ANNEALING. Annealing of Commercial Copper to Prevent Embrittlement by Reducing Gases, S. B. Leiter. Am. Inst. Min. & Met. Engrs.—Trans., no. 1525-F, Feb. 1926, 7 pp., 15 figs. Results of investigations begun in 1921, which seem to show that although cuprous oxide may be only slightly soluble (1) this solubility is sufficient to allow coalescence of cuprous oxide globules, (2) that by proper annealing of copper, cuprous oxide that exists at grain boundaries in solid solution or in finely divided state can be brought together into larger globules and when so coalesced this reduction by hot reducing gases does not cause embrittlement.

CASTINGS. Exudations on Copper Castings, W. H. Bassett and J. C. Bradley. Am. Inst. Min. & Met. Engrs.—Trans., no. 1520-E, Feb. 1926, 6 pp., 21 figs. Beads of metal frequently appear at ends of cast-copper wire bars and on sides of wedge cakes near top; these are richer in cuprous oxide than rest of casting; micrographical study of exudations; suggests that material is forced through surface while copper is solidifying; photomicrographs.

COLD-ROLLED. The Hardness of Cold-Rolled Copper, S. L. Hoyt and T. R. Schermerhorn. Inst. Metals—advance paper, no. 7, for mtg. Mar. 10-11, 1926, 24 pp., 6 figs. Results of hardness tests of 2 series of cold-rolled copper bars, one which had received a 2-per cent. and one a 10-per cent. reduction in thickness per pass.

HARDNESS. Hardness of Copper, and Meyer's Analysis, S. L. Hoyt and T. R. Schermerhorn. Am. Inst. Min. & Met. Engrs.—Trans., no. 1527-E, Feb. 1926, 15 pp., 4 figs. Tests of two bars of annealed electrolytic copper in which methods of Meyer's analysis of ball indentation tests were employed.

SCRAP RECOVERY. The Recovery of Scrap Copper, A. Bregman. Metal Industry (N.Y.), vol. 24, no. 3, Mar. 1926, pp. 102-104. Sources of scrap copper; sampling; methods of recovering clean copper; eliminating metallic impurities; refining brass scrap; metal melting precautions; recovering pickling solutions.

SOLDERING. Some Experiments on the Soft Soldering of Copper, T. B. Crow. Inst. Metals—advance paper no. 3, for mtg. Mar. 10-11, 1926, 14 pp., 20 figs. Experimental work upon soldering of copper, using tin-lead solder of eutectic composition; certain facts, microscopic evidence and theories on soldering of copper.

COST ACCOUNTING

SMALL FACTORIES. Summarizing Costs for the Directors, R. Rosenthal. Mfg. Industries, vol. 11, no. 3, Mar. 1926, pp. 179-184, 4 figs. General review of work of compiling production and cost figures for monthly closing; explaining more explicitly how final presentation of them is worked out.

CULVERTS

JACKING THROUGH EMBANKMENT. Jacking Culvert Through Embankment Cuts Cost Two-Thirds, W. C. Swartout. Ry. Eng. & Maintenance, vol. 22, no. 3, Mar. 1926, pp. 101-104, 3 figs. Missouri Pacific demonstrates marked economy of this practice in two instances.

CUTTING METALS

INGOTS. Cutting Ingots and Heavy Metal Masses, E. E. Thum. Forging—Stamping—Heat Treating, vol. 12, no. 2, Feb. 1926, pp. 57-59, 1 fig. Outlines methods whereby large masses or blocks of iron and steel may be cut to handling size for oxygen lance.

D

DAMS

EARTH AND MASONRY. Sennar Dam on the Blue Nile in Egypt Completed. Eng. News-Rec., vol. 96, no. 8, Feb. 25, 1926, pp. 316-317, 3 figs. Earth and masonry structure nearly 2 miles long; water diverted to extensive irrigation system.

LAKE KENOGAMI, QUEBEC. Eleven Dams Make Storage Reservoir of Lake Kenogami, A. F. Dyer. Eng. News-Rec., vol. 96, no. 10, Mar. 11, 1926, pp. 404-408, 8 figs. Dams, dikes and fills are making Lake Kenogami into 15,000,000,000-cu. ft. storage reservoir for water power on Ausable and Chicoutimi rivers; muck and boulder formation make difficult excavation; winter concreting; embankment cofferdams.

MULTIPLE-ARCH. Multiple Arch Reinforced Concrete Dam, H. Speight. Can. Engr. vol. 50, no. 6, Feb. 9, 1926, pp. 201-204, 7 figs. Granby Consolidated Mining, Smelting & Power Co. build interesting type of dam at Anyox, B.C.; it is 138 ft. high and 680 ft. across crest; consists of 26 arches supported by 27 buttresses with walls for end connections; siphon spillways, etc.

OVERFLOW. High Overflow Dam Main Unit of Baker Power Plant (Wash.). Eng. News-Rec., vol. 96, no. 9, Mar. 4, 1926, pp. 360-362, 5 figs. Part of diversion tunnel also serves power uses; final tunnel blast admits water; features of dam and plant.

DIE CASTING

ALUMINUM ALLOYS. The Die-Casting of Aluminium Alloys—A Review of Current Methods, G. Mortimer. Inst. Metals—advance paper, No. 11, for mtg. Mar. 10-11, 1926, 27 pp., 13 figs. Deals with slush, gravity, centrifugal, Cothias and pressure casting.

DIESEL ENGINES

INDUSTRIAL PLANTS. The Diesel Engine in the Industries, M. Rotter. Power, vol. 63, no. 10, Mar. 9, 1926, pp. 369-370. Evaluates Diesel engine in meeting, various factors that enter into selection of prime mover for industrial-plant service; suggestions as to suitability of oil, quantity and quality of cooling water, maintenance and fixed charges. Articles based on paper before Midwest Power Conference.

DILATOMETERS

DIFFERENTIAL. A New Universal Differential Dilatometer (Ein neues Universal-Differential-Dilatometer), H. Esser and P. Oberhoffer. Stahl. u. Eissen, vol. 46, no. 5, Feb. 4, 1926, pp. 142-147, 9 figs. Design and operation of new dilatometer with which relation between dilatometric, magnetic and electric properties and temperature can be investigated photographically by self-recording means.

DRILLING MACHINES

DIAMOND. The Diamond Drill and its Methods, J. A. MacVicar. Colliery Guardian, vol. 131, nos. 3398 and 3399, Feb. 12 and 19, 1926, pp. 374-375 and 444-445, 5 figs. Machine and methods for testing of mineral deposits by boring. Paper read before Min. Soc. of Leeds Univ.

E

ELECTRIC CONDUCTORS

CYLINDRICAL. Problems in Connection with Two Parallel Electrified Cylindrical Conductors, A. Russell. Instn. Elec. Engrs.—Jl., vol. 64, no. 350, Feb. 1926, pp. 238-242, 2 figs. Electrostatic problems in connection with two unequal parallel cylinders and with single-core cables when axes of cores are parallel but not coincident with axes of outer cylinders; solutions are given by formulas.

ECONOMICAL SIZE. Economical Wire Size for Lighting Secondaries, H. S. Litchfield. Elec. World, vol. 87, no. 9, Feb. 27, 1926, pp. 449-452, 4 figs. New circuit cost equation based upon loss in lighting revenue due to secondary line drop; development and use of charts for ready application.

MECHANICAL ENGINEERING. The Mechanical Engineering Curriculum, J. L. Harrington. Mech. Eng., vol. 48, no. 3, Mar. 1926, pp. 201-204. Summary of replies to questionnaire sent to 500 members of the Am. Soc. Mech. Engrs. indicating need for particularly sound training in all subjects given, and for more cultural and elementary scientific subjects in the usual four-year course.

ELECTRIC DRIVE

FRACTIONAL MOTORIZING. Search for Economy Alters Motor Drive, R. H. Rogers. Mfg. Industries, vol. 11, no. 3, Mar. 1926, pp. 171-174, 9 figs. Practice of motorizing of each power-using part of single machine is being rapidly adopted for machines of complex nature with gratifying results; typical examples.

GROUP VS. INDIVIDUAL MOTOR. Group Versus Individual Motor Drive, L. F. Leurey. Elec. World, vol. 87, no. 7, Feb. 13, 1926, pp. 347-351, 4 figs. Process of manufacture largely determines most suitable type of drive to be employed; basic principles given.

ELECTRIC FURNACES

ANNEALING. Annealing Iron and Steel Electrically, H. Fulwider. Blast Furnace & Steel Plant, vol.14, no. 3, Mar. 1926, pp. 130-132, 4 figs. Aging, normalizing and annealing of iron and steel, and typical electric-furnace installations; aging large castings. Report prepared for Nat. Elect. Light Assn.

ARC. Builds Arc Furnaces in Small Sizes. Iron Trade Rev., vol. 78, no. 10, Mar. 11, 1926, p. 635, 2 figs. Device of small units, made by Pittsburgh Electric Furnace Corp. for use in technical schools, research laboratories and industrial plants.

ECONOMIC OPERATION. Economic Operation of Electric Furnaces, R. S. Kerns. Blast Furnace & Steel Plant, vol. 14, no. 3, Mar. 1926, pp. 133-135, 6 figs. Results of tests and records made during operation of 5 standard sizes of well-known melting furnaces.

STEEL. Electrical Furnace Competes with Oil for Annealing Steel Castings. Elec. World, vol. 87, no. 10, Mar. 6, 1926, pp. 512-513, 2 figs. 250-kw. resistance type of furnace built by Electric Furnace Co. and installed in foundry of Milwaukee Steel Foundry Co., Milwaukee, Wis.; comparison with oil-fired furnace.

ELECTRIC LOCOMOTIVES

CLASSIFICATION. Electric Locomotive Classification, D. C. Hershberger. Ry. Age, vol. 80, no. 9, Feb. 27, 1926, pp. 525-526, 1 fig. New system proposed which is simple and does not have limitations of White system; it is modification of that used by continental European manufacturers.

THREE-PHASE. Three-Phase Electric Locomotive, Italian State Railways. Ry. Gaz., vol. 44, no. 8, Feb. 19, 1926, p. 246, 1 fig. Experimental design to meet special requirements.

ELECTRIC METERS

HIGH-TENSION EXCHANGE POWER FOR. Metering Exchange Power, J. H. Paget and R. P. Crippen. Elec. World, vol. 87, no. 10, Mar. 6, 1926, pp. 503-504, 3 figs. Practice of Great Western Co. for measuring high-tension exchange energy; high-tension metering equipment and methods; metering when using tertiary winding.

ELECTRIC MOTORS, D.C.

COMMUTATION. Commutation Troubles in Direct Current Motors and Generators, E. B. Stavely. Modern Min., vol. 3, no. 2, Feb. 1926, pp. 32-36, 7 figs. Causes and remedies of troubles in motors and generators; eliminating sparking, basic causes of sparking, reddish-brown sparks, bluish-white sparks, grooving of commutator, etc.

ELECTRIC MOTORS

INTERPOLES. Checking the Polarity of Interpoles, C. O. Mills. Power, vol. 63, no. 8, Feb. 23, 1926, p. 284, 3 figs. Shows relation between interpole polarity and that of main poles; points out that it is necessary that interpoles have correct polarity if machine is to operate satisfactorily; position of brushes.

ELECTRIC RAILWAYS

COMBINATION LOCOMOTIVE-CAR. Combination Locomotive-Car Developed in Switzerland. Elec. Ry. Jl., vol. 67, no. 8, Feb. 20, 1926, pp. 321-322, 3 figs. Twelve-wheel vehicle consists of 6-wheel passenger coach permanently coupled to 6-whee motive power unit; unusual safety devices are provided.

DEVELOPMENTS. Ten-Year Statistics Show Gain in Electric Railway Conditions, A. S. Richey. Elec. Ry. Jl., vol. 67, no. 7, Feb. 13, 1926, pp. 281-282. In decade, electric railways in large and small cities have had increases in revenue and traffic per inhabitant and show more economical use of cars.

ELECTRIC TRANSMISSION LINES

CALCULATIONS. Circuit Constants in Transmission-Line Calculations, A. C. A. Caldwell. Instn. Elec. Engrs. Jl., vol. 64, no. 350, Feb. 1926, pp. 243-252, 7 figs. Deals with use of circuit constants for calculation of transmission-line problems; develops formulas for calculating constants of series and parallel circuits; methods for dealing with more complex cases of lines supplying more than one substation and branching lines.

GROUNDING OF NEUTRAL. Grounding Bank for Neutral Resistor, L. A. Terven. Elec. World, vol. 87, no. 10, Mar. 6, 1926, pp. 497-500, 10 figs. Has advantages over use of tertiary windings; West Penn. Co. uses about 20 ohms in neutral resistor for large 25-kv. system; details of installation and design.

132-KV. Toronto Plant Tied in by 132-Kv. Line, J. H. Wells. Elec. World, vol. 87, no. 9, Feb. 27, 1926, pp. 455-456, 2 figs. Forty-mile line connects station with Boardman substation at Youngstown, O.; insulator strings equipped with rings and horns; substation designed for ultimate capacity of 500,000 kva.

OVERHEAD. Overhead Pole Lines. Elec. Times, vol. 68, no. 1772, Oct. 1, 1925, pp. 365-367, 7 figs. Stobie steel and concrete pole used in Australia for cross country-lines, consisting of two light standard rolled steel joists or channel sections, forming main outside tension and compression members; held at their correct distances apart, and with their proper taper from base to top of pole, by bolts passing through webs of sections at carefully determined intervals.

ELECTRICAL MACHINERY

MAINTENANCE. Handling Maintenance and Repairs on 4000 Motors, W. Rassmussen. Industrial Engr., vol. 84, no. 2, Feb. 1926, pp. 50-56 and 81, 9 figs. Methods of maintenance at Studebaker Corpn., South Bend plant, equipment of which comprises motors ranging in size from ⅛ to 700 h.p., portable electric hand tools, battery tractors, cranes, etc.; motor record systems and forms used, battery charging and repair, etc.

ELEVATORS

LOCATING FAULTS. Locating Faults in Electric Elevators—Mechanical Equipment, C. A. Armstrong. Power, vol. 63, no. 7, Feb. 16, 1926, pp. 249-252, 6 figs. Mechanical troubles that may develop in drum and in traction-type elevator machine and what to do to overcome these difficulties.

EMPLOYEES

STOCK OWNERSHIP. The Rise of Employee Stock-Ownership, O. Tead. Indus. Mgmt. (N.Y.), vol. 71, no. 3, Mar. 1926, pp. 157-160. Possibilities and dangers of this trend in business and industry.

EMPLOYMENT MANAGEMENT

DAY AND NIGHT SHIFTS. Need for Greater Co-operation Between Day and Night Shifts. Indus. Mgmt. (Lond.), vol. 13, no. 1, Jan. 1926, pp. 20-21. Plea for better co-operation between day and night shifts in works and factories; points out that complaints concerning heavy expense involved in running night shifts would be minimized if executives would encourage spirit of closer co-operation between workmen and officials in shops.

EMPLOYMENT PLANS. Guaranteeing Full Time Earnings, H. Feldman. Indus. Mgmt. (N.Y.), vol. 71, no. 3, Mar. 1926, pp. 133-138, 2 figs. Plan of Crocker-McElwain Co.; rewarding length of service; comparison with plans of other firms; effect upon employees' length of service; worker protected against arbitrary discharge.

METHODS. The Management of Men in Industry, J. S. Gray. Machy. (N.Y.), vol. 32, no. 6, Feb. 1926, pp. 445-447. Methods of managing employees; relieving monotony of repetition work; keeping a man interested in his job; providing opportunity for promotion.

ENGINEERING

ECONOMICS. Economics of Engineering, D. Adamson. Instn. Mech. Engrs.—Proc., no. 1, 1926, pp. 27-33. Deals with internal economics of workshop which come within technical administration, and external economics of business or commercial administration. (Abridged.)

ENGINEERS

INDUSTRIAL OPPORTUNITIES. Opportunities for Engineers in Industry, J. O. G. Gibbons. Mech. Eng., vol. 48, no. 3, Mar. 1926, pp. 261-262. Necessity of advising preparatory-school and engineering-college graduate about the duties, opportunities, and responsibilities of engineer, so that he may make more intelligent choice of his profession.

RIGHTS AND DUTIES. The Engineer: His Due and His Duty in Life, T. Carter. Instn. Elec. Engrs.—Jl., vol. 64, no. 350, Feb. 1926, pp. 193-220 and discussion 220-233. Rise of modern engineering; finding and training of engineers; principles and problems; engineers and public life.

STATUS, 1815 AND 1918. The Engineer's Prospects After 1815 and 1918, J. W. Hall. Instn. Mech. Engrs.—Proc., no. 1, 1926, pp. 13-26, 4 figs. Review of England's position during past century; industrial conditions; engineers' wages, etc.

EXPLOSIVES

LIQUID OXYGEN. Liquid Oxygen as an Explosive, F. W. O'Neill and H. VanFleet. Am. Inst. Min. & Met. Engrs.—Trans., no. 1562-A, Feb. 1926, 42 pp., 40 figs. Present status and possibilities of liquid oxygen as explosive based upon investigations, research and practical work of Ingersoll-Rand Co. and Air Reduction Co. from 1922 to date. See also Coal Age., vol. 29, no. 10, Mar. 11, 1926, pp. 358-362, 6 figs.

F

FANS

CENTRIFUGAL. Operating Characteristics of Centrifugal Fans and Use of Fan Performance Curve, L. W. Huber. Am. Inst. Min. & Met. Engrs.—Trans., no. 1542-A, Feb. 1926, 14 pp., 6 figs. Definite pressure necessary to force given quantity of air; manometric efficiency; improvement in design; classification of fans; performance under mine conditions; effect of increase in pressure; horsepower required by mine fan; Illinois statistics.

FILTRATION PLANTS

OPERATION. Operation of Waterworks Filter Plants, A. V. Graf. Can. Engr., vol. 50, no. 8, Feb. 23, 1926, pp. 249-252. Points out that success depends in great measure on care exercised in operation; filtering action of sand-washing periods and procedure to be followed; application of chemicals. Paper presented before Missouri Conference on Water Purification.

FLOOD CONTROL

PROBLEMS. Flood Control in the Southwest and Elsewhere. Eng. News-Rec., vol. 95, no. 10, Mar. 11, 1926, p. 411. Abstracts of papers at meeting of National Drainage Congress.

FLUIDS

RESISTANCE TO MOVING SPHERES. Fluid Resistance to Moving Spheres, R. G. Lunnon. Roy. Soc.—Proc., vol. 110, no. A754, Feb. 1, 1926, pp. 302-326, 8 figs. Measurement of times of fall of spheres from 0.2 to 10.2 cm. diam. through distances up to 537 m.; analysis of motion has provided new data on variation of resistance with speed and acceleration; experiment in which roughening of surface reduced resistance to motion.

FOREMEN

DUTIES. The Foreman's Place in an Organization, J. S. Gray. Machy. (N.Y.), vol. 32, no. 7, Mar. 1926, pp. 547-549. Foreman's position in business and his responsibilities; methods of supervising work; required qualifications.

FORGING

SWAGE BLOCKS. Swage Blocks, (Les matrices d'estampage à chaud), R. Barat. Arts et Metiers, vol. 78, no. 62, Nov. 1925, pp. 462-472, 30 figs. Discusses behavior of swage blocks, wear by heat and impacts; steels for blocks and their composition and properties; tapering; power required, dimensions of swage blocks, etc.

FOUNDRIES

STANDARDIZATION. Standardization in Modern Foundry Practice, M. J. Cooper. Foundry Trade Jl., vol. 33, no. 496, Feb. 18, 1926, pp. 129-132, 6 figs. Operations calling for standardization, such as sand density, preparation of facing sand, standardization of rammers and molding boxes, loam-molding equipment, runner plugs and skimmers, cupola practice, foundry cranes, etc., standardization of foundry accessories and materials.

FUELS

INDUSTRIAL PROCESSES. The Economy of High Cost Fuels, L. H. George. Indus. Mgmt. (N.Y.), vol. 71, no. 2, Feb. 1926, pp. 85-87, 2 figs. Cost per B.t.u. is not determining factor in industrial processes; in many cases most expensive fuel proves to be, paradoxically, the least expensive.
(*See also Coal; Oil Fuel.*)

FURNACES, INDUSTRIAL

GAS-FIRED. Furnaces. J. Fallon. Gas. Jl., vol. 173, no. 3273, Feb. 3, 1926, pp. 281-283. Advantages of burning coal gas in industrial furnaces; describes small universal-type furnace; recuperation in small furnaces; heavy-type recuperative billet-heating furnaces; cost relationship of furnaces operated by various fuels. Paper read before Junior Gas. Assn. See also Gas World, vol. 84, no. 2169, Feb. 13, 1926, pp. 150-152.

G

GAS ENGINES

EXHAUST-GAS UTILIZATION. Steam Generation and Low Temperature Carbonization by Means of Gas Engine Exhausts, D. Brownlie. Eng. & Boiler House Rev., vol. 39, no. 8, Feb. 1926, pp. 370-372 and 374, 2 figs. Describes installation at works of Staveley Coal & Iron Co.; exhaust of gas engine is being used experimentally for low-temperature carbonization of coal and refuse.

GASES

Explosive Gas-Air Mixtures. Gaseous Combustion at Medium Pressures, R. W. Fenning. Roy. Soc. of London—Philosophical Trans., vol. 225, no A633, pp. 331-356, 17 figs. Details of experiments with air-fuel explosions at the Natl. Physical Laboratory, giving results as to influences of hydrogen-air and water vapor on carbon monoxide-air explosion, and on methane-air explosion over comparatively wide range of initial temperature and pressure.

GEAR CUTTING

Automobile Gears. Hobbing Automobile Transmission Gears. Machy. (N.Y.), vol. 32, no. 6, Feb. 1926, pp. 483-484, 5 figs. High-production methods used in roughing out gears at the new Ajax automobile plant.

GEARS

Internal. A New Development in Interal Gearing. A. Fisher. Machy. (Lond.), vol. 27, 697, Feb. 4, 1926, pp. 616-618, 5 figs. Discussion based on article by H. Walker, published in Nov. 26, 1925, issue of same journal.

Involute or Enveloping Tooth. Involute or Enveloping Tooth? H. Walker. Machy. (Lond.), vol. 27, no 694, Jan. 14, 1926, pp. 509-511, 3 figs. Comparison shows that enveloping tooth avoids friction of approach; tooth form is suitable for load carrying and permits better lubrication than involute, but it is doubtful whether their wearing properties would differ greatly; for equal obliquities and depths of tooth, involute has greater arc of contact than enveloping gear, and consequently less load per tooth to withstand; enveloping gear is not well adapted for reversing driving shafts.

Long-Toothed. Long-Toothed Gears—Comment, H. Walker. Machy. (Lond.), vol. 27, no. 695, Jan. 21, 1926, pp. 556-559, 9 figs. Outline of simplest methods to be pursued when designing varying center distance gears; based on article under above title in Nov. 19, 1925, issue of same journal.

Maintenance. When Should Pinions and Gears be removed for Tooth Wear? E. S. Sawtelle. Elec. Ry. Jl., vol. 67, no. 8, Feb. 20, 1926, pp. 323-324, 4 figs. Points out that gages can be used successfully on large majority of present-day gears and pinions to determine when teeth are worn out.

Manufacture. A Western Plant for Quantity Production of Gears. West Machy. World, vol. 17, no. 2, Feb. 1926, pp. 57-60, 8 figs. Practice and machine tools of Ralph N. Brodie Co., Oakland, Cal., in manufacture of gears for automotive replacement trade.

Ratchet and Screw-and-Nut. Link-Work, Cams and Tappets and Ratchet and Screw-and-Nut Gearing. Abridgements of Specifications, class 80 (iii), period 1916-20, 1925, 82 pp. Patents for inventions.

Spacing. Excessive Gear Spacing Causes Trouble. Elec. Ry. Jl., vol. 67, no. 8, Feb. 20, 1926, pp. 317-318, 5 figs. Model shows how noise and wear and breakage of teeth follow rapidly with increases in distance between centers of gear and pinion.

GOLD MINING

Nova Scotia. Gold Mining in Nova Scotia, J. C. Murray. Can. Inst. of Min. & Metallurgy.—Bul., no. 166, Feb. 1926, pp. 271-286, 6 figs. Discusses causes of decline of gold mining; Rickard report to the Government on its condition; advocates opening up large bodies of low and medium grade ores.

GOLD METALLURGY

Milling and Cyanidation. Treatment of the Telluride-Bearing Gold Ores of the Wright-Hargreaves Mines, Ltd., W. A. Mueller, J. E. Grant and C. L. Heath. Am. Inst. Min. & Met. Engrs.—Trans., no. 1549-D, Feb. 1926, 12 pp., 2 figs. Present milling system; experiments of flotation of mill tails; flotation of mill pulp in cyanide circuit; nature and treatment of concentrate; bromocyanide process for telluride ores.

GRAPHITE

Properties and Uses. Graphite a Mineral of Increasing Value, R. C. Rowe. Compressed Air Mag., vol. 31, no. 3, Mar. 1926, pp. 1569-1573, 11 figs. Chemical nature of mineral; flotation process; various uses.

GRINDING

Disk. Modern Applications of Disk Grinding, F. W. Curtis. Am. Mach., vol. 64, no 10, Mar. 11, 1926, pp. 385-389, 10 figs. Variety of examples of work being successively ground on hand, semi-automatic and automatic grinding machines.

Flyhobs. A New Method of Grinding Flyhobs, H. E. Merritt. Machy. (Lond.), vol. 27, no. 694, Jan. 14, 1926, pp. 518-520, 6 figs. Method of finish-grinding relief of such tools.

GRINDING MACHINES

Internal. Herald "Size-matic" Internal Grinding Machine. Am. Mach., vol. 64, no. 9, Mar. 4, 1926, pp. 377-378, 2 figs. By use of this machine, holes that are parallel or tapered, plain or splined, may be ground continuously and automatically to size within very close limits.

GYPSUM

Mining and Refining. The Mineral Gypsum and Its Uses, R. C. Row Can. Machy., vol. 35, no. 7, Feb. 18, 1926, pp. 11-14, 3 figs. Discusses origin, composition and uses in smelting of copper and lead ores; plaster of Paris as a retarder for portland cement.

Ontario. Gypsum in Ontario, G. E. Cole. Ontario Dept. of Mines—Annual Report, vol. 34, pt. 2, 1925, pp. 1-34, 5 figs. Occurrences; geology; variety of gypsum mined; use of uncalcined and calcined gypsum, plaster mill and classification of plaster, etc.

H

HEAT TREATMENT

Fuel for. Fuel for Heat-Treatment of Metal, C. D. Barnhart. Can. Machy., vol. 35, no. 6, Feb. 11, 1926, pp. 19-20. Discusses quality and cost of finished product as determinative tests, not cost of fuel, labor, etc.; proper field of use for each form of fuel and its limitations; determining suitable combination for given requirements.

HEATING

Liquids and Gases. Heating Liquids and Gases. Abridgements of Specifications, class 64 (i), period 1916-20, 1925, 110 pp. Patents for inventions.

HIGHWAYS

Maintenance. Resurfacing and Maintenance by Contract, G. F. Schlesinger. Roads & Streets, vol. 65, no. 3, Mar. 3, 1926, pp. 155-159, 6 figs. Possibilities of future field for contractor. Paper before Am. Road Bldrs. Assn.

HOUSES

Iron and Steel. The Dwellings of To-morrow, P. Winchell. Iron Age, vol. 117, nos. 9 and 10, Mar. 4 and 11, 1926, pp. 613-615 and 686-687, 7 figs. Economic study in residential construction showing why growing use of iron and steel is inevitable. Points out that use of iron and steel in residential construction will result in safer and healthier homes.

HYDRAULIC PRESSES

Patent Specifications. Hydraulic Presses, Meters, Motors and Like Apparatus for Use with High Pressures. Abridgements of Specifications, class 69 (ii), period 1916-20, 1925, 103 pp. Patents for inventions.

HYDRAULIC TURBINES

Governors. Hydraulic-Turbine Governing Commercial Practice, S. L. Kerr. Power, vol. 63, no. 7, Feb. 16, 1926, pp. 255-257, 4 figs. Governor traversing time; rating of self-contained and actuator type of governors; commercial regulating standards; inherent speed changes in load; making governor adjustments.

High Specific Speed. Water Turbines of High Specific Speed, DeKeyser. Mech. Eng., vol. 48, no. 3, Mar. 1926, pp. 268-269. Mathematical discussion of factors entering into design and operation of turbines having high specific speed such as Kaplan and Bell. (Abstract.) Translated from Bl. Technique de l'Assn. des Ingénieurs sortis de l'Ecole Polytechnique de Bruxelles, vol. 20, no. 5-6, 1924, pp. 167-182.

Propeller-Type. Propeller-Type Turbines (Le piu recenti costruzioni di turbine idrauliche per basse cadute), N. Ratti. Elettrotecnica, vol. 12, no. 25, Sept. 5, 1925, pp. 611-618, 20 figs. Account of properties of these turbines, followed by historical account of their development; principal designs are considered and illustrated.

HYDRAULICS

Hydrostatic Pressure. The Center of Hydrostatic Pressure of Plane Surfaces (Il centro di pressione idrostatica delle superficie piane e delle superficie rigate), A. Cecconi. Annali della, R. Scuola d'Ingegneria di Padova, vol. 1, no. 4, Nov. 1925, pp. 314-319, 10 figs. Calculation and graphic construction for plane surface, rectangular, triangular, quadrilateral and cylindrical surface; also application to prismoids.

HYDRO-ELECTRIC PLANTS

Automatic. Automatic Plants Added After Experience, A. G. Carson and E. D. Lilja. Elec. World, vol. 87, no. 9, Feb. 27, 1926, pp. 445-448, 5 figs. Three plants on Peshtigo River, Wis., rated at 17,200 kva. total already have automatic equipment; unit of 625 kva. at another plant being so equipped; supervisory control supplements automatic operation.

Kentucky. $7,000,000 Power Project Completed in Kentucky, D. MacMurphy. Mfrs.' Rec., vol. 89, no. 7, Feb. 18, 1926, pp. 78-80, 6 figs. Dix River dam has height of 22-storey office building and is over 1,000 ft. long; tunnel 24 ft. in diameter, used to divert river water while construction proceeded; 1,800,000 cu. yds. of rock handled; annual capacity of 77,000,000 kw-hr. contracted for.

Montana. A Rocky Mountain Hydro-Electric Plant, M. E. Buck. Elec. World, vol. 87, no. 6, Feb. 6, 1926, pp. 289-290, 3 figs. Details of plant at Mystic Lake located 45 miles southwest of Columbus, Mont.; hydraulic features, powerhouse construction, waterwheel and electrical-equipment capacities; tunnel opening into lake is blasted out.

Pondage for Peak Loads. Pondage Operation to Carry Peak Loads, J. W. Shuman. Elec. World, vol. 87, no. 10, Mar. 6, 1926, pp. 506-507, 1 fig. Formulae for regulating water drawn to permit carrying maximum load for short periods.

Storage. Hydroelectric Storage Plants of Recent Design in France and Other Countries (Quelques Installations d'Accumulation par pompage récemment réalisées en France et à l'Etranger,) M. Martin. Houille Blanche, vol. 24, nos. 105-106 and 107-108, Sept.-Oct. and Nov.-Dec. 1925, pp. 129-135 and 172-175, 25 figs. Describes plant at Viverone, for pumping water from Lake Viverone into Lake Bertignano located at a higher level, thus making use of two natural reservoirs with 140-m. difference in level; pumping installation consists of 2-stage, high-pressure centrifugal pumps. Plant of Hartmann works at Munster for supplying energy at periods of low water. Nov.-Dec.: Plants of Belleville in France and Wäggital in Switzerland.

I

INDUSTRIAL MANAGEMENT

Budgeting. Novel Budgets Cut Indirect Expenses, U. L. Harmon. Mfg. Industries, vol. 11, no. 3, Mar. 1926, pp. 189-192. Plan of budget control inaugurated by Mason Tire & Rubber Co.; methods used and results accomplished.

Financial and Industrial Investigation. Analyzing Net Worth in the Financial and Industrial Investigation, A. Anderson. Mfg. Industries, vol. 11, no. 3, Mar. 1926, pp. 201-206. Sources of net worth; operating aspect; analysis of original capitalization and subsequent capitalization; net worth from capital profits; analysis of stock dividends and capital stock; comparison between bonds preferred and common stocks.

Inventory Control. The Control of Inventory Through the Scientific Determination of Lot Sizes, H. S. Owen. Indus. Mgmt. (N.Y.), vol. 71, nos. 2 and 3, Feb. and Mar. 1926, pp. 117-118 and 164-166, 2 figs. Feb.: Purchase and control of raw material. Mar.: Process routing of piece parts.

Output and Sales Co-ordination. Market Analysis Checks Over-Production, J. N. Willys. Mfg. Industries, vol. 11, no. 3, Mar. 1926, pp. 165-168, 3 figs. Advocates policy of co-ordinating production with sales demands, which in automobile industry, author believes, has led to strengthening of once weak faith of public in manufacturers.

Purchasing. Buying Factory Equipment. Indus. Mgmt. (Lond.), vol. 13, no. 1, Jan. 1926, pp. 15-16. Emphasizes importance of employing technical man for purchase of tools and equipment and advances plea that primary attention be given to technical merits of products and not to their initial cost.

We make Purchasing a Real Job of Management, C. W. Nash. Factory, vol. 36, no. 2, Feb. 1926, pp. 259-261, 288, 290 and 292. Methods employed by purchasing department of Nash Motors Co.

Successful. Successful Industrial Management, J. S. Gray. Machy. (Lond.), vol. 27, no. 699, Feb. 18, 1926, pp. 684-685. Lack of information is cause of much dissatisfaction; foreman's place in organization; matter of wages; rules and regulations in factory; avoiding great cost of labor turnover.

INDUSTRIAL ORGANIZATION

Co-operation with Complementary Plants. Learning a Lesson from the Vertical Trust, J. A. Piquet. Indus. Mgmt. (N.Y.), vol. 71, no. 2, Feb. 1926, pp. 80-84, 5 figs. Cutting costs by co-operating with complementary plants.

INDUSTRIAL PLANTS

Engineering System for. An Engineering System for the Average Size Plant, G. L. Hedges. Indus. Mgmt. (N.Y.), vol. 71, no. 3, Mar. 1926, pp. 138-140. Gives derivation of numbers as worked out in manufacturing plant employing 250 men; description of forms and how they are used.

Planning Additions. The Intelligent Planning of Plant Additions, N. L. Sammis. Indus. Mgmt. (N.Y.), vol. 71, no. 3, Mar. 1926, pp. 161-163. Factors to analyze in advance of actual construction.

INDUSTRIAL RELATIONS

Co-operation between Groups. Purpose as a Psychological Factor in Management, O. T. Tead. Taylor Soc.—Bul., vol. 10, no. 6, Dec. 1925, pp. 254-263 and (discussion) 263-267. Discussion of methods by which integration of group purposes can be effected in industry; considers what line can be followed by managers to get industry upon basis where good will is manifested, where co-operation between groups is willing and not enforced, where conflict is creative and not destructive force.

Employee Team Work. Promoting Employee Team Work and Welfare Without Paternalism, C. A. Lippincott. Indus. Mgmt. (N.Y.), vol. 71, no. 3, Mar. 1926, pp. 146-150, 5 figs. How Studebaker Corp. handles problem of industrial relations.

PROBLEMS. Creating Better Understanding in Industry, C. D. Dietz. Machy. (N.Y.), vol. 32, no. 7, Mar. 1926, pp. 541-542. Discusses new problems, presented by present industrial system; combating erroneous and misleading propaganda by accurate information.

INTERNAL-COMBUSTION ENGINES

CYLINDERS, TEMPERATURE DETERMINATION IN. Cylinder Temperature, R. W. Bailey. Automobile Engr., vol. 16, no. 212, Feb. 1926, pp. 47-48, 2 figs. A graphical method for determining temperatures from indicator diagram.

ELECTRIC TRANSMISSION FOR. Electric Transmission for Internal-Combustion Engines, H. Lemp. Mech. Eng., vol. 48, no. 3, Mar. 1926, pp. 205-217, 20 figs. Principal features of mechanical, pneumatic, hydraulic, and electric transmissions; application of automatic speed-torque control to gas-electric motor buses, rail motor cars, and switching locomotives.

(See also Airplane Engines; Automobile Engines; Diesel Engines; Gas Engines ; Oil Engines.)

INVENTION

FALLACIES CONCERNING. Some Fallacies Concerning Invention, G. F. Charnock. Instn. Mech. Engrs.—Proc., no. 1, Jan. 1926, pp. 35-36. Author points out that some few inventions of note may have been hit upon by accident, but such cases are rare, and are certain to become more so; it is shown that profits lie in pioneer work, and in utilization of research and experiment as leading up to invention. (Abridged.)

IRON

CORROSION. Rusting of Iron (Ueber das Rosten des Eisens), W. Kistiakowsky; Zeit. für Elektrochemie, vol. 31, no. 12, Dec. 1925, pp. 625-631. Electrodes of iron may exist in 5 distinct conditions ranging from superactive, attainable only in alkaline electrolytes, to passive; in former condition there is unbroken coating of hydride, in latter, of oxide, and in neither is it possible for iron to rust; when coating of oxide is ruptured, which may occur through mechanical or chemical attack, or by crystallization of oxide film, local currents are produced and rusting sets in; acceleration of rusting by CO_2 is attributed to its depolarizing action in local currents.

NOMENCLATURE. What is Iron, What is Steel? A. Sauveur. Mich. Technic, vol. 39, no. 2, Jan. 1926, pp. 119 and 125. New short definitions offered in light of modern developments, for commercial, ingot and wrought iron and steel.

IRRIGATION

DEVELOPMENTS. Irrigation Developments Through Irrigation Districts, E. C. Eaton and F. Adams. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 3, Mar. 1926, pp. 423-433, 5 figs. Present status of irrigation districts; state control of organization and financing; typical irrigation districts.

DEVELOPMENTS, WESTERN STATES. History and Problems of Irrigation Development in the West, J. A. Widtsoe. Am. Soc. Civil Engrs.—Proc., vol. 52, no. 3, Mar. 1926, pp. 396-402. Problems of irrigation; extension of irrigated area; completion of existing projects; means for solving irrigation problems.

FINANCING. The Financing of Irrigation Developments by Private Capital, R. E. Shepherd. Am. Soc. Civil Engrs.—Proc., vol. 52, no. 3, Mar. 1926, pp. 403-410. Conclusions based on experience in solving problems of Twin Falls North Side Project which is a privately financed enterprise.

HYDRAULIC. Progress Report of Special Committee on Irrigation Hydraulics. Am. Soc. Civil Engrs.—Proc., vol. 52, no. 3, Mar. 1926, pp. 242-246. Results of investigation, evaporation losses from reservoirs; losses in canal conversions; water movement pressure under dams; losses in siphon spillways; scouring below dams; measuring irrigation deliveries, etc.

L

LATHES

AUTOMATIC SPEED CONTROL. Hard Spots and Automatic Control, J. O. Knowles. Machy. (Lond.), vol. 27, no. 693, Jan. 7, 1926, pp. 476-477, 2 figs. Points out that problem of hard spots is now reduced to one of control of speed; discusses electrical mechanisms required.

CENTER. 9-Inch Centre Friction Double Back-Geared Lathe. Machy. (Lond.), vol. 27, no. 699, Feb. 18, 1926, p. 679, 2 figs. Constructed by C. Redman & Sons, Ltd.,. Halifax, for India office; new features include friction double back-geared headstock and quick-change screw-cutting and feed-gear box.

COMPRESSED-AIR MOTORS FOR. Compressed-Air Motor Applications. Machy. (Lond.), vol. 27, no. 698, Feb. 11, 1926, pp. 641-642, 3 figs. Application of air motors, manufactured by Globe Pneumatic Eng. Co., London, to railway-wheel lathe.

TURRET. Machining Hoist Load Wheels. Machy. (N.Y.), vol. 32, no. 6, Feb. 1926, pp. 479-480, 7 figs. Turret lathe used by Wright Mfg. Co., Lisbon, O., to finish sheaves or load wheels for chain hoists.

LEAD ALLOYS

HARDENING. The Lead-Antimony System and Hardening of Lead Alloys, R. S. Dean and F. C. Nix. Am. Inst. Min. & Met. Engrs.—Trans., no. 1539-E, Feb. 1926, 55 pp. 29 figs. Lead-antimony equilibrium diagram; presents evidence showing that solid solubility of antimony in lead at room temperature is at least as low as 0.5 per cent; lead-antimony alloys of approximately eutectic composition behave normally with regard to volume change on solidification; age hardening may be observed in all lead-antimony alloys containing more than 0.5 per cent. antimony; rate and degree of age hardening is determined by rate of cooling.

LEAD, METALLURGY

ROASTING AND LEACHING. The Durango Lead Smelter and Sulphating Plant, E. H. Robie. Eng. & Ming. Jl.-Press, vol. 121, no. 7, Feb. 13, 1926, pp. 288-290, 1 fig. Roasting and leaching process for lead-zinc concentrating at Durango plant of American Smelting & Refining Co.; standard Dwight & Lloyd sintering machines.

LIGHTING

COSTS ALLOCATION. Peak Responsibility as a Basis for Allocating Fixed Costs, A. S. Knight. Elec. World, vol. 87, no. 10, Mar. 6, 1926, pp. 495-496. Discusses important factors which affect distribution of costs; maximum demand of class is said to be better line of analysis than peak responsibility.

LIME

HYDRATED. The Hydration of Lime, W. G. Whitmen and G. H. B. Davis. Indus. & Eng. Chem., vol. 18, no. 2, Feb. 1926, pp. 118-120, 3 figs. Study of effect of various hydration methods on properties of hydrated lime.

LOCOMOTIVE BOILERS

PITTING. Pitting, A Myth or a Menace? D. A. Steel. Ry. Age, vol. 80, no. 8, Feb. 20, 1926, pp. 467-474, 9 figs. Detailed survey reveals progress being made in eliminating corrosion of boiler steel.

SUPERHEAT FOR. Superheat for Locomotive Boilers, C. A. Seley. Ry. Rev., vol. 78, no. 6, Feb. 6, 1926, pp. 259-264, 3 figs. Graphical study of evaporation tests which show very interesting results.

LOCOMOTIVES

DEVELOPMENTS, 1925. Steam Locomotives of 1925. Engineer, vol. 141, no. 3653, Jan. 1, 1926, pp. 2-5, 14 figs. London & North-Eastern, Great Western, Southern, and London, Midland & Scottish railways; makers' locomotives; French locomotives.

DIESEL-ELECTRIC. Diesel-Electric Develops Great Power. Ry. Rev., vol. 78, no. 9, Feb. 27, 1926, pp. 374-376, 4 figs. Largest locomotive of this type built in United States was turned out recently by Baldwin Locomotive Works, Phila.; it develops 1,000 h.p.; total weight 275,000 lbs.

The Diesel-Electric Locomotive. Min. & Met., vol. 7, no. 231, Mar. 1926, pp. 129-130. Discussion of its merits; its value in special field already demonstrated; no immediate probability of its displacing steam locomotive or heavy electrification in trunk-line service.

FUTURE DESIGN. Some Suggestions for Future Locomotive Development, Wm. A. Newman. Ry. Mech. Engr., vol. 100, nos. 1 and 2, Jan. and Feb. 1926, pp. 13-15 and 85-88, 6 figs. Jan.: Weak points of design in modern locomotive; fundamentals defined for proposed locomotive; design of boiler and frame; forward and rear driving units. Feb.: Details of boiler construction and its advantages; side water legs stayed with cable wire.

IMPROVEMENT POSSIBILITIES. Possibilities of Improving Present Steam Locomotives (Considerazioni sulle possibilita di perfezionamento della locomotiva a vapore attuale), T. Jervis. Industria Rivista Tecnico-Scientifica ed Economica, vol. 39, no. 21, Nov. 15, 1925, pp. 564-566. Shows that piston locomotive has still good future; examines vertical water-tube boilers; double-expansion, superheated-steam, 4-cylinder and compound engines.

INTERNAL-COMBUSTION. Self-Propelled Cars and Locomotives, A. H. Candee. Ry. Age, vol. 80, no. 7, Feb. 13, 1926, pp. 443-446, 1 fig. An analysis of limitations and possibilities of internal-combustion engines for railroad service. Paper presented before Iowa Eng. Soc.

OIL-ELECTRIC. 100-ton Oil-Electric Locomotive. Ry. Mech. Engr., vol. 100, no. 2, Feb. 1926, pp. 92-95, 7 figs. Built for freight and switching service on Long Island; develops tractive force of 60,000 lb. at 1 mi. per hr.

M

MACHINE SHOPS

WORK ORDERS AND SKETCHES. Methods of Increasing Output in Small Machine Shops, R. B. Robison. Ry. Mech. Eng., vol. 100, no. 3, Mar. 1926, pp. 181-182, 4 figs. Application of sytematic methods which have assisted greatly in putting the work on economical basis.

MACHINE TOOLS

AUTOMATIC. 4-Spindle Automatic. Machy. (Lond.), vol. 27, no. 697, Feb. 4, 1926, pp. 609-612, 10 figs. New machine for bar and chucking operations; examples of tooling; developed by A. H. Schutte, Cologne, Germany.

REPLACEMENT POLICY. Getting the Most Out of Your Machine Tool Dollar, J. R. George. Am. Mach., vol. 64, no. 10, Mar. 11, 1926, pp. 381-383. Discusses equipment problems in plant where product is rolling-milll and wire-drawing machinery.

TESTING EQUIPMENT. Service and Taking Over Control for Machine Tools, M. Kurrein. Eng. Progress, vol. 7, no. 1, Jan. 1926, pp. 8-10, 6 figs. Equipment of test beds, their functions and aims.

MAGNESITE

TREATMENT. Pyro and Hydro-treatment of Magnesite and Dolomite, H. M. Henton. Am. Inst. Min. & Met. Engrs.—Trans., no. 1573-H, Mar. 1926, 34 pp., 12 figs. Conclusions based on laboratory experiments: dolomite may be semi-calcined in rotary kiln; gas cooling is practicable with waste-heat boilers and other water devices; dust recovery from gases after cooling is practicable by means of filters; for brick or other products where purity is not essential, dust will not necessarily be detriment in carbonator; it may help by acting as catalyzer or gas carrier; carbonation and bi-carbonation are possible in four stages or less; etc. Bibliography.

MAGNESIUM ALLOYS

BINARY. A Preliminary Study of Magnesium-Base Alloys, B. Stoughtom and M. Miyake. Am. Inst. Min. & Met. Engrs.—Trans., no. 1538-E, Feb. 1926, 17 pp., 28 figs. Study of binary magnesium-aluminum and magnesium-zinc alloys.

MALLEABLE CASTINGS

EMBRITTLEMENT. A Process for the Prevention of Embrittlement in Malleable Cast-Iron, L. H. Marshall. Am. Inst. Min. & Met. Engrs.—Trans., no. 1572-C, Feb. 1926, 8 pp., 4 figs.; also (abstract) in Iron Age, vol. 117, no. 8, Feb. 25, 1926, pp. 558-560, 3 figs. Simple heat treatment developed to prevent brittleness due to hot-dip galvanizing; application of process in plant on production basis.

MANOMETERS

LOW-PRESSURE AND VACUUM MEASUREMENT. Measuring Low Pressure and Vacuum, F. Johnstone-Taylor. Power House, vol. 19, no. 3, Feb. 5, 1926, pp. 19-20, 9 figs. Describes simple and useful instrument known as manometer which forms basis of draft gages, blast-pressure indicators and other devices dealing with gas, air, and water.

MATERIALS HANDLING

BUCKET ELEVATORS. Centrifugal Bucket Elevators, N. Tate. Mech. World, vol. 79, no. 2039, Jan. 29, 1926, pp. 82-84, 4 figs. By centrifugal elevators is meant that type which throws its material clear of preceding bucket by virtue of its speed and not continuous; importance of correct feeding; practical speeds; when to use belt elevators.

FOUNDRIES. Material Handling Revolutionized Our Production. A. Weber. Factory, vol. 36, no. 2, Feb. 1926, pp. 282-284, 330, 334 and 338, 10 figs. Method, equipment, and results obtained in foundry of Wilson Foundry & Machine Co. (Willys-Overland), Pontiac, Mich.

INTERMITTENT HANDLING DEVICE. A New Intermittent Handling Device. Indus. Mgmt. (Lond.), vol. 13, no. 1, Jan. 1926, pp. 3-5, 3 figs. Describes handling innovation which has some affinity to Hunt or gravity railway, and is power-driven; curves and gradients can be negotiated with good facility by means of distant contrivance.

LABOR-SAVING DEVICES. Labor-Saving Devices at Shipping, Engineering and Machinery Exhibition. Indus. Mgmt. (Lond.), vol. 13, no. 1, Jan. 1926, pp. 5-7, 1 fig. Details of chief handling appliances on view at exhibition at Olympia, London.

METALS

COLD-WORKED. Crystal Growth in Recrystallized Cold-Worked Metals, W. Feitknecht. Inst. Metals—advance paper, no. 5, for mtg. Mar. 10-11, 1926, 35pp., 51 figs. Experiments primarily undertaken to investigate causes of formation of very large crystals; experiments were mainly carried out with pure commercial aluminum; some work was also done with very pure aluminum and very pure silver.

COLD WORKING, INFLUENCE OF. Influence of Cold Working and Quenching on the Elastic Properties of Various Metals and Alloys (Influence de l'écrouissage de la trempe sur les propriétés élastiques de divers métaux et alliages), A. Portevin and P. Chevenard. Académie des Sciences—Comptes Rendus, vol. 181, no. 20, Nov. 16, 1925, pp. 716-718, 2 figs. Influence of thermal and mechanical treatment on elastic properties of pure metals and alloys was investigated by method previously described; in case of cold-drawn gold wires, relative torsion modulus diminishes with rising temperature; thermoelastic coefficient varies with rising annealing temperature; qualitatively similar results are obtained with normal solid s olutions (silver-gold alloys); minimum annealing temperature of ferro-nickels is about 550 deg.; in case of carbon steel, quenching diminishes torsion modulus, and increases thermoelastic coefficient and change in internal friction.

HARD SPOTS IN. Hard Spots in Metals. Machy. (Lond.), vol. 27, no. 696, Jan. 28, 1926, pp. 569-572, 5 figs. Causes and effects on machineability; hard spots in cast iron; conditions affecting machineability of steel; simple test for segregation; effect of slag on machining; effects of scale; cutting-tool design and hard spots; hard spots in non-ferrous alloys.

RECRYSTALLIZATION. A Photomicrographic Study of the Process of Recrystallization in Certain Cold Worked Metals, V. N. Krivobok. Am. Inst. Min. & Met. Engrs.—Trans., no. 1557-E, Feb. 1926, 30 pp., 43 figs. Results of investigation; progressive recrystallizztion in single crystals of iron-silicon alloy after cold working; critical strain and recrystallization; recrystallization in electrolytic iron.

STRAIN HARDENING. Note on the Softening of Strain-Hardened Metals and Its Relation to Creep, R. W. Bailey. Inst. Metals—advance paper, no. 1, for mtg. Mar. 10-11, 1926, 14 pp., 7 figs. Author believes that rational explanation of phenomenon of creep is to be found in balance of rate of production of strain hardening by distortion, and rate of its removal by thermal action; if this view be correct, importance in connection with creep phenomena of examining data available upon softening of strain-hardened metals will be understood.

MICROMETERS

SCREWS, WEAR OF. Wear of Micrometer Screws. Machy. (Lond.), vol. 27, no. 694, Jan. 14, 1926, pp. 521-522, 2 figs. Report of series of experiments made at Zeiss plant.

MINES

SURVEYING. Magnetometric Surveying as an Aid in Exploring Placer Gound, K. C. Laylander. Eng. & Min. Jl.-Press, vol. 121, no. 8, Feb. 20, 1926, pp. 325-328, 10 figs. Magnetometer and its operation; comparison of results with those obtained by drilling and actual mining leads to conclusion that areas of relative concentration can be determined; can not be used for finding gold.

MOLDS

INGOT, SHELL DEFECTS IN. The "Shell" Defect in Ingot Moulds, W. Rogers. Foundry Trade Jl., vol. 33, no. 495, Feb. 11, 1926, p. 119, 5 figs. Causes and prevention.

MOTION STUDY

APPLICATIONS. Some Recent Applications of Motion Study, Jos. A. Piacitelli. Taylor Soc.—Bul., vol. 10, no. 6, Dec. 1925, p. 268-273 and (discussion) 273-276, 3 figs. How study of processes of production and shipping of roofing materials led to standardization of methods and equipment with resultant economies.

MOTOR BUSES

DESIGN TRENDS. Trends in American Motor Bus Design. Automotive Industries, vol. 54, no. 7, Feb. 18, 1926, p. 287. Information graphically presented. See also Motor Bus Design Trends, p. 294.

SPEED, EFFECT ON FUEL CONSUMPTION. Effect of Speed on Fuel and Oil Consumption. Automotive Industries, vol. 54, no. 7, Feb. 18, 1926, pp. 272-273. Results of study of effect on increase in maximum speed on fuel and oil consumption of motor omnibuses made by M. A. Banlier, chief engineer in charge of buses of Société des Transports en Commun of Paris.

MOTOR TRUCKS

DESIGN TRENDS. Trends in American Truck Design. Automotive Industries, vol. 54, no. 7, Feb. 18, 1926, p. 298. Information graphically presented.

HORSE VS. Horse Trucking versus Motor Trucking, Arthur J. Peel. Indus. Mgmt. (N.Y.), vol. 71, no. 3, Mar. 1926, pp. 141-145, 8 figs. Author shows where in many cases horse truck is better than motor truck; and how to determine which method will prove more economical in given case.

N

NICKEL ALLOYS

NICKEL-COPPER. The Mechanical Properties at High Temperature of an Alloy of Nickel and Copper, with Special Reference to "Creep," H. J. Tapsell and J. Bradley. Inst. Metals—advance paper, no. 15, for mtg. Mar. 10-11, 1926, 19 pp., 10 figs. Deals with work carried out on 70 : 30 nickel-copper alloy.

NICKEL INDUSTRY

CANADA. The Nickel Industry, P. D. Merica. Can. Inst. of Min. & Metallurgy—Bul., no. 166, Feb. 1926, pp. 173-212, 5 figs. Discusses development work, nickel mining, nickel steels, nickel plating, monel metal and malleable nickel, alloys, nickel in cast-iron, nickel at brass foundry, etc.

NON-FERROUS METALS

ENDURANCE PROPERTIES. Endurance Properties of Non-ferrous Metals, D. J. McAdam. Am. Inst. Min. & Met. Engrs.—Trans., no. 1537-D, Feb. 1926, 10 figs. Presents stress-cycle graphs for five samples of monel metal and three high strength aluminum alloys; monel metal and duralumin are not exceptional among non-ferrous metals in endurance properties.

NOZZLES

PATENT SPECIFICATIONS. Spray-Producers and Liquid-Distributing Sprinklers and Nozzles. Abridgements of Specifications, class 69 (iii), period 1916-20, 1926, 63 pp. Patents for inventions.

STEAM-TURBINE, TESTING. A Machine for Testing Steam-Turbine Nozzles by the Reaction Method, G. B. Warren and J. H. Keenan. Mech. Eng., vol. 48, no. 3, Mar. 1926, pp. 227-232, 10 figs. Explains apparatus used in reaction-nozzle tests, difficulties encountered, means of eliminating them, and methods of obtaining and developing test data; discusses underlying principles and type of results they would indicate; shows by sample test curves close agreement between expected and actual data.

O

OIL

REFINING. New Oil Refinery at Edmonton, Alberta, H. Norbury. Can. Min. Jl., vol. 47, no. 9, Feb. 26, 1926, pp. 211-212, 1 fig. Details of refinery built to cope with rapid development of Wainwright; it has nominal capacity of 1,000 barrels a day but is capable of 1,500 barrels.

OIL ENGINES

SKETCHES AND WORKINGS. Sketches andWorkings of Oil Engines. Motorship (N.Y.), vol. 11, no. 2, Feb. 1926, pp. 127-128, 133-136, and i-ii, 19 figs. Major bearings and their structure considered from viewpoint of maintenance and adjustment.

OIL FUEL

EXPLOSIONS OF, CLOSED VESSEL. Closed Vessel Explosions of Mixtures of Air and Liquid Fuel (Petrol, Hexane, and Benzene) over a Wide Range of Mixture Strength, Initial Pressure, R. W. Fenning. Aeronautical Research Committee—Reports & Memoranda, no. 979, Sept. 1925, 22 pp., 16 figs. Results of investigation at 100 deg. cent.; air-fuel ratio giving maximum explosion pressure is considerably less than required for complete combustion.

OPEN-HEARTH FURNACES

SULPHUR IN PRODUCER GAS. Reduction and Behavior of Sulphur Contained in Producer Gas in Open-Hearth Furnaces (Verringerung und Verhalten des im Generatorgas enthaltenen Schwefels im Siemens-Martin-Ofen), J. Bronn. Stahl u. Eisen, vol. 48, no. 3, Jan. 21, 1926, pp. 78-80. Also translated abstract in Iron & Coal Trades Rev., vol. 112, no. 3025, Feb. 19, 1926, p. 309. Sulphur content in producer gas and slag with and without lime addition; influence on slag and bath in open-hearth furnace; conclusions.

ORE

SINTERING. Iron Ore Sintering Spreads in East, E. C. Kreutzberg. Iron Trade Rev., vol. 78, no. 10, Mar. 11, 1926, pp. 641-643, 3 figs. Broader application of sintering process is most important development in eastern iron-ore industry in many years.

ORE DEPOSITS

ONTARIO, CANADA. The Matabitchuan Area, Ontario, E. W. Todd. Can. Min. Jl., vol. 47, no. 6, Feb. 5, 1926, pp. 139-142. Discusses territory adjoining South Lorrain silver area to the west; mapping of rocks and resurvey of prinicpal lakes and streams.

OXYACETYLENE CUTTING

FOUNDRIES. Influence of Oxy-Acetylene Cutting on Steel Foundry Practice, R. W. Thomas. Acetylene Jl., vol. 27, no. 7, Jan. 1926, pp. 339-340, 342 and 344, 6 figs. Advantages of process. Paper read before Int. Acetylene Assn.

P

PACKING

STANDARDIZATION APPLIED TO. How Standardization Solves Our Export Packing Problems, R. W. Chalmers. Factory, vol. 36, no. 2, Feb. 1926, pp. 272-275, 15 figs. Deals with exporting automobiles; shows how engineering principles can be applied to packing.

PAINTS

SETTLING AND PACKING. The Settling and Packing of Mixed Paints, Wm. C. Arsen. Indus. & Eng. Chem., vol. 18, no. 2, Feb. 1926, pp. 157-160, 1 fig. In mixed paints pigment grains are to some extent deflocculated and dispersed by free acids in the vehicle, and metallic soaps are maintained in sol conditions by same agency; in stored paint slow chemical reaction between basic pigments and free acids form basic soaps with little dispersing power.

TECHNOLOGICAL PROBLEMS. Problems in Paint and Varnish Technology. The Need for Experimental investigation, H. H. Morgan. Roy. Soc. of Arts—Jl., vol. 74, no. 3821, Feb. 12, 1926, pp. 271-291. Discusses problems of technology, storage and keeping qualities; experimental work necessary; raw materials for faded varnish manufacture; viscosity and drying capacities of varnishes; value of various pigments.

WHITE. Factors Determining the Brightness and Opacity of White Paints, F. H. Rhodes and J. S. Fonda. Indus. & Eng. Chem., vol. 18, no. 2, Feb. 1926, pp. 130-135, 5 figs. Formula developed to express relation between brightness of film of white paint and thickness of film, and experimental evidence in support of this formula is advanced.

PAVEMENTS

EXPERIMENTAL. Experimental Pavements in Queens Borough, New York, E. E. Butterfield. Roads & Streets, vol. 65, no. 3, Mar. 3, 1926, pp. 160-162. Methods of surfacing dirt roads and constructing bituminous and key block pavement. (Abstract.) Paper presented before Am. Soc. for Mun. Improvements.

PAVEMENTS, ASPHALT

REPAIR. Repair of Asphaltic Type Pavements in a Small City, H. W. Alexander. Pub. Wks., vol. 57, no. 2, Feb.-Mar., 1926, pp. 49-50, 1 fig. Manhattan, Kans., maintains nearly half million yards by use of portable repair plant at satisfactorily low cost.

PAVEMENTS, BRICK

THIN. Thin Brick Pavements. Pub. Wks., vol. 57, no. 2, Feb.-Mar., 1926, pp. 46-49. Data from fifteen cities that have laid 2½-in. brick and from more than 100 others with brick less than 4-in. thick; special reports concerning thin pavements ten or more years old.

PAVEMENTS, CONCRETE

JOINTS IN. Joints in Concrete Pavement, W. W. Lane. Roads & Streets, vol. 65, no. 3, Mar. 3, 1926, pp. 127-128, 1 fig. Method of securing 100 per cent. joint employed on Federal Aid job in Arizona.

PIPE, CAST-IORN

BRONZE WELDING. Effect of Heat of Bronze Welding on Cast Iron Pipe, A. R. Lytle. Acetylene Jl., vol. 27, no. 7, Jan. 1926, pp. 325-338, 35 figs. Advantages of bronze-welding process over that of actual welding with cast-iron welding rod. Photomicrographs. Paper read before Int. Acetylene Assn.

PISTONS

ALUMINUM-ALLOY. Bohn Alloy Piston Employs Struts; Has Low Expansion Rate, W. L. Carver. Automotive Industries, vol. 54, no. 9, Mar. 4, 1926, pp. 406-407, 3 figs. Details of two engine components placed in production by Bohn Aluminum and Brass Corp.; completely interchangeable bronze-back babbitt-lined bearing, and Nelson-type aluminum alloy piston in which expansion difficulties ordinarily associated with light-alloy pistons have been eliminated.

PLANERS

BEDS AND TABLES. Finishing the Inner Guides of Planer Beds and Tables, C. E. Linden. Machy. (N.Y.), vol. 32, no. 7, Mar. 1926, p. 554, 3 figs. Rough-planing inner guides of bed; gaging fixture for finish-planing guides.

BEVEL-GEAR. Planing Spiral Bevel Gears. Automobile Engr., vol. 16, no. 212, Feb, 1926, pp. 68-69, 4 figs. Machine consists essentially of continuously rotating work spindle, together with tool slide which reciprocates to and from cone center of gear.

LEVELING. Levelling a Planer, C. O. Lewis. Machy. (Lond.), vol. 27, no. 696, Jan. 28, 1926, pp. 577-578, 1 fig. Equipment required for leveling operations; rough leveling; running level; second-leveling operation; crosswise leveling; setting up work.

POWER TRANSMISSION

BUYING AND SELLING EQUIPMENT. Intelligent Buying and Selling of Transmission Equipment, W. Staniar. Indus. Mgmt. (N.Y.), vol. 71, no. 3, Mar. 1926, pp. 173-175, 2 figs. Points out that transmission service and not sales volume is important point.

PRESSURE VESSELS

WELDED. Tests on Welded Pressure Vessels, L. H. Roller. Refrig. Eng., vol. 12, no. 7, Jan. 1926, pp. 215-237 and (discussion) 237-241, 54 figs. Results of investigation by Bureau of Standards to determine strength of welded tanks made in commercial shops, and whether acceptance test of proposed A.S.M.E. code for unfired pressure vessels would reveal defects in tanks which would make them unsafe.

PROFIT SHARING

PERKINS PLAN. Better Than a Bonus Plan, M. Droke. Indus. Mgmt. (N.Y.), vol. 71, no. 2, Feb. 1926, pp. 115-116. Outline of Perkins plant of profit sharing.

PUBLIC UTILITIES

CONSTRUCTION COSTS. Trend of Construction Cost of Certain Public Utilities, W. Breuger. Am. Soc. Civil Engrs.—Proc., vol. 52, no. 3, Mar. 1926, pp. 434-438. 5 figs. Valuation was recently made of one of largest public utilities in United States and in connection therewith a detailed study of trend, year by year. from 1914, to date, of construction cost of various public utility properties.

PUMPING STATIONS

WATER WORKS. Waterworks Pumps and Pumping Stations, R. W. Angus. Contract Rec., vol. 40, no. 10, Mar. 10, 1926, pp. 238-239. Outline of types of equipment in common use and their merits; centrifugal pumps now general type; simplified construction; field for high-speed, low-head pump.

R

RADIOTELEPHONY

AMPLIFIERS. The Performance of Amplifiers, H. A. Thomas. Instn. Elec. Engrs.—Jl., vol. 64, no. 350, Feb. 1926, pp. 253-268 and (discussion) 268-278, 31 figs. Research carried out at Nat. Physical Laboratory for Radio Research Board; standard method of testing amplification and input impedance of amplifier; analyses output wave-forms from audio-frequency amplifiers.

RAILS

HEAT TREATMENT OF. New Heat Treatment for Improving Quality of Rails (Nouveaux traitements thermiques pour l'amélioration de la tenue des rails), E. Marcotte. Revue Industrielle, vol. 55, no. 2195, Oct. 1925, pp. 439-449, 6 figs. Cause of wear in rails and how to deal with it, by changing shape and increasing profile, by chemical composition, and by heat treatment; pearlitic structures, sorbitic structure, meanganese steel, Sandberg process; sorbitic rails and their tests.

WELDED BONDS. Low Resistance Welded Bonds Result in Economy on Erie, C. A. Nichols. Ry. Signaling, vol. 19, no. 3, Mar. 1926, pp. 96-98, 5 figs. Cut section eliminated, battery consumption reduced, factor of safety increased, on 139 miles of track without a bond failure.

RAILWAY ELECTRIFICATION

DEVELOPMENTS. Railroad Electrification is Well Started, L. D. Moore. Elec. World, vol. 87, no. 10, Mar. 6, 1926, pp. 507-508. Except for traction, railroads are as completely electrified as any industry; large volume applications for shop power, illumination, freight handling, signals and control, and other uses.

ILLINOIS CENTRAL. Illinois Central Electrification Progress. Ry. Age. vol. 80, no. 7, Feb. 13, 1926, pp. 432-434, 6 figs. Details of overhead distribution system for part of territory included in electrification program; catenary structures also carry a.c. distribution system. See also account in Ry. Elec. Engr., vol. 17, no. 2, Feb. 1926, pp. 47-50, 10 figs.

RAILWAY MAINTENANCE

LABOR-SAVING METHODS. How We Are Cutting Our Maintenance of Way and Structures Payroll $50,000,000 a Year, C. C. Cook. Ry. Eng. & Maintenance, vol. 22, no. 3, Mar. 1926, pp. 93-96. Conservation of ties; devices for surfacing soft ballast; mechanical cranes and ditching machines; rail-laying machines; other labor-saving equipment.

RAILWAY MOTOR CARS

GASOLINE-ELECTRIC. Gas-Electric Cars for the Seaboard. Ry. Elec. Engr., vol. 17, no. 2, Feb. 1926, pp. 41-43, 6 figs. Dual-power-plant gas-electric rail motor cars made by Electro-Motive Co., Cleveland, Ohio; motor equipment permits rapid accelerations, high-speed operation and large hauling capacity.

SPECIFICATIONS. American Gasoline Rail Car Specifications. Automotive Industries, vol. 54, no. 7, Feb. 18, 1926, p. 297. Tabular data.

RAILWAY OPERATION

TRAIN CONTROL. Norfolk & Western Train Control Approved. Ry. Signalling, vol. 19, no. 2, Feb. 1926, pp. 51-54. Union Switch & Signal Co.'s 3-speed continuous induction type found to meet I. C. C. requirements.

RAILWAY REPAIR SHOPS

LOCOMOTIVE. Locomotive Repair Shop Labor Saving Devices. Ry. Mech. Engr., vol. 100, no. 2, Feb. 1926, pp. 109-114, 18 figs. Development of machine attachments, cutting tools and jigs, encouraged at Houston, Texas, shops of Southern Pacific Lines.

Maintenance of Motive Power on New England Railroads, E. Sheldon. Am. Mach., vol. 64, no. 8, Feb. 25, 1926, pp. 303-306, 11 figs. Boiler and tank work in Readville shops of New Haven road; system to salvage flues and tubes; punching, bending, flanging, and similar operations; device to clean and test superheater units.

RAILWAY SIGNALLING

A. C. FLOATING SYSTEM. Five Years of Success With the A. C. Floating System, C. F. Stoltz. Ry. Signaling, vol. 19, no. 3, Mar. 1926, pp. 91-93, 5 figs. Charges for maintenance, operation, and supervision amount to less than $5.00 per block signal per month.

AUTOMATIC STAND-BY POWER UNITS FOR. Automatic Gas-Electric Stand-by Power Units for Signals and Interlockings. Ry. Signaling, vol. 19, no. 3, Mar. 1926, pp. 101-103, 5 figs. Development that provides an emergency supply of current for a.c. installations or constant supply for apparatus located at isolated points.

COLORED-LIGHT SIGNALS. A New Development in Chromatic Light Signals, D. J. McCarthy. Ry. Signalling, vol. 19, no. 3, Mar. 1926, pp. 103-105, 4 figs. Ground-glass lens with five-watt lamp gives color-light signal indication at 4,000 ft.

MAINTENANCE AND OPERATION. Maintenance and Operation of A.C. Signals on the Southern. Ry. Signaling, vol. 19, no. 3, Mar. 1926, pp. 87-90, 5 figs. Average cost for current, labour and materials based on 868 signals on 700 miles of double track, is $10.61 per month per signal.

UNDERGROUND WIRING. Parkway Cable Reduces Maintenance, E. G. Stradling. Ry. Signaling, vol. 19, no. 3, Mar. 1926, pp. 105-107, 2 figs. Study of methods for more permanent construction of underground signal wiring.

RAILWAY TIES

PRODUCTION. Producers Discuss Crosstie Supply at Cleveland. Ry. Eng. & Maintenance, vol. 22, no. 2, Feb. 1926, pp. 63-68, 1 fig. Review of papers presented at Nat. Assn. of Railroad Tie Producers.

RAILWAYS

ENGINEERING PROBLEMS. Railroading and the Engineer, S. P. Bush. Ry. Rev., vol. 78, no. 7, Feb. 13, 1926, pp. 315-317. Points out that technically trained men are needed in transportation and industry. (Abstract.) Address delivered at regional meeting of Amer. Soc. of Mech. Engrs.

RAILWAY TRACK

GRADE-CROSSING ELIMINATION. Maryland Negotiates Agreement for Crossing Elimination, J. N. Mackall. Eng. News-Rec., vol. 96, no. 8, Feb. 25, 1926, pp. 314-315. Arrangements completed with three leading railways for 10-year program of grade-crossing elimination on state roads.

LAYING. How a Track Was Moved 500 Miles, G. E. Olson. Ry. Eng. & Maintenance, vol. 22, no. 2, Feb. 1926, pp. 53-54, 3 figs. In effort to complete extension of Bainville branch of Great Northern from Scobey, Mont., north 20 miles to Peerless in time to bring out wheat grown in that territory, novel expedient was adopted to laying of track in minimum time; track consisted of 80-lb. rail, full tie-plated; it was disconnected at every second joint and was handled in units of two panels or 60-ft. lengths.

REFRIGERATING MACHINES

ABSORPTION TYPE. Absorption Type Household Refrigerating Machines, H. E. Keeler. Refrig. Eng., vol. 12, no. 8, Feb. 1926, pp. 269-272 and (discussion) 272-274. Consideration of factors which have been operative in bringing about development of household refrigeration; lines of future development.

REFRIGERATING PLANTS

ERRORS IN, ANALYSIS OF. Avoiding Mistakes in the Refrigerating Plant, H. G. Venemann. Power, vol. 63, no. 8, Feb. 23, 1926, pp. 292-293, 2 figs. Errors of two different plants are reviewed. (Abstract.) Paper read before Nat. Assn. Practical Refrig. Engrs.

PURDUE UNIVERSITY. The Purdue Refrigerating Plant, E. F. Burton. Purdue Eng. Rev., vol. 21, no. 2, Jan. 1926, pp. 6-7, 2 figs. Working principles of University refrigerating equipment.

REFRIGERATION

CENTRIFUGAL. Centrifugal Compression as Applied to Refrigeration, W. H. Carrier. Refrig. Eng., vol. 12, no. 8, Feb. 1926, pp. 253-268 and 277, 17 figs. Résumé of principles involved in centrifugal refrigeration; effect of inlet angle of impeller blade; blade snape; ratio of compression; relation of temperature range to speed; performance characteristics.

ROAD CONSTRUCTION

SUPER-HIGHWAY. Building an Eight-Lane Paved Highway. Eng. News-Rec., vol. 96, no. 9, Mar. 4, 1926, pp. 350-353, 10 figs. Construction of 13 miles of super-highway out of Detroit, Mich., from Wayne County line to Pontiac; two 44-ft. concrete slabs in 200-ft. right-of-way being constructed to carry traffic averaging 14,000 vehicles in 24 hours.

ROADS, CONCRETE

CONSTRUCTION. Efficiency in Concrete Road Construction, J. L. Harrison. Pub. Roads, vol. 6, no. 12, Feb. 1926, pp. 269-276. Organization and equipment of concrete paving operations.

OVER-RUN OF CONCRETE. How to Stop Over-run of Concrete Material, R. E. O'Connor. Roads & Streets, vol. 65, no. 3, Mar. 3, 1926, pp. 135-140. Suggestions for preventing use of excess quantities of cement and aggregate. Paper presented before Am. Road Bldrs. Assn.

PAVING PRACTICE. Concrete Paving Practice, H. E. Surman. Roads & Streets, vol. 65, no. 2, Feb. 3, 1926, pp. 69-73, 5 figs. Recent developments outlined. Paper presented before Am. Road Bldrs. Assn.

WEIGHED AGGREGATES. Records on a Concrete Road Using Weighed Aggregates, W. E. Barker. Eng. News-Rec., vol. 96, no. 11, Mar. 18, 1926, pp. 440-441, 4 figs. Weighing simple and rapid; daily sieve analysis; aggregate moisture content tested often; full test control.

ROCK CRUSHING

PHENOMENA, INVESTIGATION OF. An Investigation of Crushing Phenomena, A. M. Gaudin. Am. Inst. Min. & Met. Engrs.—Trans., no. 1565-B, Feb. 1926, 58 pp., 84 figs. Study undertaken in order to condense information concerning comminution, and covering great variety of conditions into one or several rules which would be of use in development of sytematic theory and in many directly practical ways.

RECLAMATION

LAND. Present Policy of the United States Bureau of Reclamation Regarding Land Settlement, E. Mead. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 3, Mar. 1926, pp. 411-415. Review of main activity of reclamation services; relation of private ownership of land to social and economic value of works built with Government money.

RESERVOIRS

CONCRETE LINED. Design and Construction of Concrete-Lined Distributing Reservoirs, I. E. Flaa. Am. Water Wks. Assn.—Jl., vol. 15, no. 2, Feb. 1926, pp. 118-128, 3 figs. Distributing reservoirs are used for receiving water from long conduits, leading from source of supply into cities and there regulating flow into distributing system; type of reservoir depends upon physical character of available sites; examples of reservoirs in vicinity of San Francisco.

RIVERS

ST. LAWRENCE. Ice Conditions in St. Lawrence River, H. T. Barnes. Can. Engr., vol. 50, no. 6, Feb. 9, 1926, pp. 207-208. Effect of ice on water levels, advantages provided by nature; method being worked out for conservation of heat of Lake Ontario for ice prevention. (Abstract.) Paper presented before Shipg. Federation and Board of Trade, Montreal.

ROLLING MILLS

BLOOMING-MILL DRIVE. New Electric Blooming Mill Drive Installed in Record Time, A. L. Foell. Blast Furnace & Steel Plant, vol. 14, no. 3, Mar. 1926, pp. 115-117, 3 figs. Installation of new electric blooming-mill drive put in operation by Donner Steel Co.

NON-REVERSIBLE. Cascade Control, System Krämer, for Non-Reversible Rolling Mills (Groupes de reglage en cascade système Krämer), G. Wauthier. Revue Universelle des Mines, vol. 9, no. 3, Feb. 1, 1926, pp. 138-151, 6 figs. Details of Krämer and Scherbins systems; starting, speed control, braking. Advantages of cascade systems are: speed changes within wide limits, cos $\varnothing = 1$ for all loads and speeds, constant power at all speeds, etc.

STEEL ROLLING. The Theory and Practice of Rolling Steel, W. Tafel. Iron Trade Rev., vol. 78, nos. 5, 7 and 9, Feb. 4, 18 and Mar. 4, 1926, pp. 331-335, 457-460 and 570-572 and 575, 26 figs. Feb. 4: Development of roll-drawing outer collars; pass layouts for hoop steel. Feb. 18: Hand and guide rolling. Mar. 4: Determining of square to be entered into flat oval pass; types developed by author for overcoming production with improperly rolled material; difference between wire and other materials.

S

SAND

HANDLING. Handling Sand and Gravel Efficiently from Oregon Rivers, E. D. Roberts. Pit & Quarry, vol. 11, no. 11, Mar. 1, 1926, pp. 75-80, 5 figs. Methods and equipment required to deliver sand and gravel direct to barges of small retailing companies.

PREPARATION AND USE. Preparation and Use of Industrial Special Sands, W. M. Weigel. Am. Inst. Min. & Met. Engrs.—Trans., no. 1569-H, Feb. 1926, 14 pp., 10 figs. Definition of special sands; sources of supply; mining methods; preparation; uses and properties; possible by-products in preparation of sand; possible fields for research.

WASHING AND SIZING. Washing and Sizing Sand and Gravel, E. Shaw. Am. Inst. Min. & Met. Engrs.—Trans., no. 1528-H, Feb. 1926, 10 pp. Impurities to be washed out; standard and special washing method; washing sand by decantation; water required for washing; uniformf eeding; sizing and classification; future industry.

SAND, MOLDING

ANALYSIS. Analysis of Molding Sand; Some Physical and Chemical Tests, W. B. Vestal and H. L. Pierce. West. Machy. World, vol. 17, no. 2, Feb. 1926, pp. 73-75, 2 figs. Fundamentals of sand analysis, divided into physical and chemical characteristics for purpose of discussion.

RECLAMATION. Reclamation of Molding Sand in the Steel Foundry. West. Machy. World, vol. 17, no. 2, Feb. 1926, pp. 75-77, 1 fig. Economic system of sand reclamation; results of tests taken from several installations, give very complete analysis of what may be expected if rejected sand was analyzed in any steel foundry.

TESTS. The Use of Standard Tests of Molding Sands, H. Ries. Am. Inst. Min. & Met. Engrs.—Trans., no. 1522-H, Jan. 1926, 3 pp.; also (abstract) in Iron Age, vol.. 117, no. 9, Mar. 4, 1926, pp. 621-622. Research with object of obtaining reliable data on which formulation of standard methods of testing could be based.

SAWS

FRAMES. Multiple Blade Saw Frames and Their Requirements (Welche Anforderungen müssen an ein modernes Vollgatter gestellt werden?), Spatz. Maschinenbau, vol. 5, no. 2, Jan. 21, 1926, pp. 62-64, 4 figs. German and Swedish frames; frames with one or two connecting rods; overhanging of saw blades, deep-cutting, and high-speed frames.

SCREW MACHINES

AUTOMATIC. Automatic Screw Machine. Machy. (Lond.), vol. 27, no. 698, Feb. 11, 1926, pp. 652-653, 3 figs. New type machine of Swiss manufacture, for rapid production of screws in large or small quantities.

PURCHASING PRODUCTS. Buying Screw Machine Products, C. W. Bettcher. Iron Age, vol. 117, no. 10, Mar. 11, 1926, pp. 688-690. Suggestions from manufacturer aimed to produce better commercial understanding between buyer and seller.

SCREW THREADS

FIXING LIMITS. Limits of Accuracy in Repetition Work, H. Applegard. Am. Mach., vol. 64, no. 10, Mar. 11, 1926, pp. 389-390. Notes on fixing limits and turning of metals on automatic machine, on work to be threaded, for drilling, etc.

SEWAGE DISPOSAL

CHICAGO. Progress of the Sewage Disposal Progam at Chicago, E. J. Kelly. Eng. News-Rec., vol. 96, nos. 9 and 10, Mar. 4 and 11, 1926, pp. 363-366 and 394-400, 12 figs. Mar. 4: Entire Sanitary District has been divided into five areas for sewage treatment purposes. Mar. 11: Design and early construction methods of North Side activated sludge plant for 800,000 population; cableways handle concrete and equipment; bulk cement shipped in refrigerator cars.

PLANT TROUBLES. Some of the Tuning-Up Difficulties of the Milwaukee Sewage Plant, T. C. Hatton. Eng. News-Rec., vol. 96, no. 11, Mar. 18, 1926, pp. 446-447, 1 fig. All troubles so far have been found to be mechanical and not fundamental, and are gradually being eliminated; conveyor system for sludge handling has given most trouble; early difficulties and what is being done to overcome them.

SHAFTS

VIBRATION. Vibration Phenomena of Loaded Unbalanced Shaft While Passing through Its Critical Speed, A. L. Kimball, Jr., and E. H. Hull. Mech. Eng., vol. 48, no. 3, Mar. 1926, pp. 251-253 and (discussion) 254-255, 9 figs. Problem of shaft whirling considered in this article is reduced to simplest terms by assuming rotor to be disk-shaped flywheel, carried by straight, weightless shaft with unbalanced producer, for example, by drilling hole in one side of disk.

SLOTTING MACHINES

BUSH 4-INCH. The Bush 4-Inch Slotting Machine. Machy. (Lond.), vol. 27, no. 698, Feb. 11, 1926, p. 649, 3 figs. Machine for use with light and medium-size work in engineering works and in garages or small general repair shops.

SNOW REMOVAL

COST ANALYSIS. Cost Analysis of Snow Removal in Michigan, V. R. Burton. Roads & Streets, vol. 65, no. 2, Feb. 3, 1926, pp. 93-99, 5 figs. Results of condition survey. Paper presented before Am. Road Bldrs. Assn.

SPRINGS

HELICAL. Helical Springs, C. W. Hill. Machy. (Lond.), vol. 27, no. 697, Feb. 4, 1926, pp. 601-607, 7 figs. Investigations into relation of actual to calculated performance.

STANDARDS

GERMAN N.D.I. REPORT. Report of German Industrial Standards Committee (NDI.-Mitteilungen), Maschinenbau, vol. 5, no. 1, Jan. 7, 1926, pp. 45-52, 4 figs. Details of proposed standards for interchangeable gears for machine tools; milling cutters for wheel-tire profile of German Railway, with and without shank

STEAM

HIGH-PRESSURE. High Pressure Steam Working, Löffler. Eng. & Boiler House Rev., vol. 39, no. 7, Jan. 1926, pp. 315-318 and 324, 3 figs. Requirements of high-pressure steam generators; trials of new generator of Vienna Locomotive Works Corp., where testing plant has been erected in their shops.

Power and Process Steam from Higher Pressures, A. G. Darling. Paper Trade Jl., vol. 82, no. 8, Feb. 25, 1926, pp. 163-165, 4 figs. Increase of energy from higher pressures; application for pulp and paper mills; multi-stage condensing turbine; bibliography. Paper before Tech. Assn. Pulp & Paper Industry.

LONG-DISTANCE DISTRIBUTION. Economical Conveyance and Distribution of Steam over Long Distances, K. Hencky. Eng. Process, vol. 7, no. 2, Feb. 1926, pp. 43-51, 17 figs. Precaution against heat losses; influence of properties of steam on heat losses; delivery of steam of different pressures to large works.

UNDERGROUND HEAT, PRODUCTION FROM. Steam Apparatus for Using the Internal Heat of the Earth (Ancora sulle centrali di Larderello e di Torre del Lago). Industria, vol. 39, no. 18, Sept. 30, 1925, p. 481, 1 fig.

STEAM ENGINES

CYLINDERS. Water in Steam-Engine Cylinders, E. Ingham. Power Engr., vol. 21, no. 240, Mar. 1926, pp. 103-104. Discussion of ways and means whereby this may be avoided.

STEAM PIPES

CALCULATION. Calculation of Steam Pipe Lines (Nota sul calcolo delle condotte per vapore), T. Jervis. Industria, vol. 39, no. 23, Dec. 15, 1925, pp. 611-613, 2 figs. Calculation of coefficient of friction, viscosity; turbulent flow; diameter and velocity; pressures; develops equations.

STEAM POWER PLANTS

COMBINATION HEATING AND. Fuel Economy by Combined Services. Power Engr., vol. 21, no. 240, Mar. 1926, pp. 92-99, 13 figs. Through combination of heating and electricity supply at St. John's Hospital, Wandsworth, quite small plant has yielded striking results.

STEAM TURBINES

DEVELOPMENTS. Evolution of Steam Turbines. (L'évolution des turbines à vapeur), F. Fontanel. Arts et Metiers, vol. 78, no. 62, Nov. 1925, pp. 441-462, 25 figs. Use of high pressures and superheat; feed-water heating by absorbing steam; high powers and speeds attained with multicellular turbines; applications to turbo-alternators, turbo-pumps, turbo-blowers, etc.

STEEL

ALLOY. *See Alloy Steels.*

CARBON EXPANSION CURVES. A Simple Dilatometer for High Temperatures; Expansion of Carbon Steels at Critical Points (Ein einfacher Ausdehnungsapparat für hohe Temperaturen; das Ausdehungsverhalten der Kohlenstoffstähle im Umwandlungsbereich), F. Stablein. Stahl u. Eisen, vol. 46, no. 4, Jan. 28, 1926, pp. 101-104, 5 figs.

CARBON, PHYSICAL PROPERTIES. Influence of Temperature, Time and Rate of Cooling on Physcial Properties of Carbon Steel II, F. B. Foley, C. V. Clayton, and W. E. Remmers. Am. Inst. Min. & Met. Engrs.—Trans., no. 1545-C, Feb. 1926, 19 pp., 14 figs.

FATIGUE FAILURES. Fatigue Failures in Steel, F. W. Rowe. Metal Industry (Lond.), vol. 28, nos. 6, 7 and 8, Feb. 5, 12 and 19, 1926, pp. 133-135, 157-159 and 185-188, 18 figs. Duscusses, with examples, some of general problems of fatigue failure, especially in regard to concentration of stresses at sharp changes of section, including effect of surface scratches, and also in regard to lack of correlation between endurance limit of a steel and its chief static mechanical properties; examples of typical fatigue failures in service, in most of which defective metallurgical treatment as well as design and constructional problems are involved.

IMPACT RESISTANCE. Variation with Temperature of the Resistance to Impact of Steel (Sur la variation de la résistance des aciers ordinaires doux et dur, au chock par traction, avec la température), J. Cournot and R. Sasagawa. Académie des Sciences—Comptes Rendus, vol. 181, no. 25, Dec. 21, 1925, pp. 1065-1066.

MALLEABILITY. Limit of Malleability of Steel When Hot as a Function of Carbon Content (Limite de la malleabilite à chaud de l'acier en fonction de sa teneur en Carbone), E. Cotel. Revue Universelle des Mines, vol. 9, no. 1, Jan. 1, 1926, pp. 27-29, 1 fig.

PHYSICAL PROPERTIES. Some Physical Properties of Steel and Their Determination, J. H. Andrew, M. S. Fisher, and J. M. Robertson. Roy. Soc.—Proc., vol. 110, no. A754, Feb. 1, 1926, pp. 391-422, 19 figs. Investigation of constitution of steel by new methods; deals with electrode potential, electrical resistance, and change of resistance during tempering.

STAINLESS. Rustless Steel (Nichtrostender Stahl), E. Richards. Schweizerische Bauzeitung, vol. 87, nos. 5 and 6, Jan. 30 and Feb. 7, 1926, pp. 59-60 and 72-74, 8 figs.

STEEL CASTINGS

TEST BARS. Producing Test Bars in Quantities. Machy. (Lond.), vol. 27, no. 693, Jan. 7, 1926, p. 477, 1 fig. In a large works so many test bars of steel castings are made that it has been found economical to tool up a turret lathe for finishing them.

STEEL, HEAT TREATMENT OF

HARDENING. The Current Theories of the Hardening of Steel Thirty Years Later, A. Sauveur. Am. Inst. Min. & Met. Engrs.—Trans., no. 1532-C, Feb. 1926, 44 pp., 10 figs. Duscusses phenomenon of hardening of steel; appendix contains answers to questionnaires to eminent metallurgists in effort to ascertain prevailing views of those best qualified to express opinion.

TEMPERING LIQUIDS. Study of Quenching Liquids (Etude rationelle des liquides de trempe), J. Hebert. Technique Moderne, vol. 18, no. 3, Feb. 1, 1926, pp. 65-71, 13 figs. Concludes that it is always possible to impart to steel greater or inferior hardness than that resulting from pure water by dissolving a certain quantity of salts, acids or bases, capable of producing a desired effect.

STEEL MANUFACTURE

AUTOMOBILE STEELS. The Production of Automobile Steels. Automobile Engr., vol. 16, no. 212, Feb. 1926, pp. 59-61, 6 figs. Notes on works and manufacturing methods of Hadfields, Ltd., in England; making manganese steel, road springs, valves, and heat-resisiting steels.

BESSEMER AND BASIC PROCESSES. The Present Status of the Basic Bessemer Process in Comparison with the Thomas Process (Der heutige Stand der basischen Herdfrischverfahren im Vergleich zum Thomasverfahren), F. Bernhardt. Stahl u. Eisen, vol. 48, nos. 1, 2, 3 and 5, Jan. 7, 14, 21, and Feb. 4, 1926, pp. 1-7, 39-44, 73-78 and 137-142, including discussion.

HIGH-GRADE. Making High Grade Steel, J. A. Coyle. Iron Trade Rev., vol. 78, nos. 8 and 10, Feb. 25 and Mar. 11, 1926, pp. 514-516, 4 figs., and 636-637, and 640, 5 figs. Feb. 25: Metal for band, circular and gang saws, cutlery and engraving plates requires close control of melting and finishing processes; typical analyses of band-saw, circular-saw, and metal-cutting steels. Mar. 11: Shearing blanks for cross-cut saws from clogged or rolled blanks; clearance obtained by tilting top-roll of mill.

STOKERS

CHAIN-GRATE. Chain-Grate Stokers. Power Engr., vol. 21, no. 240, Mar. 1926, pp. 90-91, 3 figs. Factors affecting their operation.

HEATING PLANT. Stokers Pay Big Dividends in Heating Plant. Power, vol. 63, no. 7, Feb. 16, 1926, pp. 253-254, 1 fig. In three-boiler plant operating during heating season of seven months, installation of stokers saves more than $10,000 over hand firing and use of oil for short period.

SIDE-CLEANING. New Double Retort Side Cleaning Stoker, R. June. Combustion, vol. 14, no. 3, Mar. 1926, pp. 176-177, 4 figs. Stoker developed by Detroit Stoker Co., two retorts doing work which formerly had to be done by one.

STREAM POLLUTION

PROBLEMS. Some Viewpoints on Stream Pollution, H. P. Eddy. Can. Engr., vol. 50, no. 7, Feb. 16, 1926, pp. 223-226. Legal and engineering aspects discussed at conference of Engineering Profession of Michigan at Detroit; sanitary laws in various states and of health authorities quoted; theory and practice form main topic of discussion; American and Canadian viewpoints. See also discussion by Wm. Gore, pp. 226-227.

SUBSTATIONS

AUTOMATIC. Another Automatic Converter Sub-Station. Elec. Rev., vol. 98, no. 2513, Jan. 22, 1926, pp. 124-125, 3 figs. Demonstration of Reyrolle-Mather & Platt equipment at Park Works, Manchester.

SAFETY DEVICES. Substation Designed for Safety, N. B. Higgins. Elec. World, vol. 87, no. 6, Feb. 6, 1926, pp. 295-297, 5 figs. Violet Hill station of Pa. Water & Power Co. at York, Pa., uses ingeniously devised system of switch interlocks to prevent injury to persons or damage to equipment.

SUPERHEATERS

TYPES. Modern Superheaters. Eng. & Boiler House Rev., vol. 39, no. 7, Jan. 1926, 329-332, 4 figs. Details embodied in design of Superheater Co., Ltd.

SUPERPOWER

INTERCONNECTION. Conti Dwells on Advantages of Interconnection. Elec. World, vol. 87, no. 7, Feb. 13, 1926, p. 353. Review of address by Ettore Conti delivered before International Chamber of Commerce at Brussels, stating that social and economic pressure forces interconnection; national laws should permit developments to be made freely.

SURVEYING

AERIAL. The Brock Process of Making Topographic Surveys from the Air, F. E. Weymouth. Engineering, vol. 121, no. 3138, Feb. 19, 1926, pp. 245-248, 12 figs. Method of determining contour location from aerial photographs and translating photographic data to form of engineering maps with constant scale.

Aeroplane Topographic Surveys, G. T. Bergen. Am. Soc. Civil Engrs.—Proc., vol. 52, no. 3, Mar. 1926, pp. 367-395, 13 figs. Method of making accurate contour maps directly from aerial photographs; method is applicable to wide range of conditions, it offers marked advantages in making maps of large areas for engineering studies and preliminary locations, particularly in country of bold relief and considerable growth of timber or brush.

T

TERMINALS, LOCOMOTIVE

BATTLE CREEK, MICH. Grand Trunk Western Completes Modern Terminal. Ry. Mech. Engr., vol. 100, no. 2, Feb. 1926, pp. 115-119, 11 figs. Modern cinder storage and power plant are outstanding mechanical features of terminal at Battle Creek, Mich.

TERMINALS, RAILWAY

CHICAGO. I. C. Chicago Terminal Project Now One-Third Completed. Ry. Age, vol. 80, no. 9, Feb. 27, 1926, pp. 514-519, 9 figs. Project comprises complete reconstruction of passenger and freight facilities of road in Chicago, and electrification of all service other than that on its branch west to Sioux City.

ST. PAUL, MINN. St. Paul Union Depot Completed, G. H. Wilsey. Ry. Age, vol. 80, no. 7, Feb. 13, 1926, pp. 418-422, 6 figs. New passenger-terminal improvements; use of cellular retaining wall; track layout.

TIDAL POWER

UTILIZATION. Harnessing Tidal Power from Waves (La captation de la puissance des vagues), P. van Vloten. Génie Civil, vol. 88, no. 4, Jan. 23, 1926, pp. 80-83, 4 figs. Details of new method in which waves are directed up an incline provided with vertical divisions so that water collects in canals or chambers above sea-level for driving turbines.

TOLERANCES

SCREW-THREAD. Screw Thread Tolerances—Comment, R. E. Flanders. Machy. (Lond.), vol. 27, no. 696, Jan. 28, 1926, pp. 580-582, 7 figs. Discusses Hartness comparator, with reference to article by Elstub in Oct. 29, 1925, issue of same journal.

TOOLS

WEAR. The Effect of Wear on Small Tools. Indus. Mgmt. (L9nd.), vol. 13, no. 1, Jan. 1926, pp. 29-30. How normal wear affects accuracy.

TORSION

STEEL BARS. Theoretical and Practical Points on Torsion of Bars of Non-Circular Section (Quelques particularités théoriques et expérimentales de la torsion de barreaux à section non circulaire), M. J. Sigle. Revue de l'Industrie Minérale, no. 120, Dec. 15, 1925, pp. 557-566, 29 figs. Results of experiments; inferiority of non-circular cross sections in resisting torsion; lines of equal displacement and of equal sliding during deformation by torsion; appearance of steel bars subjected to extreme torsion; change of length, etc.

TRACTORS

FARM, AMERICAN SPECIFICATIONS. American Agricultural Tractor Specifications. Automotive Industries, vol. 54, no. 7, Feb. 18, 1926, pp. 312-315. Tabular data alphabetically arranged according to makes. See also data on American garden-tractor specifications, pp. 314-315.

TRANSFORMERS

CONNECTING METERS AND RELAYS. Connecting Meters and Relays to Transformers, J. B. Gibbs. Power, vol. 63, no. 9, Mar. 2, 1926, pp. 326-328, 13 figs. Simpler and common connections for single-phase and polyphase circuits; discusses accuracy of instrument transformers and factors that limit number of meters and relays that can be connected to same transformers.

TAP-CHANGING. Tap-Changing Transformer with Nine Steps, A. Palme. Elec. World, vol. 87, no. 10, Mar. 6, 1926, pp. 511-512, 2 figs. Details of installation in electrolytic copper-refining plant in Belgium.

TUNNELLING

ROCK. Recent Rock Tunneling Methods, Illinois Central R.R. Eng. News-Rec., vol. 96, no. 9, Mar. 4, 1926, p. 370, 2 figs. Longest of 3 rock tunnels on new line through Ozark Hills exemplifies best modern equipment practice.

TURBO-ALTERNATORS

INDIRECT COOLING. Indirect Cooling of Turbo-Alternators, F. S. Bennett. Power, vol. 63, no. 11, Mar. 16, 1926, pp. 400-403, 9 figs. Comparisons between type of air-cooler designed for using condensate and raw water and those using raw water only; improvements in design; suggestions on operating practice; brief reference to application of these coolers to synchronous condensers and frequency-changer sets.

