in the name selected for the newly formed club, we feel honored, though free to say that some other name would seem to have more pertinent significance. This club shall have what assistance we can give in aiding the good work which it has undertaken:

NEW SMYRNA, FLA., October 31, 1874.

EDITOR FOREST AND STREAM:
The "Hallowell Sporting Association" was organized at this place on the evening of the 29th. Dr. French, of Meltonville, was elected President; Capt. Thorpe, of Meltonville, and George J. Alden, of New Smyrna, Vice Presidents; E. Marcie, of Fort Orange, Secretary; and John Allan, Treasurer. A committee, consisting of Messrs. Alden, Allan and Marcie was chosen to draft a constitution and by-laws. Charles Hallowell and Wm. Allan, of New York, were made honorary members. The object of

this Association is to urge the passage of suitable game laws, and see that they are enforced. Other similar organizations will be formed in different sections of the State, after which a State's Sportsman's Association will be organized. We have selected one of the most sightly places on the coast for a club house, and as soon as we can purchase the same shall commence building.
Yours, truly,
GEORGE J. ALDEN.

Honors multiply! We had scarcely seen the ink dry on the foregoing acknowledgement of ours, when the following note came to hand from Corinth, Mississippi, through our valued correspondent "Guyton":

CORINTH, MISS., November 13.
EDITOR FOREST AND STREAM.—We have organized a Shooting Club here named in honor of your paper, "The Forest and Stream Shooting Club." Capt. W. S. Reynolds, President; Lawings Young, Secretary; Capt. J. V. Duncan, James E. Gift, Capt. W. B. Kean, Dr. S. L. Paine, Capt. R. V. Munton, and Colonel Tom Johnson, members. We intend to make a start to-day getting a game law passed in our State, without which we will soon be entirely cut off from all field sports, as there will be nothing left to shoot.
GUYTON.

The formation of Clubs in the South we regard as a most auspicious sign.—Ed.]

—Franklin W. Fish, Esq., a poet and humorist of some repute, will deliver a lecture on Nov. 24th, in Temperance Hall, Kent avenue, Brooklyn. Subject—"The Oddities of Every Day Life, or the Funny Things We See."

YALE COLLEGE.—A summary of the students in Yale College by the last catalogue, is as follows:—Theological Department, 103; Law Department, 53; Medical Department, 50; Graduate Students, 55; Special Students, 7; Under Graduates, Academic, 537; Sheffield Scientific School, 263; School of Fine Arts, 21; Total, 1,074. The freshman class of the college proper has 164; sophomores, 142; juniors, 136; seniors, 95.

—Mean noon-day temperature at New Smyrna, Florida, for the month of October, 80 degrees, 14 minutes; at 7 A. M. 74 degrees; at 9 P. M., the same.

—Snow three feet in depth is reported in parts of Ontario, Canada.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

SOUTHERN WATERS.	
Striped Bass, <i>Morone chrysops</i> .	Weakfish.
Pompano.	Trout (black bass).
Shad.	Drum (two species).
Groupers.	Kingfish.
Rockfish.	Sheepshead.
	Tarfish.
	Sea Bass.

FISH IN MARKET.—Owing to the exceedingly mild weather which has greeted us of late, the fish market cannot display as bounteous a variety of species as it usually does at this season of the year. There is a fair supply of blue fish, some specimens weighing from ten to sixteen pounds, which retails at 12 1/2 cents per pound. These are caught on the coast of North Carolina at present. The live codfish sent to market at this season usually is most marked by its absence, for where it should be very profuse, scarcely any can be seen. The consequence is that the fishermen who usually reap their piscatorial harvest off Sanly Hook are getting discouraged, so some are laying up their vessels and returning home. There is a good supply of striped bass, but it is expected to be more abundant in a short time, as the late run is now due, but owing to the mild weather, no schools have approached our shores. The surf fishermen of Long Island are on the beach every day looking out for their visitors, but though they see them out to sea, yet none come within their reach. They are now preparing for a hard game and some cold weather, in order that the fish may be driven shoreward. Bass sell now at from fifteen to twenty cents, but as soon as the usual catch is made, it will come down to 12 1/2 cents. The white perch is caught largely off Long Island, and some of them weigh two pounds, an unusual size for this little species. Price 15 cents per pound. White fish from the Great Lakes are plentiful at 20 cents per pound. Fresh mackerel are scarce at 20 cents per pound. Fishermen are looking for a large catch during the next ten days, as the finest specimens are put up from the late run. Halibut is comparatively abundant at 20 cents per pound.

—Blackford, of Fulton market, has received from a friend in Savannah a soft-shell turtle (*Trionyx ferox*), a species of its family which is quite a stranger in the Northern latitudes, although it has been found in the State of New York and some adjoining regions. It has a dark slate-colored shell, with ocellated spots, and is of a soiled white beneath. Its most marked peculiarity is its rather long and pointed snout, and its prominent marbling of the neck. The flesh is thought to be highly edible, and very nutritious. The specimen under consideration enjoys life in a fountain, and partakes of scollops and meat. It seems to be well content with its narrow home, and to take an exhibition of its peculiarities with stoical indifference.

—Myriads of small or young herrings are being caught by hook and line, shrimp baited, in the waters of Wareham, Mass. This acceptable little morning aperitif seems to be a stranger in our waters, he having several bright trout-like spots on the line of the back, shows conclusively that he must be a foreigner, as he is unlike any of the herring or alewife family who have previously visited these waters.—Wareham News.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

Table with columns: Date, Boston, New York, Charleston. Rows for Nov. 19, 20, 21, 22, 23, 24, 25.

The Boston Boat Club, which now numbers over fifty members, have chosen the following officers for the ensuing year: President, John Doherty; Vice President, John W. Fraser; Secretary, Andrew H. McCarthey; Treasurer, James D. Sienk; Captain, Patrick Reagan; Board of Directors, John W. Fraser, John Cullin, Peter F. Flinn, James N. Henry, Patrick McGeahy, Committee on Membership, Chas. Reagan, Peter McDonald, Michael J. Mahoney.

FAMOUS CLIPPER SHIP.—The following letter appeared in FOREST AND STREAM October 29th: "The Shipping News recently announced the loss of the ship Flying Cloud at St. Johns, N. B., with her cargo of lumber. This vessel was the once celebrated clipper Flying Cloud, built by Donald McKay, of Boston, and which for many years during the clipper furor flew the champion pennant for the fastest passage on record to San Francisco. Many of your readers will recollect the excitement and interest felt in this city in the great race between the rival clippers of New York and Boston twenty years ago. Webb and Westervelt were launching boats, while from Boston and the East came gallant competitors for the pennant. At last, McKay sent forth the Flying Cloud, the most beautiful vessel that ever floated. So exquisite were her lines, that although a ship of great tonnage—1,760 tons—she looked when under way hardly more than a boat, and in the thirty years that cruise around the harbor. The Flying Cloud ran to Frisco in eighty-nine days and a few hours. This passage has never been excelled. It is a question whether it has been equalled, although Mallory's wonderful clipper, the Andrew Jackson, claims to have beaten the Cloud a few hours. Webb's crack ships, the Challenge and Young America never came within two weeks of the Cloud's time, and cost their New York backers lots of money by their failure."

Commenting on the above, the Mystic (Conn.) Press says: "The above article—in so far as it relates to the clipper ship Andrew Jackson, and her sailing time, as compared with that of the Flying Cloud—is incorrect; as will appear by the following statement:—

The Andrew Jackson was built by Irons & Grinnell, of Mystic, and owned by J. H. Brower & Co., of New York, and Mystic parties. She made "the shortest time on record" from New York to San Francisco (in the year 1850) in eighty-nine days four hours, thus "excelling" the time of the Flying Cloud, (made in 1851) eighty-nine days (nearly hours), and was awarded therefore and honored the commodore pennant in the harbor of Frisco and New York, which the Flying Cloud never did. She also "excelled" the Flying Cloud in her general record, making five passages whose average time beat the best five passages of the Flying Cloud.

That we know whereof we affirm when we claim that "pennant" for a Mystic ship, will be apparent when we say that within an hour of the present writing we have had the statement confirmed by Captain J. E. Williams and Captain William Morgan, master and mate of the Andrew Jackson at the time of the passage referred to, and during a period of seven years, extending before and after the same. Capt. Williams still carries a fine gold watch, from the increase of which is copied the following inscription: "Presented by J. H. Brower & Co. to Capt. J. E. Williams, of clipper ship Andrew Jackson, for shortest passage to San Francisco. Time 89 days, 4 hours, 1560."

YACHTING PRIZES.

We give this week a complete list of races sailed last Summer, prizes won, names of winners, &c., as supplementary to our schedule printed last week. Both tables will be found very useful for reference.

Table with columns: NAME, CLUB OR PORT, No. Races Sailed, No. Wins, No. Races First, No. Races Second, No. Third Prizes, No. Fourth Prizes.

—According to the Cape Ann Advertiser lobsters are plenty and of good size this Fall. They never were better or in livelier demand. The present month will about wind up the halibut, cod and mackerel fisheries. The demand for boneless cod, as prepared in Gloucester for the retail trade, is constantly increasing. The Baymen are now coming along briskly, and our traders are glad to welcome them with good bargains.

FISHERMEN'S LUCK.—The Nantucket Review says schooner Oliver Cromwell, while on her mackerel cruise, had a curious incident befall her. The seine being out, a school of mackerel suddenly turned, and making for the seine took it down. A vessel in the neighborhood immediately answered a call for assistance, and swept her seine under that of Oliver Cromwell's. Twenty-three hundred dollars' worth of mackerel were secured, the two vessels dividing the catch, the fish selling at an average of nine cents each. The bunt of the seine belonging to the Oliver Cromwell was badly rent by the sudden rush of the fish, or more would have been secured. This is the second time the seine of the Oliver Cromwell has experienced similar treatment, losing all its fish the first, on account of the seine giving way, and there being no help near.

—The Canadians are imposing heavy fines on all who capture fish out of season.

—Any catch of white fish made in Canada between November 19th and December 1st will prove a dear matter to the angler, as the law will be strictly enforced.

—Mackerel fishing on the North Coast of Prince Edward Island, has, during the season just closed proved a most profitable one. Over thirty thousand barrels are reported, and their market value eight dollars; the return is by local authorities pronounced eminently satisfactory. Cod fishing, though not so largely engaged in, has proved a profitable investment to those engaged in it, and as a consequence, all branches of trade on the Island are reported in a flourishing condition.

—Some enormous fish, a stranger to the Western waters, played last week a fisherman's net near Detroit, recently, and then escaped. This giant of the deep is supposed to be a man-eating shark.

FLY RODS OF BARBERRY WOOD.

New York, November 10th, 1874.

EDITOR FOREST AND STREAM:—

In your issue of November 24, "C. B. C." reminds me that, in my communication under the head "New Material for Fly Rods," published by you July 29, 1874, it was suggested that your readers might hear of the barberry rod again. It will be remembered that I had then fished in the lower Beaverkill, again using the rod in question, with increased satisfaction and admiration. On the last day of the bout, while fishing a wide pool, from which I had just taken two half pound trout, and when I had cut about forty feet of line, a half pound fish rose at one of my droppers. I struck it with considerable force, and broke the second joint of the rod near the middle. On attempting to reel in my fly I discovered that my trail fly was securely hooked into a piece of timber lying in the stream, covered by water two inches in depth, and which the heavy rain, falling at the time, prevented me from getting to the cast. Of course it was no fault of mine that it broke under such circumstances. Near the end of July a friend and myself went to Canada to fish a river of which we were the lessees. As I had had no time to make a new second joint of barberry, I spliced the broken one. I fished one day with it in its impaired condition, taking fifteen or twenty trout, weighing from half a pound to three pounds each. In the course of the next day, when I had hooked a trout (which I save) that weighed two pounds and fourteen ounces, I broke the same joint, quite near, and above, the splice. This was not unexpected, as the shortening of the joint in splicing, and the whipping of the splice with silk, destroyed the uniformity of the taper and the elasticity of the rod. After this, for about one week, I used the barberry rod, except in the case of a few fish, killing many large trout without injury to the rod. I am not at liberty to name the stream where we fished, but can state that our smallest trout weighed one quarter of a pound, and the largest four and a quarter pounds; that the average of our catch (several hundred in number) was one and a quarter pounds per fish, and that all were taken with the fly.

In conclusion, I will state that my confidence in barberry is not impaired, but, on the contrary, increased by my experience in its use. I have now finished duplicate second joints of barberry, one having the joint in the centre, and the other being made, like the tips, from a section of a stick one and a quarter inches in diameter, in anticipation of the next, my thirty-second, annual trout campaign.

Should C. B. C. or any other person, try my experiment, I would suggest that it is important to have the rod straight when made, for it is difficult, if not impossible, to get a set out of barberry, such as I have used, after it has become thoroughly seasoned. F. T. Z.

MAINE TROUT.

Boston, Nov. 13, 1874.

EDITOR FOREST AND STREAM:—

In F. and S., of October 13th, a letter from W. W. S. on the decrease of trout in the Adirondack region in a few weeks in regard to the trout and lakes of Maine, and Moosehead Lake in particular. We find the general close season to commence Oct. 1st, while those we frequented in the Grand Lake section very judiciously offered a special law for those waters, commencing fifteen days earlier. While special legislation, also, has given the angler until Oct. 15th on Moosehead, offering no protection for these fish until many days after they have sought their spawning beds.

Through my own observation and experience in this section, together with an extensive association with sportsmen, I find that Moosehead is already depleted to that degree that trout are much more abundant in all the surrounding smaller lakes.

Depletion and certain natural causes resulted in poor fishing during the latter part of last season; many sportsmen failed to catch enough to gratify present needs, the months of September and October offering no sport whatever, except in a few individual cases where success attended the discovery of a spawning bed.

These fish are found on their beds in September, and should be protected as early as the 15th of that month. Sportsmen know it. The people know it. Then, why allow them to be grasped by a few tardy anglers, fifteen days after humanity forbids? What need of any law, if not a protective one? Why prohibit the few residents there from enticing a hole in the ice and securing a much needed article of diet for their table in the long cold winter?

It is not my purpose to claim that this is not a people's law, nor a sportsman's law; neither that it is a law effected by hotel interests, but to show it to be one most destructive in its workings, which will eventually put an end to trout fishing in Moosehead Lake, and I appeal to the old pine tree State to protect it for themselves and posterity. M.

Large table listing names of yachts and their owners, with columns for various statistics.

Hall during the ten days of the tournament. In the first place the game itself—the three-ball French carom game called for the most scientific billiard playing in vogue; and then, again, the high reputation of the contestants, who included the most noted billiardists of France, the United States and Canada, warranted an exhibition of skill unequalled in the annals of the game; and when combined with these elements was added the exciting feature of a series of contests for valuable money prizes, it will be seen that everything was present in the arrangements calculated to lead to the successful issue attained.

In our last number the descriptive record of the games played included the games up to Monday, November 9th, only. We now give a brief notice of the contests which followed, two or three of which proved to be of such exceptional excellence as to call for more extended comment. On Tuesday the games were opened by Messrs. Slosson and Daniels, and the result was the success of the Chicago expert and the defeat of the Bostonian, Slosson winning by a score of 300 to 161, his average being a trifle over eight, and his best runs 67. The next game brought together J. Dion and Ubassy, and the Canadian defeated the French veteran by 300 to 123, the victory giving Dion the lead in the tourney. His average was over 11 and his best run 80. The first game of the afternoon session was between Daly and Garrier, and to the surprise of his friends he allowed the American to defeat him, Daly winning by 300 to 175; Daly's average was a little over 11, and his best run 60, Garrier not exceeding 40.

In the evening the attendance was very large, as Rudolphe was to meet Maurice Vignau for the first time, and an exciting contest was expected. Rudolphe obtained the lead early in the game and he maintained his advantage ground to the close, and won by 300 to 250. His average was 12 and his best run 90.

On Wednesday afternoon two important games were played. Rudolphe defeating Daniel by 300 to 237, the average not exceeding 7; and Garrier had almost a "walk over" with Slosson, the score being 300 to 45 only. In the evening the hall was crowded as it never had been before at any billiard entertainment, the attraction being the first meeting between the Canadian champion, T. Dion, and the French expert, Vignau. Long before the hour for play in the evening all the tables were occupied, and so numerous was the attendance of ladies and extra seats had to be prepared for them on the floor of the hall. The first call showed Vignau to be in the van by 78 to 17, and the lead thus secured was maintained to the close. At the call of the first hundred Vignau led by 106 to 43. It was not until his 20th innings that Dion scored his first hundred and then Vignau led him by 70 points. In his second hundred, as he was now but 40 points behind his opponent's total, the contest became more interesting, and, than before, the previous attraction consisting of Vignau's masterly exhibition of French billiard playing. In the 32d innings, however, Vignau added 35 to his score, and in his 34th, by a run of 23, closed the game, leaving the totals at 300 to 234.

The next contest to be between Daly and C. Dion, and the former won without difficulty by 300 to 245, the winner's average being 7. He made a fine run of 108, the fourth best run of the tourney.

On Thursday, Daly defeated Ubassy by 300 to 104, Maurice running 70 and averaging 9, after which Slosson defeated Cyrille Dion by 300 to 256, Cyrille playing poorly until the last, when he made a plucky rally. Slosson's average was 11 and his best run 50.

On Friday the first contests were Daly and Daniels, the former winning by 300 to 183, Daly's average being a little over 7 only, and his best run 53. This closed the score of both players in the tourney, their totals being as follows: Daly six victories and two defeats, and Daniels no victories and eight defeats. Rudolphe had closed his score the night previous with a record of four victories and four defeats. The next game brought together the veteran Ubassy and young Slosson, the former winning by 300 to 197. In the evening the game was between Vignau and C. Dion. Vignau made his first count in the fifth inning. In the meantime Dion led scored double figures three times, and ran his total up to 40. In Vignau's sixth inning he added 29 to his score, thereby securing the lead, after which both laid duck eggs until the ninth inning, when Vignau again ran 29, marked by two masse shots. This left him in the van by 75 to 41. Both now began to lower their average. Cyrille only adding 10 to his score from the fifth to the fifteenth inning. It was not until Dion's twentieth inning that he exceeded a run of 17, but then he got the balls close together, and he did not cease counting until he had made 79 and run his total up to 151, Vignau's score being 99. In the next inning Vignau ran 31, slipping up on a draw. Dion scored 7, when Vignau added 23 to his score, and left the table at 158 to 159, only five points behind. In Vignau's twenty-sixth inning he made 24, which placed him 182 to 163. In Dion's twenty-seventh inning he slipped up after getting 17. In the thirty-second inning Dion again obtained the lead with a run of 26, leaving the totals at 208 to 201 in his favor. Vignau made 13 in the next inning. From this point up to the thirty-eighth inning the game fluctuated considerably. Finally, in Vignau's thirty-ninth inning, he made a run of forty-six. Dion then made 19, and in the fortieth inning Vignau ran the game out, thereby winning the champion's gold medal.

The last game was opened by J. Dion with a run of 21, and he was the first to score a hundred, a run of 49 in his eleventh inning leaving the totals at 101 to 61 in his favor. This Garrier offset with a run of 93, he slipping up on an easy bank shot. Afterward each ran 34, but Garrier was the first to turn the second hundred, and in his twenty-fifth inning he ran to the game winning by the totals of 300 to 233. The full score is appended.

Players.	Vignau	Dion	Daly	Ubassy	Rudolphe	Slosson	Daniels	Garrier
Games won	1	1	1	1	1	1	1	1
Games lost	0	0	0	0	0	0	0	0
Games tied	0	0	0	0	0	0	0	0
Games total	1	1	1	1	1	1	1	1

The decision of the money prizes at the billiard tourney resulted as follows: The second and third money prizes, \$800 and \$600, were equally divided between Maurice Daly and Albert Garrier; the third and fourth, \$500 and \$400, between Ubassy and Slosson. Vignau of course takes the emblem, and Dion and Garrier each a watch.

Vignau has accepted Dion's challenge to play for the championship. Chris O'Connor, acting for Vignau, has deposited the forfeit, and the same is to be played within fifty days. Rudolphe and Garrier's match is to be played on the 11th of December.

It is anticipated that a Billiard Tournament like the one just concluded here will take place in Chicago about the 1st of December. The same professionals who played here will participate there. The games will be played at Foley's, in Madison street.

The Colleges.

YALE ATHLETIC ASSOCIATION.—We announced in last week's paper that the athletic games would be repeated in the Spring, with the object of encouraging men to enter the inter-collegiate games and of training men for them. This matter has now assumed shape, and by the kindness of those having it in charge, we are able to present to our readers a list of prizes, with the accompanying conditions, as follows:

	1st.	2d.	3d.	Total.	Conditions.
100 Yard Hurdle Race	\$12	\$8	\$0	\$20	Winner's time shall be better than 19 sec., and 2d time less than 24 sec.
100 Yard Dash	10	8	0	18	Winner's time better than 11 sec., and 2d better than 13 min. 30 sec.
300 Yard Dash	10	8	0	18	Winner's time better than 11 sec., and 2d better than 13 min. 30 sec.
One Mile Walk	16	12	8	36	1st better than 8 min. 10 sec.; 2d than 8 min. 30 sec.
Three Mile Walk	23	18	8	49	1st better than 25 min. 30 sec.; 2d than 26 min. 15 sec.
Half Mile Race	18	9	6	33	1st better than 2 min. 19 sec.; 2d than 2 min. 29 sec.
Quarter Mile Race	15	8	5	28	1st better than 56 sec.; 2d than 59 sec.
220 Yards Consultation	8	6	0	14	
Total				\$322	

The meeting will take place between the 15th and 25th May, one month after the Spring vacation. Entrance fee, \$1, entitling to compete in all races.—*Yale Record.*

A match game of football of considerable interest took place on the Campus at Dartmouth College last week. There were eighty kickers, twenty men being selected from each of the four classes. The Seniors and Sophomores played against the Juniors and Freshmen, the trial being for the best three out of five games. Quite a large number of spectators witnessed the game, three of which were played. The first game was the most closely contested of the three and lasted ten minutes. The Seniors and Sophomores were victorious after several very narrow escapes from defeat. The remaining two games the Seniors and Sophomores won with less difficulty. Mr. C. H. Pettee of the Thayer department acted as umpire.

PRINCETON COLLEGE, Nov. 14, 1874.

EDTOS FOREST AND STREAM.—The first game of a series for the championship of the colleges in foot ball was played here this afternoon between the Columbia College, of New York, and Princeton twentys. The game was witnessed by a large crowd of spectators, composed chiefly of students, though quite a number of the fair sex were present. Columbia's representatives appeared in a very becoming uniform of white with blue stockings and hankkerchiefs. The Princeton men were attired in a rather strange dress. Some wore ball suits belonging to the University, while others had on other suits belonging to the various clubs. The game was witnessed by a large number of spectators, at least, was not very favorable to Princeton.

The game was called shortly after one o'clock, and closed about an hour afterward. The first goal was won by Princeton in seven minutes. The second and third innings occupied the same length of time each as the first. The fourth inning was the longest, Princeton not being able to reach her goal until she was obliged to wait three minutes and a half. In six innings were played, and Princeton won them all, beating Columbia by the score of 4 to 0. The last two innings occupied four and twelve minutes, respectively.

The Columbia twenty is composed of a fine-looking set of men, physically, and it is hard to discover the secret of their ill-success, unless it be that they were outwily "outplayed," which Yale so frankly confessed last Fall to have been the reason of the severe defeat she then experienced at the hands of Princeton.

Messrs. King and Root, of the Columbias, especially excelled in their playing to-day; each of whom did what he had to do well. The effective kicking of Moffat secured two goals for Princeton; and Scott, of the same twenty, did some of the most brilliant playing of the year. Though decidedly one-sided the game was quite exciting at times, and by no means uninteresting affair. It is to be hoped that the intercourse thus instituted between Columbia and Princeton, will serve to strengthen the bond of union which existed in a great measure during the past between these two Universities; and that the good feeling and friendly spirit evinced to-day, will continue throughout their future relations with each other.

The second game of the season, in foot ball, will be played here on Saturday, the 21st inst., between the Rutgers' College and Princeton twentys. A close contest is expected, as the former has acquired the art of "batting" well, to which acquirement the latter attribute much of her previous success, as none of her other opponents have been found very skilful in this style of playing.

It is understood that Columbia and Yale, both under the conviction that "batting" alone enabled Princeton to be so victorious over them, will take strong measures to have all hitting the ball with the hand ruled out at the next intercollegiate foot ball convention. They also claim that their mode of playing is not foul. Technically speaking, they are correct, inasmuch as the faculty or dislocation of the hand is not one of its most brilliant and attractive features, the next convention alone must and will decide.

In closing, I would like to make a slight correction of an evident mistake in the last issue of your valuable paper. In a notice of games, which took place at Tuft's College, I stated that Perry ran and jumped 17 feet 4 inches, which is a very long ahead of any of the *Colleges*. (The Indians are my own.) In correction of the last clause of this sentence, I would simply state that Walker, of 78, ran and jumped 18 feet and 19 inches, at our Canadian games in June. The measurement was made by Prof. Goldie, the Champion Athlete of the United States and Canada, who is our representative in the faculty of dislocation of certain ones to acquire skill in "batting" well, is to deprive the game of one of its most brilliant and attractive features, the next convention alone must and will decide.

—At a meeting of the Ottawa Hunt Club, it was decided to hunt for the Governor General's cup in Mutchmore Park. Two steep-chases, in which His Excellency will join, follow.

—Some friends of those who rode at the fox hunt at Quebec last week, feeling interested in the height and extent of many of the jumps, measured a number of the fences. They found that several of the horses went over a mile of country, where they averaged four feet six inches. One long jump across a gully measured eighteen feet four inches. There was also a fence of four feet four feet eight inches, and a strike of sixteen feet six inches.

—At a meeting of the Ottawa Club, on the 23d inst., Mr. F. X. Lambert was elected President, Dr. Hurbert, Vice President, and Rev. Mr. Phillips, Secretary, for the ensuing year.

—Lieut. Mends, 60th Royal Rifles, broke his leg on Saturday last in a match of football with the Garrison vs. the Navy.

—Beaver's team of Six Nation Indians beat the Young Ontarios, of Caledonia, in three straight games at lacrosse on the 29th ult.

—Mr. Robert Clark, of the London branch of the Bank of Montreal, walked forty miles in nine hours and twenty-four minutes, on the 29th ult.

—The Caledonia Club of Toronto, will send four rinks to the grand bospital to be held under the auspices of the Thistle Club, of Hamilton, on Burlington Bay, in January next. Messrs. H. Malcolm, Wm. Ronnie, R. H. Ramsay and Jas. Pringle will be the skips.

—On the 7th inst. the Ottawa Hunt Steeplechases were held, where Prince Arthur won His Excellency's Cup and the \$175 Local Handicap, beating in the first event First Flight, Bonnie Bracs, and Jack-in-the-Green; in the second, the last named, Young Wagram and Clip. The Hunt Steeplechase for \$175 was won by Bonnie Bracs.

—On Tuesday last the Toronto Fox Hounds met at the kennels. The hounds were laid on to a drag and went as far as Mr. Hinchliff's house on Bloor street, thence North to the Davenport road, where they turned sharp to the left and went straight as the crow flies to Mr. Sheldon's farm, where a slight check enabled some of those who had tailed off owing to the severe pace, to get on better terms with the rest of the field. The scent was soon found again and we went on to Carleton, where we finished. Altogether we had a splendid run, which was enjoyed by a field of about fifty, among whom we were pleased to notice a considerable sprinkling of ladies. Of course some of the hard-riding ones contrived to part company with their horses during the course of the run, but no one was hurt and they went on as merrily as ever, after accidents that only increased the general enjoyment. Ours is not quite a "cut 'em down and hang him up to dry" country, but it is quite as possible to come to grief in a grand old fashion as a Leicestershire one. As in one case it was the other—get up again and try and look pleased. That is what our friends did on Tuesday.—*Canadian Sportsman.*

—Clip and Count Kilrush are matched to run a two and a half mile steeplechase at Redmor Park, Ottawa, and two hours afterwards to go two miles over eight hurdles. Clip is to carry 135 lbs. and Count Kilrush 144 lbs.

—The Albert Association, of Galt, beat the Bruce Association, of Waterdown, on the 6th inst., by thirteen points.

—The Toronto Hunt had two capital runs on Saturday, one of twenty-five minutes, on Armstrong's Park, Yonge street, and another of fifteen minutes after a fox, finishing with a kill "in the open."

—Trinity College School played a return match with Port Hope town on the 4th inst., the school being again defeated by one goal.

—McGill University, of Montreal, refuses to play Queen's College, of Kingston.

—The University Club beat the Toronto Lacrosse Club by two goals to one on the 7th. The return match will be played on the 4th.

—The Canadans are organizing their Curling Clubs for the Winter work.

New Publications.

ENCYCLOPEDIA OF RURAL SPORTS. By J. H. Walsh (Stonchenge): Porter & Coates, Philadelphia, Publishers.

This splendid volume is the most thorough work on the subject under consideration that has yet been written. The author has had a very varied and extensive experience in all the sports of the field, and being a great lover of such exercise, besides a literateur by profession, he has performed his labor in the most satisfactory manner; hence, persons need go no further than this book to learn how to become experts in all the many accomplishments. The first portion of the book is devoted to the best mode of killing wild animals, and this subject treats of shooting, hunting, coursing, falconry, and fishing. The second portion embraces an account of racing in all its forms, yachting, boating, pedestrianism, and the third describes cricket, foot ball, tennis, golf, curling, horse-manship, driving, skating, swimming, and these are followed by sketches of the anatomy and physiology of the most useful dog, the treatment of these animals in disease. The lovers of each exercise and studies will find this work a *valde necesse*, for besides the information it imparts, it is also pleasantly read.

EATING FOR STRENGTH. By M. L. Holbrook, M. D.: Wood & Holbrook, New York, Publishers.

This convenient volume is divided into four parts; the first being devoted to the mode of eating the second to receipts for wholesome cookery, the third to receipts for wholesome drinks, and the fourth to answers to recurring questions. These divisions render the work easy of reference, and prove a most desirable convenience. The subjects treated are analyzed most carefully, so that every delusion made is the logical sequence of the premises assumed, and that it is a correct one is proved by both arguments, comparison, and incidents in actual life. Whatever the writer of this volume may assert is apt to be based on the principles of right, for he is too conscientious to make false statements, or jump at conclusions, without a thorough analysis of the subjects. On this ground his work will be appreciated by all who may read it, hence its teaching will be accepted and imitated by all who would learn to eat that they may live in such a manner as to avoid disease. Every housekeeper should be in possession of this excellent volume.

The *Maritime Monthly*, of New Brunswick, Canada, is filled with a good assortment of sketches. This publication is doing much to make the treasures and pleasures of the sea known to the uninitiated.

The Horse and Course.

The first day of the third Fall meeting at Fleetwood Park was characterized by a poor attendance. The race for a purse of \$400 by horses that never before, three minutes was won by Mace's H. D. Walton; and the second race for a purse of \$500 for horses that had not beaten 2:31, was won by Murphy's Lady Dahliman. Best time, 2:33 1/2.

The second day of the Fall meeting of the Fleetwood Park Association passed off successfully, as there was an increased attendance of spectators, and three excellent contests furnished a good day's sport. The first race was a sweepstakes to wagon between Anna, Corra F., and Harry Gilbert, for which Gilbert was the favorite, but Lady Anna won in three straight heats. Best time, 2:40. The 2:38 race, for a purse of \$500, was won by Pauline in three straight heats. Best time, 2:35. The 2:34 trot, for a purse of \$600, closed with five entries, and the honors fell to Barney Kelly. Best time, 2:27 1/2.

Two trotting contests and a pacing match came off at the Fleetwood Park last Thursday. The track was in fine condition and the weather very suitable for the amusement. The first trot was between horses that had never beaten 2:33 before the closing of the entries. The starters were Mace's bay gelding H. D. Walton, W. P. Fleming's gray gelding Willie, A. Bourritt's gray gelding T. E. Gordon, Jacob Somerindyke's chestnut mare Melissa, John Murphy's roan mare Lady Collier, and L. Devos bay gelding Tommy Moore. Walton was the favorite over the field before the start and afterwards at almost any odds received. He won the race in three straight heats very easily. Best time, 2:33 1/2. The second race was between four horses under the saddle—a novelty now-a-days. The horses were John Murphy's bay mare Lady Dahliman, W. E. Weeks' gray gelding Farmer Boy, E. K. Bradbury's brown horse Berkshire Boy, and H. Peterson's gray mare Cora F. Four heats were run, Lady Dahliman winning the first, third and fourth. The second heat was won by Farmer Boy. Cora F. was distanced the first heat. Best time, 2:27 1/2. The third race was a match between two pacers, one called King of the Forest, the other Cricket. The latter was distanced on the second heat.

The regular trotting season closed at Fleetwood Park last Saturday. The 2:34 pace was won by Ella Madden after seven heats had been run. Best time, 2:30. The team race for a purse of \$400 was won by May Bird and Fred. Best time, 2:37. The contest between American Girl and the pacer Copperbottom, for a purse of \$1,000, was won by the latter. Best time, 1:22 1/2. Music held Barney Kelly the same day. The best time made was 2:29 1/2.

The four-mile heat running race for a purse of \$25, 900, gold, took place at San Francisco last Sunday. The heat was won by Katie Pease, Joe Daniels second, Thad Stevens third. Time, 7:43 1/2. The second heat and the race were won by Katie Pease, Henry second, Harwood third, Thad Stevens fourth, Heck Hocking fifth. Joe Daniels broke down. Time, 7:30 1/2.

C. Boyce's Dick won the \$300 purse at the West Side Driving Park on the 16th. Best time, 2:47. Eva won the \$500 purse, and the \$300 purse for running horses, half mile heats, best three in five, fell to Dan O'Connor. Best time, 0:59.

[FROM OUR OWN CORRESPONDENT.]

MEMPHIS, TENN., Nov. 10, 1874.

The horse fever hasn't subsided any yet in this or adjoining States, as was shown in my last letter giving the result of the race at the Mississippi State Fair. Stuchten Helena, Ark., has had quite a display of horse flesh, which with the fair lasted three days, and to give your readers an idea of the average speed of a Southern "scrub," I will give the race there on the first day, in a dash of half a mile. McMahon's bay pony made the distance under saddle in 22 1/2 seconds, heating three competitors, and in a mild dash which followed she got around the track in 1:54, beating two other entries. On the second day, in the trot, mile heats, best three in five, Tanglefoot won three straight heats, his best time being 4:10. In a pacing race, mile dash, same day, Senator Johnson best the first and second heats in 2:20 1/2, beating two opponents. On the third day the trot to harness, best two in three, Farrar's mare Kate won the two first heats in 3:03, 3:04 going to wagon, while her two competitors drew only two wheels each. In the running race, three in five, Brook's horse Johnson best the first and second heats in 2:20 1/2, 1:52 1/2, 1:45 1/2.

Pine Bluff, Ark., has also had a week's sport, during which a trot, two in three, to harness, was won by Floyd's Henry in 2:52, 2:41, distancing his only competitor in the second heat. A running race between three plantation horses resulted in Red Bone winning in two heats, and Missy in three. Here in Pine Bluff the turf is being sadly neglected, although there are thirty or more roads owned in the city that can draw a top buggy around a mile track inside of 2:40, and there

are half a dozen matched teams that can make the circuit in 3, while some of the high-flyers, if put to the string for big money, could make a record of from 2:27 to 2:35, but all we have to encourage the sport is a few young men who some time since organized a club and secured a very good track, but for some reason they cannot entice the people to a sufficient extent to collect over 100 or 200 at the horse matinees. General Forrest, who has resided here since the war, has a very fine stable (nearly all trotters) that he exercises personally about the streets and on the track, and recently has carried off several purses at the fairs, but did not get an opportunity to show his running stock, as the regular Fall meeting of the Chickasaw Jockey Club went by the board for want of support in the "purses" line.

RACE FOR LIFE.—The Calais Times says that Thursday's express train on the E. & N. A. R. R. had a race with a fox, on its way down, just below Enfield. The fox jumped on to the track after dark, and the only place where there was light enough to see to run being the centre of the track where the headlight of the locomotive threw its rays ahead of the train, he took it, and commenced "his race for life." For the first three or four miles, while the fox was fresh he held his own, keeping about the same distance ahead of the train, but after that gradually lost ground, until the pilot struck him, knocking him against a tree and killing him instantly. The train was late and was running along at the rate of sixty miles an hour.

BEAR HCS.—A man residing in Colorado had an opportunity recently to test the lunging power of a bear, and after his experience he considers such affection rather disagreeable. It seems that he went into the mountains to look after cattle that had strayed away, and while pausing to listen and look about, suddenly a large cinnamon bear which had been concealed in the bushes near by sprang toward him with the evident intention of giving him a hug. Not fancying such intimate friendship with strangers, the man declined to permit the affectionate embrace, and made for a tree which fortunately stood close by, and reached the lower branches near the ground just as he seized hold of his right leg and ankle. After a severe struggle he succeeded in freeing himself from the bear's hold, but before he could get out of reach the other leg was grasped with such a firm hold that he could not shake him off, and he began to feel that his time had come, and he was destined to become a meal for the ravenous beast. But finally the bear let go, slid down the tree, and retreated from the field.

The number of canary birds in the United States is estimated at 900,000, of which number 300,000 were imported last year. Additions come only from importation, since the number raised in this country yearly, only about equal the number lost through various causes. Of other cage birds there are about 100,000, and the whole consume about 175,000 bushels of seed in a year. Of this amount more than two thirds is canary seed, millet, cracked wheat, etc., to the value of more than \$2,000,000 annually.

HAVING recently purchased, for the use of our Florida Commissioners, a very fine Breach Loading Gun, made by the celebrated firm of W. & C. Scott, and Sons, England, and the outfit purchased being in excess of their wants, we now offer the gun for sale. Description—Breach Loader, Side Snap, Double Shot Gun, 10 lb. bore, length, 32 inches; weight, about 11 lbs. Price, \$110. Address, FOREST AND STREAM, 17 CHATHAM STREET.

Trout Business for Sale.

One of the largest Establishments in the country.

Post Office Money Orders for \$50 or less are cheap and safe also. When these are not obtainable, register letters, affixing stamps for postage and registry, put in the money and send the letter in the presence of the postmaster, and take his receipt for it. Send the money with the money as fast as obtained, that subscribers may get the paper at once.

Forest and Stream Publishing Company

17 CHATHAM STREET, N. Y.

Post Office Box 2632,

STURST'S CLASSIFICATION OF THE ANIMALS AND BIRDS OF NORTH AMERICA. PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various Animals and Birds in grotesque attitudes, never however violating their natural instincts. We offer these views not as pictures only, but as studies from nature. One of the most moving objects in our material world is the life of the animal kingdom. The interesting fidelity of the stereoscopic transfers the animals and birds from their natural habitat to the eye of the student, and the friends of our homes, where they cannot fail to leave a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and his gathering the large collection of native and foreign specimens, enables Mr. Sturges to combine in every view the locality of the specimen with its appropriate rocks, woods or water, and coloring from the originals.

- 1. Wild Cat, or Bay Lynx. Lynx rufus.
2. Snowy Owl. Strix Nyctea.
3. American Wolf. Canis Americanus.

Prices: By the Dozen, \$3 00. By Retail, 25 Cents. In Advance, \$1 00. Dealers supplied at a liberal discount from these rates. Back numbers and parts of sets always on hand.

TESTIMONIALS.

CORNELL UNIVERSITY. I SATISFIEDLY recommend the use of this new educational enterprise. If we can arrange to purchase a set of the same, it will contribute to the education of the mind, it will be a step in advance in education. EZRA CORNELL.

WASHINGTON, D. C., March 15th, 1870. I am much pleased with the success you have met with in giving to the world specimens a very decided appearance of life.

I hope you may be able to continue the Series, and I have with me a large number of orders for more information and instruction in regard to the wild mammals of New York. SPENCER F. BAIRD.

STATE HOUSE, BOSTON, Mass., March 15th, 1870. I have examined carefully the "Stereoscopic Studies of North American Wild Animals and Birds," and I think they are of very great value, both as object lessons for students, and as a most interesting series for popular instruction. The illustrations, in point of accuracy, position, and color of the different groups and the general treatment are most perfect. I cordially recommend them to the public, and I think you may trust you will meet the encouragement which you have earned. EDWARD A. SAMUEL, Curator of Zoology in Mass. State Cabinet.

PEABODY ACADEMY OF SCIENCE, Salem, Mass., March 15th, 1870.

I have shown your Stereoscopic views to the Directors of the Academy and the editors of the American Naturalist and the Boston Herald. They concur with me in praising their truthfulness and the taste which they have displayed in surrounding the specimens with natural objects and in their arrangement. I think they are of great characteristic fitness. They are certainly better fitted, not only as parlor and drawing room illustrations, but as educational illustrations for the use of schools and colleges, than anything we have yet seen.

A. HYATT.

CORNELL UNIVERSITY, President's Room, ILLIAC, March 19th, 1870.

I have received the Stereoscopic views of objects in Natural History, and have examined them carefully. They have surprised all who have seen them by their wonderful fidelity, both as regards the animals and their surroundings, and I think they are of great service to the study of Natural History, first by attracting students to it, and next by perfecting them in it. ANDREW D. WHITE.

These Stereoscopes are sold wholesale and retail by

FOREST AND STREAM P. CO., 17 Chatham St., (City Hall Bldg.) P. O. Box 2532.

VIENNA, 1873
For Merit.
Vanity Fair.

VIENNA, AUSTRIA, Nov. 30, 1873.
Messrs. Wm. S. Kimball & Co.
Sirs—A friend of mine sent me, with a transport of Italian Shells, two boxes of "Vanity Fair," which I declare to be the best Tobacco I ever smoked. We have very good tobacco in Vienna, and I have never seen any other so good. My friend in New York got an acquaintance in California, by that reason I apply immediately to you, begging you to send me forthwith ten pounds of "Vanity Fair," and send with the main remittance to Germany. If there is a man in England who has sold you "Vanity Fair," I beg you to address me the address. Dr. Jos. Hyatt, Professor of Anatomy in the University of Vienna.

It is manufactured from the best Virginia and North Carolina Leaf. It is particularly adapted to Meer-schmied and Cigarette smoking—does not bite or make the tongue sore—is therefore unlike any other tobacco in these respects.

Sportsmen's Goods.

SCHUYLER, HARTLEY & GRAHAM, 19 Maiden Lane, 20 & 22 Jervis street, N. Y. BREECH LOADING GUNS A SPECIALTY.

We would call the attention of the public to our large assortment of Breech-Loading Shot Guns, Manufactured by the following celebrated makers: Messrs. W. & C. SCOTT & SONS (winners of the International Gun Trial of 1873), F. WEHLEY & SONS, W. V. GREENER, WESTLEY RICHARDS, J. HOLLIS & SONS, and other makers.

A full line of fine PISTOLS AND RIFLES CONSTANTLY ON HAND. DICKSON & HAWKLEY'S SHOOTING TACKLE. To insure good shooting from Breech-loading Guns, we would recommend the use of the STURTEVANT BLASS SHOT SHELLS, manufactured by the Union Metallic Cartridge Co., Bridgeport, Conn. These shells are the cheapest and best in the market, can be easily re-pressed with ordinary caps, without the use of the implements necessary in priming all other styles of shells. BUSSEY'S PATENT GYRO PIGEON AND TRAP, WITH GASKETS AND BIRDS.

Black's Patent Cartridge Vest. This Vest affords the best arrangement yet in carrying cartridges. The weight is so evenly distributed that it is scarcely felt. Cartridges are carried in this vest, which is of great importance when brass shells are used. When the head of the weight on forces the vest backward, the head of the vest is forced forward, when the vest is in the ordinary position, the head of the vest is forced backward, when the vest is in the ordinary position, the head of the vest is forced backward, when the vest is in the ordinary position, the head of the vest is forced backward.

AGENTS FOR THE Union Metallic Cartridge Company's Ammunition, WARRANTED THE BEST IN THE MARKET. SEND FOR CIRCULAR.

GREAT SUCCESS. 1st. Justin McCarthy's New Story, LINLEY ROCHFORD.

Price, \$1. or \$1.75 cloth. Five editions sold in two weeks.

2d. GEN'L CUSTER'S GREAT BOOK, MY LIFE ON THE PLAINS. Elegantly Illustrated. Price, \$2.50. Two editions in two weeks.

3d. LOSING TO WIN. BY THEODORE DAVIES. Price, \$1.00. Cloth, \$1.50. Two editions in two weeks.

4th. THEODORE TILTON'S GREAT NOVEL, TEMPEST-TOSSED! Price, \$1.75. Thirteen editions sold.

5th. NEARLY READY. Annie Edwards' Powerful Story, ESTELLE.

1 vol. 12mo. Price, \$1.50. Mrs. Edwards considers this one of the best of her stories.

Either of the above sent by mail, post paid, on receipt of the price.

SHELDON & CO., Publishers, NEW YORK.

Setter Dog For Sale. THE UNDERSIGNED HAVING GIVEN UP his office for sale his SETTER DOG JACK. He is a good dog as anybody has got, in my opinion, and after hunting thirty years for the market, and owning many dogs, I think I ought to know. He is known and white, quite large, and was bred in England. I have seen better dogs for partridge, but for quail, woodcock, or snipe I never saw his equal. He is very staunch, is four years old, a good retriever, and works equally well quartered or against the wind. He has been hunted eight or nine months in the year for the past three years, and is in first rate shape now. For further information, address G. A. WHITE, Sheridan House, New Bedford, Mass.

NEW YORK, THURSDAY, NOV. 26, 1874.

Volume 2, Number 16.
 17 Chatham St. (City Hall Squ.)

BABYLON.

Selected.

MORE than several years have faded since my heart was first invad-
 ed
 By a brown-skinned gray-eyed siren on the merry old South Side,
 Where the mill flume cataracts glisten, and the agile blue fish listen
 To the fleets of fishing schooners floating on the weedy tide.

'Tis a land of ram and romance, for the old South Side is no man's.
 But belongs, as all such places should belong, to "Uncle Sam."
 There you'll see the dusky plover, and the woodcock in the cover,
 And the silky trout all over underneath the water dam.

There amid the sandy reaches, in among the pines and beeches
 Oaks and various other kinds of old primeval forest trees,
 Did we wander in the moonlight, or beneath the silvery moonlight,
 While in ledges sighed the sedges, to the salt salubrious breeze.

Oh I loved her more than sister, often oftentimes I kissed her,
 Holding pressed against my vest, her slender soft seductive hand,
 Or o'er by midnight taper, filled at least a quire of paper,
 With some graphic ode or Sapphic to the nymph of Babylon.

Of the saw the dim blue Highlands, Coney, Oak and other islands,
 Moles that dot the dimpled bosom of the sunny Sommer seas,
 Or o'er polluted leaves of lotus, anywhere where our skiff might float us,
 Anywhere where nines might lodge us, there sought we alone to be.

Thus (ill) Summer was transient, and the woods were leafless,
 Dolphin touts, and hectic blubs, of what was shortly coming on,
 Did I worship Amy Milton—fragile was the fawn I built on,
 And we parted—broken-hearted I, when she left Babylon.

As on the moonless water, lies some moonless frigate,
 Flings her spars and spidery outlines lightly o'er the lead plain,
 Not when the fresh breeze bloweth, to some distant region goeth,
 Never more the old haunts knoweth, never more returns again—

So is woman evanescent, shifting with the shifting present,
 Changing like the changeful tide, and faithless as the fickle sea,
 Falser than the fowler's whistle, lighter than the wind blown thistle,
 (Was that coaxing piece of coaxing, Amy Milton's love for me;

Yes, that transitory bubble floating on a sea of trouble,
 Though the skies were bright above us, soon those Summer days were
 gone.

But till I'm by all forsaken, will my bankrupt heart awaken
 To those golden days—those olden days in happy Babylon.

For Forest and Stream.

Salmon on the Amoor River.

"**C**ALL that a fine fish, sir?" said old Jack, our best
 foremost hand, as he swung another eel over the
 rail and deposited him in the deck bucket by his side.
 "Wait 'till we get on the river, sir, if you want to see fish.
 Why, the salmon are thicker there, sir, than mossbunkers
 in the sound, and the Indians feed their sledge dogs on
 them all the year round."

How Jack's assertions were verified will be seen. I had
 gone on deck at early daybreak to get the first close look
 at the new land, this wonderful Siberia, and found the old
 tar engaged in the laudable occupation of providing a
 breakfast of fresh fish for all hands. The distant views of
 the rugged and heavily timbered coasts of Tartary and
 Siberia we had obtained while sailing up the gulf, majestic
 in their grandeur, were fully sustained by closer inspection.
 The schooner lay motionless at her anchor on the placid
 bosom of De Castries Bay. Off seaward, the little Oyster
 Island's, between which we had sailed the previous even-
 ing, almost hid the entrance to the land-locked harbor. At
 the upper end a few rude log-houses indicated the settle-
 ment dignified with the high-sounding title of Alexan-
 drovsky, where a lieutenant of His Majesty's navy paid
 penalty for his title of Governor by involuntary exile.
 On each side the forest-covered hills rolled away from the
 water in successive tiers until the tall pines, which crowned
 the summits of the loftiest ranges, seemed to lose their
 tops among the clouds. Truly, this was the "forest prime-
 val," nothing but trees to be seen in any direction save
 on the little clearing where they had been felled to make
 room for their own trunks in another position. Ordering
 the boat, the Captain and myself pulled up the bay to pay
 our respects to the Robinson Crusoe of Alexandrovsky,

and beg for a pilot to carry the schooner up the Amoor as
 far as Nikolaefsk. We found him and his man Friday,
 who, in this instance, happened to be a charming little
 blue-eyed German wife, anxiously awaiting our arrival, and
 in a few moments we were surrounded by the whole garri-
 son clamoring for news. The Governor was very polite,
 placed everything in his possession at our disposal, but a
 pilot! alas, "eest impossible"—there were none there. A
 chart upon which the buoys and beacons marking the
 tortuous channel of the river were correctly designated,
 was given us, and with this, alone, as a guide, we were to
 find our way over the two hundred miles of the most diffi-
 cult navigation in the world, which was still between us
 and our destination.

After being shown the trees in which were still em-
 bedded the bullets fired by the British storming party when
 they captured the place during the so-called Crimean war,
 we bid adieu to the kind Governor and his wife, and returned
 to the "Alert." As the flood-tide was making, preparations
 were immediately commenced for getting under way and
 heaving up the anchor which had touched bottom but once
 before—in the harbor of Huloodai in the Japanese island of
 Yesso—during our voyage of eight thousand miles, the
 little schooner was soon gliding past the mouth of the bay
 with her bow pointing towards the almost unknown North-
 ern waters. From De Castries, the Gulf of Amoor is
 formed by the island of Saghalien on one side, and the main
 Siberian coast, broken by the mouth of the mighty river,
 on the other. It contains innumerable and constantly
 shifting sand banks, the largest of which form two chan-
 nels; one, following the Saghalien coast at varying dis-
 tances, finds its way into the Ochotsk Sea. The other,
 which we were to pursue, leads into the Amoor through
 the *Loman*, crossing myriads of "bars" and zig-zagging
 from one side to the other until Nikolaefsk is reached.
 We had scarcely been under way an hour when long streaks
 of muddy green began to mingle with the liltier blue
 water, gradually increasing in size and consistency until all
 traces of the sea were lost, and we were sailing on the tur-
 bid accumulation of mud and sand washed from the
 thousands of miles of ever-varying banks, through which
 the Amoor passes on its way to the ocean.

A description of the vicissitudes of that four days' trip
 would be almost as tiresome as the voyage itself. Cape
 Catherine, the first promontory, was passed in safety, and
 then the thumping and bumping commenced; now an
 anchor was carried out astern and all hands manued the
 capstan to heave the vessel off. Now a boat was sent
 ahead to find the channel or to tow the schooner into it.
 Once, when in comparatively deep water, while we in the
 cabin were eating dinner, the watch on deck cried out,
 "breakers ahead!" and sure enough there was a long line
 of foaming, muddy water churned into white caps. It was
 impossible to account for it. There was no wind, and we
 were not making more than three miles an hour, yet it
 seemed to be rapidly approaching. Tidal waves do not
 generally come down a river, or I should have ascribed it to
 some such phenomenon. While we were yet speculating we
 suddenly found ourselves in the midst of an immense
 school of grampus. Thousands of the ungainly creatures,
 evidently bound on a Summer's jaunt to the Ochotsk, or
 Arctic Ocean, were floundering in every direction, giving
 the water the appearance of being covered with breaking
 waves. Following the beacons and buoys, as laid down in
 our chart, we managed to pass Capes Nevelskoi and Mura-
 vief-Lazaref and the dreaded Pronge—and crossed in
 safety the principal bar where there is a beacon and code
 of signals giving the depth of water. Only Providence
 and a light draft carried us over, however, as the inebriated
 Russian soldier in charge of the signal station displayed
 the entire code in quick succession, giving us our choice of
 any depth from a fathom to fifteen feet. Before reaching
 this point my attention had been attracted by a number of
 stakes driven in the channel, formed by the sand banks,
 strongly suggesting the idea of fish nets, and my suspicions
 were confirmed when a number of canoes were seen push-
 ing off from the wooded banks and intercepting our course,

and soon we had the pleasure of welcoming alongside a
 party of Gilla Indians, the aborigines of the country.
 They were swarthy, Mongolian-featured fellows, of low
 stature, and dressed in illy-cured skins of wild animals, all
 possessing an ancient and fish-like smell, which rendered it
 desirable for us that they should remain in their canoes.
 What made their visit welcome, however, was the discov-
 ery that their boats were loaded with salmon trout just
 taken from the nets, magnificent speckled beauties, weigh-
 ing four or five pounds each. By means of signs and a few
 mutually intelligible words, a tariff was established and the
 cargo of each boat purchased. It was the cheapest fishing
 I had ever participated in. A cup full of rice, or a plug of
 tobacco for each boat load! Think of that Messrs. Black-
 ford & Co. a plug of tobacco for fifty salmon trout!

The way in which we feasted, after a two months diet of
 salt beef and pork, can be imagined. We had trout broiled,
 fried and baked, and what we could not eat the provident
 Captain consigned to the pickle barrels to fill the vacuum
 caused by the consumption of salt horse.

Another day of hard work and a night passed in fighting
 a voracious horde of mosquitoes, and we entered upon the
 last stretch of the river below Nikolaefsk. On the North
 bank were frequent little clearings where the Cossacks,
 under the fostering care of the Government, had abandoned
 their lives of predatory warfare against Tartars and
 Khrigis, to cultivate the soil. Rounding the last point the
 glazed roof of the Greek church came in view, and our
 anchor was dropped in front of the most important settle-
 ment in Eastern Siberia.

The Amoor at this point is over a mile in width, and
 comes rushing towards the sea with a current so fierce and
 strong that the Russians, for the preservation of such of
 their vessels as may be obliged to Winter there, have built
 immense *corvets* to protect them from the ice during the
 spring freshets. Steamers of considerable size ascend for
 fifteen hundred miles to Nertschinsk, and following its
 windings to the junction of the Argoon and Schilka, the
 distance is fully two thousand.

Nicolaefsk has a population, almost entirely soldiers, of
 between two and three thousand souls, all existing on a fish
 diet. Fish in such profusion I never saw before. The
 officers had champagne with their salmon, while the rank
 and file were content with *rodzky*, a vile spirit composed
 of anything that could be distilled into alcohol. For about a
 week we enjoyed it and then it pulled. One morning the
 men came aft and informed the Captain that they had
 enough fish, and wanted their allowance of salt beef and
 pork again, and even the aristocratic residents of the town
 were glad enough to avail of the contents of our harness
 cask.

The Amoor is open only five months in the year, and the
 Russians aver that during each month a different descrip-
 tion or species of salmon ascend to their spawning beds in
 the tributary streams above. The salmon trout, such as we
 purchased of the Gillaaks at the mouth of the river, they
 say, are the first to appear, followed by the fish which we
 found in such quantities upon our arrival at Nikolaefsk.
 Whether these are the *anchoalynchus orientalis* or not, my
 ignorance of the ichthy science prevents me from deciding,
 and our limited stay did not permit me to examine the
 other descriptions which were said to follow them. They
 were certainly noble fish, and in general appearance, in
 their bright, silvery sides and thickness through the
 shoulders, closely resembled the salmon of our own East-
 ern coasts. I remember observing the difference between
 them and the darker skinned fish of the Sacramento River.
 The climatic positions of the Eastern coasts of America and
 Asia, and the Western coasts of Europe and our continent,
 are not dissimilar. The great *Kuro Suwa*, or Japanese gulf
 stream, which follows the coast of that Empire, and then,
 diffusing itself over the North Pacific, gives to California
 its temperate climate, produces the same geniality that the
 Atlantic gulf stream does for the shores of Europe. The
 mouth of the Amoor, which is in about the same latitude
 as London, is a mass of snow and ice for six months in the
 year; and Peking, which bears almost the same relation to

San Francisco, is deprived of any but land communication with the rest of the Empire, for a similar period. This climatic difference of course affects the fauna of each country, and opens an extended field for the investigations of the naturalist and scientist. I met no one at the Amoor who had given attention to these subjects, and such a thing as a "fly," or even a fisherman, was unknown. Our fishing was done entirely with nets. Every evening a barge, filled with Russian soldiers and an immense seine, would cross the river to the Southern bank, and manning our boat we would put off from the schooner and join them. Not an enclosure of any kind but was a piece of smooth water, where one of the nets would be cast, and the barge again pushed off to surround the necessary space of water. It seemed only necessary to drop the net and haul it in to make an almost miraculous draught of fishes. The aborigines would gather around for a share of the spoils, and their wolfish looking dogs fairly jumped into the water for the fish. The Gillkiss, Tongouss and Goldcees, who have quietly submitted to the Russian yoke, find in this bountiful supply their almost only means of subsistence. The Winter's supply is caught and cured in the sun during the Summer months, and the few furs of a saleable quality, which they trap, are traded for tobacco and vodka. A more degraded race do not exist in the scale of civilization, and they are in strong contrast to the Manchour Tartars, who have been ousted by the Russians. A few of these latter came into the Amoor with strings of sable skins for sale. They were tall, fine-looking fellows, neatly dressed, and with intelligent faces; but, alas! vodka was their enemy also, and the skins were all bartered for spirits.

The high expectations as to commercial results, which were to follow the opening of the Amoor, do not appear, as yet, to have been realized; but while it is true that the agricultural development of this magnificent country, the Russians have so recently acquired will be retarded by the extreme severity of the climate, they yet possess inextinguishable mines of wealth in the timber and fisheries. With the rapid settlement of California an impetus has been given to the latter industry, which is sending our hardy fisherman, not only to the shores of Alaska, but to the almost unexplored cruising grounds of the Far Northwest, and as the demand for fish grows, the attention of the Government, many of the former pursuers of the Leviantha are turning their attention to a smaller but more profitable "fry." China affords an almost unlimited market for lumber, and the Russians, if their Government will permit it, can compete successfully with the dealers of Puget Sound. The Summer that we were on the Amoor a German vessel sailed with a cargo of ice, a portion of which, I understand, is being consumed at Shanghai. But I fancy that in the eyes of the Czar whatever advantages, either commercial or agricultural, the Siberian country may possess, are but secondary considerations compared with its strategic importance in the event of a war between his own and either a European or the Chinese governments. With fine foundries, as there are now at Niekolefsk, and a base of supplies; with telegraphic communication direct to St. Petersburg, and with advantages prior to any nation trading with the East. It is remarkable the facility with which all this country was acquired. As early as 1722 numerous settlements of Cossacks had been formed along the banks of the middle and upper Amoor, but were driven away by the Chinese. In 1834, one hundred and thirty-two years afterwards, the descendants of these same Cossacks were to be seen in the great river from its commencement to its mouth, and all in a space of six weeks, without molestation; adding nearly half of Manchuria to the Russian crown, and placing the Chinese Empire at their mercy should it ever become necessary or politic to pursue an aggressive course. As a place of residence, Niekolefsk did not strike me as being as desirable as more general portions of our little river, and I had no objection to my ballast trim, pointed down the river, drifted away from the west shore. Reaching the sand bars, at the month, we found them covered with flocks of the great China goose. They had apparently come there for the purpose of moulting, and being unable to fly, the Gillkiss were chasing them about and catching them alive. Some of the canoes coming off to us, we bought a number of the geese, and throwing them on the balls, where they had laid run of the field, and feeding them on *padly*, or unaltered rice, they were soon in fine condition for the table.

Our run down the Tartar Gulf was without incident of note, and entering the Straits of Sangar, between the islands of Niphon and Yesso, we once more anchored in the lovely harbor of Hakodadi.

A DAY'S DUCK SHOOTING.

I SEND you particulars of a day's shooting I had last week, which may, perhaps, interest some of your readers. I was shooting on Lake St. Francis, and had arrived at camp on afternoon of Tuesday, the 10th instant. On arrival I at once started a party to look for ducks. On arrival in a vain search; after spending a couple of hours in a rain search, Baptiste, who has eyes like a hawk, declared he saw a large flock on the other side of the channel, about a mile and a half distant. I laughed at him and could see nothing; he was most positive that he saw the birds moving their wings in the sun. To make sure he climbed a tall tree, and as soon as he got down, he at once proposed to cross to the other side, and build a raft for the morning's sailing. Of course I agreed, and we found on crossing that he had been right, and that a flock of from six to eight hundred ducks were feeding in a bay which, luckily, had a thick border of reeds. We at once put the decoys out and backed my canoe into the reeds, and went on then to borrow another canoe and cut branches to make a good blind. While he was at work making a blind, I went on to pick up some of the ducks. As it was then late in the day, and we were far from camp, we stopped shooting and paddled back to the shanty, feeling pretty confident that we were in for a good day on the morrow.

At half past four on Wednesday morning the tea-pot was boiling, and after a hasty breakfast Baptiste and I started. It was a few minutes after six when we got down to our blind, and at seventeen minutes to seven I fired my first shot. In two minutes to seven I had twenty-four blue mallards picked up. They were coming in small flocks of four or five, sometimes two or three, and were lighting freely with the decoys. I had two breech loaders, one ten and one twelve bore, and as luck would have it I was shooting very steadily, getting almost all the birds that came in. For example, when a flock of five ducks came in, I got two with my first barrel on the water and three with my left as they went. I had rare sport up to nine o'clock, when it came on rain and then heavy hail. I stood out the storm for some time, but at last thought discretion the better part of valor, and went ashore to get warmed and to dry my guns. While on shore the ducks literally piled into my decoys and I was chafing at the chances I was missing. At eleven I went out again, and now ill-luck commenced; eight times in succession did a single bird pass quietly over the decoys and get missed clean with both barrels. It was annoying, so I had to take a big dose of milk punch and smoke my pipe most philosophically till I got steady again. I soon got to work, and by three o'clock had bagged, in spite of the storm and spell of wretched shooting sixty-four ducks. The wind had now risen so much that it became a question whether my canoe could live crossing the lake, and Baptiste and I thought it better to stop shooting and cross by daylight, as the waves were too high to be asked in the dark. We got back to camp about six o'clock, pretty tired, very cold, and hungry enough to eat double rations. At camp we found that the storm had been so bad that none of our other three canoes had ventured out, and that ours were the only ducks brought in. I might, had I chosen to have remained till dark in my blind, have easily killed one hundred ducks to my own regret. Even had I done so, I could not have had more than half as many as I had had at least eight when we left at three o'clock. This is a genuine day's shooting, and I enclose my card as a guarantee of its veracity. I was paddled by the celebrated Baptiste Bibean, a lord whom I took up with me. He did not shoot, except at cripples, but picked up the dead as they were shot.

If I should like to know if any of your readers have beaten the score of two or three ducks in fifteen minutes, not getting more than three to any one barrel, this season, my chin and self returned on the 16th with 280 ducks.

Yours truly,

ROYAL.

Montreal, November 18, 1874.

A DEER HUNT IN THE ADIRONDACKS.

AFTER dinner R. and I, with their guides, went fishing, leaving old John Plumby (yes, Mr. Ray's John), Jack, a hound, and yours truly to keep camp. Then fellow went back to eight, where he was to go and get the deer. John, I think, supposed he killed a deer, so my answer came quickly—"All right, wherever we go!" "Well, we'll go over to Betna ponds, and take a little 'bit,' and a couple of blankets with us, so that we don't see one afore dark, we can stay at night and try the 'jack' on them."

We were quickly ready, and leaving poor Jack to keep camp, started for Betna, which we reached by going down the lake a couple of miles, and then striking across a mile "carry," which at best has a poor reputation with the guides.

Those of you who know what they call a first class "carry," and take into consideration that a short time before we had the heaviest wind storm known in that section for years, can, I think, sympathize with me. The pack basket containing the "bit" and blankets on my back, a rifle and double barrel shot gun, (which I never used) on one shoulder; the paddle and "jack" on the other; my pockets full of cartridges; no tar on my face, (our stock was low, and we were trying to economize, and may the devil take such economy!) I trudged along, beset at every step by several million insects to dig, and several hundred, all the way over the ridge, that we "craw" up, you bushes, down your back, and under your hat, tapping you where it sees it; to the moose fly, who will bite through wherever he chances to light, whether it be on your dammed shirt, or back skin mecessaris.

I said a mile "carry." Well, that is all right, but we walked a very short distance indeed in that "carry."

You think us foolish, I think little streams, that are not over a hundred feet deep, find a large tree blown down across the path. Now a tree that proposes to fall across a "carry" generally arranges things so that it will be just too high to climb over, and yet uncomformably low to crawl under with a boat or pack basket on your back; at least so I concluded after a few trials, and went round the balance of them. Consequently the foregoing statement.

You perhaps have your own way of doing things, but after starting on its downward course, came in contact with a huge boulder and concluded to go round rather than over it. While crossing this "carry" I often thought of that little stream, and—admired it.

After a little short of an hour of this most exerting pleasure, we reached Betna ponds, which are both small, say a half mile in length by a quarter in width, and connected by a stream or eight or ten feet long and scarcely navigable to our cockle shell of a boat.

John now took the aforesaid boat off his shoulders, and placed it in the water. We got in, and from five to seven floated noiselessly around in all the little bays and inlets, hoping that some deer would come in to drink. "Nary a deer." We had just landed, and were seated on a large rock at the water's edge partaking of some flap jacks about a splash, and on looking across the pond saw what caused an immediate suspension of hostilities towards the flap jacks. A big buck. He did not see us, and was quietly feeding on the lily pads. John and I got into our boat in a very short space of period, John in the stern armed with a paddle, I in the bow with a rifle. I think you could have heard a whole paper of pins, (not to mention your prop, while John was rowing) as the boat started. When about a quarter of a mile from him our prize raised his head and saw us. For one instant he looked, and then I suppose would have bounded up the bank, but a crack from my rifle, and a case of "shuffling off this mortal coil" prevented.

I said a case of "shuffling off this mortal coil." Well, so it was, but John's remark—"I'll be good darned if it didn't

peer pretty doubtful one spell there, who would "shuffle," you or that old buck"—gives to an imaginative mind a very correct idea of what followed; but for the benefit of those who, like, myself are not imaginative worth one cent, I give it in detail.

1st. When I shot, the deer, who was standing in about three feet of water, dropped. Then he rose above the water probably five feet, and came down with a splash on his broad side. This operation he repeated again and again. I had fired at his head, and when he fell John hinted at such a thing as my not hitting him there, I should have been very indignant. This strange conduct on the part of the buck, however, made me very uneasy. I began to suspect he was not hit in the head, but merely wounded some where, and would get away.

2d. I was possessed of a large hunting knife which had never been stained with blood, and my friends at home had cruelly remarked to me before starting, possibly never would be.

3d. And lastly, but not leastly, it was my first deer. Now reader (gentle or otherwise) do you wonder, taking into consideration, 1, 2, and 3, that as soon as I was in the vicinity of the deer, I jumped into the water, nearly capsizing the boat, and made a blind attack on that buck.

The result of that attack again requires three subdivisions.

1. Round 1st. Was indisputably the deer's. I was kicked a considerable distance further than I cared to be.

2. Round 2d. I came to the scratch promptly, and left in like manner. The deer evidently been playing off on me before. We (the buck and I) were in the water, about eight feet from the bank, which was thickly lined with bushes. Mr. Buck now placed his hind feet against my chest (or a little lower) and I found myself sticking up head down in the bushes. I got out into the water as quickly as possible, and changed ends. I had not looked at John since leaving the boat. I now did. There he sat in the water, with that bow in his hand, and that water splashed over his head, yet apparently happy. He was laughing. At that moment there was no doubt in my mind but that he would have laughed had it been a funeral. He did not open his mouth (save to emit peal after peal of hearty Adirondack laughter), so I again turned my attention to the buck.

3. Round 3d. After considerable sparring in which I did not come out first best, I managed to get a firm hold of one of the horns of my antagonist, and in a second I had disappointed my friends at home. My knife was bloody. I had killed a deer.

I then felt as I imagine a great conqueror must; in fact I thought myself one, yet I was aware that there was nothing in my personal appearance which would lead an unprejudiced person to any such conclusion. My hat was gone, in round number two the buck had put one of his hind feet in at the opening in my hunting shirt, and the principal visible part of that was gone. My clothing that had remained by me, was soaked with blood and water, and my whole person besmeared with mud.

Again I looked at John. This time he gave me an approving nod, and said, "well done for a youngster." I was then examined the buck, and found that the bullet had entered on ear and passed out at the other. From the time he was shot till it cut his throat, was eight or ten minutes, and during the whole of that time he kicked and splashed with a strength quite wonderful.

We got him into the boat, John pronouncing him to weigh between 220 and 250 pounds. The rest of the trip, as it was the one into which the "carry" led. We had difficulty in getting through the shallow stream which connects the two ponds, when we had no freight; and now with 250 pounds of buck aboard, we just had to get out and wade, towing the boat after us.

On reaching the place of embarkation and "skinning" out our deer, keeping only a small and tender skin for the Winter, I examined the buck, and found that the bullet had entered on ear and passed out at the other. From the time he was shot till it cut his throat, was eight or ten minutes, and during the whole of that time he kicked and splashed with a strength quite wonderful.

"TO FLORIDA FOR ONE HUNDRED DOLLARS."

EDITOR FOREST AND STREAM.—

I have just been reading Mr. Beverly's paper of "Three Months in Florida for a Hundred Dollars." It is very interesting. I think a hundred dollars would hardly be enough to maintain a man, his gun, and his dog in the Winter climate, and spend quite a number of winters South, and about half a dozen in Florida, living in tents, hotels, boarding houses, and steamboats, some of my experiences might interest some of the many readers of your interesting journal, the FOREST AND STREAM. The first consideration to the Winter visitor to Florida, is the climate, which is delightful. I do not think so agreeable a place can be found in the Winter climate, and enables the sportsman to be comfortable in his tent, when in Georgia, Texas, or California, he would wish himself in the hotel. I can confirm what has been said in your journal of the great abundance of fish and game. The whole coast, East and West, swarms with fish, and of a very fine quality; pompano, sheephead, grouper, red fish, king fish, Spanish mackerel, mullet, wrasse, and a large cod fish, and a size very good, can be found North. The St. John River is also full of fish. Slud are plenty all Winter, and in the upper parts of the river black bass were so plenty as to often jump into our boats, and light to ten pounds are very common. Game, except quail, is getting scarce about the larger places, but you have only to go into the country to find abundance of deer and turkeys.

When I commenced I intended from my experience to tell of a more pleasant way to spend Winters in Florida than Mr. Beverly's (provided you have money enough), and without costing near as much as to live at the hotels, have a better table, and lots of fine sport, and withal the most comfortable and pleasant way a company of gentlemen can spend Winters in Florida. Take a half dozen good fellows get up a light draft, stern wheel steamer, to draw about

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

WHITEFISH BREEDING.

THE experiments of Mr. Nelson W. Clark, of Clarkston, Mich., have resulted in proving that this inhabitant of the deeper lakes and rivers can be successfully propagated artificially. In 1899, he attempted to hatch out 50,000 eggs, which are spawned in the Fall, and as near as can be ascertained, remain in shallow water around the margins of lakes, under the ice all winter. Mr. Clark's experiment was tried with spring water, as usual in hatching trout's eggs. Out of the whole lot he hatched only 1,500, and these soon died. The temperature of the hatching house was from 40° to 48°. He became convinced that spring water would not do for whitefish. Their eggs naturally hatch out in April, succeeding the deposition of the spawn. He therefore fixed a pond in which to place eggs, and which could be allowed to freeze over and remain so all winter, thus keeping the water so cool that incubation would be more gradual. He succeeded in hatching the greater number of the eggs, but the young fish died when fed with any food (artificial) that he could procure. The next year he succeeded in hatching fifty per cent. of the spawn, about April 1st, four and a half months after taking the eggs. The young fry were immediately put into the Detroit River and into three small lakes in Oakland county. The next season he took 1,000,000 eggs, of which he hatched 66 per cent.; 216,000 eggs in a forward state of incubation were shipped successfully to California.

Mr. Clark is certain that he can succeed every time if he can keep the water, in which are the eggs, covered with ice until April 1st, and he is equally certain that the eggs of the salmon, salmon trout and brook trout should be hatched in running spring water. Their eggs hatch about February 1st, and the young have an umbilical sac attached to them, from which they derive all their substance for about fifty days. Until this sac is absorbed they require no artificial food, and after feeding them a few days they can be turned over in a pond. But the whitefish which he hatched have no yolk sac left, and for some reason or other artificial food kills them every time. They must therefore be retarded from hatching until Spring so that they can be immediately turned out.

None of the fish put into the lakes in Oakland county in 1872, had been seen until Nov. 17th of last year, when they were found in apparently countless numbers in one of these lakes. A single boat load of fishermen took 350 in an hour with spears—400 or 500 being taken a few days afterwards in the same place. These were all whitefish of fair size to the table.

The Detroit Tribune, from which we gather the above, says that Mr. Clark had in December last over 1,800,000 eggs in his hatching boxes at Clarkston, expecting to get at least 1,500,000 young fish therefrom.

Mr. Clark is likely to be commended for his perseverance in his attempts to re-stock our fresh water lakes with a fish which is so staple an article of commerce. The whitefish (*Coregonus albus*) is one of the salmon family, and is the principal fish caught for export in the waters of Lake Erie, Detroit River, and the straits at the lower ends of many of the Great Lakes. It is so relentlessly hunted that the average yearly catch has fallen off nearly one-half. It is to be hoped that Mr. Clark's success may induce the general artificial propagation of one of our great sources of animal food.

BLACK BASS.

New Hope, Penn., November 16th, 1874.

EDITOR FOREST AND STREAM.—
The Delaware River is well stocked with black bass. A large number have been taken here this season, some weighing four pounds—two pounds quite plenty. There has been a great demand for them from New Jersey for stocking purposes, and I have known boys with hook to catch as many as 10 in a day. A cat is kept in the river, where each boy deposits his day's work. They are quite plenty in the canal, having escaped through the feeder, and when the water is drawn off many could be taken for stocking ponds that would otherwise perish. As all the shad interest here is opposed to them they receive very little protection. I gave them a few trials, and found they tasted took any large gizzard fry, but the boys bait with minnows and trap grubs. J. B. T.

THE CALIFORNIA FISH CULTURE.

The following letter from Mr. Livingston Stoue's headquarters on the McCloud River, California, has been handed to us by Mr. Conklin, the artist of the Commission. It records the close of the season's operations:

McCLOUD RIVER, Cal., November 8th, 1874.

MY DEAR CONKLIN:
Mr. Stoue went East night before last—or at least left the camp at that time. Mr. Williams, Dick, and Green have gone into camp on Soda Creek, to try their luck at mining. White and Anderson will join them in about two weeks, as soon as a gale, through here. We have had very stormy weather ever since the eclipse of the moon. One night the water came down in sheets, and raised the river about two feet and carried away part of the dam. I am waiting about 80,000 young salmon in the McCloud River for the State of California. I have already put in 500,000 and the rest in boxes in the river, and will dump them at the end of two weeks.

Those boxes left put up, that you helped paint, have worked finely. They have no cavity so smooth as glass, and have never leaked a drop. With my experience this year with asphaltum I am better pleased than ever. The trays—the deep ones—have given perfect satisfaction; they have worked to a charm. I have already taken up the troughs in the tent, and also the paddles from off the wheel, and will fold the tent as soon as the rain lets up so that it will get dry. Our camp is very quiet now; only Waldo, Anderson, Ben and myself left, and a few very Indians come around now. Yours, very truly,
J. G. WOODBERRY.

PENNSYLVANIA FISH CULTURE.

Lancaster, November 18th, 1874.

EDITOR FOREST AND STREAM.—
I had the honor to assist in organizing an association in Lancaster county for the protection of fish and game, which is now at work stocking the streams with black bass as fast as they can get the fish. We are overcoming local prejudices, and gradually educating our community up to the proper standard on the subject, and those who will not be thus educated by argument and moral suasion, we intend to punish, when-

ever caught violating the game laws. In this work the influence of your paper is rendering valuable assistance. The increase of its circulation is greatly to be desired.

Perhaps it may be of interest for you to know that we have had excellent black bass fishing this Fall in the Susquehanna, between Columbia and Harriburg, and from that place to the mouth of the Juniata, large numbers having been taken with the hook and line daily during the season; and all the increase of a small number of fish placed in the stream five years ago at Harriburg, and near the Juniata, as I understand, with prohibition for several years. Respectfully yours,
SIMON P. BEV.

LIMING PONDS.

ROCHESTER, Nov. 30 1874.

EDITOR FOREST AND STREAM.—

If you lime a pond to kill obnoxious fish you not only kill all the fish but you kill all the feed that is in the pond, and when you put the trout back in the pond there will not be any feed for them, and they will die. It takes a great many years for a pond to get stocked with insects so that it will support many trout. Fish thrive according to the feed they have, the same as any other animal. It is a mistaken idea that many people have, that fish can live on water; they can't, any more than man can live on air.
Yours,
SETH GREEN.

[Mr. Green has spoken in behalf of our correspondent who asked us last week about the proper mode of clearing a pond of pickerel, in order to substitute trout, and we advise with his advice be followed, by all means; nevertheless, we have seen trout ponds limed repeatedly, including that of W. H. Furman, Esq., at Maspeth. Perhaps, in the latter case, the absence of natural food was not felt, as the trout with which the pond was replenished, were fed by hand with liver, gentles, and the like.—Ed.]

A correspondent of an exchange says:—A year ago having more young trout than my pond would accommodate, I put a few thousand into a barren stream near by. They were then about one inch long. I took my rod and a couple of my little boys went to the branch, and in less than an hour caught thirty—all we wanted—and might have caught hundreds, as we could see them in schools of fifty or a hundred in a place for a mile up and down the brook. They were about seven inches long, or what would be called a nice catch. As this same thing can be done by every brook of a State of New York, or of the State, I submit if it would not pay the owners of brooks to stock them, if in nothing else, in furnishing one more attraction for the farm, if not for themselves, for the boys; for recreation is as necessary to them as meat and bread, and if they can't find it on the farm, they will hunt it in the village. Many of us can recollect how attractive the brook on our father's or neighbor's farm was, and how his wily deuces tamed and developed our young skill and ingenuity in their capture.

The Canadian Sportsman says: At Port Dalhousie and other points along the shores of Lake Ontario, the shad fishery has become an established and lucrative business. Get the record: A few years ago there was not a Shad in Lake Ontario. But the State of New York has an intelligent and enterprising board of fish commissioners, liberally sustained by the State Government. This board of fish commissioners conceived the bold idea that the shad could live throughout the year in fresh water, and accordingly hatched and set free in Lake Ontario some hundred thousand of the spawn of that species. The result is that millions of that delicious fish swarm in the waters of Lake Ontario, and have become the basis of a new system of fisheries.

Natural History.

NOTES ON THE ALEWIFE, (*Alosa tyrannus*).

IN the days of my boyhood I had a very good opportunity to study the habits of the alewife. Living near a large lake, into which the shad and alewife came at their appointed seasons for casting their spawn, I was induced almost imperceptibly, as it were, to become a student of the habits of this fish. Little did I then think how great a space in the vacuum of humanity this poor despised little alewife destined to fill.

In the course of my observations, I found the alewives were generally the companions of the shad, from the reason of its similarity of habits, and of breeding in breakish and waters of little depth. It is found far up in places where the shad cannot go. Many of the shad have discontinued visiting their old places of resort, and are not often seen in the places formerly frequented by them. Years ago it was not an uncommon spectacle to behold hundreds of shad on the Mystic and its tributaries. Now not a single shad is to be found, and very few of the alewives are caught outside of Mystic Lake, where once they were numerous. Alewives are much more abundant in the Middle and Southern States, for the reason that there are fewer obstructions and mill dams in their progress up the streams. You will now find alewives in what are called shad streams. But one fact I have learned, that when once the shad or alewives are stopped in their progress up stream they grow less in numbers every year, until they leave the stream altogether. In New England almost all streams are dammed, and as a consequence few fish are to be seen where once they were numerous.

Being very prolific, we hope this fish will remain in our rivers until some saving legislation shall be had for their protection. Something must be done, or farewell to the shad and alewife fisheries, of which old Massachusetts was once so proud. The early run of alewives are very fine, and generally quite fat, being often from one foot to sixteen inches in length, and weighing about six ounces. They make their appearance early in Spring, and remain with us only a sufficient time to spawn, when they return to the sea. In June they are all gone. The fry remain attached to twigs in the water, where they are hatched up to November, sometimes to December, and then they go to sea. I have seen thousands of these young fish around

the shores one day, and the next not one was to be seen.

The alewife will take bait, but the general method of taking them is by means of the net. In all narrow streams they are taken in seines. Many ways are resorted to to cure them, but smoking and pickling are the usual methods. Some of the streams near Boston yield upwards of 1,500 barrels of alewives per year, and such streams rent for from six to nine hundred dollars per annum.

OLLIPHOU QUILL.

THE "BLUE BACK" TROUT OF RANGELEY LAKE, MAINE.