V

VALVES

MULTIPLE-FLAP. Multiple-Flap Valve. Engineer, vol. 141, no. 3568, Feb. 5, 1926, p. 160, 2 figs. Details of Ismailia valve, which derives its name from fact that it was first used at Ismailia Pumping Station at Cairo, in connection with pumps designed to discharge crude sewage against head of 300 ft.; it is claimed for it that, it not only provides clear way for passage of liquid, but it has no hinge to collect fibrous matter, and can be removed and replaced by hand without use of tools.

VARNISHING

SPRAY METHOD. Modern Processes of Spray Varnishing (Newzeitliche Spritzlackierverfahren), R. Klose. Maschinenbau, vol. 5, no. 2, Jan. 21, 1926, pp. 65-71, 18 figs. Shows how work may be put on modern basis; types of atomizers for various kinds of work; automatic machines; precalculation, examples and curves; cost data.

W

WAGES

GROUP-PAYMENT SYSTEM. The Group System of Wage Payment, H. B. Maynard and G. J. Stegemerten. Indus. Mgmt. (N.Y.), vol. 71, nos. 2 and 3, Feb. and Mar. 1926, pp. 93-98 and 167-172, 6 figs. Feb.: Discussion of its advantages and applications. Mar.: Details of operation of group system at East Pittsburgh.

WATER HAMMER

PENSTOCK, EFFECT ON. Effect of Hydraulic Shock on Welded Drum. Power, vol. 63, no. 7, Feb. 16, 1926, pp. 260-261, 2 figs. Analyses of tests at plant of A. O. Smith Corp. indicate that about 7,000 repetitions of stress materially reduced strength of plate; initial stresses in unannealed drum may also have been a factor.

WATER MAINS

CAST IRON. Laying Cast Iron Mains: Organizations and Methods, H. V. Knouse. Am. Water Wks. Assn.—Jl., vol. 15, no. 2, Feb. 1926, pp. 129-136, 6 figs. Installation in Metropolitan Utilities District of Omaha, Nebr.

CLEANING. Cut Holes in Submerged Main for Cleaning, L. F. Hagglund. Water Wks. Eng., vol. 79, no. 4, Feb. 15, 1926, pp. 195-196, 2 figs. Manholes cut in supply pipe, submerged 50-ft. to remove incrustations; description of process.

WATER SUPPLY

GROUNDWATER. Increasing the Capacity of Ground Water Supplies, W. G. Kirchoffer. Am. Water Wks. Assn.—Jl., vol. 15, no. 2, Feb. 1926, pp. 144-151. Deals mainly with water supplies on wells, both deep and shallow.

WATER TREATMENT

SOFTENING OF COOLING WATER. Improved Cooling System for Oil-Engine Plants, E. J. Kates. Power, vol. 63, no. 11, Mar. 16, 1926, pp. 407-408, 2 figs. Zeolite water-softening system; heat exchanges for large plants.

WATERWAYS

FORMULA FOR. A General Formula for Waterways, C. S. Jarvis. Pub. Roads, vol. 6, no. 12, Feb. 1926, pp. 253-259, 2 figs. Modification of Myers formula; adaptability of Meyers scale; identical problems solved by various formulas; advantages of Myers scale.

WATER WORKS

BISMARCK, N.D. Single Building Houses Bismarck's New Pumps and Filters, T. Dickinson. Eng. News-Rec., vol. 96, no. 9, Mar. 4, 1926, pp. 371-373, 4 figs. Improvements made in water-works system include power plant, pumping station and water softening and filtration plant under one roof, for operation by two or three attendants; utilization of domestic service pumps in connection with high-level storage reservoirs to supply fire demands at increased pressure and at three times capacity of filtration plant.

JASPER, ALBERTA. Waterworks System at Jasper, Alta., J. M. Wardle. Can. Engr., vol. 50, no. 7, Feb. 16, 1926, pp. 221-222, 4 figs. New gravity system replaces old intake works and pipe line; concrete dam built at Cabin Creek to form new reservoir with capacity of 210,000-gals. Eight inch pipe line supplies town and 80,000-gal. tank for C.N.R. system.

PORT COLBORNE, ONT. Waterworks Plant, Port Colborne, Ont., E. H. Darling. Can. Engr., vol. 50, no. 8, Feb. 23, 1926, pp. 243-246, 6 figs. Abstract of engineer's report containing recommendations for filtration plant; water conditions in harbor; details of plant installed; pressure filter; two motor-driven centrifugal pumps and gasoline engine driven standby unit; pedestal type chlorinator; statement of costs.

PUMP CAPACITY VS. STORAGE REQUIREMENTS. Balancing Reservoirs to Supplement Pump Capacity During Peak Demands, E. K. Barnum. Am. Water Wks. Assn.—Jl., vol. 15, no. 2, Feb. 1926, pp. 109-117, 5 figs. Outlines method of determining relationship between maximum hourly demand and pump capacity versus storage requirements.

WAVES

WATER, PRODUCED BY WIND. On the Formation of Water Waves by Wind, H. Jeffreys. Roy. Soc.—Proc., vol. 110, no. A754, Feb. 1, 1926, pp. 241-247. On hypothesis that water waves may be considered irrotational, viscosity and other factors tending to change amplitude being small, it has been found possible to investigate conditions of growth of waves under action of wind, even when depth is finite and surface tension is allowed for; it is found that rate of decay of waves, in absence of wind, is independent of depth and surface tension.

WEIGHING MACHINES

HEAVY LOADS. The Geared Weighing Machine and Its Application for Heavy Loads, F. Rinecke. Eng. Progress, vol. 7, no. 1, Jan. 1926, pp. 6-8, 6 figs. Machine in which problem of determining moments acting on beam is solved in such manner that length of lever is constant and weight of load is determined by weight required to establish equilibrium; use of safety device on large weighing machines.

WELDING

BOILERS. Autogenous and Electric Welding of Boilers and Containers (Autogen und elektrisch geschweisste Kessel und Behälter), E. Höhn. Zeit. des Vereines deutscher Ingenieure, vol. 70, nos. 4 and 6, Jan. 23 and Feb. 6, 1926, pp. 117-122 and 194-196, 71 figs. Strength of autogenous and electrically welded seams and boiler parts; production of autogenous and electrically welded boilers and containers.

WELLS

GRAVEL-WALL. Gravel-Wall Well in Leamington. Contract Rec., vol. 40., no. 9, Mar. 3, 1926, pp. 200-201, 2 figs. One 18-in. well of this type produces nearly as much water as three 10-in. wells of old kind; comparison of production curves.

WIND TUNNELS

AIR CURRENTS. Change of 180 deg. in the Direction of a Uniform Current of Air, J. Bonder. Nat. Advisory Committee for Aeronautics—Tech. Memorandums, no. 350, 31 pp., 8 figs. Determination of rational form for turn at change of direction by 180 deg. of horizontal uniform current.

NEW YORK UNIVERSITY. The N. Y. University Wind Tunnel, Wm. H. Miller. Aviation, vol. 20, no. 9, Mar. 1, 1926, pp. 293-295, 4 figs. N. P. L.-type, 4-ft. wind tunnel equipped for extensive research and test work in aerodynamics.

VARIABLE-DENSITY. The Variable Density Wind Tunnel of the National Advisory Committee for Aeronautics, M. M. Munk and E. W. Miller. Nat. Advisory Committee for Aeronautics—Report, no. 227, 1926, 18 pp., 19 figs. Discusses novel features of this tunnel and gives general description.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

ACCELEROMETERS

AUTOMOBILE TESTING. Riding Qualities. Soc. Automotive Engrs.—Jl., vol. 18, no. 3, Mar. 1926, pp. 248-251, 7 figs.

ACCIDENT PREVENTION

ECONOMIC SOCIAL ASPECT. Does Accident Prevention Pay? G. A. Orth. Safety Eng., vol. 51, no. 3, Mar. 1926, pp. 145-150, 2 figs.

AERONAUTICAL INSTRUMENTS

TYPES. New Types of Aircraft Instruments, F. L. Hunt. Optical Soc. of Am. & Rev. of Sci. Instruments—Jl., vol. 12, no. 3, Mar. 1926, pp. 227-269, 40 figs.

AIR

VISCOSITY. The Effect of Temperature on the Viscosity of Air, F. A. Williams. Roy. Soc.—Proc., vol. 110, no. A753, Jan. 1, 1926, pp. 141-167, 3 figs. Coefficient of viscosity of dry air free from CO_2 has been studied by means of comparative method of transpiration from 15 to 1002 deg. cent.; results show Sutherland's formula for temperature coefficient of viscosity to hold with great accuracy between 250 and 1000 deg. cent.; value of carbon falls off as temperature decreases and Sutherland's law is no longer true.

AIR CONDITIONING

HUMIDITY CHART. A New Psychrometric or Humidity Chart, C. A. Bulkeley. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 32, no. 4, Apr. 1926, pp. 237-244, 3 figs. Fundamental principles underlying subject on which any psychrometric chart or tables must be based; presents Bulkeley chart based on Carrier's rational psychrometric formula; examples in use of chart.

HUMIDITY CONTROL IN TEXTILE MILLS. Importance of Fixed Regulation of Humidity in the Textile Industry (Die Bedeutung einer bestimmten Regulierung der Feuchtigkeit in den textiltechnischen Betrieben), J. Obermiller. Zeit. für angewandte Chemie, vol. 39, no. 2, Jan. 14, 1926, pp. 46-51, 1 fig.

AIRCRAFT

PRESSURE-DISTRIBUTION MEASUREMENT. The Spacing of Orifices for the Measurement of Pressure Distributions, M. M. Munk. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 230, Jan. 1926, 48 pp., 10 figs. on supp. plates.

AIRPLANE ENGINES

AIR-COOLED. Removable Cylinders Simplify Maintenance of Air-Cooled Airplane Engines, A. Black, Automotive Industries, vol. 54, no. 12, Mar. 25, 1926, pp. 528-531, 4 figs.

AMERICAN DEVELOPMENT. Modern American Aircraft Engine Development, C. L. Lawrence. Aviation, vol. 20, nos. 11 and 12, Mar. 15 and 22, 1926, pp. 364-367, and 411-415, 12 figs.

DESIGN TREND. The Trend of Aircraft Engine Development, E.E. Wilson. Am. Soc. Naval Engrs.—Jl., vol. 38, no. 1, Feb. 1926, pp 130-143, 5 figs.

MANUFACTURE. Aero Engine Manufacture. Machy. (Lond.), vol. 27, no. 703, Mar. 18, 1926, pp. 793-806, 30 figs.

SPEED REDUCER. French Airplane Speed Reducing Gear to be Used Here, W. F. Bradley. Automotive Industries, vol. 54, no. 14, Apr. 8, 1926, p. 615, 2 figs.

SUPERCHARGERS. Description and Laboratory Tests of a Roots Type Aircraft Engine Supercharger, M. Ware. Nat. Advisory Committee for Aeronautics—Report, no. 230, 1926, 13 pp., 13 figs.

TORSIONAL VIBRATION. Torsional Vibration, B. C. Carter and A. Swan. Automobile Engr., vol. 16, no. 213, Mar. 1926, pp. 86-88, 1 fig.

AIRPLANE PROPELLERS

TESTS. Comparison of Tests on Air Propellers in Flight with Wind Tunnel Model Tests on Similar Forms, W. F. Durand and E. P. Lesley. Nat. Advisory Committee for Aeronautics—Report, no. 220, 1926, 29 pp., 29 figs.

THRUST DISTRIBUTION. The Best Thrust Distribution for Airplane Propellers Taking Profile Resistance into Consideration (Die günstigste Schubverteilung für die Luftschraube bei Berücksichtigung des Profilwiderstandes), T. Bienen. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 17, no. 1, Jan. 14, 1926, pp. 4-6, 2 figs. Corrected reprint of portion of author's article published in nos. 10 and 11, May 28 and June 13, 1925, issues of same journal, which contained error in one of the equations.

AIRPLANES

AUTOGIRO. De la Cierva's Autogiro (Ueber den Autogyro von de la Cierva). Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 17, no. 4, Feb. 27, 1926, pp. 69-73, 10 figs.

DURALUMIN. Duralumin Construction on Original Lines. Flight, vol. 18, no. 10, Mar. 11, 1926, pp. 139-141, 2 figs. Methods employed at works of Short Bros., Rochester, England.

JOINTS AND FITTINGS. Aeroplane Joints and Fittings, F. M. Green. Flight (Aircraft Engr.), vol. 18, no. 12, Mar. 25, 1926, pp. 178f-178h, 4 figs.

METAL STRUCTURE. Relationship of Metallurgy to the Development of Aircraft, J. B. Johnson. Am. Soc. Steel Treating—Trans., vol. 9, no. 4, Apr. 1926, pp. 517-538, 13 figs.

SEAPLANES. *See Seaplanes.*

SLIPSTREAM EFFECT. Slipstream Effect, C. N. Monteith. Nat. Advisory Committee for Aeronautics—Tech. Memorandums, no. 355, Mar. 1926, 7 pp., 4 figs.

SPINNING. Some Experiments on a Model of a B.A.T. "Bantam" Aeroplane with Special Reference to Spinning Accidents, H. B. Irving, A. S. Batson, H. C. H. Townsend and T. A. Kirkup. Aeronautical Research Committee—Reports & Memoranda, no. 976, Nov. 1925, 21 pp., 17 figs.

TECHNICAL PROGRESS. Technical Progress in Aeronautics, E. E. Aldrin. Mech. Eng., vol. 48, no. 4, Apr. 1926, pp. 309-316, 15 figs. Trend in airplane construction; increasing use of metal in fuselage and wing structures; lighter, more rigid, and more powerful engines; metal propellers; improvements in navigating instruments; roll reduction through braking, etc.

TESTS. Some Aspects of the Comparison of Model and Full-Scale Tests, D. W. Taylor. Nat. Advisory Committee for Aeronautics—Report, no. 219, 1926, 23 pp., 19 figs. Author considers general case applying to motion of objects in fluid medium.

WINGS. Tests for Determining the Effect of a Rotating Cylinder Fitted into Leading Edge of an Airplane Wing, E. B. Wolff and C. Koning. Nat. Advisory Committee for Aeronautics—Tech. Memorandums, no. 354, Mar. 1926, 15 pp., 8 figs.

ALIGNMENT CHARTS

CONSTRUCTION AND USE. Designation, Graphic Development and Use of Alignment Charts (Bemerkungen zur Bezeichnung, zur zeichnerischen Ausgestaltung und zum Gebrauch von graphischen Rechentafeln), P. Werkmeister. Bauingenieur, vol. 7, no. 9, Feb. 26, 1926, pp. 162-165.

MATHEMATICAL PRINCIPLES. Mathematical Bases of Most Simple Nomographic Charts, Their Construction and Use in Locomotive Work (Die mathematischen Grundlagen der einfachsten nomographischen Rechentafeln, ihre Herstellung und praktische Anwendung im Lokomotivmaschinenbau), U. Barske. Glasers Annalen, vol. 98, no. 2, Jan. 15, 1926, pp. 17-22, 12 figs.

MAGNESIUM. *See Magnesium, Properties.*

ALUMINUM ALLOYS

ALUMINUM-LITHIUM. Aluminum-Lithium Alloys (Ueber vergütbare Aluminium-Lithiumlegierungen), P. Assmann. Zeit. fur Metallkunde, vol. 18, no. 2, Feb. 1926, pp. 51-54, 3 figs.

SAND-CAST. Properties of Some Sand-Cast Alloys of Aluminium Containing Silicon and Magnesium, S. Daniels. Indus. & Eng. Chem., vol. 18, no. 4, Apr. 1926, pp. 393-398, 14 figs.

AMMONIA COMPRESSORS

OIL-ENGINE-DRIVEN. Oil-Engine-Driven Ammonia Compressors, F. W. Green. Refrg. Eng., vol. 12, no. 9, Mar. 1926, pp. 311-316, 5 figs. Discusses oil-engine-driven compressor which has been specially designed for service under consideration; consists of horizontal, double-acting ammonia cylinder driven directly through connecting rod and crosshead by single-cylinder, horizontal single-acting oil engine.

POWER-DRIVE EQUIPMENT. Power-Drive Equipment for Ammonia Compressors, G. Fox. Indus. Engr., vol. 84, no. 3, Mar. 1926, pp. 106-109, 4 figs. Factors to consider when selecting equipment, including type and capacity of motor required, kind of control apparatus necessary and type of mechanical connection that should be used for coupling motor to compressor.

SPEED, EFFECT OF. Effect of Speed on Compressor Capacity and Power, L. H. Jenks. Refrg. Eng., vol. 12, no. 9, Mar. 1926, pp. 291-310 and 316-317, 32 figs. Results of test was to note performance of compressor known to makers as Type J, having plate valves arranged radially to cylinder circumference.

APPRENTICES, TRAINING OF

MORAL VALUE. The Moral Side of Apprentice Training, F. E. Lyford. Ry. Mech. Engr., vol. 100, no. 4, Apr. 1926, pp. 214-215, 1 fig. Vital factors in apprentice training; contacts with officials.

ARCHES

MASONRY. A Review of the Theory of Masonry Arch Analysis, J. Rathbun. Black Hills Engr., vol. 14, no. 1, Jan. 1926, pp. 3-13, 11 figs. Approximate analysis of arch rings, elastic theory of arch analysis; limitations of analysis; large natural bridges.

ASH HANDLING

MECHANICAL. A Recent Development in the Mechanical Handling of Ashes, G. F. Zimmer. Indus. Mgmt. (N.Y.), vol. 71, no. 4, Apr. 1926, pp. 242-244, 3 figs. Details of system recommended because of its simplicity, long life and efficiency.

ATOMS

DIMENSIONS. Atomic Dimensions, R. G. Lunnon. Physical Soc. of London—Proc., vol. 38, no. 212, Feb. 15, 1926, pp. 93-108, 7 figs. Deals with diameters of atoms of elements and compares estimates obtained by various methods. Bibliography.

AUTOMOBILE ENGINES

CARBURETORS. *See Carburetors.*

CYCLES, CALCULATION OF. Explosion Cycles, Calculation of Efficiency and Heat Balance (Remarques sur les cycles a explosions. Calcul du rendement et du bilan thermique), A. Planiol. Technique Automobile et Aérienne, vol. 16, no 131, 1925, pp. 97-109, 6 figs.

MACHINING PARTS. Machining Automotive Engine Parts, A. Murphy. Can. Machy., vol. 35, nos. 8 and 9, Feb. 25 and Mar. 4, 1926, pp. 14-17 and 15-18, 13 figs.

OIL FILTERS. New Engine Oil Filter Built for Quick Cleaning by Compressed Air. Automotive Industries, vol. 54, no. 13, Apr. 1, 1926, pp. 570-571, 4 figs. Foreign matter collecting in H-W-filtrator can be blown out; new air filter also introduced by Rich Tool Co.

OPERATING TEMPERATURES. High Average Operating Temperature and Engine and Car Operation. Soc. Automotive Engrs.—Jl., vol. 18, no. 3, Mar. 1926, pp. 255-267, 17 figs. Part 1, A. Taub: Deals with laboratory tests to prove by comparative data that higher average operating temperature maintained in engine by constant temperature or evaporation system of cooling have negligible detrimental effects. Part 2, L. P. Saunders: Gives results of road tests of cars operated under same conditions when fitted with standard water-cooling radiator core and with constant-temperature cross-flow condenser core.

SLEEVE-VALVE. Sleeve-Valve Engines, P. M. Heldt. Soc. Automotive Engrs.—Jl., vol. 18, no. 3, Mar. 1926, pp. 303-314, 15 figs.

AUTOMOBILE FUELS

ANTI-KNOCK COMPOUNDS. Anti-knock Materials, W. H. Church, E. Mack, Jr., and C. E. Boord. Indus. & Eng. Chem., vol. 18, no. 4, Apr. 1926, pp. 334-340, 7 figs.

DEVELOPMENTS. Present-Day Automotive Fuel, R. F. Lybeck. Soc. Automotive Engrs.—Jl., vol. 18, no. 3, Mar. 1926, pp. 282-284, 1 fig.

SYNTHETIC. A New Automotive Fuel (Ein neuer Motorbrennstoff). Motorwagen, vol. 29, no. 2, Jan. 20, 1926, p. 35. New synthetic fuel, developed by two Norwegians, Wittke and Selvin, obtained from sulphite alcohol and gas tar as by-product; it can be utilized directly in ordinary gasoline engine and in Norway it is cheaper than gasoline.

VOLATILITY. Progress in the Measurement of Motor-Fuel Volatility, T. S. Sligh, Jr. Soc. Automotive Engrs.—Jl., vol. 18, no. 4, Apr. 1926, pp. 393-496, 2 figs. Laboratory test methods of indicating volatility characteristics and starting capability of fuels used in internal-combustion engines; testing apparatus and procedure.

AUTOMOBILES

AMERICAN AND EUROPEAN DESIGN. Lessons of the American and European Automobile Industry (Lehren des amerikanischen und europäischen Automobilbaus), G. Becker. Zeit. des Vereines deutscher Ingenieure, vol. 70, nos. 8 and 10, Feb. 20 and Mar. 6, 1926, pp. 245-252 and 323-326, 18 figs.

CHASSIS DESIGN. Modern Chassis-Frame Design and Body Mounting, T. D. Carpenter. Automobile Engr., vol. 16, no 213, Mar. 1926, pp. 115-116.

EQUIPMENT, OPERATING COSTS OF. Analysis of Operating Costs of Automotive Equipment, J. Scott. Soc. Automotive Engrs.—Jl., vol. 18, no. 4, Apr. 1926, pp. 367-370, 6 figs.

HEADLIGHTS. Automobile Head-Lamp Light-Characteristics and Improved Distribution, W. D. Ryan. Soc. Automotive Engrs.—Jl., vol. 18, no. 4, Apr. 1926, pp. 351-358, 11 figs.

Dipping Headlights. Automobile Engr., vol. 16, no. 213, Mar. 1926, pp. 96-97, 4 figs. Apparatus designed and produced by Sheffield Simplex Co.

Headlighting Situation in the District of Columbia, R. E. Carlson. Soc. Automotive Engrs.—Jl., vol. 18, no. 4, Apr. 1926, pp. 399-401.

WORM-GEAR DRIVE. Worm-Gear Drive Re-entering American Passenger Car Practice, W. L. Carver. Automotive Industries, vol. 54, no. 11, Mar. 18, 1926, pp. 479-482, 2 figs.

AVIATION

AIR-MAIL SERVICE, Air Mail Service, W. I. Glover. Aviation, vol. 20, no. 14, Apr 5, 1926, pp. 488-489, 2 figs. Developments of United States Air Mail Service; specialized planes developed. See also accounts of various air-mail routes as follows: Chicago to Dallas Air Mail Line, pp. 490-491, 2 figs.; Ford Air Transport, p. 492; Los Angeles-Salt Lake City Air Mail Line, H. M. Hanshue, pp. 493-494, 1 fig.; Los Angeles-San Diego Airline, pp. 495-496, 2 figs.; Washington, Oregon, Idaho Air Mail, pp. 496-497, 1 fig.; Boston-New York Air Mail Line, pp. 498-499, 1 fig.; Chicago-St. Louis Air Mail Line, p. 499; Chicago-St. Paul-Minneapolis Air Mail, pp. 500-501, 2 figs.; Seattle-San Francisco Air Mail Line, p. 501.

AIRWAY LIGHTING. The Lighting of the London Continental Airway, C. H. Biddlecombe. Aviation, vol. 20, no. 15, Apr. 12, 1926, pp. 550-552, 2 figs. Night-flying system employed on Imperial Airways Route from London to Continent.

FLYING-FIELD EQUIPMENT. Flying-Field Equipment for Air Transport, A. Black. Aviation, vol. 20, no. 15, Apr. 12, 1926, pp. 553-554, 4 figs. Elements affecting equipment; type of hangar buildings; internal equipment; gasoline storage and equipment.

TRANSPORT ECONOMY. Aircraft Transport Economy, W. L. Cowley. Roy. Aeronautical Soc.—Jl., vol. 30, no. 183, Mar. 1926, pp. 160-228, 26 figs.

B

BALANCING MACHINES

MARTIN. Martin Balancing Machine. Machy. (Lond.), vol. 27, no. 704, Mar. 25, 1926, pp. 842-843, 2 figs. Machine affords quick, inexpensive and accurate method of balancing rotary bodies such as armatures, rotors, gear wheels, propellers, fans, disks, crankshafts, etc.

BEARINGS, ROLLER

TAPERED. The Tapered Roller Bearing in Industry, A. P. Strong. Belting, vol. 28, no. 2, Feb. 1926, pp. 32 and 34. Fulfils all requirements of anti-friction bearing for machine tools; machinery applications requiring low speeds, high speeds and shock loads.

BOILER FEEDWATER

CONDITIONING. Boiler-Water Conditioning with Special Reference to High Operating Pressure and Corrosion, R. E. Hall. Mech. Eng., vol. 48, no. 4, Apr. 1926, pp. 317-325 and (discussion) 325-327, 17 figs. Prevention of scale formation on evaporating surfaces; relation between chemical used and operating pressure; prevention of corrosion of surface in contact with boiler water; control of non-condensable gases in steam by boiler-water conditioning.

BEAMS

CONTINUOUS. Moments in Restrained and Continuous Beams by the Method of Conjugate Points. Am. Soc. Civ. Engrs.—Proc., vol. 52, nos. 1 and 2, 3, 4, Jan., Feb., Mar. and Apr. 1926, pp. 122-134, 329-333, 473-517 and 645-715, 57 figs. Discussion on paper by L. H. Nishkian and D. B. Steinman.

HEATING AND DEAERATING. Feed Water Heating, Deaerating and Pumping Plant. Eng. & Boiler House Rev., vol. 39, no. 9, Mar. 1926, pp. 411-426, 18 figs. Deals with handling of feedwater, that is, pumping into boiler circuit, deaerating or degassing to get rid of dissolved air in apparatus forming part of this circuit as distinct from ordinary softening plant and feed heating by means of exhaust steam that may be available.

TREATMENT. Preparation of Feed Water in Modern Power Houses, Von Le Juge. Eng. Progress, vol. 7, no. 3, Mar. 1926, pp. 64-67, 5 figs. Recent design of evaporating plants; deals with supplementing and degassing feedwater.

BOILER FURNACES

AIR PREHEATERS. The Perry Air Heater for Boiler Furnaces. Engineering, vol. 121, no. 3144, Apr. 2, 1926, pp. 445-447, 5 figs. Simple and effective form of air heater, which, although primarily intended for preheating air delivered to boiler furnaces, can also be used for obtaining supply of hot air for drying and other industrial processes; designed by H. H. Perry.

COMBUSTION CHAMBERS. Combustion Chambers for Pulverized Coal Firing, L. C. Harvey. Indus. Mgmt. (Lond.), (Cassier's Works Power No.), vol. 13, no. 2, Feb. 1926, pp. 104-106, 4 figs. Forecast of future developments in combustion chamber designs for burning of cheaper grades of fuel in pulverized form under industrial boilers and in smaller types of metallurgical or process furnaces.

GRATE BARS. Recent Tests with Grate Bars (Neuere Versuche mit Roststäben), Schulz Brenstoff- u. Wärmewirtschaft, vol. 8, no. 2, Jan. 2, 1926, pp. 22-25, 7 figs.

MECHANICAL FIRING. The Mechanical Firing of Solid Fuel, A. W. Bennis. Indus. Mgmt. (Lond.), (Cassier's Works Power No.), vol. 13, no. 2, Feb. 1926, pp. 67-73, 4 figs. Describes most efficient and economical method in use.

BOILER OPERATION

DRAFT. Theory of Induced Draft and Suction Draft Apparatus (Théorie des appareils à tirage induit et à tirage aspiré total), F. Frothais. Chaleur et Industrie, vol. 6, nos. 68 and 70, Dec. 1925, and Feb. 1926, pp. 555-561 and 91-96, 4 figs. Discusses forced draft and induced draft, determination of fans and their operation and efficiency. Theory of suction-draft apparatus, comparison of both systems.

BOILERMAKING

BRITISH PRACTICE. British Boiler Firm Fabricates Variety of Plate Products, J. G. Kirkland. Boiler Maker, vol. 26, no. 4, Apr. 1926, pp. 98-101, 12 figs. Welding plays important part in production of tanks, pipe works, stills and boilers; samples of work turned out.

BOILERS

DESIGN. Boilers and Furnaces, A. Grounds. Indus. Mgmt. (Lond.), (Cassier's Works Power No.), vol. 13, no. 2, Feb. 1926, pp. 62-66, 3 figs. Construction and operation of most efficient types of boilers and furnaces used in modern power plants.

DEVELOPMENTS. Increased Efficiency and Progress in Boiler Construction (Leistungssteigerung und Fortschritte im Dampfkesselbau), C. Rühl. Wärme u. Kälte-Technik, vol. 28, nos. 2 and 3, Jan. 15 and Feb. 1, 1926, pp. 9-14 and 23-28, 22 figs.

ELECTRIC. The Generation of Explosive Gases in Electric Water Heaters and Boilers. Elec. News, vol. 35, no. 4, Feb. 15, 1926, pp. 27-30 and 51, 1 fig. Operating on alternating current with submerged electrodes, introduces danger factor; interesting experiments in Winnipeg.

GAS-FIRED. Town's Gas for Steam Generation, J. N. Williams. Gas World, vol. 84, no. 2173, Mar. 13, 1926, pp. 247-251, 4 figs. (Abstract.) Paper read before Midlands District Salesman's Circle.

INSPECTION. Inspecting Boilers in England, A. Wrench. Boiler Maker, vol. 26, no. 4, Apr. 1926, pp. 107-108. Advisability of adopting definite procedure when inspecting boilers of different types; suggested procedure to follow.

INTERNAL-COMBUSTION. The Internal Combustion Boiler, O. Brunler. Inst. Mar. Engrs.—Trans., Feb. 1926, pp. 625-640 and (discussions) 640-663, 5 figs. Considers possibilities of reducing heat losses in boiler; idea in working of internal-combustion boiler, principle of which is to maintain flame burning in water in order to produce steam for power or heating purposes; discusses flame temperature, what becomes of gases produced during combustion; compressor question, condensation, etc.; practical example demonstrating what can be gained with Brunler boiler, showing how it is possible to reduce steam power.

LOCOMOTIVES. *See Locomotive Boilers.*

LOW-PRESSURE. Low-Pressure Boiler Plants (Beobachtungen an Niederdruckkressel-Analgen), M. Klein. Zeit. Bayerischen Revisions-Vereins, vol. 30, no. 4, Feb. 28, 1926, pp. 37-42, 7 figs.

OIL-FIRED. Oil-Fired Yarrow Land-Type Boiler. Engineer, vol. 141, no. 3662, Mar. 5, 1926, pp. 274-275, 1 fig. Boilers of single gas-flow type equipped for oil burning.

RIVETED JOINTS. British Boiler Shop Practice, F. J. Drover. Boiler Maker, vol. 26, no. 4, Apr. 1926, pp. 111-113, 9 figs. Board of Trade requirements for riveted joints and calculation of their efficiencies.

SCALE REMOVAL. Boiler-Scale Prevention by Means of Kespurit (Kesselsteinverhütung mittels Kespurit), E. Awe. Archiv für Wärmewirtschaft, vol. 7, no. 3, Mar. 1926, pp. 85-87.

SPHEROIDAL STATE. The Spheroidal State in Steam Boilers (La Caléfaction et la limite de production des générateurs de vapeur), E. Emanaud. Revue Industrielle, vol. 56, no. 2199, Feb. 1926, pp. 68-74, 5 figs. See also brief translated abstract in Power Engr., Mar. 1926, p. 113.

VERTICAL. New Tests with Sectional Vertical Tube Boilers of Mass Type (Neue Versuche am Sektional-Steilrohrkessel Bauart Maas), F. Kaiser. Zeit des Bayerischen Revisions-Vereins, vol. 30, nos. 1 and 2, Jan. 15 and 31, 1926, pp. 1-6 and 17-20, 2 figs.

BOILERS, WATER-TUBE

HEAT LOSSES. Radiation and Conduction Losses of Water-Tube Boilers in State of Resistance, during Feeding and Stops (Strahlungs- und Leitungsverluste and Wasserrohrkesseln im Beharrungszustande, während des Einlaufens und in den Betriebspausen), E. Praetorious. Archiv für Wärmewirtschaft, vol. 6, no. 11, Nov. 1925, pp. 285-288, and vol. 7, nos. 1 and 3, Jan. and Mar. 1926, pp. 18-23 and 71-80, 14 figs.

HIGH-PRESSURE. High-Pressure Water-Tube Boilers for Marine Purposes, H. E. Yarrow. Engineering, vol. 121, no. 3144, Apr. 2, 1926, pp. 443-445, 6 figs. partly on p. 434. Investigates practical application of high pressure and temperatures on board ship with special reference to definite step which has been taken in introducing high-pressure boilers in passenger steamer under construction. Paper read before Instn. Nav. Architects.

MAINTENANCE AND OPERATION. The Maintenance and Operation of High-Pressure Water Tube Boilers, F. J. Drover. Indus. Mgmt. (Lond.), vol. 13, no. 3, Mar. 1926, pp. 146-148. Notes on firing and regulation of draft plates; feeding; care of boilers after use; industrial management.

BRAKES

AIR. Some Fundamentals of the Air Brake, J. C. McCune. Ry. Mech. Engr., vol. 100, no. 4, Apr. 1926, pp. 223-226. Braking problems of modern freight and passenger-train operation. (Abstract.) Paper read before Eastern New York Section of Am. Soc. Mech. Engrs.

BRASS

HIGH-STRENGTH. High-Strength Brasses. Metallurgist (Supp. to Engineer, vol. 141, no. 3661), Feb. 26, 1926, pp. 20-21. Discusses ternary systems containing copper and zinc with aluminum, iron, nickel and manganese respectively; deals solely with castings; complex alloys.

BRIDGE STRENGTHENING

REINFORCED CONCRETE, USE OF. The Strengthening of Bridges, C.C. Mitchell and C. S. Chettoe. Concrete & Constr. Eng., vol. 21, no. 2, Mar. 1926, pp. 247-250, 11 figs. Deals with strengthening of existing bridges by use of reinforced concrete. (Abstract). Paper read before Instn. Mun. & County Engrs.

BRIDGES, CONCRETE

MINNESOTA. Minnesota Bridge Construction, W. H. Wheeler. Minn. Techno-Log, vol. 6, no. 5, Feb. 1926, pp. 142-145 and 160, 21 figs. Progress of bridge building in Minnesota, present-day reinforced-concrete design supersedes timber, wire suspension, wood and iron truss structures of past.

BRIDGES, LIFT

VANCOUVER. The Second Narrows Bridge, Vancouver. Engineer, vol. 141, no. 3667, Apr. 9, 1926, p. 409, 2 figs. Bridge was designed of standard railway construction known as Cooper's E 50 loading plus 100 lb. per sq. ft. for roadway allowance; subsequently increased to 15-ton truck gross loadings; total length is 1¼ miles; structure comprises one fixed span of 300 ft.; three fixed spans of 150 ft., and bascule lifting span of 185 ft. in length.

BRIDGES, RAILWAY

RAISING. Lift Span Complicated Bridge Raising Project, G. H. Wilsey. Ry. Eng. & Maintenance, vol. 22, no. 4, Apr. 1926, pp. 134-136, 6 figs. Methods employed in raising Chicago Great Western bridge to meet new grade of depot tracks; how difficulty of settlement of pier was overcome.

REINFORCING. Reinforcing Columbia River Bridge of Great Northern Ry., H. S. Loeffler. Eng. News-Rec., vol. 96, no. 14, Apr. 8, 1926, pp. 558-561, 7 figs. Strength of large steel railway bridge increased 100 per cent.; cantilever erection of 416½-ft. span; anchor spans re-used; erection controlled by strain gages.

BRONZES

GENELITE. Characteristics of Genelite. Am. Mach., vol. 64, no. 16, Apr. 22, 1926 pp. 647. Genelite is spongy bronze having approximately 40 per cent by volume of graphite mechanically mixed with it; use for bearing metal and for valve facings. Reference-book sheet.

BUILDING CONSTRUCTION

ARCHITECTURAL FORMS. Traditional Architectural Forms and Their Structural Efficiency, W. Harvey. Engineer, vol. 141, no. 3666, Apr. 2, 1926, pp. 374-375, 9 figs. Points out evil effect of traditional architectural form; patient analytical surveys are needed if effects of time and efforts of curve-loving architects are to be differentiated from one another in case of any particular monument.

BUILDING MATERIALS

BLOCKS. New Product Combines Concrete and Fiber Construction. Concrete Products, vol. 30, no. 2, Feb. 1926, pp. 39-40, 3 figs. Details of building block, made of vegetable fiber which acts as its own mold for interior columns of reinforced concrete; its fundamental element is palmetto fiber or saw grass fiber, chemically treated and condensed into hard block.

C

CABLES, ELECTRIC

CURRENT-CARRYING CAPACITY. Calculation of Current-Carrying Capacity of Type H Cable, D. M. Simons. Elec. Jl., vol. 23, no. 2, Feb. 1926, pp. 59-63, 3 figs. Explains peculiarity in thermal resistance of type H cable; this element on thermal resistance when combined with ordinary equation of belted form can be used to calculate allowable current for cable, and to compare its carrying Capacity with that of belted form.

PAPER-INSULATED. Ionization Studies in Paper-Insulated Cables, C. L. Dawes and P. L. Hoover. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 4, Apr. 1926, pp. 337-347, 17 figs. Preliminary results of research investigation being carried out at Harvard Eng. School; tentative conclusions suggested by data and method developed for making measurements.

RUBBER INSULATED. Rubber Insulated Cables. Elecn., vol. 96, no. 2492, Feb. 19, 1926, pp. 197-199, 4 figs. Describes various processes of manufacture of Helsby Works of British Inuslated Cables, Ltd.

STANDARDS. Wires and Cables. A.I.E.E. Standards, no. 30, Oct. 1925, pp. 5-12. Standards apply to bare wires and cables, rubber insulated wires and cables, impregnated paper insulated wires and cables, varnished cambric insulated wires and cables, and dry core paper insulated cables.

CABLES, HOISTING

CALCULATION. Loading of Stranded Cable (Die Beanspruchung der Litzenseile), P. Stephan. Fördertechnik u. Frachtverkehr, vol. 19, no. 2, Jan. 22, 1926, pp. 14-17, 1 fig.

CALORIMETERS

OXYGEN-BOMB DETERMINATION. Theoretical and Recorded Pressures in Oxygen-Bomb Determinations, M. J. Bradley, C. Z. Rosecrans and R. M. Corbin. Indus. & Eng. Chem., vol. 18, no. 3, Mar. 1926, pp. 307-309, 3 figs. Measurement and photographic records of pressures with oxygen bomb during combustion of different weights of crude petroleum, coals, benzene, kerosene and benzoic acid.

CANALS

WELLAND SHIP, ONTARIO. The Welland Ship Canal. Engineering, vol. 121, no. 3145, Apr. 9, 1926, pp. 451-454, 19 figs. (partly on pp. 466 and sup. plates). Reconstruction of canal which crosses Niagara Peninsula which juts out between Lake Erie and Lake Ontario.

CARBURETORS

ADJUSTING. Correct Carburetor Adjustment and Improper Adjustment Effects, O. H. Ensign. Soc. Automotive Engrs.—Jl., vol. 18, no. 4, Apr. 1926, pp. 389-391. After discussing conditions that control power output, general method of adjustment that can be applied with certainty to any installation is presented.

CAST IRON

MELTING WITH ALKALI FLUX. Refine Iron with Alkali Flux, G. S. Evans. Foundry, vol. 54, no. 5, Mar. 1, 1926, pp. 180-183 and 187, 6 figs. Details of operation and results obtained in using alkali flux in melting foundry iron. (Abstract.) Paper read before Detroit Foundrymen's Assn.

SHRINKAGE. Shrinkage and Stresses in Cast Iron (Schwindung und Spannung im Gusseisen), E. Bauer. Giesserei-Zeitung, vol. 23, nos. 3, 4 and 5, Feb. 1, 15 and Mar. 1, 1926, pp. 61-73, 95-102 and 121-128, 77 figs.

CASE-HARDENING

COPPER MIGRATION IN. Copper "Migration" in Carburizing, E. H. Stilwell. Am. Soc. Steel Treating—Trans., vol. 9, no. 2, Feb. 1926, pp. 323-325.

NITRATION HARDENING. The Krupp Process of Nitration Hardening (Das Nitrierhärtungsverfahren der Fried. Krupp Aktiengesellschaft), A. Fry. Kruppsche Monatshefte, vol. 7, Feb. 1926, pp. 17-24, 16 figs. See also Maschinenbau, vol. 5, no. 4, Feb. 18, 1926, pp. 161-165, 12 figs.

SOLID CEMENTS. Carburization by Solid Cements, W. E. Day, Jr., Am. Soc. Steel Treating—Trans., vol. 9, no. 2, Feb. 1926, pp. 240-257 and (discussion) 257-258, 16 figs. Deals with carburizing process when using solid compounds; production of carburizing gases from cement and their reaction on steel; study is made of mechanism through which carbon is conveyed from surface inward; photomicrographs and curves.

CEMENT

LUMNITE. Tests of Lumnite Cement and Concrete, H. H. Scoffeld and C. A. Wright. Cornell Civ. Engr., vol. 34, no. 5, Feb. 1926, pp. 111-113 and 124, 4 figs. Method of test for shrinkage and temperature change; temperature change and shrinkage during setting.

CENTRAL STATIONS

AUSTRALIA. Electrical Equipment of the Yallourn Power Station. Elec. Engr. of Australia & New Zealand, vol. 2, no. 10, Jan. 15, 1926, pp. 383-388, 6 figs. Has installed capacity of 62,500 kw. in 5 generating units; there are 12 John Thompson boilers of 70,000-lb.-per hr. evaporative capacity each, burning brown coal exclusively; turbines are of impulse (Rateau) type; main generators are of 12,500-kw. capacity each and generate at 11,000 volts, 3 phase, 50 cycles.

CLEVELAND, OHIO. Construction Work Progresses at Avon Station. Power Plant Eng., vol. 30, no. 6, Mar. 15, 1926, pp. 380-381, 4 figs. New plant of Cleveland Electric Illuminating Co., designed for 300,000-kw. ultimate capacity, to have pulverized-fuel-fired boilers.

COLUMBIA PARK, OHIO. The New Columbia Power Station. Elec. Light & Power, vol. 4, no. 1, Jan. 1926, pp. 23-24 and 125-126, 4 figs.

DES MOINES, IOWA. New Des Moines Power Station. Power, vol. 63, no. 16, Apr. 20, 1926, pp. 590-595, 8 figs.

ENGLAND. Extensions at St. Helens. Elec. Times, vol. 69, no. 1798, Apr. 1, 1926, pp. 417-418, 3 figs. See also description in Elecn., vol. 96, no. 2498, Apr. 2, 1926, pp. 382 and 386.

GERMANY. The Goldenberg Central Station (Das Goldenberg-Werk und das Versorgungsgebiet des RWE), W. Kraska. Elektrotechnische Zeit., vol. 47, nos. 3 and 4, Jan. 21 and 28, 1926, pp. 65-70 and 104-108, 14 figs.

MIDDLETOWN, PA. Design and Test of Susquehanna Station, E. M. Gilbert. Mech. Eng., vol. 48, no. 4, Apr. 1926, pp. 362-368, 11 figs. Details of preliminary studies made in design of Metropolitan Power Co.'s 30,000-kw. pulverized-coal-burning power plant at Middletown, Pa., together with data on performance obtained in tests.

WINNIPEG, MANITOBA. Winnipeg's Steam Plant, G. Mossman. Elec. News, vol. 35, no. 7, Apr. 1, 1926, pp. 29-37, 9 figs. Used at same time as emergency standby and for heating purposes; much of equipment is of English manufacture.

CHROMIUM STEEL

ASCOLOY. Characteristics of Ascoloy. Am. Mach., vol. 64, no. 15, Apr. 15, 1926, p. 609. Characteristics of ductile and malleable chromium-steel alloy made in electric furnace. Reference-book sheet.

ELECTRIC MELTING. Melt High Chromium Alloys in Acid Furnace, R. S. Kerns. Iron Trade Rev., vol. 78, no. 12, Mar. 25, 1926, pp. 812-814; also Foundry, vol. 54, no. 6, Mar. 15, 1926, pp. 229-231. Gives uses of high-chromium alloy steel and relates experience in melting alloy in acid electric furnace; although high losses of chromium were expected, reverse was true.

CIRCUIT BREAKERS

OIL-IMMERSED. English Electric Co.'s. Oil Immersed Current Breakers. Elec. Ry. & Tramway Jl., vol. 54, no. 1331, Feb. 12, 1926, pp. 69-71, 8 figs. Details of breakers of class O.K.B., sizes IV and V.

OIL-TIGHT. Oil-Tight Multi-Pole Circuit Breakers with Single Tanks, H. M. Wilcox. Eng. World, vol. 28, no. 3, Mar. 1926, pp. 171-173, 2 figs. Doming of breaker frame permits change in arrangements with number of advantages accruing.

CITY PLANNING

REGIONAL AND. Regional Planning in Relation to Public Administration, T. Adams. Nat. Mun. Rev., vol. 15, no. 1, Jan. 1926, pp. 35-42. Recommends co-operation between local governmental authorities in regional planning, such authorities should be assisted by advisory agencies established by various states.

COAL

COKING. Low Temperature Process Produces Hard Coke, A. Thau. Chem. and Met. Eng., vol. 33, no. 4, Apr. 1926, pp. 227-228, 3 figs. Process developed by Dobblestein at Essen, Germany; provides for continuous operation without disturbing coal during carbonization.

LIQUEFACTION. The Liquefaction of Coal (Die Verflüssigung der Kohle), F. Berguis. Glückauf, vol. 61, nos. 42 and 43, Oct. 17 and 24, 1925, pp. 1317-1326 and 1353-1358, 16 figs.; also in Montanistische Rundschau, vol. 18, no. 6, Mar. 16, 1926, pp. 184-199, 16 figs.

COAL HANDLING

POWER PLANTS. Methods of Handling Fuel and Waste in the Power House, G. F. Zimmer. Indus. Mgmt. (Lond.) (Cassier's Works Power No.), vol. 13, no. 2, Feb. 1926, pp. 96-102, 6 figs. Deals with propositions arising from varying topographical conditions of power-house site, giving practical solutions in each case for dealing with handling of coal.

COAL MINES

ELECTRIFICATION. Power Applications in Coal Mines. Elec. World, vol. 87, no. 13, Mar. 27, 1926, pp. 655-657, 5 figs. Brief résumé of practices followed in 200 mines out of 338 operated in state of Illinois showing trend of electrified mines using purchased power.

COILS

PETERSEN. Operating Performance of a Petersen Earth Coil, J. M. Oliver and W. W. Eberhardt. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 3, Mar. 1926, pp. 227-230, 3 figs. Results of operating experience show that over-voltage disturbances can be eliminated by doing all line switching operations with Petersen coil out of service; that is, with system neutral solidly grounded; it is believed that same results can also be obtained by under-tuning coil; it appears that application of these coils is limited to comparatively low voltage lines of moderate length with single source of power supply.

COKE OVENS

HEATING. Heating of Modern Coke Ovens, H. Kuhn. Chem. and Met. Engr., vol. 33, no. 4, Apr. 1926, pp. 231-234, 4 figs. Variations of temperature in vertical flues and heat required per pound of dry coal with special reference to the Carl Still oven.

COLD STORAGE

AIR COOLING IN ROOMS. Air Cooling in Cold Storage Rooms. Sulzer Tech. Rev., no. 1, 1926, pp. 9-15, 11 figs. Describes various systems of air coolers, advantages and disadvantages, with particular attention to various types constructed by Sulzer Bros.

COLUMNS

REINFORCED-CONCRETE. Stresses in Helically Reinforced Concrete Columns, A. W. Zesiger and E. J. Affeldt. Am. Soc. Civil Engrs.—Proc., vol. 52, no. 1, Jan. 1926, pp. 3-40, 4 figs. Analyses effect of helical reinforcement on concrete core of helically reinforced-concrete column and develops formulas for stresses which obtain in steel and concrete with varying percentages of reinforcement. See also discussion in no. 4, Apr. 1926, pp. 733-736.

COMPRESSED AIR

PROPERTIES AND USES. Compressed Air and Air Compressors, C. H. Sonntag. Fit & Quarry, vol. 11, nos. 10 and 11, Feb. 15 and Mar. 1, 1926, pp. 59-63 and 95-100.

TUBES. Condensing Equipment. Jl. Electricity, vol. 56, no. 7, Apr. 1, 1926, pp. 259-261, 2 figs. Serial report of Prime Movers Committee, P.C.E.A.; efforts of committee have been confined to trying to find causes and remedies for tube failures in condensers such as are used for condensing steam from prime movers in power plants.

CONCRETE

CALCIUM CHLORIDE, EFFECT OF. Some Effects of "Cal" on Cement and Concrete, M. N. Clair. Boston Soc. Civil Engrs.—Jl., vol. 13, no. 2, Feb. 1926, pp. 33-50, 7 figs. Investigations to determine effect of calcium chloride on time of set of cement, strength of neat cement in tension, cement mortar in tension, and of concrete in compression; elastic properties of concrete.

CAST IRON. Tests on Hooped Cast-Iron Concrete, R. N. Stroyer. Concrete & Constr. Eng., vol. 21, no. 2, Feb. 1926, pp. 170-176, 6 figs. In connection with building of reinforced-concrete bridge of 215-ft. span, in Austria, in which compressive reinforcement consisted of cast-iron, tests on compression members of this description were carried out recently, showing conclusively superiority of hooped cast-iron as compressive reinforcement.

CORROSION. Corrosion of Concrete, J. R. Baylis. Am. Soc. Civil Engrs.—Proc., vol. 52, no. 4, Apr. 1926, pp. 549-579, 11 figs. Points out that porosity is very important factor in determining life of concrete exposed to water or to weather; method of measuring voids in concrete; indicating that voids one day old should not exceed 28 per cent. mortar volume when concrete is to be exposed to water or freezing weather; for concrete more than one day old, voids probably should not exceed 22 per cent.; problem of how to take care of existing structures.

LIME, EFFECT OF. Effect of Lime on Concrete Products, P. C. Cunnick. Concrete, vol. 28, no. 3, Mar. 1926, pp. 43-44, 6 figs. Result of investigations carried out at Rock Island Arsenal during 1925, involving 1,500 test operations.

MOISTURE, EFFECT OF. The Effect of Moisture on Concrete. Am. Soc. Civil Engrs.—Proc., vol. 52, no. 1, Jan. 1926, pp. 164-168, 2 figs. Discussion of paper by W. K. Hatt, continued from Aug. 1925 Proceedings.

CONCRETE CONSTRUCTION, REINFORCED

SPECIFICATIONS. Standard Specification for Reinforced Concrete. Concrete & Constr. Eng., vol. 20, no. 12, Dec. 1925, pp. 689-698, and vol. 21, no. 3, Mar 1926, pp. 266-267 and 270-272. Abstract of recommended specifications reported by affiliated committee of A.S.C.E., A.S.T.M., A.R.E.A., A.P.C.A., etc., Mar. 1926; Reinforced concrete columns; footing; retaining walls; summary of working stresses.

CONVERTERS

SYNCHRONOUS. Synchronous Converter Copper Loss, R. Lee and H. L. Hildenbrand. Elec. Jl., vol. 23, no. 3, Mar. 1926, pp. 110-112, 12 figs. Brings out fact that it is important to keep converter operating at unity power factor, and importance of this becomes greater as number of phases increase.

CORE OVENS

DESIGN. Oven Design Shows Advance, C. A. Barnett. Foundry, vol. 54, no. 6, Mar. 15, 1926, pp. 240-241, 4 figs. Deals with Shelf, drawer-type, portable rack-type, car-type and conveyor ovens.

CORROSION

OXYGEN REMOVAL FROM WATER. Removing Dissolved Oxygen From Water, W. J. Risley, Jr. Chem. & Met. Eng., vol. 33, no. 3, Mar. 1926, pp. 163-164, 3 figs. Equipment used for preventing corrosion occurring due to heated water containing this gas when in contact with iron or steel.

SODIUM SILICATE AS PREVENTIVE. Sodium Silicate as a Corrosion Preventive, R. P. Russell. Mass. Inst. Technology—Publications, vol. 61, no. 69, Feb. 1926, 4 pp., 4 figs. Deals with use of sodium silicate (water glass) as means of decreasing corrosion in water heaters and pipe lines.

CRANES

HYDRAULIC CARGO. Hydraulic Cargo Cranes on the Motor Liner Asturias. Engineer, vol. 141, no. 3665, Mar. 26, 1926, p. 364, 3 figs. Equipment comprises two sets of motor-driven hydraulic pumps, with Ward-Leonard electrically controlled motor-generator, air-lined hydraulic accumulator, and 12 hydraulic cranes which serve 6 cargo hatches.

JIB. New Jib Cranes for Harbor Work (Neue Einziehkrane für den Seehafenumschlag), C. Overbeck. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 3, Jan. 16, 1926, pp. 73-77, 13 figs.

SHIPBUILDING. The Crane Equipment of Shipbuilding Berths, E. Smith. Engineering, vol. 121, no. 3145, Apr. 9, 1926, pp. 480-482, 7 figs. Considers from point of view of mechanical efficiency, different types of cranes. Paper read before Instn. Nav. Architects.

TRAVELING. Traveler Erects Heavy Trusses for Theatre Roof. Eng. News-Rec., vol. 96, no. 11, Mar. 18, 1926, pp. 454-455, 5 figs. Steel traveler of remarkable size used in erecting columns and trusses for auditorium of Paramount Theatre Building in New York; trusses weighing up to 150 tons lifted 130 ft. and set on columns 120 ft. high by traveler carrying two 75-ton derricks.

CRANKSHAFTS

TORSIONAL VIBRATION. Torsional Vibrations in Automobile Engines (Drehschwingungen des Automobilmotors), J. Plünzke. Motorwagen, vol. 29, no. 6, Feb. 27, 1926, pp. 115-128, 27 figs.

CUPOLAS

COKE BEDS. Judging the Coke Bed in the Cupola, R. A. Knight. Foundry, vol. 54, no. 5, Mar. 1, 1926, pp. 177-179, 3 figs. Discusses difficulties encountered by foundryman in judging coke bed when melting in cupola; describes easy correction measure and quick run.

MELTING LOSSES. Losses in Melting, from Cupola to Finished Casting, R. Coulthurst. Mech. World, vol. 79, no. 2044, Mar. 5, 1926, p. 184. Causes determining losses are: (1) insufficient fuel; (2) too much air admitted, thus increasing amount of iron that is oxidized; (3) insufficient supply of limestone to flux away silica.

OPERATION. The Cupola Furnace, J. E. Hurst. Foundry Trade Jl., vol. 33, nos. 498 and 499, Mar. 4, and Mar. 11, 1926, pp. 170-172 and 199-200, 3 figs. Notes on combustion of coke; thermal balance sheet; cupola melting zone; escaping-gas analysis; improved cupolas. Mar. 11: Factors in cupola design; tuyere area; number and shape of tuyeres.

CUTTING METALS

CUTTING ACTION AND TOOLS. Cutting, W. R. Ward. Am. Soc. Steel Treating—Trans., vol. 9, no. 3, Mar. 1926, pp. 482-486, 3 figs.

CUTTING TESTS OF TOOLS. Cutting Tests of Tool Steels, J. Strauss. Am. Soc. Steel Treating—Trans., vol. 9, no. 4, Apr. 1926, pp. 571-584, and 648, 9 figs. Deals with cutting ability of tools and tool steels and cutting resistance of metals; sets forth 3 classes of tools for cutting metals and describes various experimental tests made in determining failure of tools; general precautions necessary to be taken in various methods of testing. Bibliography.

D

DAMS

ORADELL. The Oradell Dam of the Hackensack Water Company. Am. Soc. Civ. Engrs.—Proc., vol. 52, nos. 1 and 2, Jan. and Feb. 1926, pp. 118-121 and 325-328, 3 figs. Discussion of paper by N. S. Hill, Jr. published in Oct. 1925 Proceedings.

ARCH. Stresses in Thick Arches of Dams, B. F. Jakobsen. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 2, Feb. 1926, pp. 206-251 and (discussion), 252-277, 36 figs. Investigates influence of temperature, variations, swelling and shrinkage; presents formulas which make it possible to assume different conditions for up-stream and down-stream faces; shows that radial sections cannot remain plane and that correct stresses cannot be found unless deformations of abutments are taken into account; influence of variation of modulus of elasticity on stress distribution; theory of secondary arch.

DRY-FILL. Reconstructing the Calaveras Dam by Dry Fill, G. A. Elliott. Eng. News-Rec., vol. 96, no. 13, Apr. 1, 1926, pp. 514-517, 4 figs. Dry-fill substituted for hydraulic fill in dam of Spring Valley Water Co., San Francisco, after slip of 1918; dam is now 220 ft. high with provision for ultimate height of 255 ft.

EXPERIMENTAL. Building a Dam Marked for Destruction, F. A. Noetzli. Modern Irrigation, vol. 2, no. 2, Feb. 1926, pp. 16-17, 2 figs. Full-size test arch dam to be built near Fresno, Calif., for experimental purposes.

MULTIPLE ARCH. Multiple-Arch Dam at Gem Lake on Rush Creek, California. Am. Soc. Civil Engrs.—Proc., vol. 52, nos. 1, 2 and 3, Jan. and Feb. and Mar. 1926, pp. 90-101, 293-302, and 457-469. Discussion of paper by F. O. Dolson and W. L. Huber, continued from Dec. 1925 Proceedings.

SPILLWAYS. Side Channel Spillways: Hydraulic Theory, Economic Factors, and Experimental Determination of Losses. Am. Soc. Civ. Engrs.—Proc., vol. 52, nos. 1 and 2, Jan. and Feb. 1926, pp. 107-110 and 319-324, 1 fig. Discussion of paper by J. Hinds, continued from Dec. 1925 Proceedings.

DIE CASTING

ALUMINUM ALLOYS. The Die-Casting of Aluminum Alloys. Machy. (Lond.), vol. 27, no. 703, Mar. 18, 1926, pp. 812-814. Discussion of paper by G. Mortimer presented before Inst. of Metals. Crystallization shrinkage; nomenclature.

DIELECTRICS

SOLID ABSORPTION IN. Theory of Absorption in Solid Dielectrics, V. Karapetoff. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 3, Mar. 1926, pp. 236-243, 5 figs. Investigation to establish certain general properties of function which expresses increase in initial electric displacement with time; assumption is made that law of relaxation of electric displacement in individual particles of dielectric is simple exponential function of time, but that exponent varies from particle to particle; ultimate aim of theory is to make it possible to correlate and to mutually check vast amount of experimental data on absorption and on dielectric loss.

DIESEL ENGINES

AIRLESS-INJECTION. West Coast System of Airless Injection. Motorship (N.Y.), vol. 11, no. 4, Apr. 1926, pp. 289-292, 21 figs. Design, construction and operation of Pacific Coast types of airless-injection Diesel engines.

COMPRESSORLESS. Improvement in Diesel Engine Design (Neue Wege im Dieselmaschinenbau), Parey. Dinglers polytechnisches Jl., vol. 341, no. 3, Feb. 1926, pp. 26-28. Discusses injection of fuel in compressorless Diesel engines by antechamber; eddy and pressure method and their characteristics.

CRANKLESS. Crankless Diesel Engine. Times Trade & Eng. Supp., vol. 17, no. 396, Feb. 6, 1926, p. 514, 2 figs.

MUNICIPAL POWER PLANTS. A study of Diesel Engines for Municipal Power-Plants, A. L. Mullergren. Am. City, vol. 34, no. 3, Mar. 1926, pp. 240-243, 2 figs. Economics of Diesel vs. steam plant selections of type of plant; adaptation of different types; direct-connected pumps.

SMALL POWER PLANTS. Diesel Engines Raise Small Plant Efficiency, R. C. Demary. Power Plant Eng., vol. 30, no. 6, Mar. 15, 1926, pp. 369-370. Comparison of costs taken from records of steam plant for ten months with corresponding period after Diesel engines were installed, showing savings effected by Diesel-engine installation.

SPEED CONTROL. Novel Speed Control for Diesel Engines, E. J. Kates. Power, vol. 63, no. 16, Apr. 20, 1926, pp. 596-598, 5 figs. N.Y. Central Railroad has placed water-pressure regulated speed control on Diesel engines driving pumps in one of its water stations, which solved difficult problem of wide-speed regulation of such oil-engine-driven units.

TEMPERATURE VARIATION. Temperature Variation and Heat Stresses in Diesel Engines, R. Sulzer. Engineering, vol. 121, no. 3144, Apr. 2, 1926, pp. 447-450, 21 figs. Account and results of experimental work; measurement of temperature in walls of two-cycle marine engine. Paper read before Instn. Nav. Architects. See also Engineer, vol. 141, nos. 3666 and 3667, Apr. 2 and 9, 1926, pp. 391-392 and 420-421, 21 figs.

DRAINAGE

FOREST GROWTH, EFFECT ON. Effect of Drainage of Swamps Uopn Forest Growth, R. Zon. Reclamation & Farm Eng., vol. 9, no. 2, Feb. 1926, pp. 33-37 and 42, 4 figs. Lake States, swamp problem; making swamps safe for forestry; what drainage does to timber growths; costs and returns.

DREDGES

DIESEL-ELECTRIC. Diesel-Electric Drive on Dredge, J. H. Polhemus. Elec. World, vol. 87, no. 14, Apr. 3, 1926, pp. 703-705, 3 figs. Port of Portland has largest and most powerful dredge using this system; electric drive proves most flexible and economical; Diesel engines used as prime movers.

DRILLING MACHINES

AUTOMATIC. Automatic Drilling Machine. Brit. Machine Tool Eng., vol. 3, no. 37, Jan.-Feb., 1926, pp. 361-362, 2 figs. Built by J. Archdale & Co., Birmingham, Eng., for drilling small holes in tubes of special form.

SIX-SPINDLE. Six Spindle Drilling Machine. Brit. Machine Tool Eng., vol. 3, no. 37, Jan.-Feb., 1926, pp. 363-364, 2 figs. Heavy-duty machine, built by Wm. Asquith, Ltd., for drilling holes in special types of gas burners.

DRILLS

STEEL, SHARPENING. Sharpening and Handling Drill Steels at Franklin, C. M. Haight. Am. Inst. Min. & Met. Engrs.—Trans., no. 1556-A, Feb. 1926, 14 pp., 12 figs. Shop procedure; heat-treating machine; cycle of operations; output of heat-treating machine and output per shift.

DROP FORGING

NON-FERROUS ALLOYS. The Drop Forging of Non-Ferrous Alloys. Metal Industry (Lond.), vol. 28, nos. 7 and 9, Feb. 12 and 26, 1926, pp. 149-152 and 197-199, 1 fig. Feb. 12: Practical problems in drop-forging of aluminum alloys. Feb. 26: Practical problems in making of drop-forgings from copper and chief hot-working brasses.

DRYDOCKS

SUNDERLAND, ENGLAND. Messrs. T. W. Greenwell and Co.'s Dry Dock, Sunderland. Engineering, vol. 121, nos. 3135, 3138 and 3140, Jan. 29, Feb. 19 and Mar. 5, 1926, pp. 134-136, 225-228 and 312-313, 89 figs. partly on supp. plate. General features of dock; plan and sections of main structure; details of pump house, fitting-out quay, repairing yards, keel blocks, excavations, dock gates, crane track, pumping plant, etc.

DYNAMOMETERS

ELECTRIC-TOOL TESTING. Electric Dynamometer for Testing Electric Tools (Ueber die Konstruktion von Bremsvorrichtungen zur Prüfung elektrischer Handwerkzeugmaschinen), J. Dalchau. Elektrotechnische Zeit., vol. 47, no. 2. Jan. 14, 1926, pp. 36-38, 4 figs.

E

EDUCATION, ENGINEERING

EUROPE. The Engineering Scene, W. E. Wickenden. Eng. Education—Jl., vol. 16, no. 6, Feb. 1926, pp. 433-449. Critical glance at technical education in Europe and how we may profit by it.

MECHANICAL-LABORATORY COURSES. The Mechanical Laboratory Courses in the Sibley School of Mechanical Engineering, H. Diederichs. Sibley Jl., vol. 40, no. 2, Feb. 1926, pp. 29-30. Historical review of development being partly outlined of work done at present time and of its aims.

ELASTICITY

DYNAMIC MEASUREMENT ON TORSION MACHINE. Dynamic-Elastic Measurements in Torsion, G. Welter. Metallurgist (Supp. to Engineer, vol. 141, no. 3665), Mar. 26, 1926, p. 37, 3 figs. Measurements of elastic properties of specimens when subjected to impact torsional loads. Abstract translated from Zeit. für Metallkunde, vol. 17, Dec. 1925. (See reference to original articles in Eng. Index 1925, p. 239.)

ELECTRIC CIRCUITS

MECHANICAL FORCE BETWEEN. Mechanical Force Between Electric Circuits, R. E. Doherty and R. H. Park. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 3, Mar. 1926, pp. 231-235, 5 figs. Develops general equation for mechanical force exerted by system of n electric circuits, upon any part of that system; electric circuits are assumed to contain resistances, and reluctance of several magnetic circuits is assumed to be function of both currents and relative positions of circuits; equation is applicable to circuits involving saturated iron.

ELECTRIC CONDUCTORS

EDDY-CURRENT LOSSES. No-Load Copper Eddy-Current Losses, T. Spooner. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 3, Mar. 1926, pp. 264-271, 11 figs. Attempt to remove calculation of no-load copper eddy-losses from field of empiricism and to place it on firm theoretical foundation; test results show that theoretical formulas which have been developed are correct.

TEMPERATURE MEASUREMENTS. A New Method of Measuring Cable Conductor Temperatures, W. Phillips. Sci. Instruments—Jl., vol. 3, no. 5, Feb. 1926, pp. 135-140, 6 figs. New method of measuring temperature of conductor of live cable; curves showing performance of apparatus.

ELECTRIC DISTRIBUTION SYSTEMS

EXPANSION THEOREM. Heaviside's Proof of His Expansion Theorem, M. S. Vallarta. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 4, Apr. 1926, pp. 383-387. Heaviside's proof of his expansion theorem is reconstructed; it is based upon his so-called conjugate theorem which establishes relation between any two normal modes of oscillation of dynamical system; Heaviside's argument applies to systems having finite number of degrees of freedom and no reported or null roots of detrimenta equation of system.

INTERCONNECTED, STATISTICS KEEPING. Statistics Pertaining to Modern Interconnected Systems, G. S. Jackson. N.E.L.A. Bul. vol. 13, no. 2, Feb. 1926, pp 119-123, 5 figs. Deals with actual working of statistics keeping methods employed in interconnected system operated by Consumers Power Co.

PITTSBURGH, PA. Novel Distribution Scheme, C. G. Watson. Elecn., vol. 96, no. 2494, Mar. 5, 1926, pp. 294 and 297, 3 figs. As illustration of extent to which American engineers will go to ensure continuity of electricity supply, author describes distribution system now being installed by Duquesne Light Co. in Pittsburgh; use of duplicated services.

ELECTRIC DRIVE

FACTORIES. Electricity for the Factory, E. Ingham. Indus. Mgmt. (Lond.), (Cassier's Works Power No.), vol. 13, no. 2, Feb. 1926, pp. 73-78, 3 figs. Methods employed in production, transmission and utilization of electrical power in small factory or works.

SECTIONAL. The Development of the Sectional Paper Machine Drive, H. W. Rodgers. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 4, Apr. 1926, pp. 323-329, 9 figs. History and development of several types of sectional drive and relative merits of each particular type; sets forth advantages of sectional drive and shows that its field of applications should increase with fuller understanding of its advantages as to increased production, improved product and lower operating cost.

UNIT-DRIVE SYSTEM. Advantages of Unit-Drive System Shown in Reorganized Factory. Jl. Electricity, vol. 56, no. 5, Mar. 1, 1926, pp. 179-182, 9 figs. Details of installation in Oakland factory of Fageol Motors Co.

ELECTRIC FURNACES

ANNEALING. An Electric Annealing Furnace. Elec. News., vol. 35, no. 4, Feb. 15, 1926, pp. 41-43, 3 figs. Furnace installed in Davenport Works of Can. Gen. Elec. Co. is of tunnel or box type with steel framework and moveable ends or doors.

Electric Annealing Furnaces. Metallurgist (Supp. to Engineer, vol. 141, no. 3661), Feb. 26, 1926, pp. 19-20. Review of types described in recent issues of Forging—Stamping—Heat Treating. Stahl u. Eisen and Zeit. des Vereines deutscher Ingenieure; advantages of electric furnace for commercial annealing.

ARC. Large Arc Furnace (Le four de 100,000 ampères de Saint-Julien de Maurienne), P. Bergeron. Société Française des Electriciens—Bul.. vol. 6, no. 53, Jan. 1926, pp. 75-80, 2 figs.

HEATING ELEMENTS. Rating of Heating Elements for Electric Furnaces, A. D. Keene and G. E. Luke. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 3, Mar. 1926, pp. 222-226, 6 figs. Study of practical considerations involved in assigning kilowatt ratings to radiant heating elements in furnace chambers; constants for radiation and absorption are given; consideration of shape and spacing of elements witb respect to shielding due to adjacent elements; method of determining equivalent unshielded element is worked out to provide basis for comparing dissimilar shapes of heaters.

ELECTRIC GENERATORS, A.C.

LOW POWER FACTOR. Effects of Low Power Factor on Alternator's Voltage, C. O. Mills. Power, vol. 63, no. 16, Apr. 20, 1926, pp. 599-601, 12 figs. Explains how when power factor is lagging armature current tends to weaken main poles and when leading, armature current strengthens main poles of machine.

TEMPERATURE MEASUREMENT. Hot-Spot Measurement, S. L. Henderson. Elec. Jl., vol. 23, no. 3, Mar. 1926, pp. 95-99, 10 figs. Discusses 3 main methods of temperature measurement; by thermometer, by increase in resistance of windings, and by embedded temperature detectors.

ELECTRIC LOCOMOTIVES

CLASSIFICATION. Electric Locomotive Classification, D. C. Hershberger. Ry. Elec. Engr., vol. 17, no. 3, Mar. 1926, pp. 81-82, 1 fig. New system proposed which is simple and does not have limitations of Whyte System.

ELECTRIC POWER

GREAT LAKES. Great Lakes Power Survey. Elec. World, vol. 87, no. 14, Apr. 3, 1926, pp. 706-708, 2 figs. Committee of geographic division of Nat. Elec. Light Assn. issues report of its studies on present and future use of electrical energy in Great Lakes territory.

ELECTRIC METERS

THREE-PHASE METERING METHODS. Comparative Accuracy of Three-Phase, Four-Wire Metering Methods, D. T. Canfield. Purdue Univ.—Bul., vol. 9, no. 9, Dec. 1925, 15 pp., 7 fig. Investigation of 3-, 2-, 4-wire and 2-element polyphase wattmeter methods; theory of each of these methods and reasons for and against their use; conclusions from tests concerning relative accuracy of each method.

ELECTRIC MOTORS, A.C.

INDUCTION. Induction Motors and Induction Machines in General. A.I.E.E. Standards, no. 9, Jan. 1926, pp. 5-13. Standards applying to induction motors larger than fractional horsepower motor and induction generators; they are applicable also to induction machines in general.

ELECTRIC MOTORS, D.C.

COMMUTATION. Commutation Troubles in D.C. Motors, E. B. Stavely. Forging—Stamping—Heat Treating, vol. 12, no. 3, Mar. 1926, pp. 91-94 and 107, 7 figs. Causes and remedies of different kinds of commutation troubles in motors and generators.

OPERATION. How a Direct-Current Motor Operates, A. A. Fredericks. Power, vol. 63, no. 12, Mar. 23, 1926, pp. 452-454, 7 figs. Simple explanation of what takes place in direct-current motor to make armature revolve and how current is regulated to meet demands of load changes.

ELECTRIC TRANSMISSION LINES

OVERHEAD-CATENARY, MAINTENANCE. Maintaining an Electrical Contact System, H. W. Schuler. Ry. Elec. Engr., vol. 17, no. 3, Mar. 1926, pp. 86-89, 7 figs. Swiss Federal railroads have well developed organization for maintenance of overhead catenary.

STABILITY. Steady-State Stability in Transmission Systems, E. Clarke. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 4, Apr. 1926, pp. 365-373, 17 figs. Calculation by means of equivalent circuits or circle diagrams.

STABILITY. Studies of Transmission Stability, R. D. Evans and C. F. Wagner. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 4, Apr. 1926, pp. 374-383, 8 figs. Deals with principal elements entering into stability problem such as action of generators and exciters during disturbances, effect of dissymmetry produced by single-phase circuits, simplification of load and network and methods for combining these various factors in determination if electromechanical oscillations of system following major disturbances; various methods of improving stability discussed.

ELECTRIC WELDING

OIL TANKS. Welding as a Means of Fabricating Tanks, Vessels and Pipes, W. Schenstrom. Am. Welding Soc.—Jl., vol. 5, no. 2, Feb. 1926, pp. 11-15. Electrically welded construction, welding on large tanks, vacuum tanks and pipe.

PROCESSES. Electric Welding (La soudure electrique), J. Maurice. Annales de l'Energie, vol. 9 no. 19, Jan. 25, 1926, pp. 3-7. Discusses pressure welding; autogenous and arc welding; resistance or Thomson process, carbon-electrode or Bernados process; preparation of welds; uses of electric welding.

STRUCTURAL WORK. Electric Welding in the Design and Fabrication of Plant and Structures, J. N. Reeson. Engineering, vol. 121, no. 3145, Apr. 9, 1926, pp. 473-474.

ELECTRIC WELDING, ARC

CRANE RUNWAYS. Crane Runway Built By Welding. Iron Age, vol. 117 no. 16, Apr. 22, 1926, pp. 1132-1133, 6 figs. Electric arc employed in fabrication of 14 girders and 16 "A" frames wbich support them; joints given severe tests.

Welded Construction for Runways. Welding Engr., vol. 11, no. 2, Feb. 1926, pp. 28-30, 10 figs. Crane runway fabricated from structural steel, in which arc welding replaced all rivets.

HYDROGEN. Arc Welding in Hydrogen and Other Cases, P. Alexander. Gen. Elec. Rev., vol. 29, no. 3, Mar. 1926, pp. 169-174, 8 figs. Author shows that usefulness of hydrogen in arc welding is not limited entirely to its atomic properties; results obtained through use of this gas mainly as shield around arc; shows that some other gases also have serviceable properties in this respect.

Atomic Hydrogen Arc Welding, R. A. Weimnan & I. Langmuir. Gen. Elec. Rev., vol. 29, no. 3, Mar. 1926, pp. 160-168, 21 figs. Describes apparatus and distinctive character of results obtained.

The Hyde Hydrogen Process of Welding (Nouveau procédé de soudre). Chimie & Industrie, vol. 15, no. 2, Feb. 1926, p. 229.

PRACTICE. Metallic Arc Welding, P. L. Roberts, Mech. World, vols. 78 and 79, nos. 2025, 2027, 2032, 2037, 2042 and 2047, Oct. 23, Nov. 6 and Dec. 11, 1925, pp 325-326, 364-366 and 465-466, and Jan. 15, Feb. 19 and Mar. 26, 1926, pp. 46-47, 148, 150 and 242-243, 24 figs. Oct. 23: Principles of metallic arc welding. Nov. 6: Process. Dec. 11: Welding plant; reverse-compound-wound generators. Jan. 15, 1926: Welding of cast iron. Feb. 19: Applications to manufacture, Mar. 26: Application to repairs.

ELECTRIC WELDING, RESISTANCE

SEAM. Resistance Seam Welding, W. H. Gibb. Welding Engr., vol. 11, no. 3, Mar. 1926, pp. 27-29, 3 figs. Progress made in construction of machines promises to improve many products now assembled by riveting method.

ELECTRICAL APPARATUS

ROTATING, INSULATION OF. A High-Frequency Voltage Test for Insulation of Rotating Electrical Apparatus, J. L. Rylander. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 3, Mar. 1926, pp. 217-221, 8 figs. Method of making thorough and practical test between various parts of coil or winding; as shop method for checking defects in material or poor workmanship, high-frequency test method has been found very effective; method used for detecting short circuits on principle of radio receiving set is described.

ELECTRICAL MACHINERY

ECONOMIC CHOICE. The Variation of Efficiency with Size, and the Economic Choice of Electrical Machinery, D. J. Bolton, Instn. Elec. Engrs.—Jl., vol. 64, no. 351, Mar. 1926, pp. 337-348, 2 figs. Examination of efficiency on electrical machinery of varying sizes, and application of results to problem of economic choice; results suggest that where hours of service are long or energy is expensive far larger or more efficient machine is justified than would normally be employed.

HYDROGEN AS COOLING MEDIUM. Hydrogen as a Cooling Medium for Electrical Machinery. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 3, Mar. 1926, pp. 281-284, 1 fig. Discussion of paper by Knowlton, Rice & Freiburghouse, published in July, 1925, issue of journal.

ELECTRICITY SUPPLY

RATES. Rates from the Customer's Viewpoint. Elec. World, vol. 87, no. 16, April 17, 1926, pp. 806-808. Tendency toward rate forms which encourage use of service; psychological effect on customers; need and justification of rates for eveloping new loads.

ELEVATORS

LOCATING FAULTS. Locating Faults in Electric Elevators—Alternating-Current Controllers, C. A. Armstrong. Power, vol. 63, no. 13, Mar. 30, 1926, pp. 483-487, 9 figs. Different types of a.c. elevator-motor controllers, and how to locate troubles in such equipment.

EMPLOYEES

PHYSICAL EXAMINATIONS. Physical Examinations in Industrial Plants, E. W. Locher. Safety Eng., vol. 51, no. 3, Mar. 1926, pp. 170-177. Points out importance of such examinations, their effect upon employer and employee.

EMPLOYEES, TRAINING OF

TEACHING ECONOMICS. Teaching Economics to Industrial Employees, J. R. Barbor. Indus. Mgmt. (N.Y.), vol. 71, no. 4, Apr. 1926, pp. 224-225. Points out advantages of study of economics for industrial employees.

ENAMELLING

RESEARCH. Researches in Enamelling and Glazing. Chem. & Met. Eng., vol. 33, no. 3, Mar. 1926, pp. 167-168, 3 figs. Studies at Bureau of Standards include abrasive hardness test for glazes warpage of sheet metal and development of wet process for cast iron.

ENGINEERING

ETHICS. Ethics and Engineering, C. F. Taeusch, Prof. Engr., vol. 10, no. 3, Mar. 1926, pp. 12-13 and 29. Presentation and review of leadership and accomplishments of Am. Assn. of Engrs. Practice Committee in field of professional ethics.

SCIENCE AND. Science and Engineering, W. F. Durand. Mech. Eng., vol. 48, no. 4, Apr. 1926, pp. 337-340. Visualization of material elements of civilization as complex products of manifold studies, fundamental and applied, that interlock and trace back to broad, basic concepts through which attempt is made to interpret phenomena of nature.

ENGINEERS

COMPENSATION. Compensation of Engineers, C. S. Shaughnessy. Prof. Engr., vol. 10, no. 2, Feb. 1926, pp. 6-10, 2 figs. Significant movements for financial improvement; factors entering into compensation; address delivered before Philadelphia chapter of Am. Assn. Engrs.

SALESMENSHIP, VALUE TO. Should the Engineer Be a Trained Salesman? J. B. Mannion, Prof. Engr., vol. 10, no. 3, Mar. 1926, pp. 5-7 and 28, 2 figs. Shows briefly how study of salesmanship will save time, effort and money in professional engineer; increase opportunities and earnings; enable him to be a leader and increase power of his personality; show him how to be tactful and resourceful; and speed his progress toward success.

EVAPORATION

RECLAMATION PROJECTS. Evaporation on United States Reclamation Projects, I. E. Houk. Am. Soc. Civil Engrs.—Proc., vol. 52, no. 1, Jan. 1926, pp. 41-61, 5 figs. Summarizes evaporation Investigations of Reclamation Bureau to date; it is roughly estimated that on Federal irrigation projects alone, 1,000,000 acre-ft. of water is lost each year by evaporation from reservoirs, much of this loss is unavoidable, but in some instances substantial economies can be effected if nature and extent of losses are thoroughly studied. See also discussion in no. 4, Apr. 1926, pp. 737-751, 1 fig.

EXCAVATORS

DRAGLINE. An Oil-Engine-Driven Dragline Excavator. Engineer, vol. 141, no. 3667, Apr. 9, 1926, pp. 419, 2 figs. Self-propelling dragline excavator by Ruston and Hornsby, Ltd., Lincoln.

F

FACTORIES

SMALL. Capitalizing the Advantages of the Small Factory, D. S. Cole. Indus. Mgmt. (N.Y.), vol. 71, no. 4, Apr. 1926, pp. 235-240. Looking for new products to make; weeding good from bad; intensive combing of possible fields; narrowing list of possibilities.

FANS

CASINGS AND INLETS. Experiments on Fan-Casings and Fan-Inlets, H. Briggs and J. N. Williamson. Instn. Min. Engrs.—Trans., vol. 70, Jan. 1926, pp. 241-258, 16 figs. Experiments carried out in Heriot-Watt College to determine (1) velocity of flow in air space between fan runner and casing; (2) effect of varying clearance between fan runner and "beak" on commencement of volute; (3 improvement to be effected by substituting casing of profile following definite mathematical relationship; (4) effect of altering width of volute whose curve has definite relationship; (5) changes brought about by using fan inlet of various forms.

FELDSPAR

USES. Feldspar—Commonest of World Minerals, R. C. Rowe. Can. Machy., vol. 35, no. 10, Mar. 11, 1926, pp. 13-17, 7 figs. While main use of feldspar lies in ceramic industry, mineral of which Canada has inexhaustible supply, is used in manufacture of abrasive wheels, false teeth, scouring soap and roofing papers.

FILTRATION

RAPID-SAND. Important Phases of Rapid Sand Filtration, J. O. Meadows. Contract Rec., vol. 40, no. 11, Mar. 17, 1926, pp. 261-262. Proper application of coagulant and types of coagulating basins; design of filter units and underground systems; nature of action that takes place.

FILTRATION PLANTS

ST. CATHARINES, QUEBEC. St. Catharines Filtration Plant, A. Milne. Can. Engr., vol. 50, no. 10, Mar. 9, 1926, pp. 91-94A, 5 figs. With general historical review of city's water works system since its inception half century ago.

FLOTATION

LEAD-ZINC ORES. Selective Flotation at Bauer, Utah, E. H. Robie. Eng. & Min. Jl.-Press, vol. 121, no. 10, Mar. 6, 1926, pp. 405-407, 2 figs. Method of treatment of lead-zinc ores by Combined Metals Reduction Co.

FLOW METERS

SELF-RECORDING. A New Type of Flowmeter, J. H. Powell. Sci. Instruments—Jl., vol. 3, no. 5, Feb. 1926, pp. 144-148, 4 figs. Form of flowmeter in which loosely fitting piston of neutral buoyancy is impelled along glass tube by flow of li uid, against spring control in which restoring force is proportional to square of displacement so as to obtain approximately even velocity scale.

FLUE-GAS ANALYSIS

COMPUTATIONS. Flue-Gas Computations, A. A. Bato. Mech. Eng., vol. 48, no. 4 Apr. 1926, pp. 330-336, 3 figs. Abbreviation methods for checking flue-gas analyses and computing results; heat balance without ultimate analysis of fuel.

FLUMES

VENTURI. The Improved Venturi Flume. Am. Soc. Civ. Engrs.—Proc., vol. 52, nos. 1, 2, 3 and 4, Jan. ,Feb., Mar. and Apr. 1926, pp. 102-106, 303-318, 470-472 and 627-630, 13 figs. Discussion on paper by R. L. Parshall.

FOREMEN

RESPONSIBILITIES. The Foreman's Responsibilities, F. J. Borer. Ry. Mech. Engr., vol. 100, no. 4, Apr. 1926, pp. 219-220. Stopping of leaks of all kinds; constructive suggestions; attitude toward employees; public relations.

FORGING

MACHINES FOR. Modern Forging Machines (Neuere Schmiedemaschinen), A. Georg. Maschinenbau, vol. 5, no. 3, Feb. 4, 1926, pp. 114-116, 4 figs.

FOUNDATIONS

COFFERDAM. Problems of a Deep Caisson-Cofferdam Foundation, New York Federal Reserve Bank, C. S. Proctor. World Power, vol. 5, no. 27, Mar. 1926, pp. 598-604, 7 figs. Great depth required to accommodate five cellar stories; bracing of cofferdam complicated by size of site; 2 types of permanent bracing; wedging methods; stress transfer checked by strain gage.

ROADS AND STRUCTURES. Foundations for Roads and Structures, W. J. Moore. Can. Engr., vol. 50, no. 12, Mar. 23, 1926, pp. 419-420. Failures of bridge piers cited to show need for adequate foundations; subgrade for all types of pavement should be thoroughly consolidated. Paper presented at Annual Conference on Road Construction.

UNDERPINNING. Difficult Underpinning Work in Building Reconstruction, W. P. Parker. Eng. News-Rec., vol. 96, no. 13, Apr. 1, 1926, pp. 530-532, 3 figs. Putting in sub-basement in Philadelphia department store involves unusual difficulties; quick hardening cement used.

FOUNDRIES

AIR FURNACES. Air Furnace Has Underfeed Stoker, B. Finney. Iron Age, vol. 117, no. 16, Apr. 22, 1926, pp. 1119-1123, 8 figs.

CONVEYOR SYSTEMS. Conveyor Systems, F. G. Steinebach. Foundry, vol. 54, no. 7, Apr. 1, 1926, pp. 256-261, 8 figs. Systems employed by Warren Foundry Co.. Warren, Ohio, to transport molds and finished castings, to handle jackets, weights, bottom boards and sand, etc.

Conveyors Nearly Triple Output, F. L. Prentiss. Iron Age, vol. 117, no. 14, Apr. 8, 1926, pp. 977-982, 10 figs. Power-driven conveying systems are feature of improvements in continuous foundry of Saginaw Products Co., Saginaw, Mich.; make 2000 Chevrolet cylinder blocks a day.

COST ACCOUNTING. Foundry Costing, C. Dicken. Foundry Trade Jl., vol. 33, no. 500, Mar. 18, 1926, pp. 215-218. System which can be used in either ferrous or non-ferrous foundries, but chiefly concerned with cost of production in cast-iron foundry from arrival of pattern into foundry to delivery of rough castings to stores.

MATERIALS HANDLING. Handling Foundry Materials Efficiently, R. Micks. Can. Foundryman, vol. 17, no. 3, Mar. 1926, pp. 11-13, 2 figs. Utility of cranes; overhead systems of hoisting and conveying; electric and gasoline truck and truck tractor; conveying system of transportation; transportation in yard.

Lower Handling Costs of Foundry Materials, H. J. Payne. Foundry, vol. 54, no. 7, Apr. 1, 1926, pp. 262-264 and 282, 8 figs. Materials-handling practice of Kuebler Foundries, Easton, Pa., having productive capacity of 80 tons of malleable castings per day; use of electric industrial trucks.

PROBLEMS. Recurring Foundry Problems, D. Wilkinson. Foundry Trade Jl., vol. 33, no. 498, Mar. 4, 1926, pp. 165-169, 3 figs. Deals with troubles arising when actions and reactions occur which are not yet fully under control of founder; typical reactions; troubles from scum inclusions; blowhole defects; importance of magnetic oxide reaction; solidification voids; hot spots; diagnosed by isothermal lines; chills suggested as remedy.

FOUNDRY EQUIPMENT

FLASKS. Moulding Cases. Metal Industry (Lond.), vol. 28, no. 13, Mar. 26, 1926, pp. 301-303, 7 figs. Explains various useful expedients which can be adopted in making molding cases, and gives hints as to advantages and disadvanatges of using foundry floor as part of mold.

FREIGHT HANDLING

EXCEPTIONAL LOADS. Transport of Exceptional Loads, A. R. Polson. Inst. Transport—Jl., vol. 7, no. 5, Mar. 1926, pp. 259-265. Difficulties met with in transporting and delivering heavy packages; outline of services to be provided for and problems to be met by manufacturers exporting abroad.

FUELS

RESEARCH. Significant Progress in Research on Fuels, A. C. Fieldner. Coal, vol. 1, no. 2, Mar. 1926, pp. 88-94. Origin and constitution of coal; research on preparation, storage and utilization of coal; research on combustions and carbonization; by-product coking; gas manufacture; low-temperature carbonization. Paper presented in Annals, Am. Academy of Political & Social Science.

USE AND TREATMENT. The Use and Treatment of Fuel, S. H. North. Indus. Mgmt. (Lond.), (Cassier's Works Power No.), vol. 13, no. 2, Feb. 1926, pp. 51-56, 6 figs. Compares respective calorific values of coal and oil, and gives examples of economies which may be effected where oil is employed for power production. [*See also Coal; Oil Fuel; Pulverized Coal.*]

FURNACES, HEAT-TREATING

SALT BATHS. Design and Operation of Furnaces for Salt Baths, S. Tour. Am. Soc. Steel Treating—Trans., vol. 9, no. 4, Apr. 1926, pp. 553-569 and (discussion) 569-570, 12 figs.

FURNACES, INDUSTRIAL

DESIGN AND OPERATION. Industrial Furnaces. Mech. Eng., vol. 48, no. 4, Apr. 1926, pp. 356-359. Heat losses, products of combustion, fuels, efficiency and its improvement, automatic control, selection of fuels, etc., as discussed at meeting of Am. Soc. Mech. Engrs.

OIL-BURNING EQUIPMENT. Oil Burning Equipment for Industrial Furnaces, M. H. Mawhinney. Am. Soc. Steel Treating—Trans., vol. 9, no. 1, Jan. 1926, pp. 99-109 and (discussion) 109-110.

G

GALVANIZING

CRAPO PROCESS. Crapo Galvanizing Process. Metal Industry (Lond.), vol. 28, no. 14, Apr. 2, 1926, p. 315, 1 fig. New process developed at research laboratory of Indiana Steel & Wire Co., which solves problem of producing non-peeling, non-cracking zinc coating on iron wire.

GAS ENGINES

POWER PLANTS. The Gas Engine, P. S. Caldwell. Indus. Mgmt. (Lond.), (Cassier's Works Power No.), vol. 13, no. 2, Feb. 1926, pp. 88-95, 19 figs. Its design and application in modern power house; details of most important British types; running costs and results which may be expected from carefully kept installation working either on town, producer, blast-furnace or coke-oven gas.

GAS PRODUCERS

COST. A Few Points on Gas Producer Costs, J. A. Voorhies. Indus. Mgmt. (N.Y.), vol. 71, no. 4, Apr. 1926, pp. 240-241. Gives analysis of cost figures for two raw-gas producer plants of normal size so that relative idea as to comparative costs to other gaseous fuels may be obtained.

STEAM GENERATORS, DIRECT APPLICATION TO. Complete Gasification of Coal for Firing Boilers, C. H. S. Tupholme. Chem. & Met. Eng., vol. 33, no. 3, Mar. 1926, pp. 160-162, 5 figs. Producers directly applied to steam generators, either with or without by-product recovery, have recently received much attention in Great Britain.

GAS TURBINES

5000-KW. Oil and Gas Turbines: A 5000-Kw. Unit Built. Oil Engine Power, vol. 4, no. 4, Apr. 1926, pp. 217-218. Outlines basic conditions, which indicate full consumption is not too high for locomotive work.

GASES

IDEAL, LAWS OF. Aberrations from the Ideal Gas Laws in Systems of One and Two Components, O. Maass and J. H. Mennie. Roy. Soc.—Proc., vol. 110, no. A753, Jan. 1, 1926, pp. 198-232, 7 figs. Research, object of which was measurement of deviations from Dalton's law in gaseous mixtures; density of CO_2 and water vapors; systems water-carbon dioxide and water-ammonia.

GEAR CUTTING

SHAPER CUTTERS. The Design and Application of Gear-Shaper Cutters, H. Walker. Machy. (Lond.), vol. 27, no. 699, Feb. 18, 1926, pp. 671-673, 7 figs. Pressure-angle correction of cutter, application to thread cutting.

SUPER-ACCURATE PRODUCTION. The Super-Accurate Production of Spur Gears on the Gear Shaper, H. Walker. Engineer, vol. 141, no. 3664, Mar. 19, 1926, pp. 316-317, 3 figs. Presents graphical method of correction, reduced to its simplest possible terms.

GEARS

GRINDING. Gear Grinding, H. Darbyshire. Automobile Engr., vol. 16, no. 213, Mar. 1926, pp. 108-110, 3 figs.

GOLD DEPOSITS

NOVA SCOTIA. An Occurrence of Zinc Silicate Ore of Supposed Primary Origin, S. J. Speak. Instn. Min. & Met.—Bul., no. 258, Mar. 1926, pp. 1-13. Facts brought out by analysis of ore; logical conclusion is that Nova Scotia has never properly been tested.

ONTARIO. The Goudreau Gold Area, C. W. Macleod and G. S. Cowie. Can. Inst. Min. & Met.—Bul., no. 167, Mar. 1926, pp. 393-401, 2 figs. Area is roughly 25 miles in length by 6 miles in width; potential gold formation is much more extensive, but little prospecting has been done outside of these limits; actual continuous area of Keewatin formation in which gold has been found is one of largest in Ontario.

ONTARIO. Gold Deposits of Kenora and Rainy River Districts, E. L. Bruce. Ont. Dept. Mines—Annual Report, vol. 34, 1925, pp. 1-42, 23 figs.

ONTARIO. Kamiskotia Gold Area, F. L. Finley. Ont. Dept.Mines—Annual Report, vol. 34, 1925, pp. 43-64, 10 figs.

ONTARIO. Tashota-Onoman Gold Area, T. L. Gledhill. Ont. Dept. Mines—Annual Report, vol. 34, 1925, pp. 65-85, 14 figs.

ONTARIO. Lightning River Gold Area, T. L. Gledhill. Ont. Dept. Mines—Annual Report, vol. 34, 1925, pp. 86-98, 7 figs.

ONTARIO. Red Lake—A Present-Day Klondike Scene, H. P. Prather. Eng. & Min. Jl.-Press, vol. 121, no. 13, Mar. 27, 1926, pp. 523-524, 1 fig. Gold discoveries in isolated region of Northwestern Ontario.

ONTARIO. Gold Deposits of Kenora and Rainy River Districts, Ontario, E. L. Bruce. Can. Min. Jl., vol. 47, nos. 7, 8 and 11, Feb. 12, 19 and Mar. 12, 1926, pp. 159-161, 181-185 and 264-265, 1 fig. Reviews geological occurrence of gold-bearing veins of the various properties; operation at various mines.

GOVERNORS

INERTIA. A New Inertia Governor. Engineer, vol. 141, no. 3667, Apr. 9, 1926, pp. 419-420, 1 fig. Form of governor primarily intended for controlling marine internal-combustion engine made by Ramsay, Jackson and Co.

GRINDING MACHINES

INTERNAL. Automatic Internal Grinding Machine. Engineering, vol. 121, no. 3140, Mar. 5, 1926, pp. 317-319, 7 figs. Latest improvements in machine constructed by Heald Machine Co., Worcester, Mass.

H

HANGARS

INEXPENSIVE TYPE. An Inexpensive Serviceable Hangar. Aviation, vol. 20, no. 11, Mar. 15, 1926, pp. 370-371, 6 figs. Simple building of corrugated galvanized iron rough dressed lumber and garage hardware; built in Kansas for less than $600.

HARDNESS

TESTING MACHINES. Elastic Ring for Verification of Brinell Hardness Testing Machines, S. N. Petrenko. Am. Soc. Steel Treating—Trans., vol. 9, no. 3, Mar. 1926, pp. 420-429, 3 figs.

HEATING, ELECTRIC

APPARATUS. Calculation of Electric Heating Apparatus (Calcul des appareils de chauffage électrique), R. A. Barbes. Electricien, vol. 42, no. 1388, Jan. 15, 1926, pp. 25-30. Discusses laws of heating and cooling, coefficients of profile and of insulation, for developing equations; examples of calculation for various grades of insulation.

HELIUM

PRODUCTION AND PROPERTIES. Helium as a Floating Gas for Airships (Helium als Traggas für Luftschiffe), W. Scherz. Luftfahrt, vol. 30, nos. 3 and 5, Feb. 5 and Mar. 5, 1926, pp. 35-36 and 66-67. Details of properties and production; especially in United States; research; helium from natural gas; use for airships and its advantages.

HIGHWAYS

LOCATING RURAL. Locating Rural Highways, W. W. Crosby. Roads & Streets, vol. 65, no. 3, Mar. 3, 1926, pp. 151-154. General principles, specific example and recommendations. (Abstract) Paper presented before Am. Road Bldrs. Assn.

HOBBING MACHINES

PFAUTER. Pfauter Gear-Hobbing Machine. Machy. (N.Y.), vol. 32, no. 8, Apr. 1926, pp. 666-667, 3 figs. Automatic machine for producing spur, helical and worm gears.

HYDRAULIC PRESSES

ELECTRO-HYDRAULIC. Electro-Hydraulic Forging Press for the Mining and Metallurgical Industry (Elektrische Grossantriebe mit Leonardsteuerung in der Berg- und Hüttenindustrie), E. Riecke. Elektrotechnische Zeit., vol. 47, no. 4, Jan. 28, 1926, pp. 97-99, 5 figs.