No. 10 WARREN STREET, NEW YORK.

EDITOR FOREST AND STREAM.—

I presume few of your many readers ever heard of this singular member of the *salmo* family, and a less number had the privilege of seeing a specimen. The receipt of two boxes of these fish from Hon. H. O. Stanley, one of the Commissioners of Fisheries of the State of Maine, is the *motu* incentive to this communication.

On the 10th of October—or within three days of that date—the outlets of Gull Pond and Dodge Pond, both emptying into Rangeley Lake at points six miles apart, and the outlet of Rangeley Lake, six miles from Dodge Pond, are thronged by myriads of this exquisite fish. The waters are so deep that the trout are actually flying in the air, and are gathering, as do the smelts and alewives, to deposit their spawn. They do not make a "spawning bed," like the salmon and trout, but deposit their eggs in all parts of the stream, remaining about ten days, when they return to the lake, and are never seen until the 10th of October the following year. This is a literal fact. Notwithstanding the great number of anglers who have frequented the "Hauseley" during recent years, fishing all portions of the lake with all manner of bait, on the surface and down in the deep, no one has ever caught a blue back. They have never been seen at the surface. Among the settlers the "blue back mystery" has been an annual subject of discussion at the husking, quilting, and fishing parties, and in the country store, for over forty years.

The variation between the blue back and the brook trout is plainly noticed, even by a novice. The former are more slender, have no bright vermilion spots; the ventral, anal, and pectoral fins are a bright scarlet, without the black and white lines so conspicuous in the other. The tail is more forked. As their popular name indicates, they are very dainty. But the most singular fact of all is the uniformity of size. They are from three to four ounces. They never take fly or bait. I state this as a fact, notwithstanding the possibility of contradiction by as good an authority as our worthy President of the American Fish Culturists' Association, and my esteemed friend, that expert angler, Hon. Robt. B. Roosevelt. When last we met at Rangeley, some four years ago, Mr. E. availed himself deep interest of the subject of blue backs. They came at the appointed day in millions. Our friend had caught nearly every species of fish that swims in salt or fresh water, and he insisted that these beauties could be taken by the gandy fly. So day after day he stood on the apron of the old dam and fairly exhausted the treasures of his famous fly-book. I should never forget his overflowing enthusiasm and boundless joy as he entreated me to try to catch a blue back. He begged me to try my hook. He finally declared "the beauty bill," but who he had watched the angler casting the trio of silver baited lures among the swimming thousands in the pool, wondered that such exquisite skill in casting had not resulted in hooking out three at a time.

In consequence of the peculiar habits of this singular fish, they have been exempted from the provisions of the law making the capture of trout, and salmon also with reference to their mode of capture. I quote from the laws of Maine, now before me—chapter 20, of the laws of 1859, section 18: "There shall be a yearly close time for land-locked salmon, trout, and toad, during the months of October, November, December, January, and February, during which time none of the fish mentioned above shall be taken or killed, in any manner, under a penalty of not more than thirty or less than ten dollars, and a further fine of one dollar for each fish so taken or killed—provided that this section shall not apply to the taking of 'blue back trout' in Franklin or Oxford counties."

This exemption is properly and wisely made, as it excludes the settlers in their action to acquire themselves with quantities of superior fish food, which, smoked and salted, adds materially to the limited bill of fare for the season. They are captured in nets by the bushel and barrel. Few find their way to market. I am quite confident that the first lot of these fish that ever reached New York came to me from Mr. Stanley of your month. I have distributed them very generally, and received from your readers many inquiries concerning this comparatively new and valuable species of the *salmo* genus, may specify communicate the same to your columns. I have been informed that the naturalist Girard first made known to the scientific world that this was a distinct species, thus having properly received his name, *salmo Girardii*.

Mr. Stanley succeeded in taking thirty thousand of their eggs, which are now being hatched at the establishment of the Rangeley Trout Hatching Association, on Bona Stream. When sufficiently developed they will be placed in suitable public waters in Maine. A few thousand can probably be purchased, if desired, for other States, or by private parties. The eggs are much larger than a brook trout's, the fish yielding from 50 to 150, instead of from 400 to 500, as in the brook trout of same size.

I take this opportunity to congratulate you upon the most interesting and valuable results experienced in the discussion and elucidation of the grayling question, and trust that this communication may inaugurate a similar investigation of the "Blue Back Mystery."
GEO. SHEPARD FADE.

SOMETHING ABOUT GROUSE.

CONFUSION OF NAMES—VARIETIES IN THE WEST.

Of the eleven species of grouse known by a greater number of common names, only two are general in Illinois, while a third was at one time generally distributed over the northwestern counties of this State. Science has reduced the whole number of American grouse to six genera, and the authorities on ornithology have so plainly classified them that no further confusion need occur as to what should be considered grouse. What is known by some as the quail is called a partridge in some localities, and in others the partridge is called a pheasant, and the eleven different grouse are known by eighteen different common names, while the quail are only allied to the grouse genera, and are really the partridge family of seven American species, only one of which, the quail (*Tetrao columbianus*, or "bob white," is known in Illinois or in the Eastern United States.

The two Illinois grouse are: First, the prairie hen, or pinnated grouse, known in New York as far back as 1791 as the "health hen," and now scientifically known as *Caprimulgus caprimulgus*. Second, the pheasant, or ruffed grouse, scientifically known as *Bonassus umbellus*. The third (no longer in Illinois game bird), the sharp tailed grouse, known in late authorities as *Pedicularis phasianellus*. Strange as it may appear, yet it is nevertheless true, these three birds have been described by authors under fifteen different

not a few dogs will be unnecessarily condemned, on account of what has appeared to be with them a want of nose in the past two weeks; but we advise a second trial and a continued hunting when the state of the weather and moisture of the fields will be more advantageous and prove the most satisfactory for the masters.

FEEDING TIME DURING THE SHOOTING SEASON.—During the shooting season our dogs require the most nourishing description of food, in order to keep them in any condition to stand the immense amount of work that devolves upon them. We believe that one meal a day, providing it is of the proper kind, is ample, but just as much as the dog will eat should be given directly after returning from the field at night, after which it will be found he will curl himself up in his bed of straw and sleep comfortably until morning, awaking refreshed and ready again for work. We have always been feeding our dogs on four parts of old Indian meal to one of meat scraps, boiled together, properly seasoned and allowed to cool, but in our late trips we have carried the Spratt biscuit, which we find answers every purpose, keeping the dog in excellent condition.

THE NEXT BENCH SHOW IN TENNESSEE.—Our regular Memphis correspondent writes:—

"The officers and members of the State Sportsmen's Association are already making preparations for the next tournament, which most likely will be held here, and if the rumors circulated are correct, the next show will eclipse anything yet heard of in this country in the way of purses, or, more properly speaking, prizes. The bench show alone will foot up a couple thousand dollars, and perhaps more, and the match prizes, as well as those for the field trial, will be increased correspondingly, while the entrance fee in all cases will be greatly reduced. The prevailing idea is to offer large prizes, and in that way make it an object to the shooters and dogowners in the Eastern, as well as Western States to attend, and that they will do when they see the list of prizes which will soon be arranged."

DEAD DOG.—"Major," a celebrated fox dog, owned by Captain John Travis, died last week at Clarksville, Tenn. He formed too close an attachment for the rope with which he was tied, and swung himself into eternity in trying to break the flaxen threads that bound him to this life and his kennel.

—A Battle Creek Nimrod recently went on a hunt far North of Howard City, taking with him a young hound. One day the hound chased a deer and became lost. After hunting for him three days the search was given up and he returned home, where he was astonished to find the dog, who had crossed the State a distance of 135 miles, on a route which he had never before traveled, having been taken away from the railroad.

—The national dog of Germany, which is the "dachs-hund," or badger-hound, is beginning to make its appearance here. They are queer, stunted little creatures, with very short legs, and are said by sporting Germans to be first rate for hunting rabbits.

THE HYDROPHOBIA MANIA.

AN English correspondent, reviewing the ground taken by some London journals as to the extent of hydrophobia among dogs, and the fate which should be meted out to them whenever they show the least symptoms of the disorder, says:—

I have had my kennel of greyhounds, the season's entry, so severely attacked by the distemper that all of them at one time were more or less mad. Many of them completely recovered, some few died. Now, in the case of the "Durham" I had some rash charges of "hydrophobia" been made against this kennel of greyhounds, they might have been cruelly and wantonly destroyed, and had I been foolish enough to give heed to the counsel, I should have fewer cups to grace my sideboard by the number which some of these once mad dogs won.

It is the cur, or cross-bred dog that suffers the least from the distemper, and my long experience among hounds and dogs of all kinds has proved this fact without any sort of doubt whatever.

Sex makes no difference in regard to the epidemic of the "common distemper," by "muffs" christened with the term "rabies." Any man with two ideas must be aware that the sexes of the human race share alike in the inflictions of creation, those inflictions varying in degrees according to the uses of their lives which are worn.

A canine mother having at her side whelps when she bites a man, fully accounts for the use of her teeth on an intruding stranger, and can be no sign of any sort of insanity whatever; on the contrary, I regard it as a proof that her natural affections are predominant, and that she is in all respects possessed of her senses.

It is really surprising to find that a surgeon should assume to describe minutely the true symptoms attendant on "hydrophobia," which, in all probability, in man or dog, he had never seen twice in all his life.

When young dogs or puppies come in from "walk," no matter of what breed they may be, unless they have been successfully vaccinated, which is a never failing prevention, on being massed together an epidemic called distemper is sure to affect them more or less. It is erroneous to say that "hydrophobia" is "more frequent in Winter than in Summer," either in Winter or Summer veritable hydrophobia seldom exists, though madness of a much more innocent character does. The insanity among dogs that thus appears in the Autumn and earliest Winter months has been erroneously and foolishly termed "rabies," and "rabies" has been read by ignorant people to mean "hydrophobia," and on that delusion have arisen the most grievous consequences to the human mind, as well as the greatest cruelty to the canine race, viz., morbid delusion in man terminating in acute insanity and ending in death.

STAINCHNESS.—A friend elips the following statement from the Lawrence Standard, and sends it to us with the

request that we "score that dog some few points for staunchness." Poor fellow! he's past all scoring now:

"A somewhat singular accident befell Thomas Shaw's dog, of Wymdote, on Friday last. Mr. S. was out shooting, and when the dog, which by the way is a fall blooded animal, came to a point at some equal directly on the railroad track. Before Mr. S. could get up to the dog, the train came along, and in spite of all the whistling and coaxing, he would not relinquish his position, and in a few moments, he was cut to pieces by the train under the very eyes of his master. This is certainly a singular instance of good blood and fine training."

FAITHFUL.—An interesting instance of faithfulness on the part of a dog is reported in connection with the last fire near Worcester, Mass. During its progress, Chief Combs threw his coat on the ground and told his dog to watch it. The little fellow took his position on the coat, and the owner left him to work in another section of the woods, but as the flames approached, members of the department attempted to remove the dog, but it was no use, he attempting to bite every one who approached him or attempted to remove the coat he was watching. Word was sent to the Chief, and he arrived in time to save both coat and dog from the flames, which were within three feet of them upon his arrival.

Shot Gun and Rifle.

GAME IN SEASON FOR NOVEMBER.

- Moose, Alces Melchis. Snipe and Bay Birds, Willets. Elk or Wapiti, Cervus Canadensis. Caribou, Tarandus Rangifer. Hares, brown and gray. Rabbits, Capreolus. Wild Turkey, Meleagris gallopavo. Squirrels, red, black and gray. Woodcock, Scolopax rusticola. Quail, Orange Virginia. Ruffed Grouse, Tetrao umbellus. Wild Pigeons. Wild Duck, Geese, Brant, &c. Plover.

[Under the head of "Game, and a Fresh Season" we can only repeat in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish these entire sections of the laws of each State, and in doing so we would require a great amount of our space. Of game in question, this is guided by the laws of nature, upon which all legislation is founded, and our readers would do well to consult the laws of their respective States for constant reference. Otherwise, our attempt to assist them will only create confusion.]

GAME IN MARKET.—No epicurean can now find fault with our game markets, as a look at the establishment of the Messrs. Robbins, in Fulton Market will readily prove. The employees in that establishment were so busy that they could not get a word from them. This is a pleasant circumstance, so we forgive them this time for their taciturnity. The only unusual game we saw were English pheasants—gaudy birds—and as edible as they are handsome. These are shipped here from England, and though not as large as an ordinary hen, bring \$5 per brace. English hares are also coming over. Wild turkeys—fine, plump, soft-fleshed creatures—are arriving from the West, and sell at prices varying from \$5 to \$10 per brace. These fine birds are reported to be quite numerous in Texas, Illinois, and other places. Ruffed grouse, coming in quite profusely, retails at \$1 55 per brace. Quails bring only \$3 75 per brace; canvas back ducks, \$2 50 per brace; red heads, \$1 50; black heads, \$1; butter balls, seventy-five cents. Hares from Canada, and rabbits from Connecticut, are abundant and cheap; and robins bring \$1 per dozen.

—Opossums are among the seasonal delicacies displayed on the door-posts of restaurants. Red-headed ducks are arriving in the markets, and are selling at \$2 50 a pair.

—Never were there such swarms of ducks seen about Long Island as are now thronging its "sea-girt shore." On the great inner bays, and far out to sea, the calm surface of the water has been black with them during the warm weather just past—black ducks, broadbills and coots, floating in the sun, and asleep with their heads tucked under their wings, far beyond the sportsman's reach. Only at nightfall did they come ashore to feed among the bogs and old-grass. But since the recent storms and the advent of the cold snap, they have multiplied to incredible numbers, and give the gunners every desirable opportunity to make havoc in their ranks. The veriest tyro can come home loaded. It is almost impossible to go astray in the search for them, but Good Ground, Noack, and Belpoit may be recommended as best shooting grounds.

—The latter part of last week a party consisting of Gen. Singleton, N. D. Munson, W. B. Bull, Ed. Hope, Edgar Morris, Wash Corby, Jas. J. Singleton, E. K. Stone, F. D. Schomerhorn, of Lagrange, Mo., Hon. A. W. Lamb, Dr. Hewitt, R. Drain, and Dr. Lamb, of Hannibal, and a party from Macon, Mo., in all about twenty-five persons, started for a two weeks' hunt on the Red River and in the Indian country. Mr. Hope took his celebrated dogs and his trainer along. The party will go down the Atchison & Topeka Road for buffalo; then to Red River for alligators, thence into the Indian country. They take one of Cole's show tents along and camp out. Mr. Hope was one of the gentlemen who accompanied the Irish team out West last month.

NEW HAMPSHIRE.—South Tamworth, Nov. 18th.—Ruffed grouse are very plenty and of good size, and are not very wild, as they have not been hunted much. Foxes are without number. There have been two bears killed the past week not far from here, and one is ranging round the mountains now with a trap on him. Very good duck shooting can be had on Ossipee Lake, about six miles from here.

NEW JERSEY.—A party of hunters while heading about the bush near Pompton Plains last week started a large and savage wild cat, which was finally shot and found to be over three feet from tip of nose to tail.

VIRGINIA.—Deer Park, Md., Nov. 23.—I have just returned from two weeks hunt on the mountains bordering on "Blackwater Country," as it is called, and will inform you of my success. I had good shooting all over the grouse, turkey, squirrels and venison almost all the time I was in camp. Grouse were thicker than they had ever been within the memory of the "oldest inhabitant." I bagged 23 in three hours the last day I was out. We killed two deer the first day, but were not as lucky afterward, as we got but six in all. Immense fires have swept through the woods where we were, and I think that accounts for the scarcity of deer. The grouse we found in the alder swamps near the creeks. I killed four turkeys one day and three the next. I saw others, but did not get a shot at them. Quails were scarce, but we got a few shots. A friend of mine shot 23 grouse in a few hours (4), which is a good bag for this country. Ducks are on the creeks and ponds in larger numbers than usual. One gander shot 23 days before yesterday.

TENNESSEE.—Memphis, Nov. 18.—Bird hunters have had their tedious sport during the past week, owing to the scarcity of game on this side of the Mississippi, and generally a bad bag that is brought in is taken from not over one or three coveys at a time. As during the week the weather has been quite warm, however, until to-day, which accounts in a measure for the scarcity, but now an improvement in the supply is looked for. Arkansas is sending a splendid supply of venison and ducks, and I believe one or two bears, showing that gunners over in that wild State are having plenty of work.

WISCONSIN.—Montello, Nov. 18.—The shooting in this vicinity is gradually growing poorer, as the ducks are leaving daily by thousands for more congenial climes. I visited Puckaway Lake a few days since, and only succeeded in bagging thirteen ducks in three-fourths of a day, and these were mostly shot at a "fly-away." The rice is lodged down, and affords no cover for the ducks; hence they all flock into the open river and bayous, so that it is almost impossible to obtain a shot at them on these places. The ducks rise in myriads at the discharge of a gun, and fly for miles ere they alight again. Wild geese were quite plentiful. I visited Puckaway Lake a few days since, and only succeeded in bagging thirteen ducks in three-fourths of a day, and these were mostly shot at a "fly-away." It is a sheet which one does not feel it necessary to put back in the pocket after reading.

Use W. J. G. P. A. now has men stationed at the fairies, to watch for persons violating their law. I have heard of no arrests, but have seen them examine the sportsmen's licenses at Market Street Ferry, Camden, N. J., Oct. 10. J. W. H.

LAKE KOSHKONG.

CHICAGO, Ill., Nov. 17, 1874.

EDITOR FOREST AND STREAM:—This lake, situated about fourteen miles from Janesville, Wis., on line of Chicago and Northwestern Railway, has for late years become quite a noted resort for sportsmen from all sections of the country, as during the Fall months it is the feeding ground of the celebrated canvas back ducks which are annually congregated there in large numbers. To give some idea of the variety of the lake abounds. There is no spot in the West where they are found in such abundance, or where so many are secured by sportsmen. The lake is seven miles long by three wide, bordered by large marshes at intervals, where the wild rice grows in great profusion. On the lake and in the marshes may be found from September until the lake closes, every variety of duck known in the West. To give some idea of the numbers I will simply state that two sportsmen shot this season in one week 513, including all the early varieties. Snipe are found about the marshes, partridge in the woods, prairie chickens and quail in the immediate vicinity, and for the sportsman who enjoys the different kinds of field and lake shooting, no locality could suit him better. This season parties from New York, Boston, Providence, Cincinnati, etc., have made this their headquarters for Fall shooting, although owing to the mild weather the sport has not been equal to that of former years. The snail canvas backs have been, since October, quite plenty. The largest bag by any one party was 108 in two days. Two gens from New York shot eight-seven ducks in one day, mostly red heads. These parties, as well as those who are passing, have invariably stopped at "Bingham," who owns a fine farm bordering the lake, and although not professing to keep a hotel, his accommodations for about twenty gentlemen, where they are sure of the best of country fare. There are other stopping places in the vicinity, but none equal to this. Ira Bingham, a son of the proprietor of this farm, is acknowledged the champion canvas back shooter of this lake. During the season he has killed over sixty to seventy-five a day, when the lake is smooth. This, to some who are aware that these ducks feed and live mostly in open water, not often feeding near the shore, may look large; yet, how he does it will be explained. He has a light boat which sets very low in the water, having depth enough so that when lying flat on his back, he is not visible. Armed with two few action guns, he creeps out into the lake, until he spies a flock of canvas backs. He then lies flat on his back, propelling the boat with a scull over, which he works over his shoulder. Being entirely hidden from view, the ducks are not alarmed until, when within shooting distance, he suddenly rises and makes sad havoc of their ranks, for he is a good shot. The second gun is used for crippled birds, so he never returns. To those who desire to visit this lake another season it may be well to say they should leave Chicago by Chicago and Northwestern Railway, securing tickets to Koshkong, from which station they can easily reach the lake, which is about two miles distant, by private conveyance, which can always be procured; or, if intending to stop at Bingham's, direct letter to Ira Bingham, Koshkong, Wisconsin, stating what day they will be there and he will be on hand to convey them.

COOTING AT CAPE ANN.

SALER, MASS., November 9th, 1874.

EDITOR FOREST AND STREAM:—Seeing your notice of sea fowl shooting at Gloucester, Mass., led me to think that perhaps a description of the same might be of interest. That portion of our State called Cape Ann, which stands out so boldly into the bay, embraces five different places, including Amisquam, or, as it is commonly called, "Squam." It is at this place that most of the sport is had, though other parts of the Cape are good. The sport is commonly known as "cooting." I presume because some of those of our sea ducks known by the coots are the birds sought for, though anything will do. From a "grey gull" to a "devil diver," or treble, is fair game. Parties of gentlemen near or less staidly on the shore and spend from a couple of days to a week, or even longer here, and sometimes make big days, as many as 30 to 40 pairs being frequently shot. The sport is conducted as follows: "Taking a 'dory,' with one or two gunners in the same they row to some favorable spot, and anchor the "dory;" how and stern; then a string of (generally on account of convenience) ten decoys, arranged so as to keep up, are fastened, sometimes a flock of them, at each end of the boat, and it is then for action, or actions of many kinds, for I assure you some days, unless one has "sea legs" well on, he will do not some ludicrous tumbling around, but "heave up Jonah" as well. And here let me say that it is not remarkable to witness the skill with which some of the old gunners will keep their feet, and knock the coots as they come along. Of course this shooting is not so gentlemanly as true field sports, but to many it has strong attractions, and gives a shot a chance to show his skill. Breech loaders are unquestionably the most convenient for this, and to my mind all other kinds of at least duck shooting, and the rapidity with which you can reload, nothing one to secure many otherwise hopeless specimens. Yours fraternally, R. L. N.

KILLING DOES.

PHILADELPHIA, November 17th, 1874.

EDITOR FOREST AND STREAM:—Do you approve of killing does? I think it a most unsportsmanlike act to destroy the breeding animals of any kind of game, except beasts of prey. There seems to be a number of persons who can afford to spend money for the best outfit and time for their pleasure, and who think that they are entitled thereby to the name of sportsmen, if they camp in the woods and bring down so many deer, no matter how many of them are does. Men who cannot tell the male from the female, or who wantonly destroy the stock by purposely killing the latter, are nothing more than poachers, and are to be severely dealt with by game laws for protecting sportsmen. The legislation for the protection of game seems to me everywhere very ineffective and partial, and not at all calculated to make game an article of food for the people, but a luxury in the reach of the rich only. A. V. L.

[Doe multiply so fast that, in localities where they abound, there is no objection to killing does in the Fall of the year, after they have discarded their fawns.—E. N.]

GUN TESTS.

AKRON, Ohio, November 1874.

EDITOR FOREST AND STREAM:—In testing my gun yesterday I reached results that surprised me somewhat, and as they may be of interest to the readers of F. and S., I send you this.

The gun is 12 gauge, 30 inch barrel and is chambered for a 12 A shell. I used metal shells the full length of chamber. In previous tests I had found that the greatest amount of powder the gun would admit, without excessive recoil and splitting the pattern of shot, was 4 drachms of powder and 1 oz. of shot; the powder finally adopted was very coarse, (1 falcon draking), one pasheboard and one pin-edges wad over powder and use thin pasteboard wad over the shell. But wishing to use smaller shot than heretofore and to give them greater velocity, I concluded to retest. I first tried the 12 A and one of shot, but the recoil was so unpleasant that I determined to try the effect of reducing the weight

of the shot, and in that way gain increased velocity. If I could, without losing pattern.

On a standard paper testing procedure, I took some thin mauls for the pads, and to more readily detect any loss of pattern, I placed the target at thirty yards; the first test was with Nos. 7, 9 and 11 shot, using standard load of powder and shot, four loads for each number. The second test was with same Nos. of shot, 9 drachms of powder and 4 oz. shot, four loads of each number. I found an average gain of penetration of 25 per cent, the gain being the greatest with the finest shot. The pattern with No. 7 was same as with standard load, with No. 9 not quite so good, and with the No. 11 was the best I have ever had. This result is entirely at variance with the prevailing theory, viz., to improve the pattern, increase the amount of shot, and this quite likely is due to some peculiarity in the bore of the gun.

Perhaps few sportsmen are aware how much slight deviations of hole in guns of same gauge will effect the guns in using shot of same numbers. Some time since I assisted a friend in testing a gun which he thought of buying, since gauge and length of barrel as mine, and gauging the barrels with a steel gauge, I found that the barrels were three-ounce thousandths of an inch (3,100) smaller at the muzzle than mine, but the increase of diameter towards the breech, the gain being the greatest as mine. Yet the gun would not give any pattern with Nos. 7 and 9, and gave splendid patterns with Nos. 8 and 10; the same shells and weights of load were used as in mine. Yet this difference in size, (31,000), would hardly be noticed with a pair of ordinary callipers.

I was pleased to see in a late number of your paper a description of a gun owned by Mr. Elbert, on with a 4 1/2 inch drop and No. 4 to 6 Orange Lightning. The size I have been compelled to adopt, to secure good pattern with a fair penetration in my gun, is so coarse that I am frequently advised by my friends to use blasting powder on the score of cheapness. I do.

METAL SHELLS.

NEWARK, November 13th, 1874.

EDITOR FOREST AND STREAM:—I fully endorse "Side Lever's" opinions in regard to the length of shells and forms of shoulders in breech loaders; but he did not tell how he loads either of the guns he mentioned. Judging from his remarks, I should say he had thoroughly studied the subject, and doubt not that many of your readers beside myself would like to hear from him frequently. I should like to see his shells, and if he only uses paper shells, would like to know how he creases or closes them, for I have been unable to get any good results from paper shells turned in at the top, or creased on the outside, and firmly believe that the only way to get good pattern is by leaving the shells in the form they are made, and securing the shot with lead, thus holding them together. I have bought shells loaded and crimped, when fired, lapped over and above the shoulder in the gun about one-quarter of an inch, thus contracting the wad in passing that point, so that it must have gone out of the gun without touching the sides of the barrels. I should recommend India rubber wads in such cases. I have heard many opinions expressed on the subject of gunnars following the change of pattern, but I can not help feeling that they would not continue home in what "Side Lever" calls the "opened plan," unless there was some well grounded reason for it. Will some expert enlighten me?

Perhaps I may be wrong in thinking that by the "opened plan" "Side Lever" means tapering the chamber into the barrels so that no shoulder is perceptible. During the season of the contracting plan, and will believe it to be a well-acted method until informed of the mistake in having a square shoulder for the shell to butt against. TONLES.

JACKSON, Miss., November 13th, 1874.

EDITOR FOREST AND STREAM:—If your columns are still open to the "shell question," under "Herbert's" two columns in FOREST AND STREAM of November 5th, in favor of metal shells and condemnation of paper ones, I'll have my say. I own metal shells, and do not use them. One has a stick sticking in; I can't remove; another I throw away for a like reason, and I did not "load them one hundred times," nor let them get so dirty that I could "scrape off the dirt," like Capt. Bogardus, or "Herbert," and I affirm, as a practical man, that metal shells need nearly the same cleaning as one barrel of a muzzle loader.

Metallic shells are cheaper in the long run, and shoot better than paper shells, (because they are more solid, and are not crimped as the latter usually have to be,) in the ratio of the former bringing one bird more to bag in twenty-five or thirty than the paper shell, provided the metal shells are of the quality of the chamber, else they will not; a great many metal shells do not have the requisite lead. Metallic shells will fire after having been immersed in water for a long time. (Query: Does that constitute them hard-shod Baptist?)

"Herbert" tells of a gentleman in whose gun the cartridge extractor slipped past the shell because he was using paper shells. I deny it. It was the fault in the construction of the extractor. I could name guns of American manufacture that do so frequently, often enough to make fit quite a per centage in a day's shooting. I have fired my gun, say two thousand times, and the extractor has slipped by its first time yet, and I have shot the poorest of Ely's shells—his xxx, as well as brown, blue, and red. Furthermore, the barrels of my gun fit tight enough against the false breech to keep the powder from being forced through and "wandering" or "beautifully tattooing my left wrist"—viz "Herbert's" quotation from London Field, though I have fired several xxx shells whose bases had parted on one side from the brass cylinder.

"Herbert" says in regard to Ely's shells: "As far as usual charge of powder comes, in 10 shots they are useless." I do not know what he means. I have shot 4 drachms of powder and 1/2 oz. shot from a 12 bore gun, and 5 drachms of powder and 1/2 oz. of shot out of a 10 bore gun, or, in other words, all we could get into the respective cases, and we are not "tattooed" either.

I have been out in a drizzling rain, carrying my paper cartridges in a bag, and a little in about nine minutes one of them refused to go off at the time or afterwards, and I found that when it rains so that paper shells become useless, no one but a pot hunter would find it sport in saying. Yours truly, GEO. C. EYRICH.

Answers To Correspondents.

P. W. T., Washington.—Will you please tell me the names of two of the best hotels in the White Mountain Ass. Profile House and the Glen House.

D. C. D.—I have a muzzle loading shot gun that scatters too much. What had I better do about it? Ans. Go to a competent gunmaker and have it draw bored.

P. H., City.—A good remedy to remove warts is a tincture of cantharides, with a few drops of iodine. Apply to the warts with a small brush, three or four times a day. Ought to be equally effective in man or beast. In a short time they will disappear.

READER.—Would you be kind enough to inform me, through your columns, the name of some gun who makes a business to train dogs "wee a little in the about nine minutes one of them refused to go off at the time or afterwards, and I found that when it rains so that paper shells become useless, no one but a pot hunter would find it sport in saying. Yours truly, GEO. C. EYRICH.

P. O. Box 120, Schenectady.—Can you inform me where I can get some genuine Russian grain barrels for hunting boots, and about the

cost of same? Ans. Go to Milford, Cary & Conklin, 24 Spruce street. The genuine is red, and costs \$7.50 to \$8.50 per skin.

J. M., East Liverpool, Ohio.—I purchased a gun lately which does not seem to be doing much good. I have very little success, more in shooting too close. How can I be made to scatter sufficiently for bird shooting? This is the most killing charge for quail? Ans. No. 8 shot. Use more powder.

P. W. H., Hartford.—I have a William & Powell gun; weight, 8 1/2 lbs.; nearly; gauge, No. 10, and length of barrel 30 inches. Will you inform me if it will injure its shooting qualities by cutting the barrels off to 28 inches? Ans. So far as we have learned, alterations of this kind have proved generally satisfactory.

E. B., Conn.—Can I buy a good gun (muzzle loading) for fifteen or twenty dollars? Would you advise me to get a single or double barrel at that price, and will you tell me the best place to send for it? Ans. A double gun (twice) will cost you \$12 to \$15, and the same of laminated steel from \$17.50 to \$20. Get good barrel, and apply to any good gunmaker.

SANFORD, California.—I can inform me whether Mr. Righty, of the Irish stock, also a false muzzle in loading? Ans. He does. 2. What is the twist of the rifling in his guns? Ans. Both Righty and Melford me what is known as the increasing spiral, a term that defines itself. It is a system of rifling tried some years ago and abandoned, but recently resumed with satisfactory results.

CONSPICUOUS.—Seventeen persons this week ask for information through our Correspondent's Column, which can be found among our advertisements. If some persons would take the trouble to examine our list of advertisements in search of the goods they require, as to write and mail their letters of inquiry, they would find it more profitable to themselves, as well as vastly more convenient to us.

LOCKWOOD.—Will you be kind enough to direct me to a place where I can get some good squirrel shooting, within from three to five hours of the city? Ans. You will be a little too late for squirrel shooting any more this season, but the sports are waiting to advance the fall. Why not take the day with rabbits, with a peagle or two, in Morris or Orange county, N. J., where you might possibly run across a few squirrels also now early in the morning?

J. A. B., Newark.—Will you please inform me if I can find good partridge or quail shooting on any grounds adjacent to tributaries of Chesapeake Bay or Potomac River in December? Ans. Good quail shooting can be had at most places, but I can not say where to go for sport, adjacent to the tributaries of Chesapeake Bay or Potomac River, providing the country is cultivated for grain. We advise you to go to Acquia Creek, Stafford county, Va.

MOVING HOOPS.—Are there any farms on Indian River, in Florida? What is land worth on it opposite Lake Harney? Is there any book on the Indian River country? If so, the name, the best route there, also the cost of the paper cover, and the price of the book, would be of great interest. Ans. We know of no modern book that contains so full and reliable information as is conveyed in the numbers of FOREST AND STREAM relating to Indian River. Can furnish most of the numbers.

SHEFFIELD.—A drachm is a Troy ounce, or 60 Troy grains; and 1-16 of the avoirdupois ounce, or 27 1/16 Troy grains. The latter is the weight in use for gunpowder, and our powder scales are graduated in the "drachm" avoirdupois. One pound of powder will make 53 charges of 3 drachms each. Thus a drachm Troy is more than twice the weight of a drachm in avoirdupois weight. These drachms are very perplexing to many sportsmen. There are three scruples in a drachm Troy, but there need not be any scruples about a liquid drachm, if the quality be good.

Q. C., Philadelphia.—How many shot of each of the following sizes should hit the target under these conditions: Gun, 5 gauge, central fire, breech loader, 30 inch barrel, No. 3 shot, 1000 lbs. of powder, 1000 lbs. of shot, 1/2 oz. shot, viz: "T" 71 pellets in fall charge; H P's, 100 pellets in charge; No. 12, 157 pellets in charge; 25, 400 pellets in charge; 30 yards; target a circle 30 inches in diameter; shot from dead rest; no cross wind? Ans. If you will refer to the reports of the trial of different marks of brass loaders in the Spring of 1874, at New York, you can find full answer. Space will not permit our giving it. See *Walker Spirit*.

SUSCRIER, Minneapolis.—Myself and friend propose to take a Winter ramble to Puget Sound via San Francisco and Union Pacific R. R. Please inform me at what points on the route we may expect to find game, whether of feather or fur, and what kind of a weapon will be the best for general use? Ans. Get a good heavy shot gun, as it is most useful for both shooting and skinning, and a good knife. The success is so great that you can get little else. You will find game at any point from the mouth of the Columbia River to Foca Straits, and varied enough to give all the sport, as it embraces deer, elk, bear, panther, grouse, &c.

A SUSCRIER, Savannah.—Will you be so kind as to let me know the best load of powder and shot for a Stephen's patent, single barrel, breech loading shot gun, 14 bore, 30 inch barrel, and 6 pounds weight, for shooting doves, such as one of your subscribers writes for to some extent. We do not know of any good of true black bass (Mr. M. Gray's) and a 6 pound, breech loading, single gun for game shooting, a load of 2 1/2 dr. Ladia & Rand's No. 4 duck powder to 1 oz. of shot, size according to game sought. We do not know anything about dove shooting, nor do we care to learn; "Is a ply to kill him." An average size of shot for ducks is No. 6, and for snipe No. 7. I am, Sir, your obedient servant, W. H. G., City.—Is there any person in Saratoga who raises ducks and has them for sale? I am anxious to stock a lake in the Adirondack and if I could find one in Saratoga could take them on the Adirondack R. R. to North Creek and then by team to the Lake (Sardoff?) Ans. We know little or nothing of Saratoga, but have an impression that bass exist in the lake, and also that Mr. Moon has a pond of bass. We really don't know of any pond of true black bass (Mr. M. Gray's) and a 6 pound, breech loading, single gun for game shooting, a load of 2 1/2 dr. Ladia & Rand's No. 4 duck powder to 1 oz. of shot, size according to game sought. We do not know anything about dove shooting, nor do we care to learn; "Is a ply to kill him." An average size of shot for ducks is No. 6, and for snipe No. 7. I am, Sir, your obedient servant, W. H. G., City.—Is there any person in Saratoga who raises ducks and has them for sale? I am anxious to stock a lake in the Adirondack and if I could find one in Saratoga could take them on the Adirondack R. R. to North Creek and then by team to the Lake (Sardoff?) Ans. We know little or nothing of Saratoga, but have an impression that bass exist in the lake, and also that Mr. Moon has a pond of bass. We really don't know of any pond of true black bass (Mr. M. Gray's) and a 6 pound, breech loading, single gun for game shooting, a load of 2 1/2 dr. Ladia & Rand's No. 4 duck powder to 1 oz. of shot, size according to game sought. We do not know anything about dove shooting, nor do we care to learn; "Is a ply to kill him." An average size of shot for ducks is No. 6, and for snipe No. 7. I am, Sir, your obedient servant, W. H. A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE ENLIGHTENMENT IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
 (POST OFFICE BOX 2882)
 135 SOUTH THIRD STREET, PHILADELPHIA,
 COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tackle," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 19 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, NOVEMBER 26, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and commendation of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will endeavor to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

SATURDAY, November 28.—Competition for Turf, Field and Farm bags at Uxbridge.

TUESDAY, December 1.—Races at New Orleans.

WEDNESDAY, December 2.—Prof. Judd's attempt to walk 500 miles in six days, in New York.

THANKSGIVING.

THIS year the President, the Governor, and the Mayor have each and all respectively enjoined upon us the propriety of being thankful to day, and reminded us of the obligations we owe to the Great Provider for His goodness in showering peace, plenty, and abundance upon us; so that even if we were disposed to be ungrateful or querulous of had fortune, it would still be incumbent upon us to obey this triunivert of Chief Magistrates, attend morning church service, stuff ourselves with roast turkey and plum pudding, and be thankful that our capacity can hold no more!

What a luxury to the poor must be these annual proclamations of Thanksgiving! How grateful to the tattered and benumbed starveling these injunctions to eat and be filled! Surely, the odor of roast meats and savory stews that emanates from the kitchens of those that dwell in high places must fall with a grateful sense upon the pinched obfocurities of the maid who drags her ragged bit of a shawl closely around her face as she wistfully looks and scurries by. Few in our land will go to bed supperless to-day. Stores of good things from the kitchen, largesses of food from the abundance of the overfed, donations of cold pieces from the waste basket, special gifts to the needy, will be showered for one day from the horn of plenty upon the deserving and undeserving. Upon the memory of this day's Thanksgiving Dinner many a poor vagrant must principally subsist for the balance of the year. We should fancy that the pleasures of hope in such a case would be almost swamped in the retrospect.

"Please, sir, give me a penny?" Certainly, my son; here, take 'em."

All men are more than generous to-day, and the street urchins and Arabs expect a benefit. "Out of the fulness of the heart the mouth speaketh." Even a man plundered by thieves, with his pockets inside out, wouldn't begrudge a poor lad a penny on Thanksgiving Day. Oh, Day of

Superabundance! of all days the best! How all the poor relations from far and near gather around the festive board of the *paterfamilias* who has the fine-t house, the largest heart, and the longest purse. One likes to have his family around him. Grandpa will give Luu an extra piece of pudding, out of pure gratitude to the Good Fortune that has blessed *him* with so much, and given all the rest so little. Human nature will assert itself, even when the stomach is full. We venerate this time-honored anniversary, bequeathed to us by New England, that affords us this exceptional opportunity to turn to our neighbors the best side of ourselves. Just as plants turn their petals toward the sun, so do we persistently set our faces toward the sources from whence all good things emanate, and emphasize the truism: "It is better to give than to receive." We make this remark advisedly—to our friends, not to ourselves.

Upon the whole, we regard Thanksgiving Day as a day to be thankful for. A little reflection compels the conclusion that it is as necessary for our happiness as that its observance has become an institution thoroughly engrafted upon the whole country. Its festivities are not conventional or arbitrary, but the spontaneous and irrepresible outcome of a desire to mark an era of good feeling that wells up like the waters of an artesian from our deeply-bored selves.

The FOREST AND STREAM has certainly much to be thankful for. It has at least trobled its subscription list since a year ago to-day, and has the promise of increased favor as soon as business improves and times get better. It has won the confidence of the community, and established itself as a necessity among the fraternity of sportsmen. Its readers look for its weekly coming as eagerly as they do for the recurrence of the festival which we celebrate to-day. And in this connection we may pointedly remark the coincidence that brings Thanksgiving and the day of our publication together. It was so last year—it is so now. There must be some significance in the event, for two such benefactions seldom come at once. They say it is the best time to solicit favors after the "gude man" has had his dinner. What more auspicious season, then, than to-day for FOREST AND STREAM to present its petition for increased consideration? The fire glows warm in the grate, drowsiness soothes the senses, and the heart wells up with the fulness of gratitude and good wine, as the master of the house contemplates the comfortable surroundings of his after-dinner quiet. Let us solicit a little memento of the occasion. Our readers and subscribers are lavish in their compliments and wishes for our success. Let each now jog his neighbor's elbow, so that between this day and the new year our subscription list may be doubled and the sphere of our usefulness proportionately increased.

May our friends all rejoice and be thankful in the day we celebrate; may their roast turkey, plum pudding, and pumpkin pie "go to the right spot," and when next year the President, our Governor, and our Mayor issue their respective proclamations to observe the recurring festival, may they all be alive and ready to respond.

A PROPOSITION.

WE have been so often requested by many of our readers, interested in the improvement of our stock of setters and pointers in America, to propose to the Philadelphia Sportsmen's Association that a Bench Show of dogs of all classes shall take place under their management after the present shooting season has closed, and knowing that many of the members of this organization possess animals of superior blood, we advise, by all means, that a movement looking to such an exhibition may be made at one of their coming meetings. Not only should Philadelphia and Pennsylvania dogs be placed on the bench, but invitations should be extended to all sportsmen's societies of every State to enter their best for competition, through the medium of journals devoting a portion of their space to the subject, and we will cheerfully lend our aid in behalf of the success of the enterprise.

No more fitting time could be chosen for such a display than the month of February, when the sportsman has finished his autumn campaigns among the feathered tribe, and his dogs have fully recovered from the effects of the arduous work devolving upon them.

As an illustration of the success of exhibitions of this character, we are told by good authority that the annual show of the Poultry Breeder's Association, in Philadelphia, is self-supporting and fully paying the cost of hall, diplomas, &c., &c. Would it not be safe, then, to suppose that with all the interest taken in the improvement of field dogs within the past year, and the continued desire of the sportsman to possess well bred setters and pointers, that such a movement could not prove a failure?

The Mineola Bench Show for dogs, in connection with the Queen's County Agricultural Exhibition at Long Island in October, proved a success beyond the expectations of the most sanguine; in fact, it is stated that the display of field dogs was the great feature of the fair and attracted many that would not have otherwise attended. The points for judging were the same as those adopted by the London Kennel Club, and on which we do not think any improvement can be made. All setter dogs contending for award were placed under three classes—the Gordon, the Irish and setters of any breed—the best, under each head, receiving a cup and the second a diploma; the best and second best hitches of the same classes likewise gaining similar prizes. For pointer dogs and bitches, first and second of each were

given cups and diplomas, but we should like to see the same system, or one resembling it, carried out in awarding all breeds of animals shown, foxhound, harrier, beagle, dachshund, greyhound, bloodhound, staghound, Newfoundland, spaniel and terriers included, and as an inducement for perfection in taxidermy a prize should be offered for the finest specimens of mounted birds.

The Tennessee State Sportsmen's Association lately gave a Bench Show of their dogs at Memphis, which proved successful, as well as the Field Trial following, being the first of its kind ever held in America, giving great satisfaction to the projectors. No dog should be allowed to enter for award at an exhibition unless his pedigree for at least two generations be reliably furnished, and each owner be charged an entrance fee, to be devoted towards defraying the expenses of the affair. It will be time enough five years hence to ask of our sportsmen wishing to contend for premiums and medals at bench shows for pedigrees of greater length than two generations back on the side of both sire and dam, for the reason that in the past but little attention has been paid to recording lines of descent, and we fear if longer pedigrees be asked to day but few animals would be brought forward, notwithstanding they might be perfectly bred.

In conclusion, we will add that we promise our energies and attention in furthering any such movement on the part of the Philadelphia Sportsmen's Association, and would be happy to hear from them on the subject.

NEW GAME PRESERVE ON LONG ISLAND.

ONE of the finest trout streams on Long Island is the one whose lower half is owned by the South Side Club, and its headwaters by M. H. Keith and Son, of Babylon. The upper part especially is wonderfully pure, fed by bottom springs, and flowing over a continuous bed of whitest gravel for a distance of three miles or more. It rises back of Islip, and traverses a belt of unimpaired oak and pine timber land, sweeping in a semi-circle down to the salt meadows near its mouth, through which it flows into the Great South Bay. Its whole length is fully six miles, and its width is such, even near its source, as to permit the most unlimited play of rod for the fly-fisherman. It seems most surprising to find a river of such length and volume flowing through the sandy soil of Long Island, and still more surprising to find it stocked with trout that may be numbered by the hundred thousand! Three weeks ago we waded nearly the whole length of that portion owned by Mr. Keith, carefully avoiding the deep places, which could hardly be distinguished in water so clear that objects on the bottom seemed to be refracted against the surface. Generally speaking, we found the stream to flow uniformly and unbroken; but there are frequent intervals where it sweeps in rippling whirs around the bends, scoops out darksome holes under overshadowing elods of roots, or tumbles through cutworn channels. Occasionally it makes a little cascade where a log protrudes or spans the creek. Every foot of it seems available for the angler, and wherever we looked, whether in the shallow mid channel, in the deeper holes under the banks, or at the edges of the green patches of weeds that here and there elung to the bottom and swayed with the current, we saw the trout lying quietly, head up stream, or darting hither and yon, two, three, and a dozen together, whenever our approach disturbed them. Throughout its whole length, the stream was almost sacredly protected on both sides by a jungle of several rods in width, so thick as to be actually impenetrable. The only practicable mode, therefore, of fishing it at present is to wade it. What abundant returns our baskets would have realized had fishing been in order, it would be difficult to estimate. Certainly, the number of fish that might be taken would depend upon the angler's endurance, rather than upon the supply of fish. Very few were large, but they would average possibly four ounces apiece. By next Spring they will be larger and available to the angler.

In making our calculations, we have to take the chances against poachers, who are so persistent that neither the fear of the law or of blunderbusses will deter them, and whose gains are so lucrative as to make them speedily rich. So hold are they, and so tempting is the plunder, that on this very trout preserve of which we write, they not long ago erected a comfortable board shanty in the concealment of the thickest woods, and equipped it with stove, bunks, and provisions, to facilitate their depredations, keeping out of sight by day, and driving their nefarious vocation by night, when with silken nets so fine that one could fold them in the pocket, they would rob long reaches of the stream of its finny wealth. The plunder thus obtained is sold at this season to persons stocking their ponds; at other seasons to the market men. To five hundred of our readers who have been in the habit of fishing in Long Island waters, we are aware that our statements as to the quantity of fish in this creek will seem greatly exaggerated. For twenty years back we have tossed our own flies into many of these ponds and streams, and our returns have been meagre indeed. By the light of those other days, we should doubt any testimony now except our own eyesight. Nevertheless, the facts, as stated, can be substantiated by any who will take the trouble to investigate for themselves. Next Spring this rare preserve will be opened to the public, as it is on this account chiefly that we have undertaken to write this article. For nearly two years Mr. Amasa Keith has been improving this valuable property, and to better facilitate his work has erected and occupied a shanty in the midst of

GAME LAWS OF PENNSYLVANIA.

For the information of our readers who visit Pennsylvania, we print herewith a Digest of the Game Laws of Pennsylvania, as prepared by the "Lancaster County Fish and Game Society." Preserve it.

NAME OF GAME.	WHEN LAWFUL.		Penalty for taking out of Season.	REMARKS.
	From	Till		
"Bait fish".....	Any time	Any time	May be taken with hand nets for angling or scientific purposes.
Bass (black).....	June 1.	March 1.	\$ 25	Hook and line, nr scroll, only to be used. (See Nets.)
Birds*.....			5	Not to be trapped or snared; \$10 for destroying nests.
Dirt, coal or cain.....			50	Not allowed to be thrown in creeks or ponds.
"Drawing off Water".....			25	Fishing not allowed where water is drawn off, except for scientific or propagating purposes.
Drugs or poisons.....			70	Not allowed in fishing, baiting, or to be thrown into streams.
Ducks (wild).....	Any time.	Any time.	50	"No 'pant guns' or 'swivels' allowed."
Eggs (birds).....	Not to be destroyed.		10	Except those of "birds of prey," or for scientific purposes.
Hare or Rabbit.....	Oct. 1.	Feb. 1.	5	Not to be taken during spawning season.
Informers.....			5	To be removed on ten days notice, or by sheriff if.
Fish baskets.....			100	After due notice given by owner no one allowed to fish therein. Applies only to ponds or streams used or improved for propagation of fish.
Fish ponds (private).....			100	
Goose (wild).....	Any time.	Any time.	50	"No 'pant guns' or 'swivels' allowed.—See Ducks."
Grass, or Pheasant.....	Oct. 1.	Feb. 1.	10	No feed, bait, blind, or trap allowed.
Hare or Rabbit.....	Oct. 1.	Feb. 1.	5	See Rabbit—\$10 fine for hunting "ferrets."
Informers.....			5	Any person may inform within six months and receive one-half of the fine.
Insectivorous birds*.....			5	Not to be trapped or snared; Ten dollars penalty for destroying nests.
Limitations of actions.....				All information must be made within six months before a Justice of the Peace.
Nets (fish).....			100	Not to be placed within one-half mile of dams with sluices, unless meshes are three inches where there are trout or bass.
Nets (fish sett).....			25	Not to be set across canals, rivulets, and creeks, except for propagating purposes.
Nests of any wild bird.....			10	Not to be destroyed.—See Insectivorous Birds.
Partridge.....	Nov. 1.	Jan. 1.	10	No feed, bait, blind, or trap allowed.
Partridge.....	Dec. 20.	Feb. 1.	10	May be trapped alive for preservation only.
Pheasant, Prairie Chicken, or Grouse.....	Sept. 1.	Jan. 1.	10	No feed, bait, blind, or trap allowed.
Pike, or Perch.....	June 1.	March 1.	25	Hook and line and scroll only, except for propagation.
Pigeons (wild).....	Any time.	Any time.	10	Not to be killed or molested on nesting or roosting ground.
Plover.....	Jan. 1.	Jan. 1.	10	No feed, bait, or blinds, or traps allowed.
Quail—See Partridge.....	Nov. 1.	Jan. 1.	10	No feed, bait, or blind traps allowed.
Rabbit or Hare.....	Oct. 1.	Feb. 1.	5	Ten dollars penalty for hunting with "ferrets."
Rail, or Reed Bird.....	Sept. 1.	Dec. 1.	5	Not to be killed on nesting or roosting ground.
Salmon.....	April 1.	Aug. 15.	20	Owner of private pond may catch in his own pond to stock other waters.
Shad (Delaware and trib).....	Aug. 10.	June 16.	5	May be taken alive with nets any time for propagation.
Shad (Susquehanna & trib).....	Aug. 10.	June 16.	5	Not to be taken alive with nets any time for propagation.
Skipper (Wilson or Grey).....	Any time.	Any time.	10	Not to be killed or molested on nesting or roosting grounds.—See Nets.
Squirrel.....	Sept. 1.	Jan. 1.	5	This applies to Grey, Black, and Fox Squirrels.
Sunday.....			25	No hunting, shooting, or fishing allowed.
Troat (speckled).....	March 1.	Sept. 30.	10	Hook and line only, except for propagation.—See Nets.
Troat, Salmo (and trib).....	March 1.	Sept. 30.	10	Hook and line only, except for propagation.—See Nets.
Trapping—See Wild Duck and Goose.....				
Wild Turkey.....	Dec. 30.	Feb. 1.	10	May be used to preserve birds during the Winter only.
Woodcock.....	Oct. 1.	Jan. 1.	25	No feed, bait, blind, or trap—See nests.
Woodcock.....	July 1.	Jan. 1.	10	No feed, bait, blind, or trap—See nests.

*Insectivorous birds are not allowed to be taken or killed in any manner, under penalty of \$5 for each bird. This includes bluebirds, robin, sparrow, swallows, nuthatch, thrush, woodpecker, whippoorwill, and other insectivorous birds.—Act of May 1, 1874.

CREEDMOOR—RIFLEMEN'S COURTESIES.

PREVIOUS to the departure of the chivalric Captain of the Irish team for his home, he was made the recipient of a handsome badge by the members of the Amateur Rifle Club, as a slight token of their esteem for him. During the ceremony of presentation, Colonel Church, editor of the *Army and Navy Journal*, made the following remarks, and they express the feelings entertained for Major Leech and his men by their American friends and friendly rivals.

MAJOR LEECH:—The Directors of the National Rifle Association have requested me to present to you, on their behalf, and on behalf of the Association which they represent, this badge, which they ask you to accept as an expression of the esteem in which they hold you and your compatriots of the Irish International team. It is only at the moment that I have learned that the pleasant duty of this presentation was to devolve upon me, and I am sure you and the gentlemen of the board will pardon me if I should fail, as I most certainly should fail, even under more favorable circumstances, to give adequate expression to the sentiments which they entertain toward you. They ask you to accept this badge, not only as a token of personal regard, but as proof of their high appreciation of the service you have rendered them in stimulating the growing interest in rifle practice in this country. In the cordiality with which you aided our efforts in this respect, you have shown a great and, as we are glad to know, a well-founded confidence in the traditional friendship between Ireland and America, and whatever the result of our efforts in reviving and perpetuating the traditions of American skill in the use of the rifle, we are sure that you can cordially second those efforts; joining with us in the hope and assurance that the green and the blue will never be found opposed to each other, except upon fields of friendly competition. When we recall all the circumstances of the contest to which you invited us, and remember how many possibilities there are of unpleasantness and difficulty in such contests, we shall remember with no small satisfaction that there is no single circumstance connected with the International competition at Creedmoor which any of us can refer to otherwise than with pleasant recollections of our acquaintance. This fact is in itself testimony sufficient as to the character of the contestants; and accepting you and your friends as representative Irishmen, I can assure you that we look forward with no small pleasure to the acquaintance we shall form during our anticipated visit to Ireland in the Summer of 1875. And now, in taking leave of you for a season, we wish you my dear Sir, God speed and a pleasant voyage.

To this the recipient responded in his usual manly and feeling manner, and his reciprocation of the sentiments of good will and warm friendship proved how close are the bonds that unite the distinguished riflemen of the Green Isle and those of our own country. Now that the greater portion of the Celts have returned home, we wish them unbounded happiness through life, and hope that when next they visit us, they may know nothing worse than the hospitality with which they have been received on their first visit.

They are worthy foes, and as general as they are skillful and unpretentious, so we hope that the bond of friendship created by this visit will always remain as strong as it is at present. To Major Leech and his "team" we will say "God bless them," and promise to give them another "cordial mile farther" whenever they return to our shores.

POSTPONED.—It was supposed that the Leech cup would be shot for this month, but owing to the lateness of the season, the event has been postponed until next year.

Lieut. Col. Joseph Laing, of the Seventy-ninth Regiment, N. G., in placing at the disposal of the National Rifle Association the Gatling gun, of which a majority of the Executive Committee have deprived the Regiment, says; "I had considered the propriety of holding the gun, notwithstanding the decision, and leaving the matter to a jury, especially after learning that three of your Board, Gen. Shaler, Gen. McMahon, and Major Smith of the Seventh Regiment (who aside from their well-known qualities as soldiers are men of upright characters), had seen the injustice of throwing out Private Irwin's score and voted in our favor upon that point. Subsequent reflection convinces me, however, that such a proceeding would be unnecessary. I have, therefore, concluded to surrender the property in question. During our existence as a regiment we have taken whole batteries of guns in the cause of our National Union, and we certainly can afford to lose one now for the sake of preserving union and good feeling in the National Guard."

The competition for the *Turf, Field and Farm* badge comes off at Creedmoor next Saturday. This will be the last regular match of the Creedmoor season, so our best marksmen are expected to be present.

NATIONAL SPORTSMEN'S ASSOCIATION

The subjoined letter has been addressed to us by an officer of the National Sportsmen's Association:—

EDITOR FOREST AND STREAM:—

It is proposed to make the Convention of the National Sportsmen's Association, which is to be held at Cleveland, on the second Friday in June next, an interesting one to all true sportsmen. The attendance will undoubtedly be large, as efforts are being made to have State Sportsmen's Associations organized in all of the principal States. Papers will be read and addresses made upon interesting topics, and the sportsmen of Cleveland will do all in their power to make the occasion pleasant and one to be remembered. The Ohio State Sportsmen's Association will meet at the same time and place, but the time of meeting will be so arranged as not to conflict in any manner with the National Association.

Speaking of the Ohio State Sportsmen's Association, we will in this connection state the manner of its formation and the beneficial results already secured. In the early part of the present year, the Cleveland Sportsmen's Club, deeming it advisable that a State Association should be formed, addressed a circular letter to sportsmen throughout the State, setting forth the advantages to be derived by the organization of such an association, and asking suggestions in regard to the same. The responses were numerous and favorable; consequently a call was made for a convention of sportsmen to meet at Cleveland at a certain date. The result was a large attendance, an association organized, constitution and by-laws adopted, officers elected, and the Ohio Sportsmen's Association a fixed fact. Since its organization local clubs have been formed in many of the cities, villages and townships, auxiliary to the State Association. The game laws have been more vigorously enforced, and much attention given to the preservation of game. Although the association is only in its infancy, the good results which it can hardly be estimated.

Now here is a chance for other States to go and do likewise; then join the National Association, and then all heartily unite in one common object, the preservation and propagation of game and fish, and uniformity in game laws. We might here add that any wishing information relative to an annual meeting of the National Association, or desiring copies of Constitutions for State Associations, or local clubs, can write to A. T. Brinsmade, Esq., President of the National Sportsmen's Association, at Cleveland, Ohio, whom we know will be always ready to respond.

his territory, and upon the brink of this delectable stream where he could superintend his workmen in person. Already he has cleared and widened the stream opposite the shanty into a very considerable pond, which will reach a quarter of a mile in circumference when completed. He has turned loose large quantities of trout at sundry times, until with the aid of their natural increase he has made this one of the best stocked streams of its size in the States. Last Spring we tested its abundance by taking out forty in a few minutes. By next Spring Mr. Keith hopes to have a comfortable sporting house built close by, to accommodate not more than ten gentlemen at a time, to whom the privileges of fishing or shooting, according to the season, would be granted, at moderate prices, upon the presentation of suitable references. This will not be a club house in any sense of the word, nor yet a hotel; but applicants will be served, in turn, for a limited period, at a fixed price per diem, to include game and fish killed or taken away. There will be no tariff per pound, nor any special privileges to barter off at extortionate prices. It will be simply a sportsman's rendezvous, where good food and fair terms may be had, and a good hag of fish and game be guaranteed. This guaranty could not be given were the number of guests to be unlimited, or to exceed the fixed number of ten at any given time.

This stream, it should be said, runs through the choicest hunting ground of Long Island, and is the centre of the present deer country. It traverses the thickest cover, and is crossed by frequent runways. Partridges are more numerous here than elsewhere, and quail are found in considerable quantity. When ready for visitors, Mr. Keith will have some basswood canoes placed upon the stream for the use of anglers. He has five men now employed in improving the pond and creek. We are glad that he has consented to devote his efforts to the entertainment of sportsmen in the manner proposed, for his scheme is founded on common sense, humanity, and honorable dealing. At present trout fishing and cover shooting on Long Island is almost a farce, by reason of the extortion of landlords, or the restrictions of landed proprietors.

We understand that the South Side Club has been negotiating for this property of Mr. Keith for a considerable time, appreciating as they do its value as an addition to their preserve, especially as it includes the head waters of their stream, to which the trout instinctively resort to spawn. Mr. Keith, however, has declined to sell, which is a fortunate decision for those persons not members of the club. The entire tract embraces about one thousand acres, and lies within two miles of the South Side Railroad.

DEER SLAUGHTER IN THE ADIRONDACKS.—All sportsmen left the Adirondack region early in November, but we learn from a resident at Keeseville that the guides are making fearful slaughter of deer. We believe that more deer are killed by the few score guides in that locality, whose occupation ends with the advent of snow storms, than by all the sportsmen put together. There is crying need for some restrictive measures and very heavy penalties to prevent speedy extermination of the deer in that section. But neither laws nor fear of penalties will of themselves stop the slaughter. We are in favor of the appointment of special officers or overseers, who shall visit different localities *incognito*, as detectives, during the Fall and Winter, especially after the snows get deep, report offenders, and procure their arrest. In no other way can violations of the law be stopped. We suggest that a petition to this effect be presented to our State Legislature this Winter. It will be one step at least toward the conservation of those important interests which it is hoped the creation of the State Park will accomplish. The Adirondack region ought to be placed under the immediate supervision of the State authorities, just as portions of Canada are under those of the Dominion, with efficient men to act as wardens. It is all nonsense to invigil against sportsmen for killing deer in July and August by jacking or hounding, when the strapping backwoods-men, whose occupation as guides makes them perfectly familiar with all the haunts of deer, slaughter them by the dozen in the deep snows of mid-winter. Slaughter by sportsmen! Faugh! there's not one in a hundred who could catch a deer without the aid of his guide, even if he were at the point of starvation. Let wise men stop the leak at the huug, and not at the spigot.

LA VIE SPORTIVE.—We have received a new journal published in Paris bearing the above name. As its title indicates, it is devoted to field sports and all those exercises which develop a vigorous manhood. We notice among its contributors several names well known among the oldest nobility of the realm, a fact which indicates that the aristocracy of Europe are yet the supporters and keenest lovers of all that is ennobling and exhilarating. This journal is also replete with short and varied essays on various subjects, and while none of them displays much originality yet they are quite readable. We wish our contemporary success.

Our friends and readers are requested to scan our Prize List column in another page. The premiums offered for subscribers are unusually liberal, and embrace articles adapted to the wants of every gentleman sportsman in the country—be he tyro or veteran. The subscription list of FOREST AND STREAM is flattering full, but our ambition and hopes, and we think its own deservings, place our mark still higher.

Earl Dunraven has returned from his hunting expedition to the West.

HOLIDAY PRESENTS.—As Winter and the Holidays approach, dealers should see to it that they lose no opportunity to call the attention of the public to their wares through the best advertising mediums. THE FOREST AND STREAM has been found to be, by long odds, the very best medium for communicating with the sportsmen of the country, and money invested in its advertising columns always brings the most profitable returns. Of this we have been assured repeatedly by the heaviest dealers in the country, whose written testimony we have already printed and have now on file. Between this and last January is the best time to advertise. Not only does a change of sports and everyday necessities bring a demand for new descriptions of wares, but people are constantly in quest of articles, with money in their pockets especially appropriated for purchasing Holiday Presents. It would greatly facilitate their purchases if shopkeepers would freely advertise their goods and thus inform intending purchasers where they can be obtained.

AMARANTH DRAMATIC SOCIETY.—This society, which is Brooklyn's especial favorite, and successful beyond all precedent, introduced its fourth season at the Academy of Music on Wednesday evening of last week with Massinger's popular comedy of "A New Way to Pay Old Debts." The play was well presented, although not fully up to the standard of merit which has so long characterized the entertainments of the Amaranth. Nevertheless, for the first night, it was sufficiently acceptable and fully appreciated by the throngs of attending friends who are always pleased because they go with the purpose to be pleased. Criticism is hardly within our province, and we could hardly criticize severely if we would. That the Society possesses dramatic material superlatively good, and that its personnel is held deservedly high is evidenced not only by the crowds that fill the Academy to repletion at each monthly representation, but by the craving demand there is for entrance tickets. These are wholly complimentary, and wherever bestowed are received as tokens of especial favor by their fortunate possessors. Certainly in no audiences that gather in Brooklyn, no matter on what occasion, is there a greater display of gentility, refinement and good taste, or more substantial evidence of pleasure derived from social communion. The receptions that take place after the dramatic performances are most enjoyable, and admission thereto is eagerly sought by the most aristocratic circles of Brooklyn. We trust that the organization may have a long continuance. Its success is an earnest of its vitality and vigor.

The officers of the Amaranth this year are: Jas. B. Yail, Jr., President; Milo A. Parsons, Vice President; A. Roosevelt Thompson, Secretary; M. F. James, Treasurer. Trustees, Geo. P. Gregory, Chas. A. Hoyt, G. W. Lane, Jr., Alex. Isaacs, and John M. Burt. Dramatic Committee, John Oakley, Xenophon Stoutenborough, and L. D. St. George. The next reception will take place Dec. 16th, when Robertson's comedy of "Ours" will be presented, with Messrs. Walker, Williams, Farley, Luske, Jones, the Misses Clark and Percy, and Mrs. Ferguson in the cast.

HOWARD MISSION.—We are pleased to print the following card in aid of the praiseworthy object indicated:—

Howard Mission and Home for Little Wanderers, 40 New Bowery.—Thanksgiving Day is looked forward to by the hundreds of poor children and needy parents connected with our mission as the greatest feast day of the year. Will not our friends help us make it a "feast of fat things," a day of good cheer? We are confidently depending on the generous public which has never failed us to furnish us the means of providing for them the solitary good, substantial, square meal of the whole year. Supplies of all kinds of food and clothing will be gratefully received at the office, 40 New Bowery, and donations of money by our Treasurer, Wm. Phelps, P. O. Box, 4,512. Visitors—always welcome—are cordially invited to come and see the children eat and hear them sing on Thanksgiving Day. Dinner, 11 to 1; singing and addresses, 1 to 3 o'clock.

Wm. D. CLEGG, Supl.

READINGS.—Miss Margaretta B. Moore, a young lady accredited with the possession of beauty, culture, and talent, will give dramatic readings at Association Hall on the first of December.

—If ADVERTISERS would but take the trouble every week to examine our correspondents' column, they could readily ascertain very nearly what our readers require, and thus obtain material aid in determining how to cater for them to the mutual advantage. The object of the advertiser is to first ascertain what the public wants, and then offer his goods. The purchaser desires to know what can be bought and just where to buy it. He is constantly applying to our reading columns for information that should be found among the advertisements.

—Advice from the Red Cloud Agency of the 13th and 14th instants, confirm the reports that Prof. Marsh, of Yale College, was detained there because the Indians objected to his visiting the newly discovered fossil region near the Black Hills.

—THANKS are hereby tendered to numerous readers of FOREST AND STREAM for copies of the date of February 12, 1874. We are still short of that issue, and shall be glad to receive copies for binding.

—The best shot ever heard of has been made in Calais, Maine, where a gentleman fired, in midnight darkness, at the bark of a dog, and the next morning found the animal dead, the bullet having hit him in the throat.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Striped Bass, <i>Morone chalcidus</i> .	Walefish.
SOUTHERN WATERS.	
Pompano.	Trot (black bass).
Shapper.	Drum (two species).
Groupers.	Kingfish.
Rockfish.	Striped Bass.
NORTHERN WATERS.	
Sheepshead.	Tailorfish.
Sea Bass.	

FISH IN MARKET.—Bluefish from the South coming in rather slowly—15 cents per pound. Very little codfish at high figures. Whitefish from the Lakes quite abundant at 20 cents. Bass rather scarce, 15 to 20 cents. As soon as the Fall catch comes in it will fall to 12 cents. Fresh mackerel in much demand, but owing to the mildness of the weather but little can be procured, 20 cents per pound. Eels quite abundant at 18 cents; smelts, 25 cents. Salmon trout very scarce. The frost fish of Maine are now very profuse, and sell at 10 cents per pound.

Of marine fish there are exposed for sale in the New York markets during the year some sixty-seven kinds, and of fresh water fish some forty-one, making a total of 108, to which are to be added sixteen varieties of shell fish and crustaceans, presenting a handsome total of 124 different varieties of food. That this list may be expanded is quite probable, as fish other than the California salmon may be expected before long, and in time the grayling will come from Michigan waters, or from private fish-ponds. Comparing our own list, extensive though it may be, with the catalogue of fish eaten in England, we find that it only exceeds it by some twenty-four. The comparison is, however, not made between London and New York, but between New York and all England.

—The red snapper, a very fine fish from Southern waters which within a few years used to be a rarity here, is now brought regularly to the markets.

—Last Spring we received a bass rod from Dr. T. J. Curle, M. D., of Lexington, Kentucky, which he wished us to examine, as its material was a new kind of wood, and it had some improvements of his own as respects ferules and joints. Looking at it from the standpoint of a trout and salmon angler, and with less experience in Western fishing than we can boast at present, we passed an adverse criticism upon the implement, much to the doctor's disgust, we dare say; but we have since made the honorable amend for our too hasty judgment, and given our reserved assurance that in its essential qualities it meets all requirements. There is something in knowing just what a good bass rod is—just as there is in knowing "beans;" and having recently had opportunities to examine the tackle of some of the leading experts of the West, we are prepared to assert that a bass rod and trout fly rod are altogether different implements—just as different as are the two kinds of fish and their modes of fighting. A bass rod such as we would select for our private use should be about ten feet long, with just enough elasticity to yield gracefully when the fish makes its mightiest rushes, thereby holding him without tearing the hook from its precarious fastening. It is what trout anglers would call a *stiff rod*, yet somewhat stiffer and shorter in proportion than a "bait rod" for trout. A very pliable or flexible rod, such as we use for fly fishing for trout, cannot withstand the wear and strain that is demanded from a bass rod. The best bass rods that we have seen are owned by W. C. Egan, Esq., of Chicago, whose experience with *M. nigricans* in all waters is large. They are made of Japanese bamboo (natural), with metal ferules and fixed rings. One has a lancewood tip, and another a bamboo tip. The tips are short, and appear stubby, yet are in good taper and fair proportion to the entire rod.

We of the East need some coaching in bass fishing as practiced at the West. We might even receive some instruction with profit from the fishers on the Potomac and Susquehanna. The speckled trout is our *plais de resistance*; the black bass theirs. Each section unquestionably understands its own game. Anglers for bass here chiefly use the trolling spoon or spinner, with short, stout, stiff rod; and having hooked their fish, they drop the rod and haul in on the line hand over hand, the sole apparent utility of the rod being, by its yielding resistance, to fix the hook more securely in the fish than a hand line could do. We are speaking more particularly of lake and smooth water fishing from boat or raft. In swift water a rod is indispensable, and the "correct mode" of landing a fish is to walk him ashore, provided it be not too rooky, or there be clear elbow room. But in this latter and best approved mode of fishing, we find that the rods in vogue in this section are so stiff as to prevent that sport which arises from testing the game qualities of a fish through a long sustained struggle; or else, they are so limber and fragile as to become inefficient by their weakness, while at the same time their expense renders their use extravagant by reason of the strain which soon knocks them up. We need a happy medium, such as those who fish the rapid Western rivers seem to have discovered and employed. With just such a rod, an Improved Meek reel (to be obtained in Louisville, Chicago, etc.), and a fine grass or oiled silk line, we have no doubt our anglers here would find their sport very much enhanced, while the game qualities of the bass would rise very much in their estimation.

In fishing for bass out West, either with natural or artificial bait, the cast is made by giving the end of the line a *sling* over the shoulder and letting it run out from a freely rendering reel, just as our own experts cast for striped bass

or weakfish. The fly is but little used, and the use of it involves an entirely different mode of casting—the same that is employed when fishing for speckled trout, namely, the reeling off a few feet of slack, the taking it up and the succeeding trajectory, with the frequent repetition thereof, until sufficient line is out. No doubt that bass will take the fly freely in many localities, both in still and running water. There is testimony enough to this effect. And where this device is employed the nicest discrimination is required in selecting a rod of requisite stiffness, and yet with sufficient length and elasticity to cast the fly properly and satisfactorily. If black bass grew to the size of salmon, a salmon rod would be just what is wanted; as they do not, we must be content to find some other substitute.

—The biggest smelt catch yet in the vicinity of Marblehead, Mass., is 33 dozen in two hours and a half. This feat was performed by two Salem gentlemen at Spike bridge last week. Most of the smelters at City Point, South Boston, seem to have laid aside their poles and lines for the season, or until the ice makes, through which they can have an opportunity to fish. Some of them have taken to eel spearing, as an excellent mess received from the "Commodore" recently testifies.

—The mud, left bare by the retreating tide about Wellfleet, Mass., has been literally covered with dead bill fish during last week. This is a small fish, eight or ten inches long, excellent eating when fresh taken, and is driven ashore in much the same manner as the blackfish. It takes its name from the projecting head, shaped like the beak of a bird. Many barrels were sent to New York last week from this place.

—Nine million whitefish have been received this season at one fish factory in Guilford, Conn.

Yachting and Boating.

All communications from Secretaries and Friends should be mailed no later than Monday in each week.

CANOE VOYAGE.

MR. BISHOP'S trip from Albany to the Gulf of Mexico, in a paper canoe, is now in progress of accomplishment, and the inference is that it will be a success. A correspondent writing about his efforts, says that the object of the undertaking is not to gain notoriety or win the applause of sporting circles, but to afford an opportunity for a careful scientific observation of the system of currents, rivers, and bays that sit along the Atlantic coast, and form almost a continuous land-locked water course from Sandy Hook to the southern part of Florida, broken in some places by long reaches of the sea inland, like the Chesapeake, and in others by jutting headlands. Mr. Bishop seasoned himself for his fatiguing task by a pull in an open boat last Summer from Quebec to Philadelphia. He left Quebec in June in a cedar boat large enough to hold two men. He had with him a stern boatman as assistant. The two rowed up the St. Lawrence 145 miles to the mouth of the Richelieu or Lord River, up that stream to Lake Champlain, and from the lake reached Albany by way of the canal, traveling in all 421 miles. Mr. Bishop concluded that the help of his assistant did not compensate for his weight and that of his blankets and provisions, and that more rapid progress could be made if he went alone. He had the first had killed the malaria along the coast. In the mean time he had a paper canoe constructed by E. Waters & Son of Troy, N. Y., in which to prosecute the more adventurous part of his novel undertaking. This canoe is of what is known as the Nautilus model, designed by the Rev. Baden Powell, of England, and is in all dimensions about the well known Roy type. The body is made of linen paper about one-sixth of an inch thick, molded while soft upon a solid wood form, and afterward highly polished and varnished. This material is light, tough, and water-tight. Inside of the shell is a light framework to which the seat is attached. The dimensions of the canoe are: length, 14 feet, width, 28 inches; depth amidships, 8 inches; height at stern from a horizontal line, 29 inches; at bow, 23 inches. It is not decked over like an ordinary canoe, but is fitted with a canvas cover buttoned to the sides, which keeps the water out when a rough sea is running and serves as a shelter to the sleeping occupant at night. The weight of the craft and its equipments is as follows: canoe, 56 pounds; one pair of oars for use in still water, seven feet eight inches long, 8½ pounds; one paddle, one long blade, 2½ pounds; row, sprit and boom, six pounds; total, 73 pounds. For cooking, Mr. Bishop carries a stove that can be packed in about the space occupied by a pack of cards, a small coffee pot and a tin pan. Hisarder consists of condensed provisions; his bed is his boat, and his bedding a pair of blankets.

Mr. Bishop's plan for his long voyage is carefully made, and he has studied his course in advance by the aid of the Coast Survey maps. He will first go down the Delaware River and Bay to Lewes, where he will haul his canoe five miles over land to Rehoboth Sound. At the end of this Sound he will haul over four miles to the Indian River, which will take him into the Chincoteague system of water courses, which he will follow to Cape Charles. Crossing the mouth of the Chesapeake Bay, he will enter the Hampton Roads, and go up to Norfolk, by way of the Albemarle and Currituck Canal, reach in succession Currituck, Albemarle, Pamlico, Core, Stump, and Roanoke Sounds, which will bring him to Topsail Inlet, near Cape Fear, N. C. Here according to the Coast Survey maps, he must take to the open sea for forty miles to reach Smithville, at the mouth of the Cape Fear River. He hopes, however, to be able to work his canoe through ditches part of the way

The Colleges.

The first exhibition of Athletic exercises that has ever taken place at Wesleyan University, Middletown, Ct., occurred last Saturday at Griffin's Park. 1st. Dash of 100 yards, two heats, five entries. Ricé of '78 winner in 11 1/2 seconds and 11 seconds. 2d. Ball throwing, six entries. Andrews won in the second throw. Four of the best throws were as follows: Andrews, 315 feet, 6 inches; Robertson, 315 feet, 3 inches; Goss, 300 feet, 8 inches; Robinson, 298 feet. Downy, though not having entered for the prize was permitted to throw against the record of other colleges, and did the best throwing of the day: 1st. throw, 300 feet; 2d. throw, 323 feet, 7 inches. 3d. Half mile running race, seven entries. Beach 2m. 25 1/2 s.; Robertson, 2m. 35s. 4th. One and a half mile running race, three entries; Whitney won in 5m. 47 1/2 s. 5th. Three mile walking race, six entries; Wharf 2m. 41 s.; Sewell, 2m. 45s. 6th. Sack race, three entries; Thorpe, 45s.; Cooke, 50s.; Bailey, 52s.

The following are the members of the Dartmouth College football club: J. W. Mitchell, G. Burbeck and A. F. Sears, Class of '75; F. W. Mitchell and E. H. Gilman, Class of '76; E. L. Emery, B. F. Robinson, W. F. Temple and W. J. Willard, Class of '77. L. Parkhurst and H. S. Dewey, Class of '78.

YALE COLLEGE, NEW HAVEN, NOV. 23, 1874.

EDITOR FOREST AND STREAM:—The past week has been one of unusual activity with the Yale boys. Two foot ball matches have been played, one with Stevens' Institute, the other with Columbia. The former was played on Wednesday last, the latter on Saturday, and both were by Yale, the former by a score of 7-0, the latter score was 5-1. With such results we feel, very naturally, much gratified, and our contests with Princeton College, the champions last year, are looked forward to with much eagerness, as they are sure to be closely contested and very exciting. In the 7th Col. Ketcher contest between Princeton and Yale will be played in New York on Saturday next, when a game will be played which should attract attention and which should draw a large attendance.

The Stevens' twenty comprised—Poinier, P. G., Pezandie and Graydon, of '75; Drake, Dufno, Kingsland, Hiesenberg, Wall, Wiley, and Zimmerman, of '76; Richard, of '77; Lehigh, of '78; Lehigh, of '78; Kremer, Rosenbaum, W. Smith, Vail, and Weeks, of '78; with Deaton, '75, as Captain.

Yale was represented by Dornig and Bristol, P. G.; Peters, Theological, Avery, Cochran, Fulton, Grinnell, Maxwell, and McLenock, of '75; Hall, '75, S. S., Arnold, Ely, Phelps, Turnbull, Valle, W. Sherman, and Wright, of '76; Baker, of '77; W. Warts, of '78; with McDuffy, of '75, who captained the twenty.

It was generally anticipated that Yale would have an easy task of it, as our opponents seemed younger and of lighter build than our men. However, the two first goals proved to be closely contested while the remaining four were won with consummate ease by Yale, as well as the last goal which was played merely for form. The time of each goal was—First, 2m. 35s.; Second, 5m. 30s.; Third, 4m. 55s.; Fourth, 4m. 54s.; Fifth, 5m. 30s.; Sixth, 2m.; Seventh, 6m. 15s. This is a very good record. The best playing was done by Kingsland, Binke, Rissensham, Denton, and Poinier, while Yale, Peters, Grinnell, Avery, Hall and Baker distinguished themselves.

The referee was E. McKnight, Yale; '76; the judges were Mr. Sarge, '75, of Stevens, and Mr. Betts, '75, of Yale. These officers performed their duties with equity, and merit our compliments for the satisfactory manner in which they performed their very unthankful task. The day was all that could have been desired, and in this respect the day of the second game, the best of the Columbia and Yale matches, was far from desirable, was noticeable. Friday had been very disagreeable. It had rained and snowed, and it was thought highly probable that no game would occur on the following day. However, Saturday was clear, but towards noon the sky became overcast, and it remained cloudy and comparatively windy all day.

Equipped with these little unpleasantnesses, we must add a very great degree of cold, and our readers may imagine what the spectators endured to behold the game. In spite of all these contracting influences, the crowd which assembled at the park far outnumbered that of Wednesday, although the admission fee was twice as large, as a close and more exciting contest was anticipated, and also because the fact became known that the Yale twenty were to appear in their new suits, blue shirts and caps, and in their new uniforms. The game began at 2.35 P. M., when the following contestants appeared for Columbia—Simonds Law, '75, Captain, School of Mines; Cornwall, Morewood, Rhodes and Thompson, of '76; Lindley, Radford and Rounds, of '77; Law School, McMahon, Moore, Sprague and Webb, of '73; Cornell and Vandewater, of '76; College, Bach, George, Henry, Price, Root, and Weeks, of '76.

The Yale twenty, as mentioned above, consisted of Banknell and Tillingham, the former a theological student, the latter a '75 man, played in the places of Ely and Valle. The Columbia men presented a very neat appearance in their suits, consisting of white knee-breeches, blue stockings, white shirts and blue handkerchiefs, and many favorable comments were bestowed upon them. Yale also looked finely in her new rig.

Columbia won the first goal, but the ball was set by Yale. Moore, who bestowed upon it an excellent kick. The two twenties first engaged to be very evenly matched, and this goal was hotly contested, Yale winning, owing to a good hit by Cochran, in 15m. 31s. After this the ball was almost all of the time kept on the Columbia side, and her men were generally outplayed at every point. Owing to numerous fouls this goal was most uninteresting, and was not worth watching. The goal lasted only 4m., and was rushed through splendidly by Yale. We do not think that a goal has ever been kicked before in a regular game in so short a time, and would like to know if we are correct. Yale won the fourth in 32m. 57s., and the sixth in 19m. 37s., while, through some carelessness, Columbia managed to win the fifth in 2m. 55s. This contest only serves to belittle the Yale goal, which we feel in regard to the meeting with Princeton, as the latter, just the other day, defeated Columbia, scoring six goals to none. The only accident of the day happened to Cornell, whose ankle was sprained, but Ward, '77, M. G., filled his place very satisfactorily. The referee was J. M. Griswold, Jr., of Columbia, while Mr. Betts, of Columbia, and Mr. Betts, of Yale, acted as Judges. These gentlemen suited all parties by their decisions. After the game Yale gave a supper to Columbia, at which the best of feeling prevailed, and it is to be hoped that the good feeling there established may be of long duration. More anon. K.

PRINCETON COLLEGE, NOVEMBER 21, 1874.