PUMP AND ACCUMULATOR CAPACITY. Pump and Accumulator Capacities for Hydraulic Presses. Machy. (Lond.), vol. 27, no. 703, Mar. 18, 1926, p. 807. Method of determining capacity of pump and accumulator to serve specified number of presses to operate at predetermined speed and stroke.

HYDRAULIC TURBINES

MAINTENANCE. Hydraulic Maintenance at Holtwood Plant, T. C. Stabley. Mech. Eng., vol. 48, no. 4, Apr. 1926, pp. 341-349, 10 figs. Conditions causing deterioration of hydraulic turbines; overcoming effects of corrosion; thrust bearings; maintenance of turbines and governors; pitting of runners; safe practices during turbine repairs; governor-control system; inspection.

TESTING LABORATORY. Turbine Testing Plant of T. Bell & Co. at Kriens (Die Turbinen-Versuchsaniage der A.-G. der Maschinen-fabrik von Theodor Bell & Cie., Kriens), O. Walter. Schweizerische Bauzeitung, vol. 87, nos. 9, 10 and 11, Feb. 27, Mar. 6 and 13; 1926, pp. 111-116, 125-130 and 146-148, 33 figs.

VENTING. Venting Waterwheels for Efficiency, F. Nagler. Elec. World, vol. 87, no. 14, Apr. 3, 1926, pp. 699-703, 6 figs. Among advantages are improvement of speed regulation and runner and draft-tube efficiency, reduction of gate leakage and turbine vibration, provision of vacuum for power-house cleaning, etc.; limitations and precautions, how data to indicate best load apportionment are obtained; venting methods, explanation of effects.

HYDRO-ELECTRIC DEVELOPMENTS

FRANCE. Hydraulic Developments of the Midi Railway in the Ossau Valley. Engineer, vol. 141, no. 3666, Apr. 2, 1926, pp. 376-379, 9 figs.

GEORGIA. Hydro-Electric Development in Georgia. Elec. World, vol. 87, no. 15, Apr. 10, 1926, pp. 750-756, 16 figs.

HYDRO-ELECTRIC PLANTS

AUTOMATIC. Automatic Hydro Plants of the Detroit Edison Co. Power Plant Eng., vol. 30, no. 6, Mar. 15, 1926, pp. 352-358, 10 figs.

BRITISH COLUMBIA. The Stave Falls Development, E. E. Carpenter. Jl. Electricity, vol. 56, no. 5, Mar. 1, 1926, pp. 172-178, 7 figs.

CALIFORNIA. Balch Hydro Plant to Operate at 2740-ft. Head. Power Plant Eng. vol. 30, no. 7, Apr. 1, 1926, pp. 433-434, 4 figs.

CALUMET ISLAND, CANADA. The Ottawa River at Calumet Island. Elec. News, vol. 35, no. 6, Mar. 15, 1926, pp. 31-33, 4 figs.

WASHINGTON. Engineering Features of the Baker River Development, L. N. Robinson, Elec. World, vol. 87, no. 11, Mar. 13, 1926, pp. 547-550, 6 figs.

HYSTERESIS

MAGNETIC. The Magnetic Hysteresis Curve, H. Lippelt. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 4, Apr. 1926, pp. 355-364, 14 figs. Analysis of phenomen a of hysteresis, introducing conception of reactive component and dissipative component of counteracting force, which appears when magnetizable material is subjected to magnetizing force; using this conception, equations and curves are developed for hysteresis curve for various components and for hysteresis loss.

I

IMPACT TESTING

NOTCHED-BAR TESTS. Interpretation of Notched Bar Impact Test Results, P. Heymans. Am. Soc. Steel Treating—Trans., vol. 9, no. 4, Apr. 1926, pp. 604-610, and (discussion) 610-614, 7 figs.

Notes on Impact Testing and the Impact Strength of Copper, Aluminium and Certain Brasses at Different Temperatures, F. Sauerwald and H. Wieland. Metallurgist (Supp. to Engineer, vol. 141, no. 3665), Mar. 26, 1926, pp. 45-47, 1 fig.

INDICATORS

HIGH-SPEED ENGINES. The Gale Indicator for High-Speed Engines. Engineering, vol. 121, no. 3141, Mar. 12, 1926, p. 350, 1 fig.

MEAN-PRESSURE. The M.I.P.-Meter, J. Geiger. Oil Engine Power, vol. 4, no. 4, Apr. 1926, pp. 223-226, 15 figs.

INDUSTRIAL MANAGEMENT

BUDGETING. Foreseeing Volume of Coming Orders, J. H. Barber. Mfg. Industries, vol. 11, no. 4, Apr. 1926, pp. 253-256, 2 figs. Author shows how to construct barometer curve from four groups of Federal Reserve statistics that indicate change in gross profit margins.

ESTIMATES, PREPARATION OF. The Use of Graphs in the Preparation of Estimates, E. G. Fiegehen. Mech. World, vol. 79, no. 2042, Feb. 19, 1926, pp. 146-147. Examples of uses to which estimating graphs may be put.

FINANCIAL AND INDUSTRIAL INVESTIGATIONS. Judging Operating Results, A. Andersen. Mfg. Industries, vol. 11, no. 4, Apr. 1926, pp. 277-280. Analysis of operating statements in financial and industrial investigation; determination of profits; importance of depreciation and appreciation; profit and loss statement; consideration of gross profits and costs.

INVENTORY CONTROL. The Control of Inventory Through the Scientific Determination of Lot Sizes, H. S. Owen. Indus. Mgmt. (N.Y.), vol. 71, no. 4, Apr. 1926, pp. 257-260, 3 figs. Perpetual-inventory stock records.

MATERIALS-COST STANDARDIZATION. Material Costs Can be Standardized, F. H. Figsby. Factory, vol. 36, no. 3, Mar. 1926, pp. 431-432 and 586, 2 figs.

PROJECT ENGINEERS. Functions of a Project Engineering a Techinical Organization, J. F. Hardecker. Am. Mach., vol. 64, no. 16, Apr. 22, 1926, pp. 641-642. Complete analysis made of system whereby one engineer follows through an assignment from preliminary design to finished product.

INDUSTRIAL PLANTS

EFFICIENCY. Plant Efficiency. Mech. Eng., vol. 48, no. 4, Apr. 1926, pp. 360-361. Problems affecting plant efficiency, including selections of site, plant design, site limitations affecting layout, etc., discussed at meeting of Am. Soc. Mech. Engrs.

POWER-COSTS CONTROL. How Shall a Manager Control His Power Costs? W. H. Larkin, Jr. Factory, vol. 36, no. 3, Mar. 1926, pp. 444-445, 1 fig. Standard, monthly power report, as adopted by wide variety of industries, proves its case for simplicity and effectiveness; it is revolutionizing power costs in many plants

INDUSTRIAL RELATIONS

Improving. Promoting Friendly Relations in Industry, E. M. Herr. Machy. (N.Y.), vol. 32, no. 8, Apr. 1926, pp. 621-622. Method as worked out at Westinghouse plant, East Pittsburgh, Pa.; distinction between owners and management in modern industrial undertakings; responsibilities of management of industrial enterprise.

Maintenance. Maintenance of Proper Relations Between Employer and Employee, E. M. Herr. West. Machy. World, vol. 17, no. 3, Mar. 1926, pp. 99-100 and 135.

INSPECTION

Methods. Inspection Methods. Soc. Automotive Engrs.—Jl., vol. 18, no. 3, Mar. 1926, pp. 323-325. Discussion of paper by C. J. Ross, published in Oct. 1925 issue of same journal.

INSULATING MATERIAL, ELECTRIC

Organic. Organic Insulating Materials, A. C. Hopper. Elecn., vol. 96, no. 2494, Mar. 5, 1926, pp. 258-259. Properties of ideal substance; effect in increasing voltages; impregnation problems; acidity question.

INSULATION, HEAT

High-Temperature. High Temperature Insulation, C. S. Gillette. Am. Soc. Nav. Engrs.—Jl., vol. 38, no. 1, Feb. 1926, pp. 3-16, 3 figs. Advantages of proper heat insulation if piping and machinery on shiboard.

INTERNAL-COMBUSTION ENGINES

Combustion. Control of Carburation in Explosion Engines by Exhaust-Gas Analysis and Carburation Curves (Controle de la carburation dans les moteurs a explosion par l'analyse des gaz d'echappement dans les moteurs explosion par l'analyse des gaz d'echappement et les diagrammes de carburation), B. Jousset. Chaleur et Industrie, vol. 7, no. 71, Mar. 1926, pp. 124-126, 1 fig.

Cylinders. Thermal Stresses in Engine Cylinders, D. Laugharne-Thornton. World Power, vol. 5, no. 27, Mar. 1926, pp. 136-145, 5 figs. Examines principal factors to be considered in determination of stesses which arise in internal-combustion-engine cylinder as result of changes of temperature which such part is subject to during ordinary cycle of engine.

Instruments for. Instruments for Internal-Combustion Engines. Shipbldr., vol. 33, no. 187, Mar. 1926, pp. 150-151, 6 figs. Thermoelectric pyrometers for determining exhaust temperatures; instruments for obtaining accurate indicator diagrams.

Power Plants. The Internal-Combustion-Engine in the Power House, J. Richardson. Indus. Mgmt. (Lond.), (Cassier's Works Power No.), vol. 13, no. 2, Feb. 1926, pp. 81-84, 5 figs. Historical survey of development; chief type of engines at present in use.

(*See also Airplane Engines; Automobile Engines; Diesel Engines; Gas Engines; Oil Engines.*)

IRON ALLOYS

Iron-Chromium. The Nature of the Alloys of Iron and Chromium, E. C. Bain. Am. Soc. Steel Treating—Trans., vol. 9, no. 1, Jan. 1926, pp. 9-32, 18 figs.

Iron-Silicon. Iron and Silicon. Metallurgist (Supp. to Engineer, vol. 141, no. 3665), Mar. 26, 1926, pp. 43-44, 1 fig. Review of work by Wever and Giani on investigation of iron-silicon alloys, account of which is published in Stahl u. Eisen, Jan. 14, 1926.

IRON AND STEEL

Warping. Why Metal Warps and Cracks, J. F. Keller. Am. Soc. Steel Treating—Trans., vol. 9, no. 3, Mar. 1926, pp. 373-400 and (discussion) 400-402, 12 figs.

IRON CASTINGS

Chilled. Making Chilled Castings in Jobbing Foundries, R. Coulthurst. Mech. World, vol. 79, no. 2047, Mar. 26, 1926, pp. 246-247. Discusses difficulties encountered by jobbing foundry, as follows: size of chill, nature of metal to be used, temperature of molten metal entering mold, chief differences in molding as against molds for ordinary castings, and de, th of chill.

Methods and Processes. Comparisons in Foundry Methods and Processes, E. Longden. Foundry Trade Jl., vol. 33, no. 501, Mar. 25, 1926, pp. 227-232, 29 figs. Notes on oil-sand cores, wooden frames, molding tackle, gas-and-oil-engine pistons and liners; cupola design; solid and drop bottoms; special iron.

Notes on the Production of Castings. Foundry Trade Jl., vol. 33, no. 501, Mar. 25, 1926, p. 226. Cupola practice; sand problem; venting and cores; causes of defects. Abstract.

The Manufacture of Iron and Steel, F. T. Sisco. Am. Soc. Steel Treating—Trans., vol. 9, no. 2, Feb. 1926, pp. 305-322, 1 fig. Describes manufacture of iron and steel castings; method of preparing mold; various kinds of molds and their uses; iron for castings is melted in cupola using coke as fuel; various steel-making processes described in so far as they are used for productions of steel for castings and their various advantages and disadvantages; preparing casting for shipment, digging out, cleaning, heat treatment and inspection.

Oxidizing. Oxidizing Cast Iron Castings, W. S. Barrows. Can. Foundryman, vol. 17, no. 3, Mar. 1926, p. 18.

Sand Blasting. Sand Blasting and Other Aids to Fettling, F. W. Neville. Foundry Trade Jl., vol. 33, no. 497, Feb. 25, 1926, pp. 145-150, 8 figs.

IRRIGATION

Exchequer Project, California. The Exchequer Project of the Merced Irrigation District, R. White. Contractors' & Engrs.' Monthly, vol. 12, no. 3, Mar. 1926, pp. 45-52, 7 figs. Primarily an irrigation storage project requiring high masonry dam, work includes relocation of 17 miles of mountain railway, construction of long railway bridge on highest concrete piers ever used for this type of work and installation of 42,000 h.p. hydro-electric plant.

Water-Right Adjudications. Determination of the Duty of Water in Water-Right Adjudications. Am. Soc. Civil Engrs.—Proc., vol. 52, no. 4, Apr. 1926, pp. 580-596. Features of water adjudications of interest to engineers; principles on which duty of water is defined as indicated by court decisions; character of evidence likely to be most useful in assisting adjudicating agencies in such determinations; illustrations of results and practices in existing decrees.

L

LATHES

Tests. Investigation of Small Lathes as to Design, Construction and Efficiency. (Untersuchungen an kleinen Drehbänken hinsichtlich Konstruktion. Ausführung und Leistung), F. Theimer. Zeit, Oesterr, Ingenieur- u. Architekten Vereines, vol. 78, no. 3-4, Jan. 22, 1926, pp. 23-26, 4 figs.

LIFTING MAGNETS

Design. Lifting Magnets. Machy. (Lond.), vol. 27, no. 704, Mar. 25, 1926, pp. 833-835, 5 figs. Theory underlying design; weight of coil; cooling surface; points in construction of modern lifting magnets; control equipment.

LIGHTING

Highways. Comparison Between Lighted and Unlighted Highways, F. C. Taylor. Elec. World, vol. 87, no. 16, Apr. 17, 1926, pp. 816-818, 2 figs. Headlight road illumination not sufficient for timely perception of pedestrians, obstructions, curves and changing road conditions when car is moving at usual highway speed.

Industrial. Lighting of Factories and Workshops (L'Eclairage des Usines et des Ateliers), J. Rumilly. Revue Industrielle, vol. 56, no. 2198, Jan. 1926, pp. 9-16, 11 figs. Advantages of good lighting in industry; relation of lighting to accidents; selection of proper lighting system; coefficient of depreciation; calculation of luminous flux of lamps; details of Luxmetre Mazda for measurement of light.

Street. Cost of Operating Chicago's Street Lights, J. T. Miller. Elec. World, vol. 87, no. 15, Apr. 10, 1926, pp. 759-761, 4 figs. Allowances made by Department of Gas and Electricity for items not charged to street lighting, but really assessable in order to obtain complete operating costs.

LIGNITE

Saskatchewan Development Scheme. An Industrial Development Scheme for the Southern Saskatchewan Lignite Fields, S. R. Parker and W. P. Brattle. Elec. News, vol. 35, nos. 4, 5 and 6, Feb. 15, Mar. 1 and 15, 1926, pp. 43-44, 38-41 and 33-35, 8 figs. Feb. 15: Mining and briquetting; power and gas. Mar. 1: Ultimate layout for province-wide electrification; connected load of 40,000-h.p. awaiting service. Mar. 15: Suggested joint use of poles for telephone and electric power.

LOCOMOTIVE BOILERS

Future Possibilities. Future Possibilities of the Locomotive Boiler. L. A. Rehfuss. Ry. Mech. Engr., vol. 100, no. 4, Apr. 1926, pp. 212-214. Trend towards higher pressures; objections to water-tube boiler; objections to watering type of firebox; question of high steam temperatures.

Pitting. Great Northern Reduces Pitting of Locomotive Boilers. Ry. Age, vol. 80, no. 18, Apr. 3, 1926, pp. 951-958, 7 figs. Changes in water-treating methods yield striking results; mileage doubled and tube life trebled.

LOCOMOTIVES

Compound. High-Speed Compound Locomotives (Locomotive compound à grande vitesse), R. Vallantin. Revue Génèrale des Chemins de Fer, vol. 45, no. 2, Feb. 1926, pp. 89-100, 6 figs.

Diesel-Electric. The Future of the Diesel-Electric Locomotive. Ry. Elec. Engr., vol. 17, no. 3, Mar. 1926, pp. 70-74, 2 figs.

Eight-Coupled. Eight-Coupled Express Locomotives in France. Ry. Engr., vol. 47, no. 555, Apr. 1926, pp. 119 and 122, 2 figs. Comparative tests on 4-8-2 type, having 4-wheel front truck.

Electric. *See Electric Locomotives.*

Garratt. The Garratt Locomotive, R. H. Whitelegg. Engineer, vol. 141, no. 3666, Apr. 2, 1926, p. 392.

Internal-Combustion. Internal-Combustion Locomotives for Railway and Industrial Purposes. Ry. Gaz., vol. 44, no. 10, Mar. 5, 1926, pp. 324-325, 4 figs. Two useful types, manufactured by Crossley Bros., for switching about factory premises and yards.

Oil-Electric. A Survey of Oil-Electric Locomotive Design, E. M. Speakman. Oil Engine Power, vol. 4, no. 4, Apr. 1926, pp. 210-214, 1 fig. Summary of weight and power data of major units built to date is basis of analytical commentary.

Three-Cylinder. The Three-Cylinder Locomotive. Ry. Age, vol. 80, no. 16, Mar. 20, 1926, pp. 849-850, 1 fig. Abstracts of papers read before Chicago Section of Am. Soc. Mech. Engrs., as follows: Construction and Economy Features, J. G. Blunt; Some Test Results, E. L. Woodward.

LUBRICATING OILS

Purification. Oil Purification at Kearny Plant, D. F. Miller and R. H. Osgood. Elec. World, vol. 87, no. 16, Apr. 17, 1926, pp. 801-803, 3 figs. Systems for purifying turbine lubricating oil and transformer and circuit-breaker insulating oils at new generating station of Public Service Electric & Gas Co. at Kearny, N.J

M

MACHINE SHOPS

Foundry. Equip Machines for Large Work, R. A. Fiske. Iron Age, vol. 117, no. 13, Apr. 1, 1926, pp. 899-902, 6 figs. New machine shop of Hubbard Steel Foundry Co., East Chicago, Ind., is located between two foundries; in this shop all castings, with the exception of rolls, are finished.

MACHINE TOOLS

Design Trends. Modern Aims and Tendencies in the Machine-Tool Industry (Neuzeitliche Aufgaben und Ziele des Werkzeugmaschinenbaues), Weil. Zeit, des Vereines deutscher Ingenieure, vol. 70, no. 13, Mar. 27, 1926, pp. 437-439.

German Standards. Standards for German Machine Tools. Am. Mach., vol. 64, no. 16, Apr. 22, 1926, pp. 638, 3 figs.

Modern. Modern Machine Tools. Automobile Engr., vol. 16, no. 213, Mar. 1926 pp. 99-104, 7 figs.

Selection. How to Select Machine-Tools, W. G. Careins. Soc. Automotive Engrs.—Jl., vol. 18, no. 3, Mar. 1926, pp. 275-278 and (discussion) 278-280.

Small, Heavy Work on. Handling Heavy Work on Small Machines, J. H. Rodgers. Machy. (N.Y.), vol. 32, no. 8, Apr. 1926, pp. 632-633, 2 figs. Using rollers to support lathe work; extension plate for die-sinking machine; compensator for milling machine-table overhang.

MACHINE METHODS

Automobile-Cylinders. Stutz Milling and Boring Fixtures, F. H. Colvin. Am. Mach., vol. 64, no. 16, Apr. 22, 1926, pp. 631-634, 14 figs. Methods used in machining new Stutz eight-in-line cylinder block; drilling oil holes 36 in. deep; trunning and indexing fixtures.

MAGNESIUM

Properties. Magnesium and Its Alloys, S. L. Archbutt. Metallurgist (Supp. to Engineer, vol. 141, nos. 3657 and 3661), Jan. 29 and Feb. 26, 1926, pp. 4-6 and 26-30, 10 figs.

MALLEABLE CASTINGS

Contraction. The Contraction of Malleable Castings, R. Stotz and F. Henfling. Metallurgist (Supp. to Engineer), vol. 141, no. 3665), Mar. 26, 1926, pp. 38-40., 2 figs.

MAPPING

Topographical Expression. Expression of Land Forms on Maps, A. C. T. Sheppard. Can. Engr., vol. 50, no. 11, Mar. 16, 1926, pp. 395-397. Meaning of topographical expression; selection of contour interval; physiography as aid to topographical mapping; allowable latitude in topographical mapping. Paper presented at Annual Convention of Dominion Land Surveyors Assn.

MATERIAL HANDLING

OUTSIDE HAULAGE. Undeveloped Possibilities in Outside Haulage. Factory, vol. 36, no. 3, Mar. 1926, pp. 441-443, 510 and 514, 6 figs. Experiences of large steel mill with electric locomotives; of H. C. White Co., with gasoline locomotives; of Wilson Foundry & Machine Co., with tractor-trailers; and of Fedders Mfg. Co., with semi-trailers.

See Also ash Handling; Coal Handling; Foundries; Freight Handling.

MECHANISMS

GENEVA STOP. Inertia Forces in the Geneva Stop and Similar Mechanisms, J. I. Hall. Am. Mach., vol. 64, no. 15, Apr. 15, 1926, pp. 603-605, 5 figs. Derivation of equations for acceleration and inertia forces for general case of crank and slotted-arm mechanism; practical example worked out.

METALS

FATIGUE. On the Concentration of Stress in the Neighbourhood of a Small Spherical Flaw; and on the Propagation of Fatigue Fracture in "Statistically Isotropic" Materials, R. V. Southwell and H. J. Gough, Lond., Edinburgh & Dublin Philosophical Mag. & Jl. of Sci., vol. 1, no. 1, Jan. 1926, pp. 71-97, 12 figs. Concentration produced by small spherical flaw in material subjected to uniform tension; effect of small spherical flow in twisted shaft; origin of fatigue fractures.

What Happens When Metal Fails by Fatigue H. F. Moore. Am. Soc. Steel Treating—Trans., vol. 9, no. 4, Apr. 1926, pp. 539-552, 4 figs. Presents picture of what happens when metal fails by fatigue under repeated stress; also pictures two actions going on in metal under repeated stress; one strengthening and the other destructive action; if destructive overbalances strengthening action, metal will fail.

PLASTIC DEFORMATION. Plastic Formation (Plastische Gestaltung), P. Schweissguth. Maschinenbau, vol. 5, no. 3, Feb. 4, 1926, pp. 105-109, 6 figs.

Processes of Plastic Deformation (Ueber die Vorgange bei der bildsamen Formänderung), H. Hoff and G. Sobbe. Maschinenbau, vol. 5, no. 3, Feb. 4, 1926, pp. 109-112, 16 figs.

The Mechanism of Plastic Deformation, Meyer and Nehl. Metallurgist (Supp. to Engineer, vol. 141, no. 3661), Feb. 26, 1926, pp. 23-25, 3 figs.

POROSITY. The Porosity of Metals. Metallurgist (Supp. to Engineer, vol. 141, no. 3665), Mar. 26, 1926, pp. 41-42. Results of experiments carried out by Tammann and Bredemeyer on such widely varied materials as copper, brass, steel and cast iron, showing that water, applied under pressure, penetrated to very considerable depth. (See reference to original article in Eng. Index 1925, p. 478, under METALS, Hollow Channels.)

STRESS AND STRAIN HARDNESS. The Mechanics of Metals (Vorbilder für die Metall mechanik), F. Rinne. Zeit. für Metallkunde, vol. 18, nos. 2 and 3. Feb. and Mar. 1926, pp. 37-42 and 81-84, 34 figs. Discusses phenomena of stress, plastic deformation, strain hardness and fracture.

MILLING

CAM. Use of Dividing Head and Circular Attachment for Cam Milling. Machy. (Lond.), vol. 27, no. 702, Mar. 11, 1926, pp. 765-766, 2 figs.

MILLING MACHINES

DOUBLE-OVERARM. Double Overarm Milling Machine. Brit. Machine Tool Eng., vol. 3, no. 37, Jan.-Feb., 1926, pp. 369-370, 2 figs. Type of overarm employed on Parkinson machine consists of 2 cylindrical arms carried side by side so that centres of arms and centres of spindle form triangle.

DUPLEX. Full Automatic Table Control a Feature of New Milling Machine. Automotive Industries, vol. 54, no. 12, Mar. 25, 1926, pp. 538-540, 4 figs. Production miller brought out by Brown & Sharpe is of 2-spindle type; adapted for full automatic, part automatic and intermittent table operation; uses variety of fixtures.

High-Production Milling Machine. Iron Age, vol. 117, no. 12, Mar. 25, 1926, pp. 842-843, 3 figs. Full automatic table control is feature of new duplex machine, manufactured by Brown & Sharpe Mfg. Co., Providence; design permits use of wide variety of fixtures and attachments.

MINERALS

CANADIAN PRODUCTION. Mineral Production of Canada, J. A. Robb. Canada Dominion Bur. of Statistics—Report, Feb. 22, 1926, 47 pp., 2 figs. First detailed official figures available for whole of calendar year 1925.

MINES

PNEUMATIC PLACING OF CONCRETE. Pneumatic Placing of Concrete at Ray, D. A. Robotham. Ariz. Min. Jl., vol. 9, no. 20, Mar. 25, 1926, pp. 9-10, 4 figs. Discusses two methods: (1) pneumatic machine is placed at mixing plant conveniently located for delivery of material, and pipe lines for conveying wet mix are laid from plant to forms; (2) machine is located at forms and wet mix is conveyed in cars to machine and then placed in forms by air.

MOULDING MACHINES

DRIVE. Belt or Direct Electric Drive for Moulding Machines. Elec. News, vol. 35, no. 5, Mar. 1, 1926, pp. 49-51, 4 figs. Results of tests show startling reduction of costs with latter, accompanied by increased production.

MOULDING METHODS

LOAM. Describe Loam Moulding Methods, B. Shaw and J. Edgar. Foundry, vol. 54, nos. 5, 6 and 7, Mar. 1, 15, and Aug. 1, 1926, pp. 184-187, 225-228 and 275-279, 44 figs.

MOULDS

FORMED WITH CORES. More Moulds Made with Cores, Caster. Metal Industry (Lond.), vol. 28, no. 10, Mar. 5, 1926, pp. 229-231, 10 figs. Supplement to series or article published in same journal in 1925, giving further interesting examples of construction of molds entirely or mainly from cores.

GASES FROM MOLTEN IRON. Gases Evolved from Heated Iron, B. Hird. Foundry Trade Jl., vol. 33, no. 500, Mar. 18, 1926, pp. 219-221, 13 figs.

PERMANENT. Permanent Molds. Foundry Trade Jl., vol. 33, no. 497, Feb. 25, 1926, p. 153, 1 fig.

Traces Steps in Long Life Mold Advance, H. Schwartz. Foundry, vol. 54, nos. 2, 3, 4 and 5, Jan. 15, Feb. 1, 15 and Mar. 1, 1926, pp. 42-44 and 76, 92-94, 147 and 149-150, and 189-192, 7 figs.

VENTING. Metal Industry (Lond.), vol. 28, no. 9, Feb. 26, 1926, pp. 205-206, 5 figs. Discusses dangers of misuse of vent wire, and points out how use of suitable facing sand and skill of molder will often avoid much artificial venting; describes job illustrating certain difficult problems in venting.

MOTOR BUSES

BRAKES. Brakes for Heavy Vehicles, L. C. Huck. Soc. Automotive Engrs.—Jl., vol. 18, no. 3, Mar. 1926, pp. 288-295 and (discussion) 295-298, 6 figs.

DESIGN CHANGES. Motorcoach Builder's Attitude Toward Changes in Standard Designs, E. W. Templin. Soc. Automotive Engrs.—Jl., vol. 18, no. 4, Apr. 1926, pp. 379-383, 1 fig.

EPICYCLIC GEARS. Magnetically Controlled Epicyclic Gear. Motor Transport (Lond.), vol. 42, no. 1099, Mar. 22, 1926, pp. 349-350, 4 figs. Details of total transmission now being tested on Paris omnibuses as solution of driver problem.

GASOLINE-ELECTRIC. Operating Experience with Gasoline-Electric Motorcoaches. Soc. Automotive Engrs.—Jl., vol. 18, no. 4, Apr. 1926, pp. 373-377. Discussion of paper by R. H. Horton, published in Dec. 1925, issue of journal. See reference to original paper in Eng. Index, 1925, p. 501.

MOTOR-TRUCK TRANSPORTATION

WATER-TERMINAL OPERATION AND. Relation of the Motor Truck to Water Terminal Operation, W. F. Williams. World Ports, vol. 14, no. 5, Mar. 1926, pp. 49-54 and (discussion) 54-75. Discusses relation of motor vehicle to development of water-terminal business as applied in particular to Commonwealth Pier 5 in port of Boston.

MOTOR TRUCKS

LUBRICATION. The Essentials of Industrial Truck and Tractor Lubrication, A. F. Brewer. Indus. Mgmt. (N.Y.), vol. 71, no. 4, Apr. 1926, pp. 247-252, 12 figs. Discusses lubrication requirements of chassis parts and final drives, etc., of various modern types of industrial tractors and trucks.

OPERATING COST. Operating Costs and Economic Life of Motor Vehicles, W. H. Fairbanks. Soc. Automotive Engrs.—Jl., vol. 18, no. 3, Mar. 1926, pp. 285-287. Table summarizing operating costs of large mixed fleet for one year shows how records reveal highly important fundamental facts; relation of mileage to operating costs; determining economic life of truck.

O

OIL ENGINES

DOUBLE-ACTING. Double-Acting Engine of Wide Application. Oil Engine Power, vol. 4, no. 4, Apr. 1926, p. 215, 1 fig. Type now nearing completion at New London is 2-cycle design consisting of massive bedplate with cast-iron columns, guides, slippers, etc., in accordance with modern marine practice.

HIGH-EFFICIENCY. The High Efficiency Oil-Engine, A. E. L. Chorlton. Engineering, vol. 121, no. 3143, Mar. 26, 1926, pp. 409-411, 9 figs.; also Engineer, vol. 141, nos. 3665 and 3666, Mar. 26 and Apr. 2, 1926, pp. 364-366 and 394-395, 9 figs. (Abstract.) Paper read before Instn. Mech. Engrs.

OIL FUEL

COMBUSTION. Experience with the Combustion of Fuel Oil in Power Plant Boilers, J. F. Barkley. U.S. Bur. of Mines—Reports of Investigations, no. 2730, Feb. 1926, 6 pp.-1 fig. Also Oil & Gas Jl., vol. 24, no. 44, Mar. 25, 1926, pp. 90 and 92. Results of studies and tests made of various oil-burning equipments under power-plant boilers.

SPECIFIC GRAVITY AND VISCOSITY. The Graphic Relation of Specific Gravity to Viscosity in the Case of Fuel Oils, G. B. Vroom. Am. Soc. Naval Engrs.—Jl., vol. 38, no. 1, Feb. 1926, pp. 119-129, 5 figs. Shows how, specific gravity and viscosity at known temperatures, being given, its viscosity at any other temperature may be predicted within sufficiently accurate limits for practical working purposes.

OPEN-HEARTH FURNACES

BASIC PROCESS. Elimination of Metalloids in the Basic Open-Hearth Process, J. L. Keats and C. H. Herty. Am. Inst. Min. & Met. Engrs.—Trans., no. 1550-C, Feb. 1926, 28 pp., 18 figs. Wide variations in composition of bath from door to door occur after ore additions; bath is of uniform composition under finishing conditions and test from any door during this period will represent entire bath; one of controlling factors in rate of elimination of metalloids is fluidity of slag.

OPTICAL INSTRUMENTS

GAGING DEVICES. New Projection Device for Testing Fine Bores (Neuartiger Projektionspparat zum Prüfen feiner Bolnungen), O. Lich. Praktischer Maschinen-Konstrukteur, vol. 59, no. 5-6, Feb. 6, 1926, pp. 57-58, 6 figs.

TOOLING WORK. Accurate Angles by Optical Methods, F. C. Hudson. Am. Mach., vol. 64, no. 15, Apr. 15, 1926, pp. 601-602, 4 figs. Simple and very accurate method of setting work at right angles, that can be used on any toolroom job.

ZEISS MEASURING MACHINE. Zeiss Measuring Machine. Machy. (Lond.), vol. 27, no. 703, Mar. 18, 1926, pp. 815-816, 5 figs. Details of design; principle of optical system.

ORDNANCE

ANTI-AIRCRAFT. Anti-aircraft Ordnance—Yesterday, To-day and To-morrow, G. M. Barnes. Coast Artillery Jl., vol. 64, no. 1, Jan. 1926, pp. 17-32, 11 figs. Present and proposed new fire-control equipment; target-practice results; future anti-aircraft material.

OXYACETYLENE WELDING

APPLICATIONS. Oxygen the Wonder Worker, H. L. Rogers. Southern & Southwestern Ry. Club—Proc., vol. 18, no. 7, Jan. 1926, pp. 10, 13, 14, 17, 18, 21, 22 and 25 and (discussion) 25, 26, 29, 30, 33, and 34. Oxyacetylene welding torch and principle; oxyacetylene cutting torch; welders and cutters; application to railway work.

CAST-IRON HEATER SECTIONS. Procedure Control for Oxyacetylene Welding Cast Iron Heater Sections, J. W. Haygood. Am. Welding Soc.—Jl., vol. 5, no. 2, Feb. 1926, pp. 7-11. Selection and inspection of material; design and layout of welded joint; preparation of piece for welding; welding technique; inspection and test.

COPPER. Oxy-Acetylene Welding of Copper, S. W. Miller. Am. Mach., vol. 64, no. 16, Apr. 22, 1926, pp. 639-640, 4 figs. Introduction of silicon as deoxidizer in metal being welded as well as in welding rod results in production of sound welds.

P

PAPER MACHINERY

ELECTRIC DRIVES. Electrification of Paper-Making Machines, S. A. Staege. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 3, Mar. 1926, pp. 272-281, 12 figs. Outlines trends of development in historical sketch of progress in art up to present time, devoting special attention to unique system of d.c. drive in which section-driving motors through differential electrical field control means, cause several section-driving motors to operate in synchronous relation at any desired relative speed values.

PATTERNMAKING

ECONOMIES. Pattern Economies. Mech. World, vol. 79, nos. 2035, 2038, 2041 and 2043, Jan. 1, 22, Feb. 12 and 26, 1926, pp. 12-13, 67, 124-125 and 168-169, 34 figs. Jan. 1: Solid, or built-up patterns; metal patterns; complete, or skeleton or segmental patterns; boxing up. Jan. 22: Coring intricate interiors. Feb. 12: Sweeping, and segmental work in green sand. Feb. 26: Loam patterns; strickling.

PAVEMENTS, CONCRETE

REINFORCEMENT. A Concrete Pavement Detailed as a Floor is Detailed, W. H. Wheeler. Eng. News-Rec., vol. 96, no. 13, Apr. 1, 1926, pp. 518-520, 2 figs. Slab section and reinforcement varied with changing conditions and location and detail plans provided.

PIPE, CAST-IRON

Bronze Welding. Bronze Welding of Cast Iron Pipe, H. Y. Carson. Acetylene Jl., vol. 27, no. 9, Mar. 1926, pp. 429-435, 9 figs. Results of tests; practical bronze-welding data. Paper presented before Gas Products Assn.

Centrifugally Cast. Centrifugally-Cast Pipes at the Works of the Stanton Iron-works Company, Limited. Iron & Coal Trades Rev., vol. 112, no. 3029, Mar. 19, 1926, pp. 479-482, 13 figs. Methods and equipment of plant installed at Stanton Works near Nottingham, Eng., employing de Lavaud process.

PIPE, WOOD-STAVE

Conduits. Wood-Stave Pipe on Power Project is 16-ft. in Diameter. World Power, vol. 5, no. 27, Mar. 1926, p. 609, 2 figs. Creosoted wood-stave pipe was selected as conduit to connect two concrete-lined tunnels for Copco hydro-electric plant in Northern California.

Corrosion. Factors Other Than Dissolved Oxygen Influencing the Corrosion of Iron Pipes, J. R. Baylis. Indus. & Eng. Chem., vol. 18, no. 4, Apr. 1926, pp. 370-380, 13 figs. Investigation, which has been under way for several years, covering several phases of problem; electrochemical theory of corrosion; solubility of ferrous hydroxide and of ferrous carbonate; compounds formed in corrosion of iron; examination of question as to whether ferrous hydroxide precipitates during corrosion; influence of negative ions; pitting and tuberculation.

Renewals. Plotting a Life Line for Tacoma's Water Supply Conduit, W. A. Kurigk. Eng. News-Rec., vol. 96, no. 14, Apr. 8, 1926, pp. 562-563, 1 fig. Schedule of renewals on 40-mile wood-stave pipe simplied by use of profile on which estimated life is plotted.

PISTONS

Manufacture. Piston Methods, F. H. Colvin. Am. Mach., vol. 64, no. 15, Apr. 15, 1926, pp. 581-583, 14 figs. Methods and sequence of operations and devices used; burnishing ring grooves, grinding relief and facing pistons to length.

PLANERS

Testing Gears. Testing Planer Gears, C. E. Linden. Machy. (N.Y.), vol. 32, no. 8, Apr. 1926, p. 650, 3 figs. Use of special testing fixture may be employed with all large spur, helical, or herringbone gears.

PLATES

Flat Circular, Vibrations in. The Frequencies of Vibration of Flat Circular Plates fixed at the Circumference, H. Carrington. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl. of Sci., vol. 50, no. 300, Dec. 1925, pp. 1261-1264. Gives equations and tables for frequencies of transverse symmetrical vibration of fixed circular plate.

Rectangular, Calculation of. Calculating Flat Rectangular Plates (Calcul des plaques rectangulaires planes), R. Lemaitre. Revue Universelle des Mines, vol. 9, no. 2, Jan. 15, 1926, pp. 58-80, 6 figs. Calculation of plates supported at their circumference and subjected to uniform load per unit.

Ripping up, Machine for. A Large Plate Ripping Machine. Engineer, vol. 141, no. 3664, Mar. 19, 1926, p. 333, 9 figs. partly on pp. 326 and 332. Machine employed for ripping up steel plates required for construction of Sydney Harbor bridge; it can accommodate plates up to 5 ft. in width and 67 ft. in length, and is capable of ripping them from end to end.

POLES

Tests. Tests on Steel and Wood Poles. Jl. Electricity, vol. 56, nos. 4 and 5, Feb. 15 and Mar. 1, 1926, pp. 137-143 and 138-185, 8 figs. Feb. 15: Suggests possible standard requirements for design of steel poles to meet four loadings and furnish two proposed standard designs of steel poles, together with estimates of cost. Mar. 1: Tests to establish as far as possible relative strength of cedar, fir and pine poles, new poles as well as those that have been in service for number of years; study of methods of and materials for preservation of wood poles of all kinds.

POLES, CONCRETE

Armored. Armoured Concrete Posts, T. Rich. Elecn., vol. 96, no. 2496, Mar. 19, 1926, pp. 322-323 and 325, 7 figs. Details of patterns now used in France; their applicability to British conditions.

POWER FACTOR

Correction. The Correction of Power-Factor by the Use of Synchronous Motors, P. C. Jones. Elec. Jl., vol. 23, no. 3, Mar. 1926, pp. 99-101, 3 figs. States that greater part of all losses occasioned by low power factor may be eliminated by installation in each industrial unit of small number of comparatively large synchronous motors, operated principally for corrective purposes; relations between these motors and larger number of low power factor motors in factory.

Low, Causes and Cures. Causes and Suggested Cures for Low Power Factor, E. Douglas. Power, vol. 63, no. 14, Apr. 6, 1926, pp. 528-529. Starting and speed characteristics; disease of individual motors; fallacy of low-speed motors; danger of motor oversizing; bad pulley and belting conditions.

Problems. Power Factor Problems, P. Kemp. Elecn., vol. 96, no. 2485, Jan. 1, 1926, pp. 4-6, 1 fig. Effect of cyclically variable resistance in non-inductive circuit; importance in a.c. measurements.

PRECIPITATION

Cottrell Process. Correction of Radio Interference from Cottrell Precipitators, J. J. Jakosky. Chem. and Met. Eng., vol. 33, no. 4, April 1926, pp. 221-226, 4 figs. In operation of Cottrell precipitator installations and similar apparatus where high potentials are used; electromagnetic radiation sometimes occurs which causes local interference with radio reception; investigation made by Western Precipitation Co. and research corporations develops successful correctors.

PULVERIZED COAL

Gyro Gasification Systems. Installations of a New Pulverized Fuel System, E. K. Scott. Combustion, vol. 14, no. 4, Apr. 1926, pp. 250-253, 3 figs. Firing equipment installed on Gyro gasification system at power stations of West Ham Corp. and Dover Corp.

Limitations and Comparisons. Some Limitations and Comparisons, E. W. L. Nicol. Indus. Mgmt. (Lond.), (Cassier's Works Power No.), vol. 13, no. 2, Feb. 1926, pp. 57-61, 3 figs. Discusses whole question of advantages from an impartial standpoint, and explains systems at present in operation.

Power Generation for. Steam, Oil and Electric Power, E. A. Allcut. Can. Engr., vol. 50, no. 10, Mar. 9, 1926, pp. 54-56. Review of present practice and possible future developments in generation of power for pumping plants.

PUMPS, CENTRIFUGAL

Automatic Control. A Few New Minor Changes Improve Automatic Pumping Service, E. J. Gealy. Coal Age, vol. 29, no. 9, Mar. 4, 1926, pp. 323-324, 3 figs. Details of improvements which have simplified and perfected operation of original automatic features.

Recent Improvements in Automatic Centrifugal Pump Control Simplify Apparatus, R. S. Sage. Coal Age, vol. 29, no. 9, Mar. 4, 1926, pp. 321-322, 1 fig. Time-delay relay takes place of notching type; adjustments are made to suit pumping conditions; in case of trouble pump is locked out of service.

Impellers, Water-Presssure Distribution in. Experimental Research on the Distribution of Water Pressure in a Centrifugal Pump Impeller, S. Uchimaru. Faculty of Eng., Tokyo Imperial Univ.—Jl., vol. 16, no. 6, Sept. 1925, pp. 157-169, 65 figs. partly on supp. plates. Result of experiment to determine variation of water pressure at different points in impeller channel when rotating and delivering water.

R

RADIOTELEPHONY

Interference from Power Circuits. Radio Interference from Power Circuits, P. S. Donnell. Jl. Electricity, vol. 56, no. 6, Mar. 15, 1926, pp. 217-221. Acknowledged sources on interference are static; generative sets; defective connections in receiving sets; equipment and apparatus connected with utility circuits; operating either normally or in some cases defectively for operation of which company is not responsible; machinery, apparatus and circuits for which utilities are directly responsible.

Receiving. Oscillation Without Radiation, W. James. Wireless World, vol. 18, nos. 5 and 6, Feb. 3 and 10, 1926, pp. 154-161 and 231-234, 14 figs. Details of three valve-reflex receiver, first valve acting as high-frequency and low-frequency magnifier, second as reacting detector and third as straight low-frequency magnifier.

RADIATION

Direct. Heat Emission, Heating Effect and Heating Efficiency of Direct Radiation, K. Meier. Am. Soc. of Heat. and Vent. Engrs.—Jl., vol. 32, no. 3, Mar. 1926, pp. 159-163.

RAILWAY ELECTRIFICATION

Chicago. Chicago Terminal Electrification on the Illinois Central, C. J. Brumley. Eng. News-Rec., vol. 96, no. 8, Feb. 25, 1926, pp. 322-326, 3 figs. Terminal and lake front improvements; passenger stations and freight yard; overhead wire system; suburban-train equipment.

Gasoline-Electric. A 73-Foot Gas Electric Car for Boston and Maine. Ry. Elec. Engr., vol. 17, no. 4, Apr. 1926, pp. 109-110, 4 figs. Control circuits and 760-watt lighting load supplied by 215 ampere-hour battery and 2.5-kw. exciter.

Maintenance. Methods of Maintaining Motor Cars. Ry. Rev., vol. 78, no. 11, Mar. 13, 1926, pp. 514-519, 2 figs. Abstract. Report of subcommittee of Committee of Economics of Railway Labor, Am. Ry. Eng. Assn.

Mechanical Transmission. Smalley Rail Car Mechanically Driven Through Herringbone Gears, P. M. Heldt. Automotive Industries, vol. 54, no. 13, Apr. 1, 1926, pp. 566-567, 3 figs. Powered by 2 Climax 4-cylinder engines which develop 76 h.p. at 1,200 r.p.m.; gear changes effected with Campbell sliding-key arrangement; radiator fan driven by spur gears.

RAILWAY OPERATION

A.R.E.A. Report. Report of Committee XXI—Economies of Railway Operation. Am. Ry. Eng. Assn.—Bul., vol. 27, no. 284, Feb. 1926, pp. 733-757, 15 figs. Effect of speed of trains upon cost of transporting freight; method of increasing traffic capacity of railway; effect of installing automatic signals. See also (abstract) in Ry. Age, vol. 80; no. 14, Mar. 12, 1926, pp. 760-764.

Train Control. Train Control Devices Approved. Ry. Age, vol. 80, no. 17, Mar. 27, 1926, pp. 908-910. Interstate Commerce Commission approved 2-speed continuous-induction train-control system of Union Switch & Signal Co., as installed on Wyoming division of Union Pac. and also approved with certain exceptions automatic train-stop system of Nat. Safety Appliance Co. on Central Kansas Division of Missouri Pac.

Train Control Instruction and Inspection. Ry. Elec. Engr., vol. 17, no. 4, Apr. 1926, pp. 122-123, 4 figs. Tracks employed in maintenance program of Richmond, Fredericksburg and Potomac.

RAILWAYS

British. Notes on British Railways by a Continental Engineer. Engineer, vol. 141; nos. 3658, 3659, 3660, 3661, 3662, 3663, 3664 and 3665, Feb. 5, 12, 19, 26, Mar. 5, 12, 19 and 26, 1926, pp. 145-146, 178,179, 204, 205, 236, 238, 264-265, 288-289, 314 and 358-359. Résumé of author's observations and impartial comparison of British railways with those of other countries. Feb. 12: Permanent way, interlocking and signaling. Feb. 19: Terminals and stations; freight stations and running sheds. Feb. 26: Rolling stock, freight cars and trucks. Mar. 5: Locomotives. Mar. 12: Shunting and switching: locomotive running and management. Mar. 19: Electrification; passenger traffic. Mar. 26: Freight and traffic; conclusions.

RECLAMATION

Bombay. Bombay Reclamation Scheme. Times Trade & Eng. Supp., vol. 18, no. 398, Feb. 20, 1926, p. 562, 1 fig. Discusses scheme for reclamation of nearly 1,300 acres from sea at Bombay.

REFRIGERATING MACHINES

Domestic. Efficiency Test of Domestic Refrigerators. Ice & Refrigeration, vol. 70, no. 3, Mar. 1926, pp. 305-310, 12 figs. Results of series of tests conducted at laboratories of Armour Institute of Technology, Chicago, in which 10 refrigerators were used, all identical in shape, size and workmanship with exception of heat-insulating material used in walls.

REFRIGERATING PLANTS

Brine Handling in Coolers. Handling Brine in Coolers and Spray Systems, J. F. Staley. Power Plant Eng., vol. 30, no. 7, Apr. 1, 1926, pp. 440-442, 2 figs. Discusses operation of coolers for both salt and calcium brine, layout of brine spray system and design of brine evaporator.

RESEARCH

Engineering Application. Research and Its Application to Engineering, G. A. Hoadley. Engrs. & Eng., vol. 43, no. 2, Feb. 1926, pp. 45-48. Discusses some of fruit of research, including X-ray and atom; apparatus and training; research vs. industry.

RETAINING WALLS

Reinforced Concrete. Reinforced Concrete Retaining Walls in India. Engineer, vol. 141, no. 3666, Apr. 2, 1926, p. 390, 1 fig. (partly on p. 386). Novel type of retaining wall built at Ahmedabad in India in connection with approach roads to railway overbridge.

RIVERS

Control. River Control at the New St. Louis Water-Works, E. E. Wall. Eng. News-Rec., vol. 96, no. 14, Apr. 8, 1926, pp. 570-572, 5 figs. Expensive works essential to hold river channel to course in front of plant; brush mattresses and pile dikes effect predicted changes and add 300 acres of new land.

Interstate Problems. Interstate Water Problems and Their Solution, M. C. Hinderlider and R. I. Meeker. Am. Soc. Civic Engrs.—Proc., vol. 52, no. 4, Apr. 1926, pp. 597-613. Deals with interstate river problems of Western United States Bibliography.

STEAM REGULATION. Steam Regulation with Reference to Irrigation and Power, J. C. Stevens. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 4, Apr. 1926, pp. 614-626, 10 figs. Inquiry in general terms into varied conditions where power and irrigation uses are of importance and to ascertain possibility of aiding in providing against conflict of interests where new developments are in prospect.

ROAD, CONCRETE

REPAIR METHODS. Repair Methods for Concrete Roads, A. H. Hinkle. Mun. & County Eng., vol. 70, no. 2, Feb. 1926, pp. 109-116, 1 fig. Gives classification of defects found in concrete roads and describes various methods of repairing these defects. Paper read before Miss. Valley Highway Depts.

ROADS

MANAGEMENT AND CLASSIFICATION. Road Management and Classification, J. M. McVicar. Can. Engr., vol. 50, no. 11, Mar. 16, 1926, pp. 399-401. Roads classified according to economic needs of country and traffic; fundamentals of management of township roads; status of superintendent. Paper presented at Ontario Good Roads Assn.

ROADS, BITUMINOUS

DEVELOPMENTS. Recent Developments in Bituminous Paving Practice, H. M. Rex. Good Roads, vol. 69, no. 3, Mar. 1926, pp. 101-103 and 108, 4 figs. Tendency toward leaner mixtures; improved construction methods; asphalt sand pavements; resurfacing old macadam; veneer types; bituminous earth roads.

ROADS, CONCRETE

CONSTRUCTION. Concrete in Modern Road Construction, H. V. Overfield. Surveyor (Lond.), vol. 69, no. 1780, Feb. 26, 1926, pp. 257-260, 6 figs. Factors of importance in making concrete; volume of mixing water; mixing and placing concrete; treatment after placing; design of road slabs; compression tests. Paper presented at meeting of Instn. of Mun. & County Engrs.

CURING AND HARDENING. Curing and Hardening Concrete Roads with Silicate of Soda, R. F. Remler. Good Roads, vol. 69, no. 3, Mar. 1926, pp. 106-108, 3 figs. Method of curing; advantages of chemical curing; effects of silicate of soda on concrete; methods of hardening and dust proofing; tests on surface hardness.

S

SCREW MACHINES

END-KNURLING TOOLS FOR. End-Knurling Tool for Screw Machine, H. Simon. Machy. (N.Y.), vol. 32, no. 8, Apr. 1926, 609-612, 5 figs. Problems involved in designing tool equipment; making knurls; developing knurl-roll holder; preparing work for knurling.

SCREW THREADS

TANGENTIAL CUTTING. Thread Cutting by Means of Tangential Detachment of Chips With Rotating Self-Opening Screwing Chucks (Das Schneiden von Gewinden durch tangentiale Spanabhebung mettels umlaufenden, selbstöffnenden Schneidkopfes), R. Meininger, Maschinenbau, vol. 5, no. 4, Feb. 18, 1926, pp. 167-170, 15 figs.

SEAPLANES

LARGE. Recent Experiments with Large Seaplanes, A. Rohrbach. Nat. Advisory Committee for Aeronautics—Tech. Memorandums, no. 353, Mar. 1926, 33 pp., 15 figs. on supp. plate.

SEWAGE DISPOSAL

ACTIVATED SLUDGE. The Activated Sludge Process of Sewage Treatment, H. T. Calvert. Engineer, vol. 141, no. 3662, Mar. 5, 1926, pp. 267-268. Action of oxygen; variations of method; manurial value of activated sludge; question of cost. (Abstract.) Lecture before Instn. Civ. Engrs.

ACTIVATED SLUDGE. The Activated Sludge Process of Sewage Treatment, H. T. Calvert. Surveyor (Lond.), vol. 69, no. 1781, Mar. 5, 1926, pp. 279-280. Varying nature of sewage; final settling tanks; cost of process; Birmingham (Eng.) experiments; differences in activated sludge; manurial value; dewatering problem; (Abstract) Chadwick Public Lecture.

DEOXYGENATION. Effect of Temperature on Rate of Deoxygenation of Diluted Sewage, R. E. Greenfield and A. L. Elder. Indus. & Eng. Chem., vol. 18, no. 3, Mar. 1926, pp. 291-294, 5 figs. Experiments on rate of deoxygenation of sewage diluted with aerated distilled water and incubated at from 2 deg. to 6 deg. cent.

TANK GASES. Some Observations on Sewage Tank Gases, A. M. Buswell and S. I. Stickhouser. Indus. & Eng. Chem., vol. 18, no. 4, Apr. 1926, pp. 407-409. Gases from foaming Imhoff tanks contain more CO_2, less nitrogen and substantially same amount of methane as compared with gases from non-foaming tanks; amount and heating value of gas available from Imhoff tanks is sufficient to warrant its collection and use for fuel purposes.

SILOS

REINFORCED-CONCRETE. Reinforced Concrete Grain Silos at Alexandra Docks, Liverpool. Concrete & Constr. Eng., vol. 21, no. 3, Mar. 1926, pp. 240-246, 3 figs. Large grain silo with capacity of 12,000 quarters.

SHAFTS

VIBRATIONS. Graphical Method of Determining Torsional Vibrations in Shafts (Zeichnerisches Verfahren zur Bestimmung der Torsions-Eigenschwingungszahlen von Wellen), P. Kohn. Maschinenbau, vol. 5, no. 5, Mar. 4, 1926, pp. 220-221, 3 figs. Method for determining torsional period of vibrations which is comparatively simple.

SOUND

RECORDING AND REPRODUCING. Methods of High Quality Recording, J. P. Maxfield and H. C. Harrison. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 3, Mar. 1926, pp. 243-253, 13 figs. Analysis of general requirements of recording and reproducing sound with nature of inherent limitations where mechanical records are used; details of solution involving use of electrical equipment for purposes of recording and use of mechanical equipment based on electric transmission methods for reproducing; application of electric transmission theory to mechanical transmission system.

STANDARDIZATION

GERMANY. German Standardization Work (Die deutschen Normungsarbeiten), F. Neuhaus. Technik u. Wirtschaft, vol. 19, no. 1, Jan. 1926, pp. 31-34, 4 figs. Development of German Industrial Standards Committee (N.D.I.) and its work of standardizing and reduction of types; difficulties in adoption of standards; specialization by firms in standard articles, etc.

VARIETY THROUGH. Variety Through Standardization, C. E. Skinner. Mech. Eng., vol. 48, no. 4, Apr. 1926, pp. 327-329. Nature's use of standards; electrical industry as illustration of value of standardization; work already done in industrial standardization; work of Am. Eng. Standards Committee in national and international standardization; scope of and necessary limitations.

STEAM

HIGH-PRESSURE. High-Pressure Steam in Industrial Plants, A. F. Sheehan. Power, vol. 63, no. 16, Apr. 20, 1926, p. 606. Advantages when process steam is needed; higher installation costs.

STEAM ENGINES

CORLISS. Largest Corliss Engine in Twenty Years. Power, vol. 63, no. 12, Mar. 23, 1926, pp. 441-442, 4 figs. Twin tandem engine capable of developing maximum of 15,000 h.p. at 200-lb. steam pressure is being installed for rope drive at one of large steel mills.

HIGH-PRESSURE. A High-Pressure Quadruple-Expansion Engine. Shipbldg. & Shipg. Rec., vol. 27, no. 11, Mar. 18, 1926, pp. 328 and 335. Details of new set of engines and boilers, intended for propulsion of 11-knot cargo steamer, built by Central Marine Engine Wks.

STEAM POWER PLANTS

COMBINED HEATING AND GENERATING. Combination Power and Heating Plants in North Bohemia, J. H. D. Blanke. Nat. Engr., vol. 30, no. 3, Mar. 1926, pp. 97-101, 4 figs.

COST ANALYSIS. Power Plant Costing, C. H. S. Tupholme. Indus. Mgmt. (Lond.), (Cassier's Works Power No.), vol. 13, no. 2, Feb. 1926 pp. 48-51, 3 figs. How various costs incurred in factory power house should be allocated in works account system.

Production Cost in Private Plant Operation, E. Winholt. Nat. Engr., vol. 30, no. 3, Mar. 1926, pp. 95-96. Practical illustration of cost analysis and factors chargeable to cost of service.

DESIGN. Designing a 500-Horsepower Steam Power Plant, C. L. Hubbard. Southern Power Jl., vol. 44, no. 3, Mar. 1926, pp. 50-55, 8 figs.

OPERATION. The Economical Operation of the Power Plant, W. D. Wylde. Indus. Mgmt. (Lond.), (Cassier's Works Power No.), vol. 13, no. 2, Feb. 1926. pp. 39-48, 15 figs.

PIPING. Industrial Power Plant Piping, T. Maynz. Chem. and Met. Eng., vol. 33, no. 4, Apr. 1926, pp. 229-230. Design and upkeep of pipe lines for water, steam and air with reference to expansion, heat losses and other important factors.

WESTERN ELECTRIC CO., KEARNY, N.J. Western Electric Co.'s Power Plant at New Kearny Works. Power, vol. 14, Apr. 6, 1926, pp. 514-518, 8 figs.

STEAM TURBINES

BLEEDING. Bled Steam Heating, D. T. McHutchison. Mech. World, vol. 79, no. 2044, Mar. 5, 1926, pp. 187-188, 2 figs. Economy resulting from practice is due to fact that steam used for heating has already done considerable amount of useful work in main turbine; this is obviously more efficient than using high-pressure steam, and also more economical than putting in steam-driven auxiliaries in order to obtain supply of exhaust steam for purpose.

DEVELOPMENTS. Modern Development of Steam Turbine Design, E. A. Kraft. Eng. Progress, vol. 7, no. 3, Mar. 1926, pp. 61-63, 5 figs. Examples of recent types.

EXHAUST PRESSURE. Turbine Exhaust Pressure Measurement, W. A. Carter. Power, vol. 63, no. 13, Mar. 30, 1926, p. 488, 3 figs. Results of tests indicate that A.S.M.E. test-code method for measuring exhaust pressure is preferable to either British tip or squarewire gauze tip.

EXTRACTION. Extracted Steam Solves Power Problem. Power, vol. 63, no. 13, Mar. 30, 1926, pp. 474-477, 8 figs. Proximity Mfg. Co., denim cloth manufacturer, makes remarkable power cost reduction by installing extraction turbine and high-pressure boilers; steam at 15 lb. bled to supply dye house; boilers operate at 200 lb. and with 100-deg. superheat.

VAN DEN BOSSCHE. The Van Den Bossche Turbine (La Turbine van den Bossche), J. van den Bossche. Chaleur et Industrie, vol. 7, no. 70, Feb. 1926, pp. 77-79, 4 figs.

STEEL

AIR COOLING. Observations on Temperature Distribution in Steel Bodies Cooled in Air, F. J. Janitzky. Am. Soc. Steel Treating—Trans., vol. 9, no. 3, Mar. 1926, pp. 452-457, 2 figs.

BOILER-FURNACE. Furnace Steels. Eng. & Boiler House Rev., vol. 39, no. 9, Mar. 1926, pp. 430-433, 434, 437 and 438, 3 figs. Results of recent research work carried out by Hadfields, Ltd., Sheffield, England.

CHROMIUM. *See Chromium Steel.*

FAILURES. Facts and Principles Concerning Steel and Heat Treatment, H. B. Knowlton. Am. Soc. Steel Treating—Trans., vol. 9, no. 4, Apr. 1926, pp. 615-636, 7 figs.

MARTENSITIC STRUCTURE. On Martensite, H. Hanemann and A. Schrader. Am. Soc. Steel Treating—Trans., vol 9, no. 2, Feb. 1926, pp. 169-233 and (discussion) 233-239 and 364, 72 figs.

PEARLITE INTERVAL. The Effect of Manganese, Silicon and Phosphorus on the Pearlite Interval, B. Kjerrman. Am. Soc. Steel Treating—Trans., vol. 9, no. 3, Mar. 1926, pp. 430-451, 15 figs.

SHEET. Sheet Steel—Specification and Inspection, L. N. Brown. Forging—Stamping—Heat Treating, vol. 12, no. 3, Mar. 1926, pp. 84-90. Improved methods of testing; inspecting "seconds;" finishes for automotive sheets; testing for drawing qualities; ductility tests; gage and size tolerances.

SPECIAL. Some Special Steels. Engineer, vol. 141, no. 3667, Apr. 9, 1926, pp. 407-408, 5 figs. Describes various applications of several new steels which are made at Hecla Works of Hadfields, Ltd.

TOOL. *See Tool Steel.*

STEEL, HEAT TREATMENT OF

AUTOMOBILE PARTS. Reducing Costs in Heat Treating Automobile Parts. Am. Soc. Steel Treating—Trans., vol. 9, no. 3, Mar. 1926, pp. 471-481, 7 figs.

DILATOMETRIC METHOD. Dilatometric Method of Heat Treatment, O. E. Harder and A. C. Forsyth. Am. Soc. Steel Treating—Trans., vol. 9, no. 3, Mar. 1926, pp. 403-412 and (discussion) 412-419 and 520-521, 11 figs. Report of progress in use of dilatometric method of heat treatment and application of that method to study dimensional changes in such materials as gray cast iron; two slightly different pieces of apparatus were used; details of construction and results obtained.

QUENCHING. Initial Temperature and Maas Effects in Quenching, H. J. French and O. Z. Klopsch. Am. Soc. Steel Treating—Trans., vol. 9, no. 1, Jan. 1926, pp. 33-68 and (discussion) 68-74, 12 figs. Results of quenching experiments with high-carbon steels in which speed of cooling was determined at center of spheres, rounds and plates of various dimensions quenched from various temperatures into different coolants. Published by permission of U.S. Bur. of Standards.

STREAM POLLUTION

ACID-MINE DRAINAGE BY. Stream Pollution by Acid Mine Drainage, R. D. Leitch. U.S. Bur. of Mines—Report of Investigations, no. 2725, Jan. 1926, 7 pp. Extent and sources of pollution; present methods of disposal of acid water; cost of purification; concludes that for mine drainage wastes, only solution is neutralization by some means.

STRUCTURAL STEEL

MEMBERS. Utilizable Capacity of Steel Members of Structures. Am. Soc. Civil Engrs.—Proc., vol. 52, no. 2, Feb. 1926, pp. 337-350, 3 figs. Discussion of paper by H. S. Prichard, published in Nov. 1925 Proceedings.

STRUCTURES

VIRTUAL WORK. Virtual Work: A Restatement, H. Cross. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 1, Jan. 1926, pp. 197-205, 4 figs. Restates principle of virtual work, emphasizes that reactions to imaginary external resistance are themselves purely imaginary and in no way necessarily related to supports of structure; illustrates very broad application of principle.

SUBSTATIONS

OUTDOOR. Economies Effected by Standardizing Outdoor Substations. Elec. World, vol. 87, no. 16, April 17, 1926, pp. 803-805, 2 figs. Describes two types of substations employed; class A for 33,000-volt with transformers mounted on ground; class B for trasnformers mounted on elevated platforms in sizes up to three 100-kw. units.

MAINTENANCE RECORDS. Substation Maintenance Records, E. H. Coxe, Jr. Elec. World, vol. 87, no. 14, Apr. 3, 1926, pp. 711-712, 1 fig. Instantly available information on conditions of economical maintenance and operation, together with continuous inventory, of all classes of substation equipment.

T

TELEPHONY

LOADING FOR CIRCUITS. Development and Application of Loading for Telephone Circuits, T. Shaw and W. Fondiller. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 3, Mar. 1926, pp. 253-263, 18 figs. Review of art of loading telephone circuits as practised in United States; theory of coil loading; describes various improvements of outstanding importance which have been made in loading coils and loading systems during past 15 years to meet new or changing requirements in rapidly advancing communication art, namely: phantom group loading, loading for repeated circuits, incidental cables in open-wire lines, cross-talk, telegraphy over loaded telephone circuits, loading for exchange area cables and submarine cables.

POWER-LINE. Largest System of Power-Line Telephony, C. A. Boddie. Elec. World, vol. 87, no. 11, Mar. 13, 1926, pp. 557-560, 3 figs. Largest and most elaborate system of high-frequency telephony operating over power lines is employed by Central Indiana Power Co.; cause of line noises and remedy.

TELEVISION

RADIO. Broadcasting Photographs. Wireless World, vol. 18, no. 12, Mar. 24, 1926, pp. 437-441, 8 figs. System developed by T. Baker, consists of re-photographing of picture on to piece of copper foil so that copper surface is left clean for those parts of picture representing shadow, whereas high lights are marked by deposit of non-conducting film.

TERMINALS, RAILWAY

DESIGN. Principles of Engine Terminal Design. Ry. Rev., vol. 78, no. 11, Mar. 13, 1926, pp. 521-524, 1 fig. Report of subcommittee of Committee on Shops and Locomotive Terminals, Am. Ry. Eng. Assn.

FREIGHT. Unification of Railway Freight Terminals, E. E. R. Tratman. Eng. News-Rec., vol. 96, no. 9, Mar. 4, 1926, pp. 354-356. Comparisons of multiple-unit system with series of independent parts; examples of experience; interchange service; railway and public interests involved.

TESTING MACHINES

DYNAMOMETER ATTACHMENTS. Dynamometers and Spring Manometers as Power Recorders of Test-Machines (Ueber Messdose und Federmanometer bei Prüfmaschinen), F. Mohr. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 10, Mar. 6, 1926, pp. 317-322, 12 figs.

THERMODYNAMICS

JOULE-THOMSON EFFECT. The Joule-Thomson Effect in Air, J. R. Roebuck. Am Academy Arts & Sci.—Proc., vol. 60, no. 13, Dec. 1925, pp. 537-596, 15 figs. Data covering readily available temperatures above that of room; bath liquid above 300 deg. cent. is serious problem; available and useful pressure range. Bibliography.

THERMOMETERS

RESISTANCE. A Small Resistance Thermometer, G. F. Taylor. Phys. Rev., vol. 26, no. 6, Dec. 1925, pp. 841-850, 3 figs. Construction and performance of instrument developed for field observations in Department of Agriculture; main object sought was to produce resistance theremometer which would be comparable in size to thermocouple and thus combine advantages of both.

Resistance Thermometers (Etude sur les thermomètres à résistance), J. Vassillière-Arlhac. Revue Générale de l'Electricité, vol. 19, no. 9, Feb. 27, 1926, pp. 341-346, 11 figs.

TEST CODE. Test Code on Instruments and Apparatus. Mech. Eng., vol. 48, no. 4, Apr. 1926, pp. 382-387, 16 figs. Preliminary draft of chapter 3, Temperature Measurement, part 2—Blass Thermometers; general description and classification; expanding fluid; form, glass, immersion; precautions.

TIME STUDY

METHODS. Time Study in Industrial Management, J. S. Gray. Machy. (N.Y.), vol. 32, no. 8, Apr. 1926, pp. 613-615. First step in introducing time studies; general methods in time-study work; using time study for intelligent rate setting; time included in and time required for time studies.

TIRES, RUBBER

PNEUMATIC. Manufacture of Rubber Tires (La fabrication des pneumatiques). Nature (Paris), no. 2704, Jan. 30, 1926, pp. 75-80, 15 figs. Processes and apparatus for manufacture as carried out at Dunlop works at Montluçon, including sheet rubber, coloring and vulcanizing; air tubes, assembling tires, etc.

TOOL STEEL

COMPOSITION AND PROPERTIES. Facts and Principles Concerning Steel and Heat Treatment, H. B. Knowlton. Am. Soc. Steel Treating—Trans., vol. 9, no. 1, Jan. 1926, pp. 111-132. Composition, properties and uses of common types of tool steels; explains classification of plain carbon tool steel according to grade and carbon content.

TEMPERING AND AGING. Dimensional Changes Accompanying the Phenomena of Tempering and Aging Tool Steels, H. Scott. Am. Soc. Steel Treating—Trans., vol. 9, no. 2, Feb. 1926, pp. 277-304, 6 figs. Shows that contraction with time is identified with initial contraction on tempering and expansion with expansion on tempering which follows initial contraction; this correlation, together with analysis of associated reactions, permits generalizations regarding control of time changes. Bibliography.

TUNGSTEN. On the Nature of Some Low Tungsten Tool Steels, M. A. Grossman and E. C. Bain. Am. Soc. Steel Treating—Trans., vol. 9, no. 2, Feb. 1926, pp. 259-270 and (discussion) 270-276, 6 figs. Deals with steels containing 3 per cent. tungsten and over 1 per cent. carbon; study of hardness, toughness, shrinkage and microscopic properties.

Tungsten Steels, A. H. Kingsbury. Am. Soc. Steel Treating—Trans., vol. 9, no. 4, Apr. 1926, pp. 597-603. Tungsten steels used for cutting tools; characteristics and application of different steels containing varying percentages of element tungsten; preheating, followed by rapid heating to quenching temperature is good practice.

TRACTORS

ROADLESS TRANSPORT. Roadless Traction, J. Eaglesome. Inst. Transport—Jl., vol. 7, no. 5, Mar. 1926, pp. 230-237 and (discussion) 238-245. Discusses new field open to British manufacture in production of vehicles suitable for primitive practice.

TRANSFORMERS

CALCULATION. Current Transformer Calculations, E. G. Reed. Elec. Jl., vol. 23, no. 2, Feb. 1926, pp. 67-71, 4 figs. Current ratio; secondary winding compensated to correct for ratio error; determination of characteristics of iron in magnetic circuit from ratio and phase-angle curves; burden expressed in terms of volt-amperes and of ohms.

CONSTANT-CURRENT. The Constant Current Transformer and Cooper-Hewitt Mercury Vapor Lamp, H. M. Johnson. Black Hills Engr., vol. 14, no. 1, Jan. 1926, pp. 33-36, 1 fig. Constant current transformer is further development in effort to secure more economic and efficient street lighting; makes possible use of series system of operation whereby one line of wire is used instead of two lines necessary with parallel system; Cooper-Hewitt lamp consists of two parts, glass tube from which light emanates and operating mechanism; most notable special application is in motion-picture industry.

EFFICIENCY CHARTS. Charts for Efficiency of Transformers, A. A. Boelsterli. Sibley Jl., vol. 40, no. 2, Feb. 1926, pp. 22-27, 2 figs. Presents alignment charts for determination of efficiency of transformers and examples of its use.

HIGH-VOLTAGE. Small High-Voltage Transformers, G. W. Lentz, Gen. Elec. Rev., vol. 29, no. 4, Apr. 1926, pp. 257-259, 7 figs. Development of small power distribution transformers suitable for operation on systems up to 110,000 volts.

OIL-FILLED. Experiments on Water Cooling of Oil-Filled Transformers, O. C. Waygood and J. L. Miller. World Power, vol. 5, no. 27, Mar. 1926, pp. 146-152, 9 figs. Experimental work in which heating tests were carried out by keeping watt loss constant at some predetermined value, until temperature rises became steady.

TUNNELLING

HYDROELECTRIC PROJECTS. Tunnelling in Connection with a Hydro-Electric Project. Instn. Min. & Met.—Bul., no. 257, Feb. 1926. pp. 13-26. (Discussion of paper by R. J. D. Richardson.)

MOFFAT TUNNEL, COLO. Soft Rock Operations in Moffat Tunnel, A. E. Anderson. Du Pont Mag., vol. 20, nos. 2-3, Feb.-Mar. 1926, pp. 11, 14-15, 23-24, 11 figs. Construction work at west end was advanced with difficulty until Lewis cantilever girder was designed, made and installed to cope with soft material in bench headings.

SLAKING ROCK, IN. Tunnel Driving and Shaft Sinking in Slaking Rock. Eng. News-Rec., vol. 96, no. 14, Apr. 8, 1926, pp. 573-576, 7 figs. Tunnelling for new Kansas City water works made difficult by sloughing rock and water-bearing gravel; four identical construction plants used.

TUNNELS

PIPE. Pipe Tunnel Under Gowanus Canal, Brooklyn, New York, L. S. Stiles. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 1, Jan. 1926, pp. 62-81, 13 figs. Building of tunnel to carry gas mains from manufacturing plant and connect them to distribution system.

VEHICULAR. The Hudson River Vehicular Tunnel. Contractors' & Engrs.' Monthly, vol. 12, no. 2, Feb. 1926, pp. 47-54, 7 figs. Site and methods of construction; location grades and alignment; ventilation; temporary and permanent clay blankets; materials encountered in tunneling; decompressions; inspection of material; equipment.

TURBO-ALTERNATORS

DESIGN PROBLEMS. Some Problems of the Turbo-Alternator, E. Gallizia. Instn. Elec. Engrs.—Jl., vol. 64, no. 351, Mar. 1926, pp. 372-389, 20 figs. Deals with problems that designer has to face which are seldom dealt with in treatises on design and for this reason have been dealt with in detail; ventilation and liquid cooling; balancing.

HIGH-SPEED. Recent Developments in High-Speed Turbo-Alternators, M. D. Ross. Power, vol. 63, no. 14, Apr. 6, 1926, pp. 519-520, 3 figs. 3600-r.p.m. 12,500-kva. turbine-driven a.c. generator; shows how ventilation problem is solved.

60,000-KVA. Three-Phase, 60,000-Kva. Turbo Alternators for Gennevilliers. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 3, Mar. 1926, pp. 284-290, 3 figs. Discussion of paper by E. Roth, published in Sept. 1925 issue of journal.

VENTILATION. Abridgement of Paper on Concluding Study of Ventilation of Turbo Alternators Multiple Path Radial System, C. J. Fechheimer and G. W. Penney. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 4, Apr. 1926, pp. 347-354, 8 figs. Results of investigation on stationary models; determination of losses.

V

VACUUM

HIGH, PRODUCTION AND MEASUREMENT. The Production and Measurement of High Vacua, G. W. C. Kaye. Engineering, vol. 121, no. 3141, Mar. 12, 1926, pp. 341-342, 17 figs. Reviews development of mercury-vapor diffusion pumps, introduced by Gaede in 1915, stating that they had displaced almost all other methods of producing high vacua; types of vacuum gages. (Abstract.) Third Cantor Lecture.

VENTILATION

STANDARDS. Objectives and Standards of Ventilation, C. E. A. Winslow. Am. Soc. Heat & Vent. Engrs.—Jl., vol. 32, no. 3, Mar. 1926, pp. 113-121 and (discussion) 121-151. Includes discussion on following subjects: Research has determined most desirable air conditions; analysis of ventilation; mechanical ventilation; theater ventilation; control of temperature and drafts; etc.

VIBRATIONS

INSTRUMENTS. The Use of Vibration Instruments on Electrical Machinery, J. Ormondroyd. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 4, Apr. 1926, pp. 330-336, 8 figs. Describes several mechanical vibration instruments and mentions actual problems which these instruments have helped to solve; theory of seismographic instruments is developed to show relation between record or indication and motion being measured.

MEASUREMENTS. Measuring Oscillations by the Vibrometer. Machy. (Lond.), vol. 27, no. 700, Feb. 25, 1926, pp. 715-716, 3 figs. Apparatus designed by C. Schenck of Darmstadt, Germany, in order to determine magnitude of vibrations of any object, either machine, motor, building, structure, railway car or bridge.

RECORDING APPARATUS. A Machine for Recording Movements (Een toeste tot het opteekenen van bewegingen), C. P. B. Van Kempen. Ingenieur, vol. 40, no. 49, Dec. 5, 1925, pp. 1033-1038, 18 figs. Design and application of Guegnon apparatus for studying laws of dynamics and nature and motion of vibrations; periodic, sinusoidal and other motion.

RODS AND SHAFTS. The Vibrations of Rods and Shafts with Tension or End-Thrust, R. C. J. Howland. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. of Sci., vol. 1, no. 3, Mar. 1926, pp. 674-694, 2 figs. Deals with problem of rod or shaft under actual force; uniform shaft without attached masses; shaft carrying concentrated masses.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street New York, N.Y.

A

ABRASIVE WHEELS

Characteristics and Application. Modern Grinding Practice, H. Darbyshire. Automobile Engr., vol. 16, no. 214, Apr. 1926, pp. 151-153, 4 figs. Consideration of nature of abrasive wheels and some notes on their application to production.

Standardization. International Standardization of Grain and Hardness of Grinding Wheels (Internationale Normung von Kornung und Härtegrad der Schleifscheiben), W. Glodde. Maschinenbau, vol. 5, no. 7, Apr. 1, 1926, pp. 317-318.

ACCIDENTS

First-Aid Instruction. The Importance of First-Aid Instruction in Works, E. N. Simons. Mech. World, vol. 79, no. 2048, Apr. 2, 1926, pp. 263-264.

AIR

Pollution. Air Pollution in English Towns and Cities, J. B. C. Kershaw. Engineer, vol. 141, no. 3668, Apr. 16, 1926, pp. 433-434.

AIR COMPRESSORS

Hele Shaw-Beacham. A New Form of Air-Compressor, H. S. Hele-Shaw and T. E. Beacham, Instn. Min. Engrs.—Trans., vol. 70, Apr. 1926, pp. 403-419 and (discussion) 419-431, 19 figs. Compressor which has been delivered to British Admiralty is of rotary type, main structural feature having been employed for several years in pump known as Hele Shaw, essential feature is saturation of incoming air with oil, this oil operating to lubricate both central valves and pistons; two features which are believed to be new are low temperature of delivery of compressed air owing to oil-saturation effect, and high volumetric efficiency at all pressures, due partly to small clearance and to oil filling clearance spaces.

AIR CONDITIONING

Humidifying. Air Humidification (Das letzte Wort zur Frage der Luftbefeuchtung), Bürgers and I. Fleischer. Gesundheits-Ingenieur, vol. 49, no. 13, Mar. 27, 1926, pp. 196-200. Discusses hygienic importance of humidification of air; gives results of tests showing that evaporation of water does not materially increase humidity.

Humidification of Air (Ueber Luftbefeuchtung), S. Muntner. Gesundheits-Ingenieur, vol. 49, nos. 13 and 14, Mar. 27 and Apr. 3, 1926, pp. 194-195 and 209-217, 20 figs. Production of humidity in presence of highly hygroscopic material, as in textile and tobacco works; tests carried out with Salinator apparatus and its advantages.

AIRCRAFT

Standardization of Parts. Army-Navy Standards, L. MacDill and R. S. Barnaby. Aviation, vol. 20, no. 20, May 17, 1926, p. 752.

AIRPLANE ENGINES

Curtiss. Standard Engine Test of Curtiss D-12 High and Low Compression Engines, J. W. Carl and W. W. Bishop, Jr. Air Service Information Circular, vol. 6, no. 550, Jan. 25, 1926, 33 pp., 43 figs.

Developments. New Aircraft Engines, W. A. Bevan. Purdue Eng. Rev., vol 21, no. 3, Mar. 1926, pp. 3-6 and 18, 6 figs. Development since the war of reliable motors with marked decrease in weight per horsepower.

Fuel-Injection Nozzles. Spray Penetration with a Simple Fuel Injection Nozzle, H. E. Miller and E. G. Beardsley. Nat. Advisory Committee for Aeronautics—Report, no. 222, 1926, 8 pp., 20 figs. Tests to obtain specific information on rate of penetration of spray from simple injection nozzle, having single orifice with diameter of 0.015 in. when injecting into compressed gases.

Naval. Aircraft-Engine Relations to the Needs of Naval Aviation, H. Schmidt. Soc. Automotive Engrs.—Jl., vol. 18, no. 5, May 1926, pp. 509-513, 1 fig.

Packard. Low Weight and Compactness Feature Packard Aero Engines, L. S. Gillette. Automotive Industries, vol. 54, no. 15, Apr. 15, 1926, pp. 639-644, 10 figs.

AIRPLANE PROPELLERS

Blade-Element Theory. Propeller Design—Practical Application of the Blade-Element Theory, F. E. Weick. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 235, May 1926, 14 pp., 11 figs. Describes blade-element or modified Drzewiecke theory as used in Bureau of Aeronautics, U. S. Navy Dept.; short method is shown in which forces on only one blade element are considered in order to obtain characteristics of whole propeller; methods described have proved satisfactory in use.

Interference. Airplane Propeller Interference Study, S. Ober. Tech. Eng. News, vol. 7, no. 1, Mar. 1926, pp. 12-13, 2 figs. First wind-tunnel tests are being made to reveal nature of natural airstream interference between airplane propeller and fuselage.

Metal. Metal Airscrews. Flight, vol. 18. no. 17, Apr. 29, 1926, p. 260, 2 figs.

AIRPLANES

Airfoils. Aerofoils, O. T. Sinnatt. Roy. Aeronautical Soc.—Jl., vol. 30, no. 185, May 1926, pp. 332-336, 5 figs. Describes method of considering air flow over upper front surface of airfoil which, although in no way exact, does give indication of what happens, and leads to explanation of most effective flying angle of airfoil.

Albatros. The Albatros L 72A. Flight, vol. 18, no. 15, Apr. 15, 1926, pp. 228-231, 5 figs.

Amphibian. Amphibian-Airplane Development, G. C. Loening. Soc. Automotive Engrs.—Jl., vol. 18, no. 5, May 1926, pp. 455-462. 15 figs. Historical precedents for some of main features of present amphibian airplane, and inventions, devices and procedure that have accompanied its development; analyzes disadvantages of previous types, and enumerates reasons for advantages claimed for new type, together with possible and probable uses to which amphibious airplane is suited.

Convertible Wings. Convertible Monoplane—Biplane Wings, R. F. Hall. Aviation, vol. 20, no. 17, Apr. 26, 1926, pp. 632-634, 7 figs.

Design Problems. Some Problems in Aeroplane Structural Design, H. B. Howard. Roy. Aeronautical Soc.—Jl., vol. 30, no. 184, Apr. 1926, pp. 238-260 and (discussion) 260-266, 11 figs.

Flight-Path Angle. N.A.C.A. Flight-Path Angle and Air-Speed Recorder, D. G. Coleman. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 233, Apr. 1926, 11 pp., 13 figs. Describes new trailing bomb-type instrument for photographically recording flight-path angle and air speed of aircraft in unaccelerated flight; instrument consists essentially of inclinometer, air-speed meter, constant-speed motor and film-drum case.

Flight Tests. Flight Tests on Airplanes, H. Koppe. Nat. Advisory Committee for Aeronautics—Tech. Memorandums, no. 359, Apr. 1926, 31 pp., 18 figs. Results of author's tests. Translated from Berichte und Abhandlungen der Wissenschaftlichen Gesellschaft fur Luftfahrt.

Gloster. The Gloster "Gamecock." Flight, vol. 18, no. 15, Apr. 15, 1926, pp. 218 and 221, 2 figs.

Metal. Metal Airplane Construction. Nat. Advisory Committee for Aeronautics—Tech. Memorandums, no. 361, May 1926, 18 pp., 12 figs.

Metal Construction of Airplanes, C. W. Hall. Aviation, vol. 20, no. 20, May 17, 1926, pp. 744-748, 9 figs.

Naval. Model Designation of Naval Airplanes. Aviation, vol. 20, no. 20, May 17, 1926, pp. 757-758.

Pander. The Pander Type E Sportplane. Aviation, vol. 20, no. 18, May 3, 1926, pp. 668 and 670, 2 figs.

Performance Prediction. A Simple Theoretical Method of Analyzing and Predicting Airplane Performance, I. H. Driggs. Air Service Information Circular, vol. 6, no. 533, Feb. 1, 1926, 8 pp., 4 figs. Gives formulas to show relation of certain fundamental variables to absolute ceiling and to rate of climb and to allow estimate to be made for these quantities with but minimum calculation.

Ryan. The Ryan M-1 Monoplane. Aviation, vol. 20, no. 19, May 10, 1926, pp. 712-713, 3 figs.

Spar Failure. The Lateral Failure of Spars. S. Bromley and W. H. Robinson, Jr. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 232, Mar. 1926, 18 pp., 10 figs. Conclusion, based on tests, is that after critical span or depth-breadth ratio has been reached, modulus of rupture varies approximately inversely as first power of span and of depth-breadth ratio; direction of lateral deflection is alternate between successive supports by theory and all tests; it is, therefore, believed that rib spacing along spar is more important in reducing lateral deflection than distance between supports at strut points.

Tailless. The Tailless Aeroplane. Engineer, vol. 141, no. 3670, Apr. 30, 1926, p. 501, 4 figs. on p. 498.

The Tailless Aeroplane, G. T. R. Hill. Engineering, vol. 121, no. 3148, Apr. 30, 1926, pp. 566-568, 4 figs.

Udet Kondor. The Udet Kondor Airliner. Aviation, vol. 20, no. 18, May 3, 1926, pp. 674 and 676, 3 figs.

Wind Tunnels. *See Wind Tunnels.*

AIRSHIPS

FRAMEWORK-STRESS ANALYSIS. The Experimental Stress Analysis of Frameworks with Special Reference to the Problems of Airship Design, A. J. S. Pippard. Roy. Aeronautical Soc.—Jl., vol. 30, no. 185, May 1926, pp. 282-312 and (discussion) 313-322, 8 figs. Conclusions drawn from experiments: when tubular framework with redundant bracing is provided with efficient bracing in plane of applied load system, stresses in members tend quickly to become independent of arrangement of load system; provision of additional bracing in other planes parallel to that of loading produces much quicker equalization of stresses; if in design of such structures, as hull of rigid airship, formulas are used which determine stresses in members in terms only of resultant actions at section considered, it is important that effective bracing should be provided in plan of load section. See also paper by same author pp. 322-331, 1 fig., describing further experiments, object of which was to determine extent to which continuity of longitudinals affects stress distribution.

POLAR FLIGHT. The Transpolar Flight (Scopo delle esplorazioni polari), U. Nobile. Annali dei Lavori Pubblici, vol. 63, no. 11, Nov. 1925, pp. 969-993, 13 figs.

SEMI-RIGID. Development of Airship Construction in Italy (Sullo sviluppo delle construzioni dei dirigibli in Italia), U. Nobile. Rivista Aeronautica, vol. 2, no. 2, Feb. 1926, pp. 1-29, 26 figs.

WIRELESS EQUIPMENT. Wireless Equipment on the "Norge" Airship. Flight, vol. 18, No. 17, Apr. 29, 1926, pp. 255-256, 3 figs.

ALIGNMENT CHARTS

CONSTRUCTION AND USE. Alignment Charts as Management Tools, F. J. Reuter. Mfg. Industries, vol. 11, no. 5, May 1926, pp. 367-368, 1 fig. Shows how costs of infrequent and complicated drawing-room and production-office calculation may be lowered by use of alignment chart; application for analysis and layout purposes.

ALLOY STEELS

ANALYSES. Report of the Austrian Industrial Standards Committee (Normblattentwürfe), Sparwirtschaft, no. 2, Feb. 1926, pp. N17-N23, 1 fig. Proposed standards for analyses of high-grade steels for determination of carbon, manganese, silicon, phosphorus, copper, nickel, chromium, tungsten, molybdenum, titanium, cobalt, etc.

ALUMINUM-MAGNESIUM. The Constitution of the Alloys Al-Mg from 32 to 48 Per Cent Mg., T. Halstead and D. P. Smith. Am. Electrochem. Soc.—Advance Paper, no. 24 for mtg. Apr. 26, 1926, pp. 327-347, 9 figs.

CASTINGS. Aluminium-Alloy Permanent-Mould Castings, R. J. Anderson. Foundry Trade Jl., vol. 33, nos. 494, 495, 496, 498, 501 and 502, Feb. 4, 11, 18, Mar. 4, 25 and Apr. 1, 1926, pp. 93-94, 105-108, 125-128, 173-174, 237 and 255-256, 13 figs. Feb. 4: Permanent-mold and semi-permanent-mold casting process; die-casting process; sand founding. Feb. 11: Advantages and disadvantages in comparison with sand and die castings. Feb. 18: Uses and field of application; specific kinds of castings produced in permanent molds. Mar. 4: Kinds of alloy used; factors affecting casting behavior; particular alloys used for casting. Mar. 25: Sizes and size tolerances; weights and weight tolerances. Apr. 1: Manufacture, design and gating; essentials of permanent-mold process; gating methods.

HEAT TREATMENT AND FOUNDRY PRACTICE. Aluminum Alloys in Engineering, H. Hyman. Roy. Tech. College Met. Club Jl., No. 5, 1926, pp. 21-24.

AMMONIA COMPRESSORS

AMERICAN AND GERMAN. Comparison between German and American Design of Rotary Ammonia Compressors (Kritischer Vergleich zwischen rotierenden Ammoniakverdichtern deutscher und amerikanischer Bauart), W. Tamm. Zeit. für die gesamte Kälte-Industrie, vol. 33, no. 2, Feb. 9, 1926, pp. 23-26, 4 figs.

APPRENTICES, TRAINING OF

FOUNDRY. Adopt Principles for Apprentice Training. Foundry, vol. 54, no. 9, May 1, 1926, pp. 362-363.

RAILWAY. Railway Apprentice Training, T. C. Gray. Ry. Mech. Engr., vol. 100, No. 5, May 1926.

ARCHES

CONTINUOUS CONCRETE. Analysis of Continuous Concrete Arch Systems, C. S. Whitney. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 5, May 1926, pp. 836-878, 22 figs. Presents simple method for analyzing system composed of 2 arch spans with elastic pier; in addition, easily applied approximate method is given for analysis of system of any number of spans which is believed to be accurate enough for majority of cases occurring in practice.

ASBESTOS

PRODUCTION, 1924. Asbestos in 1924, B. H. Stoddard. U. S. Bur. of Mines—Mineral Resources, no. 11:23, Apr. 2, 1926, pp. 305-309, 1 fig.

ARTILLERY

ANTI-AIRCRAFT. Is Anti-Aircraft Artillery Overtaking the Airplane? H. E. Cloke. Sci. Am., vol. 134, no. 5, May 1926, pp. 301-308, 8 figs.

AUTOMOBILE ENGINES

CRANKCASE-OIL DILUTION. Lubrication Data from Co-operative Fuel Research, S. W. Sparrow and J. O. Eisinger. Indus. & Eng. Chem., vol. 18, no. 5, May 1926, pp. 482-485, 4 figs.

Principles Underlying the Use of Equilibrium Oils for Automotive Engines, R. E. Wilson and R. E. Wilkin. Indus. & Eng. Chem., vol. 18, no. 5, May 1926, pp. 486-490, 7 figs. Presents first theoretical analysis of dilution and development of fundamental laws, assuming that dilution approaches equilibrium condition in crankcase; experimental data from road tests and dynamometer trials were obtained to determine constants and to test validity of these laws.

FUEL-SAVING DESIGN. Mechanical Design to Realize Best Economy of Fuel, S. W. Sparrow. Engrs. & Eng., vol. 43, no. 4, Apr. 1926, pp. 100-104 and (discussion) 104-111, 2 figs.

FUELS. *See Automobile Fuels.*

IGNITION EQUIPMENT. Electric Ignition Equipment, A. C. Burgoine. Automobile Engr., vol. 16, no. 214, Apr. 1926, pp. 154-158, 9 figs.

LUBRICATION. Automotive Engine Lubrication, A. W. Pope, Jr. Indus. & Eng. Chem., vol. 18, no. 5, May 1926, pp. 490-492, 6 figs. Pertinent facts pertaining to modern practice; splash system is most widely used, but because of certain shortcomings when used for heavy-duty high-speed work, pressure system is coming into increased favor; combination of pressure and splash system has been work out to give satisfaction for general automotive use; oil purification by elimination of solids from oil and control of dilution.

SUPERCHARGERS. The Practical Application of Superchargers to Automobile Engines, C. W. Iseler. Soc. Automotive Engrs.—Jl., vol. 18, no. 5, May 1926, pp. 516-520 and 523, 3 figs.

AUTOMOBILE FUELS

COAL, RECOVERY FROM. Availability of Petroleum Substitutes from Coal, A. C. Fieldner. Engrs. & Eng., vol. 43, no. 4, Apr. 1926, pp. 96-99. Methods of obtaining automobile fuel from coal; yields from low-temperature carbonization; future prospects; Bergius process; synthetic fuel from water gas; other sources of automotive energy.

IGNITION OF CARBURETED MIXTURES. Ignition of Carbureted Mixtures by Adiabatic Compression (Sur l'inflammation adiabatique des mélanges carburés), A. Pignot. Academie des Sciences—Comptes Rendus, vol. 182, no. 6, Feb 8, 1926, pp. 376-377.

SYNTHETIC. Synthetic Motor Spirit from Mixtures of Carbon Monoxide and Hydrogen, E. Audibert. Fuel, vol. 5, no. 4, Apr. 1926, pp. 170-177.

Synthetic Substitute Fuels (Les carburants synthétiques de remplacement), Génie Civil, vol. 88, no. 10, Mar. 6, 1926, pp. 232-234.

AUTOMOBILE MANUFACTURING PLANTS

WILLYS-KNIGHT PRODUCTION METHODS. Willys-Knight Production Methods, F. H. Colvin. Am. Mach., vol. 64, no. 14, Apr. 8, 1926, pp. 551-554, 12 figs.

AUTOMOBILES

AXLE CASINGS, MACHINING. Machining Rear Axle Casings. Automotive Engr., vol. 16, no. 214, Apr. 1926, pp. 142-143, 5 figs.

BIANCHI. The 10-15 H.P. Bianchi Chassis. Automobile Engr., vol. 16, no. 214, Apr. 1926, pp. 120-126, 17 figs.

HEADLIGHTING. A Possible Solution of the Headlighting Problem, H. M. Crane. Soc. Automotive Engrs.—Jl., vol. 18, no. 5, May 1926, pp. 467-469 and (discussion) 469-473, 8 figs. Proposed method of headlighting from experiments made with car having standard equipment consisting of head lamps provided with parabolic reflectors and Bausch & Lomb lenses mounted 36 in. above road surface; separate switch permits extinguishment of left headlight alone; suggests possibility of using diffused light produced by large-diameter frosted bulbs on cars of low price and moderate speed.

LANCHESTER. The 21 H.P. Six-Cylinder Lanchester. Auto-Motor Jl., vol. 31, no. 15, Apr. 15, 1926, pp. 311-313, 8 figs.

LUBRICATION. Chassis Lubrication, F. H. Gleason. Soc. Automotive Engrs.—Jl., vol. 18, no. 5, May 1926, pp. 491-496 and 499, 11 figs. Describes system which derives its lubricant from central source; experimental work since 1924 and improvements in system resulting therefrom, layouts and constructions used in connection with this system; oil pressures maintained in different parts.

METALLURGIQUE. The Metallurgique. Auto-Motor Jl., vol. 31, no. 12, Mar. 25, 1926, pp. 247-249, 9 figs.

B

BALANCING MACHINES

RECORDING, AMPLIMETER FOR. New Type of Recording Amplimeter Is Used on Precision Balancing Machine. Automotive Industries, vol. 54, no. 15, Apr. 15, 1926, p. 649, 2 figs.

BEARINGS

LUBRICATION. Lubrication of Plain Bearings, D. P. Barnard. Soc. Automotive Engrs.—Jl., vol. 18, no. 5, May 1926, pp. 483-485, 2 figs. With view to making investigation of behaviour of oil after it has reached bearing, visual study was made by means of glass bearing and results were reproduced by film, action of lubricant being made visible by introducing into oil small quantity of dyed glycerine solution of about the same viscosity as oil; results obtained.

Oil Flow in Plain Bearings, D. P. Barnard. Indus. & Eng. Chem., vol. 18, no. 5, May 1926, pp. 460-462, 6 figs. Attempts to present basic laws of fluid lubrication in such manner that they may be readily used in correlation of test data; simple method of development of approximate laws controlling oil flow through bearings, due both to pressure developed in film and to oil-feed pressure and experimental data in substantiation of this method.

BEAMS

STEEL, LIGHT ROLLED. Light I-Beams Developed for Joist Floor Construction. Eng. News-Rec., vol. 96, no. 18, May 6, 1926, pp. 736-737, 3 figs. Beams of one-third weight of standard I-beams produced in sizes from 6 to 12 in. on new mill.

BEARINGS, BALL

Steel-Mill Machinery. Application of Anti-Friction Bearings to Steel Mill Machinery, G. R. Holmes. Iron & Steel Engr., vol. 3, no 2, Feb. 1926, pp. 104-105, 1 fig. Applications of ball and roller bearings to electrical and other equipment in steel mills.

BELTING

Initial Length of. Initial Length of Belt. H. Noguchi. Soc. Mech. Engrs. (Tokyo, Japan)—Jl., vol. 29, no. 107, Mar. 1926, pp. 123-134, I fig. Formula is worked out in which it is possible to calculate initial length of initial tension of belt required for necessary operative condition; in this formula weight of belt itself and elastic elongation are taken into account. (In Japanese.)

BLAST FURNACES

Blowing Practices. A Method of Determining Comparable Blowing Practices for Iron Blast-Furnaces, J. S. Fulton. Engrs.' Soc. West. Pa.—Proc., vol. 41, no. 10, Jan. 1926, pp. 460-470 and (discussion) 471-475, 2 figs. Actual delivery of free air; weight of oxygen per cu. ft. of air; pounds of coke per long ton of iron; chemical analysis of coke.