EDITOR FOREST AND STREAM:—The expected match between Rutgers and Princeton College twenties in foot ball, took place this afternoon. The game began at half-past one o'clock and lasted until half-past three. The first inning occupied over half an hour, and was won by Princeton, who was compelled to face a strong wind, in addition to her formidable antagonists. The remaining five innings varied from ten to twenty minutes in duration. The whole six were secured by Princeton, though without great exertion on her part. (It is a remarkable fact that neither Yale, Columbia, nor Rutgers have yet been able to win a single goal from Princeton in foot ball.) Both twenties succeeded in distinguishing themselves in the game to-day. Hendrickson and Ross, Rutgers men, did some very effective playing, while Ely, of Yale, and Alonker especially excelled in the Princeton side. Foot ball is the only out-door sport indulged in here now. The cold weather has put a stop to base ball, and our oarsmen have been compelled by the same cause to retire from their labors on the placid bosom of the canal to the congenial shelter of the gymnasium.

From Smithville to Georgetown, S. C., eighty miles, he will certainly have to trust his paper boat to the ocean. He expects to creep along the coast when the wind is off shore, and take to the land whenever it blows from seaward. All the way from Georgetown to the St. Johns River in Florida he will find land-locked waters behind the sea islands. Rowing up the St. John 240 miles to Salt Lake, near the Georgia coast, will make a portage of seven miles to reach the Indian River, a salt water bayou extending along the Eastern coast of Florida, and separated from the ocean by a narrow strip of beach. The river will take him to Jupiter Inlet, from whence he will row as far as Key Biscayne certainly, and if possible will go from key to key until he reaches Key West, where he expects to arrive in March.

The following is the new rule of measurement for yachts proposed by the Royal Thames Yacht Club, of London, England:—"The length shall be the distance from the fore part of the main stem to the after part of the stern post, measured in a straight line along the deck. The breadth shall be the distance between the outside of the outside planks or wales, measured in a direction perpendicular to the length, and where that distance is longest. The depth shall be the distance between the top of the covering board and the bottom of the keel at the middle point of the length, and in a vertical direction when the yacht is fairly floating. The product of the length, the breadth, and the depth, divided by 300, shall be taken to be the tonnage of the yacht, any fraction of a ton being taken as a ton."

On Sunday week, the yacht Cyrenet, of Port Rowan, Canada, made the trip from the Port to the "Cottages," Long Point (nine miles), in thirty-eight minutes; the return trip against a high head wind, and in a dense haze, being made in one hour and ten minutes.

A special from Ottawa to the St. John Telegraph reports that the Dominion Government are about to provide five life boat canoes for the St. Lawrence. They will be conveyed by the steamer Druid when that vessel goes down to place the buoys, and will be placed in charge of responsible parties at proper points, so that crews can soon be reached in an emergency, and that the boats will be used to parties whose lives may be in danger from accidents or wrecks. The following points have been selected: L'Islet, Point Jolly, St. Roches, St. Anne, and Kamouraska.

Capt. Barkeley, the old commander of the famous yacht Maria, who went to France several weeks ago to bring back the long lost vessel from Marseilles, has returned from Europe after a fruitless search for her. Before his arrival the craft had been left quietly slip out of port with bogus clearing papers. The Captain believes that she is furnished with arms and provisions to the Carlists in Spain. He therefore traveled along the Spanish coast, but nowhere could he find the least tidings of the Maria. Her owners lay heavy blame on the American Consul at Marseilles for not exerting sufficient vigilance to prevent her escape after having received timely warning from this side of the Atlantic.

The Rev. Dr. Henry M. Seudder, of Brooklyn, has purchased a fine speed yacht, named the Hora, from Mr. Salem J. Davis, of Greenport, on private terms. Dr. Seudder proposes to make use of her for pleasure cruises in the waters at the East end during his summer vacation.

The Naumkeag Boat Club, of Salem, Mass., hold their semi-annual election last week, when the following gentlemen were elected officers:—President, Timothy Collins; Vice President, Thos. A. Devine; Secretary, D. J. Donovan; Treasurer, John B. Harding; Collector, John Flynn; Directors, Wm. McGrane, M. J. Donovan, Philip McDonald, M. Hogan, and M. McDonald.

Abraham and Nehemiah Long, Alex. Brayley and John Lyons, of St. John, are waiting for an answer to their challenge to the Royal Yacht Club. On Monday Mr. Nehemiah Logan, Straight Shore, Portland, will start for Halifax with the new lapstick boat built by him for the Kennedy crew, of the latter place. The craft is the finest of the class ever built in the Dominion, and it is thought that she can cover four miles a minute faster than the boat Crown Prince, in which the Logan crew was defeated by the Ross-Foley's. Her weight is only 135 pounds.—St. John News.

YACHT PRIZE LIST.

BOSTON, November 12th, 1874.

EDITOR FOREST AND STREAM:—

Allow me to correct some inaccuracies in the tables I sent you, and which you published in your issues of November 12th and 19th.

List 1—May 18, S. A. Starbuck should be S. A. Stauffer; July 4, J. C. Wells should be I. C. Wells; July 27, Annie Lane should be Annie Leake; Sept. 1, Centre Moriches should be Centre Morishe; Sept. 23, Madge should be Midge; Oct. 10, Bayles should be F. Bayles. And the following receipts should be added: Oct. 21, Baltimore—match—J. E. Cornwall beats Annie Leake.

List 2—The following races were omitted: Peleeas, Southport; two races; one with allowance; one without allowance; one first prize, Minnie, Waretown; one race; one first prize.

The Albatross belongs to the Nonnah Y. C. The F. Bayles took a second, not a third prize. The Glenner took a third prize, and the Glido did not. The Lady Standley took one prize, and the Lark took one first, one second or third. The Oscar Rohison took a first and a third prize. The Ruby took two first and no second prizes.

BLUE WITH A GOLD CASTLE.

PHILADELPHIA, NOV. 23, 1874.

EDITOR FOREST AND STREAM:—

An interesting race was pulled on the national course on Saturday afternoon between two four-oared crews of the Undine Club. The Whisp—J. N. Dellaven, stroke; W. C. Madeira, 3; J. B. Colahan, 2; J. Gillingham, bow. The Atlanta—B. M. Ewing, stroke; C. Barnes, 3; John Baker, 2; Geo. Bright, bow. The race was one and a half miles straight-aways. The Atlanta crew were new comers, all in their first rowing year. The Whisp, of old members of the club. The race was followed by the empire, Mr. B. L. Keys, in the club eight-oared shell Albion. The two boats got off well together, but before Laurel Hill was reached the youngsters had a lead clear, and rowing in good form, increased their lead by five lengths at the finish, winning in 16m. 39s. Judge in finish, Mr. Twining, was expected that there would be an eight-oared race with the Crescent on Thanksgiving Day, but the Crescent was unable to get a crew. However, they offered the use of their eight and the Undine has got together two crews, who will pull another club race on that date, an account of which I hope to send you. Yours truly, SCULLS.

—Kingston is to have a new rink at the cost of \$1,000.

sium. '76 are thus far champions of the college in foot ball. In a very commendable manner, though unexpectedly, they won the championship honors from '75. In a game with the "Seminole," (theological students) they '76 came out victors in several successive innings, while '75 were the former. The next feature in the way of contests of late was a billiard tournament for the college championship, open to all under-graduates. Three prizes were given. The last game was played Tuesday evening. The first and second prizes were won by the members of the senior class, and the third was obtained by a junior. Nine entries were made, all but the lowest class being represented.

QUIDDIS. I

Chess.

THE CAFE INTERNATIONAL TOURNAY.—The record of the games played in the tourney in progress at the Cafe International up to Thursday, is as follows:—

Players.	Games Played.	Won.	Last.
Mason.....	35	22	6
Delmar.....	32	18	6
Ferrin.....	31	20	6
Dell.....	31	25	9
Alberoni.....	21	25	9
McCutcheon.....	20	20	9
Dr.....	19	20	9
Himeck.....	37	21	16
Peck.....	34	23	12
O'Neil.....	19	19	12
O'Neil.....	30	12	8

The others in the lists have lost more games than they have won. The rooms are crowded afternoon and evening with interested lookers on.

THE BROOKLYN CLUB TOURNAY.—This series of contests progresses rather slowly. Thus far Dr. Barnett and Mr. Horer take the lead. The Wednesday and Saturday evening gatherings are the most interesting, though games are played every evening.

THE DOWN-TOWN CHESS CLUB.—This misnamed club—for it is located up-town, rather than down—has had its chess facilities increased by the addition of a room up stairs, over the cafe in Second avenue. The tourney record shows the following players to be in the van:—

Players.	Games Played.	Won.	Lost.	Drawn.
Larnace.....	9	6	2	1
Rosenbaum.....	8	5	2	1
Spencer.....	8	5	2	1
Greenberger.....	5	4	1	0
Smallbeck.....	5	4	1	0
Anders.....	4	3	1	0
Lehman.....	3	3	0	0
Griffith.....	2	2	0	0
Stack.....	2	2	0	0
Livingston.....	4	2	2	0

The others have lost more than they have won.

Billiards.

THE AMATEUR TOURNAY.—The close of the amateur tourney on Thursday night last left Messrs. Knight and Pick the best of the list of contestants, with a tie, and Mr. Pfaukocken as third on the list. On Monday last the first two named played for the first prize, Mr. Knight winning by 200 to 137, the best runs being 20 and 19, and the average 2.32. This game won the champion cue, Mr. Picket taking the second prize. The full score of the tourney is as follows:—

Players.	Games Won.	Lost.
Knight.....	10	2
Picket.....	9	2
Pfaukocken.....	8	3
Dorlan.....	8	0
La Torre.....	7	4
Griffith.....	5	5
Clarke.....	4	6
Reiss.....	4	6
Backbaut.....	3	7
Vanderwerker.....	3	7
Kavanaugh.....	2	8
Ferris.....	1	9

—Gardner and Rudolph play their match for the championship at Tammany Hall, Dec. 10.

—Vignau plays C. Dion a match of 800 points up, French game, at Tammany Hall, Dec. 8.

TORONTO HUNT CLUB.—The hounds had a first rate run on Saturday last, starting from the Armstrong farm on York street, and pulling about thirty minutes lively work across country. At the conclusion of the drag hunt a fox was let go, and a spin lasting fifteen minutes followed, before reynard gave up his bruis, which gurdon was awarded to Mr. Ramsay. Miss Elwcs displayed rare horsemanship over a somewhat hard country, and ere the season closes we expect to hear of this lady being a fixture among the first flight. On Thursday the startle coats showed in force at the Humber bridge on the Lake Shore road, and had a merry spin across the plains. The weather this season has been remarkable, and the members of the T. H. C. rejoice accordingly.—Toronto Sporting Gazette, Nov. 14th.

—The Studacorn hunt steepchase took place over the St. Charles' course, on the 18th instant, and resulted in several accidents. Barbones, ridden by Mr. Beard, won the race. Mr. Lee, the rider of Kaiser, came to grief in taking a leap, his horse throwing him and dislocating his shoulder blade. Bonny Kate, ridden by Mr. McCormack, in taking the last jump, stumbled and broke the fetlock of her off fore leg.

A foot ball match (old Canadian rules) was played last week between the Toronto Lacrosse Club and the University College team, on the grounds of St. Albans. The first game was won by the Lacrosse Club team, but a short but sharp struggle. Play was immediately resumed, and two games won in fine style by the University team. The match excited considerable interest, the game won by the Toronto men being the only one lost by the University team since 1869.

—The Brown-Sadler race will likely come off in July next. The English champion has been offered \$600 as expenses for row in Halifax harbor or Bedford Basin; in the event of his refusing that offer, he is to be allowed to choose any water in Ireland, and Brown will go there at his own expense.

—A football match was played at Toronto last week between Queen's College, Kingston, and University College Clubs, and was won by the latter in two straight games. The play on both sides was good, the attack on the University College team being very strong. The games, though short, were well contested. The match was won in 14, 15 minutes.

Record of the Professional Championship Contests for 1874.

Table with columns: Club, Boston, Mutual, Athletic, Philadelphia, Chicago, Atlantic, Hartford, Baltimore, Games Won. Rows include Boston, Mutual, Athletic, Philadelphia, Chicago, Atlantic, Hartford, Baltimore, and Games lost.

Rational Pastimes.

Secretaries and friends of Athletic, Base-Ball, Cricket and other out-door Clubs will kindly mail their contributions not later than Monday in each week.

A new athletic club was organized at Wood's Museum last Tuesday.

Professor J. R. Judd is now in training for his great feat of walking 500 miles in six days.

The T. B. F. U. S. club, of Bridgeport, Connecticut—"What's in a name?"—played in twenty-two first-class matches during 1873, of which they won sixteen games, with a total of 343 runs to 50, and lost six, with a total of 82 to 87. Their best games were their victory over the Athletics, by 9 to 1, and their 3 to 5 defeat by the Baltimoreans. They "Chicagoed" four clubs, including a nine from Yale College.

The Live Oak Club, of Lynn, played 41 games during 1874, of which they won 30 and lost 11. Their total scores were 552 to 301. Their best games were their 7 to 4 games with the Chickens; their 3 to 3 match with the King Phillips, and their 9 to 3 contest with the Beacons. They played the Mutual—professional—with a score of 4 to 9.

An excellent sparring and fencing exhibition was held at Wood's Gymnasium, No. 6 East Twenty-eighth street, last Saturday. The first event was a contest with gloves between Master Leavitt, aged 14, and Professor O'Neil. The former showed that his training was fully up to the standard. Professor Woods and Dr. Meigs followed, and these were superseded by Professor Delwick and Mr. P. J. Englehardt, who displayed their proficiency with the foils. Fencing and sparring exhibitions, lifting heavy weights, and single stick exercises followed. The programme throughout was loudly applauded, as everything was done in a quiet, gentlemanly manner. Such exercises we are glad to note are becoming more general, so our young men are learning to preserve their bodies instead of exhausting them with dissipation.

Bicycling is now one of the most favored amusements in England, and is participated in by many persons who would not look at the apparently silly exercise a few years ago. The cause for the new attachment is attributed to the improvements made in the velocipede, and the greater amount of skill required to manage the latest sort, with its light body and large wheels. A race came off recently in

England between the champions, and they made some remarkable time. Stanton, in the contest, rode 106 miles in 7 hours 55 minutes and 54 1/2 seconds. There could be no doubt as to the reality of this feat, for it was witnessed in the presence of some 3,000 people. His antagonist in this match was Kcen, the champion bicyclist, the most elegant and accomplished rider in the country. The critics remarked that he rode "like a bit of machinery," with a swift, steady, easy motion, which scarcely varied. Stanton, on the other hand, is in every sense a rough rider, and owes his success to his remarkable energy and shrewd forethought. Kcen was borne down by the physical superiority of his competitor, and gave up the race at the end of the ninety-first mile, having traversed the distance in seven hours and eighteen minutes. It may be mentioned that Stanton's bicycle has a driving-wheel fifty-eight inches in diameter, and is under fifty pounds in weight. Kcen rode with a fifty-four-inch wheel, the weight of his machine being less than thirty-six pounds.

New Publications.

Albert Mason, of New York, who has published three editions of Macaulay's essays, will issue them in one volume. Prices will be \$2.50.

Popular Science Monthly for November. New York: D. Appleton & Co. This number contains a very interesting dissertation upon a subject of deep interest to every student of plant life, every botanist, and in short to every general reader; all who would learn the great contrast between the two organic worlds of plants and animals, until quite recently the ground work of all scientific speculation. We will please to analyze and expatiate at some length upon this very pleasing article, as well as notice at length all the valuable papers in this number; but we can do our readers a true favor by recommending to their perusal this article in particular, and the entire number as a whole.

THE MAGAZINES.

The American Naturalist is filled with its usual assortment of matter pertaining to the natural sciences. The metamorphosis of flies is quite interesting, and its review of the English sparrows is terse, and to us very appropriate. The department devoted to botany seems to be unusually interesting, especially the portion devoted to a review of the American woodlands.

The Galaxy has several readable articles, and some of them are decidedly strong in argument. In its scientific miscellany it has this to say of the grasshopper:—

"Professor Humiston, of Worthington, Minn., described to the Tribune

concurrent the grasshopper's mode of depositing her eggs in the soil, a subject which he has had excellent opportunity for studying this year. The tail of the female locust consists of a hard, bone, cone-shaped substance, capable of being thrust into the ground from one-half of an inch to one inch in depth. Just above the body of the insect, and attached to it, is the egg cell. The grasshopper is able to push its conical tail down into the ground and leave it there, with the cell containing the egg. The warm sun in the Spring causes the eggs to hatch, and the field is covered with millions of young grasshoppers, not as large as a kernel of wheat, just when the tender shoots of grain begin to show themselves above the ground. The damage they do is immense, for they remain a long time in one spot, and work upon the young shoots. Perhaps the best mode of treatment is "back setting," or plowing the field, and thus turning the surface soil, with its store of eggs, several inches under. This prevents hatching, and though not a complete remedy, is very useful."

The treasures paraded in Scribner's Magazine for the month of December are exceedingly varied, and, on the whole, interesting, as some of the best minds of America are represented therein, and their thoughts are illustrated by some fine engravings, for which Scribner's is so famed. Among its articles is one on Madeira as a resort for invalids, from which we make the following extracts:—

"It is evident that Madeira presents to an American in search of something new, a resort abounding in novel and valuable attractions. For the invalid afflicted with nervous or pulmonary complaints, its climate is probably more unobtrusive; the air has the rare and exquisite quality of making one oblivious that there is such a thing, suggesting neither too much moisture, nor over dryness, neither malaria or miasmas. The mean summer heat is 70°, while light clouds canopy the landscape at midday, and moderate the fervor of the direct rays of the sun. The foliage is always green, every month has a profusion of flowers peculiar to itself, the bees gather honey all the year round. The number of steamers, including the Lisbon packet, which touch at Funchal, on the passage between Europe, Africa, and Brazil, averages one a day, and, in addition, the cable has been laid between Funchal and England, thus keeping the sojourner in Madeira sufficiently within the tide of events to prevent mental stagnation, besides rendering a stay on the island anything but a captivity dependent on winds or long intervals of waiting, while the number of strangers spending the Winter there, and the excellence of the boarding houses, furnish social advantages and domestic comforts at a moderate rate. Those who seek Madeira for health should go there in October, and remain well into the Spring, but bunters after scenery and novelty will find it agreeable to arrive at Funchal without regard to time and seasons. My own preference would be from March to September, or, better still, from January to December, thus avoiding the scorching heats alternating with cold storms which make a purgatory of our Summers, and the still more injurious furnace air and January thaws of our Winters. In climate, Madeira may well be reckoned among the Isles of the Bight."

GAME OF NATURAL HISTORY. By Abby A. Denny. Philadelphia: Claxton, Remsen & Haffelfinger.

In this highly interesting game to be found ten sets, and full instructions for playing. We became once aware of its value as a source of Christmas amusement and New Year's fun before we had played four games. The Natural History series alone will convey to the mind of young children the most important facts necessary to be found in any other way. This is an improvement upon the Kindergarten plan, as the lad or lass will learn the history of the animal drawn and see what he looks like. A valuable addition to our Christmas and New Year games.

The Horse and Gaurse.

—Last week a sweepstake and match were trotted on the Prospect Park Fair Grounds Course, L. I. The first was for a purse and stake of \$1,000, mile heats, best three in five. In getting the first and last and promising horses were entered—G. Walker's br. m. Maybird, Mead & Page's b. g. Rarius, and Mr. Smith's blk. m. Catskill Girl. After Maybird had won the first heat, she became the favorite at \$100 to \$25 against the field. She won the second heat, and the crowd in attendance being dissatisfied with the track, and Rarius, took possession of the crowd, and after the usual fee of \$50 was collected to pay another driver, the judges named Hiranu Howe. This was not satisfactory to the mob, who wanted Phillips to drive, and efforts were made to throw Hiranu Howe out of the sulky. Finally the judges declared all pools and bets off, and Judge Fullerton trotted the third heat, which Maybird won after a well-contested struggle with Catskill Girl, who was second in every heat. A match for \$200, between G. Walker's b. m. Lady Anna and V. Thom's br. g. Phil. O'Neil, was won by the latter in four heats, the mare taking the first heat.

—Three trotting matches came off at Fleetwood Park last Wednesday. The first race was won by Bricks, the second by Ned and the third by Murphy's sorrel Jake. No good time was made in either contest.

—At the Woodside Park, the same day, New Dorp won the first and second heats, his best time being 2:45. And Flora Temple, belonging to Otis Bort, won the 2:50 race, the best time being 2:47. Brown Kitty won third race, her best time being 2:46.

—At Deerfoot Park a purse of \$300, brought but three competitors, and Charley Young proved the victor, his best time being 2:52.

—At San Francisco, Cal., the trot for a purse of \$6,000, mile heats, best three in five, to wagon, postponed from November 7, took place November 21st at Golden Gate Driving Park. The contest was a luring event, Judge Fullerton and Sam Purdy. The weather was fair. The attendance was immense, and included quite a number of Eastern turfmen, who strongly backed Fullerton. The adjoining elevated ground of Lane Mountain was also crowded with people anxious to get a view of the race. Sam Purdy drew the pole and Judge Fullerton the inside. Just before the horses were called, Occident was selling at \$360, Judge Fullerton \$250, and Sam Purdy at \$45. The horses called up at 2:30, but owing to the nervous restlessness of Occident, it was 2:45 before they finally started, after scoring three times. Judge Fullerton was the heat in 2:30, Sam Purdy second, and Occident last, four lengths behind the distance flag. The bad behavior of Occident caused his friends to lose faith in him, and he began to sell low in the pools. The judges refused to rule him out as distanced, which caused much dissatisfaction among the friends of the other two contestants.

There were a great many ineffectual attempts made at a start to the second heat, Occident being still restless and breaking badly. After scoring no less than twelve times, the horses finally got started at 4:05. Judge Fullerton again came in first, in 2:32, Sam Purdy second, and Occident seventh five yards behind.

Before the start in the third heat, Judge Fullerton was a great favorite in the pools, selling at \$600 against \$250 on the field. The horses were called at 4:30, and easily effected a start. Judge Fullerton again came in ahead, in 2:24, winning the race.

—Great preparations are being made for the winter meeting by the Louisiana Jockey Club, and stables of horses are beginning to congregate at the course. In addition to Mr. Howard's stable, already on the ground, W. Jenning's stable, comprising Ballenack, Larry Hart, a four-year old filly by Brown Dick, and Cape Kate, remained the place. Mr. Van Liew, with Bonabel, Astrappe and a two-year-old by Little Mac will also be there, together with Mr. Sheldon's Midway, Kadi, Bangamon, Warlike, and Warfare. Besides, A. B. Lewis & Co. will be there soon with Vandalite, Bessie Lee, Fanny Johnson and five others; and Hitchcock with Limestone, Galway, Paris, Mutual and Century. The meeting will be held early in December.

[FROM OUR OWN CORRESPONDENT.]
MEMPHIS, TENN., Nov. 18.
EDITOR FOREST AND STREAM.—
The racing season is about over, both in the country adjoining and in this immediate vicinity, and nearly all the stock that for two months has been attending Fairs, has been housed for the Winter. The Brownsville (Tenn.) Fair was the last attended by any of our local horses, and there on Saturday last, General Forrest's Kate, Hall's Wild Belle, and Murphy's Keno trotting a two in three for \$250, over a half mile track, Kate winning the first and third heats in 2:30 and 2:36, and Keno taking the second in 2:38. The track, however, is eighty yards short, which would make the actual time not less than 2:30.

A SPIDER ON HER DRESS.—A certain lady in this village, whom we shall call Mrs. Jones, because that is not her name, has some goods stored in the cellar of one of our stores. A few days since she visited the cellar, with the evident intention of obtaining some articles, and while there one of the clerks had occasion to visit also for the purpose of getting a few pounds of butter for a customer. He noticed that the lady in question stood close to a quantity of eggs, and that her crinoline had assumed undue proportions. He apparently paid no attention to her, however, but hastened back to the store and informed one of his fellow-clerks of what he had accidentally discovered. A consultation was immediately held, when one of the clerks resolved to ascertain the correctness of their supposition, viz., that Mrs. Jones had a number of eggs concealed in her dress. In order to do this, the clerk seized an axe-handle and commenced flourishing it near the entrance to the cellar. As soon as Mrs. Jones made her appearance in the store, the clerk said to her:—
"O, Mrs. Jones, there is a spider on your dress!"

He instantly struck it in several places with his shillelagh, causing the eggs to break and stream from her crinoline in all directions. The effect can be better imagined than described. Mrs. Jones did not stop to offer any explanation, but left the store as fast as the propelling power furnished by Dame Nature could carry her.

—An Irishman found a Government blanket recently, and rolling it up put it under his arm and walked off, saying:—"Yis, that's moine—U for Patrick, and S for McCarty; he me sowl, but this larlin's a foine thing, as me father would say; for if I hadn't an education I wouldn't have been after findin' me blanket."—*Dunbury News.*

HAVING recently purchased, for the use of our Florida Commissioners, a very fine Brauch Loading Gun, made by the celebrated firm of W. & C. Scott & Sons, England, and the outfit purchased being in excess of their wants, we now offer the gun for sale. Description—Breach Loader, Side Snap, Double Shot Gun, 10 bore; length, 32 inches; weight, about 11 lbs. Price, \$110. Address, FOREST AND STREAM, 17 CHATHAM STREET.

HAVANA LOTTERY.

The Great Extraordinary Drawing of December 16, 1874.

\$1,200,000 in Prizes.

- Only 16,000 Tickets. 1 Prize to every 7 Tickets.
- 1 Prize of.....\$500,000.
 - 1 Prize of.....100,000.
 - 1 Prize of.....50,000.
 - 2 Prizes each of \$25,000 each.....50,000
 - 4 Prizes of \$10,000 each.....40,000
 - Prizes of \$5,000 each.....60,000
 - 2 Prizes of \$1,000 each.....2,000
 - 473 Prizes of 500 each.....236,500
 - 1021 Prizes amounting to.....161,500

All the prizes above stated are drawn this Drawing.

THE PRICE OF TICKETS: Whole, \$100; 1/2, \$50; 1/4, \$25; 1/8, \$12 1/2; 1/16, \$6 1/4.

To prevent Loss by mail sent registered letter, Post office order, Draft on New York, or by Express, with Receipt on receipt free. Highest price paid for Spanish Bank Bills. Address all orders to TAYLOR & CO., Bankers, 11 Wall street, New York

Trout business for sale.

One of the largest Establishments in the Country.

WELL STOCKED WITH TROUT,

Having a Dwelling for Superintendent, OFFICE and READING ROOM, SHOW and STOCK TANKS, WORK SHOP, ICE HOUSE, HATCHING HOUSE, Five Small Ponds and Three Large Ponds (of an acre of over nine acres).

The property consists of over fifty acres. The ponds

Are Fed by about 100 Lively Springs, rising on the premises, some of which register 45 and 46". The volume of two cubic feet of water passes over the lower dam, with a fall of fourteen feet, continuously, and hardly varies, and never freezes, making a good water power that will be utilized.

On the farm is a

Favorite Pic Nic Grove, with dancing platform, &c. The location is about 300 feet from depot, express and telegraph offices, and

ABOUT ELEVEN HOURS FROM NEW YORK. For further particulars address the Editor, or "PISCICULTURIST," Nov. 12

FOR SALE—WITH IMMEDIATE possession, a Club House and Shooting Box, with all the accoutrements, and five best ducks, shot in Maryland, Fish and game in abundance. The property comprises a good frame house, parlor, dining room, kitchen, and five best rooms; bedding, furniture, crockery, and cooking utensils complete, ice house, tennis house, barn, stable, &c. Send the names with the money as fast as obtained, that subscribers may get the paper at once.

FORST'S STEREOSCOPIC VIEWS

Natural History

For Object Teaching in Schools,

AND

PARLOR ENTERTAINMENT.

We are prepared to furnish the first six numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various Animals and Birds in various attitudes, never however violating their natural instincts.

We offer these views not as pictures only, but as studies from nature. Great educational elements in our modern system of education is object teaching. The unerring fidelity of the stereoscopic transfers the animals and birds from their natural habitat to the rooms of the student, and the friends of our homes, where they cannot fail to leave a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and gathering his large collection of native and foreign specimens, enables Mr. Forst to combine in every view the beauty of the specimen with its appropriate rocks, woods or water, and coloring from the originals.

1. Spotted Sandpiper..... *Lymnys Tringa*.

TESTIMONIALS.
CONNELL UNIVERSITY,
ITHACA, MARCH 14th, 1870.

I must congratulate you upon your great success in this new educational enterprise. If we can arrange our arrangements so as to make them impart instruction to the mind, it will be a step in advance in education.

WASHINGTON, D. C., March 15th, 1870.

I am much pleased with the success you have met with in giving to the student specimens a very decided appearance of life.

I hope you will be able to continue the Series, and I have no doubt they will furnish interesting means of information and instruction in regard to the wild animals of NEW YORK.

STATE HOUSE, BOSTON, MASS., March 18th, 1870.

I have examined carefully the "Stereoscopic Studies of Natural History," and judging by the first ten numbers, should say that they will prove of very great value to our students. They are certainly both most interesting and well adapted to the different groups and orders of the animal kingdom, and are most judiciously recommended to the public attention, and trust you will meet the enthusiastic response you have attracted.

EDWARD A. SAMUEL,
Curator of Zoology in MASS. State Cabinet.

PEABODY ACADEMY OF SCIENCE,
SALEM, MASS., March 18th, 1870.

I have shown your Stereoscopic Views to the members of the Academy and the editors of the *American Naturalist*, Dr. Packard and Mr. Morse.

The excellent and beautiful illustrations, and the taste which you have displayed in surrounding the specimens with natural objects and scenery of character, are all so judiciously chosen and so artistically executed, that they are certainly both most interesting and well adapted to the different groups and orders of the animal kingdom, and are most judiciously recommended to the public attention, and trust you will meet the enthusiastic response you have attracted.

EDWARD A. SAMUEL,
Curator of Zoology in MASS. State Cabinet.

CONNELL UNIVERSITY, PRESIDENT'S ROOMS,
ITHACA, MARCH 14th, 1870.

I have received the Stereoscopic Views of objects in Natural History, and have enjoyed them greatly. They are certainly both most interesting and well adapted to the different groups and orders of the animal kingdom, and are most judiciously recommended to the public attention, and trust you will meet the enthusiastic response you have attracted.

VIENNA, 1873

For Merit.

Vanity Fair.

VIENNA, AUSTRIA, Nov. 30, 1873.

Messrs. Wm. S. Kimball & Co. Sir—A friend of mine sent me, with a transport of Indian Siles, two packs of "Vanity Fair," which I declare to be the best tobacco ever smoked. And five very good tobacco in Vienna—Turkish and Hungarian, but "Vanity Fair" is the King of all, by far the most delicate and most fragrant. My friend in New York got an appointment in California, and he has to leave immediately, and he has to send me for the enclosed, and a supply of "Vanity Fair," and send with the best steamer to Germany. If there is no German firm that you consider "Vanity Fair," I beg you to enclose me the address. Dr. Jos. Hyatt.

Professor of Anatomy in the University of Vienna

It is manufactured from the best Virginia and North Carolina leaf. It is particularly adapted to Meerschaum and Cigarette smoking—does not bite or make the tongue sore—is therefore unlike any other tobacco in these respects.

Remington's Long Range, Breech Loading Target Rifle.

No. 3. Diagram of Second target made by Terry Fulton, Civil Engineer, Lieut. 12th Regt. N.G.S. N.Y., of Brooklyn, at Montreal, Can., Aug. 14th, 1874, with a Remington Breech Loading, Long Range, Challenge Rifle.

Distance, 1,000 yards; No rest; Position, lying. Special Telegram to "Commercial Traveler," Montreal, Can., Aug. 14, 1874.

"Remington aimed at long range. I have taken one first and one second prize from 800 and 900 yards. In one match I made a clean string of seven bulls-eyes, and in another fifty-four out of a possible fifty-six."

Extract from the "Army and Navy Journal" Official Report, Dated Oct. 3, 1874.

The match decides several disputed points, as near as they can be decided: first, that there is no perceptible difference in accuracy between breech loaders and muzzle loaders.

No. 200 W. Baltimore St., BALTIMORE, Md.

\$10 to \$1,000 Invested in Stocks and Bonds. Pamphlet free. Gold pays 200 per cent.

Climax Creaser and PAPER SHELLS. Price \$2.75.

HALL'S PATENT Creaser and PAPER SHELLS. Price \$2.25.

Wild Wood Trout Farm, EAST TRENTON, MASS.

WANTED - TWO FULL BLOODED Rabbit Hounds, male and female; warranted to suit; state color, age, and price; also where can be had.

Miscellaneous.

This arm was submitted in competition with over one hundred different systems, American and European, to the Board of United States Officers, appointed by Act of Congress, 6th June, 1874.

Resolved, That the adoption of magazine guns for the military service by all nations is only a question of time.

Resolved, That the experiments before the Board with the Ward-Barton Magazine System have so impressed the Board with the merits of this gun, that they consider it as more nearly fulfilling the conditions above specified than any other tried by them.

FIRST SALMON OF THE SEASON.

DAYNES' BRIDGE—JACQUE CARTIER RIVER.

THE rain cloud has passed and the sun rises high,
The mist from the river floats up to the sky;
The shade of the maple still rests on the stream,
With its dattings of gold from each quivering beam.
The flood has subsided—the water is clear—
Hurrah for a salmon the first of the year.

Our tackle is ready, and first in our way
The glittering dory lowers o'er the "Grand Rets";
It fights in the eddy—by Jupiter Ammon!
Already darts at it a silvery salmon.
I have missed him, and back with a dash and a gleam
The fish seeks indignant the depth of the stream.

Once more he has risen and amply displayed
His beautiful form on the billows he made;
I have him! he's fast! hark the mistle steel
Sings sweetly as rashes the silk from the reel.
He makes for the rapids—a harlequin spring
Another! again! he's a fish for a king!

He has gained the mid-torrent, fast spins out the line;
We must run down the bank or the beany resign,
The margin is rock, and such racing I ween,
'Tis a man and a fish but seldom been seen.
Now a plunge—now a leap—and in air when he spins
He dashes the foam in white showers from his fins.

They are dangerous crags, but my path is well known,
And the hosen, like wads, catch the slippery stone;
Whilst the reel's somthing trouble enticews the chase,
And the roar of the river booms deep as a bass,
Down, down the swift current now dashes the fish,
As gallant a salmon as angler could wish.

We have gained *L'Hopital* and the rapid is past,
There's leisure to breathe and to wind up at last;
Now lie they, good Burnett, no more can he fly—
Guff slowly and surely, our triumph is nigh;
'Tis done, bravely done, the struggle is o'er,
And a bright twenty pounder gasps high on the shore.

EDITOR FOREST AND STREAM:—

The above was written about forty years ago by a surgeon in one of the British regiments. If worth publishing in FOREST AND STREAM, you are heartily welcome to it. Yours very truly,
G. M. FAIRCHILD, JR.

Sports in California.

HUNTING THE CALIFORNIA LION.

NUMBER SIX.

LION hunting is not a favorite pursuit of Californians, any more than that the wise are fond of hunting the grizzly bear. The animal in question is, next to the said grizzly, and, possibly, excepting his cousin the jaguar, or "tiger," as the Mexicans call him, the most formidable antagonist one can meet in the mountains and forests of America. I believe there is some difference of opinion as to whether he is a true panther, or puma (Spanish), or not. I am not enough of a naturalist to decide, but a slight semblance of "mane," together with his Spanish appellation of "Leon," and his habit, have given him the name of California lion. He is certainly a most formidable beast, and the very perfection of strength and agility. He never attacks man unless wounded or hard pressed by hunger. His weight, when full grown, is about one hundred and fifty pounds. The female is somewhat smaller, and, I believe, has no mane. They are not plentiful, though I have heard that quite a number—as many as eight or nine—have been seen together. Usually they are found in pairs, and their home is always amidst the fastnesses of the rocks or the impenetrable thickets of the swamp. From this point they raid on the surrounding country. The devastation a pair of California lions will commit upon the calves and pigs (they are very fond of pork) of the ranches within reach of their den is beyond count. They are never hunted save when their depredations are so great as to make it a matter of necessity, and then the ranchmen turn out in force to rid the neighborhood of their pestilent foe. I said they are not "hunted." Nobody has lost any lions; nobody has loaned any, and is

looking for his property. But occasionally the wandering hunter meets one, and if he comes upon him suddenly it is a question of life or death. Except when cornered, wounded, or famished, they flee the face of man; but when a fight is once inaugurated one meets a foe worthy of his steel.

Among the Indians of the mountains or plains, to kill a lion in single combat is a feat that places the successful hunter at the head of the list of braves. He ranks with the conqueror of the grizzly bear, and it is hard to tell who is the most honored, the warrior who sports a necklace of the claws of the grizzly, or the one who carelessly and ostentatiously draws around his shoulders a robe of the skin of the California lion. Neither dare wear such a trophy unless he has killed the beast unassisted, and much as our brother "Lo" loves the hair of his white friends, a necklace of bears' claws or a lion robe ranks far above leggings or horse trappings trimmed with human scalps.

Fortunately, the animal is too scarce to make its pursuit a business. None but those who have "a heart of iron and nerves of steel" dare hunt the lion in his lair, and then he will want the best of weapons and plenty of them. A good rifle, a good revolver (army size), and a good knife are indispensable. A well armed party, with plenty of dogs, will track the lion to his den and slay him, but I never heard of a man singly attempting the feat. Usually they are treed by dogs and then shot.

Among the Mexicans, or, rather, in Mexico, there is a class of men known as "tigreros," or tiger hunters, whose business it is, and which calling they alone follow, to rid ranches of any tigers (jaguars) which may infest that section of the country. They are usually Indians, few Mexicans possessing the necessary pluck, and receive from the proprietors of the haciendas and ranches a large "gratification" for each and every animal of this kind killed on their estates or in their vicinity. But the race has almost died out. I have heard in late years of a few, a very few, being left; but it is more of a rumor than anything else. I imagine, for although the locations were mentioned, the names were unknown. In the palmy Spanish days of California, when the "missions" counted their horses and horned cattle by the hundreds of thousands, these men may have existed. No doubt the wise padres kept so keen an eye to their possessions as not to neglect this point, and I have been informed that one or two of these bold and brave men were always kept in the pay of the good fathers. But they have long since died out, the sturdy Anglo Saxons kill their own lions, and, like the missions to which they belonged, the race of "tigreros" is but a memory.

The only occasion when I was in at the death of a California lion was whilst returning with the General and escort from a tour of inspection among the outlying posts amid the hills. We camped one evening near the cabin of a ranchman some thirty miles from the bay, and, fatigued by a long day's march over the hills, after posting our sentries and getting our suppers, turned in early. We slept "the sleep of the just," but just before daybreak a tremendous hullabaloo in the settler's pig pen, the barking of the dogs, and a shot from the sentry, brought us to our feet. The sentry stated he had seen some large animal leap on the pen, and had fired at it. Pistols in hand, we hastened at once to the place, the ranchman, armed with rifle, pistol, and knife coming out of his door and joining us as we passed. Going to the pen where those who inhabitants were still nervous, the ranchman missed a pig, and said at once "it's one of them cussed lions." The dogs, which ran around snuffing eagerly, kept near us. They well knew the nature of the foe. A short search revealed the trail, for by this time it began to be light. Taking it up we followed it as rapidly as possible, the dogs leading a very short distance in advance, and soon came to the pig, which was past squeaking, and showed unmistakably the marks of the lion's teeth. He had been so hard pressed as to drop his prey. Knowing he was not far off, we hastened on, and presently the barking of the dogs announced that he was treed. When we came up, which we did very cautiously,

for it was still barely light, we found the animal crouched in the forks of a stout madrone, some twenty feet from the ground, slowly waving his tail with that peculiar snap of the end (which means so much) each time it came round, and quietly watching the dogs, which were frantically barking at the foot of the tree. Spreading ourselves around the tree so as to command the dog, and all on the *qui vive*, the settler, rifle at shoulder, advanced into the open. A subdued, angry growl, and a quicker and more snappy movement of the tail, indicated the disposition of our foe, and his appreciation of the movement. In the gray morning light the face of the ranchman, as he slowly and carefully advanced step by step, was a picture I shall never forget. The set mouth, the rigidly drawn muscles, and the determined expression of that face told their own story. It was no trifling matter their owner was engaged in. Cautiously advancing, ever on the alert, until he was at the proper point, slowly the muzzle of the rifle was raised until the sights covered the heart of the animal. A moment's pause, a sheet of flame, a fierce howl of agony, and, wildly clinging to the tree in his death struggles, the ferocious beast presently dropped to the ground, and tore up the leaves and earth in his dying throes. The dogs vamoosed, the ranchman sprang back and snatched out his revolver (ours were already drawn), and a half dozen shots were fired at the expiring animal. But it was unnecessary. The settler's ball had found his heart and done the work. The frantic struggles were but the agony of his death throes. In a few moments he lay lifeless, and the howls rushed in, afraid even then to touch their dreaded enemy. We carried him back to the ranche, where he was very admirably and discussed. He measured nearly ten feet from the tip of his nose to the end of his tail. The fangs (canine teeth) measured an inch and a half in length *above* the gums. I got his skull, perfect, and afterwards prepared it to send to the museum of the State Zoological Society at San Francisco (Prof. Whitney's); but during a short absence my steward, who had been reading some thing about the preservation of crania, took the notion of varnishing it (for which he was duly blessed), and so spoiled it as a specimen. I regretted it the more as the animal was unusually large and thick set—weight, one hundred and fifty pounds, or very nearly so, if I recollect aright. The teeth were perfect—not a sign of decay or wear. The animal was evidently full grown, and in the prime and vigor of life. I tried to get the skin, the property of the ranchman by hunter's law, but he would not part with the trophy, and it doubtless graces his cabin to this day, the pride of his numerous tow headed children, who emulate the prowess of their paternal ancestor.