Cast-House Arrangement. Cast-House Arrangement Unusual. Iron Age, vol. 117, no. 19, May 13, 1926, pp. 1338-1340, 4 figs. Cast-house of no. 2 blast furnace of Youngstown Sheet & Tube Co., Indiana Harbor, Ind., marks new departure in design; spur from hot metal track extends under cast-house roof, which provides protection for ladles during casts; to facilitate handling materials in and out of cast-house, cast-house crane is mounted on runway spanning hot metal track; furnace has 16 tuyeres of 700-tons.

Design. Some Observations Regarding Blast-Furnace Design, A. G. McKee. Engrs.' Soc. West. Pa.—Proc., vol. 41, no. 10, Jan. 1926, pp. 391-406 and (discussion) 407-411, I1 figs. Trend of design and future developments.

Stack Built for Low-Cost Output, R. A. Fiske. Iron Age, vol. 117, no. 20, May 20, 1926, pp. I424-1426, 5 figs.

Stoves. Modern Blast-Furnace Stoves, A. E. Maccoun. Engrs.' Soc. West. Pa.—Proc., vol. 41, no. 10, Jan. 1926, pp. 412-414 and (discussion) 415-427.

BLOWERS

Centrifugal. Fundamental Principles for Predetermining the Most Important Properties of Blowers (Grunder för bedömandet av fläktars viktigaste egenskaper), F. Tenelius. Teknisk Tidskrift (Mekanik), vol. 56, no. I2, Mar. 20, 1926, pp. 31-37, 12 figs.

BOILER FEEDWATER

Meters. Choice of Boiler Feedwater Meters (Ueber die Auswahl von Kesselspeisewassermessern)), Vosskämper. Braunkohle, vol. 24, no. 51, Mar. 20, 1926, pp. 1105-1111, 10 figs.

BOILER FURNACES

Air Preheaters. Air Preheating for Combustion. Power Engr., vol. 21, no. 241, Apr. 1926, pp. 128-129, 1 fig. Useful figures and methods of calculation; advantages of air heating; Howden-Ljungström air heater; Thermix air heaters and others of plate type.

Temperatures and Heat Utilization in an Air Preheater (Temperaturen und Wärmeasusnutzung in einem Luftvorwärmer), Hakanson and H. Zander. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 14, Apr. 3, 1926, pp. 471-474, 2 figs.

The Perry Preheater. Power Engr., vol. 21, no. 242, May 1926, pp. 170-772, 1 fig. New type of air preheater for boiler furnace which has been designed so that it can be accommodated in any available space not more than 7 ft. wide; principle employed is that of moving elements which become heated by products of combustion passing over their surfaces and afterwards give up their heat to incoming air when they move into that part of apparatus.

Arches. Designing Boiler Furnace Arches, H. C. Thayer. Power Plant Eng., vol. 30, no. 8, Apr. 15, 1926, pp. 473-474.

Combustion Control. The New Combustion Control System, G. G. Hollins. Elec. Light & Power, vol. 4, no. 5, May 1926, pp. 126-129, 6 figs.

Grate Bars. Behaviour of Grate Bars in Service (Roststäbe und ihr Verhalten im Feuer). Bergbau, vol. 39, no. 11, Mar. 18, 1926, pp. 158-159.

Refractories. *See Refractories, Boiler-Furnace.*

BOILER PLANTS

Instruments. The Instrument Layout from the Investment Viewpoint. Power, vol. 63, no. 20, May 18, 1926, pp. 766-768.

BOILERS

Combined Producer-Gas and Pulverized-Fuel. A New System of Steam Generation. Eng. & Boiler House Rev., vol. 39, no. 10, Apr. 1926, pp. 469-472, 3 figs. Combined application of producer-gas and pulverized-fuel embodied in Gyro system of firing evolved by F. L. Duffield; Gyro gasifier consists of round or oval gasifying chamber into which pulverized-fuel enters tangentially. See also description in Elec. Rev., vol. 98, no. 2525, Apr. 16, 1926, pp. 609-611, 4 figs.

Efficiencies. Industrial-Boiler Efficiencies, S. D. Fitzsimmons. Mech. Eng., vol. 48, no. 5, May 1926, pp. 412-414, I fig.

Flues. Proposed New Design for Lancashire Boiler Flues, J. G. Kirkland. Eng. & Boiler House Rev., vol. 39, no. I0, Apr. I926, pp. 479-480, 1 fig.

Gas-Fired. Surface Combustion Principle Applied to Gas-Fired Boilers, C. H. S. Tupholme. Gas Age-Rec., vol. 57, no. 15, Apr. 10, 1926, pp. 512 and 542, 1 fig.

High-Pressure. Steam Plants of Very High Pressure (Dampanlæg med medget höje tryk), Ingeniören, vol. 35, no. I, Jan. 2, 1926, pp. 1-6.

Indirect Steam Generation. Steam Generated Indirectly in German Experimental Boiler. Power, vol. 63, no. 20, May 18, 1926, p. 776, 1 fig. Test boiler designed for operation at 900-lb.-per-sq. in. pressure and for indirect production of steam in drum equipped with heating coils. Translated from V.D.I. Nachrichten, Mar. I7, 1926.

Pulverized-Coal-Fired. Huge Boiler to Operate at 1,390-lb. in Lakeside Station. Power, vol. 63, no. 20, May 18, 1926, p. 771, I fig. Boiler, by Babcock & Wilcox Co., for Milwaukee plant, is to burn pulverized coal and have special arrangement of water walls and radiant superheaters.

Scale Prevention. New Electrical Process for Prevention of Boiler Scale and Corrosion. Eng. & Boiler House Rev., vol. 39, no. 10, Apr. 1926, pp. 488 and 491. Particulars of new Hauptvogel system for prevention of scale and for counteracting corrosion, which is said to be self-regulating; process consists of supplying weak d.c. electric current to boiler shell which acts as protecting current and therefore differs from other electrical methods which are based on partial electrolysis; known as Contra-Current electrical process.

Water-Level Alarm. Boiler Water-Level Alarm. Eng. & Boiler House Rev., vol. 39, no. 10, Apr. 1926, p. 492, 1 fig.

Water-Level Gauges, Distant. Distant Water Gauge Indicators, E. Ingham. Power Engr., vol. 21, no. 242, May 1926, pp. 166-168, 8 figs.

BOLTS

Wrench-Head. Tentative American Standard for Wrench-Head Bolts and Nuts and Wrench Openings. Mech. Eng., vol. 48, no. 5 ,May 1926, pp. 537-538. Standard prepared by committee under sponsorship of American Soc. Mech. Engrs. and Soc. of Automotive Engrs.

Successful Application. Bonus System Pays in Hoosier Plant, E. G. McQuinn. Mfg. Industries, vol. 11, no. 5, May 1926, pp. 329-334. 9 figs.

BRASS

Annealing. Notes on Annealing Brass. Foundry Trade Jl., vol. 33, no. 506, Apr. 29, 1926, p. 341.

BRASS FOUNDRIES

Equipment. A Western Brass Foundry. West. Machy. World, vol. 17, no. 4, Apr. 1926, pp. 163-164, 3 figs.

BRICKMAKING

Electric Hacking Machines. Hacking Brick by Electricity, W. L. Wright. Brick & Clay Rec., vol. 68, no. 8, Apr. 13, 1926, pp. 624-625 and 628-630, 9 figs.

BRIDGE ERECTION

Girder Span. Railroad Bridge Forces Erect Heavy Girder Span. Ry. Eng. & Maintenance, vol. 22, no. 5, May 1926, pp. 177-180, 7 figs. One of longest, if not actually very longest, girder span ever provided with concrete ballast deck was erected by Elgin, Joliet & Eastern in bridge across Desplaines River at Joliet, Ill.

BRIDGES

Reinforcing. Bridge Reinforcing Under Difficulties, H. S. Loeffler. Ry. Rev., vol. 78, no. 18, May 1, 1926, pp. 779-782, 6 figs. Long span of steel bridge over Columbia River, Washington, on Great Northern Railway, has been strengthened by addition of second span, trusses of which are identical in design with original trusses, except for few necessary changes in end panels; timber falsework was used to erect anchor spans; how deck span was reinforced.

BRIDGES, CONCRETE

Rigid-Frame Construction. Rigid Frames in Concrete Bridge Construction. A. G. Hayden. Eng. News-Rec., vol. 96, no. 17, Apr. 29, 1926, pp. 686-689, 11 figs. Frame type of bridge is economical, has great ultimate load capacity, and is freely adaptable to architectural demands; examples of its use in parkway bridges.

BRIDGES, HIGHWAY

Concrete. The Fort Snelling-Mendota Bridge Project, W. H. Wheeler. Minn. Federation Architectural & Eng. Soc.—Bul., vol. 11, no. 4, Apr. 1926, pp. 11-19, 7 figs.

Floor Slabs. Effective Width of Concrete Bridge Slabs Supporting Concentrated Loads, E. F. Kelley. Pub. Roads, vol. 7, no. 1, Mar. 1926, pp. 7-17 and 24, 17 figs.

Hudson River. The New Proposed Hudson River Bridge. Am. City, vol. 34, no. 4, Apr. 1926, pp. 365-366, 2 figs.

Steel. Oregon Steel Arch Bridge Erected by Cableway, C. B. McCullough. Eng. News-Rec., vol. 96, no. 19, May 13, 1926, pp. 760-762, 5 figs.

BRIDGES, RAILWAY

Plate-Girder. Heavy Steelwork in Long Plate-Girder Bridge with Two Twin Lift Spans. Eng. News-Rec., vol. 96, no. 12, Mar. 25, 1926, pp. 474-479, I4 figs. More than 300 main girders required; 288 duplicate 54-ton girders; rocker expansion bearings; lift spans have double sheaves and rope equalization by auxiliary counterweights.

BRIDGES, SUSPENSION

Wire Cables for. Fabricating Steel in World's Largest Suspension Bridge, R. B. Williams. Iron Trade Rev., vol. 78, no. 19, May 13, 1926, pp. 1248-1249 and 1252, 4 figs. Manufacture of steel for new suspension bridge connecting Camden, N.J., and Philadelphia; wire cables have unit strength of 215,000 lbs. per sq. in. and weight of 6,800 tons, each cable is 3,540 ft. long and consists of 61 strands of 306 wires each; details of floor system.

BROACHING MACHINES

Hydrauliic. New Hydraulic Broaching Machine Provides Wide Range of Cutting Speeds. Automotive Industries, vol. 54, no. 16, Apr. 22. 1926, p. 694, 1 fig.

BUILDING CONSTRUCTION

Steel Trusses for. Steel Trusses Carry 22 Storeys in Chicago Hotel. Eng. News-Rec., vol. 96, no. 16, Apr. 22, 1926, pp. 638-641, 7 figs. Unsymmetrical truss with both pin and riveted connections designed to meet special conditions in building of Stevens Hotel; steel castings on truss pins carry columns.

Wall Removal. Alteration Involving a 26-Storey Self-Sustaining Wall, D. C. Coyle. Eng. News-Rec., vol. 96, no. 19, May 13, 1926, pp. 774-776, 2 figs. Three stories of wall removed and load above transferred to steel frame; deflection wedged into framework.

BUILDING MATERIALS

Canada. Structural Materials Produced in Canda. Contract Rec., vol. 40, no. 13, Mar. 31, 1926, pp. 303-305. Statistics covering 1925; production and consumption figures in detail.

BUSBARS

Protection. Bus Protection, P. M. Currier. Gen. Elec. Rev., vol. 29, no. 5, May 1926, pp. 305-310, 4 figs. Sectionalization of bus; primary and secondary failures; isolation of bus phases and equipment; armorclad arrangement; differential and fault-bus protection.

C

CABLES, ELECTRIC

High-Tension. Some Recent Developments in High-Tension Cable Practice, G. B. Shanklin. Gen. Elec. Rev., vol. 29, no. 5, May 1926, pp. 311-314. Recent advance in voltage ratings; voids or gas pockets principal problem; new impregnators; liquid rather than solid; four methods in cable practice; 132-kv. cable new feasible.

Single-Cored Armoured. Single-Core Armoured Cables for Alternating Currents, W. Cramp. World Power, vol. 5, no. 26, Feb. 1926, pp. 63-69.

CABLEWAYS

Aerial Tramways. Warden Mine Installs Aerial Tramway to Dump Four Hundred Tons of Refuse Daily. Coal Age, vol. 29, no. 18, May 6, 1926, pp. 629-630, 4 figs. Rock and picking table rejects fall into steel bin and is loaded alternately into one of two 2-ton cars which carry it out on leg of triangular tramways system.

Funicular. Automatic Car Control for Funicular Railways. Brown Boveri Rev., vol. 13, no. 3, Mar. 1926, pp. 67-75, 8 figs.

Ore-Handling. Ore-Handling in Morocco by Mono-Cable Ropeway. Indus. Mgmt. (Lond.), vol. 13, no. 4, Apr. 1926, pp. 161-162, 3 figs.

Slackline. Slack Line Cableways in Finnish and Swedish Cement Plants. Cement Mill & Quarry, vol. 28, no. 6, Mar. 20, 1926, pp. 20 and 22, 3 figs. Details of 1-cu. yd. Sauerman slackline cableway, designed to excavate clay and gravel in Pargas and Finland; and 1½-cu. yd. slackline cableway in Sweden for excavating marl containing many huge boulders.

CAMS

Indexing Motion. The Cam Indexing Motion, B. Sassen. Am. Mach., vol. 64, no. 18, May 6, 1926, pp. 705-707, 6 figs.

CANALS

Chicago Drainage. The Chicago Drainage Canal, J. L. Busfield. Eng. Jl., vol. 9, no. 5, May 1926, pp. 237-257, 8 figs. Review of historical, technical, financial and international features; physical description of drainage canal, pumping stations, treatment plants and water supply system; plans for future works; present and future need for diversion; effect on navigation.

CARS

Dynamometer. Road Tests Influence Locomotive Design, H. A. Campbell. Ry. Rev., vol. 78, no. 17, Apr. 24, 1926, pp. 769-770. Points out that data obtained with dynamometer car are as valuable as those derived from testing plants; results of tests made by Pennsylvania R.R. and by Paris, Lyons and Mediterranean Ry.

CAST IRON

Electric Melting. Cast Iron from Electric Furnaces. Iron Age, vol. 117, no. 11, Mar. 18, 1926, p. 760. Duplexing with cupola in Germany; peculiar properties observed; pig iron unnecessary; high-grade castings from poor scrap. Based on paper delivered by Kerpeley at convention of German foundrymen in Berlin.

Engineering Practice. Cast-Iron and Modern Engineering Practice, J. G. Pearce. Instn. Mech. Engrs.—Proc., no. 6, 1925, pp. 1231-1241. Discusses relationship between engineering and foundry; output of gray iron; character of research on cast iron; co-operative research; standard specifications.

Fire-Resistant. A New Fire-Resistant Casting (Ein neuer feuerbeständiger Guss), E. Schüz. Feuerungstechnik, vol. 14, no. 11, Mar. 1, 1926, pp. 127-128, 5 figs.

Gray. Why Is Gray Iron Porous? H. M. Ramp. Foundry, vol. 54, no. 9, May 1, 1926, pp. 354-355.

Pearlitic. Some Further Notes on Pearlitic Cast Iron, J. E. Hurst. Foundry Trade Jl., vol. 33, nos. 494 and 506, Feb. 4 and Apr. 29, 1926, pp. 95-97 and 333-335, 4 figs. Feb. 4: Properties; Perlit Method; Perlit iron without heating molds; criticism of Diefenthaler's curves. Apr. 29: Concludes that attempt to relate chemical composition, thickness of casting and mold temperatures by series of straight-line curves, as outlined in patent specifications of Perlit process, results in serious anomalies and absurdities; influence of mold temperature on structure of cast iron and relation between mold temperature and composition; except for fact that somewhat lower silicon iron than normally used can be cast in hot mold, it is unlikely that hot mold confers any structure or distribution of structure throughout mass of casting which cannot be duplicated in cold mold.

The Lanz-Perlit Cast-Iron Process. Mar. Engr. & Motorship Bldr., vol. 49, no. 584, Apr. 1926, p. 134.

Testing. Testing Method for Cast Iron (Prüfverfahren von Gusseisen), P. Wolff. Stahl u. Eisen, vol. 46, no. 17, Apr. 29, 1926, pp. 560-564, 6 figs. Relation between tensile strength, compressive strength and hardness; different rapid testing methods; evaluation and comparison of test results.

Titanium, Effect On. Effect of Titanium on Cast Iron, E. Piwowarsky. Iron Age, vol. 117, no. 19, May 13, 1926, pp. 1340-1341, 2 figs. Action similar to silicon but more active; effect on mechanical properties. (Abstract.) Translated from Stahl u. Eisen, vol. 43, 1923, p. 1491.

CASTING

Machines. Pours Work in Casting Machine, W. W. McCarter. Foundry, vol. 54, no. 8, Apr. 15, 1926, pp. 317-319, 12 figs.

CASTINGS

Tolerances. Casting Tolerances, W. J. May. Mech. World, vol. 79, no. 2051, Apr. 23, 1926, p. 326. Points out that with castings made in metal molds there should always be fixed tolerances for excess shrinkage where there is any great variation in melting or rather pouring temperature, because although all grades of some particular metal may not melt and be fit for pouring at one particular heat, rate of expansion and contraction per degree of heat remains practically constant.

CEMENT

Nature and Properties. Cement: Its Real Nature and Properties, E. Godfrey. Can. Engr., vol. 50, no. 16, Apr. 20, 1926, pp. 495-497. Lessons to be learned from knowledge of colloidal character of finely-divided portion; guarding against shrinkage effects; effect of shrinkage upon stability of columns; preventing segregation of colloidal constituents.

Specifications. Cement Specifications Changed by Missouri Highway Commission, F. V. Reagel. Eng. News-Rec., vol. 96, no. 16, Apr. 22, 1926, p. 657, 3 figs.

CEMENT, PORTLAND

Lime-Silica Index. Lime-Silica Index as Measure of Cement Quality, T. Merriman. Eng. News-Rec., vol. 96, no. 16, Apr. 22, 1926, pp. 648-650, 1 fig. Proposal to grade Portland cements in terms of both strength and relative content of cementing constituents; specification for tensile strength and quality proposed.

Manufacture. The Manufacture of Portland Cement—Developments Since the War, P. Hansel. Pit & Quarry, vol. 12, no. 1, Apr. 1, 1926, pp. 75-84.

Mills. Virginia Portland Cement Corporation's New Plant, C. A. Breskin. Rock Products, vol. 29, no. 8, Apr. 17, 1926, pp. 49-63, 48 figs.

CENTRAL STATIONS

Diesel-Engined. Diesel Operated Municipal Plants, R. V. Cook. Power House, vol. 19, no. 7, Apr. 5, 1926, pp. 23-24, 1 fig. Author claims that Diesel engine is making possible success of municipal stations, effecting reduction in expense and saving in labour.

Largest Privately Owned Diesel Utility Plant in America. Southern Power Jl., vol. 44, no. 4, Apr. 1926, pp. 36-38, 5 figs.

Industries, Relation to. The Central Station and Industrial Power, R. C. Muir. Gen. Elec. Rev., vol. 29, no. 5, May 1926, pp. 298-301.

Load Analysis, United States and Canada. Data on Output and Peak Load of Largest Generating and Distributing Companies in the United States and Canada. Elec. World (Supp.), vol. 87, no. 17, Apr. 24, 1926. Table I: Data include power and electric railway companies in United States and Canada having yearly output in excess of 100,000,000 kw-hr. during 1925. Table II (on reverse side): Contains data on generator rating, output, load factor, customers and distribution of energy of all companies having output over 100,000,000 kw-hr. during 1925.

Hundred-Million-Kilowatt-Hour Utilities. Elec. World, vol. 87, no. 17, Apr. 24, 1926, pp. 855-857.

Middletown, Pa. Design and Test of Susquehanna Station Metropolitan Power Company, J. A. Powell. Iron & Steel Engr., vol. 3, no. 4, Apr. 1926, pp. 167-174, 10 figs.

Narragansett. Enlarged Narragansett Plant Embodies Unusual Engineering Features, H. Couch and R. L. Blanding. Power, vol. 63, no. 18, May 4, 1926, pp. 664-669, 5 figs.

Oil-Engined. Heavy-Oil Engine Installations—Choice of Site and Lay-Out of Plant, G. Porter. Diesel Engine Users' Assn.—Report of Discussion, no. 50, Feb. 19, 1926, 35 pp., 11 figs. Deals with application of heavy-oil engine to electric drive, especially in reference to power stations carrying on business of generating electrical energy for distribution in extensive area.

Operating Performance. Experiences with Modern Stations. Elec. World, vol. 87, no. 19, May 8, 1926, pp. 983-993, 8 figs. Operating performance of some modern plants and their experience with firing method, steam extraction, reheating and air preheating; detailed experiences with powdered fuel; stoker experiences; experience with main unit bleeding.

Philadelphia. Philadelphia Electric Company's Richmond Station. Power, vol. 63, no. 20, May 18, 1926, pp. 740-747, 8 figs.

Richmond Goes on the Line with 100,000 Kilowatts. Power Plant Eng., vol. 30, no. 10, May 15, 1926, pp. 564-573, 11 figs.

Rocky Mount, N.C. Rocky Mount, N.C., Installs Modern Power Plant. Power, vol. 63, no. 15, Apr. 13, 1926, pp. 550-553, 7 figs. New municipal electric light plant at Rocky Mount, N.C., uses high-pressure steam in latest design of turbine; modern equipment employed throughout; total capacity of 7,500 kw. contemplated.

Somerset, Mass. The Somerset Power Station, J. F. Muir. Stone & Webster Jl., vol. 38, no. 4, Apr. 1926, pp. 461-491, 9 figs.

CHIMNEYS

Calculation. Standard Calculations for Chimneys (Berechnungsnormen für Schornsteine), Tonindustrie-Zeitung, vol. 50, no. 13, Feb. 13, 1926, pp. 203-205. Proposed standards for calculating stability of high, self-supporting chimneys, admissible stresses in brickwork and reinforced concrete, foundations, lining and fittings.

Guniting. Guniting Steel Cement Kiln Stacks, J. E. Lind. Can. Engr., vol. 50, no. 16, Apr. 20, 1926, pp. 491-493, 5 figs. Steel kiln stacks at St. Mary's Cement Co.'s plant, St. Mary's, Ont., made self-supporting by application of gunite which will also prolong their life indefinitely; results of tests undertaken in connection with work.

COAL

Carbonization. Examination and Evaluation of Coals for Carbonizing Purposes, G. Weyman. Gas Jl., vol. 173, nos. 3278, 3279 and 3280, Mar. 10, 17 and 24, 1926, pp. 601-603, 677-679 and 746-747, 4 figs. Mar. 10: Variation in coal and carbonizing conditions; carbonization costs; examination and analysis of coal; estimation of constituents of coal; tests for calorific value; tests involving carbonization. Mar. 17: Coal-testing plants; method of operation for routine tests. Mar. 24: Evaluation.

Liquefaction. What is the Truth About the Bergius Process? Petroleum Times, vol. 15, no. 380, Apr. 17, 1926, p. 687. Critics of process maintain that, regarded from economic standpoint, process has no claim to be regarded as commercial one; review of reply by Dr. Bergius to criticisms contained in article in Génie Civil.

Screening. Spirals Prove Success at Utah Mine, G. A. Murphy. Black Diamond, vol. 76, no. 17, Apr. 24, 1926, pp. 449-450, 4 figs.

Pulverized. *See Pulverized Coal.*

Wet vs. Dry. Wet vs. Dry Coal, A. Page. Power Engr., vol. 21, no. 241, Apr. 1926, pp. 138-139. Disadvantages and losses due to wet coal; consideration of combustion conditions with added moisture; advantages and gains due to wetting coal.

COAL HANDLING

Central Stations. Coal and Ash Handling at Warrior Reserve Plant, A. T. Hutchins. Elec. Light & Power, vol. 4, no. 5, May 1926, pp. 89-92, 4 figs. Details of coal washer installed to reduce ash content of coal; coal-storage and handling equipment; ash handling, sampling and analyses.

Towers. Coal Towers of Reinforced Concrete (Kohlentürme aus Eisenbeton), H. Butzer. Bauingenieur, vol. 7, no. 10, Mar. 5, 1926, pp. 195-204, 15 figs.

COAL MINES

Drainage Standards. Proposed Coal Mine Drainage Standards. Min. Congress Jl., vol. 12, no. 4, Apr. 1926, pp. 304-313, 5 figs. Pumps for development work; permanent pumping stations; standard practice in priming piston, plunger and centrifugal pumps; semi-remote control, safety precautions and attendants; natural drainage; unwatering abandoned workings.

Explosion. Procedure at Horning Mine Disaster Exemplifies Strategy to be Adopted After Explosions, A. F. Brosky. Coal Age, vol. 29, no. 15, Apr. 15, 1926, pp. 527-531, 4 figs.
Great Britain. A Visit to British Coal Mines. Can. Min. Jl., vol. 47, no. 17, Apr. 23, 1926, pp. 452-453.
Ventilation. Modern Mine Must Have Ventilation System that Suits New Conditions, C. H. Trik. Coal Age, vol. 29, no. 17, Apr. 29, 1926, pp. 595-599, 7 figs. Considers effect of changes on ventilation of mines; dead ends best ventilated by blowers and canvas tubing; characteristic curves of multivane fan.
Winding Costs. Winding Costs, S. Burns. Instn. Min. Engrs.—Trans., vol. 71, Mar. 1926, pp. 141-165 and (discussion) 165-176, 6 figs.

COAL MINING

Conveyors. Installing and Moving Room Conveyors, N. D. Levin. Min. Congress Jl., vol. 12, no. 4, Apr. 1926, pp. 283 and 297-298, 5 figs.
Conveyors. Face Conveyors with Concentrated Mining System, F. S. Follansbee. Min. Congress Jl., vol. 12, no. 4, Apr. 1926, pp. 279-281 and 293-296, 2 figs.
Machine Loading. Mechanical Loading in Coal Mines, E. H. Johnson. Mech. Eng., vol. 48, no. 5, May 1926, pp. 456-458. Points out that choice of proper loader is problem for engineering analysis; mechanical loading means concentration of mine workings; delivery of tonnage from one-quarter to one-half of present developed area, rapid development and recovery in new properties, saving in timber, steel rails, mine ties, trolley wire and bonds; possibility for better supervision and greater safety for men and machinery.
Preparing Coal for Machine Loading, E. H. Johnson. Explosives Engr., vol. 4, no. 4, Apr. 1926, pp. 129-132, 6 figs.
Machine-Mining. Machine-Mining in Bord-and-Pillar Work, J. Brass and J. H. Hesketh. Instn. Min. Engrs.—Trans., vol. 71, Mar. 1926, pp. 88-97 and (discussion) 97-100, 6 figs. Describes how coal-cutting machines have been successfully introduced and are being operated in seam 4 ft. thick in conjunction with bord-and-pillar system.
Stripping. Preliminary Report on Coal Stripping Possibilities in Illinois, H. E. Culver. Ill. State Geol. Survey—Bul., no. 28, 1925, pp. 7-59, 22 figs.
Undercutting and Loading Machine. Experiment in Combined Cutting, Mining and Loading in Coal Mines, E. O'Toole. Mech. Eng., vol. 48, no. 5, May 1926, pp. 451-456, 11 figs. Development of combined undercutting and loading machine which, in connection with roof-control machines, reduces amount of timbering required and increases amount of coal produced and transported per man-hour over 30 per cent.

COAL STORAGE

Power Plants. Coal Storage for Power Plants, C. H. S. Tupholme. World Power, vol. 5, no. 26, Feb. 1926, pp. 90-92. It has been shown that mass of very small, uniform coal particles has no practical effect in retarding diffusion of oxygen through it, and proportion of voids in very fine coal when uniformly sized, is same as in lump coal; mixing different sized pieces in mass tends to reduce proportion of voids; building coal pile so as to reduce or prevent segregation of large and small pieces will lessen proportion of voids in pile, tend to keep down amount of oxygen entering pile by diffusion, and thus reduce oxidation from this source.

COAL WASHING

Flotations. The Application of the Chance Sand Flotation Process to Washing Bituminous Coal, A. Greenwell. Fuel, vol. 4, no. 4, Apr. 1926, pp. 163-166, 2 figs.

COMBUSTION

Temperature. Combustion Temperature and Its Graphic Determination (Die Verbrennungstemperatur und ihre graphische Ermittlung), W. Gunz. Feuerungstechnik, vol. 14, no. 10, Feb. 15, 1926, pp. 109-112, 8 figs.

COMPRESSED AIR

Explosions. Explosions in Compressed-Air Plants (Explosionen in Druckluftanlagen), F. Ritter. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 16, Apr. 17, 1926, pp. 543-544.

CONDENSERS, STEAM

Surface. Regarding Experimental Confirmation of Nusselt Theory on Heat Transmission in Surface Condensers (Intorno alla conferma sperimentale della teoria del Nusselt relativamente alla fase di transmissione vapore-parete nei condensatori a superficie), M. Medici. Industria, vol. 40, no. 3, Feb. 15, 1926, pp. 58-60, 6 figs. Concludes from experiments that values resulting from Nusselt equation are too low, and more so, the higher the velocity of steam.

CONCRETE

British Practice. A British View on Making Concrete, H. V. Overfield. Mun. & County En., vol. 70, no. 3, Mar. 1926, pp. 151-154.
Elastic Constants. Ultimate Strength and Elastic Constants in Compression for Granite Concrete, W. D. Womersley. Concrete & Constr. Eng., vol. 21, no. 4, Apr. 1926, pp. 309-316, 5 figs.
Water-Cement Ratio. Specifying Concrete by Water-Cement Ratio Alone. Eng. News-Rec., vol. 96, no. 17, Apr. 29, 1926, pp. 698-700, 4 figs. Job procedure in applying strength specification to construction of reinforced-concrete office building in Chicago.

CONCRETE CONSTRUCTION

Developments. Modern Concrete Construction, S. E. Thompson and M. N. Clair. Tech. Eng.-News, vol. 7, no. 1, Mar. 1926, pp. 14-15, 32 and 36, 2 figs.

CONCRETING

Spillway-Channel Lining. Lining an Earth Spillway-Channel with Concrete, C. E. Blee. Eng. News-Rec., vol. 96, no. 19, May 13, 1926, pp. 777-778, 3 figs. Spillway-channel through clay for Alouette dam exceptionally carefully lined to prevent scour.

CONDUITS

Pressure. Calculating Loss in Pressure Conduits (Calcul de la perte de charge dans les galeries sous pression), J. Calame and D. Gaden. Bul. Technique de la Suisse Romande, vol. 52, no. 7, Mar. 27, 1926, pp. 74-80.
Stresses Due to Temperature in Lined Pressure Tunnels (Gallerie in pressione con rivestimenti tensioni per azioni termiche), U. Puppini. Energia Elettrica, vol. 3, no. 1, Jan. 1926, pp. 1-7. Continuation of previous mathematical study published in same journal (Sept. 1925), devoted to caculation of pressure tunnels when lining of cement, reinforced concrete or sheet iron has different coefficients of elasticity and expansion from those of rock.

CONNECTING RODS

Resistance to Flexure. Calculation of Resistance to Flexure of Connecting Rods for High-Speed Engines (Nota sul calcolo della resistenza alla flessione delle bielle dei motori Velocissimi), A. Capetti. Industria, vol. 11, no. 4, Feb. 28, 1926, pp. 88-90, 2 figs.

CONVERTERS

Binary. A New Electrical Converter. Engineer, vol. 141, no. 3670, Apr. 30, 1926, pp. 502-503, 5 figs. Machine, built under Creedy's patents, is binary converter, closely resembling motor generator, which are only known types of apparatus in which direct-current side can be regulated in manner entirely independent of alternating current; it is more compact and of lighter weight than motor-generator; its field of application.

CONVEYORS

Overmotoring. Preventing Overmotoring of Conveyors, R. F. Emerson. Power, vol. 63, no. 19, May 11, 1926, pp. 703-704, 1 fig.

COOLING TOWERS

Fillers. Use of Raschig Rings in Refrigeration (Ueber die Verwendung von Raschig's Ringen in der Kälte-Industrie), Buschmann. Zeit. für die gesamte Kälte-Industrie, vol. 33, no. 1, Jan. 9, 1926, pp. 7-10, 3 figs.

COPPER METALLURGY

Flotation. Differential Flotation of Copper at Cananea, A. T. Tye. Eng. & Min. Jl.-Press, vol. 121, no. 15, Apr. 10, 1926, pp. 597-604, 10 figs.
Leaching. Leaching Tests at Inspiration Consolidated, G. D. Van Arsdale. Ariz. Min. Jl., vol. 9, no. 21, Mar. 30, 1926, pp. 7-8 and 59-63, 1 fig.

COPPER MINING

Methods. Mining Methods Being Used at Ray Mines, R. W. Thomas. Arizona Min. Jl., vol. 9, no. 22, Apr. 15, 1926, pp. 7-9 and 13-14, 5 figs.

CULVERTS

Concrete Pipe. Tentative Standard Specifications for Reinforced Concrete Culvert Pipe. Joint Concrete Culvert Pipe Committee—Report, Feb. 1926, 12 pp., 5 figs.

CORES

Making. The Coreroom and Its Product, R. Micks. Can. Foundryman, vol. 17, no. 5, May 1926, pp. 12-14.

CORROSION

Boiler Parts. Corrosion of Boiler Parts (Ueber eigenartige Korrosionserscheinungen an Dampfkesseltilen), R. Stumper. Feuerungstechnik, vol. 14, no. 11, Mar. 1, 1926, pp. 121-123, 5 figs.
Protective Media. The Deterioration and Conservation of Materials (Stoffverfall und Stofferhaltung), H. L. Meurer. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 14, Apr. 3, 1926, pp. 461-467, 15 figs. Points out importance of conservation of engineering materials; disadvantages of paint as protection against corrosion; most important galvanizing processes used for rustproofing; physical and chemical adaptability; applications of metal-spray process.
Resisting Finishes. Some Corrosion Resisting Finishes. Foundry Trade Jl., vol. 33, no. 502, Apr. 1. 1926, p. 261.

CRANES

Shipbuilding. The Crane Equipment of Shipbuilding Berths, E. Smith. Shipbldg. & Shipg. Rec., vol. 27, no. 14, Apr. 8, 1926, pp. 407-412, 12 figs.

CULVERTS

Jacking Through Embankment. Culvert Pipe 105-ft. Long is Jacked Through 47-ft. Fill, E. J. Cullen. Ry. Eng. & Maintenance, vol. 22, no. 5, May 1926, pp. 192-194, 6 figs. Because of width of embankment it was necessary to push pipe in from both sides of embankment in culvert installation of Lehigh Valley.

CUPOLAS

Design. Cupola Design, E. A. Roper. Foundry Trade Jl., vol. 33, no. 503, Apr. 8, 1926, p. 272.

CUTTING METALS

Flame-Cutting Speeds. Flame-Cutting Speeds. Mech. World, vol. 79, no. 2051, Apr. 23, 1926, pp. 322-323, 7 figs. Details of Gewe automatic plate-cutting machine, which is motor-driven with adjustable speeds controlled by worm and friction drive and Gewe shaft-cutting appliance; and other cutting and profiling machines.

CYLINDERS

Heads, Machining. Ajax Cylinder-Head Production. Machy (N.Y.), vol. 32, no. 9, May 1926, pp. 707-709, 7 figs.
Cylinder Heads of the New Stutz "Eight," F. H. Colvin. Am. Mach., vol. 64, no. 17, Apr. 29, 1926, pp. 671-673, 7 figs.

D

DAMS

Earth. Old Earth Dam on the Pequannock in Northern New Jersey, J. A. Holmes. Eng. News-Rec., vol. 96, no. 19, May 13, 1926, p. 765, 3 figs.
Experimental Arch. Progress on the Experimental Arch Dam. Eng. News-Rec., vol. 96, no. 12, Mar. 25, 1926, pp. 494-495. Records of deformation, deflection and temperature to be made by two or more independent means at dam being built at Stevenson Creek, Cal.
Semi-Hydraulic Filling. Giants Spread Car-Dumped Fill for Alouette Dam, C. E. Blee. Eng. News-Rec., vol. 96, no. 17, Apr. 29, 1926, pp. 696-697, 2 figs.

DIE CASTING

Process. Die Casting (der Spritzgusz), L. Frommer, Werkstattstechnik, vol. 20, nos. 4 and 6, Feb. 15 and Mar. 15, 1926, pp. 99-120 and 177-202, 72 figs. Description of working process; die casting of zinc and aluminum. Process of filling mold in die-casting; prerequisites for obtaining perfect castings and relation of these prerequisites to die-casting apparatus; flow of metal in mold; theory of motion in ideal, loss-free flow; flow of metal in die. Pressure distribution in mold; flow phenomenon and practical application of flow tests.

DIESEL ENGINES

APPLICATION AND OPERATION. Application and Operation of Diesel Engines, G. A. Adkins and R. H. Bacon. Power Plant Eng., vol. 30, no. 9, May 1, 1926, pp. 529-532, 3 figs. Points out that conditions affecting costs must be analyzed for specific conditions. Paper presented before Chicago Section of Am. Soc. Mech. Engrs. See also Power, vol. 63, no. 17, Apr. 27, 1926, pp. 653-654, 2 figs.

BUSCH-SULZER. Busch-Sulzer Completes Diesel Test. Power Plant Eng., vol. 30, no. 10, May 15, 1926, pp. 606-607, 2 figs.

HEAT TRANSMISSION IN. Heat Transmission in Diesel Engines (Der Wärmeubergang in der Diesel-maschine), W. Nusselt. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 14, Apr. 3, 1926, pp. 468-470, 5 figs. Influence of average piston speed on heat transmission, as expressed in formula developed by author in 1923, has been most satisfactorily confirmed by tests of Nagel on a Sulzer 2-stroke marine Diesel engine of 1,600 hp. See reference to author's original article on this subject in Eng. Index 1923, p. 386.

LUBRICATION. A Problem in Diesel Engine Lubrication, F. Norton and R. R. Matthews. Indus. & Eng. Chem., vol. 18, no, 5, May 1926, pp. 480-481.

Diesel Lubrication, P. L. Scott. Indus. & Eng. Chem., vol. 18, no. 5, May 1926, pp. 477-480, 4 figs.

M.A.N. M.A.N. Double-Acting 2-Cycle Engine. Motorship (N.Y.), vol. 11, no. 5, May 1926, pp. 367-370, 6 figs.

The New Double-Acting Two-Stroke Marine Diesel Engine of the M.A.N. (Der neuer doppeltwirkende Zweitakt-Schiffsdieselmotor der M.A.N.), W. Laudahn. Schiffbau, vol. 27, no. 6, Mar. 24, 1926, pp. 147-161, 20 figs.

OIL FUELS FOR. Fuel Oils for Diesel Engines, W. A. P. Schorman. Power House, vol. 19, no. 7, Apr. 5, 1926, pp. 26-27, 2 figs.

SUPERCHARGING. New Thoughts on Supercharging Oil Engines, R. Matthews. Power, vol. 63, no. 20, May 18, 1926, pp. 774-776.

WORTHINGTON. Worthington Builds New Diesel Engine. Power Plant Eng., vol. 30, no. 8, Apr. 15, 1926, pp. 478-482, 10 figs.

DISKS

INERTIA FORCES. Inertia Forces Resulting in Moving Disks (Die resultierenden Trägheitskräfte bewegter Scheiben), H. Alt. Zeit. für angewandte Mathematik und Mechanik, vol. 6, no. 1, Feb. 1926, pp. 58-62, 10 figs.

DRILLING MACHINES

MULTIPLE-SPINDLE. Multiple Spindle Drilling Machines. Brit. Machine Tool Eng., vol. 3, no. 38, Mar.-Apr. 1926, pp. 384-390, 14 figs.

PISTON-PIN HOLES. Machines for Drilling Piston-Pin Holes Introduced in Three Sizes. Automotive Industries, vol. 54, no. 18, May 6, 1926, pp. 776-777, 3 figs.

SINGLE-HEAD. A New Machine for the Locomotive Wheel Shop. Brit. Machine Tool, Eng., vol. 3, no. 38, Mar.-Apr. 1926, pp. 379-381, 2 figs.

DURALUMIN

STRUCTURE. An Atomic Picture of Duralumin and Its Crystal Structure, Rob. J. Anderson. Franklin Inst.—Jl., vol. 201, no. 4, Apr. 1926, pp. 465-483, 16 figs. Discusses constitution from atomic point of view with view to presenting true representation of nature of this alloy; summary of conclusions; X-ray data applying to elements in duralumin; effects of cold work and heat treatment on lines in diffraction patterns of duralumin; age-hardening phenomenon.

DYNAMOMETERS

AIR-BRAKE. The Heenan-Fell Air Brake Dynamometer. Engineering, vol. 121, no. 3147, Apr. 23, 1926, p. 546.

E

EARTHQUAKES

COAL MINING, EFFECTS ON. Earthquakes, Shocks and Tremors in Relation to Coal Mining, E. O. Sincock. Fuel, vol. 5, no. 4, Apr. 1926, pp. 157-163. Experience and direct observations indicate that earthquakes, shocks and tremors do not materially, if at all, conduce to increase of falls in mines.

MOTIONS OF BUILDING DUE TO. On the Motion of Building Caused by Earthquake, H. Obata. Japanese Jl. Astronomy & Geophysics, vol. 3, no. 2, 1925, pp. 141-151, 5 figs. In addition to motion of building as a whole, different parts of rooms were subjected to different kinds of motion, on account of which bodies in room were displaced in different ways according to their positions. Conclusions based on investigations following earthquakes in Japan in 1923.

EDUCATION, ENGINEERING

CIVIL ENGINEERING. A Study of Engineering Curricula, W. C. John. Eng. Education—Jl., vol. 16, no. 8, Apr. 1926, pp. 517-549, 3 figs. Deals with subjects of entrance requirements and requirements for graduation in civil engineering.

FRESHMAN COURSE. The Freshman Engineering Problems Course, B. B. Bessesen. Eng. Education—Jl., vol. 16, no. 8, Apr. 1926, pp. 564-572. Describes course which is outgrowth of study and training given to Student Army Training Corps during war, at Oregon Agricultural College.

METALLURGY. The Metallurgical Student and the Industry. Metallurgist (Supp. to Engineer, vol. 141, no. 3670), Apr. 30, 1926, pp. 49-50. Discusses German and American system of technological training, with highly developed specialization, which author does not consider applicable to British conditions and ideas. Review of discussion at inter-university conference, held in Birmingham, Eng.

ELECTRIC DISTRIBUTION

PRACTICE. Electric Distribution Practice, D. K. Blake. Gen. Elec. Rev., vol. 29, no. 5, May 1926, pp. 330-335.

TRIPLE-PHASE. A Triple-Phase, Five-Wire Distribution System, A. A. Nims. Elec. World, vol. 87, no. 19, May 8, 1926, p. 1001, 1 fig. Suggested scheme for supplying one, two or three-phase services from same distribution system; possible adaptation to existing two-phase systems to secure three-phase advantages.

THREE-PHASE. Three-Phase Four-Wire Metering, G. D. Malcolm. Elec. Rev., vol. 98, no. 2524, Apr. 9, 1926, pp. 572-573, 1 fig.

ELECTRIC METERS

THREE-PHASE. Three-Phase Four-Wire Metering, G. D. Malcolm. Elec. Rev., vol. 98, no. 2524, Apr. 9, 1926, pp. 572-573, 1 fig.

ELECTRIC FURNACES

CARBONIZING AND HARDENING. Carbonizing and Hardening Steel. Iron Age, vol. 117, no. 11, Mar. 18, 1926, pp. 764-765, 2 figs. Continuous electric furnaces of pusher type for carbonizing automobile gears and pinions placed in operation by Hudson Motor Car Co., Detroit; represents important forward step in electric heat-treating furnace design as aid to mass production; built by Holcroft & Co., Detroit.

HIGH-FREQUENCY INDUCTION. High-Frequency Induction Furnaces (Der Hochfrequenz-Induktionsofen), F. Wever. Stahl u. Eisen, vol. 46, no. 16, Apr. 22, 1926, pp. 533-536, 6 figs. Describes high-frequency melting installation in Kaiser-Wilhelm-Institut für Eisenforschung; advantages as compared with low-frequency furnaces with annular hearth, from metallurgical and energy-saving standpoint.

ITALY. New Locomotives of the Milan-Varese-Porto Ceresio Line (Nuovi locomotori per la linea Milano-Varese-Porto Ceresio), Rivista Tecnica delle Ferrovie-Italiane, vol. 29, no. 1, Jan. 1, 1926, pp. 1-3, 1 fig.

SWITZERLAND. High-Speed Locomotives of Swiss Federal Railways (Les Locomotives à grande vitesse des chemins de fer féderaux suisses), F. Collin. Vie Technique & Industrielle, vol. 7, no. 76, Dec. 1925, pp. 160-163, and vol. 8, no. 76, Jan. 1926, pp. 235-238, 18 figs.

VIRGINIAN RAILWAY. Mechanical Designs of Virginian Electric Locomotive. Ry. Mech. Engr., vol. 100, no. 5, May 1926, pp. 272-274, 6 figs.

ELECTRIC MOTORS

CONTROL. Choosing the Control to Suit the Electric Motor and the Load, B. W. Jones. Indus. Mgmt. (N.Y.), vol. 71, no. 5, May 1926, pp. 272-277, 4 figs.

SELECTION. Considerations in the Selection of Electric Motors, J. E. Housley. Power, vol. 63, no. 20, May 18, 1926, pp. 754-756, 5 figs.

ELECTRIC MOTORS, D.C.

AIR COOLERS. Application of Surface Air Coolers to Direct-Current Machines, F. S. Bennett. Power, vol. 63, no. 18, May 4, 1926, pp. 671-672, 2 figs. Problems involved in applying closed systems of ventilation to direct-current machines; compares costs of various ways of making installations.

ELECTRIC RAILWAYS

DINING CARS. First All-Electric Dining Car. Elec. Traction, vol. 22, no. 4, Apr. 1926, pp. 191-192, 3 figs. New diner completed by Interstate Public Service Co. is equipped with electric kitchen and other apparatus.

ELECTRIC SWITCHES

AUTOMATIC EQUIPMENT. The Principles of Automatic Switching Equipment, C. Lichtenberg. Gen. Elec. Rev., vol. 29, no. 5, May 1926, pp. 347-355, 5 figs.

ELECTRIC TRANSMISSION LINES

CALCULATION. Simplified Transmission Line Calculations, E. Clarke. Gen. Elec. Rev., vol. 29, no. 5, May 1926, pp. 321-329, 6 figs. Calculations based on hyperbolic functions; operations simplified by charts; voltage and charging current at no load.

CONSTRUCTION. Overhead Line Construction, R. O. Waltham. Elec. Light & Power, vol. 3, no. 12, Dec. 1925, pp. 22-24, 80-82, and vol. 4, nos. 1, 2, 3, 4 and 5, Jan., Feb., Mar., Apr. and May 1926, pp. 27-29, 104, 106, 108 and 110; 31-33, 88, 90, 92, 94, 96, 98 and 100; 23-26 and 88; 182-186; and 26-28, 42 figs. Dec. 2, 1925: Location, stepping, gaining and framing of poles. Jan. 1926: Guying: where required, insulation of; clearances. Feb.: Conductors, climbing and working space, clearance from each other, and clearance from ground. Mar.: Locating apparatus, grounds, cutouts, switches, transformers. Apr.: Conflicts and joint usage of poles, conductor conflicts, line conflicts. May: Graded construction and strength requirements; necessity for and how applied.

ELECTRIC WELDING, ARC

AUTOGENOUS. Autogenous Welding by Means of A.C. Arc (La soudure autogène à l'arc électrique au moyen du courant alternatif), G. Burnand. Bul. Technique de la Suisse Romande, vol. 52, no. 2, Jan. 16, 1926, pp. 16-19, 9 figs. Compares oxyacetylene, d.c. and a.c. welding; types of transformers, tests of welds; gives cost data for comparison.

ELECTRODES, DEPOSIT EFFICIENCY OF. Deposit Efficiency of Electrodes, J. B. Green. Welding Engr., vol. 2, no. 4, Apr. 1926, pp. 21-24, 5 figs. Study of factors affecting percentage of electrode deposited in weld zone by metallic arc.

HYDROGEN. Atomic Hydrogen Arc Welding. Welding Engr., vol. 2, no. 4, Apr. 1926, pp. 31-32, 2 figs. Process developed in Schenectady Research Laboratory employs double tungsten electrode and jet of hydrogen gas.

Welding in an Atmosphere of Hydrogen. Forging—Stamping—Heat Treating, vol. 12, no. 4, Apr. 1926, pp. 136-139, 5 figs. Discusses two methods for producing ductile welds developed by research scientists of General Electric Co.

MILD STEEL. The Metallurgy of an Electric-Arc Weld in Mild Steel, A. G. Bissell. Am. Welding Soc.—Jl., vol. 5, no. 3, Mar. 1926, pp. 8-16, 10 figs. Discusses complicated metallurgical changes that occur in immediate vicinity of arc.

ELECTRICITY, APPLICATION OF

AGRICULTURE. Electrical Power and Agriculture, C. Turnor. World Power, vol. 5, no. 26, Feb. 1926, pp. 70-71.

ELECTROPLATING

CHROMIUM. Chromium Plating. Iron Age, vol. 117, no. 17, Apr. 29, 1926, pp. 1187-1189, 4 figs.

ELEVATORS

ELECTRIC DRIVE. Electric Drive of Elevators (La commande électrique des monte-charges et ascenseurs), A. Curchod. Revue Générale de l'Electricité, vol. 19, no. 12, Mar. 20, 1926, pp. 453-465, 12 figs.

STARTING AND STOPPING. Rates of Starting and Stopping Elevators and Their Effect on Service, H. B. Cook. Power, vol. 63, no. 19, May 11, 1926, pp. 715-718, 5 figs.

EMPLOYEES' REPRESENTATION

SYSTEM. Building Worker-Management Relations on Full Sharing of Facts, C. F. Dietz. Factory, vol. 36, no. 4, Apr. 1926, pp. 627-630, 4 figs.

EMPLOYMENT MANAGEMENT

PERSONNEL SELECTION. Problems in Personnel, E. Schlesinger. Indus. Mgmt. (N.Y.), vol. 71, no. 5, May 1926, pp. 295-297.

ENERGY

Cost of Production. Possibilities of Reducing Cost of Energy. Elec. World, vol. 87, no. 17, Apr. 24, 1926, pp. 870-871. 12,000 B.t.u. per kw-hr. seen as immediate limit with present steam cycles, better with combination cycles; capital expenditures and coal-handling costs.

ENGINEERING

Character and Definition. The Character of Engineering (Wesen der Technik), A. Reidler. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 14, Apr. 3, 1926, pp. 457-460. Author gives various definitions of purpose of engineering, its fundamental function being to ensure necessities of human life; it is defined as art of creating values through technical means, art of winning and utilizing energy from natural forces, etc.; cultural value of engineering; its misuse.

ENGINEERS

Registration. Progress of Registration for Engineers, G. E. Taylor. Professional Engr., vol. 10, no. 4, Apr. 1926, pp. 7-8. Reasons for registration; points out that one of weak points in many of existing registration laws for professional engineers is method of enforcement of act; registration in West Virginia; registration by counties, technical societies and by individuals.

Training for Executive Positions. Qualifying Engineers for High Executive Positions, H. A. Guess. Min. & Met., vol. 7, no. 233, May 1926, pp. 213-214. Essentials for new education; points out that recent graduate usually takes job as junior engineer; hence schools should give thorough training in engineering essentials. Review of discussion at joint meeting of New York Sections of four National Societies.

ENTROPY

Absolute-Constant. Absolute-Constant of Entropy and Its Applications (La constante assoluta dell'entropia e le sue applicazioni), F. Rasetti. Nuovo Cimento, vol. 3, no. 1-2, Jan.-Feb. 1926, pp. 67-85.

Definition. A New Statistical Definition of Entropy (Eine neue statistische Definition der Entropie), M. Planck. Zeit. für Physik, vol. 35, no. 3, Dec. 23, 1925, pp. 155-169.

EXCAVATION

Queenstown-Chippawa Canal. Rock Excavation for Queenstown-Chippawa Canal, A. V. Trimble. Gen. Contracting, vol. 65, no. 2, Feb. 17, 1926, pp. 53-59, 8 figs.

EXECUTIVES

Relations of Chief to Associates. The Relations of the Chief Executive to His Principal Associate Executives, H. S. Person. Taylor Soc.—Bul., vol. 11, no. 2, Apr. 1926, pp. 47-51. Discusses fundamental and detailed aspects of relationship.

Training for Automobile Industry. The Training of Future Executives, J. Younger. Soc. Automotive Engrs.—Jl., vol. 18, no. 5, May 1926, pp. 479-481.

F

FATIGUE

Industrial. Fatigue from a New Point of View, H. W. Haggard. Mfg. Industries, vol. 11, no. 5, May 1926, pp. 363-366.

FILTRATION PLANTS

Pneumatic-Alum Conveyor. Pneumatic Filter-Alum Conveyor for Minneapolis Water Filters, J. A. Jensen. Eng. News-Rec., vol. 96, no. 19, May 13, 1926, pp. 766-768, 2 figs. Bulk granulated alum moved from freight cars to storage bin and to service hoppers above dry-feed machines.

FIREDAMP

Electric Ignition. The Electric Ignition of Firedamp, R. V. Wheeler. Colliery Guardian, vol. 131, no. 3406, Apr. 9, 1926, pp. 850-851, 2 figs.

FLOOD-CONTROL

Paris, France. Flood-Protection Plan Proposed for Paris District. Eng. News-Rec., vol. 96, no. 19, May 13, 1926, p. 773. Latest project would divert almost 1,000,000 cu. m. per hour from Marne at Neuilly to Seine at LaBriche. (Abstract.) Translated from Génie Civil.

FLOORS

Reinforced-Concrete. Design of Floors and Foundations. Concrete & Constr. Eng., vol. 21, no. 4, Apr. 1926, pp. 332-334, 3 figs. New system of reinforced-concrete by which saving of over $500,000 was effected in construction of new Leeds sewage disposal works; it is claimed system has very economical application in case of wide-span floors for factories, warehouses, hospitals and similar structures.

FLOW OF FLUIDS

Measurement. The Measurement of Fluid Flow, P. F. Foster. Mech. World, vol. 79, nos. 2035, 2039, 2043, 2046 and 2049, Jan. 1, 29, Feb. 26, Mar. 19 and Apr. 9, 1926, pp. 10-11, 86-87, 165-166, 227-228 and 282-283, 12 figs. Jan. 1: Measurement of rate of discharge for small flows by orifice method. Jan. 29: Employment of large uncalibrated orifice for flow measurement, etc. Feb. 26: Principle and development of Venturi meter. Mar. 19: Application of Bernoulli's theorem on flow of gas. Apr. 9: Methods of measuring air speeds.

FLOW OF WATER

Conduits. Flow of Water in 54-in. Concrete Conduit, Denver, Colo., F. C. Scobey. Eng. News-Rec., vol. 96, no. 17, Apr. 29, 1926, pp. 678-680, 3 figs.

Open Channels. The Measurement of Large Volumes of Water, F. J. Taylor. Commonwealth Engr., vol. 13, no. 7, Feb. 1, 1926, pp. 225-227, 6 figs.

FLUE-GAS ANALYSIS

CO_2 and CO Recorders. The Mono CO_2 Distant Indicator. Power Engr., vol. 21, no. 241, Apr. 1926, pp. 146-147, 2 figs.

FLUMES

Intakes for. Intakes for High-Velocity Flumes, C. W. Harris and J. B. Hamilton. Univ. Wash.—Bul., no. 33, Sept. 1, 1925, pp. 5-27, 12 figs. Ideal shape of intake; design; apparatus and methods of conducting tests; selection of type of intake.

FLYWHEELS

Failures. Flywheel Failures. Universal Engr., vol. 43, no. 4, Apr. 1926, pp. 22-23, 1 fig. Discusses common causes of overspeeding or racing.

FORESTRY

Mine-Timber, Supply for. Many Coal Companies Plant Forests to Provide Timbers for Use in Their Mines, N. G. Alford. Coal Age, vol. 29, no. 15, Apr. 15, 1926, pp. 532-535, 7 figs. Protection from fire highly important; natural reseeding adequate with some species; fruit trees thrive on stripped ground; thinning of second growth means of assuring rapid renewal of old forests.

Research Developments. Recent Developments in Forest Products Research in Relation to Forestry, J. D. Rue. Jl. of Forestry, vol. 24, no 3, Mar. 1926, pp. 237-242. Review of outstanding developments which have resulted from investigation of processes of manufacture and application of forest products, considers them especially as they relate to management and reproduction of forests.

Silviculture, Canada. Silviculture in Canada, D. R. Cameron. Jl. Forestry, vol. 24, no. 4, Apr. 1926, pp. 332-346. By Silviculture is understood treatment of forests in such manner as to ensure continuous production of timber and other forest products for uses of trade and industry.

FORGING.

Machine. Marked Progress in Machine Forging, C. D. Harmon. Forging—Stamping—Heat Treating, vol. 12, no. 4, Apr. 1926, pp. 122-126, 10 figs. Comparison of machine forging and drop forging; points out that quality of machine forgings has been improved to degree not generally appreciated.

FORGING MACHINES

Universal. Universal Forging Machine. Machy. (Lond.), vol. 28, no. 706, Apr. 8, 1926, pp. 37-39, 5 figs.

FORGINGS

Internal Defects. Internal Defects in Forgings, F. W. Rowe. Metal Industry (Lond.), vol. 28, no. 16, Apr. 16, 1926, p. 365, 2 figs. Case of internal defect in forging of 3½ per cent nickel chrome-steel which had been oil hardened and tempered to 55-65 tons after rough machining.

FOUNDATIONS

Roads and Bridges. The Necessity of Adequate Foundations for Roads and Bridges, W. J. Moore. Contract Rec., vol. 40, no. 13, Mar. 31, 1926, pp. 313-314, 1 fig. Discusses failures caused by neglect to observe engineering principles or by poor workmanship; counteracting water; inadequate piling.

Underpinning. Brick Wall Underpinned to Remove Proscenium Arch, A. H. Taylor, Eng. News-Rec., vol. 96, no. 17, Apr. 29, 1926, p. 681, 1 fig.

FOUNDRIES

Aluminum. Aluminum Foundry Practice, G. Mortimer. Foundry Trade Jl., vol. 33, nos. 503, 504, 505 and 506, Apr. 8, 15, 22 and 29, 1926, pp. 279-281, 293-295, 307-310 and 329-332, 16 figs. Apr. 8: Value of adding copper; disability of zinc; use of manganese; making alloys. Apr. 15: Melting practice and temperature control; plumbago crucibles; iron pots; reverberatory-type furnace; importance of pouring temperature; effect of occluded gases, total shrinkage and slow cooling. Apr. 22: Sand casting. Apr. 29: Fixing height of pouring; use of snap flasks; dressing; soldering; welding; plugging and doping; recovery of waste material.

Artificial Illumination. Artificial Illumination in Foundries. Iron & Steel Engr., vol. 3, no. 4, Apr. 1926, pp. 179-181, 2 figs.

Automobile Plants. Making Cadillac Car Castings. Foundry, vol. 54, no. 10, May 15, 1926, pp. 383-387, 10 figs.

Cost Accounting. Are You Making Wild Guesses or Estimates? A. E. Grover. Foundry, vol. 54, no. 8, Apr. 15, 1926, pp. 304-307 and 325.

Fluxes, Application of. Application of Fluxes, Etc., in the Foundry, W. J. May. Mech. World, vol. 79, no. 2048, Apr. 2, 1926, pp. 266-267.

Materials Handling. Lifting and Shifting Appliances in Foundries, H. H. Moore. Foundry Trade Jl., vol. 33, no. 502, Apr. 1, 1926, pp. 247-253 and (discussion) 253-254, 6 figs.

Research, Application of. Some Applications of Research to Modern Foundry Practice, J. E. Fletcher. Instn. Mech. Engrs.—Proc., no. 6, 1925, pp. 1243-1261 and (discussion) 1261-1273, 8 figs. Author seeks to illustrate example of method of attack used in applying results of research to current foundry practice; skin defects, shrinkage and contraction; trend of future developments in cast iron.

Scientific Control. Scientific Control in a Foundry, B. E. Williams. Rugby Eng. Soc.—Proc., vol. 19, session 1924-5, pp. 35-58, 23 figs.

FREIGHT HANDLING

Mechanical Equipment. Mechanizing Handling of Freight (Die Mechanisierung des Güterumschlags), D. Przygode. Glasers Annalen, vol. 98, nos. 6 and 7, Mar. 15 and Apr. 1, 1926, pp. 87-96 and 112-113, 8 figs.

FRICTION

Aspects. Some Aspects of Friction, W. A. Benton. Engineer, vol. 141, nos. 3667, 3668 and 3669, Apr. 9, 16 and 23, 1926, pp. 403-405, 430-431 and 458-459, 6 figs.

Fuels. *See Coal; Oil Fuel; Pulverized Coal.*

FURNACES, ANNEALING

Tunnel. Unusual Tunnel Annealing Furnace. Iron Age, vol. 117, no. 20, May 20, 1926, pp. 1410-1413, 7 figs.

FURNACES, HEATING

Regenerative. Siemens Regenerative Ingot-Heating Furnace with Blast-Furnace-Gas Firing (Siemens-Regenerative-Stossofen mit Hochfengas-Feuerung und Flammenteilung), A. Sprenger. Stahl u. Eisen, vol. 46, no. 11, Mar. 18, 1926, pp. 361-368, 8 figs. Describes furnace with new type of sliding rails and satisfactory results obtained under prolonged operation; important feature is erection of furnace at considerable distance from rolling mill in a special building; other features are waste-heat utilization, arrangement of sliding rails, etc.

G

GAUGES

Optical Instruments for. *See Optical Instruments.*

GARBAGE DISPOSAL

Trailer System. The Trailer System of Garbage Collection in Milwaukee, J. P. Schwada. Am. City, vol. 34, no. 4, Apr. 1926, pp. 367-372, 17 figs.

GARNET

Abrasive. Abrasive Garnet Production, W. M. Myers and C. O. Anderson. Abrasive Industry, vol. 7, nos, 3, 4 and 5, Mar., Apr. and May 1926, pp. 87 and 89, 112-113 and 153-154. Preliminary report on most important sources, methods by which it is recovered, and manner in which it is utilized. Apr.: Mining and cleaning; deposits in United States and Canada. May: Marketing methods; how garnet is utilized in various industries; future developments.

GAS PRODUCERS

Operation. Operation of Gas Producers, F. S. Bloom. Fuels & Furnaces, vol. 4, no. 4, Apr. 1926, pp. 451-452 and 458, 5 figs. Design and operation of jet blowers and turbo-blowers.

GAS TURBINES

Advantages and Limitations. Gas and Oil Turbines (Turbine à gaz et à pétrole), J. Deschamps. Technique Moderne, vol. 18, nos. 5 and 6, Mar. 1 and 15, 1926, pp. 152-153 and 182-183.

GEARS

Hob-Measuring Machines. Recent Developments at the National Physical Laboratory. Machy. (Lond.), vol. 28, no. 708, Apr. 22, 1926, pp. 111-113, 3 figs. Special machine for hobs; pantograph platform; micrometer for moving pantagraph; simplified design.

Instrument. Die and Assembling Fixture for Instrument Gears, H. M. Groff. Machy. (N.Y.), vol. 32, no. 9, May 1926, pp. 726-729, 6 figs.

Tooth Standardization. Standardization of Gear Teeth (Ueber die Normung der Zahnform), Bauersfeld. Maschinenbau, vol. 5, no. 6, Mar. 18, 1926, pp. 258-262, 3 figs.

GLUES

Polishing for. The Use and Treatment of Glue for Polishing, B. H. Divine. Automotive Mfr., vol. 67, no. 12, Mar. 1926, pp. 22-24.

GOLD DEPOSITS

Ontario and Quebec. Localization of Mineral Deposits of Northern Ontario and Quebec, G. W. Bain. Can. Min. Jl., vol. 47, no. 17, Apr. 23, 1926, pp. 440-443, 3 figs.

GOLD MINES

South African. A Visit to Gold Mines of South Africa, T. F. Sutherland. Can. Min. Jl., vol. 47, no. 15, Apr. 9, 1926, pp. 401-402.

GOVERNORS

Hydro-Electric Units. Governors for Automatic Hydro-Electric Units, J. F. Spease. Gen. Elec. Rev., vol. 29, no. 5, May 1926, pp. 356-359, 2 figs. Automatic operation requires governor accessories; starting solenoid; accelerating oil dashpot; gate-locking device; actions under various service conditions.

GRAPHITE

Lubrication Tests. The Role of Graphite in Lubrication, F. L. Koethen. Indus. & Eng. Chem., vol. 18, no. 5, May 1926, pp. 497-499, 5 figs.

GRINDING

Locomotive Parts. Grinding of Locomotive Parts, K. H. Lansing. Abrasive Industry, vol. 7, no. 5, May 1926, pp. 149-150, 4 figs.

GYPSUM

Manufacture. The Technology of the Manufacture of Gypsum Products. U. S. Bur. Standards—Circular, no. 281, Jan. 22, 1926, 81 pp., 39 figs. Describes mines, quarries and pits from which raw material is obtained, together with methods of working; types of calciners in use and approximate figures concerning efficiency of each; processes through which material passes, with machinery employed.

Production, 1924. Gypsum in 1924, K. W. Cottrell. U. S. Bur. of Mines—Mineral Resources, no. 11:19, Mar. 27, 1926, pp. 231-240.

H

HAMMERS

Pneumatic. Steam and Compressed-Air Hammers (Damp- og Lufthamre), F. Johansen. Ingeniören, vol. 35, no. 5, Jan. 30, 1926, pp. 37-46, 16 figs. Calculation of work from weight, velocity and height of fall; design of steam hammers for swaging; pneumatic hammers and comparative test data showing saving effected by latter.

HARBORS

Current Strength in Tidal-Basin Entrance. Determining Current Strengths in Tidal-Basin Entrances, H. A. Marmer. Eng. News-Rec., vol. 96, no. 16, Apr. 22, 1926, p. 656. Formulas based on area of basin and range of tide found useful in planning harbour improvements.

HEAT TRANSMISSION

Heat-Conduction Coefficients. The Role of Heat Transmission and Despretz's Heat-Conduction Coefficients (Die Rolle des Wärmeübergangs beim Vergleich von Wärmeleitzahlen nach Despretz)), M. Jacob and S. Erk. Zeit. für Physik, vol. 35, no. 8-9, Feb. 4, 1926, pp. 670-682, 4 figs.

Nature of. What We Know To-day of the Nature of Heat Transmission (Was wir heute über die Natur des Wärmeübergangs wissen), Lent. Wärme, vol. 49, no. 9, Feb. 26, 1926, pp. 145-149, 5 figs; also translation in Mech. Eng., vol. 48, no. 6, June 1926, pp. 610-612, 4 figs.

HEATING, ELECTRIC

Water. The Heating of Water by Electricity for Domestic Purposes, S. Parker-Smith and N. M. Macelwee. World Power, vol. 5, no. 26, Feb. 1926, pp. 78-89, 17 figs.

HEATING, HOT-AIR

Houses. Warm Air Furnace Heating, A. W. Lordahl. Am. Gas Jl., vol. 124, no. 15, Apr. 10, 1926, pp. 310-312.

HEATING, HOUSE

Hot-Air. The Practical Side of Warm Air House Heating, O. J. Kuenhold. Gas Age-Rec., vol. 57, no. 15, Apr. 10, 1926, pp. 503-506, 538 and 540.

HEATING, STEAM

Central. Heat Transmission in Central Heating Plants (Die Wärmefortleitung bei Fernheizkraftwerken), M. Maurer. Siemens-Zeit., vol. 6, no. 1, Jan. 1926, pp. 29-36, 8 figs. Discusses in detail hot-water and steam-heating systems, calculation of heat required, losses in transmission due to cooling, etc.; bleeder turbines, overall efficiency; characteristics of each type.

Rapid Development shown in Central Heating. Power Plant Eng., vol. 30, no. 10, May 15, 1926, pp. 611-612.

HIGH VOLTAGES

Standardization. High Tension Standardization with Discretion, M. M. Samuels. Elec. Light & Power, vol. 4, no. 5, May 1926, pp. 171-175, 4 figs. Proposes specifications covering auxiliary equipment, such as disconnecting switches, air-break switches, bus supports, choke coils and small-capacity lighting arresters and small-customer-type substations.

HIGHWAYS

Mountain. The Broadmoor-Cheyenne Mountain Highway, C. H. Bryson. Contractors' & Engrs.' Monthly, vol. 12, no. 4, Apr. 1926, pp. 45-49, 3 figs.

Surface Selection. How Should a Road Surface be Selected? E. A. James. Contract Rec., vol. 40, no. 14, Apr. 7, 1926, pp. 332-334. Influence on choice of suitable type of highway; traffic census is not proper guide; planning for progressive construction. Paper read before Ont. Good Roads Association.

HOBBING MACHINES

Automatic Gear. Gear Hobbers Equipped with Hydraulic Table Load Balancing Device. Iron Age, vol. 117, no. 15, Apr. 15, 1926, p. 1063, 2 figs.

HOUSES

Steel Framed. The Steel Framed House, J. C. Broderick. Am. Architect, vol. 129, no. 2495, Apr. 20, 1926, pp. 467-474, 8 figs.

HYDRAULIC TURBINES

Cavitation. Turbines and the Cavitation Problem, E. Englesson. Can. Engr., vol. 50, no. 15, Apr. 13, 1926, pp. 471-474, 6 figs. With particular reference to Kaplan and propeller turbines; cause and effect of cavitation and its serious consequences; conclusions arrived at by Committee of British Admiralty; factors affecting cavitation limit; cavitation laboratory at Verkstaden; experiments with oscilloscope.

Characteristics. Characteristics of Hydraulic Turbines and the Choice of a Turbine (Des caractéristiques des turbines hydrauliques pour groupes electrogènes et du choix de ces machines), G. Routin. Société Française des Electriciens—Bul., vol. 6, no. 53, Jan. 1926, pp. 33-34, 1 fig.

Governors. New Acceleration Governor by Escher Wyss & Co. (Nouveau regulateur " à acceleration " de la Société Escher Wyss & Co.), Bul. Technique de la Suisse Romande, vol. 52, no. 5, Feb. 27, 1926, pp. 50-53, 3 figs. Design and operation of Gagg regulator, assuring very smooth running of servo-motors.

High-Speed. Recent Developments in Hydraulic Turbines, F. Johnstone-Taylor. Elec. Times, vol. 69, no. 1799, Apr. 8, 1926, pp. 452-453, 4 figs.

Ice and Trash Removal. Removal of Ice and Trash in Vertical Turbine Installations. Power, vol. 63, no. 19, May 11, 1926, p. 705, 1 fig. Design, patented by R. Koechlin, Switzerland, tends to be well adapted to large flow and low head, and permits removal of ice and floating bodies over entire length of building without obstructing turbines and without requiring supplementary canals or lengthening turbine room.

Kaplan. Economic Use of Water Power for Generating Electricity with Special Reference to Water Storage and Field of Application of Kaplan Turbine (Ausnutzung der Wasserkräfte zur elektrischen Energieerzeugung mit Berücksichtigung der hydraulischen Speicherung und der Anwendungsmöglichkeiten der Kaplanturbine), W. Meyer. Elektrotechnischer Anzeiger, vol. 43, nos. 27 and 28, Apr. 3 and 7, 1926, pp. 321-327 and 333-335.

Regulation. Regulation of High-Speed Hydraulic Turbines, J. S. Carpenter. Power, vol. 63, no. 20, May 18, 1926, pp. 783-784, 2 figs. How operating characteristics of high-speed turbine differ from those of moderate-speed machine and how this affects speed regulation of unit; how to calculate speed regulation.

Sweden. The Biggest Water Turbines in the World. Swedish Export, vol. 10, no. 4, Apr. 1926, pp. 40-41, 3 figs.

HYDRO-ELECTRIC DEVELOPMENTS

Georgia. The Bartlett's Ferry Hydro-electric Development, H. A. Hageman and T. B. Parker. Boston Soc. Civ. Engrs.—Jl., vol. 13, no. 3, Mar. 1926, pp. 93-125, 15 figs. Engineering and construction features of hydro-electric stations at Chattahoochee River, operated by Columbus Electric & Power Co.; in planning development principal consideration was given to analysis of stream-flow records above site; type, location and design of structures required; selection of hydro-electric machinery and appurtenances; construction equipment and its arrangement.

Ontario. Developments of the Hydro-Electric Power Commission of Ontaric, F. A. Gadby. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 5, May 1925, pp. 911-941, 12 figs. Describes power developments of Commission; administration; sources of power supply; systems operated and plants constructed by Commission; Queenston-Chippawa development; Nipigon River development; Central Ontario system.

HYDRO-ELECTRIC PLANTS

Operating Schedules. Operating Schedules and Their Use in Hydro-Electric Plants, P. F. Kruse. Power, vol. 63, no 15, Apr. 13, 1926, pp. 561-564, 5 figs. Methods employed in working out operating schedule that has been adopted in large hydro-electric plant; this schedule has been applied to good advantage in operation of station.

Reconstruction. Reconstructing a Hydro-Electric Station, W. Brenton. Elec. Light & Power, vol. 4, no. 5, May 1926, pp. 100-103 and 105, 5 figs.

South Carolina. The Catawba Hydro-Electric Plant of the Southern Power Company. Power, vol. 63, no. 19, May 11, 1916, pp. 700-702, 5 figs.

I

ICE PLANTS

DIESEL-ENGINED. Diesel Engine-Driven Ice Plants, E. Michel. Power House, vol. 19, no. 7, Apr. 5, 1926, pp. 21-22, 3 figs.
ORANGE-CAR ICING PLANT. New Refrigerating Plant to Ice Florida Orange Cars. Power, vol. 63, no. 17, Apr. 27, 1926, pp. 635-637, 6 figs.

INDUSTRIAL MANAGEMENT

AUTOMOTIVE INDUSTRY. What Executives Can Learn from the Automotive Industry, J. B. Webb. Indus. Mgmt. (N.Y.), vol. 71, nos. 2, 3, 4 and 5, Feb., Mar., Apr. and May 1926, pp. 65-69, 151-156, 230-234 and 298-301, 30 figs.
BASIC PRINCIPLES. Fundamental Principles of Scientific Management (Grundsätze der Betriebswissenschaft), F. Meyenberg. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 17, Apr. 24, 1926, pp. 553-555.
BUDGETARY CONTROL. Major Results of Budgetary Control, W. S. Clithero. Mfg. Industries, vol. 11, no. 5, May 1926, pp. 343-346.
BUSINESS FORECASTING. Scientific Business Forecasting, J. L. Stone and S. L. Kederski. Taylor Soc.—Bul., vol. 11, no. 2, Apr. 1926, pp. 52-61, 6 figs.
DEPARTMENTAL MANAGEMENT. Putting Responsibility Up to Each Department, F. H. Colvin. Am. Mach., vol. 64, no. 14, Apr. 8, 1926, pp. 543-545, 4 figs.
EXECUTIVE CONTROL. The Technic of Executive Control in Shop Management, W. Clark. Soc. Indus. Engrs.—Bul., vol. 8, no. 3, Mar. 1926, pp. 11-17.
FINANCIAL AND INDUSTRIAL INVESTIGATION. Operating and Balance Sheet Ratios, A. Andersen. Mfg. Industries, vol. 11, no. 5, May 1926, pp. 351-354. Ratios as indices to operations; types and significance of ratios; temporary financing for fluctuations; ratio of net worth to total capital employed; eliminating influence of depreciation; ratio of stock equities to net worth; importance of earned surplus.
GENERAL ADMINISTRATION. Trends in General Administration, J. O. McKinsey. Taylor Soc.—Bul., vol. 11, no. 2, Apr. 1926, pp. 79-80.
IMPROVED METHODS. Improved Methods Double Production, C. F. O'Connor. Mfg. Industries, vol. 11, no. 5, May 1926, pp. 369-371, 2 figs.
IMPROVED WORKING CONDITIONS. Improved Working Conditions in the Factory (Der Mensch in der Fabrik), E. Sachsenberg. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 17, Apr. 24, 1926, pp. 556-562, 28 figs.
INVENTORY CONTROL. The Control of Inventory Through the Scientific Determination of Lot Sizes, H. S. Owen. Indus. Mgmt. (N.Y.), vol. 71, no. 5, May 1926, pp. 306-310, 6 figs.
MANUFACTURE AND SALES CO-ORDINATION. Balancing Manufacturing and Distribution, H. S. Dennison. Taylor Soc.—Bul., vol. 11, no. 2, Apr. 1926, pp. 81-82.
MAUNFACTURING DESIGN AND PRODUCTION. Influence of Design on Production, E. Buckingham. Mech. Eng., vol. 48, no. 5, May 1926, pp. 442-444.
MOTION STUDY. *See Motion Study.*
PRODUCTION INCENTIVES. Production Incentives at the Curtis Publishing Company, W. D. Fuller. Taylor Soc.—Bul., vol. 11, no. 2, Apr. 1926, pp. 80-81.
SALES PROGRAMME. The First Step in a Market Survey, H. L. Keely. Mfg. Industries, vol. 11, no. 5, May 1926, pp. 355-358, 1 fig. Practical methods to determine what, where, whom and how of manufacturer's sales program.
SMALL FACTORIES. Capitalizing the Advantages of the Small Factory, D. S. Cole. Indus. Mgmt. (N.Y.), vol. 71, no. 5, May 1926, pp. 311-316.
TIME STUDY. *See Time Study.*
WASTE ELIMINATION. *See Waste Elimination.*

INDUSTRIAL PLANTS

LABOR-SAVING EQUIPMENT. Labor-Saving Equipment Feature New Westinghouse Air Brake Plant, G. W. Wildin. Mfg. Industries, vol. 11, no. 5, May 1926, pp. 337-342, 9 figs. Layout of building; foundry and machine shop and their equipment.

INDUSTRIAL RELATIONS

RAILWAYS. Personnel Activities of the Delaware and Hudson Railroad, W. W. Bates. Taylor Soc.—Bul., vol. 11, no. 2, Apr. 1926, pp. 62-67.

INSULATION, HEAT

ECONOMICAL THICKNESS. Choosing Economical Thickness of Heat Insulation, L. E. Whitaker. Power, vol. 63, no. 20, May 18, 1926, pp. 726-766, 8 figs. Presents charts which supply rational and easily workable basis for choosing most economical thickness of heat insulation for any given set of conditions.
REFRIGERATING PLANTS. Calculation of Insulation in Refrigerating plants (Die Bemessung von Kälteschutzmitteln), I. S. Cammerer. Zeit. für die gesamte Kälte-Industrie, vol. 33, nos. 3 and 4, Mar. and Apr. 1926, pp. 34-38 and 52-56, 9 figs. Discusses insulation of refrigerating equipment from technical and economic standpoints; minimum thickness of insulation to avoid precipitation of moisture at surface of insulation.

INTERNAL COMBUSTION ENGINES

FRICTION LOSSES. Friction Losses in Explosion Engines (Pertes par frottement dans les moteurs à explosion)), Champsaur. Technique Automobile et Aérienne, vol. 17, no. 132, 1926, pp. 1-8, 6 figs.
IGNITION. High-Tension Ignition for Internal-Combustion Engines (Die Hochspannungszündung für Verbrennungsmotoren und neue Wege ihrer Entwicklung), H. Pickerott. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 17, no. 4, Feb. 27, 1926, pp. 73-77, 5 figs.
JACKET WATER FOR. Jacket Water for Internal-Combustion Engines. Power Engr., vol. 21, no. 241, Apr. 1926, p. 134-135, 2 figs.
SUPERCHARGING. Mixing and Ignition in Supercharged Engines. Nat. Advisory Committee for Aeronautics—Tech. Memorandums, no. 360, Apr. 1926, 26 pp., 19 figs. For carburetor engines which work with preliminary compression of charging mixture, there are 2 principal methods of mixing, with suction carburetor and pressure carburetor; effect of current transformer on process of discharging; advantage of current transformer. Translated from Motorwagen, Dec. 10, 1925. See reference to original article in Engineering Index 1925, p. 46.
See also Airplane Engines; Automobile Engines; Diesel Engines; Oil Engines; Semi-Diesel Engines.

IRON CASTINGS

DEFECTS. Causes of Defective Casting. Iron Age, vol. 117, no. 19, May 13, 1926, p. 1349, 1 fig. Interstate Commerce Commission report by physicist points out physical errors in truck frame that led to railroad wreck.
MACHINABILITY. Factors Affecting Machinability of Castings (Facteurs influençant l'usinabilité de la fonte), Fonderie Moderne, vol. 20, Mar. 1926, pp. 72-75, 10 figs. Discusses presence of carbon in form of graphite and its abrasive effect on cutting tools; explains this abrasion by micrographic study of structure of castings.

IRON DEPOSITS

CUBA. Iron-Ore Deposits of Cuba, O. R. Kuhn. Eng. & Min. Jl.-Press, vol. 121, no. 15, Apr. 10, 1926, pp. 607-610, 6 figs.
NEW FOUNDLAND. Wabana Ore from an Island of Iron, O. R. Kuhn. Iron Age, vol. 117, no. 18, May 6, 1926, pp. 1264-1266, 3 figs.

IRON MINES

MINNESOTA. The Mesabi Iron Company Enterprise, W. G. Swart. Min. Congress Jl., vol. 12, no. 4, Apr. 1926, pp. 267-272, 7 figs.

IRON ORES

BENEFICIATION. Improving Low-Grade Iron Ores, M. C. Lake. Iron Age, vol. 117, no. 20, May 20, 1926, pp. 1409 and 1474-1475. Gives data showing depreciation of Lake Superior ore reserves and outlines what has been done in way of beneficiation. (Abstract.) Paper read before Asso. Tech. Societies of Cleveland.

INSULATING MATERIALS, ELECTRIC

THIOLITE. Thiolite, a New Composite Insulator. Elec. World, vol. 87, no. 17, Apr. 24, 1926, p. 850. Review of report by A. Samuel before French Academy of Sciences of new material which has no odor, softens at 80 deg. cent. under atmospheric pressure and fuses under pressure of few kilograms at 150 deg. cent., without giving off any gas; it is stated that samples constructed four years ago have shown no alteration whatever.

INSULATORS, ELECTRIC

PORCELAIN. Testing Porcelain Insulators Under Artificial Rain, R. T. Fleming. Elec. Rev., vol. 98, nos. 2525 and 2526, Apr. 16 and 23, 1926, pp. 612-615, 11 figs.

L

LABORATORIES

HYDRAULIC. New Testing Laboratory (La nuova Sala Sperimentale delle "Construzioni Meccaniche Riva"), F. Marzolo. Energia Elettrica, vol. 3, no. 2, Feb. 1926, pp. 93-103, 25 figs.

LATHES

ARBOUR FOR HOLDING GEAR BLANKS. Lathe Arbour for Holding Gear Blanks, R. Mawson. Machy. (N.Y.), vol. 32, no. 9, May 1926, p. 717, 1 fig.
TURRET. Cutting Turret Lathe Time on the Part. Can. Machy., vol. 35, no. 14, Apr. 8, 1926, pp. 16-17.
Gisholt Turret Lathes. Machy. (N.Y.), vol. 32, no. 9, May 1926, pp. 745-747, 4 figs. New line of heavy ball-bearing lathes placed on market by Gisholt Machine Co., Madison, Wis. See also description in Am. Mach., vol. 64, no. 17, Apr. 29, 1926, pp. 687-689, 4 figs.

LEATHER

MANUFACTURE. A Chemico-Histological Study of Leather Manufacture, H. G. Turley. Am. Leather Chemists' Assn.—Jl., vol. 21, no. 3, Mar. 1926, pp. 117-156, 21 figs., partly on supp. plates.

LIGHTING

DAYLIGHTING. Further Experimental Data on the Prediction of Daylight from Windows, H. H. Higbie and A. Levin. Illum. Eng. Soc.—Trans., vol. 21, no. 4, Apr. 1926, pp. 373-380, 5 figs. Additional data to that contained in paper published Mar. 1926, issue of Transactions; predicted distribution of daylight illumination from windows in building are verified by means of photometric measurements.
PRACTICAL ENGINEERING. Practical Illuminating Engineering, A. L. Powell. Illum. Eng. Soc.—Trans., vol. 21, no. 4, Apr. 1926, pp. 381-396.
STADIUM. Lighting Scheme for the Philadelphia Municipal Stadium, G. B. Regar. Illuminating Eng. Soc.—Trans., vol. 21, no. 4, Apr. 1926, pp. 409-412, 1 fig. Details in connection with construction and lighting of new stadium; system to be installed for illumination of playing field which is to be floodlighted, lighting of stands, and also of ground surrounding structure.
STREET. Carrier-Current Control of Street Lighting, L. H. Junken. Gen. Elec. Rev., vol. 29, no. 5, May 1926, pp. 368-370, 3 figs.

LIGHTNING ARRESTERS

DESIGN PROBLEMS. Lightning and Lightning Arresters, B. J. McCarthy. Am. Ry. Assn. (Signal Section)—Proc., vol. 23, no. 4, Apr. 1926, pp. SC317-SC327, 5 figs.
REQUIREMENTS. Requirements of Lightning Arresters and Factors Effecting Their Performance, E. D. Tanzer. Iron & Steel Engr., vol. 3, no. 3, Mar. 1926,

LIGHTING

FACTORIES AND SCHOOLS. Report of L. B. Marks, Chairman of Committee on Lighting of Factories and Schools, International Commission on Illumination. Illum. Eng. Soc.—Trans., vol. 21, no. 4, Apr. 1926, pp. 402-408.

LIMESTONE

MANITOBA. Manitoba Limestone from the Tyndall Area, H. B. Lumsden. Can. Inst. of Min. & Metallurgy—Bul., no. 168, Apr. 1926, pp. 504-518, 11 figs.

LIQUIDS

HEAT CONVECTION IN. Heat Convection (Beiträge zur Frage der Wärmekonvektion), B. Gündel. Annalen der Physik, vol. 78, no. 8, Jan. 1926, pp. 697-742, 6 fis.

LOCKS

LIFT GATES. Heavy Lift Gate at Lockport Lock of Illinois Waterway, W. M. Smith. Eng. News-Rec., vol. 96, no. 18, May 6, 1926, pp. 722-723, 7 figs.

LOCOMOTIVES

BRAKE-POWER CALCULATION. Calculating Brake Power of Locomotives, G. Norman. Machy. (Lond.), vol. 28, no. 707, Apr. 15, 1926, pp. 80-81, 2 figs. Author considers actual problem, viz., to design brake mechanism of 2-6-0 locomotive with 8-wheeled tender; giving engine-brake pressure equal to half the weight of engine in working order; tender vacuum-brake pressure being equal to one-half total weight of tender under like conditions.
COMPOUND. Remarkable Four-Cylinder Compound Locomotives. Eng. Progress, vol. 7, no. 4, Apr. 1926, pp. 95-97, 6 figs.

ELECTRIC. *See Electric Locomotives.*
4-4-0. New 4-4-0 Locomotive, Southern Railway. Ry. Gaz., vol. 44, no. 16, Apr. 16, 1926, pp. 557-558, 3 figs.
FREIGHT. Locomotives Built to Fit Traffic Needs. Ry. Rev., vol. 78, no. 19, May 8, 1926, 66. 827-829, 6 figs.
INTERNAL COMBUSTION. Gasoline-Driven Locotractors (Les locotracteurs à essence), M. Polart. Revue Générale des Chemins de Fer, vol. 45, no. 3, Mar. 1926, pp. 197-203, 4 figs.
LIGNITE-BURNING. Million Dollar Saving in Fuel Consumption, M. A. Daly. Ry. Rev., vol. 78, no. 19, May 8, 1926, pp. 818-819, 2 figs.

LUBRICATING OILS

AUTOMOBILE ENGINES. Motor Carbon Deposits Formed under Controlled Conditions from Typical Automobile Oils, C. J. Livingstone, S. P. Marley and W. A. Gruse. Ind. Eng. Chem., vol. 18, no. 5, May 1926, pp. 502-504, 3 figs.
LUBRICATING VALUES. Comparison of Lubricating Efficiencies of Oils and Some of Their Physical and Chemical Properties, M. V. Dover. Ind. Eng. Chem., vol. 18, no. 5, May 1926, pp. 499-501, 6 figs. Comparison of following properties of 3 mineral oils and 1 vegetable (olive) oil; iodine number, acid number, flash point, specific gravity, viscosity, surface tension interfacial and efficiency as lubricants; study of clogging effect of iron or steel capillaries by two of these oils.
Lubricating Value as Related to Certain Physical and Chemical Properties of Oils, L. W. Parsons and G. R. Taylor. Ind. Eng. Chem., vol. 18, no. 5, May 1926, pp. 493-496, 5 figs.
POWER AND VISCOSITY. Power and the Viscosity of Oil, W. F. Parish. Ind. Eng. Chem., vol. 18, no. 5, May, 1926, pp. 525-526, 2 figs.
REQUIREMENTS AND PROPERTIES. Lubricating Oils for Machinery (Ueber Maschinenschmieröle), Swoboda. Petroleum, vol. 22, no. 7, Mar. 1, 1926, pp. 247-253.
TESTS. Technical and Economic Factors in the Consumption of Lubricants (Fattori tecnici di economia nel consumo dei lubrificanti), V. Prever. Ingegneria, vol. 5, no. 1, Jan. 1926, pp. 15-22, 12 figs. States that insufficient attention is paid to consumption and testing; describes apparatus for testing lubricating capacity and other characteristics; theory of lubrication, etc.
Testing Lubricating Oils with Regard to Efficiency and Wear of Machines (Die Prüfung der Schmieröle im Hinblicke auf Leistung und Abnutzung der Maschinen), Spindel. Sparwirtschaft, nos. 2 and 3, Feb. and Mar. 1926, pp. B21-B25 and B43-B48, 8 figs.

LUBRICATION

FACTORS AFFECTING. Some Little Understood Factors Affecting Lubrication, E. G. Gilson. Ind. Eng. Chem., vol. 18, no. 5, May 1926, pp. 467-470, 10 figs.
FLUID-FILM. Surface Action and Fluid-Film Lubrication, A. E. Becker. Ind. Eng. Chem., vol. 18, no. 5, May 1926, pp. 471-477, 17 figs.
JOURNAL. Characteristics of Full and Partial Journal Bearings, H. A. S. Howarth. Ind. Eng. Chem., vol. 18, no. 5, May 1926, pp. 453-460, 18 figs.
OILINESS IN. The Rôle of Oiliness in Industrial Lubrication, W. C. Wilharm. Ind. Eng. Chem., vol. 18, no. 5, May 1926, pp. 463-467, 3 figs. Outlines importance of efficient lubrication and discusses mechanism and possibilities for improving vital factor as it especially applies to electrical machinery and such other types as are not subjected to high temperatures; analysis of results shows difference in lubricating value of various lubricants that is not shown in tests usually made and throws more light on mechanism of property of oiliness.
PROBLEMS. Lubrication, S. E. Bowrey. Inst. Mar. Engrs.—Trans., vol. 37, Mar. 1926, pp. 751-762 and (discussion) 763-775.
PROTECTING BEARINGS FROM DUST. The Relation of Clean Air to Efficient Lubrication, A. F. Brewer. Indus. Mgmt. (N.Y.), vol. 71, no. 5, May 1926, pp. 284-289, 11 figs.

M

MACHINE SHOPS

GERMANY. Workshops of the German Machine-Tool Industry (Die Arbeitsstätten des deutschen Werkzeugmaschinenbaues), G. Schlesinger. Werkstattstechnik, vol. 20, no. 5, Mar. 1, 1926, pp. 129-175, 162 figs.
STANDARDS OF PERFORMANCE. Standards of Performance in Shop Work, J. S. Gray. Machy. (N.Y.), vol. 32, no. 9, May 1926, pp. 724-725.

MACHINE TOOLS

INDIVIDUAL DRIVE. Individual Drive for Small Machine Tools (Wirtschaftlichkeit des Einzelantriebes kleinerer Werkzeugmaschinen), H. v. Neuenkirchen. Maschinenbau, vol. 5, no. 7, Apr. 1, 1926, pp. 300-306, 8 figs.
RESEARCH AND PRACTICAL APPLICATION. Machine Tools and Tools (Werkzeugmaschinen und Werkzeuge), E. h. J. Reindl. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 17, Apr. 24, 1926, pp. 536-568, 28 figs.

MACHINERY

SIZING AND OVERLOAD. The Demand for Overload in the United States, C. F. Hirshfield. Power, vol. 63, no. 17, Apr. 27, 1926, pp. 632-634, 1 fig.

MAGNESIUM ALLOYS

PHYSICAL PROPERTIES. Physical Properties of Very Light Magnesium Alloys (Sur quelques propriétés physiques des alliages de magnésium ultra-légers), A. Portevin and F. Le Chatelier. Academie des Sciences—Comptes Rendus, vol. 182, no. 6, Feb. 8, 1926, pp. 382-384.

MALLEABLE CASTINGS

HEAT TREATMENT AND QUENCHING. Avoids Embrittlement in Malleable Iron Castings, E. Bremer. Iron Trade Rev., vol. 78, no. 15, 1926, pp. 992-994 and 998, 6 figs. New process of heat treatment and quenching in use at Ohio Brass Co., Mansfield, O., removes galvanizing difficulties and aids machining; loss of product reduced materially.

MALLEABLE IRON

DIRECT PRODUCTION. Production of Malleable Iron Direct from Iron Ore, Dispensing with the Blast Furnace. Machy. Market, no. 1328, Apr. 16, 1926, pp. 19-20. Describes 3 solutions of problem, Flodin, Wiberg and Emil Edwin. Translated from Svenska Bruk.

MANGANESE

ORE OUTPUT. Manganese Ore Output is Large, P. M. Tyler. Iron Age, vol. 117, no. 17, Apr. 29, 1926, pp. 1192-1194.

MANOMETERS

CALIBRATION. A Simple Method for Calibrating Micromanometers (Ein einfaches Verhafen zur Eichung von Mikromanometern), F. Levy. Zeit. für Instrumentenkunde, vol. 45, no, 11, Nov. 1925, pp. 515-530, 6 figs.

MAPPING

THREE-DIMENSIONAL SPACE. Representation of Three-Dimensional Space, G. W. Bain. Can. Min. Jl., vol. 47, no. 16, Apr. 16, 1926, pp. 417-425, 13 figs. Method which it is proposed to substitute for structure sections and map; three-dimension drawing, aside from portraying geology of country to untrained men and decreasing possible error in conclusions drawn, speeds up reconaissance work by amount which it is almost impossible to evaluate.

MATERIALS HANDLING

FACTORIES. Materials Handling in Plants Manufacturing Diversified Products (Das Förderwesen in Betrieben mit stark wechselnder Fertigung), H. D. Brasch. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 17, Apr. 24, 1926, pp. 573-578, 13 figs.
SAFETY IN. Safety in Materials Handling, D. S. Beyer. Mech. Eng., vol. 48, no. 5, May 1926, pp. 475-480, 5 figs.

METALLURGY

DEVELOPMENTS. Recent Metallurgical Progress, G. A. Guess. Can. Min. Jl., vol. 47, no. 13, Mar. 26, 1926, pp. 315-316. Treatment of nickel-copper ores and gold ores; cyanidation of copper ores; treatment of lead-silver ores; Coley process; treatment of siliceous hematite; flotation.
NOMENCLATURE. Nomenclature Metallurgist (Supp. to Engineer, vol. 141, no. 2670), Apr. 30, 1926, pp. 50-51. Refers to movement which is taking place in connection with various metallurgical societies in America with regard to question of nomenclature and points out that in designation of alloys and their constituents, matters arise which are of international interest and importance, extending beyond range even of English words; it would seem to be function of some widely international body upon which English and American viewpoints could be adequately represented, as well as those of other nations.

METALLOGRAPHY

MICROSCOPIC EXAMINATION OF METALS. The Optical Examination of Metals, G. Sachs. Metal Industry (Lond.), vol. 28, no. 15, Apr. 9, 1926, pp. 341-343, 6 figs.

MILLING MACHINES

FIXTURES. Milling Machines Handle Wide Range of Product. Am. Mach., vol. 64, no. 17, Apr. 29, 1926, pp. 675-678, 10 figs.
POWER RAPID TRAVERSE. New Large Miller. Iron Age, vol. 117, no. 20, May 20, 1926, pp. 1431-1432, 2 figs.
UNIVERSAL. Universal Milling Machine with Two Overarms. Machy. (Lond.), vol. 28, no. 706, Apr. 8, 1926, p. 45, 1 fig.

MINERAL INDUSTRY

CANADA. Great Progress Made by Canada's Mineral Industry in 1925, S. J. Cook. Can. Min. Jl., vol. 47, no. 13, Mar. 26, 1926, pp. 301-307, 2 figs. Output valued at $224,846,237; building aluminum works; iron, coal, asbestos and gypsum industry; investment in mines; men employed in mining industry.

MINERALS

CANADA. The Influence of Minerals on Canadian History and Development, C. Camsell. Can. Inst. of Min. & Metallurgy—Bul., no. 168, Apr. 1926, pp. 456-465. World's progress in use of minerals; effect of minerals on Canadian history.

MINES

VENTILATION. Standardizing Mine Ventilation, R. D. Madison. Min. Congress Jl., vol. 12, no. 4, Apr. 1926, pp. 254-256 and 286, 3 figs.