Lions are but seldom met, and, as in the case mentioned, only by accident. There are, however, numberless tales of such "accidents" on the frontier, and as some of them may prove not uninteresting, I will give a few samples.

A young officer of the Eighteenth United States Infantry, while stationed at Fort Reno, one day saw an Arapahoe brave promenading with a lion robe thrown gracefully about his shoulders. Being blessed with a fair portion of this world's goods, and desiring to send his friends a sample of the fauna of the country in which he then dwelt, he tried to purchase the article. But our friend Lo was obdurate. Nothing could induce the Indian to part with his treasure. He was a brave, and a chief of braves, for he had killed the best single handed, without help from mortal man, and as he struted about the admiring eyes of all the maidens of his tribe followed his steps, and the old men of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men nation spoke well of him, and

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

FISH CULTURE WITH PROFIT.—We have printed several letters from correspondents showing a quite varied experience in their attempts to propagate fish by artificial processes. The question whether fish culture can be made profitable is an economic one of no little importance, and no one appreciates the fact more sensibly than the recognized Pioneer of fish culture, Seth Green, Esq. The untiring efforts that he has devoted to this new branch of industry, and the enthusiasm with which he has entered into its prosecution from the start, render its solution (if the result still be problematical) a matter of no little anxiety to himself. The persistency with which he demands that the experience of practical experimenters shall be given for the benefit of others who stand ready to engage in the business, is something to praise. Mr. Green does not believe in concealing failures. He argues that obstacles should not be concealed, but be left uncovered, that they may be avoided. The spirit of the subjoined note is to be admired, while its frankness and general tenor are characteristic of the writer. It was provoked, it will be seen, by a note received from a fish culturist who was disappointed at failure. This note runs as follows:—

ZELLENOPLE, Butler county, Pa., Nov. 15, 1874. S. GREEN, Esq.:—Dear Sir:—My experience in trout raising might, if polished, deter others from making the experiment. The eggs hatched well enough, but the young fish were destroyed by thousands of leeches, which got into the hatching box somehow, though secured with fine flannel on the ends and a close fitting glass on top. I repeatedly pulled the leeches off the troutlets, and packed all out of the gravel I could find, but in the end all the young fish died. My ponds, though 7 to 8 feet deep, stand the largest, 75°, and the other 72° and 72°—too warm for trout. I have about 100 each black bass and snuffish, adults, for breeders, and will confine myself to those sorts. Respectfully yours, AMOS LUKK.

Mr. Green enclosed this note to us and writes:—

ROCHESTER, Nov. 23, 1874. EDITOR FOREST AND STREAM.—I sent Mr. Lukk some salmon trout spawn, and requested him to publish his success, whether it was good or bad, in hatching and raising the young. He writes me that he does not wish to publish his success for fear of deterring others from experimenting. That is where he is mistaken. I wish it published, so that others may see his mistake. I see by his letter that his water is not suitable for any of the salmon or trout family. If all the failures were published it would be of more real benefit to the country than to publish all successes. Nearly all waters are suitable for some kind of fish, and the great secret is in stocking our waters with fish suitable for them. You might as well undertake to make sheep live in water, as to make fish live in water not suitable for them, and expect them to thrive. Yours, SETH GREEN.

SALMON IN THE SEINE.—The last number of La Chasse Illustrée contains an article on the salmon frequenting the Seine. The writer, M. De La Blanchère, is probably the most thoroughly informed person in France on the subject, so his opinions are entitled to consideration. He says that the salmon enter the Seine towards the early portion of Spring, and not only that, but the Yonne, in the vicinity of Joigny, the older fish being at the head of each school, and the younger in the rear. The fact that the salmon enter these rivers for the purpose of spawning causes him to assume that if the fish were to become abundant some means should be adopted to let them into the upper basin by giving them means of ingress from the lower to the higher portion of the river. The fact that this fine species of the lachy fauna is not found in canals and kindred places he attributes to its love for rapid waters, which are more pure than the tranquil. He does not make any definite estimate of the number of salmon seeking the upper waters of the Seine, but presumes it to be very large; yet he thinks some special effort should be made to introduce it into all the larger streams and their affluents that have any connection with the sea. From present appearances, it seems that France is much interested in fish culture, and takes as much pains to restock her ponds and rivers as any country in the world.

REPORT OF THE FISH COMMISSIONERS OF THE STATE OF VERMONT FOR 1873-74.—In Vermont there are no less than 77,815 acres of superficial water, made up of lakes and ponds of fifty acres and upward. So far all this available water has been left to the original fish—the pickerel, sunfish, sucker, and dace—the labors of the commissioners having been mainly directed within the last two years to stocking the rivers of the State with the anadromous fishes, shad and salmon, and under the care of these energetic gentlemen quite a stock of these fish have been introduced into the various rivers and streams of Vermont. In December of 1873, some 35,000 California salmon (Salmo gairdneri) were put into the Missisquoi River, and in May and June of the present year some 100,000 young fry of the Salmo salter were placed in other streams. The four States, New York, Vermont, Massachusetts, and Connecticut, being equally interested in the fish products of the Connecticut River, the commissioners of fisheries of these States agreed to make this river the test one as to the feasibility of restocking the depleted rivers of New England with fish, and the introduction of salmon into the Connecticut River will be continued for some time to come by all the States. At present something over a million of salmon have been put into it. Should then, the proper precautions be used, such as of constructing fish ways and protecting the fish, there is no reason to suppose that salmon will not be as plentiful in time to come in the New England rivers as they are to-day in the Scotch streams. Quite a series of years must elapse before the salmon, grown to proper size, ready to reproduce its kind, will return to the rivers where they were first placed. The whole of the young fish were obtained from the salmon eggs produced at the Bucksport Salmon-breeding Works in Maine. The point of economy in procuring eggs from the works in

Maine is shown by the fact that, while \$40 in gold was paid per 1,000 for Canadian eggs, they are now bought from the Bucksport works at \$5, currency, per 1,000. Through the aid of the United States Commissioner, some 1,175,000 young shad have been placed in Vermont. This experiment is a most interesting one in regard to stocking interior waters with shad, that is in those streams which empty into lakes and not into the sea. It is an endeavor made to change the migratory instincts of this particular fish, and an attempt to confine it to rivers and lakes. Messrs. Edmunds and Goldsmith state that this Summer large schools of young shad were seen in Lake Champlain, confirming Mr. Seth Green's theory that shad might be taught to find their food in the deep waters of our lakes and become permanent.

STATISTICS OF THE PEARL OYSTER FISHERIES ON THE COAST OF THE BAY OF CORTES, IN THE GULF OF CALIFORNIA, FROM THE END OF MARCH TO THE 1ST DAY OF NOVEMBER, 1873.

[From the Boletín de la Sociedad de Geografía y Estadística, 3d series, Vol. 1, Nos. 10 and 11, Mexico, 1873.]

Table with 7 columns: Boques, Number of Men Employed, Expenditure, Value of pearls according to the Fishers, Value of pearls sold, Quantity of shells exported, and Value of shells. Rows include names like Bossi, Clark, Gonzalez, and others.

REMARKS. Messrs. Bossi and Clark have fished with eleven machines in two vessels, one an American and the other an Italian. Messrs. Gonzalez and Roffo have fished with two machines and fifty divers. Hidalgo Bros. have worked with one machine and 130 men. Mr. D. Geronimo Gibert fishes only during two months with one machine. Mr. A. Brand fishes with one machine, but on account of want of knowledge of the trade, and by not employing intelligent divers, he has suspended work without obtaining any result. The fishers of Manlegé have not yet made their report, although they have been asked for it repeatedly. All the pearls have been bought by D. Julio Buchster, with the exception of a very small quantity which in the beginning of the season were sent to Europe by Hidalgo Bros., and whose value is estimated at \$8,500. The shells have hitherto been bought at the rate of \$10 50 the quintal by Mr. Lehmann, who for that purpose was sent from Paris, with the exception of those of Messrs. Bossi and Clark, and Messrs. Gonzalez and Ruffo, who have sold the best quality at \$10 87 the quintal, and shipped them for their own account. A number of small fisheries have been carried on by private individuals, but all of them have either worked for one of the firms mentioned in the table given above, or at least have sold the produce, and this has been included in the status given in the table, for which reason the names of the persons are not mentioned. La Paz. MANUEL DE ZELAYETA, Secretary.

It is proposed to ship live fish from this country to England by means of portable aquariums on the steamers, other modes having generally failed.

MASSACHUSETTS ANGLERS' ASSOCIATION.—This association met Tuesday evening last at their rooms in Boston, President Ordway in the chair. After the transaction of the regular routine business, a large number of names were proposed for membership, among whom were the Hon. T. J. Field, of Northfield; Hon. John Quincy Adams, and Benj. P. Ware, Esq. The Committee on the Protection of Fisheries made a partial report. Among the communications was a letter from Mr. Ware, in which he spoke of the results in improving our fisheries that had been accomplished by protection. He stated that—

"Smelts, which were becoming quite scarce, have this Fall been very abundant. In Swampscott, where smelts have in previous years been almost unknown, they have been taken this Fall in great numbers, many of them weighing half a pound each. This change is doubtless due to the legislative acts passed in relation to the catching of smelts. The law passed in relation to lobster fishing will, with a little more care in its detail, do very much toward preserving that delicacy, which was rapidly disappearing from our coast by indiscriminate catching. I can remember when lobsters could be picked up by the dozen from under the rocks along our shore, at running ebb tide, and it requires a half dozen men to supply one table. Allow me to suggest, for your future action, that the system of trawling for cod and haddock destroys daily thousands of small, good for nothing fish. The spawn of haddock has lately become of considerable value for sardine bait. For this purpose it is salted, and shipped by the cargo to France. This makes an additional inducement for taking haddock in large numbers, and thereby, in May, when spawning season. This system of trawling was introduced by foreign fishermen, sailing out of Boston, and has since been adopted by Swampscott and other bay fishermen, in order to compete with the first named. I would also call your attention to the present method of catching mackerel with seines, by which hundreds of barrels are sometimes taken at one haul, and this during the spawning season, when the fish are of comparatively little value."

This Massachusetts Anglers' Association is accomplishing a great deal of good in a practical and unostentatious way.

—The Auburn Advertiser of late date, says:— "Lately quite a strict surveillance over the waters of Owasso Lake and its tributaries has been maintained by game constables and specially appointed officers, to detect, if possible, the unscrupulous pirates and violators of the game laws who nightly pillage the lake by spearing and netting. This has been attended with considerable expense and trouble, which has been borne entirely by the few residents of Auburn. On Saturday evening last, their efforts were crowned with success. Between eleven and twelve o'clock game constable John Thener, of Auburn, and an individual bearing the singular cognomen of Jack Frost, who have been on the alert for some time, succeeded in apprehending George R. Brinkerhoff and Charles H. Allen, who were discovered spearing trout in the neighborhood of Brinkerhoff's Point, about six miles up the lake. Both of the spears were taken into custody, conveyed to the police office, and promptly fined \$100 each by Police Justice Sisson, which was as promptly paid in both instances. They succeeded in spearing eight fine trout, and the amount of their respective fines aggregated \$25 apiece for the fish. By the provisions of the law one half the above fine is awarded to the person making the arrest, and the residue to the commissioners of fisheries of the State of New York."

The leading citizens of Auburn have petitioned the commissioners to rebate the share of the fine (\$100) paid to them, that the same may be expended by the Mayor in stocking Owasso Lake with lake trout and bass.

HOW TO RAISE TROUT.

CALEDONIA, N. Y. November, 1874.

EDITOR FOREST AND STREAM:—I noticed in your paper some weeks since a note from Mr. Alexander Kent, of Baltimore, stating that the brook trout in some of his ponds were dying, and asking the reason and how to prevent it. I often receive letters asking for similar advice. The writers of these letters generally say that their water supply is sufficient, but attribute the loss of fish to improper food or to impurities in the water. They also say that they have tried all known remedies, but have not succeeded in saving the fish except by making them try to save them. But it is comparatively easy to make them in good health. We have never yet lost at these ponds beyond the due proportion of fish. But the loss has been avoided only by knowledge of the habits of the fish and by unceasing watchfulness.

In all countries there is a certain death rate of the population, which rate varies year by year within slight limits. That is we may expect in the course of the year that so many people out of one thousand will die in the course of a year. As the average duration of a trout's life is not more than one third of the average duration of human life, we may expect that about three times as many trout as human beings will die in the course of a year. This is a natural and unavoidable loss. But when the loss rises much above the average, or when something like an epidemic breaks out among them, we have to try to save them. But it is comparatively easy to maintain them in good health. We have never yet lost at these ponds beyond the due proportion of fish. But the loss has been avoided only by knowledge of the habits of the fish and by unceasing watchfulness.

As a general thing, neither a fish nor any other animal will eat improper food. Brook trout are carnivorous, and any kind of flesh will do for food. If they eat it, it makes no great difference whether it is proper for them or not. If the trout are not sized off properly, but large ones kept with the smaller, then the big trout will drive away the small ones and keep them from eating.

Sometimes, indeed often, the trout are not fed enough, or are fed only at long intervals. In any of these cases the trout lose their plump appearance and begin to show a disproportionate size of head. The appearance of the fish should be normal every day, and the first signs of decrease in weight should be the alarm for increased care in feeding. The food ought to be chopped fine, and not in strings or crumbs. It should be given often and to repletion, that the large and very young gorged, may allow the small and weak a chance to take a good meal. The fact that the water is not so pure as it is owing to an insufficient supply of water, or rather, to an insufficient supply of air. Persons making ponds first, get that the volume of water furnished by a spring is never so large in the Summer or early Fall as in the Spring of the year; and second, that even if the volume should be the same, the quantity of air held in any given flow of water in Summer is very much less than that held in the same flow in Winter. For a familiar illustration, it is well

known fact that a pound of trout will live in a bucket of water in Winter, out of doors, for a half day or more, while they would not live a half hour in the same quantity of water in Summer.

It is not very hard to tell when the fish are suffering from air. It is only during warm weather that the breeder need watch for this mischief. If he has only been moderately prudent in stocking his ponds, if the water is getting too warm, or, in other words, if the air in it is getting too small in quantity for the number of fish, a few will be found dead, perhaps, without any mark upon them, being to all appearance plump and healthy. Fungus will show itself upon some, and some will turn dark in color. A few may be found upon the grass, near the entrance of the water, if the banks are low. Their appetites may not be visibly affected at once, but will soon begin to disappear, and the fish die "by hundreds." The only remedy is to give them more water, or take out a quantity of fish, and even this is not a remedy unless done at the very start, for even with increased flow of water the fish will keep dying for a long time. I believe that more brook trout have been lost in ponds by overcrowding than from all other causes put together. It must be borne in mind that overcrowding has reference to the flow of water, and not to the size of the pond. A tank ten feet by twenty may be overcrowded, or rather over-stocked with fifty pounds of fish, and again it may comfortably support two hundred pounds or more. Cold water, and plenty of it, is the motto of the brook trout. A. S. COLLINS.

SALMON SPAWN.

ROCHESTER, N. Y., November 30, 1874.

EDITOR FOREST AND STREAM.—I received from Prof. Baird, United States Commissioner of Fisheries, 500,000 California salmon spawn, of which I hatched 250,000, and have them on hand at the New York State Hatching House at Caledonia. They are now ready for distribution to stock any of the public waters in New York State. Any parties can have from 5,000 to 50,000, on being for them. SETA GREEN.

Natural History.

THE BLACK-FOOTED FERRET IS WANTED.—We have received from Dr. Coues a letter, from which we should judge that he was in great trouble about an animal he needs to see to complete his knowledge of a particular group of mammals he is now investigating, and we take pleasure in calling the attention of our readers to it, in hopes that some of them may be able to help him out of his difficulty. It seems that the North American animals of the weasel and ferret kind are pretty well known, only the black-footed ferret, *Mustela nigripes*, of Audubon and Beckman, being required to complete the series now in the hands of naturalists. This animal was discovered many years ago along the Platte River, but no additional specimens in good order have since been forthcoming. It is known to inhabit Colorado, near the town of Greeley, where a headless skin was lately obtained, and may be expected to occur also in portions of Kansas, Dakota and Wyoming. The animal is most like a mink in size and shape, but almost entirely whitish, with black paws, a black streak on the face, and black tip to the tail. This description will suffice, as there is no other animal in the country at all like it. The fortunate possessor of a black-footed ferret will undoubtedly find it to his advantage to send it to Dr. Coues, at the Smithsonian Institution, Washington, D. C. Will Western papers please copy?

A FROGGERY.—Salt Lake City scientists are very much agitated over a frog which has been found in a growing turnip. Now the query to speculators in natural history must be this—Did the turnip produce the frog by spontaneous combustion, or did the frog enter it while a mere *meatus moleculæ* and grow up with it? In either case the solution of the problem must be rather odd to those not acquainted with such peculiar conditions as are said to envelop this amphibious creature who lives for hundreds of years, according to chroniclers, embedded in rocky walls, and without a morsel of food or a breath of air. The answer to the query will fulfill Shakespeare's words in the mouth of Hamlet when he said that there was more in the earth and air than Horatio's philosophy ever dreamed of.

THE MYCARCHUS CRINITUS.

BY F. W. HALL.

THIS species of the fly-catcher is not very common in any of the New England States, and consequently very little definite knowledge has been obtained concerning its habits.

For the past two years I have had limited facilities for observing its movements, and I therefore give a brief record of such of its habits as I have been permitted to notice, and which may not be uninteresting to the scientific ornithologist.

The species prefers for its abode a dry, rocky and wooded hill slope, and here, at intervals through the day, it strikes forth its harsh discordant notes, which, alone, is capable of distinguishing the bird, so that it cannot be mistaken for any other. It usually, if not almost invariably, nests in a hollow tree. Sennets says that "it is a distinguishing characteristic of the nests of this species, to have the skins of one or more snakes woven into the other materials."

A nest found in the hollow stump of an old apple tree in North Haven, Ct., was composed of withered grass and chips—chiefly the latter. I judge from this that the species may occupy the deserted nest of the woodpecker, as no snake skins were found in the nest, as Sennets asserts. I am inclined to think that the young leave the nest when quite young, even soon after they have got their eyes open, and before they have a single well-developed feather on their bodies, or at least before they are fully hatched, as I shot one in Killingworth, Ct., in a high tree, having only a very few undeveloped and rudimentary feathers, and with its neck and head entirely bare.

As soon as the bird was shot the old ones came around and appeared to be in great distress for the safety of their young. This species appears to be more shy than any of the other fly-catchers. It occasionally utters a wild, earless shriek, but, to my knowledge, only when sitting, as I

have never heard it emit any sound while on the wing. It sits perfectly still when perched, and does not seem to be at all restless or as vigilant in its lookout for insects as most other fly-catchers; but its keen eye soon detects a passing bug, and it instantly darts upon it in a manner not unlike the remainder of its group. It does not usually long in one place, but is constantly on the move, although it seems to adhere to one neighborhood, and usually among large trees and will almost invariably return to the same spot, if not to the same tree, within half an hour.

I encountered quite a family of these birds in Killingworth, Ct., in the Summers of 1873-4, and shot several which were not in full plumage, but the markings of which were not unlike those of the adult bird. I judge, therefore, from these facts that the species breeds abundantly in this locality, or about six miles from the sea shore, as I have noticed the old and young together for two consecutive years.

As is usually the case among the fly-catchers, after darting upon an insect, they will often return to the same perch, particularly if the tree or object upon which they alight is standing alone. The bird will often sit upon a limb and keep perfectly still for the space of twenty minutes, apparently very watchful, and at intervals of perhaps a minute it will utter its fierce cry, as if in great agony; but rather because it becomes impatient in waiting so long a time for its favorite insect. While these birds appear to be rather shy, they are not at all affected by the report of a gun, and even the report seems to have a tendency to bring an additional number together. The habits of this species, owing to its comparative rarity, have been only little studied; so many of its more important and peculiar characteristics are yet to be discovered.

The Chicago Academy of Sciences was the other day told by a member that there are over 700 species of clam in North America, and 1,500 species in all have been described, more than one thousand books and papers having been written on the subject.

ALEWIFE AND ALOSA

EDITOR FOREST AND STREAM.—

A communication by "Ollipqu" in your last on "Alewife" set me to thinking about the name, and which the following is the result of my cogitations. Alewife (the name came to us from England—and, I think, came to England from France, as thus the shad by the Romans was called Alosa, then by the French Alos—pronounced correctly at *was*—but the French peasantry, like all other peasantry, do not often pronounce words in the refined manner. The tendency of the F. P. is any one who has been among the *Belgians* of Canada may remember is to pronounce words ending in *ois* as *way* instead of *way*. Alos then would degenerate in the mouths of the Channel fishermen from "alwif" to "alway," "al" being aspirated as in *alley* in both cases. The English Channel fisherman would hear the *parley vousay* *alway*, and how easy, then, the transition from *alway* to *alewife*. Remembering the tendency of our British always to give some sort of substantive meaning to a word in use, I think it is a very fair deduction to find the word *alewife* to be a corruption of *alway*. Have I a right to say "G. E. D. P." Bacteriophoe was changed by the British sailors to *Bully* ruffian, and that is a harsher mutation than the one which I have supposed. Recollect *alewife* is *alwa tyrannus*, Yours, VET.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, }
NEW YORK, Nov. 29, 1874.

Animals received at Central Park Menagerie for the week ending November 28, 1874.
One Mottled Owl, *Scops asio*. Presented by Dr. E. Sterling.
One Monkey, *Macacus cynomolgus*.
One Monkey, *Macacus rhesus*.
One Leopard, *Felis leopardus*. Born in Menagerie.

W. A. CONKLIN.

Woodland, Lawn and Garden.

CARNIVOROUS PLANTS.—Dr. J. D. Hooker's recent address to the Department of Zoology and Botany of the British Association, gives the result of his study of the carnivorous habits of the *Nepenthes*, the pitcher plants of the East Indies, and supplements what was already known of like habits in *Dionaea*, *Sarracenia*, *Drosera*, *Delphinium*, and *Pinguicula*. He states that the rim of the pitcher and the under side of the lid, always more highly colored than the rest of the plant, are provided with numerous honey-secreting glands, while the surface immediately below is covered with a glue-like substance which affords a foothold to insects. The entire lower portion of the cavity is occupied by innumerable spheroidal glands which secrete a fluid that is always acid and is found in the pitcher before the opening of the lid. The digestive powers of this fluid were tested in various ways, often with surprising results. Fragments of meat were rapidly rednoed, and pieces of fibrin weighing several grains dissolved and totally disappeared in two or three days; lumps of cartilage weighing eight to ten grains were half gelatinized in 24 hours, and in three days were greatly diminished and reduced to a clear transparent jelly. The experiments make it probable that these results are not wholly due to the original fluid, but that after the addition of the animal matter a substance acting as pepsine is produced by a change in the process of secretion. By two or three days the animal matter exists between this mode of plant-nutrition and the more ordinary one of the embryo in the act of germination, and of some colorless plants which live by the absorption of the elaborated juices of others. He also very briefly indicates how the highly specialized organs and strange habits of these plants may be conceived to have arisen by the process of natural selection from ordinary leaf-structures and from processes which are well known to the vegetable world. The fact may at least be accepted as proving that the protoplasm of plants can avail itself of the same food with that of animals—thus serving as one more link in the continuity of nature.

DENDING A COUNTRY OF ITS TREES.—The Khanate of Bukhara affords a signal illustration of the damage done by denuding a country of its forests. Thirty years ago, the Khanate was one of the most fertile provinces of Central Asia, and well known to the world as regarded as an earthly paradise. Five years thereafter, a mania for forest-clearing broke out among the inhabitants, and continued to rage as long as there remained timber on which to vent itself. What trees were spared by rulers and peo-

ple were afterwards utterly consumed during a civil war. The consequence of this ruthless destruction of the forest-growth is now painfully manifest in immense dry and arid wastes. The water courses have become empty channels, and the system of canals constructed for artificial irrigation, and supplied from the living streams, has been rendered useless. The moving sands of the desert, no longer restrained by forest-barriers, are gradually advancing and drifting over the land. They will continue their noiseless invasion until the whole Khanate will become a dreary desert, as barren as the wilderness separating it from Khiva. It is not supposed that the Khau has sufficient energy or the means at his command to arrest the desolation that threatens to spread over his territories. The example is now to stimulate enlightened governments to avoid a similar catastrophe, by preserving a due proportion of forest-lands in their domains, and by restoring those which have been improvidently laid bare.

BURYING CELERY FOR WINTER.—Select the driest, best drained spot you have. Dig a trench eighteen or twenty inches wide and ten or twelve inches deep, according to the length of the celery, or just so that five or six inches will be above the surface, throwing out the earth on each side. Before hard freezing weather comes, fifteen degrees Fahrenheit will blacken celery, so dig the plants, allowing as much earth to adhere to the roots as will naturally do so. Place the plants upright in the trenches, on their roots and as closely together as possible, filling all interstices with earth except the tops of the plants; hold them together so that the earth may not enter the crevices. When all has been finished, bank up the remaining earth about the sides, place a roof of some rough material over all, so as to exclude air, and cover securely from frost, adding to the covering as cold weather increases, taking care not to smother the plants. A little care will prevent smothering.

USES OF THE DEAD LEAVES.—The leaves of deciduous trees and shrubs, grapevines, etc., are now falling, and will soon be scattered by the high winds of the Fall, if not collected and stowed away for future use. They are too valuable for many purposes to be allowed to go to waste. They form a good protection for strawberries during the Winter, as a covering of them prevents that alternate freezing and thawing which is so injurious to the plants. A covering two inches in depth will be necessary, and this should be kept from blowing away by the pressure of twiggy branches spread over it. Decayed leaves produce that valuable manure known as leaf-mold, which is so highly prized by the florist. In the construction of hot-beds, dead leaves are very useful, as layers of them, between layers of manure, moderate the heat and retain it for a long time. For filtering stock and absorbing liquid manure, dead leaves are of great value. Large quantities should now be collected and kept in sheds for future use. EDWARD MASON.

The Kennel.

THE POINTER IN THE UNITED STATES.

IT is noticeable that at present we have in America far more well bred setters than pointers, and greater attention seems to have been paid in the past two years in procuring the former blood than the latter. This arises from the fact that the setter is the greater favorite of the two, and justly the choice of the sportsman when he desires a dog that will unflinchingly stand the rough and tumble nature of our shooting. Still, we are sorry to see the balance so much weighed down by the setter, for fear the staunch pointer may be finally crowded out entirely. Of the two, the point of the shorter haired animal is far the most marked when on game, and the training once received by him is always retained, and on each returning shooting season he enters the field to be depended upon, while the setter often has to be partially rebroken each year; and if not owned by a sportsman who shoots continually, becomes headstrong and unreliable.

For the person whose business will not allow him to take his gun in hand but two or three times in the Autumn, we advise by all means that his dog should be the pointer; but for the one who takes advantage of the open season for different game from its beginning to its close, we recommend the setter as best able to bear continued work in all descriptions of cover.

The short hair of the pointer enables him to do work on the prairies, where water is seldom to be found while "chicken" shooting, and he can do without the necessity for a much longer time than the setter; but the latter is frequently used with advantage for the same purpose when a supply for his benefit is taken to the field. In New Jersey, Delaware and Maryland, and in countries where the game invariably takes to briary thickets on being started, the pointer is at a disadvantage, for we have seen but few that were not intimidated by these thorny coverts refusing entirely to enter.

Far more birds are accidentally flushed by the setter than the pointer, who is generally more cautious, notwithstanding he may be fully as fast. Certainly we cannot condemn those that write in favor of the pointer as having the best nose, for they are given strong proofs of its truth.

In cool and misty weather the pointer, on account of his slight coat, suffers greatly, and therefore is far inferior to the heavy haired setter in wet localities. Nevertheless, we have seen them so highstrung and ambitious as to work wherever desired by their masters at a risk of injury to themselves.

We advise our readers who are taking an interest in the breeding of field dogs in the United States, to pay just as much attention to the rearing and improvement of the pointer as the setter, for when we compare the market value of the two, the well bred pointer is worth the most at present on account of its scarcity.

POINTS FOR JUDGING SETTERS AT AMERICAN BENCH SHOWS.—There are no doubt at this time in the United States quite a number of purely bred setters of both the Irish and Gordon breeds, either imported directly from Europe or the progeny of animals brought to this country, whose pedigrees can be given for at least two or three generations, many of which will be entered for award on this side of the water. For the reason that these breeds have distinctive characteristics, we advise that the English points of judging for both be taken at exhibitions of our own, which will be found to differ from those followed at the display of the Tennessee State Sportsmen's Association at Memphis, October 7th, where both the best setter and pointer, it appears, were judged by the one scale of points. A setter is not necessarily a Gordon, because he is of black and tan color; nor an Irish, because he is red, although we should pronounce them as having decidedly such blood if this was the case; both might have had dams of far different shade of coat than themselves, being Gordon and Irish alone in color; in shape and other points, just the reverse. At Mineola the great dog that took the prize, under the class of setters of any other breed, was a perfect black and tan. Colburn's Dash, entered by Mr. A. C. Waddell, of Newton, N. J., in very many characteristics a perfect Gordon in appearance, is still a cross, if we are informed correctly, of last mentioned breed; and the red Irish, and a truly fine stock and field dog.

We have but three classes of setters displayed at any Bench Show—the Gordon, the Irish and the setter of any other breed, (we might have said four, if any pure Russians do exist even in their own country), for are not the Blue Belton's, the Macdonna's, the Lovellin's, and the Lavarack's made up by judicious crossings of the first two? Therefore, all of these latter mentioned must come under the head of setters of any breed.

The London Kennel Club adopt this system of classification, and we must say it is the only method that we can go by in our shows, as far as we can see.

MANGE IN DOGS.—The surest preventative of mange in dogs is a clean and comfortable kennel, where the bed is changed at least once a week during the season when straw is needed for warmth, and in milder weather where pine shavings are used and removed as often.

We have noticed that when growing puppies are compelled to sleep in damp and dark places mange frequently appears on them before they attain twelve months of age, and we advise those having setters and pointers to raise to allow them plenty of pure air and sun light, for this malady once established is difficult to cure.

The following formula we have taken from Maylew's management of dogs, as being an admirable remedy for this skin disease, having known of its being used with great success:

Ung. rosini.—As much as you please to take.
Salicyl. Subl..—Enough to make the ointment very thick.
Ol. Turp..—Enough to make the unguent of a proper consistency, but not too thin.

Apply this once a day, thoroughly rubbing it in, and wash it off the day following, repeating the dressing until the dog has been dressed three times and washed three, when the ointment can be discontinued, again using it only when the dog shows a return of the disease.

This receipt is by no means a cleanly one, and necessarily keeps dog and master some distance apart; a simpler remedy, however, when the case is a mild one, will be found by rubbing into the dog's skin a decoction of white oak bark and alum and letting it dry in.

IRISH SETTERS.—A dog show was held recently in Dublin which was very successful in every way, but especially in its display of that magnificent type of the hunting dog, the red Irish setter. A correspondent, who notes keenly, writes that the best dog was a splendid animal. Describing him he says that "he has a grand long face, nearly, if not quite, an inch longer than anything else in the class; his ears are good and bang well, his nose is mahogany-colored, his red is as good as can be bred, his legs are good, and so are his feet; he has a grand loin, his hair is straight, and his stern is grand, being beautifully carried, and with the nice comb fringe so much admired. Had he a darker eye he would be perfect. The second prize dog is a fine fellow, beautifully feathered on legs and body, but his tail has not so good a style of feathering as the first, being rather more like a sheep-dog's brush than a setter's flag; moreover, he has a vile temper. The third prize is a brother of the former, but younger. He is in the same style, but is shorter in head, and has a black nose, which Dr. Stooe would have us believe is the correct color; but it is the first time I have ever heard it mooted as a good point. The same gentleman tried very hard to make me believe that red and white is the correct color for an Irish setter, but I am not quite convinced on that point yet."

A CANINE MILKER.—A gentleman residing in Dorchester, Mass., Barzilla Paine, Esq., owns a large dog of the St. Bernard species, also a cow, from which to obtain milk for family use. Until subsequent to a period some three or four weeks ago the cow gave four or five quarts daily, she having begun to dry up, when suddenly the quantity was reduced to about two quarts without any apparent cause. The reason was not discovered until Thursday last, (Thanksgiving Day,) when the cow was found in the afternoon, quietly lying at rest, chewing her cud, in the field, where she had been turned to graze, and beside her lay the dog, stretched out in a most comfortable position, busily engaged in sucking the milk from her teats. It was then noticed that

the dog had displayed considerable tact in taking advantage of like daily opportunities, he being always at home at morning, noon and night, when his master was there, but had not made allowance for a holiday, and was therefore discovered, which will in future cut off his rations in that quarter. Are not like instances of a dog turning milk maid rare?

—The kennel at the Jardin d'Acclimatation of Paris has been enriched by the addition of some of the finest strains of English staghounds, foxhounds, harriers, beagles and retrievers, and these close the magnificent collection of hunting dogs kept in the Garden. All members of the canine race useful to man are now represented there, and as the best blood only is selected the people have an opportunity of becoming acquainted with the higher class of dogs, and from these they learn what the best types should be; and of course this must have a most salutary effect on the improvement of the race.

—One of the most interesting exhibitions of dog, held in the British Kingdom for many a day, was the great national trial of sheep dogs, which came off at Garth Gooch, Bala, recently. The intelligence displayed by the animals was most extraordinary, and so effective as to receive the loud applause of the numerous spectators in attendance.

—The Providence Journal relates the following stories:—
A dog belonging to Mr. P. Riley, of Knightsville, R. I., having discovered his master's house on fire the other morning, ran up to where the children slept, and tried to awake them by barking and jumping on their bed. Failing in this he ran to the room of the elder son and seizing him by the ear aroused him so that he screamed loudly. His cry awake the father, and the dog led him to the fire, which he succeeded in extinguishing ere it had made much headway.

Michael Conley, of Providence, has four greyhounds which were last week. This person was engaged in making an excavation when the earth fell on him, and covered him up. The dogs being near when the accident occurred, commenced scratching and yelping, and this being noticed, assistance was soon at hand to take the man from his tomb ere death had visited him.

A FAITHFUL DOG.—Wednesday afternoon a half-drunken man named Croy, living in Canada, was wandering around the Potomac, accompanied by a big dog, and having lots of money. Yesterday morning he was found in an alley, sleeping a drunken sleep, and his dog was keeping watch over him and would allow no one to come near until the man shook off his sleep. The dog had been stabbed twice with a knife, and there were two extra hats in the alley, showing that thieves had come to rob the man and that the dog had fought them off.—*Detroit Free Press.*

THE WEBSTER SETTERS.

POMPFRY CENTRE, CONN., November 23, 1874.

EDITOR FOREST AND STREAM.—
I read with much interest the account given in your issue of the 24th of last March, by "Veritas," about the Webster dogs Rake and Rachel, and though I have never chance to see Rake, I think I can enlighten "Veritas" somewhat as to what became of Rachel; at least she did not die, as he says, without further issue. I know very little of the circumstances attending their importation. The story circulated at the time was, that they were present from the Duke of Devonshire to Mr. Webster. I find by my record for it has long been my practice to keep a record of all the dogs and puppies of all the dogs I breed, and since by no means few) that in the Fall of 1871, my friend Benjamin Anthony of Providence, R. I., (who was also an intimate sporting friend of Mr. Webster's) sent me Rachel to keep and breed a litter of puppies from. I kept her through one Fall and Winter, and returned her to Mr. Anthony the following Spring, and what became of her afterwards I am unable to say. She dropped a litter of pups at my place in January, 1873, by a fine, brown setter dog, called Phil, owned by Stephen A. Packer of Packersville, Conn. Of this litter only two dogs were saved. I kept one and Packer had the other. Mine died before he was old enough to break. Friend Packer broke his, and I afterwards sold him to the late Wm. S. Green, of Worcester, Mass. Previous to Rachel's coming into my possession, she was bred to a fine liver and white setter owned by Mr. Edward Harvey, of Providence, R. I., and I broke a bitch of his litter for Mr. Henry Thurber, formerly of Providence, R. I., and late of Putnam, Conn. This bitch was the very image of old Rachel. Mr. Thurber afterwards sold her to Eden Perry, then of West Killingly, Conn., but now of Olneyville, N. H., purchased her of Mr. Ferris for \$100. Robert B. Roosevelt, of New York, and while with me I bred this bitch, named Het, to Stephen A. Packer's dog Phil; the result was two dogs and a bitch pup, all liver and white. I sold one, called Stov, I broke for Mr. Roosevelt, the other dog, called Dash, I sold to Freeman James, Esq., then of West Killingly, Conn., and now of St. Paul, Minn. The bitch called Zip, and kept her myself, and from her nearly all my present dogs have descended, and they carry her blood, in a greater or less degree, many of them still retaining one-eighth to one-sixth of old Rachel's blood. I do not mention this because I think so highly of the blood of Rachel, or of her stock. I regret to say that my experience with old Rachel to the field does not correspond at all with that of "Veritas" or Mr. Blunt. I have hunted her, and had her repeatedly in the field on the grouse, quail and woodcock, and have seen her flush a bird after bird without even attempting to make a point, and I never saw her make but one point, and that was on a bevy of quail, and she did that in a very indifferent manner. I have seen her repeatedly, day after day, flush every bird she found. She hunted fast, with nose seeking the ground, making a rattling noise with her nose like a horn on an old trail. I never saw a pair from the first cross come from her, without the first-class dog, but not with her blood was reduced by a second cross did the stock prove with me of any value.

I have always heard that Rake was a fine animal, and I once saw a splendid dog, owned by Mees Taylor, Esq., of New York, said to have been a daughter of Rake, and a dog owned by J. P. Moore, Esq., of New York. This dog was black roan and black in color, without the tan belonging in the Webster stock. I have had considerable experience with different breeds of both pointers and setters, and my own kennel seldom numbers less than a dozen, and I believe I understand what is requisite to constitute a first-class setter or pointer in the field. I make here no expressions that I cannot prove by competent witnesses.
Respectfully yours,
ETIAN ALLIN.

PEDIGREES.—We have some English and American pedigrees of great interest to sportsmen, which we shall publish next week.

Sea and River Fishing.

FISH IN SEASON IN DECEMBER.

Striped Bass, <i>Morone chrysops</i> .	Weekfish.	Sheepshead.
Pompano.	SOUTHERN WATERS.	Tallorhead.
Shad.	Trout (black bass).	Tallorfish.
Snapper.	Drum (two species).	Sea Bass.
Groupers.	Kingfish.	
Rockfish.	Striped Bass.	

FISH IN MARKET.—Fresh mackerel and codfish are now for sale; the former at 18 cents, one of which, the largest we ever saw weighed four pounds. Smelts from the Penobscot River in Maine are abundant. Price 25 cents per pound. Live codfish brings from 8 to 10 cents per pound; half but very scarce, 25 cents; white fish abundant at 18 cents; scollops are becoming scarce, \$1 50 per gallon; green turtle is also very rare at 20 cents per pound; a fair supply of terrapin is on hand, but these creatures bring \$12 per dozen "counts." Lobsters from Massachusetts are comparatively abundant at 10 cents per pound; and hard shell crabs are numerous enough to supply all demand at \$3 50 per 100.

—Most of the fishing fleets have returned home, so the ports at which they belong are crowded with masts.

—The oyster trade in Baltimore has had a very remarkable increase within a few days, the sales having doubled those of any previous time.

The herring fishery has been very successfully prosecuted from Ipswich the past month.

The Portsmouth Chronicle says that Mr. Charles H. Wallace recently caught off the Shoals, while alone in his whaleboat, 2,180 pounds of cod—the largest single catch of the season. The crew of schooner "Light of Home" caught 250 cwt. of fish during one night recently, not far from the same locality. Squid fishing has become a lucrative employment at Provincetown. Owners of bankers are buying them for from 40 cents to 50 cents a hundred. Two men can easily catch on a hook made for the purpose 1,300 or 1,400 a day.

Schooner Willie B. Wilbur took with the hook 20 barrels of fine mackerel off Itace Point on Monday last week.—*Cape Ann Advertiser, Nov. 25th.*

—An attentive correspondent, Mr. C. W. Stevens, of Boston, who was recently in Milwaukee, has sent us a large pebble and the accompanying note which follows. The pebble is erased so as to receive the digit of a cord around its centre:

MILWAUKEE, November 19, 1874.
The stone presented you to-day, weighing three-quarters of a pound, is an anchor stone from a gill net which is set in the bottom of Lake Michigan, in 300 to 500 feet of water. It was taken from the stomach of the trout (Maekinnaw) you saw to-day in our fish room. There was also taken from the same trout a herring about eight inches long, and a dog fish about twelve inches long. They are a very voracious fish, and beef bones, corn cobs, and other refuse, thrown them from vessels are often found in them. The trout above mentioned weighed, when dressed, 29 pounds. Very respectfully yours,
GREEN J. LANGWORTHY.

Commenting upon the foregoing, our correspondent informs us that these anchor stones have not been in use for several years, and that Mr. Langworthy's supposition is correct—that, in lowering the net the stone became detached, and Sir Trout, thinking it a nutritious morsel, gobbled it—then he must have carried it around for quite a lengthy period.

A WHALE FEAST.—The Washington Sunday Herald contains the following natty description of a whale feast, in which many friends of the FOREST AND STREAM participated:

Among those present were Professors S. F. Baird, United States Fish Commissioner, and his assistant, Professor James A. Miller, Dr. Emil Bessels, of Poland's fame; Dr. Gill, the eminent ichthyologist; Professor G. B. Good, Dr. W. H. Holmes, W. H. Jackson, the well known scenic photographer; Professor Henry W. Elliott, the naturalist, who has become an authority in the habits of the seal and walrus; G. Beihler, the engineer; J. T. Gardiner, the well known geographer; Professor Bean, of Pennsylvania; Dr. Elliot Coates, U. S. A.; Dr. J. D. White, the geologist, and a number of others who were present in the city. Professor Baird presided, and dispensed the broiled meats, while Dr. Endlich and Professor Miller, respectively, served the roast and broiled dishes of whale. The fish was a young whale of the species known as "black fish," and was caught off Block Island a short time since, and sent to Professor Baird, carefully packed in ice, and arrived in a few days. Dr. Bessels, of Poland's fame; Dr. Gill, the well known taxidermist and artist attached to the Smithsonian, was engaged in making a plaster cast of the specimen, a discussion rose among several of the scientists as to the value of the whale as a food fish, and on the spur of the moment it was decided to prepare a feast and send forth among the highways to find adventurous, inquiring men to meet and eat a portion. A little delay was occasioned by the fact that it was necessary to find some one who would say "grace before meat," and the guests were asked for a preference. All being helped, the first few mouthfuls were taken in silence and meditatively, and then opinions as to the taste of the flesh were in order. This developed the remarkable fact that the little party comprised men who had visited not only every portion of our own country, but nearly every portion of the globe. Dr. Endlich, the well known taxidermist and artist attached to the Smithsonian, was engaged in making a plaster cast of the specimen, a discussion rose among several of the scientists as to the value of the whale as a food fish, and on the spur of the moment it was decided to prepare a feast and send forth among the highways to find adventurous, inquiring men to meet and eat a portion. A little delay was occasioned by the fact that it was necessary to find some one who would say "grace before meat," and the guests were asked for a preference. This developed the remarkable fact that the little party comprised men who had visited not only every portion of our own country, but nearly every portion of the globe. Dr. Endlich, the well known taxidermist and artist attached to the Smithsonian, was engaged in making a plaster cast of the specimen, a discussion rose among several of the scientists as to the value of the whale as a food fish, and on the spur of the moment it was decided to prepare a feast and send forth among the highways to find adventurous, inquiring men to meet and eat a portion. A little delay was occasioned by the fact that it was necessary to find some one who would say "grace before meat," and the guests were asked for a preference. All being helped, the first few mouthful

one. There were three present who had eaten seal, walrus, musk ox, and Polar bear in the Arctic; seal, bear, walrus, and sea-lion in the Aleutian Islands; grizzly, panther, rattlesnake, wild cat and buffalo in the West, and various strange animal meats in other parts of the world. The bill of fare, as stated by the writer by one of the party, comprised solumm tuberosum, visis viniferis, varhispanica and catibensis, pyrus malus and pyrus pyram, panam, and others which could not be ascertained. Several gentlemen who had been invited were unable to attend, among whom was Giro Yano, the Japanese Minister, who had promised to attend, but being prevented, sent a letter in Japanese which was not read by the company. The dishes were fully discussed, and the party separated with the conviction that whale steaks are a very good article of diet, and resolved to recommend their friends to adopt it.

A monster pike was caught the other day with a net in Ripley Lake, near Bagshot Park, in England, which belongs to the royal domain. The fish weighed thirty-five pounds and measured three feet ten and a half inches in length. The eye was exceedingly beautiful, the head shone like smoked mother-of-pearl, every scale was perfect, and his red as a peach; four black fins extended some distance from the head toward the tail, giving the fish a zebra-like appearance. The fish is supposed to be about fifteen years old. Its roe weighed 3-1/2 pounds and contained 45,000 eggs.

Yachting and Boating.

All communications from Secretaries and Friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

CANOE TRAVEL.—Now that Mr. Bishop is engaged in making the most celebrated canoe voyage known in this country, the following sketch of the origin of this means of travel may prove interesting, as it shows how far man's skill is capable of overcoming the great obstacles of nature. It is only within the last few years that this mode of travel has been inaugurated, but from its popularity it promises to play a very important part in future voyages and discoveries. We copy from the Tribune:

A few years since Mr. McGregor, an Englishman, built his little "Rob Roy" canoe and sailed over the rivers of Europe. The published accounts of his journey created such an interest in boating circles that a club of canoeists was organized in London, and this pioneer institution now possesses some two or three hundred of these miniature craft. A canoe propelled by its English owner was once a novel sight on European rivers; now canoe men, in couples, may be frequently encountered on the waters of the Continent, and even the sea-ordian has been vexed by their paddling. With these light boats one can travel with ease and rapidly. They are nearly as portable as a trunk, and are sometimes of less weight. The American Indian furnished the original model, but the kayak of the Esquimaux contributed the water-proof deck and illustrated its effectiveness in battling with heavy seas. In the canoe you once sailed and paddled, a new and adjustable outrigger foot-lock being, first adapted to the tiny craft, you can have a choice of three modes of propelling the canoe, with the most satisfactory results. The expenditure of but little power drives the canoe along over the water at a speed of over four or five miles an hour. All day you can keep up this speed, in smooth water, and not feel weary from the effort when night comes on, and you are obliged to pull craft upon the salt water, converted into lodging quarters. The model canoe holds but a single occupant, and is but 14 feet long. McGregor was the pioneer of European canoe traveling. In the vicinity of New York all the so-called "Rob Roy" canoes that I have examined differ materially from the original designs of the Englishman; they are hardly imitations. The original "Rob Roy" canoe lacked sheer, that essential element to seaworthiness. Canoe travelers are given but a very season. Rivers and lakes became to small fields of adventure; they aspired to explore larger sheets of water. The Baltic and the ocean had not been plowed by their canoes. The "Rob Roy" must not be enlarged, but it must be made more seaworthy. The Rev. Baden Powell came to the relief of the canoe traveler and built the beautiful "Nauticus" canoe, lanching it upon the rough waters of the Baltic, and his composition, and his two canoes of the new model, traveled a long distance over the waters of Northern Europe, penetrating inland villages, to the astonishment of the natives. The account of that novel journey was given to the public by Mr. Powell in his work entitled "Canoe Traveling."

The Baden Powell canoe is a finely-designed kayak, which can be used by a skillful navigator in rough as well as smooth water. In rough water the double-bladed paddle should be used. In smooth water greater speed can be maintained, and with a smaller expenditure of strength by using an adjustable outrigger and row-lock, and light oars seven feet and eight inches in length. The newly introduced English canoes were built of wood, the plank or skin of the boat was sewed together, the plank or skin of the boat was sewed together. Expansion and contraction produced by heat and cold, by moisture and dryness, affect in a greater or less degree, to an injurious extent, these frail wooden boats. It is difficult to keep them from leaking during a long journey, when the canoe is to be rough-treated at times in hauling it over rocks, and in knocking it upon the shoals of rivers and creeks. A concussion at the stern may cause a rivet to start in another part of the boat, or a check may be made even by the heat of a summer's sun. The canoe traveler requires a lighter material than wood, a material which should possess toughness of fiber, and upon which the heat of the sun would have no effect. He desired a light light craft, light, dry and buoyant. The American Indian minister, had accomplished their parts in canoe instruction; now the American inventor ap-

peared and perfected the whole work. The light wooden frame of the canoe is covered by this new process with paper, and this material answers the purpose better than anything previously used. Seven years have passed away since the paper boat was put upon the market. The tendency to become pulpy or water-soaked, and the many other objections that were raised in the early days of paper-boat manufacture, have all been removed; and paper boats are lighter, tougher and dryer than boats constructed of any other material of the same weight. The covering of the paper boat is about one-eighth of an inch in thickness. After the shell has received its covering of shillic and a coat of copal varnish the boat looks like a piece of burished mahogany.

The Argonaut Boat Club, of Bergen Point, has secured the first place in which the Ward brothers won a victory over the English crew at Stratoga three years ago.

PHILADELPHIA, November 20, 1874.

EDITOR FOREST AND STREAM:— In the summer of 1872, Mr. H. H. Playford, of the London Rowing Club, sent over three of his eight-oared shells to give our boatmen an idea of the kind of boat which the British Club were fitted to use. To secure all three of them, the Crescent, Undine, and West Philadelphia club getting one. They are (the only boats of the kind on this side of the herring pond. The Crescent's boat—the "Longfellow"—is 52 feet long by 24 in. beam, and built by Salter, of Oxford. It competed for the grand challenge cup at Henley, in 1874. The Undine, of the Undine, is about the same in the beam, is 49 feet 8 inches in length, and was built by Mat. Pybus, of Newcastle on Tyne. It was used by the London Rowing Club in the race for the grand challenge cup at Henley, in 1873. The West Philadelphia boat, built by Messinger, of Tordington, is longer than either of the others, being 56 feet from stern to stern. It was rowed in 1867 for the grand challenge cup at Henley, and in the International regatta at Paris. These boats are splendidly built, and although getting well along in years, are in first rate condition. The West Philadelphia has been singularly unfortunate with their's, having had her badly smashed getting her through the Fatmoutm Locks after the National Amateur Regatta in '73, and later knocked her nose off, when taking her away from Metcalfe's this fall. However, she is now as good as new, and probably the fastest boat of the lot. On Thanksgiving day, 1872, the Undine and Crescent pulled a race in their newly acquired prizes, which resulted in the most exciting contest we have ever had on the river. After a literally side and side race for about two miles, the Crescent won by less than a quarter of a length. It was hoped that there would be another race between the same clubs this year, but the Crescents were unable to get a crew. They however did the next best thing, and sent one of their best boats to the Undine, who got together two club crews and fixed on Thanksgiving for the race. Although this is the season for the "melancholy days," Thursday was not one of the kind. The winds didn't wait worth a cent, and though early in the morning the air was keen and frosty, it was soon rendered invigorating by a clear bright sun. By ten o'clock the river was above the boat houses papered up an apparatus that would do credit to a summer regatta. The river was covered with boats, the different clubs making a large turnout. The selection of two crews that should be equal was a matter requiring considerable judgment and no little labor. The benefit of a little extra strength and stuy was given the Longfellow crew to counterbalance the disadvantage of a boat to which they were unaccustomed. The crews were: The Crescent, 13 lbs.; J. B. Colohan, 2, 128 lbs.; Geo. Bright, 3, 120 lbs.; Tingo, Frothingham, 4, 170 lbs.; Arthur B. Frost, 5, 166 lbs.; De W. W. Smith, 6, 145 lbs.; F. T. Patterson, 7, 133 lbs.; Jno. T. Boyd, 8, 165 lbs.; Brandon L. Keys, coxswain, 139 lbs. Longfellow—W. R. Tucker, stroke, 137 lbs.; E. Baker, 2, 149 lbs.; W. C. Madeira, 3, 145 lbs.; J. H. Acker, 4, 135 lbs.; J. N. D'Haven, 5, 145 lbs.; W. P. Page, 6, 145 lbs.; A. L. Wilson, 7, 145 lbs.; A. S. Roberts, Jr., 8, 133 lbs.; C. E. Steel, of the Crescent, coxswain, 125 lbs. Commodore James M. Ferguson, umpire; Vice Commodore John Hockley, Jr., and H. S. Woodbury, timekeepers, with a large delegation of navy men followed the race on the fog Frisco. Judge at the finish, John Wiley.

The race was from the middle of Peter's Island to Turtle Rock, one and a half miles straight away. At eleven o'clock a shot from the Commodore's pistol called the boats into line, Steel taking a position close under the lee of the Island, the Albion well over toward the eastern shore. Are you ready?" and sixteen men were started upon the grounds in the slip. Strated upon the start." Got and sixteen oars hit the water together. Almost at once the Long fellows began to lead, but before the bridge was reached the Eastern boat picked up and shot through the arch on the inside of the curve, almost half a length. But this very advantage was a disadvantage (pardon the pun), for Keys had to jam his rudder hard down, checking the speed, and the two boats came round and made. At the "nose point" the work was hot, and the stroke put the stroke up to 42, pushed a head of three-fourths of a length, while Gillingham, pegging away steadily at 28, his row backing him up splendidly, lung fast to them clean down to Junction Bridge. When the two boats came from under Girard Bridge, the Longfellow were clear, and had half a length of water. Here the Albion tried a spurt and gained a little.

That age, ache, pain and imprisonment Can lay on Nature, in a paradise To the—all-gone feeling of a done up oarsman, and after a desperate attempt the stroke went down to 30, the crew still in good shape. Tucker kept well up to 40 strokes all the way east, and crossed the line one-quarter of a length ahead. (Time—Longfellow, 10 min. 10 sec. Albion—10 min. 15 sec. The Undine may feel proud of being able to make such a large turnout solely in the season. There were rumors of club races among the Pennsylvania, Malta and Quaker City Clubs, but none came off. Oscar Welf, the bow oar of the Pennsylvania crew, of last year, left his club and joined the Quaker City crew, which looks as if the latter meant business in the spring. Very truly yours, SETH GREEN.

Answers To Correspondents.

- D. L. HUGH, Great Jones street.—You article in our next issue.
SODDERICK.—Is there good gunning at Attica, twenty miles east of Buffalo? Ans. No.
PIFFTON.—You would oblige me by sending your address to this office, so that we can communicate upon the subjects referred to in your notice.
GASCONADE.—Z. A. L., of Colman, Mich., wishes you to inform us of the game birds, animals and wild fowl of the Ozark Mountains and along the Gasconade River.
JOHN S. B.—Will you please inform me if paper shells can be used in a Remington single barrel, breech loading shot gun; if so, what size? Ans. Yes.
MAGNETEAS.—We have a second paper on hand from the author of the recent article on the Magnetite Gun, which we shall print in our issue of December 10th.
A. C.—Will you kindly inform me of the best locality on the eastern shore of Maryland for duck and quack shooting? Ans. Why not go to J. O. Meyer's place near Green Spring?
J. O.—Please inform me how to take care of gold fish; how often to feed them, and upon what food, &c. Ans. See FOREST AND STREAM, Vol. 2, No. 16, page 245, instructions by Seth Green.
F. C. P.—Do you consider the Remington 10 bore breech loader

\$45 shot gun a good shooting gun for fifty yards? An entire season's use of one in Florida last Winter proved most satisfactory at all ranges.

WEEKLY, Washington.—Can you refer me to any good lined and work an American quadrants and slide the best? Ans. Anderson's Bucknors, in three volumes, price \$10. Published by Lockwood & Co., New York.

PROVIDENCE.—Where can I find a day's shooting in this vicinity? I do not wish any shooting, for I do not think that good shooting can be obtained? Ans. Why go abroad for news from home? Write to A. B. Harrower, Providence, R. I.

NEW HAVEN.—Can you inform me whether Holahrd's English duck shooting suits are to be obtained in New York? I can find no advertisements to that effect. Ans. No New York agency. By sending us your measure we can fill an order.

KENNESAW.—Will you kindly inform me if it is against the law to take lobsters in this State at this season? A friend says that under the new law, none can be taken between Aug. 1 and April 1. Ans. Aug. 1 to Oct. 15, none to be taken; from Oct. 1 to April 15 to be taken only exceeding 100 inches in length; while from April 15 to Aug. 1 there are no restrictions.

C. E. W., Nashville.—Will you please inform me what a muzzle loading gun, say 12 gauge, 30 inch barrels, loaded with 2 1/2 dr. powder and 1 oz. of No. 6 or 7 shot, at 70 yds, should do to be a good shooter for general shooting? Ans. Your gun should dispose evenly on a 3 inch range, and should be accurate at 50 yds. shooting, say as an average shooting at 40 yards. Better load with 1/2 dr. more powder.

MORRIS.—We think that the kinds of fish you name as inhabiting the lake mentioned, are about all that will thrive in it. It is of no use to put fish in water not suitable for them. Parties to stock their waters will know the kinds of fish to put in different kinds of waters by reading Seth Green's circular, published in FOREST AND STREAM, Nov. 19th, 1874.

WATERLY, Md.—Will you please inform me through your answers to Correspondents, the names of several places in Georgia and Alabama where I will probably find good general shooting after the middle of December? Ans. You can scarcely go anial on any of the rivers and bayous, for ducks, deer, bears, coons, &c. If you wish wilderness shooting, not about proximity to civilization, go to Butler, Choctaw county, Alabama.

SAND FLEA.—1. What place on Indian River, in Florida, do you recommend for shooting and fishing, where a man can be comfortably housed? Ans. If our correspondent—Major Geo. J., Alden at New Smyrna—is not already full, he can accommodate you. At the Ocean House, near by, you will fare tolerably well at \$2.50 per day. 2. What kind of boat I take for fishing, and what kind of boat should be put on, centre-board, centre-board, cent-rigger boat, about 22 feet long, with a dory, is the thing. 3. Where shall I inquire for passage on a schooner going to Indian River? Ans. Van Brunt, 75 South street.

A. M. SHERMAN, Eau Claire.—Send me your best plan of dog kennel for six to eight dogs, with facilities for breeding, and outline a backwoodsman? Ans. To give you a plan for a dog kennel with breeding apartments attached for house, stable, or poultry, as you should be considered, we would have to see the entire plan. Ans. We have a circular on this subject. If you refer to Stoubridge, Frank Forester, Yonah, or Dicks, Mayhew, and Hutchinson, you will find detailed instructions as to how it should be arranged. Our columns are limited, as you can see.

FAVORITE.—How can I rid my canary of lice? Ans. The cage must be thoroughly cleaned and scoured, the bird must then be taken and his feathers filled with a German insect powder that comes for the purpose, and sent you free of charge, at evening, while each should be put on, cage, taken off and shaken out the window or before the fire before you go to bed, replaced, removed, and shaken again over the fire before in the morning. This is to be followed up closely until not a louse is left. If your bird is not moulted well, is dumpy and does not sing, he is without doubt lousy.

W. L. L.—The subscriber being desirous of procuring a dog for hunting and for the household, I want to know if you have any good, quiet and woodcock. What kind of a dog would best answer my purpose, how much it will cost, and where can I procure one? Ans. You cannot possibly have a dog that will be good on rabbit, quail and woodcock combined. For rabbits, get a hagle hound; for feathered game, we advise you to purchase a steady pointer or setter, as we judge you have had little experience in sporting. Our advertising columns will direct you in purchasing either; price vary.

N. Y. FIREMAN.—I have got a young hagle hound, and I would like to know the best way to break him for rabbits. I have been looking for an old dog to take him out with, but cannot find one, so I will have to break him alone. By giving me 2 or 3 few points through your valuable paper my will very much obliged.

W. G. D., Philadelphia.—Will you please answer through your paper: If I put a dog on a rabbit trail, will the companionship of an other hound, if he is well bred, should take the trail when a rabbit is started. Teach him to come in when the gun is fired, that he may know it is killed. This is about all that is necessary. We advise you, however, to make extra allowances to have him run with older hedges.

W. G. D., Philadelphia.—Will you please answer through your paper: If I put a dog on a rabbit trail, will the companionship of an other hound, if he is well bred, should take the trail when a rabbit is started. Teach him to come in when the gun is fired, that he may know it is killed. This is about all that is necessary. We advise you, however, to make extra allowances to have him run with older hedges.

W. E. P.—I have a gun case which is made of sole leather, and having been wet has become very stiff and warped. Can you inform me what I can do with it to make it soft and pliable? I have had it at harness makers and they did not improve it. I have had it in a tannery, and they have put it over a large vat of water, and it has become so soft that I cannot use it. I have tried to grease it slightly with neatfoot oil, hammer, and "doh" it, Indian fashion, with a smooth stick rounded at the end—that is, rub it hard and thoroughly, and manipulate it before as hot as I am possible. If you can afford it, cut up the old case for gate hinges, and buy a new one.

W. S. R., Attleboro.—I have a four month old pointer pup that is troubled with worms. What can I do with them? I also tell me something about the feet; what is best to give him, and how many times a day he should be fed? Ans. A certain cure for worms in dogs is the administration of very finely powdered glass, made into a ball about the size of a gooseberry with lard and ginger. The glass must be impalpably powdered or it will do mischief. About three hours afterwards give a mild purgative. This is Yonah's recipe, and has been tried with success. Feed your puppy on Indian meal mush, made afterwards with little fish. Divide what would be one good meal into two parts and feed twice a day, morning and evening. We fear your dog will take distemper in the Spring badly.

JOHN JACK, Brooklyn.—I wish to find out in what manner I should proceed to give my gun a 7 1/2 lb. 12 bore muzzle loader a thorough and systematic cleaning, so as to determine the residue of powder and shot, and also in loading, so as to get the best possible result in shooting with an unpleasant recoil. Also what points are to be especially considered in such a trial? I should also like to know what the points are that go to make up a good pattern of shooting from such a gun as mine? Ans. 1. Practice with various charges of powder on paper patterns of a certain size, and note how many pellets will enter it at various distances, and with different charges. 2. The deduction you must make is to know at what distances and with what charges your gun settles or shoots closely. Keep an account of each shot fired and its result, and you will then have a thorough knowledge of the power of your gun.

—We will positively answer no more questions through our Correspondent's Column from anonymous writers.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND EXERCISE.

PUBLISHED BY

Forest and Stream Publishing Company,

AT

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
 (POST OFFICE BOX 2532)
 125 SOUTH THIRD STREET, PHILADELPHIA,
 COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double columns 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, DECEMBER 3, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notices of their movements and transactions, as it is the aim of this paper to be a medium of useful and interesting information between gentleman sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and commendation of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will endeavor to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the direction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

SATURDAY, December 5.—Racing at New Orleans, La.
 MONDAY, December 7.—Racing at New Orleans, La.
 TUESDAY, December 8.—Billiard match between Victoria and Dion for the championship of the French game, at Tammany Hall.
 THURSDAY, December 10.—Billiard match between Rudolph and Gardner, at Tammany Hall.

OUR SECOND FLORIDA EXPEDITION.

THE publishers of the FOREST AND STREAM have inaugurated and successfully carried out a number of expeditions for research in the geography and natural history of this Continent, from which, no doubt, much valuable information has been gathered. We have now on hand no less than two additional expeditions. One of these is noticed at length in another article, and is no doubt the greatest effort of the kind attempted anywhere, rivaling the African and Indian hunting expeditions of Cumming, Grant, Speke, and other famed hunters, and even vying with the gigantic efforts of the great Barnum himself in the originality of its design, the composition of its personnel and material, the completeness of its outfit, and the extent of its scene of operations.

The other expedition to which we have not referred heretofore, is in some measure supplementary to our Florida expedition of last Winter, which resulted in a very satisfactory survey of Lake Okechobee, of which scarcely anything was previously known, the discovery of a practicable water route thereto, and the procuring of additional information of special value to sportsmen and naturalists. Of many portions of the west coast of Florida, bordering the Gulf of Mexico, just as little is known, that region being a terra incognita even to the residents themselves. Steamers at certain intervals of time touch only at the few chief points along their routes, so that long reaches of intermediate swamp, hammock, bay and inlet remain unvisited and entirely unknown, save to a few cow-herders and the roaming Indians who visit them occasionally to hunt and fish. It is our purpose to explore the whole of this coast most thoroughly with a sail boat, and instruments of our own, in charge of competent persons of high scientific ability, and already familiar with much of the coast. To do this will require the whole Winter and carry us far into the Spring. The expedition will start December 7th, and the route thereof will be via Charleston to Cedar

Keys, Clearwater Harbor, Tampa, Manatee, Sarasota, and Charlotte Harbor, with its numerous Keys, including a thorough examination of the Caloosahatchee River to the farthest point that can be reached by boat; and if possible a visit to lakes Flint, Hickpochee, and Okechobee. It was a part of the original plan to include an exploration of the Suwannee River from Ellaville to its mouth, a distance of some two hundred miles, but the time allotted to the expedition will be too limited. To indicate the great importance in which this enterprise of ours is held by the intelligent citizens of Florida, as well as by the superintendents of the various lines of communication, it is most gratifying to us to state that free passes and transportation for boat and outfit have been furnished without hesitation over all sea and inland routes that cover the field of our explorations, and that our representatives have been promised all the assistance that can be rendered them.

While we are guided only by the desire to bring the hidden secrets of that country to light, to reveal its beauties and make known its treasures of natural history, we feel that we are at the same time aiding in developing not only that region, but the whole of Florida, as we attract attention to the excellence of the country for invalids, sportsmen, and even those interested in fruit culture.

For the prompt alacrity which the citizens of Florida have seconded our efforts to make their country known, and for the courtesies so freely presented to us by the officers of railroad and steamer companies, we beg to return our thanks, and to hope that our expeditions will prove of even greater advantage to them than they anticipate.

CHANGES IN ANIMAL LIFE.

THE success which has attended the re-explorations of the Government scientific surveys amidst the fossil cemeteries of our distant territories, proves how abundant animal life was on this continent in the misty past; long ere the immense fields of ice plained the earth and rendered it fit for man. The variety of the species is also something startling, for where one or two now exist, there were hundreds then, and each was apparently more distinct from its kindred than those known to the world of science at present.

The abundance of fossil life, and the numbers of species, proves that this continent is really the oldest portion of the globe; that it is above all others the land most adapted to variety and profusion of life, owing to its luxuriance of vegetation and different types of climate, and that it is the latest burial ground of animals in the world.

From the profusion of animal life in the past it would seem that Nature is now working towards a smaller range of species, and that these are the most useful to man; in fact that such only will live as are best adapted to his purposes. Those which were of no comparative utility to him have passed away since his advent, and now that he is monarch of creation, he is aiding Nature in the work of extermination and leaving only those creatures that please his fancy, aid him in subduing the earth, or possess economic value. The preservation of the latter classes is now a duty the civilized man has to perform if he would leave those that follow him some representatives of those that furnished him pleasure. Another general deduction one might make from the lessening of the numbers of species is that Nature is working for conciseness and unity, and that her aim is to make families as compact as possible, that harmony might reign throughout all her works, and that order might assume the place of apparently erratic fancies. If this deduction is correct we may expect a decrease in our present number of species as soon as they have performed the duty allotted them in life, and their total extinction, or else a transformation, or rather a superseding by other types of creation better adapted to the changes and progress of the globe. We have learnt from the researches and investigations of scientists that one form of life dies and is superseded by another, and that this also becomes extinct for good, or else merges into another, according to the exigencies of the occasion. As this new type increases it holds sway over all others of its class for a time, until that is also deposed by another species; and thus the changes of life occur, first one species and then another occupying the throne of power, until each has accomplished its mission, when it disappears.

Now if this rule holds good in the lower forms of life, why should it not in the higher; and why should it not continue until the various races of mankind at present in existence disappear, and are superseded by those possessing more homogeneity, and more intimate relation in physique and mental characteristics? If this idea is followed out we will find the Caucasian race the dominant power of the world; the others being only its servants. We find that in most countries where the pale face plants his standard that the aborigines disappear before him, and that he becomes monarch of the new lands. This would prove the correctness of the assumption "that the fittest lives," and that it is only those persons and races who are able to conquer by mental and physical prowess the difficulties which surround them, that are of use to Nature, and, like certain species of animals, that it is these she retains to carry out her work and bring to light her concealed laws. If so, it behooves every one who would desire to be considered among those fit to live, to so improve their mind and body that they may be able to meet all exigencies, and thus occupy those in the onward march of progress and be among those who are crowned by Nature with the chaplets of victory.

As the law of life seems to be to struggle and grow strong, it behooves us to obey it, if we would not sink

early in the contest for future supremacy, and be reckoned among those unworthy to live.

The decrees of Nature seem to point to a condensation of creation into closely-allied and powerful families or orders, so that in all future contests between these it will be a war of giants and only the fittest will survive. If the changes of the past continue, we may expect the future to be entirely different from the present, not only in its fauna but in its mode of thought, and that these transformations will continue until we have reached that acme of perfection when Tyndall's ideal man will rule the world, and there can be no quarrel, because it would be a war between kindred people or races.

A GREAT HUNTING PARTY.

THIS great land of ours has witnessed more gigantic schemes than any other of modern times; but it seems that we are not content with past efforts, and the glory they have brought to us, but desire to keep enlarging upon their magnitude, besides making them as novel as possible. The most towering schemes are entered upon here with as much assurance of success as if they were trifles. Hesitation is looked upon as cowardice, and caution as a want of pluck and determination. This faculty of deciding every scheme undertaken a *fait accompli*, is a marked characteristic of our people, and comes from their enormous energy and self reliance; and these combined are apt to lead to success, even when the probabilities point the other way. Every great economic enterprise undertaken so far throughout the country has been carried to a prosperous issue, and we have no reason to suppose that any scheme combining the aesthetic qualities in one grand whole, should not also prove successful.

These remarks are preliminary to our announcement of a grand hunting expedition that is now in process of organization in the West, that land of limitless prairies, and the birth place of schemes as broad as its rolling plains. The projector and organizer of this expedition is Col. W. C. McCarty, a gentleman whose experience as a soldier and huntsman extends over three continents; for we learn that he commanded a regiment of Texas cavalry during the late rebellion, and at its close joined Maximilian's forces in Mexico. When that ill-fated prince met his death, Col. McCarty went to Europe and followed the standards of France in the Franco-Prussian war, until they were lowered at Sedan. After that contest he went to Egypt and entered the Khedive's service as Adjutant General, but desiring to return to his own land, he resigned his position, and on reaching home was appointed to a position in the western department of the Bureau of Mines and Mining by the Government. This he retained until recently, when he was compelled to resign in order to complete the organization of his great hunting expedition.

According to what we can learn he has been importuned at various times during the last three years by some English gentlemen to undertake an expedition that should be complete in all its appointments, for the purpose of chasing the wild animals so numerous in the West and Southwest, and dallying among the game fishes so abundant in many portions of the country. These importunities at length prevailed; so he went abroad to finish the necessary arrangements. The programme as now prepared is, that a hunting party consisting of one hundred gentlemen, and their servants, horses and dogs, is to leave England the first week in May, and after visiting New York and vicinity go to Chicago, the headquarters of the organization, where they will be joined by several American sportsmen. From this place they will go to Dallas, Texas, the general rendezvous, and here they will be reinforced by one hundred Texas Rangers, who have been engaged for the entire trip, and by sixty Tonkawa Comanche Indians, whose duty will be to herd the large game while the others pursue it, and to give exhibitions of the dances and customs prevalent among the children of the boundless prairies.

When the organization is completed the expedition will move to Northern Texas, and there engage in the pursuit of the deer and antelope with hounds, so that it may revive memories of the stag hunts so popular in England and Ireland, and give all an opportunity of testing the difference between a "cross country" canter and a wild gallop on the prairies. The visitors will also be taught the different styles of hunting employed by our Western Nimrods, especially that known as "coursing." When this species of hunting is exhausted the *chasseurs* will take dashes after the shaggy buffalo for a certain time, and after that they will either engage bruis, beard the cougar in his leafy retreat, pursue the gaunt wolf over hill and dale, or take a run after Reynard to the wild music of a pack of hounds. The jack rabbit (*Lepus arizonae*), will also afford them sport, as it will be chased with greyhounds, and this must certainly prove interesting to those who are attached to coursing. In order to give them an opportunity of using the shot gun as well as the rifle, all the game birds of the region, which include the wild turkey, the quail, the prairie chicken, pinnated and ruffed grouse, and other species, will be sought in their covers. This will afford them an opportunity to enjoy every variety of wing shooting, and should therefore please the most fastidious follower of Diana. Those who desire to show their horsemanship, or learn to handle a larial with dexterity, can engage in the inspiring exercise of catching the wild mustangs of Texas, and if necessary breaking them, so that they can have circus exhibitions of their own.

The party will next engage in angling, and as they have many species to select from in the waters of that region, they will have sport indeed,

Texas being done, the party will cross into Colorado, and emerging at Denver, will take the transcontinental railroad to California, thence proceed to Oregon and Washington Territory. All the game animals of the Pacific Coast will be assailed in succession, but special attention will be given to the grizzly bear and the ponderous elk. Every place having any scenic attractions will be visited, so that the trip may be as complete as possible. As soon as the Summer wanes, the party will return to Kansas to enjoy Fall hunting among the buffaloes, prairie chickens and other game; and after this exercise all will go to the Great Lakes and enjoy what fishing and hunting they and their vicinity can afford. On their return from this classical region they will visit Washington, thence return to New York and England, arriving home about the middle of December.

This will give six months of hunting, enough to satisfy the appetite of the most insatiate Nimrod.

For fear of any mishap, the expedition will be complete in every detail, so that it will be its own commissary and protector in case of an attack from the Indians. The commissariat will contain the choicest viands of the country; the quartermaster's department will be able to supply any number of horses and carriages that may be needed, and, finally, the *cuisinier* will be presided over by one of the best cooks in the West. To drive care away, a full brass and string band will accompany the expedition, so that when the weary hunters return from the chase, their fatigue may be banished by the dulcet notes of sensuous music. In order to meet all emergencies, a surgeon and assistant will be a portion of the organization, and no small one either, if the programme is fully carried out. By this combination of elements the party will be complete in all its appointments, so that it might be termed a sylvan excursion were it not for the virility of the chase, and the fact that the hunters must sleep in tents, and without any mattresses.

This scheme is a large one, and is certainly capable of being carried to a successful issue provided gentlemen enough can be secured to pay the necessarily heavy expenses. No other country but this could originate such a gigantic hunting scheme, and few, except the originator would dare to carry it out. The expedition when on the march would number about thirty wagons, ten ambulances, one hundred and sixty horses, and two hundred and fifty men.

We understand that some American gentlemen have already given in their names as subscribers and that a few more will be taken, but the great bulk of the hunters are expected to hail from England. The toils, dangers and amusements of the party, and the salient points of the country they may visit will be perpetuated by an artist, and a photographer and a reporter to be designated by the editor of FOREST AND STREAM, and their joint work will be issued in book form under the same auspices after the return of the expedition.

As the main object of this excursion is to initiate European sportsmen into our mode of hunting, and to make them acquainted with the grand scenery of the country, the expense must be a mere trifle compared with the result obtained. He who desires to enjoy such pleasures of the chase as he cannot procure elsewhere, and he who delights in the beauties of Nature, should be enamored of this varied programme. The originator is endorsed by the leading gentlemen of Chicago, and the Governor and other prominent citizens of Texas, and this should be sufficient guarantee for the fulfillment of any promise he might make. He has also been promised the co-operation of the C. B. and O., and M. K. and T. railroads. So far as we have been advised of the details of this enterprise and the countenance given it by prominent citizens of the West, it has our fullest sanction, and we shall do all in our power to expedite it.

SHOOTING BOX.—We designed last week to call attention to the advertisement now in our paper of a fine shooting property near Philadelphia. It is situated on the North East River, about five miles above Turkey Point, and the same distance above the mouth of the Susquehanna River, contiguous to the Grand Flats which abound with canvas back and red head ducks, in season. There is plenty of upland game, quail, woodcock, and pheasant; and there is no better place for fishing in this part of the country. The present owners have purchased the Seneca Point Farm in the immediate vicinity and have no use for this property; consequently it will be sold at a bargain. The property is two hours ride from Philadelphia, ten miles below Elkton, and is very retired, yet easy of access.

—We are indebted to Prof. Baird for his very valuable report on the fishes of the Atlantic waters. The pamphlet is a most valuable one, as it is prepared in the most painstaking manner. Our summary is crowded out of this week's issue.

—On the 15th November, the Esquimaux Indians of Labrador murdered two families consisting of eight persons, one of them a woman, at Indian Tickle, a fishing station on the coast. The Indians retaliated for having been publicly whipped for stealing. This is the first instance of criminal or troublesome conduct among the Esquimaux in Labrador in the memory of the oldest fishermen, and the effect of the unfortunate circumstance will probably be disadvantageously felt for years to come.

—The ball of the Royal Canadian Yacht Club was one of the most agreeable affairs ever held in Canada.

CREEDMOOR.—The last regular contest of the season came off last Saturday at Creedmoor for the *Turf, Field and Farm* challenge badge. The competitors embraced the best contestants in the Amateur and National Rifle Associations, but Mr. O'Kelly has again been the fortunate victor. According to the terms on which it is offered it is necessary to win it three times in order to retain it permanently. It is shot for at the 200 yards range, with any rifle; position standing. Among the competitors was J. K. Milner, the celebrated shot of the Irish team. The contest was a very close one, and resulted in a tie between Lieutenant P. W. Hoelle and Mr. J. O'Kelly. Both gentlemen scored six points. Lieutenant Hoelle, in shooting off the tie, made an outer, and Mr. O'Kelly making a centre, was declared the winner. Mr. J. T. B. Collins and Mr. E. H. Madison tied for the third prize. Having shot off, Mr. Collins was declared the winner. Colonel Gildersleeve, in presenting the badge to Mr. O'Kelly, complimented him on being the only marksman who had succeeded in carrying off the badge in two successive matches. The following are the scores made by the two contestants:

Name	Score	Total
J. J. O'Kelly	4 3 2 3 4	16
P. W. Hoelle	4 3 2 3 4	16
J. T. B. Collins	3 3 3 3 2	15
E. H. Madison	3 3 3 3 2	15
J. K. Milner	4 3 3 3 2	15
Lieutenant H. Fulton	3 3 3 3 4	15
H. A. Gildersleeve	3 3 3 3 2	15
J. H. Holland	3 3 3 3 4	15
Captain Barker	3 3 3 3 2	15
Sergeant Lee	3 3 3 3 4	15
Lieutenant G. W. Wingate	3 3 3 3 4	15
H. S. Jewell	2 3 3 3 4	14
George Crouch	4 2 3 3 2	14
L. J. Price	3 3 3 3 2	14
Captain H. B. Smith	3 3 3 3 2	14
P. Lark	3 3 3 3 2	14
B. E. Valentia	3 3 3 3 2	14

J. B. Holland	0 2 0 2 0	4

PROMPT ACTION.—The Amateur Rifle Club held a special meeting at the First Division Headquarters, in West Thirtieth street, last week, Col. Wingate, the President, in the chair. An amendment was made to the by-laws, fixing the initiation fee at \$10 on and after December 1. The committee recently appointed to decide upon the disposition of the silver cup presented to the club by Major Leech, recommended that it be designated hereafter as the "Leech Cup," and subjected to annual competition by the members of the Amateur Rifle Club, the winner to retain it in his possession for one year. On motion of Lieut. Fulton, it was resolved to request the National Rifle Association to appoint a committee to co-operate with the Executive Committee of the Amateur Rifle Club in making the necessary arrangements for the international match, to be contested at Dublin in 1875. A committee of three was appointed to raise a subscription among the members for the purpose of providing a testimonial to be presented to Lieut. Fulton, as a memento of the remarkable score made by him at the late international match. After some further routine business the meeting adjourned.

THE GATLING GUN CONTROVERSY.—The recent controversy between Colonel Laing, of the Seventy-ninth Regiment, and the officers of the National Rifle Association, relative to the proprietorship of the Gatling gun offered at the annual contest at Creedmoor, has brought the following reply in response to the letter of Colonel Laing, published in our last issue:

OFFICE NATIONAL RIFLE ASSOCIATION, }
NEW YORK, Nov. 23, 1874. }

Lieutenant Colonel Joseph Laing, Commanding Seventy-ninth Regiment, N. G. S. N. Y.:

Sir: We are in receipt of your lithographed letter of the 19th inst., informing us that you have reconsidered the purpose you at one time entertained of resisting by legal process the transfer to other hands of the Gatling gun which was last year entrusted to the keeping of your regiment.

The officers of our Association have given no heed to the report that you contemplated the action you have reconsidered, believing that you could not fail to reach the conclusion you have when you remembered that the Gatling gun was entrusted to your regiment in full reliance upon your responsibility as soldiers and your honor as gentlemen. The authorities whose full control of that prize you acknowledged by accepting it at their hands, have this year awarded it to others; in accordance with the terms of the match in which it was offered and the rules of the Association, by which they were bound equally with you, and to which you as well as they have given voluntary adhesion.