MOLDING MACHINES

TURNOVER-TYPE. Turnover-Type Molding Machine with Jarring Device in Turnover Top Table (Wendeplattenformmaschine mit Arbeisttrüttler in der Wendeplatte), A. Schwarze. Zeit. für die gesamte Giessereipraxis, vol. 47, no. 13, Mar. 28, 1926, pp. 142-143, 3 figs. Machine for quantity molding of larger castings, which produces molds by jarring and lifts or lowers these from table by means of rapidly working device, thus avoiding damage to flask in lifting it from table.

MOLDING METHODS

CAR WHEELS. Mechanical Molding of Car Wheels, R. F. Ringle. Can. Foundryman, vol. 17, no. 5, May 1926, pp. 22-23, 5 figs.
MACHINE-PLATE. Machine-Plate Molding Practice, J. Dean. Foundry Trade Jl., vol. 33, no. 506, Apr. 29, 1926, p. 336, 2 figs.

MOLDS

CHILL ROLL. Making a Chill Roll Mould. Foundry Trade Jl., vol. 33, no. 503, Apr. 8, 1926, p. 268, 1 fig.
RAMMING. Modern Foundry Methods, F. A. McLean. Can. Foundryman, vol. 17, no. 4, Apr. 1926, p. 21.
Modern Methods of Ramming Molds, R. Micks. Can. Foundryman, vol. 17, no. 4, Apr. 1926, pp. 11-12. Points out that advent of compressed air in foundry has done much towards increasing production and decreasing labourious work, and air or pneumatic rammer has proved a great boon to both foundryman and molder; making molds on squeezer; most recent method of ramming molds is with sandslinger.

MORTARS

CEMENT-LIME. Cement-Lime Mortars, H. V. Johnson, U. S. Bur. of Standards—Technologic Papers, no. 308, Jan. 29, 1926, pp. 241-274, 14 figs. Tests made on mortars in which percentages of cement, lime and sand were varied considerably; it was found that addition of lime to cement mortars increased water requirement for same consistency, very nearly in proportion to percentage of lime added, that shrinkage is increased by addition of extra water; therefore, where low shrinkage is of prime importance lime should be limited.

MOTION STUDY

ECONOMIC VALUE. Reducing Costs 22% by Motion Study, J. A. Piacitelli. Mfg. Industries, vol. 11, no. 5, May 1926, pp. 347-350, 7 figs. Considers features of cutting and packing of 10-in. strip shingles which is characteristic of majority.

MOTOR BUSES

GASOLINE-ELECTRIC. Mack Departs from Usual Practice in Gas-Electric Design. Automotive Industries, vol. 54, No. 16, Apr. 22, 1926, p. 699, 1 fig. Uses single motor drive and retains standard rear axle and differential gear; two chassis sizes in production; designed for 25- and 29-passenger city-type bodies.

MOTOR TRUCKS

COST DATA. Operating Costs of Motor Trucks (Betriebskosten und Wirtschaftlichkeit von Lastkraftwagen), P. Friedmann. Allgemeine Automobil-Zeitung, vol. 27, no. 11, Mar. 13, 1926, pp. 17-19. Discusses conditions under which motor trucks of various types may be used to greatest advantage, and comparative operating costs of delivery cars; 2-ton and 5-ton trucks; trucks with trailers.

ELECTRIC. The Electric Motor Truck, D. M. Phillips. Elec. World, vol. 87, no. 17, Apr. 24, 1926, pp. 863-866, 3 figs. Characteristics and advantages of electric vehicles; their effect upon revenue of central-station companies; possibilities of development in proper fields of application. (Abstract.) Thesis presented to Univ. of Pennsylvania.

REO. Reo Lowers Body, Improves Steering Gear of 1¼-Ton Truck. Automotive Industries, vol. 54, no. 16, Apr. 22, 1926, pp. 692-693, 1 fig.

SIX-WHEEL. Special Six-Wheel Chassis Is Designed for Moving Vans. Automotive Industries, vol. 54, no. 18, May 6, 1926, p. 761, 2 figs.

N

NON-FERROUS METALS

STANDARDS. German Standards for Non-Ferrous Metals (Die deutschen Werkstoffnormen der Nichteisenmetalle), P. Melchoir. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 16, Apr. 17, 1926, pp. 529-535. Standardization is determined by German Industrial Standards Committee according to nature, properties and designation; chemical and mechanical test standards; standards for nickel, aluminum, tin, zinc, copper, copper alloys, drawn metals, rods, pipe, wires and plates.

O

OHMMETERS

DIRECT-READING. Use of Direct-Reading Ohmmeters, H. N. Faris. Telephony, vol. 90, nos. 12, 13 and 14, Mar. 20, 27 and Apr. 3, 1926, pp. 12-16, 22-23 and 26, and 16-18, 1 fig. Small exchange testing. Mar. 20: Direct-reading ohmmeters are becoming popular and efficient parts of equipment; detail methods for routine tests. Mar. 27: Use of shunted voltmeters for low-resistance measurements. Apr. 3: Voltmeter resistance measurements; how wire chief who has high-class voltmeter can prepare table which will enable him to interpret deflections on his voltmeter into ohms of external resistance.

OIL ENGINES

HEAVY-OIL. A New Gardner Marine Heavy-Oil Engine. Mar. Engr. & Motorship Bldr., vol. 49, no. 584, Apr. 1926, p. 129, 1 fig.

An All-American Two-Stroke Cycle Double-Acting Heavy-Oil Engine. Mar. Engr. & Motorship Bldr., vol. 49, no. 585, May 1926, pp. 188-191, 7 figs.

The Richardsons, Westgarth Heavy-Oil Engine. Mar. Engr. & Motorship Bldr., vol. 49, no. 585, May 1926, pp. 165-170, 19 figs.

PARSONS. An Eight-Cylinder Marine Oil Engine. Engineer, vol. 141, no. 3668, Apr. 16, 1926, p. 447, 1 fig. Designed for output of 56 b.hp. on paraffin fuel and 70 b.hp. when using gasoline, running at normal speed of from 900 to 950 r.p.m.

OIL FUEL

BURNERS. Oil Burner Service. Heat & Vent. Mag., vol. 23, no. 4, Apr. 1926, pp. 80-81.

FUTURE AVAILABILITY. Furnace Oil, Its Future Availability, R. L. Welch. Nat. Petroleum News, vol. 18, no. 15, Apr. 14, 1926, pp. 75-76.

HEAVY OILS. Experimental Investigation of the Physical Properties of Medium and Heavy Oils, Their Vaporization and Use in Explosion Engines, F. Heinlein. Nat. Advisory Committee for Aeronautics, no. 362, May 1926, 25 pp., 2 figs. Defines technically important physical properties of heavy oils, insofar as these properties affect vaporization under pressure and temperature conditions which exist during intake phase of engine; from results, conclusions will be drawn (with mathematical treatment of vaporization process of oils) on state of vaporization, as it takes place under conditions existing in engine. Translated from Motorwagen, Oct. 10, 1925.

MAZOUT FOR DIESEL LOCOMOTIVE. The Burning of Mazout in Diesel Engine of Russian Diesel-Electric Locomotive (Verbrennung von Masut im Dieselmotor der russischen dieselelektrischen Lokomotive), N. Dobrowolski. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 16, Apr. 17, 1926, pp. 527-528.

VAPOUR PRESSURES. The Vapour Pressures of Fuel Mixtures, J. S. Lewis. Instn. Petroleum Technologists—Jl., vol. 12, no. 54, Feb. 1926, pp. 32-44 and (discussion) 44-47, 5 figs. Continuation of previous work, published in same journal (vol. 11, no. 49, 1925). Special attention is paid to influence of alcohol, utilization of which in fuel mixtures is more than theoretical possibility; addition of alcohol to hydrocarbons gives rise to mixtures of maximum vapour pressures or minimum boiling points.

OIL INDUSTRY

ALBERTA. Petroleum and Natural Gas Development in Alberta, C. C. Ross. Can. Inst. of Min. & Metallurgy—Bul., no 168, Apr. 1926, pp. 466-495, 10 figs.

OIL SHALES

MINING AND TREATING COSTS. Estimating Costs of Mining and Treating Oil-Bearing Shale, V. C. Alderson. Salt Lake Min. Rev., vol. 28, no. 2, Apr. 30, 1926, pp. 19-21.

OIL-PRODUCTION COSTS. The Cost of Producing Shale Oil, V. C. Alderson. Can. Min. Jl., vol. 47, no. 18, Apr. 30, 1926, pp. 473-474. Presents analysis from which it is reasonable to infer that oil shale company, adequately financed and operating on open cut plan with 500-ton daily throughput, can manufacture shale oil at a cost approximating $1.25 a barrel.

OIL WELLS

DRILLING. Wildcat Drilling in Wyoming, E. G. Sinclair. Min. & Met., vol. 7, no. 233, May 1926, pp. 210-212, 1 fig.

STEELS FOR BORING EQUIPMENT. The Selection and Properties of Steels Used for Oil-Well Boring Equipment, J. H. S. Dickenson and F. E. Cherry. Instn. Petroleum Technologists—Jl., vol. 12, no. 54, Feb. 1926, pp. 1-24 and (discussion) 24-31.

OPTICAL INSTRUMENTS

TYPES. Measuring by Optical Means. Machy. (N.Y.), vol. 32, no. 9, May 1926, pp. 695-697, 6 figs. Applications of two optical instruments, developed by Bausch & Lomb Optical Co., Rochester, N.Y., intended for use in shop, tool-room and inspection department; one is a direct-reading thickness measure for accurate measurement to 0.0001 in.; other is toolmaker's microscope, applicable in connection with screw threads, gauges, small jigs and other precision parts.

ORE HANDLING

APRON FEEDERS. Apron Feeders at Inspiration, Arizona, G. J. Young. Eng. & Min. Jl.-Press, vol. 121, no. 18, May 1, 1926, pp. 726-728, 8 figs.

UNDERGROUND BINS. Underground Ore-Bin Construction at the United Verde, C. E. Mills. Eng. & Min. Jl.-Press, vol. 121, no. 15, Apr. 17, 1926, pp. 649-650, 3 figs.

OXYACETYLENE WELDING

ALUMINUM. Some Notes on the Welding of Aluminum, E. T. Painton. Mech. World, vol. 79, nos. 2049 and 2052, Apr. 9 and 30, 1926, pp. 290 and 341. Points out advantages of oxyacetylene welding; use of aluminum fluxes.

COPPER. Oxy-Acetylene Welding of Copper, S. W. Miller. Am. Welding Soc.—Jl., vol. 5, no. 3, Mar. 1926, pp. 23-31, 11 figs. Results of series of tests of copper welding rods containing deoxidizers such as silicon, manganese, aluminum, phosphorus and various combinations of them; results show that trouble with copper welding was due to reducing flame of welding blowpipe.

P

PACKING

STANDARDIZATION. How Standardization Helps Export Packing Problems, R. W. Chalmers. Automotive Mfr., vol. 67, no. 12, Mar. 1926, pp. 13-15, 10 figs.

PATTERNMAKING

SHOPS. Pattern Shop Aids to Foundry Production, F. C. Edwards. Foundry Trade Jl., vol. 33, no. 505, Apr. 22, 1926, pp. 311-315, 15 figs.

PAVEMENTS

BLACK-BASE FOUNDATION. Black-Base Foundation for Pavements, V. L. Ostrander. Can. Engr., vol. 50, no. 18, May 4, 1926, pp. 545-547. Methods of construction and qualities of black-base; resilient and flexible features of black-base; comparatively thin foundations have proved successful; paper presented before Mass. Highway Assn. See also Contract Rec., vol. 40, no. 16, Apr. 21, 1926, pp. 378-379.

REPAIR COSTS. Repair Costs of City Pavements, R. H. Simpson. Am. City, vol. 34, no. 4, Apr. 1926, pp. 400-406, 9 figs.

PAVEMENTS, ASPHALT

MIXTURES. New Ideas Concerning the Use of Asphalt Paving Mixtures, P. Hubbard. Contract Rec., vol. 40, no. 16, Apr. 21, 1926, pp. 383-385. Investigation and experience are proving that many customary requirements are unnecessarily restrictive and others not sufficiently so; recommends new rolling procedure; mechanical spreaders are gaining favour.

REPAIR PARTS. Comparison of Brick and Asphalt Pavement Repair Costs, R. H. Simpson. Eng. News-Rec., vol. 96, no. 12, Mar. 25, 1926, pp. 480-482, 7 figs.

PAVEMENTS, BRICK

SALVAGE. The Salvage Value of Brick Pavements, A. S. Mirick. Cornell Civil Engr., vol. 34, no. 6, Mar. 1926, pp. 134-135 and 152, 3 figs.

PAVEMENTS, CONCRETE

CENTER JOINTS. Center Joints Reduce Cracking of Seattle pavements, W. H. Tiedeman. Eng. News-Rec., vol. 96, no. 16, Apr. 22, 1926, pp. 646-647, 3 figs. Experience with center groove has developed design of part depth and through joints which promises advantages.

DEVELOPMENTS. Recent Developments in Concrete Paving Practice, H. E. Surman. Am. City, vol. 34, no. 4, Apr. 1926, pp. 357-360, 3 figs. One of most important developments is improvement in highway alignment; wide earth shoulders, shallower side ditches and stronger cross-section; improving existing pavements; checking specified thickness; use of aluminate cement strength tests of concrete. (Abstract.) Paper read before Am. Road Bldrs.' Assn.

HEXAGONAL SLAB. Cost of Hexagonal Slab Concrete Pavements, L. A. Perry. Roads & Streets, vol. 65, no. 4, Apr. 7, 1926, pp. 207-210, 1 fig.

MIXING AND LAYING. Fundamentals in Mixing and Laying Cement Concrete, C. M. Zeigler. Mun. & County Eng., vol. 70, no. 3, Mar. 1926, pp. 172-177.

PAVEMENTS, WOOD-BLOCK

EXPANSION, EFFECT OF. The Life of Wood Paving as Affected by Expansion, J. Garvie. Surveyor (Lond.), vol. 69, no. 1785, Apr. 2, 1926, pp. 361-365, 8 figs. Method of laying blocks; materials used in expansion joint; pressure generated in wood blocks; effect of using puddle clay in expansion joints; tendency of paving to rise and formation of blisters; failures due to blistering.

PHOTOELASTICITY

STRESS ANALYSES BY. Some Recent Stress Analyses by Means of the Photoelastic Method, P. Heymans. Eng. Jl., vol. 9, no. 4, Apr. 1926, pp. 193-198, 9 figs.

PILES

CONCRETE. Comparative Tests on Concrete Piles in Sea Water. Eng. News-Rec., vol. 96, no. 18, May 6, 1926, pp. 732-736, 3 figs. Los Angeles Harbour Board studies 4 different types; driven piles deflected 6 in.; results show danger attends only cracks above tide level; field and laboratory tests.

Driving. The Vibro Concrete-Piling System. Engineering, vol. 121, no. 3139, Feb. 26, 1926, pp. 251-255, 17 figs. System of forming formations developed by A. Hiley, involving driving into ground of plain steel tube with cast-iron conical shoe, placing suitable reinforcement in tube and filling it with concrete, subsequently withdrawing tube, leaving concrete and shoe behind in ground.

PIPE, CAST-IRON

Centrifugally Cast. Centrifugal Pipe from Sand Molds. Iron Age, vol. 117, no. 15, Apr. 15, 1926, pp. 1055-1060, 12 figs. How sand-spun or mono-cast product is made in new plant of Am. Cast Iron Pipe Co.; details covering molds, sand and finished product; facing sand and handling flasks; photomicographs of cast-iron pipe. See also description in Am. Gas Jl., vol. 124, no. 18, May 1, 1926, pp. 384, 388 and 390-391, 6 figs; also Water Wks. Eng., vol. 79, no. 8, Apr. 15, 1926, pp. 444, 451 and 471, 10 figs.

PISTONS

Machining. Machining Pistons for the Automotive Industry. West. Machy. World, vol. 17, no. 4, Apr. 1926, pp. 145-148, 11 figs.
Pins. Piston-Pin Methods That Are Different, F. H. Colvin. Am. Mach., vol. 64, no. 18, May 6, 1926, pp. 701-702, 5 figs.

PNEUMATIC TOOLS

Mechanisms. Pneumatic Tool Mechanisms, F. Hills. Engineering, vol. 121, nos. 3145 and 3146, Apr. 9 and 16, 1926, pp. 462-463 and 507-508, 19 figs.

POLES

Steel and Concrete. The "Stobie" Steel-and-Concrete Pole. Concrete & Constr. Eng., vol. 21, no. 4, Apr. 1926, pp. 322-325, 6 figs. Details of Australian invention, essential feature of which is used of 2 light standard rolled-steel joists or channel sections, forming main outside tension and compression members; whole triangular space between these sections is then filled with stiff concrete mixture.

POWER

Forecasting Regional Requirements. Predicting Regional Power Requirements, W. Alwyn-Schmidt. Power Plant Eng., vol. 30, no. 10, May 15, 1926, pp. 587-588. To be of aid in predicting.
Generation, Developments in. Latest and Future Developments in Power Generation, L. C. Loewenstein. Franklin Inst.—Jl., vol. 201, no. 4, Apr. 1926, pp. 431-464, 30 figs. Study of problem of power production from engineering point of view; what has been accomplished; lines along which latest developments in power generation are progressing, and along which future endeavours should proceed.
Industry Balance Sheet. An Industry Balance Sheet. Elec. World, vol. 87, no. 19, May 8, 1926, pp. 971-982, 10 figs. Analysis of business situation in light and power industry, based on available data, opinion and general information; data show present business done in each class of service; gross income from each class and total investment in system capacity for each class of service and influence of different class of business on total system characteristics, investments and revenues.
Purchased vs. Generated. Analyzing the Power-Purchase Problem, A. C. Wood. Power, vol. 63, no. 20, May 18, 1926, pp. 777-782, 6 figs. Factors affecting decisions as to purchasing or generating power for industrial plants, particularly those requiring steam for heating and process purposes.

PROSPECTING

Deep-Hole Drilling. Deep-Hole Drilling at the Chief Consolidated, C. A. Dobbel. Ariz. Min. Jl., vol. 9, no. 22, Apr. 15, 1926, pp. 5-6 and 62-63.
Electrical. Electrical Prospecting for Exploring Oil-Fields, N. Gella. Min. Jl., vol. 153, no. 4730, Apr. 17, 1926, p. 324. Results of extensive trials carried out by Elbof Co. of Cassel, Germany, in neighbourhood of oil-bores electric currents were sent into earth, distribution of which was reproduced by induction and recorded on suitably constructed receivers, which also act at great distances from generating plant; in this way complete picture of distribution of electric current in earth was obtained.
Geophysical Methods. Systematic Use of Geophysical Methods in Prospecting, R. A. Gottingen. Can. Min. Jl., vol. 47, no. 16, Apr. 16, 1926, pp. 427-430.
Lundberg Ore Detection Method. The North-Swedish Ore Deposits. Swedish Report, vol. 10, no. 4, Apr. 1926, pp. 43-45.
Sulphide Deposits, Quebec. Exploration of Claims in the Rouyn Area, T. C. Denton. Can. Min. Jl., vol. 47, no. 13, Mar. 26, 1926, pp. 327-328, 1 fig.

PULVERIZED COAL

Ash from. The Ash from Powdered Fuel Installations, J. T. Dunn. Chem. & Industry, vol. 45, no 11, Mar. 12, 1926, pp. 60T-61T.
Problems. Some Problems in the Use of Pulverized Coal, A. G. Christie. Power, vol. 63, no. 20, May 18, 1926, pp. 748-750.
Sampling. Sampling Pulverized Fuel (Richtlinien für die Probenahme von Brennstaub), K. Förderreuther. Glückauf, vol. 62, no. 11, Mar. 13, 1926, pp. 344-345.

PUMPING STATIONS

Electric. New Water Pumping and Filtration Plants, Hannibal, Mo., M. P. Hatcher. Eng. News-Rec.. vol. 96, no. 18, May 6, 1926, pp. 727-728, 3 figs.
Steam. An Efficient Waterworks Pumping Plant, H. R. Lupton. Engineer, vol. 141, no. 3668, Apr. 16, 1926, pp. 438-440, 2 figs. Results obtained in test of pumping plant supplied to Metropolitan Water Board for Lea Bridge pumping station; pumping engine is of triple-expansion inverted vertical type and its specified duty is to pump from 12,000,000 to 14,000,000 gal. of water per day against head of from 180 to 200 ft.; pumps are of outside packed ram type. (Abstract.) Paper read before Instn. Civ. Engrs. See also Engineering, vol. 121, no. 3147, Apr. 23, 1926, p. 528,

Equipment of Provincial Steam Plant of Bay of Friesland (De werktuigen ban het Probinciaal stoomgemaal voor den boezem van Friesland), J. C. Dijxhoorn. Ingenieur, vol. 40, no. 50, Dec. 12, 1925, pp. 1053-1065, 17 figs.

PUMPS

Water Elevators. *See Water Elevators.*

PUMPS, CENTRIFUGAL

Turbine. Greensboro Water-Works Adds Turbine-Driven Pumps. Power, vol. 63, no. 18, May 4. 1926, pp. 681-682, 3 figs. Installation of 4,000,000- and 6,000,000-gal. series centrifugal pump built for 310-ft. head and driven by geared steam turbine.

R

RADIOTELEGRAPHY

Antennas. Space Characteristics of Antennæ, Wm. H. Murphy. Franklin Inst.—Jl., vol. 201, no. 4, Apr. 1926, pp. 411-429, 10 figs. Study of actual radiated fields in space at unit distance made by resolving true fields into three imaginary components, vertical component, horizontal component in directional plane of wave propagation, and horizontal component perpendicular to this plane of propagation; this was done for special cases, such as for vertical and horizontal loops and antennas, from which general formulas for inclined loops and antennas have been evolved.

RADIOTELEPHONY

Short-Wave. Short-Wave Radio Communication, J. K. Clapp. Tech. Eng. News, vol. 7, no. 1, Mar. 1926, pp. 9 and 34, 1 fig.

RAILS

Heat Treatment. Heat Treatment of Rail Steel at the Works of Neuves-Maisons (La question de l'acier à rails et le traitement thèrmique des Usines de Neuves-Maisons), L. Thibaudier and H. Viteaux. Revue de Métallurgie, vol. 23, no. 2, Feb. 1926, pp. 65-81, 8 figs. Part I: Results of study made in collaboration with Alsace-Lorraine Railway show how difficult it is to meet simultaneously the two requirements of elastic limit and resilience in rails of carbon steel; heat treatment of street-railway rails. Part II: Method of heat treating carbon-steel rails at Neuves-Maisons by Compagnie des Forges de Châtillon, consisting essentially in intermittent tempering of head in a quantity of cold water determined in function of weight of bar to be treated; advantages of process and results obtained.

RAILWAY MANAGEMENT

Budgeting. Stabilizing by Budget, C. D. Young. N. Y. Railroad Club—Official Proc., vol. 36, no. 5, Mar. 19, 1926, pp. 7954-7964, 8 figs.

RAILWAY MOTOR CARS

Diesel-Electric. The New Diesel-Electric Motor Coaches on the Swiss Federal Railways. Brown Boveri Rev., vol. 13, no. 4, Apr. 1926, pp. 98-101, 5 figs.

RAILWAY OPERATION

Despatching System. Organization of Central Control Stations on Eastern Railways of France (Particularités de l'organisation des Postes Centraux de Régulation sur le réseau de l'Est), M. Massin. Revue Générale des Chemins de Fer, vol. 45, no. 4, Apr. 1926, pp. 247-259, 18 figs.
Train Control. The Automatic Train Control, C. S. Bushnell. Am. Ry. Assn. (Signal Section)—Proc., vol. 23, no. 4, Apr. 1926, pp. SC211-SC222.
Train Stops. N.Y.C. Installs Miller Train Stop. Ry. Age, vol. 80, no. 23, May 8, 1926, pp. 1257-1259, 7 figs. Intermittent inductive type uses inert track elements, mounted at rail level, with check of wayside circuit. See also description in Ry. Signaling, vol. 19, no. 5, May 1926, pp. 176-80, 16 figs.

RAILWAY REPAIR SHOPS

Electrical. Electrical Repair Shop of the Boston and Maine. Ry. Elec. Engr., vol. 17, no. 4, May 1926, pp. 149-151, 5 figs.
Locomotive. Repairing Locomotives at Pennsylvania Railroad Juniata Shop. Ry. Mech. Engr., vol. 100, nos. 4 and 5, Apr. and May 1926, pp. 237-245 and 291-296, 22 figs. Apr.: Scheduling system, material delivery, inspection methods and standardized repair parts. May: Utilization of semi-finished parts and micrometers; dimension forms; other machine-shop methods.

RAILWAY SHOPS

Locomotive. Iselin Shop Shows Good Design. Ry. Rev., vol. 78, no. 19, May 8, 1926, pp. 820-823, 7 figs. Plant consists of locomotive machine and erecting shop, storehouse and material yard, wheel shop, power house, etc.

RAILWAY SIGNALLING

Automatic Block. A. P. B. versus Straight Automatic Block Signalling, A. R. Fugina, A. H. McKeen and E. E. Worthing. Am. Ry. Assn. (Signal Section)—Proc., vol. 23, no. 4, Apr. 1926, pp. SC223-SC238.

Committee Report on Direct Current Automatic Block Signaling. Am. Ry. Assn. (Signal Section)—Proc., vol. 23, no. 4, Apr. 1926, pp. 663-668. Necessary modifications of d.c. track circuits in detail or in principle, to insure reliable protection of motor buses and cars; preservative treatment of capping and grooved trunking.

Report of Committee on Alternating Current Automatic Block Signaling, Am. Ry. Assn. (Signal Section)—Proc., vol. 23, no. 4, Apr. 1926, pp. 638-663, 2 figs. Protection of low-voltage lines against lightning; inductive interference of a.c. circuits and supply lines for signals and train control with communication circuits; a.c., track-circuit characteristics.
Economics. Report of Committee on Economics of Railway Signaling. Am. Ry. Assn. (Signal-Section)—Proc., vol. 23, no. 4, Apr. 1926, pp. 595-617. Operation of trains by signal indication; problems in economics of railway signaling; estimated savings to be effected on 5 divisions of railway system by replacing manual block system with automatic block system; economy of car retarders at hump and gravity yards; classification yards.
Interlocking. Report of Committee on Mechanical Interlocking. Am. Ry. Assn. (Signal Section)—Proc., vol. 23, no. 4, Apr. 1926, pp. 570-579.
Lamp Standardization. Signal Lamps Standardized, H. H. Handlan. Am. Ry. Assn. (Signal Section)—Proc., vol. 23, no. 4, Apr. 1926, pp. SC250-SC259. Author demonstrates building of lamps from raw sheet of cold-rolled, deep-drawn steel through many exacting operations in stamping and drawing presses and special machinery and tools; function and importance of signal lamp.

RAILWAY SWITCHES

Car Retarders. Car Retarders Cut Down Costs. Ry. Rev., vol. 78, no. 15, Apr. 10, 1926, pp. 674-677, 7 figs.

RAILWAY TRACK

Ballast Requirements. Railway Ballast Requirements, F. J. Stimson. Contract Rec., vol. 40, no. 13, Mar. 31, 1926, p. 315.
Grade Reduction. Comparative Economy of Reduction in Ruling Grade and Length of Line, C. A. Morse. West Soc. Engrs.—Jl., vol. 31, no. 2, Feb. 1926, pp. 4-51 and (discussion) 51-61. Shows that railroads are justified in spending large sums to reduce transportation costs by diminishing heavy grades and sharp curves; each tenth of one per cent of grade eliminated was found to be equivalent to shortening line 4.32 miles.

Snow Melting. Melting Snow on Terminal Tracks of Illinois Central R.R. Eng. News-Rec., vol. 96, no. 12, Mar. 25, 1926, pp. 486-487, 3 figs. Steam pipes laid on ties of exposed tracks and on ballast at switches; snow dumped into steam-heated pits.

Steel-Tie. Steel-Tie Track Laid by New Method, R. Brokaw. Elec. Traction, vol. 22, no. 4, Apr. 1926, pp. 199-200, 7 figs. Peoria division of Illinois Power & Light Corp. constructs over a mile of double track using steel ties with rails supported on concrete frustum pyramids.

RAILWAY YARDS

Switching. Shunting Yards. Int. Ry. Congress Assn.—Bul., vol. 8, no. 3, Mar. 1926, pp. 244-286.

REFRACTORIES

Boiler-Furnace. Boiler-Furnace Combustion Chambers of Modern Design (Die Brennkämmer für Dampfkesselfeuerungen in neuzeitlicher Bauart), Wintermeyer. Wärme, vol. 49, no. 11, Mar. 12, 1926, pp. 189-192, 2 figs. Refractory requirements of a combustion chamber; use of special refractory bricks, such as carborundum, Spinell brick (with 80 per cent magnesium), Zirkol (zirconium oxide with admixtures), etc., for linings.

REFRIGERATING MACHINES

Air Removal. Removing Air from Refrigerating Machines (Die Entlüftung der Kältemaschinen), Steinbach. Zeit. für die gesamte Kälte-Industrie, vol. 33, no. 1, Jan. 9, 1926, pp. 1-7, 8 figs. Discusses behaviour of gas-air mixtures on coaling in connection with air removal and design of air-removal devices, including Friedmann, Hill, Stein, Riegelmann and Linde types.

Troubles. Some Refrigerating Machine Troubles, C. L. Morgan. Power, vol. 63, no. 19, May 11, 1926, pp. 709-710, 2 figs.

ROLLING MILLS

American. American Rolling Mills (Reiseerfahrungen in amerikanischen Walzwerken), G. Bulle. Berichte der Fachausschüsse der Vereins deutscher Eisenhüttenleute (Walzwerksausschuss), no. 41. for Mtg. Mar. 15, 1925, 12 pp. (including discussion), 15 figs. Impression gained by author on visit to American rolling mills. Development and operation of blooming mills, bar, tube and wire mills; output and fuel consumption of rolling-mill furnaces.

Cold-Rolling. The Bliss "Cluster" Mill, L. Jones. Blast Furnace & Steel Plant, vol. 14, no. 4, Apr. 1926, pp. 180 and 201.

Couplings. Mill Type Coupling Design, G. Fast. Iron & Steel Engr., vol. 3, no. 2, Feb. 1926, pp. 100-101, 6 figs.

Electric Drive. Electrical Rolling Mills, D. W. Blakeslee. Iron & Steel Engr., vol. 3, no. 4, Apr. 1926, pp. 163-167, 10 figs.

Medium and Small-Sized Products. Rolling Mills for Medium- and Small-Sized Products, T. W. Hand. Iron & Coal Trades Rev., vol. 112, no. 3033, Apr. 16, 1926, pp. 643-644.

Merchant. Merchant Mills, D. W. Blakeslee. Iron & Steel Engr., vol. 3, no. 2, Feb. 1926, pp. 96-99, 9 figs.

Roll Drives. Main Roll Drives in the United States and Canada. Iron & Steel Engr., vol. 3, no. 1, Jan. 1926, pp. 1-30.

Speed Control. Speed Control in Relation to Modern Rolling Mill Drives, L. Rothera. West of Scotland Iron & Steel Inst.—Jl., vol. 33, Dec. 1925, pp. 24-28 and (discussion) 28-30, 11 figs.

Strip Steel and Mills for Its Production, N. Jones. Iron & Steel Engr., vol. 3, no. 4, Apr. 1926, pp. 155-163, 15 figs. Use of strip steel; metallurgical and physical requirements; hand-operated mills; semi-continuous mills; modified continuous mills; steam engines replaced by motors; method of rolling; heating furnaces and auxiliary apparatus; sizes of rolls and motors; types of cold rolling mills; annealing furnaces.

RETAINING WALLS

Concrete Cribbing. Concrete Cribbing for Railway Retaining Walls. Eng. News-Rec., vol. 96, no. 16, Apr. 22, 1926, pp. 654-656, 5 figs. Open and solid-face walls; beams interlocked or pinned; comparison with monolithic walls.

Types. New Type of Retaining Wall, R. P. Mears. Concrete & Constr. Eng., vol. 21, no. 4, Apr. 1926, pp. 295-299, 11 figs.

ROAD CONSTRUCTION

Embankment. Construction of Hydraulic Fill Road Embankment. Eng. News-Rec., vol. 96, no. 17, Apr. 29, 1926, pp. 692-693, 7 figs.

Materials-Handling Costs. What Should Be the Hauling Cost on Concrete Paving, J. L. Harrison. Eng. News-Rec., vol. 96, no. 19, May 13, 1926, pp. 762-764. Formulas and tables laid down for computing chief cost variable in road paving with concrete.

ROADS, BITUMINOUS

Improvements. Recent Developments in Bituminous Paving Practice, H. M. Rex. Roads & Streets, vol. 65, no. 4, Apr. 7, 1926, pp. 191-196, 7 figs. Improvements in asphaltic mixtures and betterments in construction methods. Paper presented before Am. Road. Bldrs.' Assn.

ROADS, CONCRETE

Curing with Silicate of Soda. Curing Concrete Roads with Silicate of Soda, R. F. Remler. Pub. Wks., vol. 57, no. 3, Apr. 1926, pp. 101-103, 4 figs. Method employed; tests on concrete beams; effect of concrete.

Field Tests. Reports and Field Tests on Concrete Roads, H. C. Badder. Roads & Road Constr., vol. 4, no. 39, Mar. 1, 1926, pp. 77-79. Examination of plans and specifications; locating bench marks and balance points; right of way; grading stakes; full shrinkage; super-elevating curves; eost records; concrete test reports.

Subgrading. Subgrading for Concrete Pavements, C. J. Moritz. Roads & Streets, vol. 65, no. 4, Apr. 7, 1926, pp. 187-190, 1 fig.

ROADS, EARTH

Construction and Maintenance. Earth Road Construction and Maintenance, H. M. Thompson. Can. Engr., vol. 50, no. 15, Apr. 13, 1926, pp. 482-484, 2 figs. Time of construction dependent upon weather and soil conditions; method of operating grader when constructing earth roads through virgin soil; correct shape of blade for grader; cleaning ditches and culverts; regular maintenance essential.

ROOFS

Precast Concrete Slabs. Can. Engr., vol. 50, no. 14, Apr. 6, 1926, pp. 465-466, 4 figs.

S

SAND

Filter. Sampling of Filter Sand, W. S. Mahlie. Am. Water Wks. Assn.—Jl., vol. 15, no. 3, Mar. 1926, pp. 256-257. Results of experiments indicate need for something to take place of present effective size and uniformity coefficient methods of judging filter sands used for rapid sand filters.

SAND, MOLDING

Conditioning. Securing Perfectly Conditioned Sand, F. A. Smith. Can. Foundryman, vol. 17, no. 4, Apr. 1926, pp. 13-14, 1 fig. To secure perfectly conditioned sand, portable sand-cutting machine is commonly used; laboratory tests have revealed that mechanically cut and tempered molding sand has much higher strength and permeability than sand cut and tempered by shovel method.

Preparation. Foundry Progress in Sand Preparation, C. D. Hollins. Can. Foundryman, vol. 17, no. 4, Apr. 1926, pp. 20-21.

Sand Supplied Continuously. Foundry, vol. 54, no. 9, May 1, 1926, pp. 346-350 and 372, 7 figs. Details of installation of sand-preparation and mold-conveying units in foundry of Packard Motor Car Co., Detroit.

Reclamation. Can Used Sand Be Reclaimed? P. Dwyer. Foundry, vol. 54, nos. 5, 6, 7, 8, 9 and 10, Mar. 1, 15, Apr. 1, 15, May 1 and 15, 1926, pp. 170-172 and 187, 216-219, 265-267, 311-313, 356-358 and 394-398, 3 figs. Results of questionnaire sent to foundries. Facing-sand formulas; shop test; samples of American molding sands; sand-handling equipment; tests on sand; indefinite variety of natural deposits demand widely different treatments; economy is determining factor in methods adopted. Apr. 1: Wide varition shown in proportion of sand to weight of finished castings. Apr. 15: Mechanical testing and control methods to insure mechanical uniformity. May 1: Relative proportion of foundries in which sand control is exercised and manner in which new sand is added. May 15: Equipment and method for reclaiming sand by addition of clay.

Steel Castings. The Relationship of Sand to Steel Castings. Research Group News, vol. 3, no. 1, Apr. 1926, pp. 69-76, 5 figs.

Testing. Testing Foundry Sand, C. W. H. Holmes. Brass World, vol. 22, no. 4, Apr. 1926, pp. 122-124.

SEMI-DIESEL ENGINES

Peugeot-Tartrais. The Latest Semi-Diesel. Motor Transport (Lond.), vol. 42, no. 1101, Apr. 5, 1926, pp. 433-434, 5 figs. Details of Peugeot-Tartrais heavy-oil engine as developed for commercial production.

SEWAGE DISPOSAL

England. Modern Methods of Sewage Disposal, F. J. Taylor. Can. Engr., vol. 50, no. 14, Apr. 6, 1926, pp. 451-454, 5 figs.

Plant Appurtenances. Sewage Works Appurtenances, C. E. Keefer. Pub. Wks., vol. 57, no. 3, Apr. 1926, pp. 75-77, 2 figs.

Settling Tanks. Improvement of Settling Basins, W. H. Kimball. Am. Water Wks. Assn.—Jl., vol. 15, no. 3, Mar. 1926, pp. 252-255. Improvements in concrete sedimentation basin of Davenport Water Co., including mixing chamber, chemical storage house adjoining division wall in basin and baffle frame, together with valve box or chamber into which water enters after passing baffles.

Sewage Treatment. Some Aspects of Sewage Treatment, A. J. Martin. Can. Engr., vol. 50, no. 17, Apr. 27, 1926, pp. 517-518.

Sludge Digestion. Experience with Sludge Digestion at the Baltimore Sewage Works, C. E. Keefer. Am. City, vol. 34, no. 4, Apr. 1926, pp. 375-379, 4 figs.

Separate Sludge-Digestion System for Small Town Use, J. Donohue. Eng. News-Rec., vol. 96, no. 17, Apr. 29, 1926, pp. 690-691, 2 figs.

Trickling Filters. Limestone for Sewage Trickling Filters, T. C. Schaetzle. Pub. Wks., vol. 57, no. 3, Apr. 1926, pp. 77-78.

SEWER CONSTRUCTION

Methods and Plant. Heavy Sewer Construction Methods and Plant in Brooklyn. Eng. News-Rec., vol. 96, no. 12, Mar. 25, 1926, pp. 488-492, 8 figs. Wide structures, piles in soft bottom, ground water and tide and sewage flow call for intensive use of machine methods.

SEWERS

Intercepting. Toledo Intercepting Sewer System, H. P. Jones. Eng. News-Rec., vol. 96, nos. 13, 15 and 18, Apr. 1, 15 and May 6, 1926, pp. 526-529, 606-608 and 718-721, 10 figs. Apr. 1.: Progressive construction programme laid down after comprehensive investigation; design for ultimate population and area expected in 1960. Apr. 15: Balanced regulators divert storm flow; cast-iron siphons in multiple; tunnel clay excavated with power knives in pilot holes and manholes dug from bottom. May 6: Pumps discharge through submerged concrete outlets; grease removed as elliptical skimmer takes out floating material.

SHAFT SINKING

Artesian-Bore Driving. Artesian-Bore for Water Pressure Relief. Engineering, vol. 121, no. 3147, Apr. 23, 1926, pp. 539, 4 figs. Driving of artesian bore into greensand in connection with shaft-sinking operations for new Betteshanger colliery of Kent coal field.

SHEARS

Knives. Mangan. Steel Shear Knives for Hot Work, E. R. Norris. Blast Furnace & Steel Plant, vol. 14, no. 4, Apr. 1926, pp. 195 and 200.

SILVER METALLURGY

Treatment of Doré. The Parting Plant of the U.S.S. Lead Refinery, Inc., F. F. Colcord. Am. Electro-Chem. Soc.—Advance Paper, no. 17, for mtg. Apr. 26, 1926, pp. 229-238, 3 figs. Describes electrolytic processes for treatment of doré (silver and gold) and new plant embodying many improvements; process consists of electrolysis of doré in electrolyte of silver and copper nitrate, whereby silver is dissolved from doré anodes and deposited in crystalline form as pure silver, while gold and impurities form insoluble residue.

SMOKE

FORMATION AND PREVENTION. Smoke—Its Formation and Prevention, C. F. Wade. Elec. Times, vol. 69, no. 1799, Apr. 8, 1926, p. 451. Discusses causes of loss of heat; points out that black smoke is source of soot deposit on heating surfaces of economizers so that, apart from direct heat losses in gases when this smoke is present, heat-transfer process will be appreciably retarded by deposit of layer of material of very high efficiency as heat insulator.

SNOW REMOVAL

COST ANALYSIS. Cost Analysis of Snow Removal in Michigan, V. R. Burton. Am. City, vol. 34, no. 4, Apr. 1926, pp. 386-393, 3 figs. Effect of topography on cost; effect of wind direction; how study is being used; value of different equipment. (Abstract.) Paper read before Am. Road Bldrs.' Assn.

SPRINGS

HELICAL. Formulas for the Design of Helical Springs of Square or Rectangular Steel, C. T. Edgerton. Mech. Eng., vol. 48, no. 5, May 1926, pp. 484-487 and (discussion) 491.

Phosphor-Bronze Helical Springs from the Standpoint of Precision Instruments, W. G. Brombacher. Mech. Eng., vol. 48, no. 5, May 1926, pp. 488-491 and (discussion) 493 and 494, 5 figs. Results of tests made at Bureau of Standards to obtain knowledge useful in design of springs for precision instruments; sets forth characteristics of spring material, method of construction, apparatus in which springs were tested and procedure followed; results relate to stiffness, maximum fibre-stress, hysteresis, after-effect, drift and buckling.

SHOCK-ABSORBING. Factors of Design of Shock-Absorbing and Recuperating Steel Springs, T. M. Jasper. Mech. Eng., vol. 48, no. 5, May 1926, pp. 487-488 and (discussion) 491-492, 4 figs.

STADIUMS

KENTUCKY UNIVERSITY. Notes on the Construction of the Kentucky University Stadium, D. V. Terrell. Eng. News-Rec., vol. 96, no. 18, May 6, 1926, p. 739, 3 figs.

TORONTO. Toronto Baseball and Athletic Stadium, T. R. Loudon. Can. Engr., vol. 50, no. 17, Apr. 27, 1926, pp. 511-514, 7 figs. New playing field for Toronto's International League team, with covered stand of approximately 20,000 capacity; built in 5 winter months; deck formed mostly by precast slabs; ramp system throughout, on 1 to 6 grade.

STANDARDIZATION

GERMANY. Standardization of Materials and Its Importance for Producers and Consumers (Die Werkstoffnormung end ihre Bedeutung für Erzeuger und Verbraucher), L. Glück. Maschinenbau, vol. 5, no. 6, Mar. 18, 1926, pp. 252-255, 1 fig.

INTERNATIONAL. International Standardization (Internationale Normung), K. Gramenz. Maschinenbau, vol. 5, no. 6, Mar. 18, 1926, pp. 249-251.

RULES. Modifications of Rules in German Industrial Standardization (Gesetzmässigkeiten in der deutschen Industrienormung). Portsmann. Werkstattstechnik, vol. 20, no. 7, Apr. 1, 1926, pp. 217-220. Based on German industrial standards, three laws for standardization are derived and investigated, namely, law of equality, law of similarity, and law of grading.

STANDARDS

AUSTRIAN OE. N.I.G. REPORTS. Report of the Austrian Industrial Standards Committee (Normblattenwürfe), Sparwirtschaft, no. 1, Jan. 1926, pp. N1-N8, 7 figs.

Report of the Austrian Industrial Standards Committee (Normblattenwürfe)), Sparwirtschaft, no. 3, Mar. 1926, pp. N33-N35, 2 figs. Proposed standards for position and movement of operating levers for automobiles; loading of brick and masonry work in building construction.

GERMAN N.D.I. REPORTS. Report of German Industrial Standards Committee (NDI-Mitteilungen), W. Reichardt. Maschinenbau, vol. 5, no. 6, Mar. 18, 1926, pp. 285-290.

Report of German Industrial Standards Committee (NDI-Mitteilungen), W. Reichardt. Maschinenbau, vol. 5, no. 7, Apr. 1, 1926, p. 337.

STEAM

ADIABATIC EXPANSION. Relations between Heat of Expansion and Elasticity and Specific Heat (Su alcune relazioni tra le calorie di dilatazione e di elasticita e i calori specifici), R. Palladino. Rivista marittima, vol. 58, no. 11, Nov. 1925, pp. 409-420 and vol. 59, no. 2, Feb. 1926, pp. 491-504. Develops new formulas for expressing adiabatic expansion of steam, and application to perfect gases and saturated steam.

HIGH-PRESSURE. The Löffler High-Pressure Steam System, C. S. Darling. Power Engr., vol. 21, no. 242, May 1926, pp. 169-170, 1 fig.

NATURAL, FROM GEYSERS. Natural Steam for Developing Electricity, C. W. Geiger. Power Plant Eng., vol. 30, no. 10, May 15, 1926, pp. 607-609, 7 figs.

SUPERHEAT AND REHEAT. Superheat and Reheat, B. N. Broido. Power, vol. 63, no. 20, May 18, 1926, pp. 757-759, 7 figs. Author reviews reasons for using superheat and reheat, discusses design problems showing that superheater must withstand severe operating conditions; describes three schemes for reheating low-pressure steam.

STEAM GENERATION

RAPID AND HIGH-PRESSURE. New Methods of Rapid and High-Pressure Steam Generation (Neue Wege der Schnell- und Hochdruckdampferzeugung), Wintermeyer. Feuerungstechnik, vol. 14, nos. 7 and 8, Jan. 1 and 15, 1926, pp. 74-77 and 86-90, 16 figs. Arguments in favour of further development, and how this may be accomplished with aid of different types of evaporators and with steam generators of superheated water, and circulating steam generators.

STEAM METERS

ELECTROPHYSICAL. Electrophysical Measurement of Steam (Elektrophysikalisches Dampfmesserprinzip), Wittenhaus. Elektrotechnischer Anzeiger, vol. 43, no. 14, Feb. 17, 1926, pp. 163-165, 3 figs.

FLOW MEASUREMENT. Modern Practice in Steam Flow Measurement, M. A. Goetz. Power Plant Eng., vol. 30, no. 9, May 1, 1926, pp. 518-520, 4 figs. Advantages and use of flow indicators.

STEAM PIPE

INSULATION. Value of Insulation for Steam Pipe Lines (Der Wert der Isolation von Dampfleitungen), P. Wiegleb. Wärmne- & Kälte-Technik, vol. 28, no. 6, Mar. 20, 1926, pp. 60-62, 1 fig.

STEAM POWER PLANTS

BLEACHERY MILL. Southern Bleachery Installs Steam Plant in Hydro-Electric District. Power, vol. 63, no. 17, Apr. 27, 1926, pp. 626-629, 7 figs. Combined power and steam-heating plant; installed in new bleachery mill at Taylor, S.C.; horizontal tubular boilers and superheaters are used; steam is extracted from 750-kw. turbine at 40-lb. gauge.

DESIGN. Designing a 500-Horsepower Steam Power Plant, C. L. Hubbard. Southern Power Jl., vol. 44, no. 4, Apr. 1926, pp. 50-55. Steam requirements; type of prime mover; boiler capacity; condensing and furnace equipment; chimney and smoke breeching; feedwater heaters and purifiers; water piping.

STEAM TURBINES

DESIGN TENDENCIES. Tendencies in Steam Turbine Design. Power Plant Eng., vol. 30, no. 9, May 1, 1926, pp. 525-528, 4 figs. Review of situation discloses many interesting developments; use of turbines of special design; possible increased ratings from existing turbines; potential capacities of turbines designed for regenerative cycle; operation of mercury-vapour turbine at Hartford. (Abstract.) Serial report of Prime Movers Committee of Nat. Elec. Light Assn.

EXTRACTION. High Load Factor and Process Steam Demand Enables Extraction Turbine to Save Over $50,000 a Year, H. W. Gochnauer. Power, vol. 63, no. 19, May 11, 1926, pp. 706-708, 2 figs.

RESEARCH. Investigation and Research Relating to the Steam Turbine, G. B. Warren. Wis. Engr., vol. 30, no. 6, Mar. 1926, pp. 187-189, 212 and 216, 2 figs. Résumé of research work carried on during past few years by Gen. Elec. Co. relating to steam elements of large steam-turbine construction.

STEEL

ALLOY. *See Alloy Steels.*

COLD DRAWING. The Cold Drawing of Bar Steel, F. W. Krebs. Mech. Eng., vol. 48, no. 5, May 1926, pp. 448-450, 8 figs. Various steps involved in converting hot-rolled steel into cold-drawn bars; equipment used; factors affecting machining quality of steel; effects of cold drawing upon physical properties.

CORROSION. Corrosion of Steels in the Atmosphere, W. G. Whitman and E. L. Chappell. Ind. Eng. Chem., vol. 18, no. 5, May 1926, pp. 533-535, 3 figs.

FORGEABILITY. Forgeability of Steel Determined by the Brinell Machine, R. E. Kerslake. Am. Soc. Steel Treating—Trans., vol. 9, no. 5, May 1926, pp. 773-776, 5 figs.

SHEET. Sheet Steel—Specification and Inspection, L. N. Brown. Blast Furnace & Steel Plant, vol. 14, no. 5, May 1926, pp. 206-212. Testing for drawing qualities; ductility test; gauge and size tolerances; tabulated data giving results of ductility tests.

TOOL. *See Tool Steel.*

STEEL, HEAT TREATMENT OF

DILATOMETRIC EQUIPMENT. Volcrit Method of Heat Treatment by the Rockwell Dilatometer. West. Machy. World, vol. 17, no. 4, Apr. 1926, pp. 154-155 and 179, 3 figs. Details of Rockwell dilatometer and advantages of its use for heat treatment.

HARDENING, EFFECTS OF. Facts and Principles Concerning Steel and Heat Treatment, H. B. Knowlton. Am. Soc. Steel Treating—Trans., vol. 9, no. 5, May 1926, pp. 781-792.

NICKEL STEEL. Heat-Treatment for Nickel Steels. Am. Mach., vol. 64, no. 17, Apr. 29, 1926, p. 683. Reference-book sheet on treatment for annealing or hardening nickel steels.

QUENCHING. Mass Effects in Quenching. Fuels & Furnaces, vol. 4, no. 4, Apr. 29, 1926, pp. 435-438, 3 figs.

REHEATING, EFFECT OF. Effect of Reheating on Cold Drawn Bars, S. C. Spalding. Am. Soc. Steel Treating—Trans., vol. 9, no. 5, May 1926, pp. 685-707 and (discussion) 707-716 and 780, 23 figs.

STEEL MANUFACTURE

ELECTRIC MELTING. Progress in the Electric Melting of Steel (Fortschritte im Elektrostahlschmelzen), G. Mars. Giesserei-Zeitung, vol. 23, nos. 5 and 6, Mar. 1 and 15, 1926, pp. 117-120 and 154-156 and (discussion) 156-159.

INGOTS, LARGE. Chemical Analyses of Large Ingots, J. H. Hruska. Iron Age, vol. 117, no. 15, Apr. 15, 1926, pp. 1049-1050. Facts as to inclosures and gases more vital than strict chemical specifications; melting practice and analysis both important; basic, acid and refined open-hearth ingots; basic and acid electric steel ingots.

TOOL STEEL. Making High Grade Steel, J. A. Coyle. Iron Trade Rev., vol. 78, no. 18, May 6, 1926, pp. 1177-1179, 5 figs.

STELLITE

APPLICATION TO METAL PARTS. Stelliting of Metal Parts. Oxy-Acetylene Tips, vol. 4, no. 10, May 1926, pp. 177-179, 3 figs. New process of applying stellite to metal surfaces which are called upon to withstand heat, abrasion or corrosion. See also description in Machy. (N.Y.), vol. 32, no. 9, May 1926, pp. 687-690, 8 figs.

STOKERS

UNDERFEED. Recent Underfeed Stoker Developments. Power, vol. 63, no. 20, May 18, 1926, pp. 751-753, 6 figs. Outlines losses chargeable to stoker and shows how recent developments serve to reduce these losses.

STORAGE BATTERIES

POWER PLANTS. Use of Storage Batteries in the Power Plant, J. L. Woodbridge. Power Plant Eng., vol. 30, no. 9, May 1, 1926, pp. 533-535, 3 figs.

STROBOSCOPES

ROTOSCOPE. The Ashdown Rotoscope. Mech. World, vol. 79, no. 2051, Apr. 23, 1926, pp. 319-320, 3 figs.

SUBSTATIONS.

AUTOMATIC. Maintenance Experience on Automatic Substations. Elec. World, vol. 87, no. 17, Apr. 24, 1926, pp. 861-863.

AUTOMATIC CONTROL. Automatic Control in Main and Substations. Power Plant Eng., vol. 30, no. 10, May 15, 1926, pp. 602-605, 3 figs. Automatic substations for industrial and mine service; control of multiple transformer banks; automatic control for hydro-electric plants; supervisory systems.

GROUNDING. Grounding Systems for Generating Stations and Substations, W. W. Lewis. Gen. Elec. Rev., vol. 29, no. 5, May 1926, pp. 314-321, 3 figs. Importance of surrounding station with grounding system at absolute earth potential; grounding of various equipment; proper types of connection; determining size of ground leads; pipe vs. plate ground.

110,000-Volt. Standardizing 110,000-Volt Distribution Substations, L. M. Smith. Elec. Light & Power, vol. 4, no. 5, May 1926, pp. 134-136, 7 figs. Points out that, as far as practical, substations should be standardized as to type of equipment, general arrangement and facility for repair and inspection, scheme of protection and switchhouse.

SURVEYING

Great Circle and Rhumb Line. Field Procedure of Adjusting the Great Circle Line to the Rhumb Line, N. B. Sweitzer. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 5, May 1926, pp. 879-885, 1 fig.

SWIMMING POOLS

Indoor. Operation of Indoor Swimming Pools, R. F. Heath. Can. Engr., vol. 50, no. 16, Apr. 20, 1926, pp. 499-502.

SWITCHGEAR

Mining. Modern Mining Switchgear, E. E. Grover. Colliery Guardian, vol. 131, no. 3405, Apr. 1, 1926, pp. 787-788, 3 figs.

T

TAPS

Drill Sizes. The Development of Tap-Drill Sizes, A. C. Danekind. Mech. Eng., vol. 48, no. 5, May 1926, pp. 445-448, 5 figs.

TELEPHONY

Carrier-Current. Carrier-Current Communication, B. R. Cummings. Gen. Elec. Rev., vol. 29, no. 5, May 1926, pp. 365-367, 1 fig. Application to power systems; fundamental requirements for successful installation; tuned coupling around power circuit gaps; freedom from energy radiation; 50 to 150-kc. waveband limits; single-frequency operation; standardization of apparatus.

TEMPERATURE MEASUREMENT

Instruments. Test Code on Instruments and Apparatus. Mech. Eng., vol. 48, no. 5, May 1925, pp. 517-526, 16 figs.

TERMINALS, LOCOMOTIVE

Hampton, Pa. D. L. & W. Engine Terminal at Hampton, M. R. Freeley. Ry. Mech. Engr., vol. 100, no. 5, May 1926, pp. 297-301, 7 figs. Equipped with inspection sheds, ash pit, gravity coal chutes and other mechanical features of improved design.

TESTING MACHINES

Universal. A New Universal Testing Machine. Engineer, vol. 141, no. 3668, Apr. 16, 1926, p. 446, 3 figs. partly on p. 442

TEXTILE MACHINERY

Cotton Spinning. Saco-Lowell Long Draft Systems. Textile World, vol. 69, no. 15, Apr. 10, 1926, pp. 63 and 73, 4 figs.

TEXTILE MILLS

Group Drive. Group Drive Economy in Modern Textile Mills, L. H. Hopkins. Belting, vol. 28, no. 4, Apr. 1926, pp. 11-14. Saving effected by present-day methods; selection and installation; transverse and torsional strain.

THERMOMETERS

Resistance, Installing. Installing Electric Temperature-Measuring Instruments (Ueber den Einbau der elektrischen Temperaturmessgeräte), M. Moeller. Siemens Zeit., vol. 6, no. 2, Feb. 1926, pp. 65-72, 10 figs.

TIME STUDY

Analyst, Functions of. The Functions of the Time Study and Methods Analyst, H. B. Maynard. Am. Mach., vol. 64, no. 18, May 6, 1926, pp. 729-731. Relation of analyst to various departments; his qualifications.

Computation. Computing Relative Speeds of Work to Save Time Study Expense, R. Mawson. Mfg. Industries, vol. 11, no. 5, May 1926, pp. 371-372.

Piece Work. Determining Time for Piece Work (Einige Betrachtungen zur Zeitermittlung bei Akkordarbeit), K. Gottwein. Maschinenbau, vol. 5, no. 7, Apr. 1, 1926, pp. 297-300, 7 figs.

TIN DEPOSITS

Bolivia. Geologic Features of Bolivia's Tin-Bearing Veins, F. R. Koeberlin. Eng. & Min. Jl.-Press, vol. 121, no. 15, Apr. 17, 1926, pp. 636-642, 2 figs.

TIRES, RUBBER

Balloon. Balloon Tires for Motorcoaches, J. M. Linforth. Soc. Automotive Engrs.—Jl., vol. 18, no. 5, May 1926, pp. 477-478.

TOOL STEEL

Types and Classification. Selecting the Proper Steel for Making Shop Tools, J. B. Mudge. Iron Trade Rev., vol. 78, no. 17, Apr. 29, 1926, pp. 1116-1118, 4 figs. Consideration of types of steel to be used in making various tools; presents type of tool and steel classification chart employed by Western Elec. Co. serving to identify various steels.

TRAFFIC

City Streets. Increasing the Efficiency of Passenger Transportation in City Streets, J. A. Miller, Jr. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 5, May 1926, pp. 827-835, 3 figs. Considerations which point to possible solution of street traffic problems by (1) reduction or eliminating of parking; and (2) substitution of buses in many instances in place of extravagant private automobile and taxicab.

TRANSFORMERS

Eddy-Current Losses. Supplementary Eddy-Current Losses in Transformers, H. Bohle. World Power, vol. 5, no. 26, Feb. 1926, pp. 72-77, 8 figs.

High-Voltage. High-Voltage Current Transformers Developed at Niagara, L. C. Nicholson. Elec. World, vol. 87, no. 17, Apr. 24, 1926, pp. 868-869, 3 figs.

Load-Ratio Control. Arrangements for Load-Ratio Control, H. R. Wilson. Gen. Elec. Rev., vol. 29, no. 5, May 1926, pp. 335-338, 8 figs.

Oils. Care of Transformer Oil, F. C. DeWeese. Power, vol. 63, no. 17, Apr. 27, 1926, pp. 630-631, 2 figs.

TRANSMISSION LINES

Reliability. Reliability of Transmission Lines. Elec. World, vol. 87, no. 19, May 8, 1926, pp. 995-1000, 10 figs.

TUNGSTEN

Mining. Mining Tungsten at Pine Creek, California, G. J. Young. Eng. & Min. Jl.-Press, vol. 121, no. 15, Apr. 10, 1926, pp. 605-606, 3 figs.

TUNNELLING

Driving Below Water Surface. Tunnel Taps Mystic Lake Below Water Surface. Eng. News-Rec., vol. 96, no. 16, Apr. 22, 1926, pp. 642-643, 2 figs.

TUNNELS

Concrete Lining. Webb Concrete Gun. Commonwealth Engr., vol. 13, no. 7, Feb. 1, 1926, pp. 258-259, 2 figs.

TURBO-GENERATORS

Foundation. A Spring Supported Turbine Foundation, L. J. Rehberg and J. R. James. Power, vol. 63, no. 17, Apr. 27, 1926, p. 642, 3 figs. Plan worked out at Marysville power plant of Detroit Edison Co. involves supporting turbo-generator of 2000-kw. capacity on spring mattress eliminating building vibrations and gives entirely satisfactory results.

V

VALVES

Hydraulic. New Developments in Hydraulic Valves (Neuerungen an Abschlussorganen von Turbineanlagen), R. Löwy. Elektrotechnik u. Maschinenbau, vol. 43, no. 43, Oct. 25, 1925, pp. 841-846, 13 figs. Discusses problem from viewpoint of hydraulic turbines and their pipe lines; type of valve must be designed in accordance with its function; describes new type, known as spherical slide valve, built by Escher, Wyss & Co., which is combination of cock or rotary slide valve and poppet principles; for control of pressure and for by-passes, piston valves are almost universally used, and several new types are described, some of which are operated automatically and hydraulically for regulating purposes; one, a double-beat valve, made by Loebersdorf Maschinenfabrik, is operated by crank and connecting rod.

Pipe-Line Air-Inlet. Pipe-Line Air-Inlet Valves, J. W. Ledoux. Mech. Eng., vol. 48, no. 5, May 1926, pp. 467-469. Prevention of collapse due to reduced internal pressure; detailed calculation of number of air valves required in pipe line having sections of different gradients and diameters.

VENTILATION

Buildings. Artificial Ventilation of Buildings (Künstliche Regelung der Luftbeschaffenheit in Gebäuderäumen), M. Hirsch. Gesundheits-Ingenieur, vol. 49, no. 13, Mar. 27, 1926, pp. 188-194, 6 figs. Conditions conducive to comfort, and their determination; temperature and humidity; purification, cooling and heating of air; air-conditioning apparatus, etc.

VIBRATIONS

Synchronous. Notes on the Demonstration of Synchronous Vibration and Critical Speed, R. T. Liddicoat. Mich. Technic, vol. 39, no. 3, Mar. 1926, pp. 17-18 and 23, 1 fig. Summary of underlying theory and demonstration.

W

WAGES

Barth Standard Scale. The Barth Standard Wage Scale. Mfg. Industries, vol. 11, no. 5, May 1926, pp. 373-374. Discussion by C. D. Demond and reply by C. G. Barth.

Bonus Systems. *See Bonus Systems.*

WASTE ELIMINATION

Industrial. Orgbnization of a National Committee to Study Practical Methods for the Elimination of Waste. Soc. Indus. Engrs.—Bul., vol. 8, no. 3, Mar. 1926, pp. 2-10. Purpose of committee is to promote interest in elimination of waste in management, manufacturing, distribution, national resources and government.

WATER ELEVATORS

Continuous Machine. Continuous Water-Lifting Machine. Engineering, vol. 121, no. 3139, Feb. 26, 1926, p. 278, 3 figs.

WATER FILTRATION

Reaction Apparatus. Laboratory Reaction Apparatus Helps Operate Filters, C. H. Spalding. Eng. News-Rec., vol. 96, no. 16, Apr. 22, 1926, pp. 644-645, 6 figs. Better application of chemicals gives economical balance between iron and alum; saves $4500 during year.

WATER PIPE

Friction. An Easy Method to Determine Friction Losses in Water Pipe, F. J. Walter. Ry. Eng. & Maintenance, vol. 22, no. 5, May 1926, pp. 181-

WATER POWER

France. Water Power in France. Engineering, vol. 121, no. 3148, Apr. 30, 1926, p. 550. Brief review of developments in 1925; outline of what has been and is being accomplished, based on water-power year book, issued by Revue Générale de l'Electricité.

WATER SUPPLY

Ontario. Discussion on the Water Supply of the Border Cities. Eng. Jl., vol. 9, no. 4, Apr. 1926, p. 212-214. Discussion of paper by W. Gore and J. C. Keith, presented before Eng. Inst. of Canada.

Tastes. Chlorophenol-Like Tastes in Bay City's Filtered Water Supply, L. B. Harrison. Am. Water Wks. Assn.—Jl., vol. 15, no. 3, Mar. 1926, pp. 292-297, 1 fig.

WATER TREATMENT

Chlorination. Chlorination of Water and Sewage, E. B. Phelps. Boston Soc. Civil Engrs.—Jl., vol. 13, no. 4, Apr. 1926, pp. 150-169, 4 figs. Germicidal action of chlorine; rôle of chlorination in water supply practice; reliability of chlorination; what chlorination has accomplished; tastes and odors; chlorination of water for use in swimming pools; chlorination of sewage; bibliography.

Red-Water Prevention. The Causes and Prevention of Red Water, P. C. Laux. Am. Water Wks. Assn.—Jl., vol. 15, no. 3, Mar. 1926, pp. 271-278.

Softening. Zeolite Softening Plant of the Ohio Valley Water Company, F. B. Beech. Am. Water Wks. Assn.—Jl., vol. 15, no. 3, Mar. 1926, pp. 227-233. New plant will remove manganese and crenothrix, making water suitable for laundry and other washing purposes, prevent stains on plumbing fixtures and save large cost which cleaning of mains and replacing of services would require; Zeolite process may be used to reduce hardness of any desired degree down to zero; it requires little space as compared with lime-soda process.

WATERWAYS

Quebec Streams Commission. The Work of the Quebec Streams Commission, O. Lefebvre. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 5, May 1926, pp. 895-910, 4 figs. Deals with stream measurements, meteorological data, power sites, legislation and storage dams.

WATER WORKS

Bay City, Mich. New Bay City (Mich.) Water-Works Displaces Two Old Plants, J. W. Ellms. Eng. News-Rec., vol. 96, no. 17, Apr. 29, 1926, pp. 682-683, 3 figs.

Kansas City, Mo. Additional Water Supply Under Way for Kansas City, Mo. Eng. News-Rec., vol. 96, no. 12, Mar. 25, 1926, pp. 492-494, 2 figs.

Orlando, Florida. The Municipal Water and Light Plant at Orlando, Florida, W. W. Mathews. Am. Water Wks. Assn.—Jl., vol. 15, no. 3, Mar. 1926, pp. 238-251.

WELDING

Electric. *See Electric Welding, Arc.*

Wire Specifications. Welding Wire Specifications, F. E. Burk. Welding Engr., vol. 2, no. 4, Apr. 1926, pp. 33 and 36. Points out that only small number of specifications have so far been accepted as standard, and discusses advisability of providing greater number of standards.

WELLS

Pumping. Wells and Well Pumping, F. J. Garland. Power Engr., vol. 21, no. 241, Apr. 1926, pp. 130-133, 3 figs.

WIND TUNNELS

Turbulence in. Investigation of Turbulence in Wind Tunnels by a Study of the Flow about Cylinders, H. L. Dryden and R. H. Heald. Nat. Advisory Committee for Aeronautics—Report, no. 231, 1926, pp. 3-17, 19 figs.

WINDING ENGINES

Steam. Steam Winding-Engines and Accumulators, H. Pilling. Instn. Min. Engrs.—Trans., vol. 71, Mar. 1926, pp. 63-79 and (discussion) 79-87, 27 figs.

WINDMILLS

Electric-Power-Plant. Electric Wind-Power Stations (Elektrische Windkraft zentralen), Foerster. Elektrotechnischer Anzeiger, vol. 43, no. 25, Mar. 27, 1926, pp. 299-304, 12 figs.

X-RAYS

Metal-Structure Analysis. X-Rays and the Ultimate Structure of Metals, R. H. Aborn. Tech. Eng. News, vol. 7, no. 2, Apr. 1926, pp. 54-55, 76 and 98, 7 figs. Account of recent research in Research Laboratory of Applied Chemistry considering metals as crystalline aggregates, which diffract X-rays in ways characteristic of their properties.

VISCOSMETERS

Air-Bubble. The Air-Bubble Viscometer, G. Barr. Aeronautical Research Committee—Reports and Memoranda, no. 988, Apr. 1925, 10 pp., 5 figs. Investigation to find whether and under what circumstances, rise of large bubble in vertical tube containing liquid could be used as indication of viscosity of liquid.

Unit System. Construction and Use of Unit Wage Key for Determining Rate (Aufbau und Benutzung eines Einheitslohnschlüssels sur Ermittlung des Tariffaktors), A. Scheid. Technik u. Wirtschaft, vol. 19, no. 2, Feb. 1926, pp. 51-56, 6 figs. Method of arriving at amount of wages from minimum to which are added various factors of coefficients representing risk, heavy work, piece rate, artistic work, overtime, etc.

WATER FILTRATION

Colloid Chemistry in. Colloid Chemistry in Filtration, A. V. Delaporte and F. R. Manuel. Can. Engr., vol. 50, no. 10, Mar. 9, 1926, pp. 94A-94C. Explanation of terms used; colloids, suspensoids and emulsoids; mechanism of reaction; recovery of alum.

WATER METERS

Advantages and Tests. Services and Meters, E. V. Buchanan. Can. Engr., vol. 50, no. 10, Mar. 9, 1926, pp. 141-144 and (discussion) 144-146, 3 figs. Sizes of lead pipe; estimates for copper pipe; reasons for metering; meters tested for accuracy; meter-installing methods. Paper read before Can. Section, Am. Water Wks. Assn.

WATER SUPPLIES

Sanitary Conservation. The Sanitary Conservation and Utilization of Water Resources, W. L. Stevenson. Boston Soc. Civil Engrs.—Jl., vol. 13, no. 2, Feb. 1926, pp. 51-61. Magnitude of problems in Pennsylvania; existing anti-stream pollution statutes; functions of sanitary water board; typical results attained in past two years.

WATER SUPPLY

Distribution Systems. Practical Features of Water Distribution, N. R. Wilson. Contract Rec., vol. 40, no. 10, Mar. 10, 1926, pp. 240-243, 3 figs. Types of systems and their layout in relation to present-day needs; pipes and house services; hydrant, valve and meter records.

Mains, Hydrants and Valves, N. M. R. Wilson. Can. Engr., vol. 30, no. 10, Mar. 9, 1926, pp. 113-115 and (discussion) 115-119, 5 figs. Reorganization of old systems; zoning and belting; distribution mains; valves in distribution systems. Paper read before Can. Section, Am. Water Wks. Assn.

Intakes and Storage. Supply, Intakes and Storage, W. Gore. Can. Engr., vol. 50, no. 10, Mar. 9, 1926, pp. 27-29 and (discussion) 30-32, 3 figs. Natural storage of water; study of rainfall statistics; rights of riparian owner; pollution of Great Lakes system; sites for intakes; water from underground sources. Paper read before Can. Section, Am. Water Wks. Assn.

WATER TREATMENT ..

Aluminum Hydrate Sol, Use of. Use of Aluminum Hydrate Sol, E. W. Johnston and F. P. Downey. Can. Engr., vol. 50, no. 10, Mar. 8, 1926, pp. 94C-94D. Preparation of coagulant; apparatus used for experimental purposes; character of water treated.

Problems. Purification and Treatment, J. O. Meadows. Can. Engr., vol. 50, no. 10, Mar. 9, 1926, pp. 87-88 and (discussion) 88-90. Application of chemicals; coagulation; filtration. Paper read before Can. Section, Am. Water Wks. Assn.

Softening. Problems of Hard and Soft Water, R. A. Thuma. Am. Water Wks. Assn.—Jl., vol. 15, no. 2, Feb. 1926, pp. 152-157. Water softening in relation to health; cost of softening water as determined at St. Paul plant; value or return from water softening.

Modern British Practice in Water Softening, D. Brownlie. Indus. Chemist, vol. 2, no. 13, Feb. 1926, pp. 61-64. Advantages and disadvantages of zeolite or base-exchange methods of water softening.

WATERWAYS

Chicago Diversion. Army Engineers Recommend Restricting Chicago Diversion. Eng. News-Rec., vol. 96, no. 14, Apr. 8, 1926, pp. 576-578. Report that navigation requirements of Illinois Canal and Chicago sewage disposal needs can both be cared for with flow of 4167 sec. ft. in Chicago River out of Lake Michigan.

St. Lawrence. The St. Lawrence Waterway to the Sea. Am. Soc. Civ. Engrs.—Proc., vol. 52, nos. 1 and 2, Jan. and Feb. 1926, pp. 86-89 and 282-288. Discussion of paper by F. C. Shenehon continued from Dec. 1925 Proceedings.

WELDING

Electric. *See Electric Welding; Electric Welding, Arc; Electric Welding, Resistance.*

Fusion. Fusion Welded Pressure Vessels, S. W. Miller. Am. Welding Soc.—Jl., vol. 5, no. 2, Feb. 1926, pp. 23-40, 9 figs. Proposed code for fusion-welded pressure vessels; omission of some parts of A.S.M.E. code; specifications for fusion-welded tank in 60 in. in diameter, 20 ft. long, for working pressure of 200 lb. per sq. in.

Oxyacetylene. *See Oxyacetylene Welding.*

WINDMILLS

Tests. Tests and Investigation of Power of Windmills (Forsog og undersogelser vedrorende vindmotorers ydeevne), Tylvad. Ingenioren, vol. 34, no. 51, Dec. 19, 1925, pp. 613-618, 7 figs. Reviews work done in investigating windmills, wind wheels and propeller wheels, and concludes that their efficiency is respectively 23, 17.5 and 43 per cent.

WIRE ROPE

Calculation. A Method of Calculating Wire Rope (Ein Verfahren zur Berechnung von Drahtseilen), K. Kleinn. Praktischer Maschinen-Konstrukteur, vol. 59, no. 1-2, Jan. 9, 1926, pp. 2-7, 5 figs. Calculation of tensile strength, bending load, safety factor, cross section of wire; various examples of calculating wire rope for stated conditions, for winding engines, etc.; also tables for calculations.

WOOD

Industrial Problems. Problems of the Wood Industries. Mech. Eng., vol. 48, no. 4, Apr. 1926, pp. 349-355, 5 figs. Abstracts of following papers at session held under auspices of Wood Industries Division of Am. Soc. Mech. Engrs.; Scientifically Developed Shipping Containers, C. M. Bonnell, Jr.; Electric Molder, A. Jensen, Jr.; Recent Advances in Methods of Glue Evaluation, W. L. Jones; Spark Arresters and Forest Fires, J. S. Mathewson; High-Speed Induction and Frequency Changers, C. Fair.

WOODWORKING MACHINERY

Planers. High-Speed Wood Planing and Matching Machine. Engineer, vol. 141, no. 3663, Mar. 12, 1926, p. 303, 4 figs. Machine built by Thos. Robinson & Son; chief features are chain-driven feed rollers, improved weighing system for tellers, combination of rotary and fixed knives for planing, and complete equipment throughout with ball and roller bearings, whereby working speeds up to 400 ft. per min. are obtainable.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

AERONAUTICAL INSTRUMENTS

Aircraft Bubble Sextant. The Aircraft Bubble Sextant, Type A, R. C. Parker. Am. Soc. Nav. Engrs.—Jl., vol. 38, no. 2, May 1926, pp. 301-317, 4 figs. Constructed to fill requirements of instrument with which altitude of heavenly bodies can be measured without depending on sea horizon.

AIR

Pollution. Exact Methods for the Measurement of Air Pollution, J. B. C. Kershaw. Indus. Chemist, vol. 2, no. 15, Apr. 1926, pp. 153-158, 10 figs.

AIR COMPRESSORS

Portable. Portable Compressors Aid Development of Mineral Properties in Canada, F. A. McLean. Compressed Air Mag., vol. 31, no. 5, May 1926, pp. 1631-1634, 11 figs. Gasoline-driven portable compressors have been found valuable in opening up prospects; examples of application.

Testing. The Heat-Balance Method of Testing Centrifugal Compressors, M. G. Robinson. Refrig. Eng., vol. 12, no. 10, Apr. 1926, pp. 327-335 and (discussion) 335-337, 11 figs. In this method, principle is used that balance exists between mechanical energy supplied by rotation of shaft and heat-energy increase in air which is being compressed, heat-energy increase in cooling water used, and heat loss from casing, bearings and packings.

AIR CONDITIONING

Atmospheres of Low Temperatures. Work Tests Conducted in Atmospheres of Low Temperatures in Still and Moving Air, W. J. McConnell and C. P. Yaglou. Am. Soc. Heat & Vent. Engrs.—Jl., vol. 32, no. 5, May 1926, pp. 375-386, 7 figs. Results of experiments definitely indicate to what extent atmospheric conditions influence human efficiency.

AIRCRAFT CONSTRUCTION MATERIALS

Corrugated Metal. Corrugated Metal Sheet in Aircraft Structures. Aviation, vol. 20, no. 24, June 14, 1926, pp. 909-910, 6 figs. Possibilities of employing corrugated duralumin for large aircraft components in addition to parts of compound structures.

Dopes. Durability of Airplane Doping and Varnishing Systems, H. A. Gardner. Paint Mfrs.' Assn. of U. S., Sci. Section—Circular, no. 274, June 1926, pp. 61-70, 4 figs. Study of cellulose acetate and cellulose nitrate tautening and proofing schemes for fabric surfaces.

AIRPLANE ENGINES

Air vs. Water Cooling. Air-Cooled or Water-Cooled Airplane Engines (Moteurs d'avions à refroidissement par air ou par eau), J. A. Lefranc. Nature (Paris), no. 2716, Apr. 24, 1926, pp. 262-269, 6 figs. Technical advantages and disadvantages of air cooling and water cooling; rivalry between two types in France; balance of evidence is in favour of air cooling.

Fairchild-Caminez. Cam is Used Instead of Crank Train in Radial Airplane Engine, A. F. Denham. Automotive Industries, vol. 54, no. 21, May 27, 1926, pp. 891-893, 3 figs. New 4-cylinder, air-cooled engine constructed for commercial use by Fairchild-Caminez Corp.; large cylinders give output of 150 h.p.

The Fairchild-Caminez Engine. Aviation, vol. 20, no. 21, May 24, 1926, pp. 788-791, 6 figs. Details of four-cylinder air-cooled radial engine fitted into Avro 504K-type machine; design is result of inventor's effort to produce mechanism which would give four strokes per revolutions to coincide with four-strike cycle employed in internal-combustion engines; special features of engine and results of tests.

AIRPLANE PROPELLERS

Strength Determination. Propeller Design, F. E. Weick. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 238, June 1926, 11 pp., 7 figs. Simple method for determining strength of propellers of standard form and sufficient for safe operation; paper also gives approximate method of stress analysis.

AIRPLANES

Airfoils. Pressure Distribution Over Thick Tapered Airfoils, N. A. C. A. 81, U. S. A. 27 C Modified and U. S. A. 35, E. G. Reid. Nat. Advisory Committee for Aeronautics—Report, no. 229, 1926, 18 pp., 25 figs.

Calculation. Elements of a New Method for Aerodynamic Calculation of Airplanes (Elementi per un nuovo metodo di calcolo aerodinamico degli aeroplani), G. Costanzi. Rendiconti Tecnici della Direzione Generale del Genio Aeronautico, vol. 14, no. 1, Mar. 1926, pp. 1-74, 87 figs. Series of experiments with various types of wings, variation of bearing power with velocity and resistance; new method of calculation based on tests with models.

Developments. Airplanes Greatly Improved With Recent Developments in Aerodynamics, L. H. Allen. Automotive Industries, vol. 54, no. 21, May 27, 1926, pp. 898-899, 2 figs. Advantages of tailless plane, Autogiro, and slotted wing and flap are described by A. Klemin before Soc. Automotive Engrs. Metropolitan Section; further radical improvements predicted.

Drag. Notes on Airplane Performance from the Standpoint of the Modern Conception of Drag, J. A. Roche. Air Service Information Circular, vol. 6, no. 560, Mar. 15, 1926, 7 pp., 5 figs. Simple and practical explanation of modern conception of aerodynamic drag, and how it can be used in estimating power consumption of airplanes.

Gliders. Note on the Minimum Speed from Which the Direction of a Gliding Aeroplane Can Be Changed to a Horizontal Path for Landing, F. W. Meredith. Aeronautical Research Committee—Reports and Memoranda, no. 993, June 1925, 5 pp., 1 fig.

Maintenance and Depreciation. Maintenance and Depreciation of Airplanes and Engines, E. W. Dichman. Mech. Eng., vol. 48, no. 6, June 1926, pp. 574-577.

Performance Tests. The Representation of Aircraft Performance Tests, Using Non-Dimensional Variables, With Special Reference to the Prediction of the Effects of Change of Loading on Performance, R. S. Capon. Aeronautical Research Committee—Reports and Memoranda, no. 984, Nov. 1925, 7 pp., 2 figs.

Stalled Flight. Notes on Stalled Flying, C. Howarth. Roy. Aeronautical Soc.—Jl., vol. 30, no. 186, June 1926, pp. 394-402, 5 figs.

The Control of Stalled Aeroplanes, B. M. Jones. Roy. Aeronautical Soc.—Jl., vol. 30, no. 186, June 1926, pp. 345-356 and (discussion) 356-364, 5 figs. Report based on results of researches made by (Brit.) Air Research Committee.

Resistance and Thermoelectromotive Potential. The Specific Resistance and Thermoelectromotive Potential of Some Steels Differing Only in Carbon Content, E. D. Campbell and H. W. Mohr. Iron & Steel Inst.—Advance Paper, no. 4, for mtg. May 1926, 18 pp., 5 figs.

ALLOY STEEL

Properties. Properties of Alloy Steels. Am. Mach., vol. 64, no. 22, June 3, 1926, p. 873. Properties of manganese, nickel, chrome, tungsten, molybdenum and high-speed steels. Reference-book sheet.

Tungsten. The Estimation of Phosphorus in Steels Containing Tungsten, T. E. Rooney and L. M. Clark. Iron & Steel Inst.—Advance Paper, no 12, for mtg. May 1926, 6 pp. Authors carried out estimations on number of tungsten steels of low phosphorus content; in some cases no phosphorus was detected, and in others results were too low.

ALLOYS

Aluminum. *See Aluminum Alloys.*

ALUMINUM ALLOYS

Aging. Aging of Aluminum Alloys, K. L. Meissner. Metal Industry (Lond.), vol. 28, nos. 16, 17 and 19, Apr. 16, 23 and May 7, 1926, pp. 363-364, 391-393 and 439-440, 7 figs. Its effect upon electrical conductivity and chemical resistance. Discusses obscure phenomena of aging and various theories which have been advanced to account for its occurrence; influence of aging and some of other properties of aluminum alloys, and function of magnesium silicide compound, to which age-hardening effects are sometimes ascribed.

Aluminum Bronze. *See Aluminum Bronze.*

Castings. Impact Tests Show Fitness of Cast Aluminum Alloys, J. Strauss. Foundry, vol. 54, no. 11, June 1, 1926, pp. 426-429, 4 figs. Summary of impact resistance of alloys in common use at present time; tabular data on mechanical properties of various aluminum alloys.

Duralumin. *See Duralumin.*

Heat Treatment. Heat Treatment of Aluminum-Copper Alloys (Recherches sur le traitement thermique des alliages aluminium-cuivre), L. Guillet and J. Galibourg. Revue de Métallurgie, vol. 23, no. 3, Mar. 1926, pp. 179-190, 22 figs.; also translated abstract in Metallurgist (Supp. to Engineer, vol. 141, no. 3672), May 28, 1926, pp. 78-79. Investigation of behaviour under heat treatment of alloys of aluminum with copper; study of hardness of alloys; observations on resistivity; measurements of hardness and of dimensions carried out on two pistons made of one alloy containing 13 per cent copper; heat treatments were performed in baths of water, oil or salt; alloys of 5 to 35 per cent copper are harder as cast than cooled in air; tempering at 100 deg. cent. for an hour immediately after quenching decreases hardness below that of alloys in quenched state.

ALUMINUM BRONZE

Acid-Resisting. Acid-Resisting Bronze, W. E. Corse. Iron Age, vol. 117, no. 24, June 17, 1926, p. 1707, 1 fig. Advantage of alcumite in pickling equipment; properties of new aluminum alloy.

AMMONIA COMPRESSORS

Diagrams. Analyzing Ammonia Compressor Diagrams, W. H. Motz. Power, vol. 63, no. 21, May 25, 1926, pp. 812-813, 1 fig. Method developed by author of laying out adiabatic compression curve which will give correct location of points on compression curve to show relation of pressures and volumes of ammonia under actual working conditions, but compressed adiabatically.

AUTOMOBILE ENGINES

Valve Guide, Tooling. Tooling for a Valve Guide, F. H. Colvin. Am. Mach., vol. 64, no. 24, June 17, 1926, pp. 935-936, 6 figs. Fixtures and methods for an unusual design of valve guide used in new Stutz engine; automatic turning and grinding machines used.

AUTOMOBILES

Brakes. A Front Braking Problem, W. G. Aston. Autocar, vol. 56, no. 1596, May 21, 1926, pp. 807-808, 3 figs. How front brakes may lose their efficiency through unequal wear between front and rear brake linings.

AUTOMOTIVE FUELS

Alcohol-Ether Mixture. Making Alcohol-Ether Mixture in Cuba for Motor Fuel, E. Humboldt. Chem. and Met. Eng., vol. 33, no. 6, June 1926, pp. 332-336, 6 figs. How plant was designed and constructed for fermentation of waste molasses in order to take advantage of peculiar economic as well as climatic conditions in tropics.

Anti-Knock. Anti-Knock Motor Fuels Derived from Cracking Shale Oils, J. C. Morrell and G. Egloff. Petroleum Times, vol. 15, no. 383, May 15, 1926, 807-809. Shale oils of American, Australian and French origin have been cracked into yields of gasoline in excess of 50 per cent, based upon charging oil.

Finding an Anti-Knock Material, T. Midgley, Jr. Tech. Eng. News, vol. 7, no. 3, May 1926, pp. 119, 140 and 142. Explanation of cause of knock in internal-combustion engines and story of discovery of its preventive, tetraethyl lead.

Dopes and Detonation. Dopes and Detonation, H. L. Callendar, R. O. King and C. J. Sims. Engineering, vol. 121, nos. 3145, 3146, 3147, 3148 and 3149, Apr. 9, 16, 23, 30 and May 21, 1926, pp. 475-476, 509-511, 542-545, 575-576 and 605-608, 15 figs. Account of investigation made at Air Ministry, Imperial College of Sci. and Technology.

AVIATION

Coast Defense. The Influence of Aviation Upon Coast Defense, W. T. Carpenter. Coast Artillery Jl., vol. 64, no. 5, May 1926, pp. 464-475. It is concluded that net effect of aviation upon coast defense has been to advantage of defense, since aviation has increased power of shore armament over that of naval armament; that fixed primary armament, anti-aircraft artillery and submarine mines are most dependable means for defense of important harbours against naval attack; that observations aircraft and balloons should be permanently assigned to defenses of most important harbours.

Future of. The Future of Air Transport. Engineering, vol. 121, no. 3149, May 21, 1926, pp. 598-599. Review of lecture by W. S. Brancker, presenting survey of British position; figures are given illustrating present position. See also Engineer, vol. 141, no. 3671, May 21, 1926, p. 518.

AXLES

Taper Fits for. Taper Fits for Railway Axles, D. A. Hampson. Machy. (N.Y.), vol. 32, no. 10, June 1926, pp. 804-805, 3 figs. Gauges and work-holding chucks; locating and gauging taper on axle; boring and facing wheels.

B

BEAMS

Bending Moment. Problems in the Theory of Construction, E. S. Andrews. Concrete & Constr. Eng., vol. 21, no. 5, May 1926, pp. 353-358, 4 figs. Deals with problem to find bending moment and shear diagrams for beam which is simply supported at one end and fixed at other end, load being distributed and increasing uniformly in intensity from zero value at simply-supported end to maximum value at other end.

Stress Distribution. Observed Stress Distribution in Web of I-Beam, O. H. Basquin. Eng. News-Rec., vol. 96, no. 22, June 3, 1926, pp. 892-894, 2 figs. One-inch gauge used in three-directional strain measurements; cross stresses found important.

BEARINGS

Anti-Friction. Anti-Friction Bearings on Steel Mill Motors, A. G. Place. Indus. Engr., vol. 84, no. 6, June 1926, pp. 260-262, 5 figs. Operating results obtained by use of anti-friction bearings and factors considered in applying them to all bearings on 32 travelling cranes.

Overhead-Camshaft. Fixtures for Overhead-Camshaft Bearings, F. H. Colvin. Am. Mach., vol. 64, no. 23, June 10, 1926, pp. 905-906, 6 figs. Bronze self-contained bearing, that requires careful work and is made in special fixtures; bearing surface is ground automatically.

BELT DRIVE

Calculation. Safety Factor in Belt Transmission (Le coefficient de sécurité dans la transmission par courroie), G. Balachowsky. Electricité & Mécanique, no. 10, Jan.-Feb. 1926, pp. 1-8, 24 figs. Discusses present method of calculating belting and shows that it may lead to erroneous results so far as safety factor is concerned.

Crossed-Belt. Operating Characteristics of Crossed-Belt Drives, R. F. Jones. Indus. Engr., vol. 84, no. 6, June 1926, pp. 267-271, 6 figs. As determined by series of tests, with particular reference to minimum centre distances which can be used in laying out such drives.

BENZOL

Manufacture. Manufacture of Motor Benzol, E. L. Hall. Chem. & Met. Eng., vol. 33, no. 5, May 1926, pp. 288-292, 5 figs.

BOILER FEEDWATER

Locomotive Boilers. Experiments in Preheating Locomotive Feedwater (Esperimenti con preriscaldatori d'acqua per locomotive), G. Corbellini. Rivista Tecnica Ferrovie Italiane, vol. 29, no. 4, Apr. 15, 1926, pp. 140-150, 5 figs. Experiments carried out by Italian State Railways with apparatus for preheating feedwater with exhaust steam; heat balance and how affected by locomotive operation; economics and efficiency; limitations of preheaters.

BOILER FURNACES

Air Preheaters. Comparative Performance of Air Preheaters, N. E. Funk. Mech. Eng., vol. 48, no. 6, June 1926, pp. 562-566, 11 figs. Results of tests on number of boiler units equipped with air preheaters and one unit using unheated air; curves presented show comparative performances of units, relation between coal fed and flue-gas temperature, relation between gas-temperature drop and air-temperature rise and percentage of rating, and relation between percentage of combustible in ash and coal fed.

Combined Oil- and Gas-Burning. Combined Oil- and Gas-Burning Furnaces for Power-Plant Use, J. G. Rollow. Mech. Eng. (Supp.), vol. 48, no. 6, June 1926, pp. 683-685, 7 figs. Deals with combinations of equipment for best meeting required conditions.

Combustion in. Combustion of Volatiles in Furnaces with Travelling Grate (De la combustion des matières volatiles dans les foyers à grille mécanique), V. Kammerer. Société Industrielle de Mulhouse—Bul., vol. 92, no. 2, Feb. 1926, pp. 111-133, 7 figs. Results of tests carried out in various types of furnaces; concludes that by means of secondary air greater part of unburned gases from coal with high volatile content will disappear, reducing smoke, etc.

Oil-Burning. Practical Handling of Fuel Oil Burning Equipment, A. F. Brewer. Combustion, vol. 14, no. 5, May 1926, pp. 308-312, 5 figs. Deals with furnaces for burning oil fuel; details of construction; checkerwork design; oil-burner location; lining and setting requirements; furnace volume.

Pulverized-Coal. Evolution of Combustion Volumes in Design of Boiler Furnaces for Pulverized Fuel, H. W. Brooks. Engrs.' Soc. West. Pa.—Proc., vol. 42, no. 1, Feb. 1926, pp. 18-45 and (discussion) 46-59, 11 figs. Combustion volumes for stoker furnaces; furnace combustion volumes with pulverized fuel; fundamentals of pulverized-fuel combustion; past and present methods of pulverized-fuel firing.

BOILER PLANTS

Automatic Regulation. Automatic Regulation of a Small Boiler Plant, E. Therkelsen. Power, vol. 63, no. 22, June 1, 1926, pp. 846-847, 3 figs. How one plant solved problem of automatic regulation and achieved increased average economy from 5½ to 6½ lb. equivalent evaporation per pound of coal fired, and gave fireman time to keep plant clean and in perfect repair and make him ready for any emergency.

BOILER PLATE

Embrittlement. The Cause and Prevention of Embrittlement of Boiler Plate, S. W. Parr and F. G. Straub. Am. Soc. Testing Matls.—Preprint, no. 26, for mtg. June 21, 1926, 28 pp. 13 figs. Three types of cracks are recognized; those due to direct corrosion of metal, those due to fatigue, and those caused by caustic solutions; includes photomicrographs of both natural and artificially produced cracks which furnish method of identification and illustrate their special characteristics.

BOILER TUBES

Corrosion. The Influence of Segregation on the Corrosion of Boiler Tubes and Superheaters, G. R. Woodvine and A. L. Roberts. Iron & Steel Inst.—Advance Paper, no. 16, for mtg. May 1926, 4 pp., 6 figs. Results of experiments made in order to determine extent to which pitting and general corrosion in tubes could be ascribed to segregated ingot material. See abstract in Engineering, vol. 121, no. 3150, May 28, 1926, pp. 646-647, 3 figs; also Iron & Coal Trades Rev., vol. 112, no. 3039, May 28, 1926, pp. 841-842.

Stoker-Fired. Another Stoker-Fired Boiler Shows High Efficiency, D. J. Mosshart. Power, vol. 63, no. 24, June 15, 1926, p. 325, 1 fig. Efficiency ranging from 78 to 84 per cent for boiler without economizer or air preheater is shown by series of tests recently conducted by High Bridge Station at St. Paul, Minn.

Waste-Heat. Gas-Fired and Waste-Heat Boilers. Colliery Eng., vol. 3, nos. 25 and 26, Mar. and Apr. 1926, pp. 122-124, and 166-167 and 182, 12 figs. Leading features of various types.

BOILERS, WATER-TUBE

Single- and Multi-Pass. Design and Construction Details of Single- and Multi-Pass Boilers, A. A. Fette. Nat. Engr., vol. 30, nos. 5 and 6, May and June 1926, pp. 201-204 and 245-249, 19 figs. Consideration of all passes produced by baffle walls and water-tube boilers; particulars of Edge Moor and Bigelow-Hornsby boilers, which are prominent examples of this type. (Abstract.) Paper presented before Nat. Assn. Stationary Engrs.

BRAKES

Air. Investigation Made of Brake Pipe Leakage. Ry. Rev., vol. 78, no. 23, June 5, 1926, pp. 999-1003, 3 figs. Report of committee of Air Brake Assn. contains exhaustive study of entire subject; standing tests with brake-system leakage-testing device.

Lining. Coefficient of Friction of Brake Linings (Coefficient de frottement des garnitures de frein), M. Albadie. Industrie des Ferrées et des Transports Automobiles, vol. 20, no. 230, Feb. 1926, pp. 81-86, 4 figs. Results of tests to determine coefficient of friction and resistance to wear of various materials used as brake linings for buses and street cars.

Magnetic. Magnetic Brakes as Developed by West Penn Railway Company, D. Durie. Aera, vol. 15, no. 4, May 1926, pp. 623-625, 3 figs. Twenty-three years' experience with this type of brake on cars operating on steep grades satisfies management that it is reliable under severe conditions.

BRIDGE PIERS

Concreting. How They Concreted 19 Piers, P. L. Pratley. Concrete, vol. 28, no. 5, May 1926, pp. 26-28, 6 figs. Floating mixing plant and industrial railway on trestle permitted mixing and placing of good concrete in first piers for new Montreal-South Shore bridge, now being constructed over St. Lawrence River; use of inundator proved of value.

BRIDGES, HIGHWAY

Concrete. Provincial Highway Bridge, Freeport, A. B. Crealock. Can. Engr., vol. 50, no. 3, Mar. 30, 1926, pp. 431-434, 10 figs. New bridge over Grand River, Ont., has seven reinforced-concrete truss spans, each 69 ft. 8 in.; abutments and piers of mass concrete construction; cold-weather concrete pouring.

Beam and Slab Concrete Highway Bridges, O. Williams. Concrete & Constr. Eng., vol. 21, no. 5, May 1926, pp. 359-363, 7 figs. Deals with question of design of highway bridges to carry Ministry of Transport loading; when to use beams and slabs as against solid slab construction, what centres to put beams if beams are used, are economic questions which arise in design of small-span concrete bridges.

Design and Construction. Designing and Building an Ontario Highway Bridge, A. B. Crealock. Concrete, vol. 28, no. 6, June 1926, pp. 26-30, 13 figs. Situation affecting requirements of design of Freeport bridge; parabolic arch ribs; general features of construction; winter protection of concrete; bridge is composed of seven spans.

Developments. Recent Developments in Highway Bridge Engineering, J. R. Burkey. Mun. & County Eng., vol. 70, no. 4, Apr. 1926, pp. 233-2377.

BUILDING CONSTRUCTION

Fire-Test Specification. Specifications for Fire Tests of Building Construction and Materials. Nat. Fire Protection Assn.—advance paper for mtg. May 10-13, 1926, 12 pp., 1 fig.

BUILDINGS

Wind Bracing. Wind Bracing in Industrial and Many-Storied Buildings, R. Fleming. Boston Soc. Civ. Engrs.—Jl., vol. 13, no. 5, May 1926, pp. 199-215, 12 figs. Relation between wind velocity and pressure; typical mill building bent with kneebraces; wind bracing for modern high buildings; working stresses.

C

CABLES, ELECTRIC

High-Tension. Tests of Paper-Insulated High-Tension Cable, F. M. Farmer. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 5, May 1926, pp. 454-461, 11 figs.

CABLEWAYS

Coal Mines. Aerial Ropeway at Marine Colliery, Iron & Coal Trades Rev., vol. 112, no. 3038, May 21, 1926, pp. 771-773, 8 figs. Cableway is of bi-cable type, has capacity of 130 tons per hour when rope is running at speed of 110 yd. per min.; it is arranged to discharge both on outgoing and return sides.

PASSENGER. Funicular Lines for Passenger Transport from the Standpoint of Safety (Le funicolari aeree per trasporto di persone dal lato della sicurezza), I. Bertolini. Ingegneria, vol. 5, no. 3, Mar. 1926, pp. 102-109, 23 figs. Discusses bearing and traction cables, their construction and properties; telpherage systems by Bleichert, Ceretti and Cortirra; funicular line of Mont Blanc between Chamonix and Aignille de Midi for cars with 18 passengers.

CAR WHEELS

CHILLED. Chilled Wheel Design Improved, F. K. Vial. Ry. Rev., vol. 78, no. 23, June 5, 1926, pp. 1007-1008, 5 figs. Reinforcing rings and lip-type chillers add to service life of wheels.

CARBON MONOXIDE

RECORDERS. Development and Characteristics of a Carbon Monoxide Recorder, S. H. Katz, D. A. Reynolds, H. W. Frevert and J. J. Bloomfield. Am. Soc. Heat & Vent. Engrs.—Jl., vol. 32, no. 5, May 1926, pp. 349-374, 16 figs. Previous development of principle of indicating presence of combustible gases in air by differential temperature effect induced by gases when in contact with catalyst to promote oxidation; principle of CO recorder, mechanism and structure; laboratory tests of recorder and characteristics; performance of CO recorders during extended use.

CARS

CENTRE OF GRAVITY. The Determination of Height of the Centre of Gravity of Cars and Locomotives, G. L. Fowler. Ry. & Locomotive Eng., vol. 39, no. 5, May 1926, pp. 134-135, 3 figs. Explains simple method used, which is more rapid and accurate than any calculation based upon weights and relative locations of several parts entering into structure can possibly be; principle of method is that of tilting vehicle on one side and determining relation between weight thus imposed on lower wheels and vehicle as a whole.

CASE-HARDENING

GEAR STOCK. Reducing the Cost of Carburizing Transmission Gear Stock, J. B. Nealy. Iron Trade Rev., vol. 78, no. 22, June 3, 1926, pp. 1431-1432, 4 figs. Standardization of all factors involved in carburizing process is necessary for scientific duplication of results desired; describes heat-treating department of well-known automobile plant, where two large oil-fired carbonizing furnaces are installed.

CAST IRON

ANALYSIS. The Rapid Determination of Structural or Constitutional Analysis of Cast Iron. Brit. Cast Iron Research Assn.—Bul., no. 12, Apr. 1926, pp. 14-15. In any consideration of relationship between constitution and mechanical or other properties of gray iron it would be found worth while to consider properties as related to structural analysis, either by weight or volume, instead of to chemical analysis in skeleton form.

DESULPHURIZATION. Desulphurization Experiments on Cast Iron. Foundry Trade Jl., vol. 33, no. 510, May 27, 1926, p. 379, 1 fig. Experiments with cast iron with respect to (1) degree of desulphurization in strongly superheated iron baths high in sulphur content without addition of flux; (2) in just liquid iron (high in silicon); (3) composition of segregates product; (4) degree of desulphurization in cast iron of normal composition; (5) influence of movement of liquor iron upon desulphurization. Translated abstract from article by T. Meierling and W. Dennecke in Giesserei-Zeitung.

MECHANICAL PROPERTIES AND ANALYSIS. The Relation Between the Mechanical Properties and the Analysis of Cast Iron. Brit. Cast Iron Research Assn.—Bul., no. 12, Apr. 1926, pp. 16-20, 5 figs. Presents curves published by Klingenstein which are result of 2,000 routine tests made at Esslingen Iron Foundries in Germany on 1.2-in. diameter test bars. Translated from Giesserei, Feb. 27, 1926.

MECHANITE. New Cast Iron. Iron Age, vol. 117, no. 21, May 27, 1926, pp. 1559-1560, 2 figs. Mechanite, made by adding calcium silicide to iron and brought out by Ross-Meehan Foundries, Chattanooga, Tenn., has average ultimate tensile strength of 50,000 lb. per sq. in., as compared with 20,000 to 25,000 lb. per sq. in. for ordinary gray iron; material preserves its integrity almost up to its high breaking point.

STRUCTURE. The Structure of Cast Iron. Metallurgist (Supp. to Engineer, vol. 141, no. 3672), May 28, 1926, p. 74. Review of lecture by Hanemann before Betriebsverein Deutscher Ingenieure, in which suggestion is made that when gray iron is melted, whole of graphite present does not at once pass into solution, but that minute flakes of graphite remain suspended in liquid, which dissolve only at higher temperatures; photomicrographs show structure of same iron solidified before and after superheating to 1500 deg. cent.

CENTRAL STATIONS

BELGIUM. The Langerbrugge Power Station. Engineer, vol. 141, no. 3673, June 4, 1926, pp. 570-573, 17 figs, partly on supp. plate and p. 582. Station near Ghent, Belgium, contains three boilers, capable of normal aggregate output of 79,200 lb. of steam per hr., working at gauge pressure of 56 kilos per sq. cm., and at temperature of 842 deg. Fahr.; details of equipment; turbo-generator was constructed by Brown, Boveri & Co.

EQUIPMENT. Power Stations and Their Equipment, W. M. Selvey. Instn. Elec. Engrs. Jl., vol. 64, no. 352, Apr. 1926, pp. 485-495. Power-station design; boiler plant, turbines, condensers and alternators, switchgear, etc.

INTERCONNECTED STEAM AND HYDRO. Some Interconnected-System Operating Problems, F. G. Boyce. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 5, May 1926, pp. 462-466, 3 figs. Outlines advantages and disadvantages of interconnected system consisting of steam and hydro-electric stations; investment costs are materially reduced because of less reserve capacity being required to insure continuous service; more efficient operation of generating units is possible and operating costs are reduced.

PULVERIZED-COAL-BURNING. Motors and Control for Pulverized Fuel Plants, M. B. Wyman. Elec. Jl., vol. 23, no. 5, May 1926, pp. 236-243, 6 figs. Operating conditions and service requirements; special features of motors and control in pulverized-fuel plant; special applications of motors for drives of equipment.

SMALL. Outlook Promising for the Small Power Plant, E. Douglas. Power, vol. 63, no. 25, June 22, 1926, pp. 960-961. Trend of central-station business for last five years.

STEAM POWER AND HYDRO SUPPLY. Aspects of Steam Power in Relation to a Hydro Supply, A. H. Markwart. Mech. Eng., vol. 48, no. 6, June 1926, pp. 557-561, 9 figs. In final analysis relative development by utility of hydro and steam-generating capacity is problem of economy; natural resources available, character of load to be carried, rate at which energy must be supplied or load factor, extent to which utilities may depend upon it for stand-by and other related elements furnish criteria for its solution; general tendency seems to be for steam-plant ratio to increase slightly; gives data on central-station construction programme for 11 western states for 3-year period 1924 to 1926.

CHAIN DRIVE

AUTOMATIC IDLER. Holding Chain Drives at Constant Tension, F. W. Curtis Am. Mach., vol. 64, no. 21, May 27, 1926, pp. 823-824, 4 figs. Feature of automatic adjustment is that it not only takes care of any elongation that develops in chain in service, but also insures longer chain life and sustained quiet operation; chain drives with automatic idler can be applied to all styles of metal-working machines in which driving power is between ½ and 25 h.p.

CIRCUIT BREAKERS

RECLOSING EQUIPMENT. Automatic Reclosing Equipment for Alterating-Current Feeders, A. J. A. Peterson and R. F. Frenger. Elec. Jl., vol. 23, no. 4, Apr. 1926, pp. 179-190, 15 figs.

COAL

BLENDING. Coal Blending, D. Brownlie. Iron & Steel Inst.—Advance Paper, no. 2, for mtg. May 1926, 42 pp., 12 figs. Survey of subject of coal blending in connection with carbonization, that is, primarily mixing of swelling bituminous coals with other products such as non-swelling bituminous coals, anthracites and anthracite coals, high-temperature carbonization coke, which may be either metallurgical or household gas coke, low-temperature carbonization fuels, oxidized coals and various constituents of coal. Also abstract in Iron & Coal Trades Rev., vol. 112, no. 3039, May 28, 1926, pp. 837-838.

PULVERIZED. *See Pulverized Coal.*

COAL MINES

SURFACE AND UNDERGROUND SURVEYS. Orientation of Surface and Underground Surveys by Means of Plumb Lines Freely Suspended in Vertical Shafts, G. A. Gilchrist. Iron & Coal Trades Rev., vol. 112, no. 3032, Apr. 9, 1926, p. 608. Tests of various methods for orientation of surface and underground surveys which could be carried out with colliery appliances.

COAL MINING

LUMP-COAL PRODUCTION. Factors Affecting Production of Lump Coal, J. E. Tiffany and B. L. Lubelsky. Carnegie Inst. Technology—Coal-Mining Investigations Bul. 19, 1925, 92 pp., 34 figs.

COKE

COMBUSTIBILITY. Notes on the "Combustibility" of Coke and Direct Reduction in the Blast-Furnace, W. W. Hollings. Iron & Steel Inst.—Advance Paper, no. 8, for mtg. May 1926, 9 pp. Points out that only lines on which it would seem possible to make any considerable saving on side of heat demands of modern blast-furnace would appear to be: (1) considerable enrichment of blast with oxygen; (2) substitution, so far as may be practicable, of pulverized quicklime blown in tuyeres for limestone added at top of furnace.

TESTING. Notes on Coke Testing, W. A. Haven. Am. Iron & Steel Inst.—Advance Paper, for mtg. May 21, 1926, 30 pp., 9 figs.

CONCRETE

MANUFACTURE. Forward Steps in Concrete Making, A. R. Smith. Contract Rec., vol. 40, no. 21, May 26, 1926, pp. 485-488, 4 figs. Water-cement ratio method; proportion of coarse to fine aggregate; selection of materials; colorimetric field test; making watertight concrete; mixing and curing.

CONCRETE CONSTRUCTION

VIBROLITHIC PROCESS. Tests of Vibrolithic Concrete, L. S. Teller and C. E. Proudley. Pub. Roads, vol. 7, no. 2, Apr. 1926, pp. 36-45, 21 figs. Results of 28-day tests on concrete slabs constructed on same materials in accordance with ordinary methods and vibrolithic process patented by American Vibrolithic Corp.; tests were made for purpose of obtaining data on relative strength of specimens equivalent in every particular except method of construction.

CONDENSERS, ELECTRIC

AUTOMATIC CONTROL. Automatic Control for Synchronous Condensers, C. C. Levy. Elec. Jl., vol. 23, no. 4, Apr. 1926, pp. 150-153, 6 figs. Design features of full automatic equipment controlling 10,000-kva. synchronous condenser in Vancouver substation of Northwestern Elec. Co. of Portland, Ore.

CONDENSERS, STEAM

SURFACE. Auxiliary Supercooling in Surface Condensers, A. J. Nicholas. Power, vol. 63, no. 21, May 25, 1926, pp. 804-805, 4 figs. Condensate vs. steam-air temperatures; effect of supercooling on volumetric efficiency of vacuum pump; it is clear that cooling of residual steam-air mixture leaving condenser, before it reaches vacuum pump, is powerful means of either increasing capacity of pump of existing installation or reducing size of pump required for new job.

Present Problem of Surface Condensers (Le problème actuel du condenseur à surface), A. Delas. Revue Industrielle, vol. 56, no. 2201, Apr. 1926, pp. 153-159, 6 figs. Discusses conditions of effective operation, cleanliness of surfaces on both sides; uniform hourly rate of condensation per unit of surface and uniform speed of steam; gives examples with calculations.

CONVERTERS

SYNCHRONOUS. Modern Problems of Synchronous Converters, E. B. Shand. Eng. Jl., vol. 9, no. 6, June 1926, pp. 281-288, 10 figs. Outline of recent developments and means adopted to overcome various problems.

CONVEYORS

TRAMRAIL SYSTEM. Special Carrying Rail, A. F. Anjeskey. Iron Age, vol. 117, no. 23, June 10, 1926, p. 1651, 1 fig. New development in overhead conveying systems reduces wear and increases life; it eliminates entirely troubles encountered with I-beam.

COPPER METALLURGY

POWDERED COPPER IN ANODE MUD. Formation of Powdered Copper in Anode Mud, M. DeKay Thompson. Chem. & Met. Eng., vol. 33, no. 5, May 1926, p. 298. Usual explanation of precipitation of finely-divided metal at anode is shown to be correct.

CRANKSHAFTS

TORSIONAL VIBRATION. Torsional Vibration fo Crankshafts, P. M. Heldt. Automotive Industries, vol. 54, no. 23, June 10, 1926, pp. 957-965, 10 figs. Points out that lower harmonics of gas-pressure curve and not inertia force are principal factor.

CULVERTS

JACKING THROUGH EMBANKMENT. Reducing the Cost of Culvert Placement, A. S. Rosing. Good Roads, vol. 69, no. 5, May 1926, pp. 181-184, 191 and 203, 15 figs. Recommended practice based on actual field experience with jacking method of culvert placement, which differs from other methods in that culvert is forced completely through embankment without constructing open trench.

CUPOLAS

PRACTICE AND METALLURGY. Cupola Practice and Metallurgy. West. Machy. World, vol. 17, no. 5, May 1926, pp. 211-212, 1 fig. Height of coke bed, volume of air and weight of charges of metal and fuel in cupola operations are items that require manipulation, based upon fixed principles; how to figure melting capacity of any size cupolas.

SHAFT FURNACES. Melting Practice in the Iron Foundry, with Special Reference to the Shaft Furnace, J. Mehrtens. Foundry Trade Jl., vol. 33, no. 511, June 3, 1926, p. 399. Effect of melting in shaft furnace on quality of cast iron; author claims old cupola or shaft furnace still maintains its position as being simplest and cheapest melting device in iron foundry; recent improvements in shaft furnace.

CURVES

CATENARY AND PARABOLA. Properties of the Catenary and Parabola, R. Fleming. Can. Engr., vol. 50, no. 21, May 25, 1926, pp. 591-593, 2 figs. Useful mathematical and geometrical relationships for each curve; comparison of curves; error involved in substituting parabolo for catenary; common assumptions of practice; when to approximate; older books valuable in study of curves.

CUTTING METALS

OXY-ILLUMINATING GAS. Metal Cutting with Oxy-Illuminating Gas, F. P. Wilson, Jr. Gen. Elec. Rev., vol. 29, no. 6, June 1926, pp. 443-445, 6 figs. Action of metal-cutting torch; design of new torch; comparison of illuminating gas and other gases; superheating; advantages of new torch.

D

DIESEL ENGINES

APPLICATIONS. Applications, Economics and Operation of Modern Diesel Engines, G. A. Adkins and R. H. Bacon. Nat. Engr., vol. 30, no. 5, May 1926, pp. 189-195, 6 figs. Applications of modern types of various classes of service; factors to be considered in selection of units; fuel consumption, lubrication and operating requirements; operating costs, first costs, fixed charges and total cost of service under various operating conditions. Paper presented during Oil & Gas Power Week.

DOUBLE-ACTING. The North-Eastern Double-Acting Marine Diesel Engine. Engineering, vol. 121, no. 3150, May 28, 1926, pp. 634-635, 3 figs. on supp. plates. Diesel engine working on 4-stroke cycle, capable of developing 5,800 i.h.p. in its 6 cylinders, built for installation in motorship Stentor. See also description in Engineer, vol. 141, no. 3672, May 28, 1926, p. 559, 3 figs. on pp. 554 and 558.

PIPE-LINE PUMP DRIVE. Oil Engines as a Drive for Pipe-Line Pumps, F. Thilenius. Mech. Eng. (Supp.), vol. 48, no. 6, June 1926, pp. 663-670, 11 figs. Survey of use of Diesel engines for this purpose, covering facts pertaining to pipe-line systems leading out of Mid-Continent area, together with discussion of pipe-line practice and of forms of power previously employed.

DISKS

ROTATING. The Rims of Rotating Disks. Engineering, vol. 121, no. 3151, June 4, 1926, p. 649, 3 figs. Points out that width of rim which can be effectively supported by central web is point of importance in design of rotating disks; problem involved was virtually solved by J. Y. Nicholson, who derived expression for deformation of boiler shell in immediate neighbourhood of end plates, and this problem is mathematically identical with that involved in determining width of rim which can be effectively supported by web plate of rotating disk.

DOCKS

CAISSONS FOR. The Two Great Caissons for the New Canadian Government Graving Dock at Esquimalt, British Columbia. Eng. Jl., vol. 9, no. 6, June 1926, p. 308, 3 figs. Steel caissons are reversible; each has total of six decks and is equipped with two vertical-operated centrifugal pumps of 1,600-gal. per min. capacity.

DRAINAGE

PERFORATED PIPE FOR. Perforated Pipe for Subdrainage, A. S. Rosing. Contract Rec., vol. 40, no. 19, May 12, 1926, pp. 440-445, 11 figs. Advantages and application of new method of roadbed drainage; phases of railroad work for which pipe is especially suitable.

DRILLING MACHINES

PORTABLE. Portable Drilling Machines. Machy. (Lond.), vol. 28, no. 709, Apr. 29, 1926, pp. 144-147, 7 figs. Application to locomotive and heavy engineering work; types made at Selson Eng. Co., London.

RAILWAY SHOPS. The Drilling Machine in the Railway Shop, L. R. Gurley. Ry. Mech. Engr., vol. 100, no. 6, June 1926, pp. 351-358, 25 figs. Requirements for efficient operation; jigs fixtures and practical set-ups.

DROP FORGINGS

METALS. Drop Forging Metals, D. Forger. Metal Industry (N.Y.), vol. 24, nos. 4, 5 and 6, May and June 1926, pp. 141-142, 183-184 and 242-243, 1 fig. Describes British practice. Apr. and May: Aluminum alloys; importance of temperature control; types of furnace; design problems; dies; heat treating; machining and finishing; precautions in handling. June: Copper and brass.

DURALUMIN

HEAT TREATMENT, EFFECT OF. Some Mechanical Properties of Duralumin Sheet as Affected by Heat Treatment, R. J. Anderson. Am. Soc. Testing Matls.—Preprint no. 36, for mtg. June 21, 1926, 27 pp., 17 figs.

WORKING. Some Notes on Working Duralumin. Machy. (Lond.), vol. 28, no. 705, Apr. 1, 1925, pp. 15-16. Practical hints on its heat treatment, machining, rivetting and welding.

E

EDUCATION, ENGINEERING

EVOLUTIONARY TRENDS. Evolutionary Trends in Engineering Curricula, W. E. Wickenden. Jl. Eng. Education, vol. 16, no. 10, June 1926, pp. 658-668, 8 figs. Presents diagrams indicating general trends in evolution of engineering curricula during past fifty years.

GENERAL EDUCATION. The Engineering Course as a General Education, E. W. Whited. Jl. Eng. Education, vol. 16, no. 9, May 1926, pp. 615-620. Points out that engineering course is being recognized more and more as excellent system for general education; principal explanation of this fact is that type of mental training given in engineering course fits man for large number of vocations in life, even outside of engineering.

MECHANICAL ENGINEERING. Graduation Requirements in Mechanical Engineering, W. C. John. Jl. Eng. Education, vol. 16, no. 9, May 1926, pp. 581-60, 3 figs. Summary and analysis of graduation requirements in mechanical engineering; comparison of graduation requirements in publicly and privately supported institutions.

ELECTRIC ARC

PHOTOGRAPHY. Photography of Arcs, W. H. Tenney. Elec. Jl., vol. 23, no. 5, May 1926, pp. 249-253, 11 figs. Determination of characteristics of high-voltage arcs through assistance of photography.

ELECTRIC DISTRIBUTION SYSTEM

PROTECTIVE EQUIPMENT. Protective Equipment for Direct-Current Networks, M. N. Ewell. Elec. Jl., vol. 23, no. 5, May 1926, pp. 227-230, 7 figs.

ELECTRIC DRIVE

BOX FACTORY. Motor Driving Problems in Box Factory. Elec. World, vol. 87, no. 20, May 15, 1926, pp. 1043-1045, 5 figs. Power requirements; basic reasons for determining selection of motors for individual or group applications; trend toward driving.

ELECTRIC FURNACES

INDUCTION. On the Quantitative Theory of Induction Heating, C. R. Burch and N. R. Davis. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 1, no. 4, Apr. 1926, pp. 768-783, 3 figs. Investigates energetics of induction furnace, discusses conditions under which transfer of energy from inductor to charge is maximal, and influence of various operating parameters on power factor of loaded inductor.

RESISTANCE. Electric Conditions for Resistance-Furnace Operations (Le condizioni elettriche di funzionamento dei forni a resistenza), G. Rebora. Elettro-tecnica, vol. 13, no. 7, Mar. 5, 1926, pp. 137-141, 19 figs. Discusses electric phenomena in resistance furnaces and monophase a.c. operation, for production of carbide, ferroalloys, abrasives, etc.; develops calculations for principal elements.

ROTARY. Electric Rotary Furnaces Prove Highly Successful, I. S. Wishoski. Fuels & Furnaces, vol. 4, no. 6, June 1926, 66. 683-688, 4 figs. Automobile parts accurately carburized in three large rotary furnaces; small rotary furnace gives excellent results in heat treating ring gears.

ELECTRIC GENERATORS, A.C.

AUTOMATICALLY SYNCHRONIZING. Methods of Automatically Synchronizing Water-Wheel Generators, M. E. Reagan. Elec. Jl., vol. 23, no. 4, Apr. 1926, pp. 172-179, 6 figs.

LOSSES. A Contribution to Research on the Experimental Determination of the Losses in Alternators, E. Roth. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 5, May 1926, pp. 422-429, 8 figs. Deals with determination by simple tests of actual losses in alternators; reviews existing rules and states variation of losses in alternators as function of load and as function of power factor; records of experimental researches made by author which serve on one hand as basis for discussion of theoretical considerations which he develops and on other hand to compare actual losses with those obtained by methods given in rules at present in force.

ELECTRIC LOCOMOTIVES

FRANCE. Express Electric Locomotives for the Midi Railway Company of France. Engineering, vol. 121, no. 3150, May 28, 1926, pp. 622-625, 6 figs. Locomotives built at Tarbes Works of Constructions Electriques de France for Midi Railway; design embodies 3 pairs of driving wheels; power is transmitted through springs.

HIGH-SPEED. High-Speed Electric Locomotives. Int. Ry. Congress—Bul., vol. 8, no. 5, May 1926, pp. 431-459. Discussion by section and at general meeting.

ELECTRIC MOTORS

CONTROLLERS. Improving Control Operation by Changing Resistance on Motor Controllers, O. C. Callow. Indus. Engr., vol. 84, no. 6, June 1926, pp. 276-278, 2 figs. Causes of troubles encountered in blast furnace and coke plant, and diagrams showing method of overcoming them.

SLIP REGULATOR. The Mechanics of the Slip Regulator, L. A. Umansky. Gen. Elec. Rev., vol. 29, no. 6, June 1926, pp. 405-415, 18 figs.

ELECTRIC MOTORS, A.C.

INDUCTION. The Induction Motor Problem—Installation, M. Sampson. Textile World, vol. 69, no. 23, June 5, 1926, pp. 61, 63 and 65, 2 figs. Discussion of motor installation from engineering angle; characteristics of chains, gearing and belting drives for textile service; effect of location on humidity; individual motor drive incorporated in design of machine; application and installation of controls.

STATOR CONSTRUCTION. Alternating-Current Motors — Stator Construction, B. A. Briggs. Power, vol. 63, no. 21, May 25, 1926, pp. 814-817, 11 figs.

ELECTRIC RAILWAYS

DEPRECIATION. Depreciation as an Operating Expense, W. H. Maltbie. Elec. Ry. Jl., vol. 67, nos. 9, 10 and 13, Feb. 27, Mar. 6 and 27, 1926, pp. 354-356, 399-402 and 542-544. Feb. 27: Causes of depreciation. Mar. 6: Methods of setting up funds to provide for depreciation. Mar. 27: Determination of size of general reserve; practical method and replacement reserve; reserves under investment and reproduction theories for rate base.

ILLINOIS. From Receivership to Prosperity in Three Years. Elec. Ry. Jl., vol. 67, nos. 9, 10, 11 and 14, Feb. 27, Mar. 6, 13 and Apr. 3, 1926, pp. 357-362, 393-395, 439-443 and 593-595, 19 figs.

TRACTON RECORDERS. Improved Instrument for Car Operation Tests, A. W. Swan. Elec. Ry. Jl., vol. 67, no. 20, May 15, 1926, pp. 845-846, 5 figs. Improved traction recorder charts five individual records, namely, line voltage, station stops, total current, brake applications and speed in miles per hour.

ELECTRIC TRANSMISSION LINES

DESIGN. Construction of Power Transmission Lines, C. M. Goodrich. Can. Engr., vol. 50, no. 19, May 11, 1926, pp. 561-563, 6 figs. Considerations involved in design; loading classifications; various types of tower and pole; aluminum and copper cables. Paper presented at Montreal Branch of Eng. Inst. Canada.

STRINGING TENSIONS. Stringing Tensions for Unequal Spans, A. Still. Elec. World, vol. 87, no. 20, May 15, 1926, pp. 1049-1050, 1 fig.

TOWERS. Steel Transmission Towers for Williamette River Crossing at Portland, Oregon, H. F. Blood and A. H. T. Williams. West. Constr. News, vol. 1, no. 7, Apr. 10, 1926, pp. 30-33, 5 figs. 66,000-volt line carried across river on three large steel towers, allowing clearance for oceangoing ships in main channel.

TRANSMISSION STABILITY. A Mechanical Analogy to the Problem of Transmission Stability, S. B. Griscom. Elec. Jl., vol. 23, no. 5, May 1926, pp. 230-235, 11 figs.

ELECTRIC TRANSMISSION SYSTEMS

OVERHEAD. Overhead Systems Committee Reports. Jl. Electricity, vol. 56, no. 10, May 15, 1926, pp. 415-428, 7 figs.

ELECTRIC WELDING, ARC

COPPER CASTINGS. Arc Welding Heavy Copper Castings, P. M. Rauscher. Welding Engr., vol. 11, no. 5, May 1926, pp. 17-18, 5 figs. How copper blast-furnace castings are repaired by metallic arc process; work has to be kept hot for welding.

ELECTRICAL MACHINERY

THERMAL CAPACITY. Can the Thermal Capacity of Electric Machines be Made a Simple and Practical Element of Rating? A. E. Kennelly. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 5, May 1926, pp. 438-445, 12 figs. It is believed that thermal constants of electric machines in variable regime (especially their binary time constants), can, in many cases, be used in very simple way for practical purposes; it is not recommended that such thermal constants be introduced into rating of machines at present time, but that they should be regarded as useful subsidiary information concerning machines. Bibliography.

ELECTRICAL MEASUREMENTS

Three-Phase Power. A Method for Determining the Sign of the Smaller Wattmeter Reading in Balanced Three-Phase Power Measurements, H. K. Humphrey. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 5, May 1926, pp. 430-431, 1 fig.

ELECTRICITY SUPPLY

Concentrated Power System. Operating a Concentrated Power System, P. B. Juhnke. Elec. World, vol. 87, no. 25, June 19, 1926, pp. 1343-1347, 3 figs. Functions of load dispatcher; 60-cycle load dispatching more complicated than 25-cycle; load schedules and automatic load totalizing help; protecting service from bus short circuits; safeguarding downtown supply.

Economics. Economics of Electricity Supply, S. Insull. Elec. World, vol. 87, no. 21, May 22, 1926, pp. 1129-1132. Survey of national situation demands greater sales efforts; markets are available and industry situation calls for development programme; interconnection possibilities. Address made at Nat. Elec. Light Assn.

Interchange-Energy Contrast. Interchange of Energy, E. J. Fowler. Elec. World, vol. 87, no. 22, May 29, 1926, pp. 1187-1189.

ELEVATORS

Equipment. High-Speed Alternating-Current Elevator Equipment, E. Thurston. Power, vol. 63, no. 22, June 1, 1926, pp. 848-849, 3 figs. Non-scaling type of magnet, built like polyphase induction motor, is applied to operating controller contractors and brake; multi-speed squirrel-cage motors are used having speed ratios as high as six to one.

EXPLOSIVES

Pressure Wave. The Pressure Wave Sent Out by an Explosive, W. Payman and H. Robinson. Safety in Mines Research Board Paper, no. 18, 1926, 60 pp., 51 figs. Deals with experimental work carried out in laboratory in order to work out satisfactory experimental method and gain necessary experience for carrying out experiments with normal charges of explosives in field experiments and to obtain some more fundamental knowledge of phenomenon under investigation in order to be able to apply results of later work to consideration of methods of minimizing dangers involved in use of explosives in coal mines.

F

FANS

Resistance. Resistance in Fan Engineering, O. Stott. Colliery Eng., vol. 3, no. 26, Apr. 1926, pp. 177-182, 21 figs. Author tries to analyze what should be meant by resistance and also how it may be conveniently measured and indicated.

FILTRATION PLANTS

Welland, Ont. New Filtration Plant at Welland, Ont., E. R. Smallhorn. Can. Engr., vol. 50, no. 23, June 1, 1926, pp. 621-622, 4 figs. Comprises high-lift pumping station and filtration plant of 4 units each having capacity of 1,500,000 gal., making total of 6,000,000 gal. per day; total filtered water storage is 1,592,000 gal.; De Laval low- and high-lift pumps.

FIRE EXTINGUISHERS

CO_2 System. Carbon Dioxide Fire Extinguisher System, P. W. Eberhardt. Elec. World, vol. 87, no. 20, May 15, 1926, pp. 1058-1059, 4 figs.

FLOORS

Gypsum Concrete. Fire Test of Light-weight Floor of Poured Gypsum Concrete, A. H. Beyer. Eng. News-Rec., vol. 96, no. 24, June 17, 1926, pp. 993- , 2 figs.

FLOW OF AIR

Pipes. A Thermionic Valve Method of Measuring the Velocity of Air-Currents of Low Velocity in Pipes, J. A. C. Tergan. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. I, no. 5, May 1926, pp. 1117-1120, 1 fig. Describes hot-wire anemometers of new type which has been found satisfactory for measurement of slow-moving streams of air in pipes.

Research. Tasks of Air Flow Research, L. Prandtl. Nat. Advisory Committee for Aeronautics—Tech. Memorandums, no. 365, June 1926, 11 pp. Describes tasks of Kaiser Wilhelm Institute for Air Flow Research, which is dedicated first of all to systematic study of phenomena of flow in contradistinction from other institutes. Translated from Naturwissenschaften, vol. 14, no. 16.

FLOW OF FLUIDS

Viscous Fluids. The Motion of Two Spheres in a Viscous Fluid, M. Stimson and G. B. Jeffery. Roy. Soc.—Proc., vol. 3, no. A757, May 1, 1926, pp. 110-124, 2 figs. Determination of motion set up in viscous fluid at rest at infinity by two solid spheres (equal or unequal) moving with equal small constant velocities parallel to their line of centres; solution is based on determination of Stokes' stream function for motion of fluid, and from this, forces necessary to maintain motion of spheres are calculated.

FLOW OF WATER

Kinetographic Flow Pictures. Kinetographic Flow Pictures, L. Prandtl and O. Tietjens. Nat. Advisory Committee for Aeronautics—Tech. Memorandums, no. 364, May 1926, 6 pp. 12 figs. According to method worked out by F. Ahlborn, flow of water can be photographed by strewing on its surface fine particles and making short time exposures; each particle travels certain distance during exposure and is photographed as short straight line; total of all these short lines produces picture which shows direction of flow at every point and also its velocity; describes device employed by authors to make such pictures. Translated from Naturwissenschaften, vol. 13.

Reducing the Formulas Most Generally Used for Calculating Channels and Conduits to a Monomial Form (Riduzione a forma monomia delle formole piu frequentemente usate per il calcolo dei canali e delle condotte), F. Contessini. Annali dei Lavori Pubblici, vol. 64, no. 1, Jan. 1926, pp. 15-25, 4 figs. Reduces formulas by Darcy, Bazin and Kutter and their derivatives to common equation, and gives table for coefficient of roughness, etc.

FLYWHEELS

Manufacture. Two Methods of Making Flywheels, F. H. Colvin. Am. Mach., vol. 64, no. 21, May 27, 1926, pp. 821-823, 8 figs. Fixtures and methods used in making both Hupp and Stutz flywheels; machines used in turning, drilling and balancing wheels.

FOREMEN

Training. Foremen Training is Essential to Plant Self-Government, C. McCormick, Jr. Am. Mach., vol. 64, no. 22, June 3, 1926, pp. 863-864. Prime object of foreman training is to obtain correct application of company policies; influence of foremen on production, quality and cost; promotion within ranks.

FORGING

Factors. Some Factors in Forging Steel, O. W. Ellis. Forging—Stamping—Heat Treating, vol. 12, no. 5, May 1926, pp. 158-163, 9 figs. Deals with factors affected by forging machine and those affected by material being forged.

FOUNDRIES

Electric Steel. Foundry Has Electric Ovens. Iron Age, vol. 117, no. 24, June 17, 1926, pp. 1703-1707, 4 figs. Completeness of electrical application is feature of Ross-Meehan steel foundries; core drying and annealing is done electrically; hard-iron grinding in malleable plant.

Ingot-Mold. First Ingot-Mold Foundry in West, R. A. Fiske. Iron Age, vol. 117, no. 23, June 10, 1926, pp. 1642-1644, 7 figs. Careful centreing of core bar in core box, pattern in flask and core in mold insure uniform wall thickness in ingot-mold; methods and equipment of foundry at South Chicago, Ill. See also description in Iron Trade Rev., vol. 78, no. 23, June 10, 1926, pp. 1499-1501, 7 figs.

Machine Shops, Co-operation with. Machine Tools and Foundry Practice. Metallurgist (Supp. to Engineer, vol. 141, no. 3672), May 28, 1926, p. 67. Consideration of facts suggests that adoption of grinding methods for treatment of castings, combined with casting much closer to dimensions in foundry, offers method of economy which engineers and foundrymen together should consider most carefully.

FUELS

Carbonization. Carbonization of Canadian Fuels, R. E. Gilmore. Can. Chem. & Met., vol. 10, nos. 2, 3, 4 and 6, Feb., Mar., Apr. and June 1926, pp. 31-34, 51-54, 85-87 and 140-144. Application of principles of high- and low-temperature carbonization to wood, peat and different classes of Canadian fuels; gasoline and substitute motor fuels in Canada, with special reference to synthetic methanol and synthol.

Gaseous. Industrial Fuels, H. H. Clark. Engrs'. Soc. West. Pa.—Proc., vol. 42, no. 2, Mar. 1926, pp. 100-108 and (discussion) 109-118, 7 figs. Principal gaseous fuels are natural, city and producer gas; use of city gas in Chicago.

Heating Value. Calorimetric Determinations of the Heating Value of Fuels, W. J. Wohlenberg. Combustion, vol. 14, no. 5, May 1926, pp. 317-319, 1 fig. Their exact relation to energy releasable in boiler furnace.

See also Coal; Lignite; Oil Fuel; Pulverized Coal.

FURNACES, HEATING

Continuous. Continuous Bloom and Billet Heating Furnaces, E. W. Trexler. Iron & Steel Engr., vol. 3, no. 6, June 1926, p. 300. Points out that elimination of water cooling in heating furnace is important from efficiency standpoint, as heat absorbed by cooling water is from 2 to 5 per cent of total heat supplied by fuel.

Re-Heating. Re-Heating Furnaces, F. G. Bell and R. Waddell. Iron & Coal Trades Rev., vol. 112, nos. 3032 and 3033, Apr. 9 and 16, 1926, pp. 609-610 and 648-650, 12 figs. Results of experiments carried out by Brown, Bayley's Works show that they have been able to reduce consumption of fuel reheating furnaces to a figure as low as, or lower than, can be obtained by any competitive system; that they can operate continuously, except for an hour or two at lighting up, with ordinary slack; that just as good results have been obtained in heating of their steel as with any other type of furnace tried; and that latest types of recuperative furnace fired with slack are definitely proved to be practically smokeless in operation.

G

GAS PRODUCERS

Operation. Gas Producer Operation, F. E. Leahy. Iron & Steel Engr., vol. 3, no. 6, June 1926, pp. 294-299, 11 figs. Results obtained from recording instruments installed to guide operators and check practice to secure results in daily practice close to what are obtained on tests made under skilled observers; discussion of charts obtained from steam flow meters and pressure recorders; effect of steam on gas produced; regulation of steam from gas pressure.

GASES

Ignition. Ignition of Gases by Sudden Compression, H. T. Tizard and D. R. Pye. Lond., Edinburgh and Dublin Philosophical Mag. & Jl. Sci., vol. 1, no. 5, May 1926, pp. 1094-1105, 4 figs. Experiments in which both time and pressures could be measured with greater accuracy than previously; results of typical experiments by which behaviour of mixtures of ether and air on compression in old and new apparatus can be compared.

GEAR CUTTING

Hypoid Rear-Axle. Design, Production and Application of the Hypoid Rear-Axle Gear, A. L. Stewart and E. Wildhaber. Soc. Automotive Engrs.—Jl., vol. 18, no. 6, June 1926, pp. 575-580 and 600, 8 figs. After defining hypoid gears and outlining their action, characteristics and advantages, authors compare them specifically with spiral-bevel gears and describe how axis of pinion is offset from axis of gear and how direction of offset determines whether spiral is right-handed or left-handed; newest method for producing hypoid gears; finish-cutting of pinion is only major operation which requires machinery different from that used for spiral-bevel gears and pinions.

Silent. Greater Economy in Present Method of Fabricating Silent Gears, H. R. Moyer. Automotive Industries, vol. 54, no. 22, June 3, 1926, pp. 934-937, 13 figs. Waste is largely eliminated by cutting material into small segments and molding to form annulus; new development is pressed steel centre; centres of molded material also used; development of Micarta gear.

Teeth, Wear of. The Relation of Load to Wear on Gear Teeth, E. Buckingham. Am. Mach., vol. 64, no. 20, May 20, 1926, pp. 777-780, 2 figs. Experiments show that in order to transmit power without appreciable wear, maximum specific stress given by Hertz equation should not exceed elastic limit. Paper presented before Am. Gear Mfrs.' Assn.

Wear of Gear Teeth, E. Buckingham. Machy. (N.Y.), vol. 32, no. 10, June 1926, pp. 798-799. Maximum loads that do not produce too rapid wear; investigations of gear drives for durability; formula and constants for determining maximum safe load and example of use of formula and tables. (Abstract.) Paper presented before Am. Gear Mfrs.' Assn.

GRINDING MACHINES

Disk. Disk-Grinding on Production Work, W. F. Sandmann. Machy. (N.Y.), vol. 32, no. 10, June 1926, pp. 800-801, 7 figs. Double-end disk grinder; automatic grinder.

GEOLOGY

Outrageous Hypotheses. The Value of Outrageous Geological Hypotheses. Science, vol. 63, no. 1636, May 7, 1926, pp. 463-468. Points out that in order to make such progress in geology in next 30 years as has been made in physics during last 30 years, violence must be done to many of accepted principles; inasmuch as great advances have been made by outraging in one way or other body of preconceived opinions, it is almost sure that advances yet to be made in geology will be at first regarded as outrages upon accumulated convictions of to-day.

GUNITE

Fireproofing Properties. Fireproofing Properties of Cement, B. C. Collier. Can. Engr., vol. 50, no. 13, Mar. 30, 1926, pp. 443-444. Encasement of structural steel members with gunite; conditions obtained with this method. Paper read before Am. Inst. Steel Construction.

GRAIN ELEVATOR

TRANSFER. Transfer Elevator at Owen Sound, Ont. Can. Engr., vol. 50, no. 20, May 18, 1926, pp. 571-574, 7 figs. New 1,000,000-bu. elevator built by Barnett-McQueen Constr. Co. connects with both Can. Nat. & Can. Pac. railway systems; plant is of reinforced concrete and fireproof throughout; main structure consists of 26 circular tanks.

H

HAMMERS

ELECTRO-PNEUMATIC. 30-Cwt. Power Hammer. Engineer, vol. 141, no. 3671, May 21, 1926, pp. 533-534, 2 figs. Electro-pneumatic hammer of overhanging type, with arch form of frame, made by B. & S. Massey.

HEAT

RADIATION, ENTROPY OF. On Entropy of Radiation, M. Saha and R. Kanto Sur. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 1, no. 4, Apr. 1926, pp. 890-893. Develops theorem which shows that if radiation is used as working substance, absolute zero can be obtained in space where all radiation has been completely annihilated.

HEAT TRANSMISSION

COEFFICIENTS FOR REFRIGERATION. Vital Heat Transfer Data for the Refrigerating Engineer, H. J. Macintire. Power, vol. 63, no. 22, June 1, 1926, pp. 857-858. Heat-transfer action; transfer in counter-current condensers; advantage of shell-and-tube type; coefficients in other apparatus.

RESEARCH. Some Results of Heat Transmission Research, F. B. Rowley. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 32, no. 5, May 1926, pp. 339-348 and 374, 12 figs. Relates progress made at University of Minnesota.

HEATING AND VENTILATION

CANADA. Development of the Art of Heating and Ventilating in Canada, L. M. Arkley. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 32, no. 6, June 1926, pp. 431-450, 17 figs.

HEATING

HUMID AIR. Humid Air as a Heating Medium, F. Brown. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 32, no. 5, May 1926, pp. 331-338, 5 figs. Presents data showing how humid air as heating medium accomplishes primary object of development, economy of operation, by reducing steam consumption for comfortable heat; and secondary object, lesser temperature differential between floor and ceiling temperatures, or comfortable knee-height temperature by operation of radiator at temperatures lower than is possible in conventional steam installation.

HEATING, ELECTRIC

EQUIPMENT. Report of Electric Heat Committee for 1926, W. P. Chandler, Jr. Iron & Steel Engr., vol. 3, no. 6, June 1926, pp. 224-239, 9 figs. Statement by Central Power Station Duquesne Light Co., listing advantages of electric heat treatment; arc melting furnaces; renewal of interest in possibilities of duplexing with electric arc furnace; electric-steel melting furnace placed in operation at plant of Reading Steel Casting Co., Reading, Pa.; statement by Timken Roller Bearing Co. on making of steel by basic electric process; induction furnaces; resistance furnaces, (high-temperature applications); heat-treating furnaces for tool rooms; electric hot tops for molds; roll heaters; wire drying and annealing; galvanizing kettles; electric arc welding in steel industry, etc.

INDUSTRIAL LOAD. A Few Suggestions for Developing Industrial Heating Load, E. Fleischmann. N. E. L. A. Bul., vol. 13, no. 4, Apr. 1926, pp. 219-222. Suggests methods of developing and retaining good will of customers toward electric heat.

INDUSTRIAL PLANTS. Factors that Determine When Electric Heating Can Be Used to Advantage, W. S. Scott. Indus. Engr., vol. 84, no. 6, June 1926, pp. 272-275, 4 figs. Discussion of operating economies and desirable features that are inherent in this mode of heating.

HEATING, HOT-WATER

INDUSTRIAL PLANTS. How Forced Hot-Water System Heats Ford's Twin Cities Plant, E. H. Whittemore. Plumbers' Trade Jl., vol. 80, no. 10, May 15, 1926, pp. 968-969 and 983, 5 figs. Heat is supplied from steam power plant located at river bank and about 300 ft. away from building; water-heating equipment and piping system are so arranged that office section of building may be operated separately from rest of building.

HIGH-SPEED STEEL

MAGNETIC ANALYSIS. Report of Committee A-8 on Magnetic Analysis. Am. Soc. Testing Matls.—Preprint, no. 15, for mtg. June 21, 1926, 36 pp., 28 figs. Appendix contains article by T. Spooner, presenting results of investigation of correlation between magnetic and electrical properties and heat treatment of series of bars of high-speed steel, considers various testing methods.

HIGHWAYS

MAINTENANCE COSTS. Ten Years' Road Maintenance Costs in New York State. Eng. News-Rec., vol. 96, no 24, June 17, 1926, pp. 979- .

WIDENING AND RESURFACING. Widening and Resurfacing the King Edward Highway Without Detours, L. Garbi. Contract Rec., vol. 40, no. 22, June 2, 1926, pp. 542-543, 3 figs. Amiesite used to overhaul heavily-travelled thoroughfare from Montreal to international boundary; no detours were necessary and traffic was not delayed.

HYDRO-ELECTRIC DEVELOPMENTS

QUEBEC. 4,000 Men Will Be Engaged on Gatineau River Power Projects. Contract Rec., vol. 40, no. 22, June 2, 1926, pp. 547-551, 3 figs. Developments being undertaken by Can. Int. Paper Co.; details of various works involved.

Hydro-Electric Development in Quebec, C. V. Christie. World Power, vol. 5, no. 29, May 1926, pp. 231-237, 1 fig. Physical characteristics of province; water-power resources; main hydro-electric plants; utilization of electric power in pulp and paper industry; electric steam generators.

Development Work at Chelsea and Farmer's Rapids on the Gatineau, A. H. White. Contract Rec., vol. 40, no. 20, May 19, 1926, pp. 462-464, 4 figs. Four principal points for development at Maniwaki, Paugan Falls, Chelsea and Farmer's Rapids; two latter are now in process of developments.

ST. LAWRENCE RIVER. Water Power Development on the St. Lawrence River, F. P. Williams. Cornell Civ. Engr., vol. 34, no. 8, May 1926, pp. 199-201 and 214, 3 figs. Power development of river is definitely involved with proposed improvement for navigation; average flow of river; channels across which dams are to be built vary from one-half to about one mile in width; status of St. Lawrence project.

HYDRO-ELECTRIC PLANTS

AUTOMATIC. Automatic Non-Governing Hydro Plant, C. P. Scheller and W. B. Carr. Elec. World, vol. 87, no. 24, June 12, 1926, pp. 1285-1288, 4 figs. Self-operating features and elimination of governor favour development of water-power site with economy in regard to both first cost and cost of operation; complete tests gave satisfactory results.

GREAT BRITAIN. The New Hydraulic Power Station at Cardiff Docks. Engineering, vol. 121, nos. 3148 and 3150, Apr. 30 and May 28, 1926, pp. 554-556 and 562, and 617-619, 16 figs., partly on supp. plate. Work of converting old steam station into electrically-operated station making use of high-speed centrifugal pumps; main pumps are each capable of delivering 800 gal. per min. at pressure of 800 lb. per sq. in.; electric supply is brought into pumping station by 2 feeders at 6,600 volts, 3-phase, 50 cycles per sec.; pump motors, controllers, protective devices, etc.

I

INDUSTRIAL MANAGEMENT

FINANCIAL AND INDUSTRIAL INVESTIGATION. Operating and Turnover Ratios, A. Andersen. Mfg. Industries, vol. 11, no. 6, June 1926, pp. 441-444. Study of turnover ratios, which as a whole expresses relationship between operating results and capital employed, in other words, comparison between profit-and-loss figures and balance-sheet figures.

LABOUR ATTITUDE TOWARD. The American Labour Movement and Scientific Management, P. Devinat. Int. Labour Rev., vol. 13, no. 4, Apr. 1926, pp. 461-488. Discusses reasons for earlier opposition of trade units to scientific management, events which gradually led to its breakdown, and steps by which American Federation of Labour came to adopt its present attitude of readiness to collaborate with management in enlightened application to industry of scientific methods of organization.

MAINTAINING IMPROVED METHODS. Keeping Up Improved Operating Results, J. A. Piactelli. Mfg. Industries, vol. 11, no. 6, June 1926, pp. 435-439, 8 figs. Measures taken to maintain results accomplished at Maurer Plants of Barber Asphalt Co.

MANUFACTURING CONTROL. Timely Guide to Manufacturing Control, J. H. Barber. Mfg. Industries, vol. 11, no. 6, June 1926, pp. 417-420, 4 figs. Describes valves and fittings index of Walworth Co.; its general significance and methods employed.

PLANNING AND ROUTING. Planning and Routing Shop Work, J. S. Gray. Machy. (N.Y.), vol. 32, no. 10, June 1926, pp. 776-778. General duties of planning department; effect of planning on costs and on delivery dates; details of work of planning department; co-operation between shop and planning department.

SALES PROGRAMME. A Market Survey and Its Results, H. L. Keely. Mfg. Industries, vol. 11, no. 6, June 1926, pp. 421-434, 3 figs. Method of applying market survey for increasing sales of building material.

INDUSTRIAL PLANTS

POWER ANALYSIS. The Rewards to Management from a Real Analysis of Power, D. M. Myers. Factory, vol. 36, no. 5, May 1926, pp. 830-835, 870, 874, 876, 978 and 980, 12 figs. Frank discussion of question of purchased versus generated power, with reports on marked improvements in operation which have come from wide contact with industrial-plant problems.

INDUSTRIAL TRUCKS

ELECTRIC. Field of Application and Savings Effected by Industrial Trucks, H. J. Payne. Elec. World, vol. 87, no. 24, June 12, 1926, pp. 1292-1294, 2 figs. Description of operations and uses in various manufacturing plants where electric tractor has proved to be both economical and labour-saving feature.

PAPER MILLS. Cutting Handling Costs with Electrical Trucks. Paper Trade Jl., vol. 82, no. 23, June 10, 1926, pp. 59-63, 6 figs. Applications of electric trucks in various mills. (Abstract.) Paper presented before Am. Pulp & Paper Mills Supts'. Assn.

INSULATING MATERIALS, ELECTRIC

BREAKDOWNS. Breakdowns in Insulating Material. Brown Boveri Rev., vol. 13, no. 5, May 1926, pp. 115-121, 5 figs. Results of measurements of dielectric losses carried out in Brown Boveri testing laboratories; breakdown through heat; relation between allowable continued pressure and thickness of insulating layer; points out that beyond certain limit, it is of no use to thicken layer of insulation.

ELECTRICAL MACHINERY FOR. Recent Improvements in the Insulation of Electrical Machinery, K. G. Maxwell and A. Monkhouse. Instn. Elec. Engrs.—Jl., vol. 64, no. 352, Apr. 1926, pp. 439-463 and (discussion) 463-475. Review of more recent developments in manufacture and use of insulating materials; survey of prominent characteristics followed by summary of process improvements; authors put forward strong plea for standardization of nomenclature and test methods for determining essential properties of insulating materials; includes examples of standardizing of material terminology. Bibliography.

INSULATION, HEAT

PROBLEMS. Heat Insulation, C. F. Wade. Elec. Times, vol. 69, no. 1802, Apr. 29, 1926, pp. 543-544, 1 fig. Points out need of continuous attention in order to maintain non-conducting coverings in efficient condition.

INSULATORS, ELECTRIC

POWER ARC TESTS. Power Arc Tests on Insulators, J. T. Littleton and L. C. Nicholson. Elec. World, vol. 87, no. 20, May 15, 1926, pp. 1054-1056, 4 figs. Porcelain and pyrex insulators tested; analysis of results shows pyrex has good characteristics; use 1,800 ampere under maximum conditions on 6.6-kv. line.

SUSPENSION. Insulator Research. Elec. Light & Power, vol. 4, no. 6, June 1926, pp. 31 and 104-105, 1 fig. Investigation to determine what relation, if any, exists between ultimate mechanical strength of what are commonly called high-strength suspension insulators, and load which they can sustain indefinitely with electrical or mechanical failure. Subcommittee report before Nat. Elec. Light Assn.

Suspension Insulator Failures, R. Roberts. Elec. Engr. Australia & New Zealand, vol. 2, no. 12, Mar. 15, 1926, pp. 455-457, 4 figs.

INTERFEROMETERS

ETHER-DRIFT. Significance of the Ether-Drift Experiments of 1925 at Mount Wilson. Science, vol. 63, no. 1635, Apr. 30, 1926, pp. 433-443, 7 figs. Describes ether-drift interferometer, instrument which is generally admitted to be suitable for determining relative motion of earth and ether, that is, it is capable of indicating direction and magnitude of absolute motion of earth and solar system in space.

INTERNAL-COMBUSTION ENGINES

FUEL INJECTION. Fuel Injection, C. Hughes. Inst. Mar. Engrs.—Trans., vol. 37, Apr. 1926, pp. 791-818 and (discussion) 847-860, 17 figs. Discusses new features referring to pumping and injection of liquid fuels into internal-combustion engines; describes functioning of author's latest designs.

INDICATOR DIAGRAMS. Indicating the High-Speed Multi-Cylinder Internal-Combustion Engine, H. M. Jacklin. Soc. Automotive Engrs.—Jl., vol. 18, no. 6, June 1926, pp. 631-636, 4 figs. Details of construction, application, procedure and operation of standard slow-speed indicator which has been in successful operation for more than 500 hours of testing at Ohio State Univ.; composite indicator diagram obtained over great number of engine cycles, which is claimed to be distinct gain over anything else yet tried, since diagram is built up before eyes of testing engineer.

THEORY. Evolution of Internal-Combustion Engines, Especially Explosion Engines (L'évolution des moteurs à combustion interne et particulièrement des moteurs à explosion), E. Marcotte. Revue générale des Sciences, vol. 37, no. 7, Apr. 15, 1926, pp. 199-206. Discusses evolution of a fluid in an automobile or airplane engine; development of Diesel engine and Carnot cycle; 4-stroke and 2-stroke engines; combustion; anti-knock mixtures.

See also Airplane Engines; Automobile Engines; Diesel Engines; Oil Engines; Semi-Diesel Engines.

IRON

CORROSION. Testing Corrosion of Iron, T. Fujihara. Chem. and Met. Eng., vol. 33, no. 6, June 1926, p. 347.

INVENTIONS

PATENTS AND. Patents and Inventions, G. S. Roxburgh. Eng. Jl., vol. 9, no. 6, June 1926, pp. 291-297. General review of subject, with details of requirement under Canadian Patent Act.

IRON AND STEEL

CORROSION. Report of Committee A-5 on Corrosion of Iron and Steel. Am. Soc. Testing Matls.—Preprint, no. 12, for mtg. June 21, 1926, 42 pp., 21 figs. Report of inspection of Fort Sheridan, Pittsburgh and Annapolis tests; total immersion tests; proposed tentative specifications for coating on zinc-coated (galvanzide) wire; galvanized iron or steel telephone and telegraph line wire; galvanized iron or steel tie wires; tests of metallic-coated products.

The Influence of Alternating Currents on the Electrolytic Corrosion of Iron, A. J. Allmand and R. H. D. Barklie. Faraday Soc.—Trans., vol. 22, part 1, no. 1, no. 64, Jan. 1926, pp. 34-35, 5 figs. Investigates corrosion of iron in alkaline solutions by direct current, alternating current and by alternating current superposed on direct current, and shows that superposition of the two types of current causes relatively increased corrosion; similar result was found when using typical subsoil drainage liquid saturated with CO_2; experiments were also carried out on accelerating effects of added alkaline chloride on corrosion in alkaline solutions.

L

LATHES

CENTRES. Design of Lathe Centres, F. Horner. Machy. (N.Y.), vol. 32, nos. 9 and 10, May and June 1926, pp. 7.2-716 and 793-797, 16 figs. Typical designs for different classes of work.

LIGHT

ETHER-DRIFT MEASUREMENTS. Reports of Ether-Drift Measurements, A. E. Kennelly. Elec. World, vol. 87, no. 20, May 15, 1926, pp. 1045-1047. Recent data of Dr. Miller deny fundamental postulate of Einstein theory; observed drifts attain 10 km. per sec.; some speculations advanced.

UNDULATORY THEORY. Centennial of the Undulatory Theory of Light. Science, vol. 63, no. 1633, Apr. 16, 1926, pp. 387-393. History of undulatory theory developed by Augustin Fresnel.

LIGHTING

COTTON MILLS. Artificial Lighting for Cotton Mills, K. M. Reid. Textile World, vol. 69, no. 23, June 5, 1926, pp. 69-71 and 73, 10 figs. Good lighting increases production, reduces spoilage and accidents, improves hygienic conditions and factory discipline, and lessens labour turnover; layouts recommended for each department; lint or dust may reduce light output one-third.

STREET. Street Lighting with 25,000-Lumen Lamp, F. L. Mowry and O. F. Haas. Elec. World, vol. 87, no. 24, June 12, 1926, pp. 1297-1298, 3 figs.

TEXTILE MILLS. Latest Developments in Mill Lighting, R. A. Palmer. Textile World, vol. 69, no. 18, May 1, 1926, pp. 73, 75 and 77, 9 figs. Review of recent progress; tests show that installation of modern lighting in weave shed of dress-goods mill increased production 25 per cent; tests in other mills; studies on vision; inside-frosted lamp; local lighting should only supplement general lighting.

LIGNITE

STEAM GENERATION, USE IN. The Economic Use of North Dakota Lignite for Steam Generation, G. B. Wharen. Mech. Eng., vol. 48, no. 6, June 1926, pp. 583-585, 1 fig. Principal deposits; characteristics of North Dakota lignite; firing methods; possibility of utilizing lignite in pulverized form; pulverization; cost of steam production.

LOCOMOTIVE BOILERS

PITTING AND CORROSION. A Study into Causes of Pitting and Corrosion in Locomotive Boilers, W. M. Barr. Ry. Rev., vol. 78, no. 23, June 5, 1926, pp. 977-983, 13 figs. Theory of corrosion; effect of scale on corrosion; effect of air and dissolved gases in water; water treatment; recommendation for reduction in corrosion and pitting.

WAGON-TOP TYPE. Boiler of the Union Pacific Type Locomotive. Boiler Maker, vol. 26, no. 5, May 1926, pp. 123-125, 3 figs. Boiler, designed for 220-lb. working pressure, has largest firebox ever equipped with Gaines arch; it is of wagon-top type.

LOCOMOTIVES

DIESEL-ELECTRIC. The Diesel-Electric Locomotive and Its Relation to Heavy Electrification. Mech. Eng., vol. 48, no. 6, June 1926, pp. 585-589. Extracts from reports of three addresses given before Metropolitan Sections of four National Engineering Societies in New York City, as follows: Diesel-Electric Locomotive and Its Various Applications, H. Cooke; Diesel-Electric Locomotive, Its Field and Advantages, N. W. Storer; Advantages of the Oil-Electric Locomotive Over Electrification on Short-Line and Switching Operations, C. H. Stein; and general discussion.

INDUSTRIAL. Industrial Locomotives. Engineer, vol. 141, no. 3671, May 21, 1926, p. 532, 2 figs. Locomotive with vertical boiler made by Société John Cockerill, Belgium.

OIL-ELECTRIC. Railroads Turning to Heavy Oil Engines for Locomotive Service. Automotive Industries, vol. 54, no. 22, June 3, 1926, pp. 924-925, 3 figs. Power plants of oil-electric type offer advantages of more economical operation, reduced maintenance costs, elimination of much capital investment.

The Oil-Electric Locomotive in Railroad Service. Can. Ry. Club—Officials Proc., vol. 25, no. 3, Mar. 1926, pp. 20-40, 3 figs. Points out that economies of oil-electric locomotive have been firmly established in past two years in practical demonstrations, and possibilities offered warrant its rapid development to determine extent of its application under present railroad conditions; it offers immediate solution to present costly and objectionable steam operation of yard switching, terminal, branch line and local freight service, where noise and smoke become public nuisance and detrimental to real estate values.

PERFORMANCE. Steam Locomotive Performance. Theoretical and Actual, M. T. Grime. Ry. Gaz., vol. 44, nos. 21 and 22, May 21 and 28, 1926, pp. 689-690. Locomotive-cylinder performance; effect of superheating on condensation; uniflow engine; restricted cut-off locomotive; locomotive-boiler performance; feedwater heating.

LUBRICANTS

EQUIPMENT FOR APPLYING. Equipment Used for Applying Lubricants, F. E. Gooding. Indus. Engr., vol. 84, no. 5, May 1926, pp. 213-218 and 228, 15 figs. Methods and equipment for applying lubricants continuously or intermittently to different designs of bearings used on machines.

LUBRICATING OILS

SELECTION. The Selection of Lubricating Oils for Working Conditions of Bearing Load, Speed and Temperature, G. B. Vroom. Am. Soc. Nav. Engrs.—Jl., vol. 38, no. 2, May 1926, pp. 289-300, 6 figs. For petroleum industry, combined alignment chart and viscosity-temperature diagram, which are presented, should be of value in determining brand and viscosity selection from line of oils to meet specific needs of customers.

LUBRICATION

AXLE BOXES. Reduction of the Cost of Traction: Lubrication of Axle Boxes for all Rolling Stock. Int. Ry. Congress—Bul., vol. 8, no. 5, May 1926, pp. 412-419. Deals with plain, roller and ball bearings; lubricants.

M

MACHINE SHOPS

ELECTRIC HEAT FOR. Electric Heat for the Machine Shop, P. F. Creasy. Am. Mach., vol. 64, no. 22, June 3, 1926, pp. 865-868, 8 figs. Variety of applications; uniformity of product and better working conditions claimed.

MACHINE TOOLS

LOCATING DEVICES. Positive Locating Devices Vital, F. Horner. Can. Machy., vol. 36, no. 22, June 3, 1926, pp. 23-25, 19 figs. Points out that vital factor in design and operation of machine tools and other machinery is facility with which parts can be locked or located beyond all possibility of movement.

MASS PRODUCTION, EFFECT OF. The Effect of Mass Production on Machine Tool Design, A. C. Pletz. Am. Mach., vol. 64, no. 22, June 3, 1926, p. 854. (Abstract.) Paper presented before Cincinnati Section, Am. Soc. Mech. Engrs.

PERMANENT EXHIBIT. A Permanent Machine Tool Exhibit, J. W. Roe. Am. Mach., vol. 64, no. 23, June 10, 1926, pp. 889-892. Proposed outline for section on machine tools and shop practice of Museum of the Peaceful Arts.

REPLACEMENT POLICIES. Getting the Most Out of Your Machine Tool Dollar, R. A. DeVlieg. Am. Mach., vol. 64, no. 24, June 17, 1926, pp. 929-930. Points out that production guaranties must be met under average conditions rather than under favourable ones; purchaser must make allowances for actual conditions.

Getting the Most Out of Your Machine Tool Dollar, J. E. Gleason. Am. Mach., vol. 64, no. 21, May 27, 1926, pp. 809-811. Seven years is average age of machine equipment in Gleason Works; points considered in replacing; managers are convinced that they cannot afford to not buy modern equipment.

MATERIALS HANDLING

ELEVATOR AND CONVEYOR SYSTEM. Conveyor System. Conveyor System Makes Roof Work, R. A. Fiske. Iron Age, vol. 117, no. 21, May 27, 1926, pp. 1487-1489, 5 figs. Installation of conveyor and elevator system in metal-furniture plant in Kenosha, Wis., which made feasible placing ovens on roofs of 6-storey buildings, and also through re-designing of ovens so that drying time was reduced from 4 hours to 1 hour 20 minutes.

FACTORIES. Maker and User Profit by New Methods, E. M. Olin. Mfg. Industries, vol. 11, no. 6, June 1926, pp. 413-4 6, 6 figs. Handling equipment and straight-line layout cut costs and reduce selling price of Westinghouse Electric Products Co.

MACHINE DESIGN AND. Machine Design and the Handling Problem, F. L. Eidmann. Am. Mach., vol. 64, no. 22, June 3, 1926, pp. 855-856, 5 figs. Heavy machines make difficult handling jobs; designer can provide means of handling castings and moving finished machine; proper and improper base designs.

MEASUREMENTS

FINE. Recent Developments in the Art of Fine Measurement, J. E. Sears. Engineering, vol. 121, no. 3151, June 4, 1926, pp. 652-654, 8 figs. Recent experience shows that it is not possible to get agreement of interpretation between different observers of lines better than 0.000001 in., and this accuracy could be surpassed at present by material end standards with ends finished optically flat and parallel, and by natural standard based upon wave lengths of light; author refers to advance made in this direction; interference methods of measurement; triode valve applied to measurement of small displacements; measurements of internal diameters. (Abstract.) Lecture presented before Roy. Instn.

MEASURING INSTRUMENTS

LEVELS. Measuring Vertical Distances, F. Johnstone-Taylor. Can. Machy., vol. 35, no. 19, May 13, 1926, pp. 17-18, 5 figs. Principal function of level is to find difference in elevation between any two points, or conversely, to set point of prescribed elevation above or below some other point.

METALLOGRAPHY

A.S.T.M. REPORT. Report of Committee E-4 on Metallography. Am. Soc. Testing Matls.—Preprint, for mtg. June 21, 1926, no. 22, 34 pp., 2 figs. Selection and preparation of samples; solutions for carbides, etc., in alloy steels; microhardness; bibliography of scratch-hardness methods as applied to metals; glossary of terms relating to radiography; proposed tentative recommended practice for radiographic testing of metal castings, and for care of eyes when using metallographic microscope.

METALS

COLD DEFORMATION. Cold Deformation of Corrosion Fringes (Les franges d'écrouissage ou de corrosion), A. Portevin. Académie des Sciences—Comptes Rendus, vol. 182, no. 8, Feb. 22, 1926, pp. 523-525, 4 figs. Study of effects of chemical reagents on polished surfaces of metals subjected to cold deformation, and in particular of alternate bright and dark striations or "fringes" produced.

CORROSION. Corrosion, Tarnishing and Tinting of Metals, U.R. Evans. Engineering, vol. 121, no. 3151, June 4, 1926, p. 667. Shows that corrosion preferentially attacks those portions to which oxygen has no direct access, and not those exposed to oxygen. Review of two lectures before Roy. Instn.

FLOW OF GRAIN. The Influence and Importance of the Flow of the Grain of Metals. Machy. (Lond.), vol. 28, no. 705, Apr. 1, 1926, pp. 9-13, 11 figs. Flow of metal in crankshafts; gear blanks; bushes and tires.

OXIDATION. The High-Temperature Oxidation of Metals, J. S. Dunn. Roy. Soc.—Proc., vol. 3, no. A757, May 1, 1926, pp. 203-209, 1 fig. Oxidation of three copper-zinc alloys was investigated and shown to be controlled by diffusion through protective film of oxide; rate of oxidation shown to vary exponentially with temperature; theory of diffusion in solid solutions.

MICROSCOPES

METALLURGICAL. The Metallurgical Microscope in the Selection and Treatment of Metals, G. Sachs. Metal Industry (Lond.), vol. 28, no. 18, Apr. 30, 1926, pp. 419-420, 4 figs.

MILLING CUTTERS

COST REDUCTION. Reducing Costs of Cutters and Cutter Grinding, D. A. Hampson. Am. Mach., vol. 64, no. 20, May 20, 1926, p. 784. Use of cutters of single style or make is factor in lowered costs; gives working comparison.

MINES

Rock and Air Temperatures. Rock and Air Temperatures in Deep-Level Mines, M. O. Tillard and E. C. Ranson. Chem. Met. & Min. Soc. S. Africa—Jl., vol. 26, no. 8, Feb. 1926, pp. 184-201 and (discussion) 201-208, 5 figs. Deals with problems arising with rise of rock temperature and resultant heating of mine air at depth; effect of surface conditions on air entering mine; degree of heating of mine air under varying conditions and resultant cooling of rock; how heat is acquired and lost by ventilating current at various stages of its journey through mine; question of conditions beyond present working depth.

MOULDING METHODS

Car Wheels. Mechanical Moulding of Car Wheels, R. F. Ringle. Can. Machy., vol. 35, no. 21, May 27, 1926, pp. 21-22, 5 figs. Methods employed by Brown Car Wheel Works, Buffalo, N.Y.; how obstacles were overcome that previously had curtailed use of molding machines in car-wheel factories.

Grooved Pulleys. The Moulding of Grooved Pulleys, E. Ronceray. Foundry Trade Jl., vol. 33, nos. 510 and 511, May 27 and June 3, 1926, pp. 367-368 and 393-395, 12 figs. First question to be settled is arrangement of various parts; moulding with dry cores; using cope; moulding in two parts of box without cope of core; moulding without cope or core or turning over. June 3: Vertical moulding using sectional patterns; stripping by rotation; double-sided pattern plates.

MOTOR BUSES

Electric Drive. Review of the Electric Drive Type of Transmission, H. L. Andrews. New York Railroad Club—Official Proc., vol. 36, no. 6, Apr. 16, 1926, pp. 7982-7988, 4 figs. Simplicity, continuous torque, ease of control and durability among various derived advantages.

MOTOR TRUCKS

Impact Tests. General Results of the Co-operative Motor Truck Impact Tests, J. A. Buchanan and J. W. Reid. Soc. Automotive Engrs.—Jl., vol. 18, no. 6, June 1926, pp. 581-592, 26 figs. Authors state eight preliminary deductions drawn from present available data and discussed mode of static and impact-test accomplishment, and describe accelerometer used; illustrated analysis of highway and obstruction tests.

Inspection. Inspection, A Means for Economical Motor-Truck-Fleet Maintenance, F. E. Hatosy. Soc. Automotive Engrs.—Jl., vol. 18, no. 6, June 1926, pp. 637-638 and (discussion) 638-640. Author enumerates main details of adequate inspection.

N

NICKEL STEEL

Heat Treatment. The Effect of Mass in the Heat Treatment of Nickel Steel, W. Rosenhain, R. G. Batson and N. P. Tucker. Iron & Steel Inst.—Advance Paper, no. 13, for mtg. May 1926, 33 pp., 28 figs. Results of mechanical tests and microscopical examination; steels were heat-treated in form of round bars of four different sizes; heating was carried out in recuperative furnace designed to give uniform heating at high temperatures.

NON-FERROUS METALS

Standard Specifications. Report of Committee B-2 on Non-Ferrous Metals and Alloys. Am. Soc. Testing Matls.—Preprint, no. 18, for mtg. June 21, 1926, 35 pp., 8 figs. Committee reports on pure metals in ingot form, wrought metals and alloys, white metals, methods of chemical analysis; method for determination of aluminum in small quantities; properties of high-strength aluminum casting alloys; proposed tentative specifications for aluminum-bronze castings; sand castings of copper and tin and zinc alloys; steam or valve bronze sand castings; composition-brass or ounce-metal sand castings; aluminum-base sand-casting alloys in ingot form; aluminium sheet.

O

OIL

Refinery. Chemical Engineering Applications in an Oil Refinery, S. D. Kirkpatrick. Chem. & Met. Eng., vol. 33, no. 5, May 1926, pp. 270-273, 7 figs.

OIL ENGINES

Air Filters. Self-Cleaning Air Filter of Low Resistance. Oil Engine Power, vol. 4, no. 6, June 1926, pp. 354-355, 6 figs. Describes protectomotor marketed by Staynew Filter Corp.; basis of device is filtering cloth of special close texture; examples of applications.

Developments. Recent Oil Engine Developments, J. L. Chaloner. Diesel Engine Users' Assn.—Report of Discussion, for mtg. Apr. 17, 1925, no. 51, 48 pp., 22 figs. General review of many types of engines available for power purposes, taking as basis recent exhibits at Wembley Exhibition, 1924.

Fuel Pumps. Care, Adjustment and Maintenance of Oil Engine Fuel Pumps, A. B. Newell. Nat. Engr., vol. 30, no. 5, May 1926, pp. 197-199. Practical discussion on care of fuel pumps, their proper adjustment, and hints on their maintenance; fuel-pump troubles on different types of engines and how to prevent them.

Heavy-Oil. The Campbell Vertical Heavy-Oil Engine. Engineering, vol. 121, no. 3151, June 4, 1926, pp. 656-658, 6 figs. 100-b.hp. engine constructed by Campbell Gas Engine Co., Halifax, and results of demonstration to show suitability of these engines for synchronizing to work in parallel on a network.

OIL FUEL

Applications. Oil-Burning for General Uses, F. Burgess. Junior Instn. Engrs., vol. 36, Apr. 1926, pp. 300-310, 2 figs. Advantages, economy and disadvantages of oil fuel; oil burners; steam-jet, air-jet and pressure-jet systems; fuel heater and pumps.

Railways. Fuel Oil for Railways, J. C. Martin, Jr. Mech. Eng. (Supp.), vol. 48, no. 6, June 1926, pp. 671-672. Points out reasons that economically warrant continuance of its use on railways, even to extent of its allotment for use in locomotive fireboxes for steam-generating purposes should its conservation in future become national issue.

OPEN-HEARTH FURNACES

Comparison of Different Capacities. Comparison of Open-Hearth Furnaces of Various Sizes, S. J Cort. Am. Iron & Steel Inst.—Advance paper, for mtg. May 21, 1926, 16 pp. Comparison of operations of furnaces of different capacities; author emphasizes that inherently there is no reason why as good steel cannot be made in large as in small furnaces. See also abstract in Iron Age, vol. 117, no. 21, May 27, 1926, pp. 1493-1494; and Am. Metal Market, vol. 33, no. 1.2, June 12, 1926, pp. 6-7 and 18.

Practice. Data Relating to Basic Open-Hearth Steel Practice, A. N. Diehl. Am. Iron & Steel Inst.—Advance Paper, for mtg. May 21, 1926, 59 pp., 25 figs. and 19 tables on supp. plates. Submits data and information based on tests carried out at Duquesne Works of Carnegie Steel Co., on furnaces rated capacities varying from 50 to 75 tons; in addition to records and analysis, graphic charts have been prepared and tables and various element balances compiled, together with actual practice results on coal, recarburizers, alloys and conclusions drawn as to problematical action of different metalloids; discusses construction of open-hearth furnace; type of heats investigated, method of testing metal and presentation of results. See also brief abstract and discussion in Iron Age, vol. 117, no. 21, May 27, 1926, pp. 1491-1492.

OXY-ACETYLENE CUTTING

Cast Iron. Cutting Cast Iron with the Torch. Welding Engr., vol. 11, no. 5, May 1926, pp. 25-26, 5 figs. Development of special torch which provides for preheating of cutting jet of oxygen. Translated from Revue de la Soudure Autogène.

OXY-ACETYLENE WELDING

Copper Fireboxes. Welding Copper Fireboxes, H. Young. Welding Engr., vol. 11, no. 5, May 1926, pp. 27-29, 6 figs. Oxy-acetylene process used for repair of practically all defects; many welds may be made in place.

Gas-System Regulation. Regulation for the Installation and Operation of Gas Systems for Welding and Cutting. Acetylene Jl., vol. 27, no. 12, June 1926, pp. 596-600. Regulations of National Board of Fire Underwriters, as recommended by National Fire Protection Assn.

Sheet Aluminum. Oxy-Acetylene Welding of Sheet Aluminum, J. W. Meadowcroft. Acetylene Jl., vol. 27, no. 12, June 1926, p. 591, 1 fig. Method developed in Philadelphia plant of E. G. Budd Mfg. Co.

P

PAINTS

Hiding Power. A Photometric Method for Measuring the Hiding Power of Paints, H. D. Bruce. U. S. Bur. Standards—Technologic Papers, no. 306, Jan. 16, 1926, pp. 173-190, 8 figs. Results of investigation carried out to develop method for measuring from dry films, hiding power of paints.

PAPER

Colouring. Paper Colouring, I. Ekholm. Paper Trade Jl., vol. 82, no. 19, May 13, 1926, p. 56.

PAPER MACHINERY

Speed Regulator for Sectional Drives. Speed Regulating Controllers for Sectional Paper Machine Drives, R. T. Kintzing. Elec. Jl., vol. 23, no. 4, Apr. 1926, pp. 163-168, 5 figs. Review of regulating systems for sectional drives, and details of latest type of regulator which is truly differential in action and must produce 100 per cent speed correction before its action stops.

PAPER MANUFACTURE

Paperboard. Paperboard and Its Manufacture, A. O. Bragg and R. H. Harding. Paper Trade Jl., vol. 82, nos. 19 and 20, May 13 and 20, 1926, pp. 51-55, 3 figs., and 45-47, 2 figs. May 13: Chip and news board; miscellaneous setup grades; folding boxboards; test liners and test boards. May 20: Preliminary treatment of paper stock; various systems required.

Bibliography. Current Paper Trade Literature, C. J. West. Paper Trade Jl., vol. 82, nos. 18, 19 and 22, May 6, 13 and 20, 1926, pp. 63-64, 58-60 and 50-52.

Cellulose Hydration. Hydration of Cellulose in Papermaking, J. Strachan. Paper Industry, vol. 8, no. 2, May 1926, pp. 235-237.

PAPER MACHINERY

Electric Drive. Sectional Electric Drive for Paper Machines, R. N. Morris. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 5, May 1926, pp. 432-437, 10 figs.

PAPER MANUFACTURE

Pulp Bleaching. Cold Bleaching at High Densities, M. E. Boehm. Paper Industry, vol. 8, no. 2, May 1926, pp. 239-241.

Pulp Manufacture. Problems in the Manufacture of Sulphite Pulp, B. T. Larrabee. Paper Mill, vol. 49, no. 23, June 5, 1926, pp. 18, 20 and 58. Practical suggestions whereby minimum loss of wood can be obtained, and which will enable pulp superintendents to maintain maximum yield and consequently effect saving in cost of wood and materially reduce cost of finished pulp. Paper read before Am. Pulp & Paper Mill Supts'. Assn.

PAPER MILLS

Belt Drive. Paper Mill Applications of the Pulmax Drive, S. E. Frost. Paper Mill, vol. 49, no. 18, May 1, 1926, pp. 14 and 46, 5 figs. Discusses applications of Pulmax short centre drive, principle of which depends upon obtaining large arcs of contact of belt on pulleys at same time maintaining small unproductive belt tension.

PAVEMENTS, ASPHALT

Temperature, Effect of. Temperature as a Factor in the Stability of Asphaltic Pavements, W. J. Emmons and B. A. Anderton. Pub. Roads, vol. 7, no, 2, Apr. 1926, pp. 46-48, 5 figs.

PEAT

Utilization. Possibilities for the Commercial Utilization of Peat, W. W. Odell and O. P. Hood. U. S. Bur. of Mines—Bul., no. 253, 1926, 154 pp., 32 figs. Composition of peat; classification of peat deposits; distribution of peat in United States; winning of peat fuel; laboratory experiments with Minnesota peat; machined peat fuels; carbonization of peat and recovery of by-products; production of ethyl alcohol from peat; special prepared-peat products; agricultural utilization of peat lands; suggestions for utilizing peat resources of United States.

PILES

Driving. Underwater Piledriving and Cofferdam Sealing, J. C. Pritchard. Eng. News-Rec., vol. 96, no. 23, June 10, 1926, pp. 930-933, 5 figs. Precast concrete piles 48 and 68 ft. long driven under water; cofferdam sealed with tremie-placed concrete in deep water-works intake at St. Louis.

PISTONS

Flow of Heat in. Flow of Heat in Pistons, H. A. Huebotter and G. A. Young. Purdue Univ.—Bul., vol. 9, no. 12, Dec. 1925, pp. 5-114, 67 figs. Shows how satisfactory distribution of metal in plain pistons is obtained; suggestions regarding ribs, piston-rings, ring-land radial clearance, and methods of expansion control; principles of piston design are developed by mathematical analysis of heat flow from hot gas through piston and into cylinder wall; analytical study is supplemented by laboratory tests.

PLATES

Corrugated. The Elastic Stability of a Corrugated Plate, W. R. Dean. Roy. Soc.—Proc., vol. 3, no. A757, May 1, 1926, pp. 144-167, 5 figs. Deals with elastic stability of corrugated plate under thrust along its generators.

Mild-Steel. Lives of Maximum Principal Stress in Thin Mild-Steel Plates of Rectangular Shape Fixed Along the Edges and Uniformly Loaded, B. C. Laws and A. O. Allen. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 1, no. 5, May 1926, pp. 1039-1042, 1 fig. It was sought to determine in what manner stress varies from point to point and how plate changes in form under load; microscopic observations of deflexions were made at points of intersection of ordinates drawn on plate surface parallel to sides of rectangle and represented graphically.

POLES, WOODEN

TREATED AND UNTREATED. Conclusions Reached Through Service Tests of Treated and Untreated Poles, R. M. Wirka. Elec. Light & Power, vol. 4, no. 6, June 1926, pp. 29-30. Untreated poles set green will generally live longer life than untreated poles set after seasoning; open-tank butt treatment with creosote is more effective than any other kind of treatment included in experiments; two-coat brush treatment is better than single coat of same preservative. (Abstract.) Paper read before Nat. Elec. Light Assn.

POWER

GROWTH AND DISTRIBUTION, UNITED STATES. Growth and Distribution of Primary Power, S. B. Ladd. Power, vol. 63, no. 24, June 15, 1926, pp. 328-330, 5 figs. Presents charts based on reports of Bureau of Census, showing growth of primary power installations of United States.

WATER AND STEAM, CALIFORNIA. Water Power and Steam Power in California Utilities, H. A. Barre. Mech. Eng. (Supp.), vol. 48, no. 6, June 1926, p. 662. Brief analysis of power situation to determine respective contributions of water power and steam power to existing conditions, and their probable future effects.

POWER FACTOR

IMPROVEMENT. Power Factor and Production Cost, R. C. Muir. Elec. World, vol. 87, no. 20, May 15, 1926, pp. 1047-1049.

PRECIPITATION

ELECTRIC. Electrical Precipitation in the Chemical Industry, H. W. C. Henderson. Indus. Chemist, vol. 2, no. 15, Apr. 1926, pp. 161-165, 7 figs. Application of Lodge-Cottrell precipitators.

PRESSES

PLASTIC MATERIALS. Presses for Plastic Materials and Hot Pressing. Machy. (Lond.), vol. 28, no. 705, Apr. 1, 1926, pp. 6-7, 5 figs. Press exhibited at British Industries Fair in Birmingham, made by Taylor & Challen, for plastic materials and for hot-pressing brass.

PRESSURE VESSELS

WELDED. Are Welded Pressure Vessels Safe? E. E. Thum. Power, vol. 63, no. 23, June 8, 1926, pp. 886-889, 7 figs. Outlines procedure control and inspection that should result in safe and satisfactory welds; fundamental principles of oxwelded design; material for welding rod.

PULVERIZED COAL

BOILER FIRING. Pulverized Fuel at Dover Power Station, E. K. Scott. Combustion, vol. 14, no. 5, May 1926, pp. 320-321, 2 figs. Test figures obtained at Dover Corp., with recently developed system of firing pulverized coal.

EXPLOSION HAZARDS. Explosion Hazards from the Use of Pulverized Coal at Industrial Plants, L. D. Tracy. U. S. Bur. Mines—Bul., no. 242, 1925, 99 pp., 36 figs. Presents both bad and good features of pulverized-coal plants and gives recommendations for safe installation and operation; opinion based largely on results of tests at experimental mine and in laboratory dust gallery.

PUMPING ENGINES

TRIPLE-EXPANSION. The Chelvey Pumping Station of the Bristol Waterworks Company. Engineering. vol. 121, no. 3151, June 4, 1926, pp. 659-661, 4 figs., partly on p. 664. Extension of existing pumping plant by addition of triple-expansion engine driving deep-well and surface pumps, together with 3 Lancashire boilers, superheaters, economizers and usual auxiliaries; engine is inverted vertical type, with cylinders carried on cast-iron standards behind and polished steel columns in front.

PUMPING STATIONS

POWER GENERATION. Generating Power for the Pumping Plant, Prof. E. A. Allcut. Power House, vol. 19, no. 11, June 5, 1926, pp. 46-48. Reviews present practice and future developments. Paper read before Can. Section, Am. Water Works Assn.

PUMPS

POWER-DRIVE EQUIPMENT. Power-Drive Equipment for Industrial Pumps, G. Fox. Indus. Engr., vol. 84, no. 5, May 1926, pp. 208-212, 8 figs. Discussion of operating characteristics of pumps which affect selection of motor control and drive connection.

PUMPS, CENTRIFUGAL

AUTOMATIC PRIMERS. Automatic Primers for Centrifugal Pumps, F. H. Bradford. Am. Water Works Assn.—Jl., vol. 15, no. 6, June 1926, pp. 647-649. A. P. C. O. automatic primer for centrifugal pumps consists of tank divided by partition in middle into two parts, one above the other, arranged for connections to pump; lower half is connected to suction and upper half to discharge side of pump; its purpose is to automatically prime valveless pump without use of foot valve or any other mechanical contrivance which might be subject to wear and tear.

CHARACTERISTICS. Centrifugal Pumps, M. D. Engle. Elec. Light & Power, vol. 4, no. 4, Apr. 1926, pp. 21-23 and 86, 6 figs. Discusses characteristics from standpoint of purchaser and points out most desirable form of characteristic for various services for which centrifugal pumps are used in power stations; consideration on drive for different pumps.

THEORY. The Theory of Centrifugal Pump in Practical Form and Its Extension on the Other Machines, K. Okamoto. Soc. Mech. Engrs. (Japan),—Jl., vol. 29, no. 108, Apr. 1926, pp. 173-234, 40 figs. Presents improved formulas for manometric head and impelling horse power of centrifugal pumps having specially formed impellers which may be applied widely in practice.

PYROMETERS

RECORDING. Recording Pyrometers. Metal Industry (Lond.), vol. 28, no. 20, May 14, 1926, pp. 461-462, 3 figs. Points out need for robust types, easily inspected; method of recording; details of Resilia spring mounting.

Q

QUAYS

CONCRETE. Concrete Quay Built to Carry 50-ft. Pile of Rock, Eng. News-Rec., vol. 96, no. 24, June 17, 1926, pp. 976-977, 2 figs. Thick, reinforced-concrete slab floated on wood piles replaces structure which collapsed under heavy load at Buffalo, N.Y.

R

RAILWAY ELECTRIFICATION

CHICAGO SUBURBAN SERVICE. Electrification of the Illinois Central Railroad Suburban Service in Chicago, W. M. Vanderluis. West. Soc. Engrs.—Jl., vol. 31, no. 3, Mar. 1926, pp. 75-93 and (discussion) 93-96, 10 figs.

RAILWAY MOTOR CARS

DEVELOPMENTS. Rail Motor Cars and Internal-Combustion Locomotives (Les automotrices et locomotives à combustion interne), A. Bourgain. Nature (Paris), nos. 2712, Mar. 27 and Apr. 3, 1926, pp. 200-205 and 217-221, 16 figs. Development of traction on rails by means of internal-combustion engines; design of Schneider and Moyse loco-tractors; development of various types of transmission gears by Fieux, Hele-Shaw, Collardeau; various types of railway motor cars.

GASOLINE-ELECTRIC. Gas-Electric Coaches Built for C. & A., L. C. Paul. Ry. Rev., vol. 78, no. 22, May 29, 1926, pp. 943-946, 6 figs. Eight-wheel, double-truck coaches seat 35 passengers and can turn around in their own length.

RAILWAY REPAIR SHOPS

WELDING AND AIR EQUIPMENT. Welding and Air Equipment in the Danville Shops, F. W. Curtis. Am. Mach., vol. 64, no. 24, June 17, 1926, pp. 941-943, 9 figs. Welding of locomotive units; both electric and oxy-acetylene equipment used; labour-saving tools operated by air; home-made press for brasses.

RAILWAY SHOPS

SCRAP HANDLING IN. Lacakawanna Reduces Scrap Handling Costs 72 Per Cent. Ry. Age, vol. 80, no. 27, June 5, 1926, pp. 1471-1473, 6 figs. New facilities at Scranton, Pa., retire 6 old plants and release 29 men from force.

RAILWAY SIGNALLING

POWER LINES. New York Central Completes New Signal Power Line, R. B. Elsworth. Ry. Signalling, vol. 19, no. 6, June 1926, pp. 217-220, 5 figs. Transmission voltage of 4,600 employed to supply ample power for signal and train-control systems as well as other roadway facilities.

RAILWAY SWITCHES

AUTOMATIC. Automatic Electric Switches for Street Car or Railway Lines, Hervé System (Dispositif d'aiguillage automatique électrique pour tramways ou chemins de fer Système breveté Hervé), M. Weiler. Industrie des Voies Ferrée et des Transports Automobiles, vol. 20, no. 230, Feb. 1926, pp. 110-113, 3 figs. Design and operation of switch controlled from platform of electric car, action being entirely mechanical, reducing short circuits to minimum.

REFRACTORIES

COKE OVEN. Refractory Problems By-Product Coke Plant, M. J. Conway. Iron & Steel Engr., vol. 3, no. 6, June 1926, pp. 292-293, 2 figs. Presents table compiled by Am. Soc. for Testing Material, and describes kind of refractory used in construction of by-product ovens, together with approximate load and temperatures that brick are subject to.

REFRIGERATION

ELECTRIC. Present and Future of Domestic Electric Refrigeration, H. G. Scott. Refrig. Eng., vol. 12, no. 10, Apr. 1926, pp. 338-339. Review of developments and work of Society for Electrical Development.

REINFORCED CONCRETE

DEVELOPMENTS. Reinforced Concrete, A. E. Lindau. Am. Iron & Steel Inst.—Advance Paper, for mtg. May 21, 1926, 16 pp., 4 figs. Outline of development of concrete industry and relation to steel industry; advantage of reinforced concrete lies in economy; kinds of reinforcement. See also abstract in Iron Age, vol. 117, no. 21, May 27, 1926, pp. 1495-1496 and 1553.

ROAD MATERIALS

TEST SPECIFICATIONS. Report of Committee D-4 on Road and Paving Materials. Am. Soc. Testing Matls.—Preprint, no. 70, for mtg. June 21, 1926, 33 pp., 5 figs. Proposed revisions of existing standard and of tentative specifications and methods of tests; proposed tentative method of test for distillation of bituminous materials suitable for road treatment; for asphalt filler for brick pavements, for residue of specified penetration, for testing bituminous emulsions, etc.; recommended practice in bituminous paving-plant inspection.

ROADS

CORRUGATIONS IN. Corrugations in Roads: Their Cause and Their Examination. Roads & Road Construction, vol. 14, no. 40, Apr. 1, 1926, pp. 103-104, 2 figs.

ROADS, CONCRETE

STRESSES. Stresses in Concrete Pavements Computed by Theoretical Analysis, H. M. Westergaard. Pub. Roads, vol. 7, no. 2, Apr. 1926, pp. 25-35, 11 figs. Summarizes results of long period of study, in which author has developed by mathematical analysis method by which stresses in road slabs may be computed; by use of formulas, charts and tables, method can be applied conveniently for design of concrete and road slabs; it also offers means of computing critical stresses in existing pavements.

ROADS, EARTH

MAINTENANCE. Maintaining Dirt Roads. Public Wks., vol. 57, no. 4, May 1926, pp. 117-120, 6 figs. More than 2,500,000 miles of third-class roads, mostly dirt and gravel, present maintenance problem of greatest importance; some figures relative to maintenance work done by counties; equipment used, frequency and results obtained.

ROLLING MILLS

COLD STRIP ROLLING. The Cold Rolling of Strip Steel, C. B. Huston. Gen. Elec. Rev., vol. 29, no. 6, June 1926, pp. 386-393, 12 figs. Purpose of cold rolling; coiling and pickling; general design of mill; operation and control; tandem and other combinations; magnetic time control.

WIRE-ROD. Wire-Rod Mills, J. D. Wright. Gen. Elec. Rev., vol. 29, no. 6, June 1926, pp. 380-386, 13 figs. Rod-rolling industry; development and methods in wire-rod rolling; Garrett and continuous mills; analysis of rod-mill load; steps in rod-rolling in modern mill; electrification of these mills.

ELECTRIC MOTORS FOR. The Application of Synchronous Motors to Steel Mill Main Roll Drives, H. A. Winne. Gen. Elec. Rev., vol. 29, no. 6, June 1926, pp. 394-404, 14 figs.

S

SCALES

TYPES AND USES. Scales Speed Up Mass Production, F. L. Prentiss. Iron Age, vol. 117, no. 23, June 10, 1926, pp. 1635-1638, 7 figs. Monorail scale for weighing raw material; how counting scale is used; sorting parts with scale; testing springs for resistance; electric recording apparatus for conveyor scale.

SEMI-DIESEL ENGINES

HIGH-SPEED. The Fundamental Principles of High-Speed Semi-Diesel Engines. Büchner. Nat. Advisory Committee for Aeronautics—Tech. Memorandums, no. 358, Apr. 1926, 26 pp., 13 figs. Discussion of fuel mixing and ignition, with special reference to engines with precombustion chambers. Translated from Jahrbuch der Brennkrafttechnischen Gesellschaft, vol. 5, 1924.

SEWERS

DIAGRAMS FOR DESIGNING. Two Diagrams for Use in Designing Sanitary Sewers. J. R. McComas. Eng. News-Rec., vol. 96, no. 23, June 10, 1926, pp. 951-952. 2 figs. Presents diagrams, one showing number of persons that may be served by several sizes of sanitary sewers on various grades at per capita flows indicated, and other rational curve for converting average sewage flow into flow for design.

SHEARS

PLATE. Bergue Multiple Shears for Sheet Rolling Mills (Cisaille multiple, système De Bergue), Génie Civil, vol. 88, no. 15, Apr. 10, 1926, pp. 329-332, 5 figs. De Bergue electrically-driven metal-cutting machine used for cutting a number of sections with one operation and with minimum of manual work.

SHEET METAL

TENSILE PROPERTIES. Effects of Size and Shape of Test Specimen on the Tensile Properties of Sheet Metals, R. L. Templin. Am. Soc. Testing Matls.—Preprint, no. 37, for mtg. June 21, 1926, 21 pp., 13 figs. Investigation covering extensive series of tension tests on three types of sheet metals, namely: (1) material having comparatively high tensile strength and low elongation, (2) material having comparatively low tensile strength and high elongation, (3) material having both high tensile strength and high elongation; results indicate quite definitely that tensile strength and yield point of material are affected in only few extreme cases by size and shape of test specimen used; elongation is affected quite seriously by total cross-sectional area rather than by form of test specimen.

SHOVELS

POWER. Modern Tendencies in Power Shovels, F. L. Stone. Min. Congress Jl., vol. 12, no. 5, May 1926, pp. 347-349, 7 figs.

SMOKE

ABATEMENT. How Cities Can Control the Smoke Nuisance, H. B. Meller. Nat. Mun. Rev., vol. 15, no. 5, May 1926, pp. 270-276. Experiences in Pittsburgh in solving smoke problem; author states that smoke emission, regulated by law, has decreased 80 per cent within last fifteen years.

STADIUMS

TORONTO. The Erection of Toronto's New Stadium. Contract Rev., vol. 40, no. 21, May 26, 1926, pp. 495-498, 11 figs. Large steel and concrete structure seating 20,000 people built in winter time in 4½ months.

STEAM

HIGH-PRESSURE. Advantages and Disadvantages of High Steam Pressure in Industrial Plants, J. Pope. Stone & Webster Jl., vol. 38, no. 5, May 1926, pp. 622-642, 7 figs. For purpose of discussion, high-steam pressure is considered to be any pressure in excess of 200 lb. per sq. in.; theoretical and practical considerations; relative cost of equipment for various steam pressures; examples of use of high-pressure steam.

SUPERHEATING. Proposed Method for the Automatic Superheating of Steam. Engineer, vol. 141, no. 3671, May 21, 1926, p. 516. Discusses way by which steam may be automatically raised in temperature without use of any running machinery whatever; principle is reverse of that employed in ordinary refrigerating cycle.

STEAM ENGINES

UNIFLOW. First and Largest Uniflow Engine on Blooming Mill. Power, vol. 63, no. 25, June 22, 1926, pp. 968-972, 8 figs. Four-cylinder condensing uniflow engines—one on continuous mill that at 45 per cent will develop 14,000 i.hp., and reversing engine having maximum rating of 30,000 i.hp.; capacity is 100 tons of steel per hour, at steam consumption of 280 lb. per ton of steel for reversing engine.

STEAM POWER PLANTS

ELECTRIC AUXILIARIES. Electrically-Driven Steam Power Plant Auxiliaries, J. W. Dodge. Gen. Elec. Rev., vol. 29, nos. 5 and 6, May and June, 1926, pp. 340-346 and 427-439, 25 figs. May: Standardizing methods of driving auxiliaries; classification of equipment; power supply from different sources; relays; motors and control. June: Motors for various pump drives; generator-ventilating fans; draft-fan drives; stokers and coal feeders; coal-handling equipment.

HIGH-PRESSURE. Investigations of the 60-Atmos. Steam Plant at the works of A. Borsig, Berlin-Tegel (Untersuchungen an der 60 atp Dampfkraftanlage von A. Borsig), E. Josse. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 21, May 22, 1926, pp. 677-684, 11 figs. Description of plant; boiler test showed 82.9 per cent efficiency with minimum and 79.3 per cent efficiency with maximum calorific value; investigation of back-pressure steam engine, showing efficiency at 844 hp. with 57.8 atmos. absolute initial pressure, 400-deg. cent. initial steam temperature, 12-atmos. absolute back pressure and 211 deg. steam temperature back of low-pressure cylinder; a thermodynamic efficiency of 91 per cent for the whole engine, and 92.7 per cent for high-pressure cylinder alone, was obtained.

Why Higher Pressures Are Advantageous for Industrial Plants, W. Slader. Power, vol. 63, no. 23, June 8, 1926, pp. 883-885. Higher initial pressure makes possible increased extraction pressures and opens way for use of bled steam for even high-temperature process work.

HYDRAUCONE APPLICATION TO. How to Fight Low Water in a Condensing Plant, J. R. James. Power, vol. 63, no. 24, June 15, 1926, pp. 930-931, 2 figs. Falling water level in Great Lakes is serious problem for plants in that region; solution described is interesting adaptation of hydraulic-turbine practice to steam plant.