As to the control of that or of any other prize, we should not, under any circumstances, enter into a contest, legal or otherwise. Our duty was done when we decided who was entitled to the prize, under our rules and the conditions governing the Gatling match. This decision was reached by the unanimous vote of our Board, not that of a majority, as you incorrectly state, upon each and all of the scores disallowed under our rules, a majority of which scores belonged to other regiments than the Seventy-ninth.

To answer your various objections to this decision in detail is to continue a controversy which has already been protracted. We will only say that this unanimous conclusion of our Board does not sustain your *ex parte* statement in regard to the circumstances which compelled the exclusion of the scores of Privates Keller and Irwin. This match is the first case that has arisen where the score

made by the representatives of any regiment has been disputed, and imposes a most unpleasant duty upon the Board which they gladly would have avoided. As it is, a reference to our rules will show you the necessity we were under, of either recording a score which you yourself admit Mr. Keller did not make, or of rejecting his score altogether. If his score was correct it should have been allowed to stand; if incorrect, it was because his ticket had been altered—as you agree with us it had been—and such alteration under our rules compelled the rejection of the ticket altogether.

Mr. Irwin's score was disallowed by the statistical officer, General Wood, with four other scores, in other regiments, because of shooting at the wrong target, and the Board, after a most thorough investigation, voted unanimously to sustain that officer's action. Your suggestion that the tickets of all the competitors should be examined to see who shot at the wrong target, is a good one, and was followed in this case, all the scores made at the wrong targets being disallowed.

Having reached our conclusions, in regard to the score to be allowed in the Gatling match, by a unanimous vote, after a most thorough and patient investigation, we see no reason to alter those conclusions, however we may regret that they should be displeasing to so gallant a regiment as the Seventy-ninth. We are anxious that the matches at Creedmoor shall not be made the occasion of unpleasant controversy, and it is to avoid this that we adhere rigidly to our rules. If there has been any laxity heretofore, it neither can nor should be admitted as a precedent for the future.

On behalf of the National Rifle Association,
WM. C. CURTIS, President.
HENRY A. GILDERSLEEVE, Secretary.

—The officers of the Twelfth Regiment, Colonel John Ward commanding, contested for the Boylan badge, open only to the officers of that command, last week. Lieut. Charles Heizman, of Company B, was the winner for the second time. This match was the concluding contest in this command for the season.

—At a recent meeting of the officers of the Second Regiment, Connecticut, N. G., it was resolved to send a team to contest in the all comers' match at the rifle tournament at Creedmoor, Long Island, next year. During the interim the members of the regiment will practice at different distances, and from the number making the best average scores a team will be selected.

GENEROUS.—Our excellent cotemporary, *La Vie Sportive*, of Paris, has made out our people to be very generous indeed by its assertion that the moment the Amateur Rifle Club accepted the challenge to shoot the Irishmen in Dublin next year the amount of money necessary to defray all expenses to the Green Isle was made up immediately by our citizens.

This is a little premature, but we hope ere the time for action arrives that the assertion will be fulfilled.

—The Hon. A. T. Brinsmade, President of the National Sportsmen's Association has issued an address in which he reviews the motives for calling the last Convention at Niagara, and the resolutions adopted thereat. These were printed in our columns at the time of their passage. In conclusion he calls upon all sportsmen, clubs, and other organizations to aid in carrying out the tenor of the resolutions then adopted, and hopes that the next assemblage which meets in Cleveland, Ohio, in June 1875, will have delegates from every State and Territory in the Union.

ATTENTION AMATEUR CLUBS.—A Philadelphia correspondent sends us the following letter, and as he seems to think his proposition worthy the consideration of the amateur clubs, we call their attention to the matter:

EDMUND FOREST AND STREAM:

In a late issue of your paper is an item which might be worthy of your notice. It is the report on the match between the New York Rifle Corps and Jersey Rifle Corps, at Union Hill on October 29 last. The score, on page 5, is easy to understand without a knowledge of the language. Each marksman was allowed 10 shots, distance 600 feet, target divided in 25 half-inch rings, rings 20-25 in the black, (bull's eye). The report closes with the remark that the two corps can put forward a number of marksmen who could well compete with the celebrated American Team of Creedmoor (*i. e.*, at 200 yards distance, as I understand it). It might be worth the while to inform the Amateur Club of this boast, and have the United Scheutzen Association (the New York and New Jersey Rifle Corps united), challenged by them.

A VON LEHMANN.

—We acknowledge the compliment of a visit from Capt. Parker Gillmore, of England, author of "Gun, Rod, and Saddle," and other works.

A TESTIMONY IN FAVOR OF ALTERED GUNS.—A Corinth, Miss., correspondent sends us the following, which we print to serve many inquiries—

EDMUND FOREST AND STREAM:

Having now shot my altered gun—alteration by Clark & Seidler—for some time, at a variety of game, and with all sizes of shot, I can safely say that in the working and shooting it is all that I could wish. It is still perfectly true in the locking, and firm and steady as it was when it came from the shop. I prefer it to either of two other breech loaders that I have used for several past seasons. It was an excellent gun as a muzzle loader, but as a breech loader is an extraordinary gun, both for pattern and penetration. I have been shooting the Oriental powder—perhaps an imitation—and it fouls a gun like the very mischief, Mr. Jos. W. Long to the contrary notwithstanding. *Tidbits* book on the "Duck."

—Some five men tried to shoot blindfolded at a target having a sounding board attached last Saturday at Staten Island, and they did enough to prove that such work is dissipating time, though they suppose that they have proved that one can shoot well from the sense of hearing alone, and without seeing the object aimed at.

—A Southern writer deprecates the cheapness of shot guns, powder and lead. He says the shooting of insectivorous birds has this year cost Alabama alone more than \$10,000,000 in the ravages done by the cotton caterpillar.

—William Thornlaw, a noted wing shot, of Yorkshire, England, has sent a challenge to Captain A. H. Bogardus to shoot a match of 1,000 pigeons for \$2,500 aside, give or take \$200 for expenses, the choice of ground to be tossed for; shooting to be at 21 yards rise and 60 yards boundary. His proposals state that the gun be held over the elbow till the bird takes wing. The match to come off within two months.

PALATINE, Ill., November 28, 1874.

EDITOR FOREST AND STREAM:

On the 23rd inst. the Palatine Shooting Club held their first match on the grounds of the South Ball Club. Although the club is not originally a snare one, there were some very nice points made. The Hon. S. P. Hopkins was elected president, F. J. Gilbert, vice president, and W. W. Whitte, secretary of the club. The principal object of the club is to see that the game law of this State is rigidly enforced in this section of the county (Cook), as well as to improve in the art of shooting. The club will have another shoot on Christmas day next.

F. J. G.

TORTOISES AS GAME.

PHILADELPHIA, November 18th, 1874.

EDITOR FOREST AND STREAM:

I have noticed in several sporting papers for some time past various articles upon the land tortoise, ascribing to it a peculiar scent, which is recognized and worked upon by hunting dogs. Some two weeks ago, while on a shooting trip to the interior of this State, I had a young setter dog out for the first time who had never seen game. The first point the younger made was on a land tortoise, much to my disgust. A few days after this, while hunting with a friend, his name dog Dash, an animal with a splendid nose, struck a trail in a small woods, and in a short time drew up on a point. This he held but a short time, however, and then quit, as if he had made a mistake. A few feet from his stand we found a land tortoise. Determined on investigating this, I dragged the creature for some distance over the leaves, then called up the dog and had him pass over the scent. He readily rose up the trail, but refused to make a second point. This creature must undoubtedly give forth a scent in a manner similar to that emitted by some game birds, although it may be in a slight degree. What an excellent chance for good shooting. Mr. Editor, might be obtained over this new game, even a novice, by moderate coolness, might be able to get in a night and left without much damage to the dogs and great credit to himself. As the dogs, a slow old pointer would be the best, but I think that even young and headless cocks would be retraced from chastity by being severely corrected once or twice; and then after the day's hunt the display of the spoils, the summing up of each one's total, not be with the greatest number would carry off the palm, but rather the fortunate possessor of the oldest and most valuable of the race, which would be the best. I will give names and dates of our forefathers cut indubitably upon the horny breast of this new game.

J. H. W.

HINTS FOR CAMPING.

AKRON, Ohio, November 9, 1874.

EDITOR FOREST AND STREAM:

During a three years' practice of medicine in Southern Kansas, I frequently get to travelers the suggestions herein noticed, and as frequently (if they returned) they were thanked, I thought, if you think them of enough importance to publish, they are at your service.

The writer made, in the Fall of 1868, a ten days' trip through Southern Kansas, "spying out the land" for a location in which to practice medicine and surgery. The country was new, and as the grasshoppers had been there, rats were correspondingly scarce. Some days the rainfall was so heavy, that the ground could not be trodden, and the man had to handle the fat pork and greasy corn bread which alone he fed his party of the citizens could offer him. Milk, however, as in most new countries that far South, he found in plenty. And now comes "the reason" for this letter, founded on an experience obtained by three years' practice of medicine in that country. It is a suggestion for the benefit of your readers who may wish, in the character of the "Solitary Horseman" to explore that far Southwest country. Let him take with him in the saddle bags (indispensable in a trip of that kind) a pound or two of good, solid, square crackers—"hard tack" if need be, soda crackers, if obtainable at the last little village through which he passes, and in his coat pocket, securely wrapped, a pound of salt and a ounce of ground pepper. Properly packed, the crackers need take but little room; the man is to be piped, no matter how fashionable his stomach, who cannot, after a good day's ride, make a satisfactory, and certainly digestible, supper of the crackers crumbed in the good sweet milk he is sure to find at any settler's cabin, especially when duly seasoned with the salt and pepper he carries with him.

Some of limited or no experience in the West may smile at the suggestion that salt and pepper be carried along; but the writer has found many families, rich in acres and herds, who were "just out of salt," and to whom a palatable and hearty breakfast has made of crackers and milk and pepper in his early salutes when he had wanted of course, and the man to "corn dodger," made all too "short" with hard, and the bacon swimming in its native grease, which served the more rugged stomach of his host, he would but weakly have bestirred, his mistaking for the next day's ride.

W. H. RAYNE.

FALL SHOOTING IN MINNESOTA.

ALEX. LEE, FREEBORN CO., Minn., November 18, 1874.

EDITOR FOREST AND STREAM:

Being a constant reader of your valuable paper I take the liberty of sending you a partial report of the season's shooting, which is now drawing rapidly to a close.

Our limited grouse shooting commenced August 15th with the annual chicken hunt of the Sportsmen's Club with the successful result of 979, and strange to say, very few were killed within ten miles of our town. Every one interested was on the qui vive, and each side confident there would not have to pay for the supper. To have a long day of it, all that possibly could, started the afternoon before for their camping ground, or some hospitable farmer's that happened to be their friend, with his team. Fun of hunting from field to field home, but fortunately for the birds, the rain that commenced falling about dark did not abate until nearly ten o'clock the next morning, so they were obliged to get a snub later start than they would have done had not the rain prevented by the time they had hunted their time out many were as far as twelve miles from home. This year, thanks to the Legislature, the law for grouse shooting was not as strict as in the fall of August, but fifteen days later than previous years, consequently the birds were much larger and fewer were killed. Some large bags have been made, three guns in the neighborhood of Rice Lake having killed in one day 220, while the hundredth with two guns was repeatedly bagged. But with all this, there are more old ones to be seen than for a number of years, and the prospects are, "rain or shine" and the weather "fit" next year they will be as thick as blackbirds.

Our duck shooting has not been a success this Fall, owing to the fine weather. Ducks were seen in countless numbers on the lakes, but the bright, warm rays of the sun induced them to remain in the open water, far from shore, and seldom flying, except when compelled to by some boat or then flying, but they were shooting decoys used. A few large bags were made that I heard of, the largest being bagged with two guns was 304, and as they were mostly mallards, they had a bad fall. Having pulled their boat to a clump of wild rice, which surrounded a small, clear spot of probably ten rods in width, and a favorite place for

that noble bird—the mallard—to light, shot them as they would fly over; the ducks that fell in the open water they secured; while the birds that fell in the rice they did not attempt to get, knowing it was useless to look for them in the dense rice. The mallard is their store. But I saw the 304, so can vouch for that part of it. Besides this instance, a hard day's work and few ducks have been the sportsman's reward.

Geese and brant have been very plenty, and a great number have been killed on the grain fields, where they go, morning and evening, to feed, returning to the lake in the middle of the day. It is a common sight to see fully two acres of ground covered with geese, standing so thick or close it would be difficult to see the ground. But the shyness of this bird forces the hunter to devise all manner of plans for their capture when they first make their appearance. You can fool them once or twice, by apparently driving by them on a trot, while in reality you are creeping round them, drawing nearer all the time until you are in a gunshot. But they soon learn this dodge, and other means are resorted to. Occasionally the flock will light close to a straw stack, and when such is the case the sportsman is well rewarded. One party bagged in one day's hunt fourteen geese and five sand hill cranes, and the same party, one week later, succeeded in bagging sixteen cranes and fourteen cranes.

Sand hill cranes can be seen by the thousands on the prairies. But all this sport is at and now. For two inches thick covers the lakes, and all that is seen of the aquatic fowl is occasionally a flock of ducks, of probably half a dozen, skimming the lake in search of an air hole; but as these are few and far between, it is reasonable to suppose ere this reaches you they will have taken their departure. The familiar yank of the wild geese is, at times, heard, but the cold weather makes it disagreeable hunting, so they are almost to go their way unmolested.

Fearing I have already encroached entirely too much on your valuable time, I am, very truly yours,

T. VARNON HATCH.

—Here with our good friend "Jueobstaff" discourse upon ducks and geese:—

EDITOR FOREST AND STREAM:

With a party of sportsmen from "Jersey" we recently took a trip down to Lane's, at Good Ground. We found the jolly gunner waiting for us at the station, and were soon nicely located at his comfortable and well furnished table and the day passed put out the boxes and moved a space on the marsh (the water being too high on the bars) to place his stools—some twenty-two or more live wild geese, that by indefatigable perseverance he has brought to an astonishing point of docility, and I might add of intelligence, for they seem to understand (especially one very precocious individual) just what is wanted of them, and seemingly take delight in carrying out their fellow bird's orders.

Several of the party had never witnessed this interesting ceremony, and were consequently on the qui vive for the opportunity. But alas! for human hopes, the wind shifted in the night, and upon turning out we were met by Lane with the unwelcome salutation, "No need to try for geese to-day, gentlemen; but we may get some ducks." And what those Long Island gunners do not know is, that with a fair wind, and the flight of wild fowl, I can't tell them, that is certain.

Instead of the storm (geese are expected to fly) just before it, it came of warm and still. Geese did not appear, and the ducks, most of them, would provokingly persist in remaining in the centre of the bay. However, we put up our stools, or wooden decoys, and loosed ourselves on our backs behind the weeds, and sea grass, while Lane sailed off, as he said, to "sit 'em up." Soon they commenced coming in by pairs and threes or more, and then a flock of broad bills of a hundred and fifty, or more, came right to us, and we had fair shooting for several hours, when the wind dying away, no birds approaching near us, we pulled up and stood for home.

WHY QUAIL ARE SCARCE ON LONG ISLAND.

EDITOR FOREST AND STREAM:

The other day I paid a visit to Good Ground in quest of ducks, and after a day without luck, returned to Lane's, and there being yet two hours to spare, I went to see the quail. I was accompanied by a black and white Spanish pointer—we sallied out. And now comes the point to which I wish to call your attention. We found but one covey, and that contained but six or eight birds. The quail, I saw told us, had been quite plenty, and he said there had been quite a number of them of consequence among them. What, then, had become of them? I had noticed on the tract at several stations, small boys, of from ten to sixteen years of age, coming in, offering for sale hundreds of quail, containing from two to half a dozen each. It did not strike me at that time that there would probably be no shot marks found on any, or at least, but few of them; but when I came to travel through the bush and found the multitudinous traps and snares set all over in every direction, I was not at all surprised at the result.

A party of sportsmen that joined us at Westington (they had been stopping at Raynor's) told us that it was even worse down that way, and that at a hedge of only one-eighth of a mile in length, they found by actual count forty-nine of these villainous devices. Now, is there no sportsman's club in that county for no law by which this outrage can be stopped? In a region of country so fertile for the propagation and rearing of these delicious and gamey birds (for they have been, at times very plentiful), it is a disgrace and a shame that they should be so slaughtered, for it not only destroys those that are caught to this pot hunting manner, but drives the remaining ones to other haunts, and the time is put far distant, unless something is done, when quail on Long Island will be as scarce as its congeners, the pinnated grouse.

J. CONSTAFF.

LATE WOODCOCK.

SALEM, Mass., November, 1874.

EDITOR FOREST AND STREAM:

Do you not think it unusual to have snipe and woodcock with us this time of year? Within four days one of my friends shot a snipe another, on the same day, flushed two. On the 25th inst. a friend hunting for quail saw a woodcock fly out of a cover where some hounds were working. He thought he would go look for the long bills. He started four, killed the snipe, and then he was about to start five, that he saw. They did not fly by the door, but were so afraid of him, and the ground from which they were started or flushed was covered with whittings, as were some of the neighboring runs. It seemed to me (I visited the place Thanksgiving morning) that there had been a flight of woodcock within four days. In one or two other runs my friend's dog almost got a joint showing that the birds had been gone long. I have frequently killed solitary woodcock much later—seven to the middle of December—and I started a snipe on the 11th December, also one on the same ground the 23d December. May not the continued dry weather have made the birds start around, and also stay a month later this year? Two of the birds shot were large like females, one was smaller like males. A good many sportsmen think the fall flight is composed mostly of males.

Very respectfully, &c.

There is almost always, perhaps invariably, a late Fall flight of woodcock from Canada. The birds are smaller and more hardy than October woodcock, owing, no doubt, to their being bred in the more rigorous climate of the region to the north of us. We alluded to this flight of woodcock in our issue of Nov. 5. We do not think that the sex is necessarily indicated by the size.—Ed.

—The furs received by the Hudson Bay Company during the past year at its Northern Department, have been sent to England by way of the Red River and New York. The business has been more than usually large the past season.

National Pastimes.

Secretaries and Friends of Athletic, Base-Ball, Cricket and other outdoor Clubs will kindly mail their contributions not later than Monday in each week.

—In our efforts to be thorough in all matters appertaining to our sphere we have spared neither time nor expense, a fact which is evident to the most casual reader. The FOREST AND STREAM is the only paper in the United States that has published complete reports of the winning yachts during the past year, and the character of the prizes; and the full score of each game of base ball of any importance. By glancing at the table in the last number, readers will see in a concise tabulated form the scores of 233 games, and a full analysis of each. A table of this sort must prove invaluable to those interested in the National game, as it contains every matter of importance pertaining to the subject.

—The New York Caledonian Club held their fourth annual hand-picked Scottish games at Jones's Wood last Thursday. The attendance was quite large, and though the ground was slippery, the matches were well contested. One of the most amusing features of the day was the egg race. In this the competitors have each placed before them on the ground twenty-five glass eggs, laid one yard apart, and he who is able to pick up all his eggs, one at a time, and put them in a box at the starting point, is considered the winner. The total distance run in this race is upward of two miles. The scrambling after the eggs created much merriment. The utmost good humor prevailed among the competitors in all of the games, many of whom were gentlemen of wealth and influence, representing the best society of the Scotch citizens of New York. Medals were awarded to the winners in the games. The following received prizes:

Table with columns for event names (Throwing the Light Hammer, Half Mile Race, etc.), names of participants, and their respective times or scores.

The Championship Committee of the Professional Association met at Earle's Hotel, New York, on November 25, to decide which club was entitled to the pennant for 1874. After an examination of the records they easily came to the conclusion that the Boston club exceeded all other of the championship contestants in their record of the season's play, and to that club was the emblem unanimously awarded. Taking the record contained in Mr. Chadwick's statistics of the season's play, they made up their estimate on that basis with the appended result, the figures below showing the games actually won and lost, and the games accrued after actual forfeited games:

Table showing statistics for various clubs: Clubs, Games Won, Won, Lost, Lost.

It will be seen by the above record that the Mutuals and Athletics stand first for second position, and the Philadelphia fourth.

Thanksgiving Day was, as hitherto, taken advantage of by the base-ball players to a very great extent, the fine weather admitting of play on nearly every field. The greatest gathering, however, was at Prospect Park, Brooklyn, where not only base-ball matches but cricket and football were participated in.

—The following clubs have made arrangements to join the Professional National Association next year, and the majority will take part in the championship campaign of 1875. The Eastern club, of Easton, Penn.; the Western club, of Keokuk, Iowa; the St. Louis base ball association, of St. Louis; and the Centennial club, of Philadelphia. The regular clubs will of course reserve their places in the arena, the list including the Boston, Hartford, Mutual, Atlantic, Athletic, Philadelphia, and Chicago nines. This will make eleven professional clubs which will be contestants for the whip pennant of 1875. Even now it is not difficult to perceive that the three leading nines will be those of the Boston, Athletic, and Hartford clubs, the players of which are as follows:—

Table comparing players from Boston, Hartford, and other clubs, listing names and positions.

The Winona Club, of Flatbush, played in 25 games during 1874, of which they won 19. Their best play of the game was in their match with the Aetna Club, which the latter won by a score of 2 to 1. They won games from every club they played with.

—The Pacific Club, of Philadelphia, closed the season of 1874 with the best record of any amateur club of Philadelphia, as out of 27 games they lost but 5. Five of their games were won by scores not exceeding 9 runs for the winning side, showing fine play.

The Colleges.

Yale expects to have its new boat house finished and ready for occupancy next Spring. The foundation piles have been driven and are now ready for the superstructure. Progress on this work has been long delayed because of a controversy as to the ownership of the site.

Yale has spent \$260,000 on new buildings in the academic and about \$150,000 in the S. S. S. Department, exclusive of the \$115,000 or \$125,000 to be expended on the new chapel.

In the last contest between the Cambridge students the Sophomores beat the Juniors at foot ball, in three games out of five. The games were played according to the Boston rules.

YALE COLLEGE.

NOVEMBER 30th, 1874.

EDITOR FOREST AND STREAM.—

In the coming Intercollegiate contest in Oratory, which is soon to transpire, Yale is not to be represented. When the subject of sending delegates to the meeting, preliminary to this contest, was broached here, it met with little or no favor, caused no excitement. Men among us of acknowledged literary ability, who could have maintained our honor with credit to themselves and to their Alma Mater, did not favor the project. At this date we have no cause to regret our action, and while wishing that the effort to produce a high literary culture may be crowned with the highest success, still we are content to be "out in the cold," as it were. Various vague rumors have been circulated, and defamatory articles penned, the purport of all of which is that we are afraid to enter such a contest. We let our shoulders pass untouched and untaunted, and are ready and willing, if it is necessary, to be dubbed conservatives, as we have been termed.

On Tuesday last our Thanksgiving Jubilee took place, and it was a grand success. It is one of those pleasant occasions peculiar to Yale, I believe, and always looked forward to with the utmost eagerness. Most of the old customs, formerly in vogue here, have been abolished, but still one, the "dinner of our day," left us. On the night of the Jubilee night the whole University is brought together, and songs are sung and various witicisms are indulged in, indicative of a great degree of pleasure and genuine good feeling. The exercises consist of an election of a President and Secretary from the Freshman class—the shortest and tallest students being selected, and they, in company with others as a body guard, are passed along over the heads of the upper classes, until at last they are safely deposited on the stage. The work of measuring them is merely nominal, and the most ludicrous measurements are announced—the more witty the better. The sermon, by a '75 man, was next, and it was a production replete with wit and local hits. The farce of "Two Can Play at that Game" followed by the minstrel entertainment by the Yale Glee Club, were well received. The Censors report that the same next, and consisted of a turkey, and mince pies before them. Taken as a whole, this year's Jubilee was fully equal to its predecessors, and much praise is due to the committee who had the matter in charge. I will conclude this letter by giving you a full record of the Yale University Base Ball Club—the champion nine of all the colleges—for last year, as it is worthy of record.—

Table with columns: Date, Opponent, Score, Location. Rows include April 18 - Yale vs. Hartford, May 16 - Yale vs. Hartford, May 29 - Yale vs. New Haven, June 5 - Yale vs. Athletic, June 10 - Yale vs. Princeton, June 14 - Yale vs. Hartford, July 3 - Yale vs. Baltimore, July 6 - Yale vs. Manual at Brooklyn, July 7 - Yale vs. Princeton at Brooklyn, July 14 - Yale vs. Harvard at Saratoga.

Summary—Yale, 51, opponents, 130; score in professional games, 51; opponents, 130; Amateur games, 43; opponents, 16; college games, 38; opponents, 8. Total—132 to 154.

AVERAGES.

Table with columns: Player, Position, No. at Base, Avg. per Inning, Avg. per Game, Total Runs. Rows include Hocklecks, Avery, Bentley, Maxwell, Nevins, Osborn, Foster, Smith, Day, Scudder, Bigelow, Totals.

Billiards.

THE LONG ISLAND AMATEUR CHAMPIONSHIP.—The amateur tournament, which recently terminated in Brooklyn with the success of Mr. Knight as the champion player of the Island at the French game, has had a sequel which has opened up the much discussed question as to what constitutes a professional player in the billiard fraternity. The Bowling and Base Ball National Associations decided that no members of their respective brotherhood can be regarded as amateurs who in any way make their living by the pursuit of the sport, of which they are exponents. But there is no National Association of Billiard Players in existence, and the question is, who is going to decide as to the quali-

fications of an amateur billiard player. The position in this amateur tourney case is one which will be likely to lead to a moment to organize an amateur association of billiard players. Such an institution is wanted very much, if only to revise the rules of play, and give to the fraternity what they do not now possess, viz.: an established code of rules likely to govern the billiard world of America. The first step—the principal difficulty always—is to adopt means to get together a thoroughly representative delegation. To do this, there is wanted not only billiard manufacturers, but both professional and amateur players. One difficulty will be to find men who combine in an association of the kind to serve the best interests of the game at large, aside from allowing their own special interests to govern them exclusively.

Rudolph is very sanguine about the result of his match with Garner, and in order to be sure of doing his best, practices daily for five or six hours. It is understood that Vignau will challenge the winner.

M. Adrien Tsar, the French champion hand billiard player, recently scored 1,480 in nineteen minutes, while playing a match at the Victoria Hotel, Weymouth, England.

Vignau beat U'bassy in Boston last week, the score being 500 to 430.

Canada.

On Tuesday evening a few members of the Tecumseh Snow-Shoe Club crossed the Mountain. Considering the small quantity of snow the shoeing was very good, on the other side of the Pines. We believe they are the first snow-shoers that have crossed this season. Last year the Montreal Club was the first to cross, on the 12th November. The Tecumseh met next Tuesday. This being the first regular tramp, a good turn-out is expected. On Saturday following the club tramped to Lachine—Gatineau.

About four weeks ago Messrs. Isaac and George English, of Omekeer, started down Pigeon River to trap muskrats. They returned about three days ago with over 900 skins. Had the weather remained open for another four weeks they would have doubled that number.

The snow-shoing clubs are preparing for the Winter campaign. The Secretary of the Montreal Club reports the receipts of last year to be \$1,070 89 and the disbursements \$1,066 11.

While Mr. John McKay and his son, of Mt. Dalhousie, were out hunting they discovered a monster, which they at first mistook for a panther, but when the animal faced them, standing upon its hind legs, it presented to their astounded gaze, features strongly resembling the human. It is described by the men, who were too scared to fire at it, as very large and terrible.

A novelty in lacrosse playing is to enjoy the exhilarating amusement by night; the necessary illumination being furnished by torches.

Two Brantford men recently walked from their native town to Hamilton and back, fifty-three miles, 11 hrs. 15 mins.

The Directors of the Provisional Board of the Toronto Curling Club have elected Mr. McGaw President and Mr. David Walker Secretary of the club. The new rink on Adelaide street, Toronto, is now ready for flooding, and will be fit for use as soon as the frost supplies a sufficient depth of ice.

New Publications.

Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our editorial rooms will be promptly acknowledged in this paper. Publishers are requested to promptly advise us of any omission in this respect. Prices of books inserted when desired.

BOOKS RECEIVED.

PROGRESSIVE PETTICOATS; OR DRESSED TO DEATH. AN Autobiography of a Married Man. By Roub. B. Roosevelt. G. W. Carlton & Co., New York, Publishers.

This work of alliterative and self-explaining titles is dedicated to Mrs. "Jonnie Jane Croly," who was kind enough to dedicate to this author one called "Batter or Worse." Whether the writer of the volume under consideration was moved to return the compliment by a sense of gallantry, or by a desire to solve a social problem, we are at present unable to decide, but judging from his well known penchant for returning favors, we should presume that the first motive had no small weight in inducing him to undertake his present literary labor. But on glancing at the pages we also detect that the purpose of the author is to aid all sensible reformers for women, and to do this he presents contrasts which attract attention immediately by their truthfulness and appropriateness. The style is trenchant, clear, and possesses that gossip-like flavor so pleasing in works of this character. We cannot enter into the details of the story, so we would advise our readers to peruse its pages themselves and enjoy its descriptions of the mysteries of domestic life.

DISEASES OF SHEEP. With familiar explanations, essays, &c. By Henry Cook, V. S. Philadelphia: Claxton, Remsen & Haffelinger.

This work will be found of much value to the Western farmer, as its ample pages contain a full description of all the diseases incident to this valuable animal; a full and accurate diagnosis and treatment of disease in its incipient, progress, and advanced stages. The wool grower who works this work will be found invaluable, as the common sickness of the flock, when first noticed, will enable the careful shepherd to separate the fit from the not, and have perfect control of them. This book, carefully studied, even by non-professional sheep raisers, will save the lives of many sheep. Help yourself, when possible, and employ a veterinarian in cases you cannot.

HINTS TO ANGLERS AND MISERIES OF FISHING. With numerous humorous engravings. Philadelphia: Claxton, Remsen & Haffelinger.

Although these maxims and notes on the ways of fish and fishing men are professedly by a "bangler," there will be found within the pages of this little *code morum* much truth, in which "no bangler" will be found. Every cross, morose, mercantile son of the rod should take it with him when he goes fishing for big trout. If he has bagged his ten pounds he can let it remain in his pocket and go home with his speckled buddies. If he has had bad luck, let him take out the little Joker, and read about the miseries of fishing, and patch his broken lines, stop swearing, and come again to-morrow. There is much philosophy in the work, and it is worth the price, which is only fifty cents.

Last Friday a drove of 1,000 turkeys passed through Barre, Vt. They were driven as so many sheep would be. When nightfall came they would, by general consent, all leave the road and take to the fences, for they could get them no further.

The run of the Western Club of Keokuk for 1874 was Myers, C.; Golden, P.; Jones, I. B.; Miller, 2; B. C. Goldiey, 3; B. Sallman, 4; H. H. Clark, 5; F. J. Riley, 6; J. F. O'Brien as sub. Knowlton is to be their new catcher, Brainard their pitcher, and Gill their new short stop. The Westerns played 82 games in 1874 of which they lost but 9, and five of these with professional nines. Their best victories were the following:

Table with columns: Opponent, Score. Rows include Western vs. National at St. Louis, Western vs. Louisville, Western vs. Empire at Keokuk, Western vs. Union at St. Louis, Western vs. Eagles at St. Louis.

A Northwestern pedestrian from Portland, Oregon, will attempt next May the feat of walking from San Francisco to New York in 100 days for \$10,000.

A walking match, fair heel and toe, came off at Deer-foot Park last Thursday between Joseph Lecky and John Muehler, of Brooklyn. The victory fell to the former in 41-50.

Weston walked one hundred miles at the Newark Rink in 91 hours, 32 minutes and 28 seconds. The best time accomplished was the seventh mile, which he made in 11 minutes, 28 seconds, and the longest was the eighty-fourth, which was made in 16 minutes, 29 seconds. After finishing his task he retired amidst the braying of a brass band.

Professor Judd, well known in athletic circles, had the grounds on which he proposes to walk five hundred miles in six days and a half measured last Wednesday. Mr. Smith, lately Surveyor, measured the track in the presence of several representatives of the press and members of the New York Athletic Society. The Professor has been very regular in his training, taking special care of his feet, in order to prepare them for the arduous ordeal they will have to undergo.

The messengers of the American District Telegraph Company, after being reviewed last Thursday, went to Myrtle Park to indulge in athletic exercises. The prizes were vacations of from one day to one week, with pay, and in some cases silver medals were also awarded. The first prize in the first foot race was won by John Horan, of the Thirty-first District. The first prize in the sack race, which afforded a great deal of merriment to the boys, was won by Weiss, No. 282.

One of the best contested wrestling matches that has ever held in this country came off at San Francisco November 14, between Professor Miller, an Australian wrestler, and Monsieur Bauer, a celebrated French athlete. The match was for \$400 a side and the championship of the Pacific coast. After the most desperate struggle, in which the Frenchman showed unusual science, Miller won the first fall, but the second and third fell to his adversary, who exhibited extraordinary qualities. The third was decided not to be a positive throw, but as the Gallic hero had injured his groin, his opponent gallantly refused to force him to an issue, so a new match for \$1,000 was made and that is to come off at an early day.

Daniel O'Leary failed in an attempt to walk fifty miles in 8 hours and 45 minutes, for a bet of \$100, at the West Side Rink, Chicago, Ill., November 14. He, however, covered forty-eight and one-third miles in the stipulated time, which is extraordinarily good walking, and the best for the distance ever accomplished in this country.

Chess.

THE METROPOLITAN CHESS TOURNEYS.—There are three chess tournaments now in progress in the metropolis, and the result is quite a re-awakening of interest in the game, so much so indeed, that the daily papers have deemed it of sufficient importance to give special attention to the subject in their news columns, a sure indication that the matter is of more than ordinary interest. The principal series of contests are played at the Cafe International, No. 294 Bowery, the headquarters of chess players in New York. In this tourney there are nearly forty contestants, and the number of games to be played is therefore large. The principal players are Messrs. Linnar, Allen, Albright, Dr. Barneil, Perin, Dill, McCutcheon and Murray. Thus far Mr. Albrert leads in the number of won games, Mr. Mason being second, and Mr. Delmar being third. The record of those who have won more than they have lost is as follows:

Table with columns: Player, Games Played, Won, Lost. Rows include Albrert, Mason, Delmar, Perin, Dill, McCutcheon, Peck, Linnar, Dr. Barneil, Dr. Murray, O'Neil, Barnes.

The second series of contests was those in progress at the Cafe Cosmopolitan, No. 1 Second avenue, under the auspices of the Down Town Chess Club. In this we put the record of the players who have thus far won more games than they have lost is as follows:

Table with columns: Player, Games Played, Won, Lost, Drawn. Rows include Lavaces, Rosenblum, Spencer, Greenberger, Simbach, Anders, Altmann, Dalzo, Klinger, Livingston.

Next comes the regular annual tourney of the Brooklyn Chess Club which is being held in the chess parlors of the club in the Mercantile Library building. In this we put the record of the most successful of the contestants standing as follows:

Table with columns: Player, Games Played, Won, Lost, Drawn. Rows include Dr. Barcott, Spencer, Horner, Ellwell, Phillip, Perlin, Robinson, Wagner, Peck.

The other players have lost more games than they have won.

The Horse and Course.

—Some pool racing came off at Fleetwood Park last Wednesday. The first race was between Dan Mace's bay mare Clara C. and running mate and John Murphy's bay mare Lady Dahlman under the saddle. The betting on this event was even. After five heats Mace's team was declared victor. The best time made was 2:34. The second trot for a purse of \$400, mile heats, best 3 in 5, was won by Orange Blossom. The third, three heats, was won by the geldings, H. Walton and Cheston to the starting post. The former was the winner in three straight heats. Best time 2:43. The next event was a sweepstakes for a purse of \$250 mile heats. The competitors were Tommy Moore, Bricks, Humpty Dumpty, and Sargenties. The former won after running six heats. Best time 2:47. Thursday witnessed three good trots at the same place. The first regular trot of the day was for a purse between John Murphy's sorrel gelding Sorrel Jake and T. Lee's bay gelding Judge Belle. The former won the race in three straight heats. Best time 2:43. The second event was a mate between C. Walker's brown mare Lady Annie and J. H. Phillips' bay mare Susie Clay. Lady Annie after losing the first half still had the call. The second heat was also won by Susie Clay. Lady Annie afterward went to the front and won the third, fourth and fifth heats. Best time 2:43. The third trot was between C. Simmons' brown gelding Cheston and J. Peter's gray mare Clara C. Cheston won in three straight heats. Best time 2:37.

—Fleetwood witnessed some interesting contests last Saturday. The first was between Charley Green to wagon and the gelding Fred in mile heats. Best time 3:34. Four horses contested for a purse of \$400, mile heats, best three in five, catch weights. Quinn's Tommy Dodd won in three straight heats. Best time 2:45 Tommy Moore, Bricks, and Humpty Dumpty, competed for a purse of \$300, but victory fell again to the former. Best time 2:43.

—John Murphy has made arrangements to keep the club house, grounds and track open and in good order at Fleetwood Park until next spring.

—Four races came off at the West Side Park last Thursday. The first trot, half-mile heats, was won by Julia H., she making the distance in 59 seconds. The second, a running race, mile heats, brought out five horses, but Dan O'Connell carried off the laurels. Best time 2:44. The next was a pacing and trotting race between Briggs' John in harness, and Thompson's Maggie under saddle. The former won two heats in succession. Best time 2:53. The fourth trot was between Rockland Prince and Butcher Boy, but the latter being distanced the first heat finished that contest suddenly, though the time made was only 3:59.

—At the Beacon Park, Boston, Lady Wentworth, Little Red Polly, and Kate, met on the 28th to compete for a purse of \$300. After five heats the former was the victor. Best time 2:43. A race between the geldings John T. Russell and Frank Hall for a purse of \$300 was won by the former. Best time, 2:41. The percentage on pools at Beacon Park during the past season exceeded \$10,000, and at Mystic Park the amount fell below that sum.

—Two trotting races were held at the Hudson River Driving Park. The first was between the gelding American Girl and the pacer Copperthorn for a purse of \$2,500. The former was the winner, having gained the second and third heats. Best time 2:53. The second trot for a purse of \$1,000 was between Barney Kelley and Annie Collins. The former won the first two heats, so was victor. Best time 2:31.

—At Deerfoot Park, Thelmissing day was celebrated by a good trotting. The first contest was for a purse of \$50. There were five starters, but Aleck was the victor. Best time 2:58. This was followed by a running race of a quarter of a mile between the horses Cable and Buffalo Bill. After six heats the race was given to the former. Best time, 29 seconds.

—At Norfolk, Virginia, on the same day a trotting race between Orlean's Lady Paterson and McCull's Orange Blossom, for \$1,000, mile heats, best three in five, was won by Orange Blossom. The best time, 2:37. Lady Paterson beat Orange Blossom in several races previously.

—Judge Fullerton and Occident again tried their speed near San Francisco last Saturday. Fullerton was the favorite before the race but after the first heat his rival loomed up into favor and kept it until the contest was finished. Fullerton did not win a heat, so the victory was earned by Occident in a brief period of time. The heats were run in 2:19, 2:25, and 2:20. Murphy's Black Hawk and Hassett's Jerry tried their speed for a purse of \$200, mile heats, best three in five, catch weights. The former was declared winner on the fourth heat. Best time 2:55.

—We learn that a meeting of representatives of some of the prominent trotting associations was held in New York last

week, and it was decided to hold a "trotting circuit" on the following days:

Philadelphia, commencing.....	Thursday, May 25
Prospect Park,	June 1
Brooklyn,	" 15
Providence,	" 22
Massachusetts,	" 29
Beacon Park,	June 5

Mr. Bonner's last purchase, the bay gelding Wellesley Boy, by Godfrey's Patchen, is trotting very fast. Mr. B. drove him half a mile over his new track a few days since, the wind blowing half a gale, in 1:07. Wellesley Boy was five years old last Spring, and can trot in 2:20. He is one of the most promising young horses in this country. He was cheap at \$15,000.

—Lieut. Zubowiz, an Austrian officer, who undertook for a wager to ride on his own long nose from Vienna to Paris in fifteen days, accomplished his feat Nov. 9, arriving at the Place du Trone shortly before 10. But for a slight accident to his horse, which is of Hungarian breed and of average size, he would have arrived a day sooner. The horse did not appear exhausted by its long journey. About 300 persons, some of whom lined the route on the ground, had assembled to witness the Lieutenant's arrival.

A MULE STORY.—Says the *Territorial Enterprise*: A gentleman who is too modest to allow us to use his name, furnished us the following specimen of sagacity which he yesterday saw displayed by a pair of mules—those curious spotted fellows belonging to Hank Blanchard. Hank and John Fagan were seated in a buggy behind the mules, driving along South C street, near the Divide. Suddenly the animals halted. Dipping and coining were alike in vain; they would not move. We told them that this Hank didn't know, as the mules had never before so conducted themselves. Seeing that the animals constantly turned their heads in one direction, Fagan began to look that way, to see what it was that so strongly attracted their attention. In a moment he dropped on it. It was a single rat, worth \$25. He told Hank that the regular retail price being \$25. The mules had observed this, and could not be moved beyond it until Hank got out of the buggy, went into the place and came back, pretending that he had ordered ten tons of the article at the reduced rates. They then trotted off perfectly content.