INCREASED COAL PRICES, EFFECT OF. The Effect of Increased Coal Prices on the Private Power Plant, E. Douglas. Nat. Engr., vol. 30, no. 6, June 1926, pp. 237-239. Cost of purchased current in future will be based on market value of coal; sidelight on current rates from hydro-electric systems; comparison of power costs of private plants and public-utility service.

INDUSTRIAL PLANTS. Selecting a Power and Heat Supply for Industrial Plants, M. K. Bryan. Mech. Eng., vol. 48, no. 6, June 1926, pp. 567-571, 8 figs. Basis on which schemes used to supply heat and power to industrial plants may be compared; curves illustrating power and steam demands of different industries.

STEAM TURBINES

AUXILIARY PUMPS FOR. Auxiliary Pumps for 30,000-k.w. Steam Turbine. Engineer, vol. 141, no. 3673, June 4, 1926, p. 590, 3 figs. Exhibited by Sulzer Bros., Ludwigshafen, at Leipzig Fair; for use in connection with 3-cylinder steam turbine of 30,000 k.w.; circulating water pump, air ejector pump and condensate pump are all mounted on single shaft, which is arranged for direct coupling to 600 hp. 3-phase Brown-Boveri motor running at 960 r.p.m.

EXTRACTION. Utilization of Extraction Steam. South. Power Jl., vol. 44, no. 5, May 1926, pp. 50-55. Part I, by E. D. Dickinson, discusses types and operation of extraction turbines. Part II, by A. D. Somes, discusses ways in which various types of steam turbines may be applied to economical production of power and process steam for industrial purposes. Part III, by R. G. Standerwick, deals with methods of regulating flow of steam through turbines, with particular reference to extraction and mixed-pressure applications.

LARGE. Some Problems in Connection with the Design of Large Turbines, W. B. Flanders. Elec. Jl., vol. 23, no. 5, May 1926, pp. 213-221, 7 figs. Points out that desire for highest efficiency must not be allowed to overshadow practical needs of operator on one hand nor financial balance of investment on the other; discusses types of design.

MIXED-PRESSURE. Mixed-Pressure Turbine Saves $6,000 a Year, W. Arnold. Power, vol. 63, no. 21, May 25, 1926, pp. 810-811, 2 figs. At plant of Pearson & Ludascher Lumber Co., Philadelphia, power formerly purchased is now generated from exhaust steam heretofore blown to atmosphere.

STEEL

ABRASION. Abrasion of Carbon Steels. Soc. Mech. Engrs. (Japan)—Jl., vol. 29, no. 109, May 1926, pp. 273-298, 21 figs. Study of relative abrasion of various carbon steels at state of sliding frictional condition per unit work, coefficient of friction being kept constantly; test was carried out by means of abrasion-testing machine designed by author; specimens were taken from Swedish steels in form of hollow concentric cylinder. (In Japanese.)

ARSENIC, EFFECT OF. The Effects of Arsenic on Steel, A. E. Cameron and G. B. Waterhouse. Iron & Coal Trades Rev., vol. 112, no. 3039, May 8, 1926, pp. 843-845.

ALLOY. *See Alloy Steel.*

DEFORMATION. Initial Permanent Deformation in Soft Steel (Les premières deformations permanentes dans les aciers doux), J. Seigle. Génie Civil, vol. 88, nos. 14, 15 and 16, Apr. 3, 10 and 17, 1926, pp. 315-317, 332-336 and 357-358, 45 figs. Discusses appearance of Piobert lines when elastic limit is exceeded in tensile strength test of bars, etc.; Fry reagent which colors those zones of permanent deformation, lines or zones of initial deformation; examples of tension and bending, and of compression.

FATIGUE. The Fatigue of Steel and Its Recovery, Y. Fujii. Kyoto Imperial Univ., College of Eng.—Memoirs, vol. 4, no. 2, Mar. 1926, pp. 37-62, 47 figs. Investigation of fatigue followed by physical and chemical phenomena, recovery condition of fatigued steels and nature of fatigue.

HARDNESS AT HIGH TEMPERATURE. The Hardness of Carbon Steels at High Temperatures, I. G. Slater and T. H. Turner. Iron & Steel Inst.—Advance Paper, no. 14, for mtg. May 1926, 4 figs. Also abstract in Iron & Coal Trades Rev., vol. 112, no. 3039, May 28, 1926, pp. 842-843, 4 figs.

HIGH-SPEED. *See Steel, High-Speed.*

INGOTS, HETEROGENEITY OF. The Heterogeneity of Steel Ingots. Engineering, vol. 121, nos. 3149 and 3150, May 21 and 28, 1926, pp. 610-612 and 645-646. Deals with observed facts and theoretical aspects of present problems involved. Report of Sub-committee before Iron & Steel Inst. See also Engineer, vol. 141, no. 3671, May 21, 1926, pp. 528-530.

INGOTS, SILICATE DISTRIBUTION IN. A Note on the Distribution of Silicates in Steel Ingots, J. H. S. Dickenson. Iron & Steel Inst. Advance Paper, no. 6, for mtg. May 1926, 20 pp., 18 figs. Method used for estimation of non-metallic impurities; distribution of silicates in two typical ingots and in large ingots; microscopic appearance of separated silicates. See also abstract in Engineering, vol. 121, no. 3150, May 28, 1926, pp. 640-641, 4 figs; and in Iron & Coal Trades Rev., vol. 112, no. 3039, May 28, 1926, pp. 828-831, 14 figs.

MAGNETIC SHEET. The Power Losses in Magnetic Sheet Material at High Flux Densities, C. E. Webb. Instn. Elec. Engrs.—Jl., vol. 64, no. 352, Apr. 1926, pp. 409-427 and (discussion) 427-435, 6 figs. Describes series of tests both by a.c. and ballistic methods on wide range of sheet materials, and also construction of new Lloyd square for tests at still higher flux densities; also more detailed series of tests, both a.c. and ballistic, on representative specimen of each type of material. Bibliography.

STANDARDS. Report of Committee A-1 on Steel. Am. Soc. Testing Matls.—Preprint, no. 9, for mtg. June 21, 1926, 59 pp., 3 figs. Recommendations affecting standards and tentative standards; proposed revisions in standards for steel; proposed tentative specifications for open-hearth carbon-steel rails; for manufacture of open-hearth steel girder rails; soft-steel track spikes; steel tie plates; marine-boiler steel plates; hot-rolled bar steels; cold-finished bar steels and shafting; cold-rolled strip steel; pipe flanges for high-temperature service, etc.

STRUCTURE. On Ghost Lines and the Banded Structure of Rolled and Forged Mild Steels, J. H. Whiteley. Iron & Steel Inst.—Advance Paper, no. 15, for mtg. May 1926, 6 pp., 8 figs. It is shown that only when variations in percentage of phosphorus between two adjacent areas in iron exceed 0.07 per cent, do they cause removal of carbon, between Ar3 and Ar1, from richer area; evidence is given showing that in certain cases carbon may actually move from one region to another of higher phosphorus concentration; it is shown that ghost lines cannot adequately be accounted for by theory that they are due to crystallization of ferrite on non-metallic inclusions. See also abstract in Engineering, vol. 121, no. 3149, May 21, 1926, pp. 613-614, 4 figs.; also Iron & Coal Trades Rev., vol. 112, no. 3039, May 28, 1926, pp. 832-833, 8 figs.

TENSILE STRENGTH AND HARDNESS. The Ratio of the Tensile Strength of Steel to the Brinell Hardness Number, R. H. Greaves and J. A. Jones. Iron & Steel Inst.—Advance Paper, no. 7, for mtg. May 1926, 18 pp., 3 figs. Ratio of tensile strength to Brinell hardness number is dependent on hardness of material and on its yield ratio; for given class of steel ratio decreases with increase of yield ratio and also decreases with increases of hardness up to 375 to 450, depending on composition of steel; summary of ratio of tensile strength to Brinell hardness number, calculated from data obtained in Research Department, Woolwich, and from sources indicated. Bibliography. Also abstract in Iron & Coal Trades Rev., vol. 112, no. 3039, May 28, 1926, pp. 847-848; and Engineering, vol. 121, no. 3151, June 4, 1926, pp. 673-674, 2 figs.

STEEL CASTINGS

ELECTRIC HEAT-TREATING. Electric Heat-Treating of Steel Castings, L. E. Everett. Elec. World, vol. 87, no. 23, June 3, 1926, pp. 1233-1236, 4 figs. Practical advantages of electric furnaces in annealing field; utilization of electric energy as source of heat compared with fuel-fired furnaces; method of application.

STEEL, HIGH-SPEED

HARDENING AND TEMPERING. The Hardening and Tempering of High-Speed Steel, A. R. Page. Iron & Steel Inst.—Advance Paper, no. 11, for mtg. May 1926, 24 pp., 40 figs. Preliminary investigations on effect of hardening and tempering on microstructure, etc., of two steels; effect of time and temperature of hardening and tempering on hardness of these same steels. See abstract in Iron & Coal Trades Rev., vol. 112, no. 3039, May 28, 1926, pp. 833-836, 33 figs.

STEEL WORKS

OPERATION. Problems of Steel Mill Operation, A. J. Whitcomb. Indus. Engr., vol. 84, no. 6, June 1926, pp. 249-259, 14 figs. Trends that are being followed in solving problems involving use of electrical and mechanical power-drive equipment; present tendencies in conversion, distribution and application of electrical energy in iron and steel industry.

STOKERS

LUBRICATION. Lubrication of the Mechanical Stoker, A. F. Brewer. Power, vol. 63, no. 23, June 8, 1926, pp. 895-896. Deals with oiling of worm and spur gearing used for speed-reduction purposes; bearings of electric motors, turbines, steam engines and of such shafting as is involved in operation of movable grates; and steam cylinders where steam engines are used as driving units.

STREAM POLLUTION

PAPER MILLS. Pulp and Paper Mill Discharge in Relation to the Purity of Streams, V. P. Edwardes. Paper Mill, vol. 49, no. 24, June 12, 1926, pp. 10, 12, 42 and 44. Paper-mill waste; waste from straw pulp; sulphite mill waste; legal aspects of problem; recommendations; technical outlook for waste reduction. Report submitted to Am. Pulp & Paper Mill Supts'. Assn.

STREET RAILWAYS

MULTIPLE-UNIT OPERATION. Multiple-Unit Operation of Tramways and Light Railways. English Elec. Jl., vol. 3, no. 4, Jan.-Mar. 1926, pp. 188-195, 10 figs.

STRUCTURES

TIMBER. Design of Details in Timber Structures, R. H. Lindgren. Boston Soc. Civil Engrs.—Jl., vol. 13, no. 5, May 1926, pp. 216-232, 10 figs. Discusses details usually encountered in timber design; methods shown, either alone or in combination, will ordinarily be sufficient to solve majority of cases.

ULTIMATE DESIGNING. In Advocacy of Ultimate Designing. Eng. News-Rec., vol. 96, no. 24, June 17, 1926, p. 994. Review of small pamphlet essay in German, by M. Mayer, advocating what is sometimes called ultimate designing, that is, calculating with limiting forces, or assuming for each influencing factor most unfavourable limiting condition that is practically conceivable, then planning construction so that when all these unfavourable conditions concur it will yet be little short of failure.

T

TAR

LOW-TEMPERATURE. A Study of a Tar from the Low-Temperature Carbonization of Coal, R. Parrish and F. M. Rowe. Chem. & Industry, vol. 45, no. 17, Apr. 23, 1926, pp. 99T-106T. Examination of low-temperature tars by method recommended to depict salient characteristics.

TEMPERATURE MEASUREMENTS

INSTRUMENTS. The Science of Temperature Measurement, H. M. Brown. Indus. Chemist, vol. 2, no. 15, Apr. 1926, pp. 166-168, 7 figs. Deals with four types of temperature-measuring instruments, namely, mercurial thermometer, electrical resistance thermometer, electrical thermocouple instrument and optical pyrometer.

TESTS AND TESTING

MATERIALS. Some Practical Aspects of the Testing of Materials, M. Moser. Metallurgist (Supp. to Engineer, vol. 141, no. 3672), May 28, 1926, pp. 79-80. Deals with tensile, hardness and bend testing; author emphasizes necessity for exercising discretion in choosing localities from which specimens should be taken from large masses of material. (Abstract.) Address before German Assn. for Testing Eng. Matls.

METHODS. Report of Committee E-1 on Methods of Testing. Am. Soc. Testing Matls.—Preprint no. 3, for mtg. June 21, 1926, 58 pp., 34 figs. Reports of sub-committee on mechanical and impact testing; volatility, plasticity and consistency, determination of water, shape and size and methods for density; report on testing of thin sheet metals; facilities and methods for making impact tests and their interpretation; proposed methods of impact testing.

TEXTILE MILLS

LOCATING HIDDEN WASTES. Mechanical and Material Research in Management, T. P. Gates. Mech. Eng., vol. 48, no. 6, June 1926, pp. 579-582, 5 figs. Method for locating hidden wastes in textile manufacturing that has shown marked results, and its application in mercerizing problem.

TEXTILES

TESTING. Report of Committee D-13 on Textile Materials. Am. Soc. Testing Matls.—Preprint no. 77, for mtg. June 21, 1926, 19 pp., 4 figs. Proposed general methods of testing textile fabrics; specifications for tolerances and test methods for rayon, and for electrical cotton tapes.

TOOLS

MANUFACTURE. The Division of Labour in Tool Manufacturing, G. A. Pennock. West. Soc. Engrs.—Jl., vol. 31, no. 3, Mar. 1926, pp. 97-102. Describes modern organization of specialists, each performing only part of operations in making tools; such system should obviously bring many economies and comparison of costs given by author reveals savings under newer order; these refer only to toolmaking expense.

TORSION

TWIST METER FOR TESTS. A New Twist Meter for Torsion Tests, J. H. Smith. Am. Soc. Testing Matls.—Preprint, no. 84, for mtg. June 21, 1926, 4 pp., 2 figs. New type of instrument for accurately measuring twist in torsion tests, designed in such manner as to be quickly attached to and removed from test specimens.

TRACTORS

CATERPILLAR. The Development of the Caterpillar Tractor and Its Application to Industry, P. E. Holt. Mech. Eng. (Supp.), vol. 48, no. 6, June 1926, pp. 657-661, 7 figs. Historical; inception of idea of endless-track principle and its development into workable machine; caterpillar in World War; standardization and refinement in manufacture; universal application to industry.

LUBRICATION. Tractor Lubrication and Lubricants. Lubrication, vol. 12, no. 4, Apr. 1926, pp. 37-48, 19 figs. Relation of physical characteristics of tractor oils to operating conditions; tractor-engine oil requirements; mechanical conditions involved; transmissions, final drives and other gearing.

TRANSFORMERS

110,000-VOLT. 110,000-Volt Transformers for 100,000-HP. Transmission Scheme. English Elec. Jl., vol. 3, no. 4, Jan.-Mar. 1926, pp. 145-157, 19 figs. Transformers being installed in power station at Bhira, near Bombay, India, are of core-type construction with windings of 2 vertical limbs; they are oil-immersed, water-cooled by means of internal cooling coil, and arranged for outdoor service.

STATIC. Notes on the Testing of Static Transformers, J. L. Thompson and H. Walmsley. Instn. Elec. Engrs.—Jl., vol. 64, no. 353, May 1926, pp. 505-526 and (discussion) 527-547, 40 figs. Usual methods adopted in commercial testing; discusses drying out of transformers, determination of dryness and measurement of insulation resistance; measurement of iron and load loss, and methods for obtaining greater accuracy; measurement of form tractor and its effect on loss measurements; methods for determining ohmic resistance.

VOLTAGE RATIO CONTROL. Transformer Voltage Ratio Control Under Load, L. H. Hill. Elec. Jl., vol. 23, no. 5, May 1926, pp. 261-266, 13 figs. Methods of tap changing; installations described are typical of tap changing under load equipments in use, and to some extent indicate trend of development toward simpler and more compact equipment.

TUNNELS

VEHICULAR. Work Begun on New Mersey Tunnel, A. L. Murphy. Compressed Air Mag., vol. 31, no. 5, May 1926, pp. 1627-1629, 4 figs. Construction of world's largest subaqueous vehicular tunnel under Mersey River at Liverpool, Eng.; will have internal diameter of 44-ft. and be over two miles long.

V

VACUUM VESSELS

EVAPORATIVE LOSSES. On the Evaporative Losses of Vacuum-Jacketed Vessels of the Dewar Type, R. M. Archer. Phys. Soc. Lond.—Proc., vol. 38, part 3, Apr. 15, 1926, pp. 247-272, 7 figs. Particulars of experiments made by author in Oxygen Laboratory of Air Ministry; describes separation of neck and radiation losses, and also method of testing absorbents under working conditions.

VALVES

PIPE-LINE. Valves for the Fourth Thirlmere Pipe Line. Engineer, vol. 141, no. 3672, May 28, 1926, pp. 550-552, 10 figs. Laying of fourth line completes aqueduct between Lake Thirlmere and Manchester; fourth line consists of 29 siphons having aggregate length of 32 mi. and are controlled by valves at each end; on longer siphons there are manual sluice valves, reflux valves, automatic stop valves and double-ball air valves; all of these appliances are described.

RELIEF. A High-Pressure Relief Valve, F. A. Ernst and F. C. Reed. Mech. Eng., vol. 48, no. 6, June 1926, pp. 595-597, 11 figs. Difficulties encountered with valves of commercial design; steps taken in evolving dependable design; details regarding materials and processes of manufacture.

VISCOSIMETERS

AIR-BUBBLE. The Air-Bubble Viscometer, G. Barr. Lond, Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 1, no. 2, Feb. 1926, pp. 395-405, 1 fig Effects of length of bubble and diameter of tube have been examined and rate of rise determined for several oils of known viscosity and surface tension, for water and for glycerin in different tubes; above certain limit, length of bubble is without appreciable effect on rate of rise; air-bubble viscosimeter may be used with confidence for approximate comparison of viscosities of materials of same class.

VOLTAGE REGULATION

REGULATORS. Compensating for Voltage Drop with Automatic Voltage Regulators, J. H. Ashbaugh. Elec. Jl., vol. 23, no. 5, May 1926, pp. 243-246, 8 figs. Points out there are many instances where compensation would result in improved operating conditions.

W

WATER PIPES

CORROSION. Prevention of Corrosion and "Red Water," J. R. Baylis. Am. Water Wks. Assn.—Jl., vol. 15, no. 6, June 1926, pp. 598-633, 12 figs. Theory of corrosion; solubility equilibrium of iron salts; tendency for iron to go into solution; factors influencing corrosion of iron; pitting and tuberculation; corrosion of zinc and of lead; brass and copper pipe; concrete and cement-lined pipes; treatment of water to prevent corrosion and red water.

WATER TREATMENT

CHLORINATION. Review of Nineteenth Annual Report on Water Examination. London Metropolitan Water Board, M. C. Whipple. New England Water Wks. Assn.—Jl., vol. 40, no. 1, Mar. 1926, pp. 33-39. Review of report which records interesting observations upon subject of chlorination and tastes in drinking water.

WATER WORKS

HAMILTON, ONT. Water Works Extension, Hamilton, Ont. Can. Engr., vol. 50, no. 23, June 8, 1926, pp. 631-635, 5 figs. Report, prepared by city engineer and consulting engineers, strongly advises immediate construction of filtration plant, reservoir, new intake and additional pumping facilities.

INTAKES. Intakes for Water Works, J. J. Traill. Water Wks., vol. 65, no. 6, June 9, 1926, pp. 261-263. Information on Canadian installations. Paper presented before Can. Section, Am. Water Works Assn.

TORONTO DUPLICATE SYSTEM. Toronto Duplicate Water Works System, W. Gore and H. G. Acres. Can. Engr., vol. 50, no. 22, June 1, 1926, pp. 611-615, 6 figs. Report recommends construction of 10-ft. intake tunnel, filtration plant and pumping station at Victoria Park; 10-mile tunnel to link Victoria Park plant with John Street station and with new station at Parkside Drive; additional reservoir capacity provided.

WELDING

BOILERS. Autogenously and Electrically-Welded Boilers and Containers, E. Hohn. Mech. Eng., vol. 48, no. 6, June 1926, pp. 603-609, 71 figs. Results of investigation of strength and tenacity of parts welded together. Translated from Zeit. des Vereines deutscher Ingenieure, Jan. 23 and Feb. 6, 1926.

ELECTRIC. *See Electrical Welding, Arc.*

OXY-ACETYLENE. *See Oxy-Acetylene Welding.*

WELDS

X-RAY TESTS. X-Ray Tests of Welds Reveal Some Defects, But Not All. Power, vol. 63, no. 21, May 25, 1926, pp. 800-803, 12 figs. Investigation indicates that X-ray examination of fusion-welded joints is of value in revealing certain types of defects, particularly voids and oxide inclusions; X-ray missed defects due to insufficient fusion.

WINDING ENGINES

CONTROL FOR ELECTRIC DRIVE. A New System of Control for Electrically-Driven Machines and Cranes, J. Bentley. Instn. Elec. Engrs.—Jl., vol. 64, no. 353, May 1926, pp. 567-578, 10 figs. Describes arrangement of contactors, resistances, etc., together with patent speed-load device as applied to electric winch and its method of working and performance under various conditions of hoisting and lowering loads; simpler, more compact and less costly system, obtained as result of experiment is developed, with curves giving various speeds obtained at different loads and description of safety devices, etc.

WINDMILLS

ELECTRICITY GENERATION. Windmills for the Generation of Electricity. Engineer, vol. 141, no. 3673, June 4, 1926, pp. 586-587. Results of work carried out at experimental station by Inst. of Agricultural Engineering, Oxford Univ., covering (1) testing of several actual plants to obtain data on output, general performance and suggestions for improvements; (2) collection of economic data for benefit of public; and (3) collection of meteorological data, particularly probabilities of wind and calms.

WIRE

ELASTICITY. The Elasiticity of Wires and Cables, H. W. Swift. Engineering, vol. 121, nos. 3148 and 3150, Apr. 30 and May 28, 1926, pp. 547-548 and 615-617, 6 figs. Critical comparison of available methods of determining modulus of elasticity, and account of tests made to determine comparative accuracy and reliability of certain of them; methods of measurement are: (1) extensometers of special type on short lengths; (2) verniers on long vertical lengths; (3) methods depending on sag in horizontal span.

WROUGHT IRON

STANDARD SPECIFICATIONS. Report of Committee A-2 on Wrought Iron. Am. Soc. Testing Matls.—Preprint, no. 10, for mtg. June 21, 1926, 3 pp. Sub-committee report on tubes and pipe and on merchant bar iron.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

ABRASIVE WHEELS

Standardization. Grinding Wheels. U. S. Bur. of Standards—Simplified Practice Recommendation, no. 45, 1926, 23 pp., 33 figs. Study conducted by Bur. of Standards resulted in reduction from 715,200 to 255,800 varieties of grinding wheels.

AERODYNAMICS

Wind-Tunnel Research. The Resistance of the Airship Models Measured in the Wind Tunnels of Japan. Tôkyô Imperial Univ.—Report of Aeronautical Research Inst., vol. 2, no. 15, Mar. 1926, 84 pp., 28 figs. Report of investigation to compare resistance or resistance coefficient of airship models measured at different wind tunnels and by different methods to deduce some properties, if any, peculiar to wind tunnels and aerodynamical balances employed.

AIRCRAFT

Defense Against. The Past and Future of Defense Against Aircraft, B. F. Harmon. Coast Artillery Jl., vol. 63, nos. 5 and 6, Nov. and Dec. 1925, pp. 449-460 and 555-566. Shows great importance of roles played by Air Service. Illustrates importance of Air Service roles, particularly reconnaissance, by reference to opening phases of World War; anti-aircraft means of defence, etc.

Steam Power Plants for. Steam Power Plants in Aircraft, E. E. Wilson. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 239, June 1926, 30 pp., 2 figs. Analysis of proposal to use steam power plants in aircraft.

AIRCRAFT CONSTRUCTION MATERIALS

Compression Rubbers. Compression Rubbers, G. H. Dowty. Flight (Aircraft Engr.), vol. 18, no. 25, June 24, 1926, pp. 60-62, 7 figs. Properties of compression rubbers and results of tests of various types of compression rubbers.

AIRPLANE ENGINES

Air-Cooled. Adaptation of the Radial Air-Cooled Engine, R. W. A. Brewer. Aviation, vol. 20, no. 25, June 21, 1926, pp. 942-944, 12 figs. Special problems of installation; cowling and cooling; materials for manifolds.

Navy Air-Cooled Engines Development, E. E. Wilson. Aviation, vol. 21, no. 2, July 12, 1926, pp. 59-61, 3 figs. Weight per horse power of air-cooled engines; fuel consumption favours water-cooled engines; Navy's programme for development of air-cooled engines.

Fuel-Injection Valves. An Investigation of the Characteristics of Steel Diaphragms for Automatic Fuel-Injection Valves, W. F. Joachim. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 234, Apr. 1926, 22 pp., 15 figs. Research on steel diaphragms undertaken at Langley Memorial Aeronautical Laboratory as part of general investigation of fuel-injection engines for aircraft; work determined load-deflection, load-deformation and hysteresis characteristics for single diaphragms having thickness from 0.002 to 0.012 in. and for similar diaphragms tested in multiple having total thicknesses from 0.012 to 0.18 in.

AIRPLANE PROPELLERS

Design. Propeller Design—A Simple System Based on Model Propeller Test Data, F. E. Weick. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 237, May 1926, 19 pp., 12 figs. Simple system for designing propellers of standard form; based on tests of 13 Navy models; method has given satisfactory results in Bur. of Aeronautics, U. S. Navy Department.

Propeller Design—Extension of Test Data on a Family of Model Propellers by Means of the Modified Blade Element Theory, F. E. Weick. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 236, May 1926, 8 pp., 6 figs. Describes method to extend data obtained from tests on 13 model propellers to include all propellers of same form likely to be met in practice.

Theory. Theory of Airscrews, S. Kawada. Tôkyô Imperial Univ. of Aeronautical Research Inst.—Report, vol. 1, no. 14. Mar. 1926, pp. 361-404, 8 figs. Attempts to elucidate mechanism of action of airplane propeller in air, based on Prandtl's theory of airfoil.

AIRPLANES

Control at Low Speeds. On the Control of Airplanes at Low Speeds, B. V. Korvin-Kroukovsky. Aviation, vol. 20, no. 25, June 21, 1926, pp. 946-947, 3 figs. Supporting existing control methods as adequate for control under all conditions.

Line Assembly. Line Assembly of Airplanes at the Breguet Works. (La fabrication des avions "à la chaine" aux usines Breguet), Aéronautique, vol. 8, no. 85, June 1926, pp. 193-196, 6 figs. Description of methods employed in vertical erection of wings and assembly of fuselages and frames of Breguet 19 metal biplane, with routing diagrams.

Metal. Metal Aeroplane Construction, A. B. Miller. Junior Instn. Engrs., vol. 36, May 1926, pp. 325-343, 17 figs. Review of construction at present stage of selective process which continues its development due to search for light and permanent structure, capable of production and maintenance, in same way as any other manufactured article, by engineering industry; factors leading to choice of metals as most suitable construction materials are: weight economy, lack of deterioration of spares in storage, good supply of raw material, and facilities for mass production and standardization.

Spar and Wing-Rib Tests. Comparison of Tests on Experimental 15-Inch Metal Spars and 11-Foot Chord Metal Wing Ribs, J. S. Newell. Air Service Information Circular, vol. 6, no. 556, Mar. 1, 1926, 43 pp., 54 figs. Results and conclusions of tests made at McCook Field.

Velocity. The Effect of Flight Path Inclination on Airplane Velocity, W. S. Diehl. Nat. Advisory Committee for Aeronautics—Report, no. 238, 1926, 11 pp., 6 figs. Systematic study of relations between flight velocity and its horizontal component in power glides; effect of inclination of flight path on horizontal velocity; effect of slight deviation from horizontal flight path.

AIRSHIPS

Electric Hazards. Electric Hazards of Airship Traffic (Die elektrischen Gefahren des Luftschiffverkehrs), Wiegand. Zeit. für Technische Physik, vol. 7, no. 5, 1926, pp. 238-239. Discusses formation of strong electric fields and electric sparks, electrostatic field in atmosphere, electric charge of airships, etc., and shows how dangers may be eliminated.

AIRWAYS

Meteorological Conditions. Meteorological Conditions Along Airways, W. R. Gregg. U. S. Natl. Advisory Comm. for Aeronautics, Report No. 245, 1926, 16 pp., 8 figs. Chicago-Fort Worth airway studied to show kind of meteorological information needed to determine operating conditions along airways.

ALLOYS

Aluminum. *See Aluminum Alloys.*
Iron. *See Iron Alloys.*
Nickel. *See Nickel Alloys.*

ALUMINUM ALLOYS

Duralumin. *See Duralumin.*

Refining Processes. Processes of Refinement in Aluminum Alloys (Die Veredelungsvorgänge in vergütbaren Aluminiumlegierungen), K. L. Meissner. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 12, Mar. 20, 1926, pp. 391-401, 13 figs. Nature of automatic refinement of duralumin; explanation of refining phenomena according to Merica; tests by Fraenkel on electric conductivity and chemical resistance; influence of age hardening at room and at higher temperatures; effect of compound Mg_2Si; refining process according to Hanson and Gayler, Hond and Konno; refining of magnesium-free aluminum containing copper by artificial age hardening; peculiarities of magnesium and magnesium-free alloys when used in light-metal construction; tests with lautal; critical dispersion.

ALUMINUM BRONZES

Heusler Ferromagnetic. Crystal Structure of Heusler Alloys (Ueber die Kristallstruktur der Heuslerschen Legierungen), L. Harang. Physokalische Zeit., vol. 27, no. 7, Apr. 1, 1926, pp. 204-205, 1 fig. Determination of structure of Heusler ferromagnetic aluminum-manganese bronzes; there is no simple relationship between magnetic properties and appearances of different lattices.

AMMETERS

Multiple Range. The Multi-Range Ammeter of Constant Resistance, L. G. A. Sims and M. H. Hunt. Experimental Wireless, vol. 3, no. 34, July 1926, pp. 425-428, 4 figs. Derives equations for computing values of shunt and series resistance required so that set of such resistance could be constructed and mounted with instrument, together with switches, for changing resistances according to desired ratio.

AMMONIA CONDENSERS

Troubles, Prevention of. Preventing Ammonia Compressor Troubles, H. J. Macintire. Power Plant Eng., vol. 30, no. 12, June 15, 1926, pp. 708-710, 1 fig. Discusses factors that may reduce efficiency of compressor, such as incorrect pressures, non-condensable gases and poor heat transfer in system.

Operation. Operating Characteristics of Ammonia Condensers, W. H. Motz. Power, vol. 63, no. 26, June 29, 1926, pp. 1012-1014, 7 figs. Influence upon condenser pressure of initial temperature and quantity of cooling water, amount of surface, and disposition of surface; condenser pressures for various conditions and effect of reduction of condenser pressure on power consumption.

AUTOMOBILE ENGINES

Crankcase-Oil Dilution. Oil Rectification. Automobile Engr., vol. 16, no. 216, June 1926, pp. 226-228, 5 figs. Details of device for preventing crankcase dilution.

Oil Filtration. Improved Engine Oil Filtration. Motor Transport, vol. 42, no. 1109, June 14, 1926, pp. 670-671, 4 figs. Describes three types of special oil filters which, it is claimed, yield more mileage for less consumption and wear; absorbent-pad type, Skinner combined filter and recovery unit, and Renault oil purifier.

AUTOMOBILES

Headlights. New Headlight Has Long Range Without Glare, M. A. Hall. Automotive Mfr., vol. 68, no. 3, June 1926, pp. 5-7, 3 figs. Headlight demonstrated by Gen. Elec. Co. at Schenectady which has long range without glare; wide side beam with backward rays which illuminates ditches and road signs and requires no focusing.

Photometric Measurements and Glare Tests of Automobile Headlights (Misure forometriche e di abbagliamento in fari per autoveicoli), E. Perucca. Elettrotecnica, vol. 13, no. 3, Jan. 25, 1926, pp. 45-46, 11 figs. Suggested tests for automobile headlamps; convenient method for halving distance required for photometric measurements by means of reflection by plane mirror; describes several headlights and give results obtained by testing them in manner suggested.

AUTOMOTIVE FUELS

Anti-Knock. Motyl and Motalin (Motyl und Motalin), Ostwald. Petroleum, vol. 22, no. 14, May 10, 1926, pp. 525-530, 8 figs. Discusses low volatility, impurities and knocking of gasoline; production of motalin, dapolin colored yellow by addition 4 per cent of motyl, which prevents knocking, iron carbonyl replacing dangerous tetraethyl lead.

France. Better Use of Liquid Fuels (Sur la meilleure utilisation des combustibles liquides), P. Dumanois. Annales des Combustibles Liquides, vol. 1, no. 1, 1926, pp. 49-78. Increasing efficiency of explosion engines by increasing compression, and consequent appearance of spontaneous ignition and detonation; anti-knock compounds and possibility of using heavier oil.

B

BEAMS

Continuous. Apparatus for Drawing Influence Lines of Continuous Beams. (Appareil Donnant le Tracé des Lignes d'Influence des poutres continues), G. Colonnetti. Génie Civil, vol. 88, no. 24, June 12, 1926, pp. 523-526, 9 figs. Description of the "influentiograph," a drafting-board device for this purpose, and methods of using it.

Reinforced Concrete. The Design of Reinforced Concrete Beams and Slabs for High-Strength Concrete, E. S. Andrews. Concrete & Constr. Eng., vol. 21, no. 6, June 1926, pp. 424-426, 2 figs. Shows diagram prepared in order to facilitate design of beams and slabs when higher stresses are employed.

BEARINGS

Babbitted. Babbitting Bearings. Mech. World, vol. 79, no. 2060, June 25, 1926, pp. 489-490, 8 figs. Discusses method for babbitting bearings; removing old babbitt; housing; tools for cutting oil grooves, etc.

Motor, Lubrication of. Lubricating Motor Bearings, F. E. Gooding. Indus. Engr., vol. 84, no. 7, July 1926, pp. 311-315, 10 figs. Problems in lubricating motor bearings and methods used by manufacturers of motors and bearings to reduce operating troubles.

BEARINGS, BALL

Calculation. Construction of Ball Bearings (Ueber die Konstruktion von Rillenkugellagern), A. Palmgren. Maschinenbau, vol. 5, no. 10, May 20, 1926, pp. 452-455, 6 figs. Discusses bearings derived from Stribeck type; effect of contact between balls and race on load capacity; shows by calculations that bearings without filling groove and small number of balls are preferable.

Journal-Thrust. Journal-Thrust Ball Bearings. Automobile Engr., vol. 16, no. 216, June 1926, p. 208, 8 figs. Combination journal and thrust bearing somewhat similar to French duplex bearing; another type is known as U or Universal bearing, in which advantage is taken of thrust-resisting feature to build up effective double-journal and double-thrust bearing.

BELT DRIVE

Individual vs. Group. Group Drives More Economical for Most Conditions, L. H. Hopkins. Belting, vol. 28, no. 6, June 1926, pp. 15-17, 1 fig. Group drives show greater efficiency from standpoint of operation, maintenance and initial cost and are more adaptable to slight speed changes.

BLASTING

Detonators. Detonators and Tests for Detonators, C. S. Hurter. Dupont Explosives Service Bul., July 1926, 4 pp. Discussion of principal factors which determine efficiency of blasting caps; function of detonator and its essential elements; action of detonator; relative merits of various explosives; substances for detonators; tests for detonators.

BOILER FEEDWATER

Deaeration. Importance of Care of Feedwater in Economic Boiler Operation (Die Bedeutung der Speisewasserpflege für den wirtschaftliches Dampfkesselbetrieb), H. Riemer. Sparwirtschaft, nos. 4 and 5, Apr. and May 1926, pp. W55-W60 and W-76-W81, 18 figs. Formation of boiler scale, solubility of gases in water, deleterious effect of organic compounds. Physical and chemical processes of feedwater purification.

Softening. The Why and How of Water Softening, S. O. Andros. Steam Power, vol. 5, no. 5, June 1926, pp. 3, 5 and 12, 4 figs. Gives case representing typical condition arising from use of raw water and water-softening method employed.

BOILER FURNACES

Air Preheating. A New Air Preheater. Eng. & Boiler House Rev., vol. 39, no. 11, May 1926, pp. 520-524, 2 figs. General principle of new Perry design which, it is claimed, is considerably less in weight and bulk than existing types of preheaters or economizers, while for high duties, advantages, together with low cost, are increased.

Preheating Combustion Air in Boiler Firing (Ueber die Vorwärmung der Verbrennungsluft bei Dampfkesselfeuerungen), E. Mikocki. Sparwirtschaft, vol. 3, no. 5, May 1926, pp. W73-W76. Discusses recent tests made and advantages of air preheating; types of preheaters, including that of Schwabach and Ljungström.

Utilization of the Waste Heat of Boiler Installations to Preheat the Combustion Air, E. Blau. Combustion, vol. 14, no. 6, June 1926, pp. 374-377, 2 figs. By preheating combustion air, 70 per cent of heat of flue gases can be recovered; temperature in combustion chamber is increased appreciably, and consequently combustion on grate proceeds more vigorously; system of air heaters in common use. Translated from German.

Excess-Air Reduction. Limiting Factors in Reducing Excess Air in Boiler Furnaces, E. G. Bailey. Mech. Eng., vol. 48, no. 7, July 1926, pp. 703-709, 16 figs. Study of interrelationship and relative importance of three factors most closely related to excess air; namely, furnace temperature, unburned fuel, and heat loss in chimney gases.

BOILER OPERATION

Control. Regulating Devices and Measuring Instruments in Boiler Plants (Neue Regeleinrichtungen und Messgeräte für Dampfkesselanlagen), Elektrotechnik u. Maschinenbau, vol. 44, no. 12, Mar. 21, 1926, pp. 60-63, 5 figs. Roncka automatic regulator known as multimeter, which controls velocity of combustion, air supply, feedwater supply, fuel supply, etc.; examples of applications.

BOILER PLATE

Caustic Embrittlement of. Caustic Embrittlement, S. W. Parr and F. G. Straub. Power, vol. 63, no. 26, June 29, 1926, pp. 994-998, 10 figs. Summary of results of studies carried on at engineering experiment stations of Univ. of Illinois to discover process whereby seemingly good boiler plate becomes worthless after few years of service.

BOILERS

Economy, Determination of. Determining Boiler Economy, D. Cochrane. Power House, vol. 19, no. 12, June 20, 1926, pp. 23-24. Determination of economy in coal consumption, in weight of boiler, in first cost, and in maintenance of total life.

Heat Transfer. Heat Transfer in Boilers, C. F. Wade. Elec. Times, vol. 69, no. 1808, June 17, 1926, pp. 705-707, 4 figs. Trend of design of steam boilers; transfer of heat by radiation and by conduction aided by convection.

Therm as Unit of Capacity. The "Therm" as a Unit of Boiler Capacity, H. W. Brooks. Combustion, vol. 14, no. 6, June 1926, p. 377. It is believed that therm would lend itself ideally to solution of problem.

BORING MACHINES

Stern-Bush. Stern-Bush Boring Machine. Engineering, vol. 121, no. 3152, June 11, 1926, p. 692, 8 figs. Details of machine for rebushing stern-tube liner of vessel in position.

BRIDGES, HIGHWAY

Concrete. New Bridge Over the Thames at Caversham. Engineer, vol. 141, no. 3676, June 25, 1926, p. 656, 5 figs. partly on p. 666. Approach roads between reinforced-concrete retaining walls run up towards bridge on either side of river; there are three abutments connected by two-arched bridge having clear spans of 126 ft. and 106 ft. respectively; total length, 457½ ft.

BRIDGES, RAILWAY

Concrete. Concrete Bridge Designed for Elastic Movement, C. R. King. Eng. News-Rec., vol. 96, no. 25, June 24, 1926, pp. 1022-1024, 5 figs. Swedish railroad bridge in cold climate uses steel hinges, different concrete mixes, large expansion joints, and expansion slide plates under floor.

Raising. Chicago & Eastern Illinois Raises Bridge by a Novel Method, J. E. Bernhardt. Ry. Eng. & Maintenance, vol. 22, no. 7, July 1926, pp. 263-265, 3 figs. Existing 103-ft. steel span is lifted vertically 23½ ft. by locomotive power to permit dredging operations.

BRIDGES, SUSPENSION

Delaware River. The Delaware River Bridge, C. E. Chase and C. Carswell. Contractors & Engrs'. Monthly, vol. 12, no. 6, June 1926, pp. 45-52, 10 figs. Wire-cable suspension bridge with main span of 1,750 ft.; main piers are located shoreward of pierhead lines on each side of river; piers are founded upon rock and were constructed by use of pneumatic caissons.

C

CABLES, ELECTRIC

Internal Vacua, Effect of. The Effect of Internal Vacua, W. A. Delmar. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 7, July 1926, pp. 627-629. Considers rate of pressure equalization in cables and relative effects of slow equalization upon long and short cables, indicating that there may be considerable difference in dielectric properties depending on length and past history in regard to temperature cycles; suggests means of overcoming these differences.

Paper-Insulated. The Quality Rating of High-Tension Cable with Impregnated Paper Insulation, D. W. Roper and H. Halperin. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 6, June 1926, pp. 505-515, 12 figs. Laboratory tests to determine what high-voltage tests cable, known to be of good quality, will withstand; careful examination and dissection of samples of cable as received from factory and samples removed from lines which have failed in service or which have been in service for number of years without failure; comparison of operating records of cable with examination of samples, etc.

Pulling Tensions. Reduced Pulling-In Tensions on Cables, C. H. Shaw. Elec. World, vol. 88, no. 1, July 3, 1926, pp. 17-18, 4 figs. Improvement in transmission cables requires equal betterment of installation practice; studies on pulling tensions for 132-kv. cable in monolithic ducts reveal great reductions through use of soapstone.

CABLEWAYS

Funicular Lines. Safety Devices in Cableways for Passenger Traffic (Dispositif de sécurité dans les funiculaires aériens pour voyageurs), F. Crestin. Génie Civil, vol. 88, no. 22, May 29, 1926, pp. 482-485, 14 figs. Discusses principal causes of cable deterioration; safety devices, brakes, etc., and describes Mont Blanc line and its equipment.

CAISSONS

Sinking. A Problem in Plant Layout on Saturated Sand. Eng. News-Rec., vol. 96, no. 25, June 24, 1926, pp. 1016-1017, 4 figs. Sinking circular caisson 82 x 63 ft. deep in sand below tide level calls for pile foundation for new Jamaica, L.I., sewage treatment plant.

CANALS

Welland. The Welland Ship Canal, J. B. Walker. Sci. Am., vol. 135, no. 1, July 1926, pp. 32-33, 6 figs. Progress on 25-foot waterway with 30-foot locks that will open Great Lakes to ocean.

CAR DUMPERS

Grain Elevators. Dumping Plant for Grain Cars. Engineering, vol. 121, nos. 3151 and 3153, June 4 and 18, 1926, pp. 650-652 and 716-720, 47 figs., partly on supp. plates. Details of Metcalf dumping plant for No. 3 grain elevator of Harbour Commissioners of Montreal; it comprises 4 dumpers, capable of unloading 7 cars per hr. containing 2,500 bu. of wheat each.

CAR LIGHTING

Equipment and Maintenance. Requirements for Present-Day Car Lighting. Ry. Elec. Engr., vol. 17, no. 7, July 1926, pp. 213-216, 1 fig. Discusses various types of equipment and quality of maintenance, which are vital factors for satisfactory illumination.

CAR WHEELS

Specifications. Report of Committee on Wheels. Ry. Age, vol. 80, no. 34, June 15, 1926, pp. 1830-1839, 12 figs. Developments in wrought-steel and cast-iron wheels; grinding of wheels; vertical flange defect; brake-burned wheels, etc. See also Ry. Rev., vol. 78, no. 25, June 19, 1926, pp. 1139-1142, 2 figs. Report before Am. Ry. Assn.

CARS, FREIGHT

Repairing Steel Cars. Ry. Jl., vol. 32, no. 7, July 1926, pp. 27-32, 15 figs. Describes unit spot system of repairing steel cars in railway shops; system affords systematic programme of work and more efficient and economic operation of forces.

Temperature Measurement. Temperature Measurement in the Boiler House, D. Brownlie. Eng. & Boiler House Rev., vol. 39, no. 12, June 1926, pp. 568-572, 4 figs. Discussion of instruments employed.

Specifications. Report of Committee on Car Construction. Ry. Age, vol. 80, no. 32, June 12, 1926, pp. 1713-1723, 13 figs. Sub-committee on fundamental calculations for design of box cars; test of cast-steel truck side frames; design of box cars; moisture content of lumber used in box cars; self-clearing hopper car; amplification of definitions designating letters for car equipment; lettering and marking cars, etc.

CARS, REFRIGERATOR

Bunkers. Divided Basket Bunkers Save Ice. Ry. Age, vol. 80, no. 38, June 26, 1926, pp. 1956-1959, 7 figs. Discusses economies to be obtained by use of wire basket bunkers divided by vertical air spaces which effect reduction in ice-carrying capacity and considerable increase in ice surface exposed to air circulating through bunker; results of test trips.

Iceless. North Shore Runs Iceless Refrigerator Cars. Ry. Rev., vol. 78, no. 24, June 12, 1926, pp. 1081-1083, 7 figs. These cars entirely eliminate necessity for precooling, icing service and salt drippings along right-of-way; refrigerating machine consists of 2½-ton capacity. Phoenix unit-type twin-cylinder ammonia compressor, driven by electric motor through Morse silent chain; describes process of refrigeration.

CASE-HARDENING

Irregular Carburization. Irregular Carburization of Iron and Iron Alloys—The Cause and Prevention, W. J. Merten. Am. Soc. for Steel Treating—Trans., vol. 9, no. 6, June 1926, pp. 907-920 and (discussion) 920-928 and 1004, 17 figs. Sets forth physico-chemical reactions within carburizing container; shows that chemistry of steel plays only minor role in success of satisfactory production of proper depth and uniformity of case and that physical structure of steel and mechanical arrangement of steel articles and carburizers for correct chemical reactions are major factors.

CAST IRON

Cooling Tests. Cooling Tests on Different Cast-Iron Test Pieces (Abkühlungsversuche ad verschiedenen Gusseisenproben), F. Roll. Giesserei-Zeitung, vol. 23, no. 11, June 1, 1926, pp. 295-297, 7 figs. By means of cooling-off curves, temperature variations in cross-sections of different gray-iron castings are measured; observations were also made of structure and segregation; separate parts of test pieces form heat reservoirs that give off heat slowly to more rapidly cooling thinner cross-sections.

Corrosion of. "Simply Cast Iron," H. I. Young. Indus. Chemist, vol. 2, no. 17, June 1926, pp. 254-257. Cast iron, in order to withstand corrosion conditions, must have certain composition and all its impurities must be controlled; discussion of problem with sugestions for elimination of difficulties.

Graphitization. Graphitization at Constant Temperature, H. A. Schwartz. Am. Soc. for Steel Treating—Trans., vol. 9, no. 6, June 1926, pp. 883-906, 5 figs. Mathematical analysis of data of graphitization; demonstrates that rate of graphitization is determined by rate at which carbon can migrate in iron; progress of graphite formation with time is shown to be expression of changing migratory distances, and concentration gradients produced by reaction; reference is made to range through which graphitizing rate varies in commercial material; effect of silicon on this constant. Bibliography.

CEMENT

Alumina. Properties of Aluminous Cements. Concrete, vol. 29, no. 1, July 1926, pp. 46-47 and 49, 1 fig. Results of experiments in use of high alumina cements; high temperatures generated during setting period; action of frost on setting properties; volumetric changes; relation between setting and hardening; resistance of aluminous cement salt solutions. Translated from Chemiker Zeitung.

Hydraulic. Hydraulic Cements from Copper Slags, G. Agde and P. Assmann. Pit & Quarry, vol. 12, no. 7, July 7, 1926, pp. 87-92, 4 figs. Factors which render slag usable or otherwise; description of slag; preparation of natural cements; compressive strengths; setting times. Translated from Zeit. für Angewandte Chemie.

CEMENT, PORTLAND

Strength of. Predicting the 28-Day Tensile Strength, M. A. Durland. Concrete, vol. 29, no. 1, July 1926, pp. 40-42, 4 figs. Results of study conducted during past 6 years on more than 8,000 cement samples, each consisting of three briquettes tested by Road Materials Laboratory at Kansas State Agriclutural College; samples made up with standard Ottawa sand; study shows relation between 7-day and 28-day strength of these briquettes.

Tension Tests. Report of Special Sub-Committee on Survey of Tension Tests of Portland Cement for 1925. Am. Soc. for Testing Matls.—Preprint, no. 40 for mtg. June 21, 1926, 13 pp., 2 figs. Information from laboratories testing cement which would permit classification of results of standard briquette tests according to tensile strength; survey probably consitutes most comprehensive statistical study of cement tests which has ever been carried out since it summarizes results of over 1,000,000 briquette tests.

CENTRAL STATIONS

Design. Power Station Design, V. E. Alden. Elec. Light & Power, vol. 4, no. 7, July 1926, pp. 17-18, 84 and 86, 2 figs. Before designing new power station, ideals or objectives of station should be clearly defined; basic facts as to conditions affecting construction should be determined and accurate forecast should be made of conditions under which station will operate.

Lignite-Burning. Progress in Lignite Power Plant Construction in Germany, A. Peucker. Elec. World, vol. 87, no. 26, June 26, 1926, pp. 1392-1393. Changes in methods of fuel and ash handling, additions to boiler plant and turbine installation and raising of power factor from 0.67 to 0.90 greatly increase capacity of Zschornewitz power house.

CHIMNEYS

Calculation. Calculation of Chimneys for Central-Heating Boilers. (Ueber Schornsteinberechnung für Central-Heizungskessel), Seeling. Verband der Central-lieizungs-Industries — Mitteilungen der Wärmetechnischen Abteilung, Jan-Mar. 1926, pp. 32-38. Calculation of chimney before it is built, so that it can be proportioned to dimensions of boiler, and in conformity with Berlin building code.

CIRCUIT BREAKERS

High-Speed. The High-Speed Circuit Breaker in Railway Feeder Networks, J. W. McNairy. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 7, July 1926, pp. 619-626, 10 figs. Method of insulating grounded sections of extensive feeder networks supplying power to railways without disturbing power supply to other sections.

COAL

Carbonization. Low-Temperature Carbonization of Fuel, D. Brownlie. Power House, vol. 19, no. 13, July 5, 1926, pp. 19-20, 42 and 44, 3 figs. Different processes of carbonization, operated in conjunction with steam boiler, general furnace and power plant.

Low-Temperature Carbonization. D. Brownlie. Chem. News, vol. 132, no. 3447, May 7, 1926, pp. 296-299. Consideration of processes for production of free-burning smokeless fuel involving mechanical compression or briquetting of charge before and during carbonization.

COAL DEPOSITS

Identification of Seams. Identification of Coals, T. B. Williams. Economic Geology, vol. 21, no. 4, June-July 1926, pp. 364-374, 7 figs. Investigation of coal by use of selenium oxychloride; characteristics of selenium-oxychloride reactions; preparation of treatment of samples; this method of treatment of polished surfaces of coal offers quick and easily-controlled means of bringing into relief delicate detail of plant structure; as means of treating coal surfaces in order to distinguish one seam from another it offers much promise.

Heating-Value Determination. Graphical Method of Determining the Heating Value of Coal. (Méthode graphique de détermination du pouvoir calorifique du charbon), A. de Zawaritxky. Chaleur & Industrie, vol. 7, no. 72, Apr. 1926, pp. 191-199, 10 figs. Ten charts and instructions for their use.

Pulverized. *See Pulverized Coal.*

COAL HANDLING

Conveyors. Conveyors for Coal and Ash Handling in Boiler Plants (Der gegenwärtige Stand des Transportwesens zur Bekohlung und Entaschung von Dampfkesseln), F. Riedig. Fördertechnik u. Frachtverkehr, vol. 19, nos. 11 and 12, May 28 and June 11, 1926, pp. 157-160 and 176-180, 25 figs. Discusses systems of mechanical handling of coal, types of bucket conveyors, conveying bands, spirals and tubes; also transportable types: cableways, ash handling by suction and hydraulic system, combination of mechanical and wet process.

Unloaders. Hydraulic Unloading of Coal (Le déchargement hydraulique du charbon), P. Calfas. Génie civil, vol. 88, no. 13, Mar. 27, 1926, pp. 289-292, 6 figs. Plant of St. Ouen central station, where coal is unloaded by means of strong water jets, cars being run out crosswise on inclined track, coal and water running into canal, along track, and water being re-used indefinitely; used for rapid unloading of large quantities of coal.

COAL MINES

Bituminous. Principal Factors in the Development of Bituminous Coal Mines, A. W. Hesse. Modern Min., vol. 3, no. 6, June 1926, pp. 189-192. Factors effecting efficient production as well as safety, including ventilation, coal-cutting machinery and shooting, sprinkling and rock dusting, transportation equipment, system of communication and tipple operation.

COAL MINING

Cutting Machines. Machine Coal-Cutting at Shakerley Collieries. Iron & Coal Trades Rev., vol. 112, no. 3040, June 4, 1926, p. 887, 2 figs. Details of chain coal cutter installed; motive power is compressed air, operating through very powerful but compact pair of reciprocating cylinders of locomotive type.

Machine Loading. How to Shoot Coal for Machine Loading Without Making Too Much Slack, B. L. Lubelsky. Coal Age, vol. 30, no. 1, July 1, 1926, pp. 9-12, 7 figs. Increasing quantity of permissible often merely shatters coal without widening breakage area; more holes with same weight of explosive give better results but must be properly placed.

Underground Transportation. Underground Transportation and Its Relation to Efficient Mining. Min. Congress Jl., vol. 12, no. 7, July 1926, pp. 512-521, 13 figs. Contains following articles: Importance of Good Track for Safe, Efficient and Low-Cost Haulage, A. A. Culp; Track Work, Details and Maintenance, F. C. Hohn; Selecting a Mine Car Design, C. E. Watts; Despatching for Long Haulage, J. B. Hicks.

COKE MANUFACTURE

Coal for, Selection of. The Selection of Coals for the Manufacture of Coke, H. J. Rose. Am. Inst. of Min. & Met. Engrs.—Advance Paper, no. 1577-F, July 1926, 40 pp., 30 figs. Suitable coals; behaviour of coking coals when heated; coke formation in by-product oven; determination of coking properties of coal; correlation of chemical composition and coking properties; classification by volatile matter content; coal classes and coke structure; coking coal deposits in United States; chemical and physical characteristics desired in coke.

COLD STORAGE

Temperature Measurement. The Measurement of Temperature and Carbon Dioxide in Cold Stores. Ice & Cold Storage, vol. 29, no. 340, July 1926, pp. 181-184, 9 figs. Describes thermometers of electrical-distance type used to observe from one convenient position all temperatures throughout cold-storage room.

COLUMNS

Underpinning by Girders. Remove Cast-Iron Column Carrying Ten Stories. Eng. News-Rec., vol. 96, no. 25, June 24, 1926, pp. 1030-1031, 3 figs. Lower portion of cast iron column in old 10-storey building in Philadelphia removed by use of system of steel diaphragms and timber shores for temporary support of column at second-floor level, while lower portion was removed and new steel girders and columns were installed to span store-front opening.

CONCRETE

Cement-Water Ratio. The Cement-Water Ratio Theory in Practice. Concrete, vol. 21, no. 7, July 1926, pp. 495-498, 2 figs. Water-cement ratio; concrete proportions and consistency.

Hardening. Silicium Fluoride as Hardener for Concrete, E. Schmidt. Eng. Progress, vol. 7, no. 6, June 1926, pp. 166-167, 4 figs. Treating concrete with silicium fluoride; prevents formation of lime dust from factory floors and lengthens wear of concrete.

Mixing. The Design and Control of Concrete Mixes, W. C. Voss. Boston Soc. of Civ. Engrs.—Jl., vol. 13, no. 6, June 1926, pp. 281-291, 3 figs. Considers questions of strength, wear and economy.

Inundation Method for Constant Concrete. Concrete, vol. 29, no. 1, July 1926, pp. 37-38, 1 fig. Blaw-Knox inundation method for supplying correct amount of water in concrete; practical application of method to concrete construction job in general.

Specification Problems. Concrete Specification Problems, C. M. Chapman. Am. Soc. for Testing Matls.—Preprint, no. 52, for mtg. June 21, 1926, 18 pp. Topics discussed include: Subjects to be covered in comprehensive specification; necessity for separate specifications for concrete for different types of service; possibility of developing special cements for particular services; necessity for developing test methods for determining suitability of fine and coarse aggregates and water for making concrete; methods for designing concrete mixtures.

CONCRETE CONSTRUCTION, REINFORCED

Members for Bending. Design of Reinforced Concrete Members for Bending Combined with Thrust or Tension, O. Faber. Concrete & Constr. Eng., vol. 21, no. 6, June 1926, pp. 448-464, 9 figs. Members subject to bending combined with thrust include arches, members in trusses and nearly all pillars, columns, piles, etc., which are, as a rule, more or less eccentrically loaded; members subject to bending combined with tension include silo walls and members in trusses.

CONVERTERS

BINARY. The Binary Converter, F. Creedy. Elecn., vol. 96, no. 2505, June 4, 1926, pp. 570-571 and 577, 5 figs. New machine for direct to alternating-current transformation, having variety of possible applications.

CONVEYORS

BELT. Material Handling with Belt Conveyors. Buildings, vol. 65, no. 6, June 23, 1926, pp. 261-263, 6 figs. How aggregate for 9-story reinforced-concrete building at Atlanta, Ga., was conveyed 400 ft.

SCREW. The Screw Conveyor and Its Manufacture, D. C. Wright. Am. Mach., vol. 64, nos. 24 and 25, June 17 and 24, 1926, pp. 931-933 and 977-980, and vol. 65, no. 1, July 1, 1926, 19 figs. Different types of screw conveyors; design of sectional flight conveyor; efficiency in manufacture; methods of production for flight sections. June 24: Methods of piercing rivet holes in sectional flight circles; forming or shaping sections; continuous flight conveyors and their construction. July 1: Manufacturing conveyor backbone; shrinking collars and pipes; assembling sectional and continuous flight conveyors.

COST ACCOUNTING

SYSTEMS. Estimating the Cost of a New Product. Indus. Mgmt. (Lond.), vol. 13, no. 6, June 1926, pp. 243-246, 5 figs. Describes possibilities of scientific costing system and indicates far-reaching character of advantage to be derived by making full use of statistics thus obtained.

CRANES

STORM BRAKES. Storm Brakes for Cranes and Transporters. Indus. Mgmt. (Lond.), vol. 13, no. 6, June 1926, pp. 239-240, 4 figs. Describes two mechanical devices by means of which cranes and loading and unloading bridges and telphers are automatically secured to their rail tracks to prevent damage by storm; appliances, which are of German origin, have brake power capable of resisting pressure of 20 tons.

CRANKSHAFTS

DIESEL ENGINE. Forging and Twisting a Three-Throw Crankshaft for Diesel Engines (Das Schmieden und Verdrehen von dreifach gekröpften Kurbelwellen für Dieselmaschinen), P. Schweissguth. Werkstattstechnik, vol. 20, no. 10, May 15, 1926, pp. 306-307, 17 figs. Older and more recent methods of forging; elongation of fibre in twisting; precautions in twisting and subsequent precautions.

CUPOLAS

REACTIONS, CHEMISTRY OF. Some Notes on the Chemistry of the Cupola, F. C. Thompson. Foundry Trade Jl., vol. 33, no. 514, June 24, 1926, pp. 491-495, 4 figs. General discussion of chemistry of reactions involved in cupola practice; thermal balance of cupola; reactions with carbon; lime or limestone; reactivity of coke and addition of further air through auxiliary tuyeres; bibliography.

CUTTING METALS

TURNING. Temperature of Cutting Point in Lathe Work and Dependence on Form of Chip Cross-Section (Die Schneidentemperatur beim Drehen in Abhängigkeit von der Form des Spanquerschnittes), K. Gottwein. Maschinenbau, vol. 5, no. 11, June 3, 1926, pp. 505-506, 3 figs. At given values of chip cross-section and cutting-speed, temperature at point of tool is affected by ratio of depth of cut to feed; temperature drops if this ratio increases; gives number of micrographs in systematic order for comparison.

D

DAMS

ASPHALT GROUTING. Asphalt Grouting Under Hales Bar Dam, G. W. Christians. Eng. News-Rec., vol. 96, no. 20, May 20, 1926, pp. 798-802, 9 figs. New method of sealing and its operative procedure; fissured or cavernous strata of water-bearing rock successfully sealed by forcing in asphalt in plastic condition heated by electric wire; large underflow cut-off; procedure described in detail.

MASONRY. Masonry Dams and Weirs, S. K. Gurtu. Indian Eng., vol. 78, nos. 5, 6, 7, 8, 9, 10, 11, 13, 14, 17, 19, 20, 23 and 24, vol. 79, nos. 2, 4, 6, 9, 11, 12, 18 and 21, Aug. 1, 8, 15, 22, 29, Sept. 5, 12, 26, Oct. 3, 24, Nov. 7, 14, Dec. 5, 12, 1925, Jan. 9, 23, Feb. 6, 27, Mar. 13, Apr. 3, May 1 and 22, 1926, pp. 67-69, 82-83, 95-98, 109-111, 123-124, 138-139, 150-151, 180-181, 194-195, 235-237, 263-264, 279-280, 320-322 and 335-336, and pp. 25-26, 52, 82-83, 122-123, 150-151, 192, 248-249 and 290-291, 63 figs. Design; water pressure; forces which tend to destroy dams; densities and specific gravity of different materials; principles of designing stable dams; examples; causes of failures; lines of restoration of Tigra dam.

DIELECTRICS

ABSORPTION AND BEHAVIOUR. Dielectric Absorption and Theories of Dielectric Behaviour, J. B. Whittehead. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 6, June 1926, pp. 515-524. Historical outline of dielectric theory; dielectric absorption and related phenomena; dielectric behaviour under alternating electric force; compares alternating theory and experiment.

MEASUREMENT. Three Methods of Measuring Dielectric Power Loss and Power Factor, E. D. Doyle and E. H. Salter. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 6, June 1926, pp. 556-563, 11 figs. Methods of measurement in commercial use at Electrical Testing Laboratories, New York City.

DIESEL ENGINES

ELECTRIC DRIVE VS. Comparative Calculations of the Cost of Power from Diesel Engines and from High-Tension 3-Phase Current (Vergleichsberechnung zwischen Antrieb durch Dieselmotor und Bezug von hochgespanntem Drehstrom), Hack. Chemiker-Zeitung, vol. 50, no. 48, Apr. 28, p. 301. Calculation of direct and indirect operating costs for Diesel engines and for electric motors.

15,000-HP. The 15,000-hp. Diesel Engine, M.A.N. Type, Built by Blohm & Voss for Hamburg Central Station (Der 15,000 PS-Dieselmotor, Bauart MAN, erbaut von Blohm & Voss für die Hamburgischen Elektricitätswerke), W. Ladahn. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 24, June 12, 1926, pp. 818-825, 18 figs. Details of double-acting 9-cylinder Diesel engine driving 13,000-kva. generator at plant in Neuhof; consisting of 3 parts, 9-throw crankshaft is forged of Siemens-Martin steel. See also description in Oil Engine Power, vol. 4, no. 7, July 1926, pp. 416-420 and 430, 8 figs.

GENERATOR SET. A 10,000-KW. Diesel-Generator Set. Engineer, vol. 141, no. 3676, June 25, 1926, pp. 662-663, 5 figs. Details of 15,000-B.hp. engine and 10,000-kw. 3-phase generator installed in Neuhof power station, Hamburg; engine is coupled direct to alternator, which is believed to be largest of kind ever built for Diesel-engine work.

TORSIONAL VIBRATION. Torsional Vibration in the Diesel Engine, F. M. Lewis. Marine Eng. & Shipping Age, vol. 31, no. 7, July 1926, pp. 415-423, 5 figs. Amplitude of vibration at critical speeds in multi-cylinder engines; damping forces; elastic hysteresis; elimination of vibration; mathematical analysis.

DISKS

ROTATING, STRESSES IN. The Effect of Axial Restraint on the Stress in a Rotating Disk, W. G. Green. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. of Sci., vol. 1, no. 6, June 1926, pp. 1236-1251, 3 figs. Study of problem of rotating disk carried on shaft; presence of shaft prevents parts of disk near axis shifting so far in direction of axis as they would if there were no shaft; illustrative problem is given to trace consequences of this effect.

DURALUMIN

HEAT TREATMENT. Effect of Heat Treatment on Duralumin, R. J. Anderson. Forging—Stamping—Heat Treating, vol. 12, nos. 5 and 6, May and June 1926, pp. 169-172 and 208-211 and 219, 32 figs. Summary of results of study on effect of various heat treatments on microstructure of duralumin sheet; object of work was to examine effects of wide variety of heat treatments and throw light on age-hardening phenomenon. June: Effect of temperature of quenching and aging; effect of time period of aging; effect of quenching medium; features of microstructure. (Abstract.) Thesis submitted to Mass Inst. Technology.

E

ECONOMIZERS

HEAT TRANSMISSION IN. Temperatures and Heat Exchange in a Cast-Iron Economizer. (Temperaturen und Wärmeaustausch an einen gusseisernen Speisewasservorwärmer), H. Reiher and G. Neidhardt. Archiv für Wärmewirtschaft, vol. 7, no. 6, June 1926, pp. 153-157, 3 figs. Gives results of measurements of temperatures and flue-gas velocity in a Green economizer from which coefficient of heat transmission is calculated.

ELECTRIC CONDUCTORS

TROLLEY SUPPORTS. Roller Conductor Supports Used on Crossing Tower, E. F. Pearson. Elec. World, vol. 88, no. 1, July 3, 1926, pp. 21-22, 2 figs. Centre tower of two-span river crossing is furnished with trolley frame conductor carrier, which eliminates dead-end construction.

ELECTRIC CURRENTS

SHORT CIRCUITS. Short-Circuit Calculating Table of the Variable Resistor Unit, Direct-Current Type, I. T. Monseth and R. DeCamp. Elec. Jl., vol. 23, no. 6, June 1926, pp. 299-305, 7 figs. This table provides easy method for making system studies and has proved to be remarkably flexible.

ELECTRIC FURNACES

CARBURIZING. Progressive Carburization in Rotary Electric Furnaces, H. E. Martin. Am. Soc. for Steel Treating—Trans., vol. 9, no. 6, June 1926, pp. 933-937, 1 fig. Reasons why electrical heat was selected for additional carburizing and heat-treating furnaces at plant of Dodge Bros.; details of rotary carburizing furnaces, cycle of operations, heat-control arrangement and advantages.

CASTINGS AND INGOTS. Electric Furnaces for Castings and Ingots, E. T. Moore. Elec. Jl., vol. 23, no. 6, June 1926, pp. 279-284, 9 figs. Details of Edmoore electric furnace of rolling-rocker type, installed by Reading Steel Casting Co.; it has capacity of 7 to 15 tons, is equipped with three electrodes, and circular shell composed of boiler plate having inside diameter of 12½ ft.

POWER FACTOR. Power Factor of Electric Furnaces (Le Facteur de puissance des fours électriques), M. Bergeon. Société Française des Electriciens—Bul., vol. 6, no. 55, Mar. 1926, pp. 292-296, 3 figs. Establishes empirical formula, showing that it is desirable to reduce frequency and increase voltage and multiply circuits as was done by Miguet in his 100,000 A furnace.

ELECTRIC GENERATORS

LOSS DETERMINATION. The Retardation Method of Loss Determination, J. A. Johnson. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 6, June 1926, pp. 546-556, 11 figs. Advantages of retardation method of loss determination and of procedure followed in testing Niagara generators.

ELECTRIC GENERATORS, A.C.

SYNCHRONOUS. Variable Armature Leakage Reactance in Salient-Pole Synchronous Machines, V. Karapetoff. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 7, July 1926, pp. 665-669, 4 figs. Author assumes leakage inductance to consist of two parts, one of which is constant (average inductance), and other varying harmonically at double frequency, reaches maximum opposite centres of poles.

ELECTRIC LOCOMOTIVES

CHARACTERISTICS. Report of Committee on Electric Rolling Stock. Ry. Age, vol. 80, no. 35, June 16, 1926, pp. 1853-1863, 8 figs. Tractive-power characteristics of electric locomotives; probable effect of height of centre of gravity; locomotives of Virginian electrification; design of multiple-unit and trailer cars for terminal service of trunk-line railroads; electrification progress. See also Ry. Rev., vol. 78, no. 25, June 19, 1926, pp. 1142-1149, 4 figs. Report before Am. Ry. Assn.

MOTOR-GENERATOR. Motor-Generator Locomotives for the Great Northern. Ry. Age, vol. 81, no. 1, July 3, 1926, p. 20. Two locomotives weighing 250 tons each, under construction for Great Northern Railway; maximum tractive effort based on 30 per cent coefficient of adhesion is 122,940 lb.; total wheel-base, 60 ft.

SINGLE-PHASE. A Single-Phase 50-Cycle Electric Locomotive. Engineer, vol. 141, no. 3674, June 11, 1926, pp. 606-608, 11 figs. Built by F. Krupp Corp., Essen, Germany; equipped with novel type of compensated single-phase motor without commutator, which is claimed to possess running qualities of 3-phase motor.

ELECTRIC MOTORS, A.C.

GRAPHICAL THEORY OF. The Graphical Theory of the Polyphase Synchronous Motor, H. Cotton. World Power, vol. 5, nos. 30 and 31, June and July 1926, pp. 315-326 and 33-34, 23 figs. Mathematical treatment.

SYNCHRONOUS. The Graphical Theory of the Polyphase Synchronous Motor, H. Cotton. World Power, vol. 5, no. 30, June 1926, pp. 315-326, 13 figs. This type of motor can be run idle as far as production of mechanical power is concerned, when, if its excitation is increased sufficiently, it will work at very low leading power factor; most of its kva. capacity will then be leading wattless, with result that motor will perform considerable amount of power-factor correction; when used in this way it is usually called synchronous condenser.

ELECTRIC MOTORS, D.C.

BRUSHES FOR. Brushes for D.C. Machines, Their Composition, Properties and Application, E. B. Stavely. Modern Min., vol. 3, no. 6, June 1926, pp. 176-180, 3 figs. Properties of brushes, including current-carrying capacity, contact resistance, abrasives, etc.; composition and selection of brushes for mining applications.

ELECTRIC TRANSMISSION LINES

LIGHTNING, EFFECT OF. Lightning and Other Experiences, M. L. Sindeband and P. Sporn. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 7, July 1926, pp. 641-651, 12 figs. Experiences with 55 mi. 132-kv. transmission line since 1917; analyzes cases of lightning trouble and steps taken to reduce its frequency; its bearing on tower line design from continuity-of-service standpoint.

SAG. Sag Calculations for Transmission Lines, H. B. Dwight. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 6, June 1926, pp. 564-568, 2 figs. Presents set of sag formulas in form of convergent series which give accurately results of hyperbolic catenary formulas; they are useful for calculating almost any practical transmission line span, long or short.

ELECTRIC WELDING, ARC

CRANE RUNWAYS. Welded Crane Runway, A. F. Davis. Am. Welding Soc.—Jl., vol. 5, no. 5, May 1926, pp. 35-41, 7 figs. Work of Morgan Eng. Co., Alliance, O., in building great industrial crane runway without use of rivets; involved in welded job are 65 tons of steel for supporting frames and crane girders, which provide runway of 245 ft.

DIRECT-CURRENT. Welding Plants for D.C. Arc Welding (Schweissanlagen für Gleichstrom-Lichtbogenschweissung), K. Meller. Elektro-Jl., vol. 6, no. 6, Mar. 25, 1926, pp. 83-91, 17 figs. Discusses developments in electric welding, static characteristics of machines, shunt-wound machines with separate or self-excitation high-frequency current superposed on welding current; transformers, etc.

GASEOUS ATMOSPHERE. Electric Arc Welding in Gaseous Atmosphere. West. Machy. World, vol. 17, no. 6, June 1926, pp. 245-246, 5 figs. By surrounding ordinary welding electrodes with atmosphere of hydrogen or certain other gases, it has been found possible to produce ductile welds; gas acts as flux and shield against oxygen and nitrogen of air, preventing formation of oxides and nitrides of iron in molten metal.

RESEARCH. Research, the Beacon of Progress in Arc Welding, H. M. Hobart and W. Sparagen. Am. Welding Soc.—Jl., vol. 5, no. 5, May 1926, pp. 13-17 and (discussion) 27-35. Problems in arc welding which require study.

STAINLESS STEEL. Electric Welding the New Stainless Steels, C. J. Holslag. Am. Welding Soc.—Jl., vol. 5, no. 5, May 1926, pp. 57-60. Procedure is same as for iron and steel welding except that iron or steel electrode is useless and in general wire drawn for welding of material to be welded gives best results.

ELECTRICITY SUPPLY

BRITISH COLUMBIA. Electrical Developments in British Columbia, H. Vickers. World Power, vol. 5, no. 30, June 1926, pp. 287-292. Electric drive on lumber and shingle mills, mines and urban railways.

TARIFFS. Power Factor and Tariff, E. V. Clark. Instn. Elec. Engrs.—Jl., vol. 64, no. 354, June 1926, pp. 625-632 and (discussion) 640-654. Author contends that wattless component of current, despite its having no energy content, involves supply undertaking in extra running costs, and that therefore charge should be levied for supplying it; three-part tariff is proposed, embracing periodic charge per kva. of maximum demand, charge per kw.-hr. of energy and charge per kva.-hr. of lagging wattless component; question of metering three-part tariff.

ELECTROMETERS

QUADRANT. Zero Method of Measuring Power with the Quadrant Electrometer, W. B. Kouwenhoven and P. L. Betz. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 7, July 1926, pp. 652-661, 9 figs. Zero deflection of electrometer is obtained by opposing torque produced by a.c. load by means of counter torque set up by continuous potentials introduced into electrometer circuit; continuous potentials required are small in value and easily handled.

F

FANS

CASINGS AND INLETS. Experiments on Fan Casings and Fan Inlets, H. Briggs and J. N. Williamson. Mech. World, vol. 80, no. 2062, July 9, 1926, pp. 30-32, 7 figs. Function of fan casing and Rateau's diffuser; methods of measurement; velocity of air inside casing; measurement of centripetal and circumferential re-entry; effects of modifying profile of casing; experiments with narrower spiral casing; experiments with five types of inlet duct; conclusions.

FILTRATION PLANTS

INTAKE PIPE. Laying Intake Through Earth Dike Under Service. Eng. News-Rec., vol. 96, no. 25, June 24, 1926, pp. 1010-1014, 8 figs. Intake for new 90-m.g.d. filters for Denver water works put through Marston Lake embankment in cofferdam, subaqueous pipe placed by divers from barges.

FIRE FIGHTING

FORESTS. Forest Fires and Weather, A. E. Moss. Jl. of Forestry, vol. 24, no. 5, May 1926, pp. 555-556. Studies as to effect of weather conditions of fire hazard in coniferous stands; author attempts to correlate frequency and area of fires with record of weather for same days.

FLOOD CONTROL

FREEPORT, ILL. Flood Protection for Freeport, Ill., W. G. Potter. Am. City, vol. 35, no. 1, July 1926, pp. 69-73, 3 figs. Discusses three projects for problem of flood control and compares their advantages.

FLOTATION

DATA ON. Abstracted and Tabular Data on Flotation, I. J. Koulaieff. Ariz. Min. Jl., vol. 10, no. 3, June 30, 1926, pp. 5-6 and 18. Experience of copper industry with flotation; bibliography; amount of reagent used in 1923-1924; evolution of copper ore concentration at Morenci, Arizona; differential flotation of copper and iron sulphides; floating and leaching copper-molybdenum ores; selective flotation at Nacozrari; New copper Queen concentrator, etc.

FLOW OF GASES

HIGH SPEEDS. On the Flow of Gases at High Speeds, T. E. Stanton. Roy. Soc.—Proc., vol. 3, no. A758, June 2, 1926, pp. 306-339, 15 figs. Experimental study of distribution of pressure and velocity in jets flowing through orifices of different forms, with special reference to existence of minimum section of jet and its variation in position and magnitude; relation between pressure in receiver and pressure in jet for increasing and constant rates of discharge, and possibility of characteristics of high-speed jets being affected by dimensions of orifice and viscosity of air; study of motion of jets at speeds above velocity of sound, and nature of wave motion set up on their emergence into quiescent air.

FLUE-GAS ANALYSIS

CO_2 RECORDS. CO_2 Records and Their Interpretation, C. F. Wade. Elec. Rev., vol. 98, no. 2533, June 11, 1926, pp. 863-865, 1 fig. Points out that in case of large boiler units, two combustion records should be kept, first being taken at middle chamber and preferably including CO_2 and CO charts for observation and control of air and fuel regulation, while plain CO_2 recorder installed at point of gas will, by comparison with first record, furnish evidence as to physical state of boiler settings with regard to air leakage and overall conditions.

FORGING

MACROSTRUCTURE TEST. Flow of Metal in Forging and the Use of Macrostructure Testing (La bavure d'estampage et l'utilité des essais de macrostructure), E. Dercherf. Revue Universelle des Mines, vol. 10, no. 4, May 15, 1926, pp. 162-168, 6 figs. Discusses forging or deformation and control of flow lines or fibre lines; macrographic tests to reveal flow lines, etc.

FOUNDRIES

COST ACCOUNTING. Foundry Costs, J. A. Thomas. Machy. (N.Y.), vol. 32, no. 11, July 1926, p. 874. In foundry specializing on class of work that is about uniform in weight and labour cost per unit, average cost per pound is satisfactory basis for determining selling prices; however, if foundry output is diversified, average cost would be useless.

FUEL ECONOMY. Foundry Fuel Economies, W. J. May. Mech. World, vol. 79, no. 2058, June 11, 1926, pp. 450-451. Chief form of economy is to have good furnaces; where used, air blast should be capable of adjustment; coke should be used in as nearly exact proportions as can be managed, but amount varies with kind of furnace used.

QUANTITY PRODUCTION. Foundry Quality in Quantities, A. Lenz. Can. Foundryman, vol. 17, no. 6, June 1926, pp. 7-15, 13 figs. Factors effecting quantity production in foundries; control of mills; elimination of risers; need of close checking; floor and conveyor moulding; assembling of cores; keeping stock at minimum, etc. See also Foundry Trade Jl., vol. 33, no. 514, June 24, 1926, pp. 481-485, 7 figs.

FOUNDRY EQUIPMENT

PRODUCTION-INCREASING. Costs Show Lower Trend on Installing New Foundry Equipment, P. Dwyer. Foundry, vol. 54, no. 12, June 15, 1926, pp. 464-468 and 478, 7 figs. Details of equipment which has directly or indirectly increased production from 200 to 600 tons per month; ladle-handling devices; sand-handling equipment.

SAND-HANDLING. Materials-Handling Equipment in Foundries (Fördervorrichtungen in Giessereien), Walther. Glasers Annalen, vol. 98, no. 10, May 15, 1926, pp. 163-166, 6 figs. Describes equipment of Eickhoff Machine Works foundry at Bochum, Germany, especially for handling of sand, main principle of which is to keep labour in place and move material whenever possible.

FREIGHT HANDLING

RAIL AND HIGHWAY TRANSPORTATION. Co-ordination of Rail and Highway Freight Transportation Within the Terminal Area, F. J. Scarr. West. Soc. Engrs.—Jl., vol. 31, no. 4, Apr. 1926, pp. 128-134. Shows that highway transportation has definite field; concludes that rail transportation, poorly adapted to efficiently handle terminal transportation, will gradually be relieved of responsibility for performing so-called retail service and be permitted to confine its efforts to that for which it is best suited, handling of mass transportation over long distances; highway transportation will ultimately assume major role in intra-terminal complete movement of freight; inter-line interchange of l.c.l. freight, and movement of freight between rail carrier and trader's door.

FUELS. *Oil Fuel; Pulverized Coal.*

FURNACES, HEATING

FUELS. *See Oil Fuel; Pulverized Coal.*
Laffargue. Chaleur & Industrie, vol. 7, no. 73, May 1926, pp. 264-268, 2 figs. Necessity for short flame; working temperatures; fuel requirements per ton of metal heated; length of tunnel kiln; calculation of furnace.

G

GAS ENGINES

INDICATORS. Indicators for Gas Engines. Gas Engr., vol. 42, no. 602, June 1926, pp. 125-127, 9 figs. Various designs of indicators recently developed and precautions necessary in their use.

GEARS

HOBBED. The Generation of Tooth Forms by a Hob, E. A. Limming. Machy. (Lond.), vol. 28, no. 717, July 8, 1926, pp. 397-399, 3 figs. Analysis of action of hob when generating tooth forms for spur or helical gears.

MEASURING INSTRUMENT. Gear-Measuring Equipment. Machy. (Lond.), vol. 28, no. 714, June 17, 1926, pp. 301-304, 9 figs. Gear-measuring instrument made by Maag Co., Zurich, Switzerland; measurements obtained with this instrument are made with reference to theoretically correct involute curves; instrument for examining involute tooth profiles and comparing these with correct theoretical shape; also serves to examine symmetry of two profiles of tooth.

TOOTH FORMS. Spur Gear Tooth Form. Machy. (N.Y.), vol. 32, no. 11, July 1926, pp. 905-906, 1 fig. Reasons underlying tentative American standard which has been completed by Sub-committee No. 4 of Sectional Committee on Standardization of Gears, and approved by Am. Eng. Standards Committee; problem related to standardization of gear-tooth forms.

The Design of Gear Tooth Forms, E. Buckingham. Am. Mach., vol. 64, nos. 8, 9, 10, 11, 12, 13, 14, 15, 16, 18, 19, 21, 23, 24 and 25, Feb. 25, Mar. 4, 11, 18, 25, Apr. 1, 8, 15, 22, May 6, 13, 27, June 10, 17 and 24, pp. 299-302, 345-347, 391-394, 439-441, 465-467, 509-512, 555-562, 595-598, 635-637, 719-722, 745-751, 817-820, 895-898, 945-948 and 973-975, 69 figs. Attempt to solve present-day gear problems by employing fundamental principles as foundation. Feb. 25: Discusses conjugate tooth action, involute curve, involute trigonometry, involute tooth design, strength of gear teeth and their durability under load. Mar. 4: Construction of line of action from given tooth profile and reverse; requirements for interchangeable tooth forms; cycloid curve. Mar. 11: Characteristics of cycloid, epicycloid and hypocycloid curves; application to tooth forms and resulting lines of action; cycloidal blower rotors. Mar. 18: Basic racks to generate spline shafts; theory of involute curve and its chief characteristics when used as gear tooth profile form. Mar. 25: Action of involute against straight line; summary of involute curve properties; its application to gear tooth profiles; duration of contact. Apr. 1: Combined rolling and sliding takes place between 2 involutes in contact; calculation of ratio of sliding. Apr. 8: Tooth and bearing pressures; simple solution of involute tooth gear problems through use of involute functions in tabulated form. Apr. 15: Further solutions of general involute tooth-gear problems; relation of gear to meshing rack; duration of contact; under-cutting. Apr. 22: Nomenclature and definitions of gear teeth; 14½-deg. composite of gear teeth with tabulated formulas for their proportions. May 6: Form milling of gears and action of gears produced by this method; effect of eccentricity; effect of errors in Milling. May 13: Tabular data on correcting tooth depth with various combinations of range milling cutter. May 27: Introduction of straightsided hobs and racks resulted in 14½-deg. generated gear tooth system; effect of under-cutting on length of contact. June 10: 20-deg., full-depth tooth gear system; tooth proportions and length of contact. June 17: 20-deg. stub-tooth gear system for gears of small number of teeth. June 24: 14½-deg. variable-centre system.

GRINDING MACHINES

INTERNAL. An Ingenious Internal Grinder. Automobile Engr., vol. 16, no. 216, June 1926, pp. 224-225, 4 figs. Fully automatic machine with hydraulic table drive.

LOCOMOTIVE AXLES. Locomotive Axle Grinding. Brit. Machine Tool Eng., vol. 3, no. 39, May-June 1926, pp. 407-408, 2 figs. Describes 18-in. by 84-in. plain grinding machine equipped for grinding of locomotive axles built by Churchill Grinding Machine Co.

GUNITE

Uses of. Some Uses of Gunite, B. C. Collier. Coal Mine Mgmt., vol. 5, no. 1, Jan. 1926, pp. 29-31, 53-54, 56, 58 and 60, 2 figs. Various uses of gunite (mixture of sand and cement applied with cement gum) in mines to prevent slaking, and for stoppings, fireproofing, fire fighting, prevention of corrosion, etc.; instructions for use.

H

HARBOURS

Breakwater. Construction of a Breakwater-Head at Madras, C. R. White. Dock & Harbour Authority, vol. 6, no. 69, July 1926, pp. 266-267, 3 figs. Building of circular well head 85 ft. 9 in. high with external diameter of 48 ft., and internal diameter of 18 ft. 6 in. and sinking it off existing end of breakwater to depth of 35 ft. 6 in. with sea bed.

HARDNESS

Rockwell and Brinell. Some Comparisons Between Rockwell and Brinell Hardness, C. R. Brumfield. Am. Soc. Steel Treating—Trans., vol. 9, no. 6, June 1926, pp. 841-856, 7 figs. Results obtained in testing both hard and soft metals by Rockwell and Brinell hardness tests; establishes relation between Brinell hardness and each type of Rockwell hardness in which most influential factor is area of contact with piece tested; tables show comparative Rockwell and Brinell hardness for various metals.

Testers. The Durometer—An Instrument for Testing Hardness, A Suaveur. Am. Soc. for Steel Treating—Trans., vol. 9, no. 6, June 1926, pp. 929-932 and 1000, 2 figs. New instrument used in determining hardness of metals and manner in which it functions.

HEAT TRANSMISSION

Calculation. Heat Transmission from Solids to Fluids in Turbulent Flow (De warmteovergang van vaste lichamen op turbulent stroomende vloeistoffen), F. K. Th. Van Iterson. Ingenieur, vol. 41, no. 17, Apr. 24, 1926, pp. 321-333, 12 figs. Calculation of coefficient of heat transmission; air preheating and preheaters; aircooling, etc.

Coaxial Cylinders, Between. Heat Transfer in the Annular Space Between Two Coaxial Cylinders, S. R. Parsons. Phys. Rev., vol. 27, no. 6, June 1926, pp. 788-792. Two brass tubes are mounted with common axis, one inside of other, and are warmed by driving hot air in turbulent flow through annular space between them; purpose of work was to show whether or not heat is transmitted more readily to one of two surfaces than the other.

HEATING

Central, Steam and Water. Central Heating Plant for Canadian Government Buildings, P. H. Bryce. Heating & Ventilating Mag., vol. 23, no. 7, July 1926, pp. 78-81, 5 figs. Principal features of combination steam and water heating system for federal group in Ottawa.

HEATING, HOT-WATER

Cast-Iron Radiators. Dissipation of Heat by Cast-Iron Water Radiators, F. E. Giesecke. Heat. & Vent. Mag., vol. 23, no. 6, June 1926, pp. 67-72, 9 figs. Recent tests which show fallacy in use of comparatively small pipes and superiority of two-pipe over one-pipe water-treating systems.

HEATING, STEAM

Low-Pressure. The Argument for Low-Pressure Heating Plants, A. L. Sanford. Heat. & Vent. Mag., vol. 23, no. 7, July 1926, pp. 76-77. Comparison of high- versus low-pressure systems and description of typical heating installations in Minneapolis public schools.

Requirements. Analyzing Steam Heating Requirements, W. L. Berry. Elec. World, vol. 88, no. 1, July 3, 1926, pp. 5-7, 2 figs. Methods used by Union Electric Light & Power Co., St. Louis, to determine actual steam requirements and amount of exhaust steam wasted.

HIGH VOLTAGES

Testing Equipment. High-Voltage Direct-Current Testing Equipments. Engineer, vol. 141, no. 3676, June 25, 1926, pp. 658-660, 8 figs. High-voltage testing equipments employing thermionic valve rectifiers brought out by Ferranti, Ltd.

Testing Laboratories. High-Voltage Laboratories, A. P. M. Fleming. World Power, vol. 6, no. 31, July 1926, pp. 16-26, 14 figs. Transformer arrangement; power supply; measurement of high-voltage; auxiliary apparatus; buildings and equipment.

HIGHWAYS

Capacity. Capacity of Highways, R. F. Kelker, Jr. West. Soc. Engrs.—Jl., vol. 31, no. 4, Apr. 1926, pp. 140-147, 2 figs. Points out that two roads of medium width will carry more traffic than one road of double width and cost will be less per unit of traffic carried; this fact is important in designing highway system as area will be better served by two separate roads than by one of extreme width.

Improved. The Development of Improved Highways, T. H. MacDonald and H. B. Fairbank. West. Soc. Engrs.—Jl., vol. 31, no. 4, Apr. 1926, pp. 113-121. Rapid progress in last decade; new types developed; state systems; plan for ultimate growth; building for future.

Planning and Layout. The Planning and Layout of Highways and the Economics of Highway Transportation. West. Soc. Engrs.—Jl., vol. 31, no. 4, Apr. 1926, pp. 111-113. Committee report sets forth number of conclusions based on papers presented at meeting of Apr. 21, 1926.

Vertical Curves for Designing. Application of Vertical Curves to Highway Design, M. W. Furr. Eng. News-Rec., vol. 96, no. 20, May 20, 1926, pp. 819-820, 2 figs. How designing, checking and drafting curve may be somewhat simplified by semi-mechanical method.

HOUSES

Steel. The Day of the Metal House is at Hand, P. Winchell. Can. Machy., vol. 36, no. 1, July 1, 1926, pp. 25 and 27. Result of careful investigation as to use of steel in residential dwellings.

HYDRAULIC TURBINES

Propeller-Type. Propeller Turbine Aids Low Head Developments, J. S. Carpenter. Power Plant Eng., vol. 30, no. 12, June 15, 1926, pp. 703-704, 3 figs. High specific speeds decrease first cost and increase output of turbine at reduced heads.

Size Limitations. Developments in Hydro-Electric Practice, C. R. Martin. Purdue Eng. Rev., vol. 21, no. 4, May 1926, pp. 7-10, 4 figs. Size of hydro-electric machinery is becoming limited by mechanical restrictions.

Specific Speed. The Character of the Specific Speed, B. Eck. Indian Eng., vol. 79, no. 20, May 15, 1926, pp. 278-280, 1 fig. Objections which can be raised against definition now in use; states relationship between turbines, centrifugal pumps and related engines, and shows how non-dimensional term related to specific speed can be found from physical considerations.

HYDRO-ELECTRIC PLANTS

Earthquakes, Effect on. Effect of Earthquake Shocks on Hydro-Electric Plants (L'influence des tremblements de terre sur les installations hydro-électriques), M. Legouez. Société Française des Electriciens—Bul., vol. 6, no. 54, Feb. 1926, pp. 121-126, 2 figs. Inertia of upper stories of buildings and of masses of water must be taken into account; damage is usually due to landslides, insufficiently solid foundations, or lack of elasticity in buildings; work should not be built where there is change in geological structure of earth; details of damage to electrical apparatus in Japanese earthquake in 1923; Italian rules for constructing foundations.

I

ICE MANUFACTURE

Sub-Cooled Raw Water. Reversing the Ice-Making Process, C. H. Herter. Power Plant Eng., vol. 30, no. 12, June 15, 1926, pp. 710-711. Discussion of feasibility of making ice from sub-cooled raw water.

ILLUMINATION

Effect of Mixtures of Artificial Light and Daylight. The Effect of Mixing Artificial Light with Daylight on Important Functions of the Eye, C. E. Ferree and G. Rand. Illuminating Eng. Soc.—Trans., vol. 21, no. 6, July 1926, pp. 588-609 and (discussion) 609-612, 4 figs. Experiments on effect of artificial light, daylight and mixtures of daylight and artificial light on acuity, speed of vision, power to sustain acuity, and ocular fatigue; on effect of time of day artificial light is turned on; on relation of time of day and adaptation of eye.

Relative Values of Different Types of. Relative Value of Daylight, Tungsten Filament and Mercury Arc Light, and Mixtures, as Measured by Visual Acuity, F. E. Carlson. Illuminating Eng. Soc.—Trans., vol. 21, no. 6, July 1926, pp. 613-636 and (discussion) 636-640, 20 figs. Determination by laboratory methods, relative values of various types of industrial illuminants and daylight, particularly as applied to work on metals.

INDUSTRIAL MANAGEMENT

Planning. Planning and Routing Shop Work, J. S. Gray. Machy. (Lond.), vol. 28, no. 715, June 24, 1926, pp. 342-344. Work of planning department; effect of planning on cost and delivery dates; co-operation between shop and planning department and advantages to be gained by proper planning.

Production-Control. A New Electrical Production Control System, L. Ederer. Soc. of Indus. Engrs.—Bul., vol. 8, no. 6, June 1926, pp. 3-5. Electrical control equipment consisting of series of substations placed at convenient points throughout plant and connected electrically to central station in such a manner that information is sent directly from substations and recorded at central station.

Production Planning. Factors in Industrial Organization, R. Wendorby. Indus. Mgmt. (Lond.), vol. 13, no. 6, June 1926, pp. 251-252. Author divides controlling factors into five groups, namely, intelligent buying, centralized storage and expeditious distribution, efficient production, prompt and reliable inspection, and rapid transit.

INDUSTRIAL ORGANIZATION

Improvements. Industry's Silent Revolution—and What It Portends, M. W. Alexander. Iron & Trade Rev., vol. 78, no. 25, June 24, 1926, pp. 1622-1625, 4 figs. Effects upon industry of rapid increase of population; improvements in organization and in technical processes; increase in influence of corporately-owned establishments, etc.

INDUSTRIAL RELATIONS

Future Prospects. Future Relationship Between Employer and Employed. Indus. Mgmt. (Lond.), vol. 13, no. 6, June 1926, p. 247. Symposium of opinions received from leaders of industry on future relationship between employer and employed and its bearing on industrial reconstruction.

Personnel, Study of. Influence of Personnel on Industry, R. A. C. Henry. Eng. Jl., vol. 9, no. 7, July 1926, pp. 333-336. Necessity of studying personnel in industry and possibility of creating better relationship between employer and employee.

INDUSTRIAL TRUCKS

Electric. The Expanding Uses of the Electric Industrial Truck, H. J. Payne. Factory, vol. 36, no. 6, June 1926, pp. 1035, 1130, 1134 and 1138. Comprehensive report shows opportunities for use of electric trucks in many industries not yet familiar with them and for their use in new ways by present owners.

INSURANCE

Group Life. Making Life Insurance Easy for Employees, J. J. Birch. Indus. Mgmt. (N.Y.), vol. 71, no. 6, June 1926, pp. 349-350. General Electric Company has recently inaugurated group-life and salary-allotment insurance plan for optional use for its employees; types of salary-allotment policies; total permanent-disability benefits.

INTERNAL-COMBUSTION ENGINES

Portable. Light Engines for Special Purposes (Der Leichtmotor für Sonderzwecke), K. R. H. Praetorius. Automobil-Rundschau, vol. 28, nos. 5 and 6, May 1 and June 1, 1926, pp. 107-111 and 137-138, 14 figs. Application of small-size engines for driving small radio transmitter stations, machine tools, etc.; types built by Siemens & Halske, Bergmann, etc., from 1¼ hp. upwards.

Supercompression. Supercompression in Explosion Engines (La surcompression dans les moteurs à explosion), M. Dumanois. Technique Moderne, vol. 18, no. 9, May 1, 1926, pp. 257-261, 2 figs. Discusses effect of increased compression on combustion, and efficiency; spontaneous ignition, detonation; their causes and effects.

Tests. Industrial Tests of Internal Combustion Engine, W. A. Tookey. Diesel Engine Users' Assn., no. S70, for mtg. Apr. 9, 1926, 40 pp., 11 figs. Tests made by manufacturers under supervision of engineer acting on behalf of purchaser; preliminary arrangements, duration and scope of trials; power output; fuel consumption; governing and speed variation; control; thermal and mechanical efficiencies.

See also Airplane Engines; Diesel Engines; Gas Engines; Oil Engines.

IRON

Electrolytic. Electrolytic Iron from Ilmenite Ores, R. H. Monk and R. J. Traill. Can. Chem. & Met., vol. 10, no. 6, June 1926, pp. 137-139. Process for production of electrolytic iron and recovery of titanium oxide for pigment purposes; production of sponge iron; commercial advantages of processes.

IRON ALLOYS.

Constitution. The Constitution of Steel and Cast Iron, F. T. Sisco. Am. Soc. for Steel Treating—Trans., vol. 9, no. 6, June 1926, pp. 938-953, 11 figs. Discusses fundamental concepts necessary to complete understanding of constitution and structural changes of alloys of iron and carbon; included in fundamentals are simple crystallization, saturation and equilibrium, crystallization of metals, orientation and cleavage, crystal structure, amorphous solids, allotropy and allotropy of iron.

IRON AND STEEL

MACROSCOPIC EXAMINATION OF. Macroscopic Examination of Iron and Steel, F. P. Gilligan and J. J. Curran. Am. Soc. for Steel Treating—Trans., vol. 10, no. 1, July 1926, pp. 9-25 and (discussion) 25-30, 21 figs. Describes deep-etch method of testing or inspecting bars, billets, or finished parts; discusses procedure in using this method of test, merits of various acid mixtures used in detecting different types of defects occurring in steels which may be revealed by this type of test; comparison between this and microscopic test is made; photographs are shown of specimens tested by this method and nature of defects as revealed by this method are described.

IRON CASTINGS

GATES AND RUNNERS. Arrangement of Gates and Runners in Gray-Iron Founding. (Anordnung der Trichter and Eingüsse bei Grauguss). Zeit. für die Gesamte Giessereipraxis, vol. 47, nos. 18 and 19, May 2 and 9, 1926, pp. 201-203 and 213-215, 33 figs. Gives illustrations showing arrangements for various classes of work.

IRON FOUNDING

RESEARCH. The Value of Research in the Production of Castings, J. G. Pearce. Mech. World, vol. 79, nos. 2041 and 2049, Feb. 12 and Apr. 9, 1926, pp. 129-130 and 289-290. Feb. 12: Shows value of research in iron founding; how every-day difficulties may be explained and corrected by metallurgical knowledge and experience; and how current research work is resulting in developments which call for serious attention of industry. Apr. 9: Deals with Emmel iron, hot-mold, Schuz and Nomag iron.

IRON ORE

CANADIAN TITANIUM-BEARING. Electrolytic Iron from Ilmenite Ores, R. H. Monk and R. J. Traill. Can. Min. Jl., vol. 47, no. 27, July 2, 1926, pp. 671-672. Practical utilization of titanium-bearing iron ores found in Canada, particularly Quebec; describes process for production of iron as electrolytic iron and of titanium as oxide for pigment and other purposes from ilmenite.

IRON, PIG

RE-MELTING. Re-Melting Pig-Iron in the Open-Hearth Process, E. Herzog. Foundry Trade Jl., vol. 33, no. 514, June 24, 1926, pp. 500-501. Describes cupolas used at Rothe Erde Works, Germany; difficulties encountered and how they were overcome.

IRRIGATION

MERCED DISTRICT, CAL. The Merced Irrigation District, E. C. Eaton. Western Constr. News, vol. 1, nos. 1, 2, 4 and 11, Jan. 10, 25, Feb. 25 and June 10, 1926, pp. 19-25, 24-33, 21-27 and 20-28, 24 figs. Jan. 10: Early irrigation history of area; reasons for organizing present quasi municipal project and steps taken leading to its construction. Jan. 25: Layout of Exchequer Dam and Power Plant, with contract prices and quantities. Feb. 25: Relocation of part of Yosemite Valley railroad. June 10: Distribution and drainage.

J

JAPANNING

OVENS. Japanning Stove Parts in a Continuous Conveyor Oven, W. E. Crum. Fuels & Furnaces, vol. 4, no. 7, July 1926, pp. 829-831, 3 figs. Oven is of double-tunnel type, each tunnel ventilated separately and provided with conveyor driven by individual motors giving independent control of conveyor speeds.

L

LIGHTING

INDUSTRIAL. Industrial Lighting (L'éclairage dans l'industrie), M. J. Wetzel. Electricité & Mécanique, no. 11, Mar.-Apr. 1926, pp. 32-46, 20 figs. Discusses relation between lighting and eyesight, quicker accommodation of eye in good lighting, increased production, reduction of accidents.

Plant Illumination, W. Harrison. Engrs. & Eng., vol. 43, no. 6, June 15, 1926, pp. 149-151, 3 figs. Author refers to practical tests which have been made in number of industries and which show that supplying more light increases production and decreases unit cost.

PRINCIPLES OF. Modern Principles of Good Lighting, R. M. Hutton. Can. Engr., vol. 51, no. 1, July 6, 1926, pp. 105-107. Good lighting necessary to secure maximum output and industrial efficiency; difference between natural and artificial lighting; main factors in good artificial lighting; avoidance of glare and location of light source.

LOCOMOTIVES

DESIGN. Report on Locomotive Design and Construction. Ry. Age, vol. 80, no. 34, June 15, 1926, pp. 1819-1829, 7 figs. Standardization of taps and dies; bolt and screw threads; designing locomotives to reduce track stresses; standardization of water columns; definition of engine failure. Report of committee before Am. Ry. Assn.

DIESEL-ELECTRIC. Diesel Locomotive with Gear Transmission, B. A. Wittkuhus. Ry. Mech. Engr., vol. 100, no. 7, July 1926, pp. 425-428, 8 figs. Describes two Diesel-electric locomotives designed for freight service, one is 2-10-2 type equipped with 1,200 b.hp. M.A.N. Diesel engine, and other is 4-10-2 type with gear-transmission system equipped with same engine.

ELECTRIC. *See Electric Locomotives.*

INTERNAL-COMBUSTION. Internal-Combustion Locomotives and Vehicles, S. M. Vauclain. Baldwin Locomotives, vol. 5, no. 1, July 1926, pp. 43-49, 8 figs. Types of railway motor cars; D locomotives, with mechanical, hydraulic and electric transmission.

MOUNTAIN TYPE. 4-8-2 Compound Locomotives of the P.L.M. Railway. (Locomotive Compound A Quatre Essieux Couplés de la Compagnie des Chemins de fer P.L.M.) Génie Civil, vol. 88, no. 24, July 12, 1926, pp. 517-519, 9 figs. Particulars on new 117-ton compound superheater locomotive for express service between Paris and Dijon.

MULTIPLE-PRESSURE. Multiple-Pressure Locomotive Developed in Germany. Boiler Maker, vol. 26, no. 6, June 1926, pp. 152-153, 3 figs. Also Ry. Age, vol. 80, no. 38, June 26, 1926, pp. 1969-1970, 3 figs. Locomotive, known as Henschel multiple-pressure compound locomotive, is of 4-6-0 type and has 3 cylinders; combined water-tube and fire-tube boiler generates steam at 800- and 200-lb. pressure.

PISTONS, STANDARDIZATION OF. Standardization and Maintenance of Steam Pistons and Piston Rings in German Locomotives (Die Normung und Unterhaltung der Dampfkolben und Kolbenringe bei den vorhandenen Reichsbahn-Lokomotiven). Glasers Annalen, vol. 98, no. 11, June 1, 1926, pp. 174-177, 5 figs. Shows that by adopting degrees of wear and fixed dimensions for shrunk rings maintenance of pistons in repair works may be facilitated and reduced in cost.

RAIL-STRESS-REDUCING. Designing Locomotives to Reduce Rail Stresses, H. H. Lanning. New England Railroad Club—Official Proc., Apr. 13, 1926, pp. 78-93 and (discussion) 93-101. How Atchison, Topeka & Santa Fe Railway Co. built heavier and more powerful locomotives without overtaxing strength of existing track and bridges; describes four standard types of steam locomotives adopted.

TENDERS. Tenders of Large Capacity for the Great Northern. Ry. Mech. Eng., vol. 100, no. 7, July 1926, pp. 429-430, 5 figs. Seventeen locomotive tenders largest that have ever been built for regular railroad service; have coal capacity of 24 tons and water capacity of 21,500 gal.; light weight is 138,100 lb. and loaded 364,550 lb., or 182 tons; have rigid anchorage between body and underframe.

THREE-CYLINDER. Three-Cylinder Locomotive Performance Record. Ry. & Locomotive Eng., vol. 39, no. 6, June 1926, pp. 153-154, 1 fig. Locomotive No. 5000 of Lehigh Valley Railroad shows low maintenance cost per locomotive mile; it is 4-8-2 type and weighs 369,000 lb.

LUBRICATING OILS

USED, TREATMENT OF. The Treatment of Used Oil (Die Aufbereitung gebrauchter Oele), v. d. Heyden and Typke. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 12, Mar. 20, 1926, pp. 401-402. Considerable savings may be effected by treating used lubricating and other oils, so as to eliminate impurities and correct changes in composition caused by service conditions; treatment with Fuller's earth removes mechanical impurities and absorbs acids and dissolved asphaltic matter; oil may either be passed through filter bed of granular Fuller's earth, or agitated with finely divided earth in stirring machine; latter method is more effective.

LUBRICATION

DIESEL ENGINES. Lubricating Oils for Heavy-Oil Engines. Marine Engr. & Motorship Bldr., vol. 49, no. 587, July 1926, p. 252. Particulars of report issued by committee of Diesel Enginer Users' Association on specification of such oils.

MATERIALS-HANDLING EQUIPMENT. Lubrication of Materials-Handling Equipment. Power Plant Eng., vol. 30, no. 12, June 15, 1926, pp. 700-702, 5 figs. Proper selection of lubricant to fit working conditions and proper application to gears, bearings and wire rope increase efficiency.

OIL FILTRATION. Lengthening the Life of Oil. Autocar, vol. 57, no. 1600, July 2, 1926, p. 33, 2 figs. Description of Hele-Shaw streamline lubricant filter, and method of applying it to automobile engines.

M

MANOMETERS

THERMOELECTRIC. Thermoelectric Manometers for Small Pressures (Ueber ein thermoelektrisches Manometer für kleine Drücke), E. Rumpf. Zeit. für Technische Physik, vol. 7, no. 5, 1926, pp. 224-226, 2 figs. Describes manometer consisting of heating filament and thermocouple which enables quick continuous measurement of pressures.

MASONRY

STRENGTH AT EARLY AGES. Strength of Masonry at Early Ages, J. S. Elwell. Can. Engr., vol. 50, no. 24, June 15, 1926, pp. 667-668. Tests of mortar made of hydrated lime and sand, and lime, putty and sand; strength of specimens increases with age. Paper presented before Building Officials' Conference.

MATERIALS HANDLING

MACHINERY, EVOLUTION OF. Material-Handling Machinery and Its Evolution, T. L. Messiter. Indus. Mgmt. (Lond.), vol. 13, no. 6, June 1926, pp. 240-242, 1 fig. Diagrammatic representation of evolution of handling machinery.

MATERIALS TESTING

FATIGUE OF METALS. The Fatigue of Metals When Stressed Beyond the Yield Point. Brown Boveri Rev., vol. 13, no. 7, July 1926, pp. 169-174, 8 figs. Investigations by Brown-Boveri materials testing department.

MERCURY-VAPOUR PROCESS

SUPERIORITY OF. The Mercury-Steam Cycle, P. M. Shen. Power, vol. 64, no. 1, July 6, 1926, pp. 8-11, 2 figs. Binary-vapour conception considered as possible means of increasing efficiency; why mercury-steam cycle is superior to other binary-vapour processes.

METAL WORKING

AUTOMOBILE FENDERS. Making Automobile Fenders with Hand Tools, E. Heller. Machy. (N.Y.), vol. 32, no. 11, July 1926, pp. 871-874, 9 figs. Methods employed in making set of fenders for first car of new model.

METALLOGRAPHY

STUDY OF. The Engineer and the Study of Metals, W. R. Needham. World Power, vol. 5, nos. 30 and 31, June and July 1926, pp. 303-309 and 29-32. June: Discusses facilities available for study of metal, such as X-ray examination of metals; recording internal forging or ingot flaws; magnetic analysis, micro-stress recorder, photoelastic method of determining stresses, etc. July: X-ray examination of materials; clink detector for recording internal forging or ingot flaws; quest for flaws by magnetic analysis; trepanning tool for removing central cores; drop-of-potential method for detecting flaws; micro-stress recorder; photoelastic stress analysis; commercial application of light alloys for forgings; castings, etc.

METALLURGY

GRAPHITIZATION. Graphitization at Constant Temperature, H. A. Schwartz. Am. Soc. for Steel Treating—Trans., vol. 9, no. 6, June 1926, pp. 883-906, 5 figs. Mathematical analysis of data of graphitization; means for laboratory determination of graphitizing rate as physical constant for any given hard iron outlined; mathematical deviations in appendix, July issue p. 53.

METALS

ELASTICITY AND MELTING POINT. Elasticity and Melting Point (Elastizität und Schmelzpunkt), J. P. Andrews. Physikalische Zeit., vol. 27, no. 7, Apr. 1, 1926, pp. 210-211. Widder's linear relation in elasticity-temperature curve of metals requires line when produced to zero elasticity to cut temperature axis at melting point; expression leads to erroneous melting-point values. See also brief abstract in Brit. Chem. Abstracts, May 1926, p. 462.

FATIGUE. Stress-Strain-Cycle Relationship and Corrosion-Fatigue of Metals, D. J. McAdam, Jr. Am. Soc. for Testing Matls.—Preprint, no. 33, for mtg., June 21, 1926, 31 pp., 12 figs. Material and methods of investigation; stress-cycle graph extended to nominal stresses well above tensile strength of material and over range from less than 1,000 to more than 100,000,000 cycles; interrelationship between stress-cycle, stress-deflection and deflection-cycle graphs; effect of cycle repetition on deflection and hysteresis; evidence is presented that very slight corrosion when simultaneous with fatigue causes low resistance to fatigue; damaging effect is greater the harder the steel; advantage of heat treatment may thus be practically neutralized; ratios of corrosion-fatigue limits to endurance limit are compared with other physical properties of steel.

HEAT CONDUCTIVITY. Thermal Conductivity of Certain Metals and Alloys (Conductibilité thermique de certains métaux et alliages), M. Jakob. Chaleur & Industrie, vol. 7, no. 74, June 1926, pp. 301-306, 1 fig. Data on conductivity of certain bronzes, aluminum, aluminum alloys and precious metals.

STRESS-STRAIN CURVES. Stress-Strain Curves and Physical Properties of Metal with Particular Reference to Hardness, H. P. Hollnagel. Am. Soc. for Steel Treating—Trans., vol. 10, no. 1, July 1926, pp. 87-108, 10 figs. Physical properties of metals as associated with stress-strain curve interpreted in terms of atomic forces of restitution, slip of atomic nature and in mass; interfering material set forth as amorphous phase; hardness defined; dimensions of hardness.

PLASTICITY. On the Plasticity of Metals, H. Shoji. Inst. of Physical & Chem. Research—Sci. Papers, vol. 4, nos. 57-58, Apr. 1926, pp. 189-201, 26 figs. Definition; description of apparatus for experiments made; plasticity of metals; change of plasticity with straining time.

MILLING MACHINES

OIL-GROOVE. Lehmann Oil-Groove Milling Machine. Machy. (N.Y.), vol. 32, no. 11, July 1926, p. 913, 1 fig. Machine designed primarily for use in railroad shops for milling oil-grooves in locomotive crown brasses, but which may also readily be adapted to other work.

MINES

VENTILATION. Permissible Limits of Toxic and Noxious Gases in Mine and Tunnel Ventilation, R. R. Sayers. Am. Inst. of Min. & Met. Engrs.—Advance Paper, no. 1580-A-F, July 1926, 14 pp., 3 figs. Carbon dioxide limit; oxygen required; excess oxygen; limits of other gases; sources and effects of carbon monoxide; prevention of poisoning from gases; treatment for persons poisoned.

MOLDING MACHINES

INCREASING PRODUCTION. Increasing Output with Molding Machines, R. Micks. Can. Foundryman, vol. 17, no. 6, June 1926, pp. 17-19, 2 figs. Points out that rapid development of molding-machine practice in past few years has made it possible to produce molds by machinery for almost any casting that can be made in 2-part flask; types of molding machines.

MOTOR TRUCKS

CRUDE-OIL. Crude-Oil Automotive Engine Installed in Four-Ton Truck, L. M. Fanning. Oil & Gas Jl., vol. 24, no. 51, May 13, 1926, pp. 92 and 94. Motor truck of 4-ton capacity operating in New York City traffic on 24 deg. Baumé fuel oil; equipped with French Peugeot crude-oil engine, which can work on any kind of oil, including heaviest; it is an explosion engine in which fuel is injected and is of constant volume combustion type. See also description in Oil Engine Power, vol. 4, no. 7, July 1926, pp. 403-405, 4 figs.

OPERATION COSTS. How to Find Unit Costs in Motor Truck Operation, A. J. Peel. Indus. Mgmt. (N.Y.), vol. 71, no. 6, June 1926, pp. 346-349, 3 figs. Outlines of simple methods of finding unit costs which, put into operation, shows way to substantial savings.

ROLLED STEEL WHEELS. Rolled Steel Truck Wheels. Iron Age, vol. 118, no. 1, July 1, 1926, pp. 9-11, 7 figs. Describes manufacture of rolled steel truck wheels by Bethlehem Steel Co. and laboratory tests made by Bureau of Standards.

N

NICKEL ALLOYS

NICKEL-CHROMIUM. Heat-Resisting Nickel Chrome Alloys. Foundry Trade Jl., vol. 33, no. 512, June 10, 1926, pp. 411-412, 1 fig. Research has shown that several combinations of these two elements can be effected which will withstand most arduous conditions of industrial service.

NON-FERROUS METALS

GERMAN DEVELOPMENTS. Recent Development of Non-Ferrous Metals, H. Groeck. Eng. Progress, vol. 7, no. 6, June 1926, pp. 158-159. Discusses German supply of non-ferrous metals, and endeavours since war to find substitutes for those no longer available; characteristics of some non-ferrous metals, including copper and brass, and aluminum and its light alloys.

O

OIL ENGINES

COOLING-WATER RE-CIRCULATION. Re-Circulating Oil Engine Cooling Water, A. B. Newell. Marine Eng. & Shipping Age, vol. 31, no. 7, July 1926, pp. 397-398. System of oil-engine cooling designed to maintain constant temperatures under all conditions of sea-water temperature.

LUBRICATION. The Choice of a Lubricating Oil, A. J. Wilson. Gas & Oil Power, vol. 21, no. 250, July 1, 1926, pp. 213-214. Physical tests to be considered when making choice of lubricating oil for use in gas or oil engine; specifications for oil for use on heavy-oil engines.

SKETCHES AND WORKING. Sketches and Working of Oil Engines. Motorship, vol. 11, no. 7, July 1926, pp. 532-536 and 544, 14 figs. Circle diagrams aid study of reversing systems; analysis of mechanisms found in practice.

WASTE-HEAT UTILIZATION. Reclaiming Waste Heat from Modern Oil Engines, A. B. Newell. Nat. Engr., vol. 30, no. 7, July 1926, pp. 301-302. Approximately one-eighth of original heat in fuel used in oil engine is available for heating purposes after having passed through engine; factors to be considered when installing equipment of this kind.

OIL FIELDS

ALBERTA, CANADA. Petroleum and Natural Gas Development in Alberta. Petroleum World, vol. 23, no. 310, July 1926, pp. 245-248. Developments in or near Alberta on basis of information concerning sub-surface conditions and actual results obtained from drilling in its various phases.

OIL FUEL

BURNERS. Test Data on Oil Burner. Elec. World, vol. 88, no. 1, July 3, 1926, pp. 7-8. Results of tests conducted by Phila. Elec. Co. giving data on boiler efficiency and costs of oil burner for use with house furnace; burner makes desirable load for central stations.

The Development of Atomization Methods for Oil Burners, S. D. Rickard. Heat. & Vent. Mag., vol. 23, no. 6, June 1926, pp. 76-78, 3 figs. Considerations affecting flame characteristics and economies derived from experiences of past.

HANDLING EQUIPMENT. Fuel Oil-Handling Equipment, C. C. Hermann. Machy. (N.Y.), vol. 32, no. 11, July 1926, pp. 883-885, 4 figs. In planning fuel-oil system for forge-shop use, special attention should be given to certain parts of equipment; strainer for oil-pipe line; hose for tank connection; unloading station plans; oil-pump installation.

OIL SHALES

DUST, EXPLOSION OF. Explosibility of Oil-Shale Dust, V. C. Allison and A. D. Bauer. U. S. Bur. of Mines—Reports of Investigations, no. 2758, June 1926, 8 pp., 1 fig. Investigation shows that oil-shale dusts are explosive and that their explosiveness increases with their combustible content; formation of dust during mining and handling of oil-shale is almost unavoidable, and same precautions against explosions should be taken as in coal mines.

EXTRACTION. A Problem in Oil-Shale Extraction, T. M. Bains. Eng. & Min. Jl.—Press, vol. 121, no. 25, June 19, 1926, pp. 1009-1013, 4 figs. Procedure to be followed in attempting to solve mining-research problem; basic principles involved; investigation of all known methods which might be applied to problem; applying new methods; problem of loading deep and almost flat holes; fire risk involved.

OPEN-HEARTH FURNACES

REGENERATIVE. Regenerative Pusher Type Furnace for Heating Blooms. Fuels & Furnaces, vol. 4, no. 7, July 1926, p. 807, 2 figs. Describes regenerative continuous furnace of pusher type built in Germany for heating blooms 6¼ in. x 6¼ in. cross-section and 86 in. long, weighing 880 lb.

ORE DRESSING

MOUNTING FRAGMENTAL MILL PRODUCTS. A New Method of Mounting Polished Sections of Mill Products, E. Thomson. Can. Inst. Min. & Met.—Bul., no. 170, June 1926, pp. 706-711, 6 figs. Method of mounting and polishing fragmental mill products in easiest and most efficient way, so that minerals present may be readily determined.

OXY-ACETYLENE CUTTING

SHIP SCRAPPING. The Ship Scrapping Industry. Welding Engr., vol. 11, no. 6, June 1926, pp. 41-42, 4 figs. Contractors find various ways to reduce costs of cutting up steel ships and similar structures with oxy-acetylene cutting torch.

OXY-ACETYLENE WELDING

ALUMINUM. Oxy-Acetylene Welding Sheet Aluminum, J. W. Meadowcroft. Am. Welding Soc.—Jl., vol. 5, no. 6, June 1926, pp. 47-49, 4 figs. Sheet aluminum can be welded with same thoroughness and at much greater speed than sheet metal; rod or strip completely covered with flux or filler body must be used.

PIPE JOINTS. Design of Oxwelded Equipment, E. E. Thum. Am. Welding Soc.—Jl., vol. 5, no. 5, May 1926, pp. 42-56, 14 figs. Points out that large savings in material can be made when pipe systems are designed for oxy-acetylene welded joints; principles which should control design of all oxy-acetylene joints.

PRECAUTIONS AND METHODS. Do's and Dont's for Oxy-Acetylene Welding, A. Eyles. Machy. (N.Y.), vol. 32, no. 11, July 1926, pp. 892-894, 1 fig. Requirement for welding; precautions in handling welding equipment; welding sheet metal; flux for aluminum welding; welding galvanized and other coated metals.

P

PAPER MILLS

SHAWINIGAN FALLS, QUE. Mill Extension at Shawinigan Falls, Que. J. W. H. Ford. Can. Engr., vol. 51, no. 1, July 6, 1926, pp. 101-102, 4 figs. Capacity of Belgo-Canadian Pulp & Paper Co.'s mill will be increased to 600 tons of paper per day; two 100-ton machines to be installed; interesting problems solved in building foundations; Raymond concrete piles employed.

PAVEMENT, ASPHALT

MIXTURES. Researches on Asphalt Paving Mixtures, P. Hubbard and F. C. Field. Asphalt Assn.—Circular, no. 34, pp. 1-6 and (discussion) 6-19, 20 figs. Reviews various tests to determine stability of asphalt paving mixtures, comparing different methods developed. Paper presented before Am. Soc. for Mun. Developments, Oct. 27, 1925.

PEGMATITES

CANADA. Pegmatites of South Eastern Manitoba, J. S. Delury. Can. Min. Jl., vol. 47, no. 28, July 9, 1926, pp. 695-697. Pegmatite dikes yielding lithium, cassiterite, spodumeme, lithium phosphate, sulphides, etc.

PIGMENTS

HIDING POWER. Hiding Power of Pigments, R. L. Hallett. Am. Soc. for Testing Matls.—Preprint no. 52, for mtg. June 21, 1926, 6 pp., 1 fig. Pigment characteristics which influence hiding power; relation between tinting power and hiding power of pigment in square feet per pound may be calculated if tinting power has been determined.

PIPE, CAST-IRON

STRENGTH. Strength of Iron Pipe Cast by Various Methods, A. N. Talbot. Can. Engr., vols. 50 and 51, nos. 26 and 1, June 29, and July 6, 1926, pp. 699-704 and 713; and 109-115, 11 figs. (Also Contract Rec., vol. 40, no. 36, June 30, 1926, pp. 631-632.) Results of tests by flexure, impact, and internal pressure on 6-in. pipe cast vertically and cast by two different centrifugal processes.

PIPE LINES

WELDED. Long Welded Water Pipe Line. Eng. World, vol. 29, no. 1, July 1926, pp. 5-6, 7 figs. Description of 22-mile welded pipe line of 22- and 24-in. diameter, used for water supply for city of Vallejo, Cal.

PIPE, STEEL

ELECTRICALLY WELDED. The Mokelumne River Water Supply Project for East Bay Municipal Utility District. West. Constr. News, vol. 1, no. 12, June 25, 1926, pp. 29-35, 15 figs. Successful shop and field tests prove 65- and 63-in. electrically welded steel pipe, ½, 7-16, ⅝ in. thick, entirely practicable; details of manufacture and testing.

PIPING

MANUFACTURE AND LAYOUT. Pipework: Its Manufacture and Layout, G. H. Willett. Jr. Instn. of Engrs.—Jl. & Rec. of Trans., vol. 36, part 9, June 1926, pp. 380-412, 27 figs. Ferrous pipes; riveted pipes; welded pipes; weldless tubes; fittings; non-ferrous pipes; joints; design of layout; velocities; expansion; drainage; steam traps; valves; supports; insulation; corrosion. See also Mech. World, vol. 80, no. 2062, July 9, 1926, pp. 32-33.

POWER FACTOR

CORRECTION. Power-Factor Correction in Steel Mills, E. F. Rhodes. Elec. Jl., vol. 23, no. 6, June 1926, pp. 287-288, 8 figs. Advantage of high power-factor maintenance in steel plant; power factor may be raised by substitution of synchronous and static condensers.

Power-Factor Correction by Synchronous Motors, A. S. Rufsvold. Power Plant Eng., vol. 30, no. 13, July 1, 1926, pp. 751-754, 7 figs. Principles involved in correcting power factor; methods of calculation and solution of problems by means of vector diagrams.

IMPROVEMENT. The Improvement of Power Factor, E. W. Dorey. Instn. Elec. Engrs.—Jl., vol. 64, no. 354, June 1926, pp. 633-640 and (discussion) 640-654, 7 figs. Summarized principal types of apparatus employed for improvement of power factor, and describes modern static condenser and types of power-factor-rectifying plant that have been developed during past three years; outlines various forms of power-factor tariff in force in Great Britain; systems of metering employed in conjunction with power-factor tariffs.

PRESSWORK

POWER. Power Press Work, W. A. Lynch. Machy. (Lond.), vol. 28, no. 712, June 3, 1926, pp. 236-240. Deals with cold sheet-metal work; blanking and piercing; tool clearance, shaving, drawing, forming, stripping, etc.; notes on tool design and press production.

PULLEYS

LOOSE, BALL-BEARING. Ball-Bearing Loose Pulleys Lower Production Costs. Belting, vol. 28, no. 6, June 1926, pp. 46 and 48. Use of such pulleys in industrial plant in Chicago made it possible to dispense with service of four maintenance men; design of loose pulleys.

WROUGHT-IRON. Wrought-Iron Pulleys, H. Bentley. Mech. World, vol. 80, no. 2061, July 2, 1926, pp. 6-7, 20 figs. Summarizes advantages claimed for wrought-iron pulleys and discusses some of their features.

PULVERIZED COAL

BOILER FIRING. Experiences in Pulverized-Coal Firing (Betriebserfahrungen mit Kohlenstaubfeuerungen), E. Schulz and F. Gropp. Archiv für Wärmewirtschaft, vol. 7, no. 5, May 1926, pp. 121-129, 28 figs. Use of pulverized-coal boilers for peak loads, damages of brickwork in combustion chamber, ash removal, pulverizing plants, evaporating efficiency.

Pulverized-Coal Firing and the Hygroscopic Properties of Lignite. (Kohlenstaubfeuerung and hygroskopische Eigenschaften der Braunkohle), E. Rammler. Archiv für Wärmewirtschaft, vol. 7, no. 6, June 1926, pp. 159-166, 8 figs. Significance of moisture in powdered-coal firing; handling and grinding hygroscopic coals; handling and bunkering of hygroscopic pulverized coal. See also Braunkohle, vol. 25, no. 6, May 8, 1926, pp. 120-131, 8 figs.

COMBUSTION. On Pulverized Combustible (Sur les combustibles pulvérisés), D. W. Lulofs. Chaleur & Industrie, vol. 7, no. 72, Apr. 1926, pp. 177-182, 3 figs. Notes on calculation of cooling effect of furnace walls; data on experiments with furnace having water-cooled top, bottom and side walls.

MAINTENANCE IN SUSPENSION. Power for Maintaining Coal in Suspension, J. G. Coutant. Combustion, vol. 14, no. 6, June 1926, pp. 378-379, 4 figs. Coal pulverized to sufficient fineness will remain in suspension in moving air; this fact forms basis for design of pulverized-coal burners; fuel-transport lines and pneumatic conveying systems; in order to maintain coal in suspension while burning, total air pressure of 1.68 oz. per sq. in. at burner should be provided for.

PUMPING STATIONS

CHICAGO. Factors Considered in Designing Largest Pumping Station, L. D. Gayton. Eng. News-Rec., vol. 96, no. 21, May 27, 1926, pp. 838-843, 5 figs. Reasons given as to necessity, capacity, type of unit and choice of equipment on new Western Avenue 300-m.g.d. installation in Chicago.

PUMPS

CYLINDERS. Laying Out and Machining Large Pump Cylinders, W. Wheatley. Machy. (N.Y.), vol. 32, no. 11, July 1926, pp. 908-909, 3 figs. Account of author's experience obtained while operating boring mill in copper-mining centre.

POWER EQUIPMENT. Power-Drive Equipment for Industrial Pumps, G. Fox. Indus. Engr., vol. 84, no. 7, July 1926, pp. 316-321, 11 figs. Selection of motors, control and drive equipment for different types of pumps.

PUMPS, CENTRIFUGAL

AUTOMATIC CONTROL. Controlling Centrifugal Pumps Automatically, A. H. Hubbell. Eng. & Min. Jl.-Press, vol. 121, no. 25, June 19, 1926, pp. 997-1001, 9 figs. Manual attendance largely eliminated; labor cost lessened; system is dependable and applicable to practically every condition of mine drainage where water is handled by units of this type.

R

RADIO COMMUNICATION

POLARIZATION OF WAVES. Polarization of Radio Waves, E. F. W. Alexanderson. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 7, July 1926, pp. 636-640, 4 figs. Recent investigations of phenomena of radio wave propagation; observations on short waves; theory of wave motion; mechanical model for studying wave polarization, irregularities of direction finders.

RADIOTELEGRAPHY

SHORT WAVE TRANSMISSION. Refraction of Short Radio Waves, W. G. Baker and C. W. Rice. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 6, June 1926, pp. 535-539, 1 fig. Shows that short-wave radio transmission (below 60 meters) can be quantitatively accounted for on simple electron refraction theory in which effect of earth's magnetic field and electron collisions may be neglected as first approximation.

RADIOTELEPHONY

DEVELOPMENTS. Notes on Wireless Matters, L. B. Turner. Elecn., vol. 96, no. 2506, June 11, 1926, pp. 596-597, 2 figs. Reception in wireless telephony; analysis of carrier wave; low frequency amplification; resistance and choke amplifiers.

HARMONICS. Harmonics and Their Effects on Wave Form, J. F. Herd. Experimental Wireless, vol. 3, no. 34, July 1926, pp. 407-410, 17 figs. Typical cases of effect of harmonics illustrated by drawing one complete cycle of fundamental, together with harmonic or harmonics stated in each case, and obtaining resultant wave form by algebraic addition.

RAILS

BREAKING OF. Accidental Breaking of Rails (Les ruptures accidentelles des rails), M. Merklen. Revue Génerale des Chemins de Fer, vol. 45, no. 5, May 1926, pp. 346-387, 66 figs. Defects in rails and their remedies; brittleness, cracks and fissures and their spread in rails; pipe, segregation, premature wear, corrosion, and wear.

RAILWAY MANAGEMENT

STORES CONTROL. Standardization and Simplification of Stores Stock. Ry. Age, vol. 80, no. 30, June 11, 1926, pp. 1635-1638. Report of committee before Am. Ry. Assn.

RAILWAY MOTOR CARS

BENZOL. New Benzol Car of the Town of Spremberg [Ein neuer Benzoltriebwagen der Stadt Spremberg (Lausitz)], Fratschner. Verkehrstechnik, vol. 39, no. 18, Apr. 30, 1926, pp. 288-291, 3 figs. Design and operation of A.E.G.-car replacing steam service and considerably reducing operating costs.

GASOLINE. C. B. & Q. Acquires Gasoline Car with Independent Power Units. Ry. Age, vol. 81, no. 1, July 3, 1926, pp. 19-20, 3 figs. New car having seating capacity for 42 passengers and containing baggage and mail compartments; entire floor space of 65 ft. available for revenue purposes; trucks provided with 100-hp. motors.

RAILWAY OPERATION

TRAIN CONTROL. New York Central Equips Engines for Train Stop. Ry. Signaling, vol. 19, no. 7, July 1926, pp. 264-266, 9 figs. Locomotive taken from service for 33 hours is equipped in average of 93.7 man-hours; installation of wayside inductors.

TRAIN DESPATCHING. Time Schedules and Dispatching Methods, J. A. Droege. Ry. Rev., vol. 79, no. 1, July 3, 1926, pp. 17-18. Positive meet system possesses advantage of simplicity over superiority by direction.

RAILWAY SHOPS

MATERIALS HANDLING. Handling Material in Railway Shops. Ry. Mech. Engr., vol. 100, no. 7, July 1926, pp. 447-454, 25 figs. Developments in equipment have facilitated work of routing material; efficient operation depends on prompt deliveries.

RAILWAY SIGNALLING

MAINTENANCE. Signal Maintenance on the Erie. Ry. Signaling, vol. 19, no. 7, July 1926, pp. 257-263, 17 figs. Performance in terms of train interruption improved 76 per cent and expenditure for battery reduced 43 per cent during last seven years.

RAILWAY SWITCHES

RENEWAL. How to Renew Slip Switches, J. Wilson. Ry. Rev., vol. 79, no. 2, July 10, 1926, pp. 45-46, 2 figs. Two methods for renewing slip switches; compares their advantages and stresses importance of good maintenance.

RAILWAY TRACK

CURVES. Influence of Gyroscopic Action on the Necessary Superelevation to be Provided on Curves, F. Corini. Int. Ry. Congress—Bul., vol. 8, no. 6, June 1926, pp. 491-501, 7 figs. Gyroscopic action as affecting railway rolling stock and passing round curve; superelevation of outer rail; superelevation of outer rail to gyroscopic moment, etc.

DRAINAGE. Illinois Central Installs Large Mileage of Track Drainage, P. T. Savage. Ry. Eng. & Maintenance, vol. 22, no. 7, July 1926, pp. 260-262, 3 figs. Improper drainage of subgrade, permitting formation of soft spots and water pockets in roadbed, has given maintenance force constant trouble; combination vitrified pipe and field tile drain proves efficient and economical.

TRACK STRESSES. Report of the Bridge Sub-Committee on Track Stresses, 1925. India Govt. Publication—Tech. Paper, no. 245, 1926, 54 pp., 83 figs. Sources of information; note on elastic theory; general conclusions regarding locomotive, cars, particular types of locomotives, curved track, effect of sleeper spacing, etc.

RECTIFIERS

VOLTAGE CONTROL. Rectifier Voltage Control, D. C. Prince. Am. Inst. Elec. Engrs. —Jl., vol. 45, no. 7, July 1926, pp. 630-636, 20 figs. Method of voltage control for rectifiers based on use of saturated core interphase transformer; theory of operation and curves showing results of observations.

REFRACTORIES

FOUNDRY. Refractories in the Foundry, H. V. Grundy and A. Phillips. Foundry Trade Jl., vol. 33, nos. 511 and 513, June 3 and 17, 1926, pp. 387-391 and 445-448, 15 figs. Chemical and physical properties of molding sands; test for cohesiveness; durability sand; ground coke, ground gas carbon and ground charcoal. June 17: Refractories for cupola; lining corrosion; refractory coatings.

ELECTRICAL RESISTANCE. The Electrical Resistance of Refractory Materials, J. B. Ferguson. Can. Chem. & Met., vol. 10, no. 6, June 1926, pp. 131-136, 14 figs. Summary of work on glasses and crystals illustrating many of characteristics which may be shown by commercial refractories under like conditions; porcelain and pure refractory materials.

OF OPEN-HEARTH PROCESS, EFFECT ON. Progress Report on the Effect of the Open-Hearth Process on Refractories, F. W. Schroeder and B. M. Larsen. Am. Inst. of Min. & Met. Engrs.—Advance Paper, no. 1579-C, July 1926, 19 pp., 8 figs. Economies of refractories on open hearths; dusts in open-hearth atmosphere; effects of oxide dusts on silica-brick walls; fusion, spalling, and hole formation in roof arch; dust deposits in checker chambers and tunnels.

HIGH TEMPERATURES AND. Refractories and High Temperatures. Eng. & Boiler House Rev., vol. 39, no. 11, May 1926, pp. 515-516, 1 fig. Discusses complicated problems with high-grade firebricks.

SPECIFIC-HEAT DETERMINATION. The Role of Specific-Heat in the Selection of Refractories, A. E. MacGee. Am. Ceramic Soc.—Jl., vol. 9, no. 6, June 1926, pp. 374-379. Discussion of specific heats in which particular emphasis is placed upon its determination at high temperatures; methods used in past for its determination and application of values in selection of refractories; points out need for determining physical properties of brick which have been in service.

STEEL AND METAL INDUSTRIES. Refractory Materials for Steel and Metalworking Industry (Feuerfeste Stoffe für die Eisen und Metall erzeugende Industrie), E. H. Schulz. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 12, Mar. 20, 1926, pp. 408-410. Methods of investigating, testing and standardization of refractories for metallurgical industry; main types of refractory brick and their properties; difficulties of selection and testing.

REFRIGERATING MACHINES

DOMESTIC. Self-Contained Unit or Separate Systems, O. T. Knight. Am. Gas Jl., vol. 125, no. 2, July 10, 1926, pp. 32 and 38. Factors to be considered in choosing refrigerating system for domestic purpose; objections to self-contained unit; brine-circulating systems and basement installation.

RESERVOIRS

RIVER REGULATING. Operation of River-Regulating Reservoirs, M. D. Casler. Eng. News-Rec., vol. 96, no. 20, May 20, 1926, pp. 812-816, 7 figs. Possibilities of storage reservoirs studied by use of mass diagrams made from flow records; regulation adjusted to meet local requirements.

RETAINING WALLS

GEOSTATIC THEORIES. Retaining Walls and Geostatic Theories, F. W. Woods. Engineer, vol. 141, no. 3674, June 11, 1926, pp. 604-605, 8 figs. Factor of soil cohesion should be recognized as having bearing on theories of soil movement, similar to that which viscosity has on theories of hydraulics, and it ought to be allowed for in some way, that is, by application of suitable coefficients of correction, introduced into theoretical formulas from empirical considerations.

ROAD CONSTRUCTION

GRADE CROSSINGS, ELIMINATION OF. Crossing Elimination and Road Relocation in California. Eng. News-Rec., vol. 96, no. 25, June 24, 1926, pp. 1025-1029, 8 figs. Information concerning elimination of grade crossings obtained from State Highway Commission of California; examples of elimination of both by separating grades and by relocating roads to avoid crossings.

MACHINERY. Machine for Digging Trench for Road Side Forms. Contract Rec., vol. 40, no. 26, June 30, 1926, p. 641, 2 figs. Describes machine which in two or three hours will dig enough form trench for day's run of mixer, and grade will be so exact that no trimming or filling and tamping need be done by form setters.

ROADS

SILICATED. Silicated Roads (Le Silicatage des Routes), L. Greschwind. Génie Civil, vol. 88, no. 24, June 12, 1926, pp. 519-523. Results obtained in Switzerland with limestone macadam roads in which water glass is used as binder.

ROLLING MILLS

Blooming Mills. Comparative Investigations of Power Requirements and Rolling Efficiency of Blooming Mills (Vergleichende Untersuchungen auf Kraftbedarf und Walzleistung an Blockstrassen), C. Schmitz. Stahl u. Eisen, vol. 46, no. 23, June 10, 1926, pp. 769-776, 12 figs. Investigations, carried out with aid of operating data and time studies, show what conditions influence power consumption and efficiency; calculation also provides operator with adequate means of supervising blooming mill.

Electric Drive. Converting Existing Rolling Mills from Steam-Engine to Electric-Motor Drive, D. M. Petty. Elec. Jl., vol. 23, no. 6, June 1926, pp. 276-278, 4 figs. Cites instances in which number of causes led to replacement of steam engine by motor; one of principal advantages of electric power over steam is difference between no-load losses; other advantages.

Hot-Strip Mills. New Hot-Strip Mill in Operation, R. A. Fiske. Iron Age, vol. 118, no. 2, July 8, 1926, pp. 78-81, 6 figs. New 14-stand hot-strip mill of Acme Steel Co., Riverdale, Ill.; stands are driven by 9 motors; 101 motors on runout table and hot bed; producer gas used.

Plate Mills. Steel Works Modernization. Elec. Rev., vol. 98, no. 2534, June 18, 1926, pp. 902-905, 7 figs. Electrical equipment of new plate mill of Consett Iron Co., Ltd., England.

S

SAND BLAST

Air Ratio. Compressed Air and Sand Blast Operation (Die Pressluftverhältnisse beim Betrieb von Sandstrahlgebläsen), R. Karg. Zeit. für komprimierte und flüssige Gase, vol. 25, nos. 2 and 3, Feb. and Mar. 1926, pp. 17-20 and 30-33, 5 figs. Discusses quantity of air required and its calculation from number and diameter of nozzles, operating pressure, temperature and type of compression.

SAND MOLDING

Gas Permeability and Cohesion. The Practical Utilization of Apparatus for Measuring the Permeability and Cohesion of Moulding Sands, R. Lemoine. Foundry Trade Jl., vol. 33, no. 513, June 17, 1926, pp. 449-452, 3 figs. Apparatus for measuring permeability and cohesion in cold state, when employed according to certain methods, may be of great service in foundry; controlling mixtures, raw materials, and prepared sand.

SCREW THREADS

Calipers. Screw Thread Micrometer Calipers, H. Bentley. Indus. Mgmt. (Lond.), vol. 13, no. 6, June 1926, pp. 261-262, 2 figs. Application of micrometer calipers to measuring V-type screw threads.

Generating Machine. Thread Generating and Forming Machine. Machy. (Lond.), vol. 28, no. 716, June 30, 1926, pp. 373-374, 3 figs. Cornelis machine, which is semi-automatic in operation and consists of lathe-type bed with fast headstock at one end and saddle which is guided along bed by two cylindrical steel bars supported between headstock and bracket, at left-hand end of bed.

SEWAGE DISPOSAL

Activated Sludge. Activated-Sludge Plant for Three Small California Cities, F. M. Veatch. Eng. News-Rec., vol. 97, no. 1, July 1, 1926, pp. 10-13, 4 figs. Excess sludge returned to Imhoff tanks, residue to drying beds; effluent not sent to old sewage farm is chlorinated; design features of comprehensive plant.

Plants. Sewage Treatment in Chicago. Pub. Works, vol. 57, no. 6, July 1926, pp. 218-221, 5 figs. $10,000,000 worth of work under contract and $70,000,000 more to be spent, in addition to millions already spent for sewage treatment plants, make this most extensive programme ever undertaken by any municipality.

Sludge Digestion. Experiences with Separate Sludge Digestion, L. R. Howson. Am. City, vol. 35, no. 1, July 1926, pp. 47-50. Experience at three or four different sewage treatment plants where separate sludge digestion tanks have demonstrated their ability to accomplish efficient clarification and sludge reduction and to produce good sludge which can be readily dried.

SEWER CONSTRUCTION

Relief Sewer. Construction Methods on $3,450,000 Relief Sewer, F. W. Skinner. Gen. Contracting, vol. 65, no. 6, June 16, 1926, pp. 247-254, 8 figs. Methods employed in constructing one of largest sewers in world by Brooklyn Bureau of Sewers; 14,800 ft. of lower end of sewer terminating at receiving chamber near shore of Jamaica Bay to which effluent is discharged, has overall width of 14 ft. 10 in. to 47 ft. and depth of 12 ft. 4 in. to 13 ft. and is calculated to carry maximum flow of 2,460 cu. ft. per second of storm water from large residential area; special drainage features of deep trench in wet sand.

SMOKE

Abatement. Smoke Elimination. Clay-Worker, vol. 85, no. 6, June 1926, pp. 463-465, 5 figs. Process developed by W. C. Mitchell, of Superior Press Brick Co., St. Louis, by which smoke menace is eliminated in plant manufacturing brick and tile.

The Black Smoke Problem: The New Smoke Abatement Bill, J. B. C. Kershaw. World Power, vol. 5, no. 30, June 1926, pp. 310-314. Present law relating to smoke emission; report of Committee on Smoke Abatement; set up in 1914; Government bills of 1923 and 1925; probable effects of new legislation.

SPRINGS

Laminated. Experiments on Laminated Springs, H. S. Rowell. Automobile Engr., vol. 16, no. 216, June 1926, pp. 229-236, 44 figs. Experimental determination of spring stresses and observations on spring friction.

Standardization. Standardization of Springs from the Standpoint of Construction (Ueber die Normung von Federn vom Standpunkt der Konstruktion), R. Geyer. Maschinenbau, vol. 5, no. 10, May 20, 1926, pp. 450-451, 8 figs. Discusses possibility of standardizing pressure and expansion springs and proposes standard dimensions based on calculations.

STANDARDIZATION

Developments. Engineering and Industrial Standardization. Mech. Eng., vol. 48, no. 7, July 1926, pp. 763-764. Proposals for standardized Woodruff keys; T-slot and parts; standards for gear-tooth form and nomenclature; for plain taper and gib-head taper keys; bolt, nut and rivet proportions; standardization of machine tapers; lathe and planer tool holders; standards for plain and lock washers.

STANDARDS

German N. D. I. Reports. Report of German Industrial Standards Committee (N.D.I.-Mitteilungen), W. Reichardt. Maschinenbau, vol. 5, no. 10, May 20, 1926, pp. 481-483. Proposed standards for square nuts and holes; bronzes and red brass; terminology, castings, etc.; diameters for woodworking machines; milling cutters and arbors.

Report of German Industrial Standards Committee (N.D.I.-Mitteilungen). Maschinenbau, vol. 5, no. 11, June 3, 1926, pp. 533-544, 18 figs. Proposed standards for headless screws with square shoulder; gears, definitions, designations and graphic symbols; welding, definitions and graphic symbols.

STEAM

High-Pressure. Industrial Production of High-Pressure Steam (La production industrielle de la vapeur d'eau à haute pression), M. C. Roszak and M. Veron. Société des Ingenieurs Civils de France, no. 8, Apr. 30, 1926, pp. 159-168. Discusses influence of high pressure on utilization and production of steam, concludes that high-pressure steam leads to important improvements in efficiency of central stations; pressures of 50 kg. per sq. cm. and of 80 kg. per sq. cm. will have to be considered.

Pressure Regulation. A New Pressure-Reducing Apparatus (Ein nieuw system reduceerapparaat), A. Bargeboer. Ingenieur, vol. 41, no. 17, Apr. 24, 1926, pp. 333-337, 4 figs. Dikkers-Bargeboer system of pressure regulation, calculation and applications.

Tables. New Tables of the Properties of Steam (Nouvelles Tables des Propriétés de la Vapeur d'eau), R. Martin. Chaleur & Industrie, vol. 7, no. 73, May 1926, pp. 269-271. Extensive metric tables and charts of properties up to a pressure of 60 atmospheres, values below 30 atmospheres corresponding to those established by Knoblauch, Raisch and Hausen, and those above to values of Dr. R. Mollier.

STEAM ENGINES

M. E. P. Indicator. The Direct Indication of Mean Effective Pressure—The Pî Meter [as direkte Anzeigen des mittleren indizierten Kolbendruckes (das Pî-Meter)], J. Geiger. Wärms, vol. 49, no. 19, May 7, 1926, pp. 331-333, 10 figs. Describes apparatus combining pressure-volume and pressure-time measurements and giving direct reading or recording of mean effective pressure.

Uniflow. An Auxiliary Steam Engine Development. Mar. Engr. & Motorship Bldr., vol. 49, no. 586, June 1926, pp. 216-219, 8 figs. Economy to be derived from use of uniflow principles for marine auxiliary-engine purposes.

Record-Breaking Uniflow Engine in Steel Mill. Power Plant Eng., vol. 30, no. 13, July 1, 1926, pp. 746-750, 7 figs. Largest uniflow in America, incorporating many unusual features of design and construction, is pioneer unit for reversing blooming-mill service at Steubenville plant of Wheeling Steel Corp.

STEAM PIPES

High-Pressure. High-Pressure Pipe Lines for Highly Superheated Steam of 40 Atmos. (Hochruck-Rohrleitungen für hoch überhitzten Dampf von 40 atü), H. Menk, Archiv. für Wärmewirtschaft, vol. 7, no. 5, May 1926, pp. 133-138, 22 figs. Discusses question of materials, calculation of thickness of pipe, fixing of flanges by DIN standards, expansion pipes and their tests, valves and fittings, draining of pipes, etc.

Power-Plant. How to Lay Out Power-Plant Piping, S. Crocker. Power, vol. 63, nos. 20, 23 and 25, May 18, June 8 and 22, 1926, pp. 769-770, 890-891 and 962-965, 8 figs. May 18: Preparation of preliminary plans. June 8: How to select pipe sizes. June 22: Influence of high temperatures on choice of materials; development of dimensional standards.

STEAM POWER PLANTS

Cold Circulating Water. The Value of Cold Circulating Water. Power Engr., vol. 21, no. 243, June 1926, pp. 220-221. Investigation into reduction of operating costs of steam power plants possible by use of lower-temperature circulating water.

Control Apparatus. Modern Devices for Power Plant Control. Chem. Age, vol. 14, no. 365, June 26, 1926, pp. 567-569, 2 figs. Notes on various types of apparatus applicable to conservation of power in works and for obtaining accurate data for costing.

STEAM TURBINES

Automatic Regulation. Automatic Regulation Maintains Exhaust and Bleeder Pressures. Power, vol. 63, no. 26, June 29, 1926, pp. 1005-1007, 4 figs. Describes 500-kw. Moore turbine at power plant of Lever Bros. Co. at Cambridge, Mass.; although there are three governing devices, operation is simpler than for condensing unit; thermal efficiency exceeds that of best condensing station.

Brush-Ljungstrom. Notes on the Brush-Ljungström Turbine, J. R. Cowell. S. African Instn. Engrs.—Jl., vol. 24, no. 10, May 1926, pp. 218-230, 17 figs. Machine is of pure reaction outward radial-flow double-rotation type; advantages of system.

High-Pressure. High-Pressure Prime Movers in Industrial Plants, F. Hodgkinson. Engrs. & Eng., vol. 43, no. 6, June 15, 1926, pp. 151-157 and (discussion) 157-160, 1 fig. General thermal advantages of high pressures; increasing pressure vs. increasing superheat; small-capacity turbines; industrial applications.

Reactions. The Limiting Efficiency of the Reaction Steam Turbine. Engineering, vol. 122, no. 3155, July 2, 1926, p. 1. Points out that graphic method of determining diagrammatic efficiencies as commonly applied in design of impulse turbines is but ill-fitted for discussing efficiency of group of reaction blading.

STEEL

Dentritic Structure and Crystal Formation. A Study of Dentritic Structure and Crystal Formation, B. Stoughton and F. J. G. Duck. Am. Soc. for Steel Treating—Trans., vol. 10, no. 1, July 1926, pp. 31-41 and (discussion) 42-52, 21 figs. Formation of dentritic crystals in overheated high-carbon steel; comparison of structure and hardness with normal file steel of approximately same composition; evidence is offered that amorphous-metal hypothesis does not hold when crystals are large and there are correspondingly large surfaces of cement; it is thought possible that intercrystalline rupture of metals at high temperatures is due to large size of crystals at those temperatures, as contrasted with their small size at normal temperature.

Rivet. Effect of Sulphur on Rivet Steel—Summary of Findings. Eng. News-Rec., vol. 97, no. 1, July 1, 1926, p. 26, 1 fig. Committee on investigation of effect of phosphorus and sulphur in steel reports that sulphur, up to 0.06 per cent is harmless; larger amounts reduce ductility, toughness and strength of riveted joints.

Spheroidization. Spheroidization and How It Occurs, A. Allison. Iron Age, vol. 118, no. 2, July 8, 1926, pp. 73-76, 14 figs. Damascus metal remarkable example of spheroidization; relation to grain growth and grain boundaries; explanation of Stead's brittleness.

STEEL CASTINGS

Defects. Defects Hiding in Steel Castings, F. J. Stanley. Iron Age, vol. 118, no. 1, July 1, 1926, pp. 12-13 and 60-62, 3 figs. Lists and gives causes of such defects as porosity, blowholes, shifts, cracks, etc.

STEEL, HEAT TREATMENT OF

Annealing and Quenching. Changing the Size of Steel Fittings, C. Jones. Forging—Stamping—Heat Treating, vol. 12, no. 6, June 1926, pp. 206-207, 1 fig. Method of changing size of piece of steel; results obtained by annealing carbon and low-tungsten bars.

Some Characteristics of Quenching Curves, H. J. French and O. Z. Klopsch. Am. Soc. for Steel Treating—Trans., vol. 9, no. 6, June 1926, pp. 857-882 and 906, 10 figs. Discusses time-temperature cooling curves at centre of steel samples of various sizes and shapes quenched into ordinary coolants such as water, commercial quenching oil and air; based on described experiments, method is outlined by which cooling curves for various sizes and shapes quenched from various temperatures can be derived.

STEEL, HIGH-SPEED

Hardening and Tempering. The Hardening and Tempering of High-Speed Steel, A. R. Page. Engineering, vol. 121, no. 3153, June 18, 1926, pp. 738-739. Experiments with two steels, composition of which varies only in carbon content, to determine effect of hardening and tempering on microstructure and effect of time and temperature of hardening and tempering on hardness.

STEEL MANUFACTURE

High-Grade Steel. Making High-Grade Steel, J. A. Coyle. Iron Trade Rev., vol. 79, no. 1, July 1, 1926, pp. 5-7, 3 figs. Surface finish of cold strip steel undergoes improvement due to development of rolling and supplementary equipment.

STEEL WORKS

Production at Low Cost. Steel-Plant Operating Costs from an Engineering Point of View, L. C. Edgar. Engrs'. Soc. of West. Pa.—Proc., vol. 42, no. 3, Apr. 1926, pp. 165-180 and (discussion) 180-184. Fundamental principles governing engineering in its relation to production of iron and steel of good quality at low cost.

STRUCTURES

Wind Pressures. Wind Pressures on Structures, H. L. Dryden and G. C. Hill. U. S. Bur. of Standards—Sci. Papers, no. 523, Apr. 3, 1926, pp. 697-732, 23 figs. Results of experiments on model in 10-ft. wind tunnel of Bur. of Standards; effects of uniform and steady wind, and allowances to be made for gustiness of wind; typical values of coefficient of wind pressure for various types of models; conclusions are reached that greatest average pressure against building occurs when wind blows normal to face and is equal to 1.5 times velocity pressure; average decrease in pressure over roof is about 0.84 times velocity pressure.

SUB-STATIONS

Equipment of. Alternating Current Sub-Stations and Their Equipment for Urban Areas, A. T. Rodwell. Engr., vol. 16, no. 97, May 1926, pp. 24-33 and (discussion) 33-37, 4 figs. Factors affecting design; load; primary voltages and method of protection; state regulations regarding design and layout of electrical apparatus.

Remote-Controlled. Remote-Controlled Sub-stations, W. C. Blackwood. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 6, June 1926, pp. 531-534, 11 figs. Unit type of distribution sub-station designed for Metropolitan District; although of much lower capacity than other stations on same system its cost per kva. is approximately same as larger stations.

Supervisory Control. Supervisory Control, J. L. McCoy and W. R. Swoish. Elec. Jl., vol. 23, no. 6, June 1926, pp. 311-319, 10 figs. Increasing interest in application of supervisory control for power apparatus shows that operating companies are realizing saving in operating expense that can be effected.

SUPERHEATERS

Radiant-Heat. The Radiant-Heat Superheater. Eng. & Boiler House Rev., vol. 39, no. 11, May 1926, pp. 519-520, 1 fig. Radiant-heat superheater actually forms part of furnace walls, and so replaces equivalent area of firebrick; details of Foster superheater and its application.

SURVEYING

Geodetic and Topographic. The Geodetic and Topographic Survey of Pittsburgh and Allegheny County, U. N. Arthur and R. H. Randall. Engrs'. Soc. of West Pa.—Proc., vol. 42, no. 3, Apr. 1926, pp. 119-154 and (discussion) 154-164, 11 figs. Survey in Pittsburgh and Allegheny Counties, Pa., and progress attained; triangulation; precise levels; publication of reports.

SWIMMING POOLS

Design. Swimming Pool Design, Construction and Operation. Mun. & County Eng., vol. 70, no. 6, June 1926, pp. 358-369. Principles of sanitation; location and layout of pools; design and construction features; inlets and outlets; recirculation and filtration systems, etc.; report of Joint Committee on Bathing Places to State Sanitary Engrs.

SWITCHBOARDS

Truck-Type. Truck-Type Switching Equipment, M. H. Hobbs. Elec. Jl., vol. 23, no. 6, June 1926, pp. 319-321, 6 figs. Advantages for use of truck-type equipment; installation costs; safety features.

T

TANKS

Welded. How to Investigate Tanks, H. L. Whittemore. Am. Welding Soc.—Jl., vol. 5, no. 5, May 1926, pp. 23-27, 3 figs. Outline plans to be followed in investigating welded tanks.

TELEPHONY

Automatic. The Rotary Machine Switching System, F. A. Hubbard. Univ. Engr., vol. 43, no. 6, June 1926, pp. 26-31, 7 figs. Brief account of rotary system.

Transatlantic. Transatlantic Telephony, A. A. Oswald and B. M. Deloraine. Elecn., vol. 96, nos. 2505 and 2508, June 4 and 25, 1926, pp. 572-573 and 666-668, 6 figs. Single side-band equipment and power amplifier at Post Office Rugby Radio station. June 25: Speech-current apparatus; complete protective and testing measures; shielding arrangements; control system.

TERMINALS, LOCOMOTIVE

East Altoona, Pa. Pennsylvania East Altoona Engine Terminal. Ry. Mech. Engr., vol. 100, no. 7, July 1926, pp. 441-445, 7 figs. Gives method of handling work on sidings and in house of Pa. East Altoona engine terminal which turns out 200 freight locomotives daily.

TESTS AND TESTING

Materials. Materials Testing at the Works of Sulzer Brothers, Winterthur, Switzerland. Mech. World, vol. 79, no. 2058, June 11, 1926, pp. 443-445, 6 figs. Details of materials-testing department; parts cast in Sulzer works, in iron, steel, or any of many different alloys, are constantly kept under observation by casting test pieces or by taking samples of charges; iron and steel foundries have their own testing laboratories; principally used for testing strength of new varieties of materials before large castings are made; methods of determining tensile strength; presses for Brinnell test; hardness determination, etc.

TEXTILES

Kemp. Kemp Textile Inst., vol. 17, no. 6, June 1926, pp. T264-T304, 46 figs. Contains following articles: Introduction—Flat Kemp, H. J. W. Bliss; Kemp Fibres in the Merino, J. E. Duerden; Kemp in the Fleece of the Welsh Mountain Sheep, J. A. F. Roberts; Kemp Fibres in Fleeces of British Breeds of Sheep, J. S. S. Blyth; Some Characteristics of Mohair Kemp, H. R. Hirst and A. T. King.

Yarn. A Gravimetric Method for Investigation of the Variation and Levelness of Yarn, S. G. Barker. Textile Inst., vol. 17, no. 6, June 1926, pp. T259-T263. Describes method for determination of local variation or irregularity in count of yarns by weighing successive short lengths on special balance.

TRANSFORMERS

Auto. General Theory of the Auto-Transformer, W. L. Upson. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 7, July 1926, pp. 661-665, 2 figs. Method of complex quantities which lends itself admirably to development of general theory of auto-transformer; examples of calculations by this method; compares these transformers with calculated performance of two-circuit transformer; applies theory to transformers without iron and gives interesting conclusions.

Frequency Change, Effect of. The Effect of Frequency Change Upon Transformer Operation, H. M. Lacey. Elec. Times, vol. 70, no. 1810, July 1, 1926, pp. 3-6, 5 figs. Investigation of operating characteristics at frequency of 50 cycles per second of transformers designed for other frequencies, assuming in general that ratio is unchanged; principal features considered are output, iron loss, magnetizing current, copper loss, impedance, temperature rise and immunity from dielectric failure.

TUBES

Steel. Production of Steel Tubes and Cylinders (La fabrication des tubes et corps cylindriques en acier), M. Blutel. Technique Moderne, vol. 18, no. 8, Apr. 15, 1926, pp. 231-238, 21 figs. Methods of producing tubes without welding, such as Mannesmann, Ehrard and Stiefel methods; describes Mannesmann plant at Rath.

TURBO-GENERATORS

Efficiency Meter for. Efficiency Meter for Turbo-Generators. Engineering, vol. 121, no. 3152, June 11, 1926, pp. 710-711, 5 figs. Instrument showing at glance extent by which steam consumption of turbo-generator differs from guarantee, as well as actual consumption in pounds per kw.hr.; consists of indicating wattmeter in conjunction with Venturi or other type of water meter.

Special Design. Turbine Designed for Special Conditions. Power Plant Eng., vol. 30, no. 13, July 1, 1926, p. 734. Details of 3,600-r.p.m., 1,875-kva., 480-volt, 3-phase, 60-cycle turbo-generator set to meet requirements of Am. Trona Corp., whose plant is located near large dry salt lake in Mohave Desert of California.

V

VISCOSITY

Estimation. Viscosity and Its Estimation, W. M. Seaber. Indus. Chemist, vol. 2, no. 17, June 1926, pp. 243-248, 9 figs. Measurement of viscosity in various branches of technical chemistry; measurement methods; effect of temperature upon viscosity; standardization of viscometers.

VOLTAGES

Variation, Effect of. Voltage Variation as Affecting the Quality of Electrical Service, J. W. Peart. Elec. News, vol. 35, no. 13, July 1, 1926, pp. 37-38. When voltage drops, appliances are slowed up, motors do less than their rated work, illumination is poor and lamps inefficient. Paper read before Assn. Mun. Elec. Utilities.

W

WATER MAINS

Depth of Cover. What Should be the Depth of Cover Over Water Supply Pipes? S. G. Highland. Contract Rec., vol. 40, no. 26, June 30, 1926, pp. 635-637. Information concerning proper depth for placing water mains obtained from study of year-around soil temperatures.

WATER POWER

Low Head. Technical and Economic Aspects of Small Water Powers (Technisches und Wirtschaftliches von Kleinwasserkräften), F. Kammerer. Zeit. des Bayerischen Revisions-Vereins, vol. 30, nos. 8 and 9, Apr. 30 and May 15, 1926, pp. 104-107 and 113-115, 8 figs. Discusses development of water power of low heads for industrial purposes (up to about 1,500 kw.); including flour mills, saw mills, etc.; electric plants; storage of water; management of turbines, weirs, automatic regulation, etc.

WATER PURIFICATION

New Features of. New Features of Water Purification, F. H. Waring. Contract Rec., vol. 40, no. 27, July 7, 1926, pp. 659-662. Application of new devices and methods to treatment of water supplies; research work carried out in Ohio; prechlorination; double coagulation; excess lime treatment; combination of excess lime, double coagulation and adjustment of raw water pH value, lime soda, municipal zeolite softeners; natural recarbonation; coagulant feed devices; mixing devices; clarifiers; CO_2 application equipment.

Testing Apparatus. Recording "Dionic" Water-Testing Apparatus. Engineering, vol. 121, no. 3154, June 25, 1926, pp. 773-774, 4 figs. Determination of quantity of dissolved material in water by conductivity measurements; describes instrument put on market in 1910 by means of which conductivity of water and other liquids may be simply and rapidly measured.

WATER TREATMENT

Developments. The Past, Present and Future of Water Treatment. Ry. Age, vol. 80, no. 31, June 12, 1926, pp. 1667-1672, 1 fig. Abstract of papers read before Am. Water Works Assn. as follows: Review of Development to Date, S. C. Johnson; Statement of Problems Now Confronting Water Service Engineer, R. E. Coughlan; Forecast of Probable Future Development of Railway Water Treatment, C. R. Knowles.

Raw-Water Ice Plant. Water Treatment for Raw-Water Ice Plants, W. N. Waterman. Power Plant Eng., vol. 30, no. 13, July 1, 1926, pp. 758-760. Removal of various compounds of calcium and magnesium, together with iron and organic matter, allows clear ice to be made with less power.

WATER WORKS

Cofferdam Constructed for Intake. Building Cellular Wall Cofferdam, St. Louis Intake, J. C. Pritchard. Eng. News-Rec., vol. 96, no. 21, May 27, 1926, pp. 862-865, 3 figs. Thirty cells of steel sheet piling with clear wall height of 44 ft. built to inclose intake emplacement.

Hamilton, Ont. Water Works Extension, Hamilton, Ont., W. L. McFaul. Can. Engr., vol. 50, no. 25, June 22, 1926, pp. 677-683. Abstract of report prepared by city and consulting engineers, recommending extension of intakes, distribution system, reservoir capacity and pumping stations.

Toronto, Ont. Report on $14,000,000 Water Works for City of Toronto. Contract Rec., vol. 40, no. 23, June 9, 1926, pp. 564-568, 4 figs. Scheme involves intake tunnel at Victoria Park, 10 ft. in diameter, constructed in shale and extending distance of 3,300 ft. into 30-ft. depth of water and terminating in submerged tunnel shaft; low-lift pumping station, coagulating basins, filters, reservoirs, etc., with provision for treating initially 100,000,000 gals. water per day.

WELDING

Electric. *See Electric Welding, Arc.*

Oxy-Acetylene. *See Oxy-Acetylene Welding.*

Structural Steel. Welding in the Structural Field, J. H. Edwards. Am. Welding Soc.—Jl., vol. 5, no. 5, May 1926, pp. 19-23. Structural steel material used; welding operation; shop fabrication, such as handling and assembling; cost.

WOOD PRESERVATION

Creosote-Coal Tar Solution. A Plea for More General Use of a Creosote-Coal Tar Solution, S. R. Church. Ry. Eng. & Maintenance, vol. 22, no. 7, July 1926, pp. 282-283, 2 figs. Analyzes underlying economic basis of creosote production and discusses economic merits of creosote-coal tar solution for wood preservation.

The advertiser is ready to give full information.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

AIR

Pollution. Air-Pollution, J. B. C. Kershaw. Combustion, vol. 15, no. 2, Aug. 1926, pp. 103-105. Notes upon recent progress in Great Britain in relation to air situation.

AIR COMPRESSORS

Intake-Valve Control. Compressor for Air Brake System Has Intake-Valve Control, W. L. Carver. Automotive Industries, vol. 55, no. 2, July 8, 1926, pp. 52-54, 4 figs. Valve held in locked position when desired predetermined pressure has been built up; prevents noise of fluttering; other interesting features found in Christensen system.

AIRPLANE ENGINES

Air-Cooled vs. Water-Cooled. Financial Comparison of Air-Cooled and Water-Cooled Airplane Engines (Moteurs d'avions à réfroidissement par l'air ou par l'eau), J. A. Lefranc. Nature (Paris), no. 2727, July 10, 1926, pp. 20-24, 4 figs. Operating expenses of both types are practically same, but in case of 400-hp. engines the air-cooled one is 200 kg. lighter and will carry that extra weight of freight 160,000 km. in 1,000 hr. of flight.

American Development. Modern American Aircraft Engine Development, C. L. Lawrence. Roy. Aeronautical Soc.—Jl., vol. 30, no. 187, July 1926, pp. 405-424 and (discussion) 425-433, 20 figs. Calls attention to interesting and unusual features of American engines and discusses considerations which have led to designs in question.

AIRPLANE PROPELLERS

Tip Speeds. Airscrew Tip Speeds, R. K. Pierson. Flight, vol. 18, no. 30, July 29, 1926, pp. 464c-464e, 1 fig. Table showing relation between air-screw diameter, efficiency, tip speed and forward speed for various engines, and curves showing decrease of efficiency with increase of tip speed.

AIRPLANES

Airfoils. On the Drag of an Aerofoil for Two-Dimensional Flow, H. Lamb. Roy. Soc.—Proc., vol. 3, no. A 759, July 2, 1926, pp. 592-603, 8 figs. Profile drag of airfoil of infinite span.

Gliders. The Sixth Rhoen Glider Competition, 1925 (Der 6. Rhönsegelflug, 1925), R. Eisenlohr. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 17, no. 2, Jan. 28, 1926, pp. 28-34, 14 figs. Illustrated decriptions of the various gliders entered.

Speed. The Cost of Speed in Airplane Transportation (Le prix de la vitesse dans les avions de transport), P. Grimault. Aéronautique, vol. 8, no. 86, July 1926, pp. 233-236, 1 fig. Starts from quantity of gasoline used per unit of weight per unit of distance and develops formulas for calculating most economic weight, speed, power, dimensions, etc.; shows that speed is not incompatible with economy.

Wings. On the Slotter Wing Again. Aeroplane, vol. 31, no. 4, July 28, 1926, pp. 117-118 and 120, 7 figs. In author's belief, with proper development of slot idea, airplane of normal type can be made to do anything which is done by Hill tailless machine and Autogiro, while retaining speed and climb and weight-lifting ability of normal airplane.

AIRSHIPS

Pressure Distribution. Pressure Distribution on the C-7 Airship, J. W. Crowley, Jr., and S. J. DeFrance. Nat. Advisory Committee for Aeronautics—Report, no. 223, 1926, pp. 3-41, 39 figs. Investigation to determine aerodynamic pressure distributed encountered on "C"-class airship in flight; method of testing consisted of measuring pressures by means of orifices located at desired points connected to tubes of multiple liquid manometer; it is concluded that pressures set up by bump are larger than those obtained in manoeuvring.

ALLOY STEEL

Silicon. Silicon as an Alloy in Steel, H. W. Gillett. Iron Age, vol. 118, no. 8, Aug. 19, 1926, pp. 481-482. German "Freund" steel compared with other steels of similar composition; effect of silicon, manganese and nickel; use for structural purposes.

Selection. Application of the Mathematics of Probability to Experimental Data as a Basis for Appropriate Choice of Ferrous Materials, B. D. Saklatwalla and H. T. Chandler. Am. Soc. Steel Treating—Trans., vol. 10, no. 2, Aug. 1926, pp. 195-205 and (discussion) 205-213, 12 figs. Authors suggest method of reasoning which should be of practical value in solving problem of selecting most suitable alloy steel; law of error and law of frequency are considered; probability curves are given in which Brinell hardnesses are plotted against frequency number of castings in foundry practice.

ALLOYS

Boron. Analysis of Boron Alloys, N. Tschischewski. Indus. & Eng. Chem., vol. 18, no. 6, June 1926, pp. 607-608, 2 figs. When alloys of boron with iron or other metals are dissolved in acids, boron is converted into boric acid; describes method of determination of this boric acid which gives exact results and is rapid.

ALUMINUM ALLOYS

Boron in. Boron in Aluminum and Aluminum Alloys (Le bore dans l'aluminium et les alliages d'aluminium), P. Haenni. Revue de Metallurgie, vol. 23, no. 4, June 1926, pp. 342-352, 9 figs. Preparation of a boron-aluminum alloy; study of the aluminum-boron diagram; micrography of aluminum-boron alloys; study of mechanical properties; corrosion of light alloys of boron.

Sand-Cast. Some Sand-Cast Alloys of Aluminum Containing Cobalt, S. Daniels. Indus. & Eng. Chem., vol. 18, no. 7, July 1926, pp. 686-691, 10 figs. There is no useful casting alloy in binary series containing up to 10 per cent of cobalt; addition of more than 0.5 per cent of this element increases solidification shrinkage greatly, and more than 1 per cent imparts crystalline fracture, whose coarseness is more pronounced as pouring temperature becomes necessarily high; corrosion testing indicated that alloys are superior to those in aluminum-copper series; cobalt carries over its peculiarities into ternary and more complex alloys.

APPRENTICES, TRAINING OF

Building Contractors. The Building Contractor and Apprenticeship. Am. Contractor, vol. 47, no. 30, July 24, 1926, pp. 18-19. Responsibility of promoting apprenticeship lies jointly with vocation school and building industry.

AUTOMOBILE ENGINES

Overhauling. Engine Overhauling in Fleet Maintenance, W. S. Penfield. Soc. Automotive Engrs.—Jl., vol. 19, no. 2, Aug. 1926, pp. 183-185. Author lists operations in their sequence as dismantling, cleaning, inspection, estimating, assembling, running-in, testing, and final inspection.

Power Losses. Engine Power Losses. Autocar, vol. 57, no. 1602, July 16, 1926, pp. 89-90, 2 figs. Ingenious testing plant designed to show how much engine power is absorbed internally by drawing moving parts.

AUTOMOBILE FUELS

Coal from. The Production of Gasoline Substitutes and Solvents, R. T. Elworthy. Gas Age-Rec., vol. 58, no. 5, July 31, 1926, pp. 137-138 and 146. Discusses three main groups of processes for obtaining substitute motor fuels from coal, namely: recovery of benzol, ethyl alcohol and light oils in either high- or low-temperature carbonization processes; conversion of certain types of coals into oils by hydrogenation at high pressures by Bergius process; gasification of coal and subsequent conversion of gases to liquids by Badische, Fisher, or Patart process.

Volatility. Volatility Tests for Automobile Fuels, T. S. Sligh, Jr. Soc. Automotive Engrs.—Jl., vol. 19, no. 2, Aug. 1926, pp. 151-161, 11 figs. Review of previous methods of arriving at fuel volatility; new method is equilibrium distillation of fuel in presence of known weight of air; fuel is supplied at predetermined rate by displacement from reservoir by fall of clock-controlled cylinder, and flows into long metal helix immersed in bath at temperature of test; data for five fuels of varied characteristics.

AUTOMOBILES

Brakes. The B.K. Vacuum Brake. Motor Transport, vol. 43, no. 1, 113, July 12, 1926, pp. 61-62, 2 figs. Description of B.K. booster brake; quick action is obtained by destroying instead of creating vacuum in operating cylinder.

Front Axles. Designing Front Axle Ends to Support Braking Stresses, P. M. Heldt. Automotive Industries, vol. 55, no. 6, Aug. 5, 1926, pp. 212-216, 7 figs. Ordinary front axle has not sufficient torsional rigidity to resist stresses imposed by application of front-wheel brakes and solid section is advocated instead of I-section.

Steering Mechanisms. Duplicate Steering. Autocar, vol. 57, no. 1602, July 16, 1926, pp. 108-109, 2 figs. Novel layout which is claimed to prevent "shimmy" being set up by wheel wobble.

AVIATION

Aerial Navigation. Aerial Navigation, B. Jones. Soc. Automotive Engrs.—Jl., vol. 19, no. 2, Aug. 1926, pp. 162-164. Points out that navigation is of prime importance in aircraft operation, as it implies flying most direct course and selecting altitude that has most favourable meteorological conditions; points out some peculiarities of navigation on polar flights in spring of 1926; how ship and airplane drift differs.

B

BEARINGS

High-Speed. Design of High-Speed Bearings, C. R. Alden. Abrasive Industries, vol. 7, no. 8, Aug. 1926, pp. 251-253, 6 figs. Internal grinding spindles, operated at high rotative speeds, call for extremely accurate anti-friction bearings.

BEARINGS, BALL

SINGLE-ROW. The Design of Single-Row Ball Bearings, A. Palmgren. Engineering, vol. 122, no. 3159, July 30, 1926, pp. 127-129, p figs. Discusses two types of groove bearings, both developed from Stribeck type, but which present different features; one is provided with filling slot in order to facilitate fitting of largest possible number of balls, whereas other has no filling slot and thus operates with reduced number of balls; results of calculations show clearly that bearing without filling slot (and which, on account of this fact, operates with reduced number of balls) is in no way inferior, but in several respects superior to bearing type with largest number of balls and filling slot.

BELTING

CONVEYOR. Conveyor Belting in Production of Silica Sand, R. A. Goodwin. Belting, vol. 29, no. 1, July 1926, pp. 19-21, 3 figs. Rubber belting with heavy cover is found most economical for handling materials of this kind.

SELECTION. The Choice of Belting. Power Engr., vol. 21, no. 245, Aug. 1926, pp. 296-297. Survey of belting characteristics and requirements; author concludes that leather is most satisfactory belting.

VELOCITY, STUDY OF. Experimental Methods for Investigating the Working of Belts (Sur une méthode expérimentale d'étude du fonctionnement des courroies). R. Swyngedauw. Académie des Sciences—Comptes Rendus, vol. 182, no. 7, Feb. 15, 1926, pp. 441-443. Each element of a belt when running is subjected to variations of length which are related to acting tensions; author describes two stroboscopic methods for study of belt velocity at any particular point: (1) Based on comparison of speed of point of belt with that of pulley; (2) by direct measurement of difference of speeds at extremities of given arc on belt.

BOILER FEEDWATER

TREATMENT. Feed Water Treatment and Continuous Sludge Removal. Eng. & Boiler House Rev., vol. 40, no. 2, Aug. 1926, pp. 76-80, 4 figs. Details of continuous sludge and return device.

The Prevention of Boiler Corrosion. Eng. & Boiler House Rev., vol. 40, no. 2, Aug. 1926, pp. 70-75, 3 figs. Considers problems involved in preparing feedwater for boiler after it has been freed from its solid content; experience of G. & J. Weir, who have made special study of this aspect of feedwater problem.

BOILER FURNACES

ADDITIONAL DIRECT-HEATING SURFACE. Does Additional Direct-Heating Surface Pay? J. G. Coutant. Combustion, vol. 15, no. 2, Aug. 1926, pp. 106-107, 2 figs. Demonstrates economical features of additional direct-heating surface.

TRAVELLING-GRATE STOKERS FOR. Furnace Design for Travelling-Grate Stokers, H. S. Colby. Power Plant Eng., vol. 30, nos. 5, 6 and 7, Mar. 1, 15 and Apr. 1, 1926, pp. 313-316, 365-366 and 412-415, 9 figs. Present application of arches is due to forced draft, increasing demands for higher ratings and use of special fuel sizes. Points out that when burning fine sizes of anthracite or coke breeze, length and slope of rear arch are of prime importance.

WATER-WALL AND WELL TYPE. Water-Wall and Well Type Furnaces. A. A. Fette. Nat. Engr., vol. 30, no. 8, Aug. 1926, pp. 351-355, 3 figs. Design details, principles of operation and applications of water-wall furnaces; performance records and test results in actual practice; principle of operation of well-type furnaces and performance records in recent installations.

BOILER PLATE

CRACKS IN SEAMS. Intercrystalline Cracks in Rivetted Seams, H. Kriegsheim. Power, vol. 64, no. 7, Aug. 17, 1926, p. 261. Author maintains that intercrystalline cracks in boiler seams are fully explained by action of prolonged high total stresses, and that high internal stress, when present, is due to unsuitable mechanical or thermal treatment of material during manufacture or operation.

BOILERS

CORROSION. The Problem of Steam Boiler Corrosion, F. N. Speller. Am. Water Works Assn.—Jl., vol. 16, no. 1, July 1926, pp. 72-95, 2 figs. Mechanism of corrosion; important factors in boiler corrosion; feedwater in general; dissolved oxygen; carbon dioxide; influence of scale; organic matter; influence of composition of materials of construction; preventive measures.

ELECTRICALLY HEATED. Modern Designs of Electrode Steam Boilers, Zeulmann. Eng. Progress, vol. 7, no. 7, July 1926, pp. 174-176, 9 figs. Principal characteristics of individual types.

FRENCH CODE. Regulations for Steam Boilers Other Than Those Used Aboard Ship (Règlement sur les appareils à vapeur autres que ceux placés à bord des bateaux), Monzie. Assns. Françaises de Propriétaires d'Appareils à Vapeur—Bul., no. 24, Apr. 1926, pp. 81-84. Text of new law of April 2nd, 1926, regulating use, construction and test of steam boilers used on land; also explanatory report to French President.

SCALE PREVENTION. Preventing Hard Scale and Corrosion in Boilers, E. C. Chamberlain. Combustion, vol. 15, no. 2, Aug. 1926, pp. 101-103. Ferro-Chem process, which has been in successful use on small scale for 15 years in California, has been improved and developed and is now applied commercially in boiler room.

BOLTS

HEAT-TREATED. Heat-Treated Bolts, O. D. North. Automobile Engr., vol. 15, no. 217, July 1926, pp. 252-253. Factors influencing application; manufacture; material.

STANDARD. Basis for Determining the Proportions of Standard T-Slots and Bolts, L. D. Burlingame. Mech. Eng., vol. 48, no. 8, Aug. 1926, pp. 838-842, 7 figs. Tests conducted to ascertain comparative strength of bolts and slots in order that proportions submitted might be suited to practical needs.

BONUS SYSTEMS.

MAINTENANCE WORK. Applying a Bonus Plan to Maintenance Work, R. M. Hidey and H. Hylkema. Indus. Engr., vol. 84, no. 8, Aug. 1926, pp. 345-349, 6 figs. System employed by White Motor Co., Cleveland, Ohio.

BORING MACHINES

SCREW-CUTTING. Screw-Cutting on the Horizontal Boring Machine, H. C. Town. Machy. (Lond.), vol. 28, no. 721, Aug. 5, 1926, pp. 521-522, 5 figs. Describes three screw-cutting attachments.

BRAKES

ELECTRIC TRACK. Electric Track Brake for Gravity Switching in France. Eng. News-Rec., vol. 97, no. 6, Aug. 5, 1926, pp. 226-227, 3 figs. Sliding skates placed on rails by power devices check freight cars entering classification tracks.

MAGNETIC. Emergency Stopping Distance Decreased 22.5 to 46 Per Cent. Elec. Ry. Jl., vol. 68, no. 3, July 17, 1926, pp. 96-100, 6 figs. By using magnetic track brakes to supplement air brakes on its interurban cars, the Buffalo & Erie Railway increases retardation materially, makes braking effective regardless of rail conditions, permits higher maximum speed and reduces front-end accidents.

BRASS FOUNDRIES

CONVEYOR SYSTEM. Brass Shop Uses Conveyors, E. C. Barringer. Foundry, vol. 54, no. 13, July 1, 1926, pp. 517-519, 4 figs. Details of conveyor and sand-handling equipment.

BRIDGE ERECTION

MATERIALS HANDLING. Burlington Systematizes Handling of Its Bridge Materials. Ry. Eng. & Maintenance, vol. 22, no. 8, Aug. 1926, pp. 308-311, 4 figs. More careful programming insures better use of equipment and reduces cost.

BRIDGES, CONCRETE

GIRDER. Concrete Girder Bridge Has Steel Pin Bearings. Eng. News-Rec., vol. 97, no. 4, July 22, 1926, p. 135, 2 figs. Pin bearings were provided under concrete girders of Mitchell Ave. bridge, in Cincinnati, Ohio, to insure uniform bearing of spans in event of slight settlement of substructure.

BRIDGES, HIGHWAY

LOADS. Loads on Highway Bridges. Can. Engr., vol. 51, no. 5, Aug. 3, 1926, p. 189. Abstract of revised report of official joint committee of three engineering institutes in London.

BRIDGES, MOVABLE

ELECTRICALLY-OPERATED. Electrically-Operated Movable Railroad and Highway Bridges, H. Johnston. Elec. Jl., vol. 23, no. 7, July 1926, pp. 385-389, 7 figs. Main motors; brakes; bridge lock-motor; control, control operation; types of movable bridges.

BRONZES

STATUARY AND ART. Statuary and Art Bronzes. Metal Industry (N.Y.), vol. 24, no. 8, Aug. 1926, pp. 315-317, 9 figs. Describes work of bronze foundries of J. Williams, Inc., New York; main business of company is casting and finishing of bronze statuary, architectural work and tablets; plant includes foundry, molding, melting, pattern, chasing fitting, finishing, brazing, colouring and lacquering departments.

BUILDING CONSTRUCTION

REINFORCED CONCRETE. Van Gilder Form System Used on Plant. Am. Contractor, vol. 47, no. 30, July 24, 1926, pp. 15, 2 figs. Method can be used on double wall structures when openings between walls are only two inches in width.

BUILDINGS

STEEL-FRAME. Steel-Frame Office Building with 555½-ft. Tower. Eng. News-Rec., vol. 97, no. 8, Aug. 19, 1926, pp. 286-290, 7 figs. Girder framing and novel wind bracing connections in 20-storey structure at Columbus, Ohio, with 47-storey tower; spandrel girders; portal bracing at high entrance archways.

C

CABLES, ELECTRIC

PAPER-INSULATED. Accuracy Required in the Measurement, C. F. Hanson. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 8, Aug. 1926, pp. 719-725, 6 figs. Deals with effect of errors in measurement of power factor upon usefulness of impregnated paper-insulated cables.

CARBON MONOXIDE

COMBUSTION OF. The Combustion of Carbonic Oxide. Gas World, vol. 85, no. 2188, July 10, 1926, pp. 34-38, 7 figs. Spectrographic investigations; effect of progressive drying; theroics proved by experiment; explosion of rigidly dried mixtures of carbon monoxide and oxygen; experiments showing influence of pressure.

CAST IRON

CARBON IN. Determining Carbon in Cast Iron, J. T. MacKenzie. Iron Age, vol. 118, no. 7, Aug. 12, 1926, pp. 415-416, 1 fig. Simplified combustion train found satisfactory for routine analyses in laboratory of large cast-iron pipe foundry.

HIGH-STRENGTH. Production of High-Strength Cast Iron, Gilles. Foundry Trade Jl., vol. 34, no. 518, July 22, 1926, pp. 70-73 and (discussion) 73-75, 1 fig. Melting facilities, electric-furnace iron; pearlitic iron; Emmel's results; Wuest cupola and high tensiles; value of superheating; producing low carbon; treating coke for retarding combustion. Translated from Giesserei-Zeitung.

METALLURGY. Improving Cast Iron as Shown by Tests, J. R. Hyde. Foundry Trade Jl., vol. 34, no. 517, July 15, 1926, pp. 53-56. Experiments made during fairly extensive period in endeavour to produce improved and regular commercial cast iron.

PEARLITIC. Grey Iron Castings for Special Needs, H. J. Young. Foundry Trade Jl., vol. 34, no. 520, Aug. 5, 1926, pp. 117-121, 9 figs. Latest practice in cast iron and summary of present position; it has been demonstrated to satisfaction of author that Perlit procedure is applicable to all classes of foundry practice, and that success depends upon skill of moulder and metallurgist in same degree as it attends manufacture of castings of all other alloys and of steel. (Abstract.) Paper presented before West of Scotland Iron & Steel Inst.

SHRINKAGE. Metal Shrinkage, J. H. List. Foundry Trade Jl., vol. 34, no. 519, July 29, 1926, p. 100, 3 figs. Discusses methods employed to overcome fluid shrinkage, and tests made with object of preventing this shrinkage in large shaft couplings by means of chills and densers; describes one method whereby good castings, despite this shrinkage trouble, can be produced.

CASTINGS

HYDRAULIC RUNNERS. Canadian Foundry Makes Large Hydraulic Runner. Foundry, vol. 54, no. 15, Aug. 1, 1926, pp. 601 and 610, 3 figs. Methods employed at plant of National Bronze Co., Montreal, in casting hydraulic runner 4 ft. in diameter and 3 ft. high; it has 19 blades and weighs 4,500 lb.; casting is made of special manganese bronze.

TESTING. The Testing of Castings. Metallurgist (Supp. to Engineer, vol. 142, no. 3681), July 30, 1926, pp. 98-99. Discusses difficulties which surround satisfactory testing, and therefore drafting of sound specifications; production and use of test bars; if test bar is cooled at rate that differs widely from that occurring in casting itself, then sound test bar affords no guarantee of an equally sound casting.

CEMENT, PORTLAND

SODIUM AND MAGNESIUM SULPHATES, EFFECT OF. Action of Sodium and Magnesium Sulphates on Portland Cement, G. R. Shelton. Indus & Eng. Chem., vol. 18, no. 8, Aug. 1926, pp. 854-856, 2 figs. Investigation to determine difference in sulphate action on Portland cement clinker and on its compounds taken separately.

SULPHUR, EFFECT OF. Portland Cement, High Sulphur Content, F. C. Lea. Can. Engr., vol. 51, no. 2, July 13, 1926, pp. 133-134. Experiments on effect of sulphur on Portland cement; results tabulated from experiments of five types of specimens.

CENTRAL STATIONS

CLEVELAND, OHIO. Features of Avon Station. Elec. World, vol. 88, no. 6, Aug. 7, 1926, pp. 260-272, 20 figs. New plant of Cleveland Elec. Illuminating Co. operates on regenerative cycle, using pulverized fuel exclusively; reliability, simplicity and safety predominate in electrical and mechanical design.

DIESEL-ENGINED. Diesel Makes Ideal Steam Plant Standby, C. C. Hermann. Power Plant Eng., vol. 30, no. 16, Aug. 15, 1926, p. 900, 1 fig. Even with heating load thermal efficiency will often outweight other disadvantages; details of 750-hp. McIntosh & Seymour Diesel in municipal plant of Cedar Falls, Iowa.

INTERCONNECTION. Economies of System Interconnection, H. V. Bozell. Elec. World, vol. 88, no. 6, Aug. 7, 1926, pp. 273-275. A few examples of interconnection in electric light and power industry reduced to dollars-and-cents results.

CHAIN DRIVE

SPROCKETS. The Manufacture of Sprockets for Chains (La fabrication des pignons pour chaines). Pratique des Industries Mécaniques, vol. 9, no. 4, July 1926, pp. 140-144, 14 figs. Methods of designing sprockets for use with roller and silent chain, and of cutting teeth on same.

CHROMIUM

ALLOY. Chromium Alloys Resist Chemicals, C. E. MacQuigg. Iron Age, vol. 118, no. 7, Aug. 12, 1926, pp. 416-418, 1 fig. Use in chemical apparatus; how chromium acts in creating resistivity; proper precautions in welding. Paper read before Am. Inst. Chem. Engrs.

CIRCUIT-BREAKERS

AIR. Rupturing Circuits with Air Breakers. Elec. News, vol. 35, no. 15, Aug. 1, 1926, pp. 31-32, 2 figs. Recent tests show good performance at 250 and 500 volts; effect of short-circuits on breakers; conclusions favourable to ratings; ultimate safe ratings determined.

COAL

CARBONIZATION. The Carbonization of Coal, J. Roberts. Combustion, vol. 15, no. 2, Aug. 1926, pp. 98-100. Combustion of anthracite and of coke; coal by-products; waste of volatile products; natural fuels.

Carbonization of Coal in Continuous Vertical Retorts. Colliery Guardian, vol. 132, no. 3420, July 16, 1926, pp. 131-132. Report of Fuel Research Board.

The Low-Temperature Carbonization of Coal, A. C. Fieldner. Fuel, vol. 5, no. 6, June 1926, pp. 265-271, 10 figs.

Some Problems in the Carbonization Industries, H. M. Spiers and T. C. Finlayson. Indus. Chemist, vol. 2, no. 18, July 1926, pp. 315-318, 2 figs.

Vertical Retort for Low-Temperature Carbonization. Fuels & Furnaces, vol. 4, no. 8, Aug. 1926, pp. 915-916, 3 figs. Experimental plant for low-temperature carbonization of lignite developed by Coal Improvement Co., Germany; new carbonizing furnace is rotating vertical retort.

CONSTITUTION. The Constitution of Coal, S. W. Parr. Indus. Eng. & Chem., vol. 18, no. 6, June 1926, pp. 640-648, 23 figs. With special reference to problems or carbonization.

EVALUATION. Evaluation and Metallurgical Coals, R. H. Sweetser. Min. & Met., vol. 7, no. 236, Aug. 1926, pp. 337-339. Author seeks to find acceptable, workable method for accurately determining value of metallurgical coals containing varying percentages of ash, moisture, sulphur and carbon.

FUSION. The Transient Fusion of Coal, E. Audibert. Fuel, vol. 5, no. 6, June 1926, pp. 229-244, 18 figs. To be suitable for use in blast furnace, coke must possess mechanical strength, which necessitates: (1) that all its component parts are sufficiently strong, (2) that structure is compact and not too spongy, (3) that mass does not have too many fissures; researches show nature and mode of action of factors determining inherent strength of coke. Translated from Revue de l'Industrie Minérale.

COAL DEPOSITS

NOVA SCOTIA. The Characteristics and Utilization of Nova Scotia Coals, W. S. Wilson and M. W. Booth. Eng. Jl., vol. 9, no. 8, Aug. 1926, pp. 373-385, 8 figs. Extent of coal fields, outstanding characteristics of coals, and discussion of their utilization.

COAL HANDLING

EQUIPMENT. Economic Fuel Handling and Storage, W. T. Conlon. Mfg. Industries, vol. 12, no. 2, Aug. 1926, pp. 97-100, 5 figs. Equipment and methods that have saved money and prevented low grading and fires.

PLANTS. New Coal-Handling Plant at Beckton. Engineer, vol. 142, no. 3679, July 1926, pp. 69-71, 4 figs. Combined equipment of cranes and conveyors, which will be capable of dealing with 2,000 tons of coal per hour, is claimed to be largest installation of its kind in Europe. See also Engineering, vol. 122, no. 3158, July 23, 1926, pp. 103-105, 4 figs.

COAL MINES

ROOF CONTROL. Recent Developments in Roof Control, W. C. Stratton. Min. Congress Jl., vol. 12, no. 8, Aug. 1926, pp. 584 and 599. Author is led to believe that ultimate safety and economy will be obtained by roof-control instrument, sufficiently rugged in construction that it will be capable of use over comparatively long period, and will be designed for advance by mechanical power.

COAL STORAGE

SPONTANEOUS COMBUSTION. Does Carbon Dioxide Set Fire to Coal Storage Piles? H. G. Turner and E. Sinkinson. Coal Age, vol. 30, no. 5, July 29, 1926, pp. 139-140, 3 figs.

COKE

POWDERED SEMI-COKE. Some Tests on Powdered Semi-Coke for Boiler Firing. Eng. & Boiler House Rev., vol. 40, no. 2, Aug. 1926, pp. 65-66, 2 figs. Results of tests carried out on water-tube boiler fired with semi-coke in powdered form.

Coke Quenching and Handling, C. F. Ellwood. Iron & Coal Trades Rev., vol. 113, no. 3044, July 2, 1926, pp. 14-15, 7 figs. Methods of quenching; inclined bench; inclined bench and conveyor.

COKE OVENS

GAS REGULATION. Gas is Regulated Automatically, E. X. Schmidt. Iron Trade Rev., vol. 79, no. 8, Aug. 19, 1926, pp. 441-444, 4 figs. Calorimeter of recent design affords continuous record of heating value and reduces labour of maintaining desirable flow of potential heat in by-product oven practice; manipulation is described.

MULTI-FLAME. The "Still" Multi-Flame Coke Oven, H. Kuhn. Iron & Coal Trades Rev., vol. 113, no. 3045, July 9, 1926, pp. 50-53, 7 figs.

COLD STORAGE

EUROPEAN PLANTS. European Cold Stores at North Sea Ports. Cold Storage, vol. 29, no. 340, July 15, 1926, pp. 298-300, 5 figs. Plants at Hook of Holland and at Bremerhaven.

COMPRESSED AIR

SHIPYARDS. Shipyard Pneumatic Plant, J. A. Cromar. Shipbldg. & Shipg. Rec., vol. 28, no. 3, July 15, 1926, p. 67, 1 fig. Suggested method of control to minimize waste of air.

CONCRETE

PROPORTIONING. Concrete Strength Made Uniform by Careful Proportioning, Z. Witkin. Eng. News-Rec., vol. 97, no. 7, Aug. 12, 1926, pp. 258-259, 1 fig. Comparisons in California building between ordinary volumetric measurement, weight measurement and inundation method.

WATER-CEMENT RATIO. Proportioning Concrete by Water-Cement Ratio, W. C. Mabee. Mun. & County Eng., vol. 71, no. 1, July 1926, pp. 32-35. Outline of method of calculating ideal proportions for any job, which has been simplified until it calls for only little study and very little arithmetic. Paper presented to Am. Water Works Assn.

CONDENSERS, ELECTRIC

SPHERICAL. The Problem of the Spherical Condenser, A. Russell. Instn. Elec. Engrs.—Jl., vol. 64, no. 355, July 1926, pp. 727-736, 6 figs. Methods given of computing to any desired accuracy capacity of spherical condenser when bounding spherical surfaces are not concentric.

CONDUITS

UNDERGROUND. Underground Conduit and Manhole Construction. Elec. News, vol. 35, no. 15, Aug. 1, 1926, pp. 29-30 and 33, 1 fig. Higher voltages and concentration of larger amounts of power in single cable; wider separation at duct entrances; round manhole covers favoured.

CONVERTERS

FREQUENCY. A 49,000-Kva. Frequency Converter Set, A. McCarty. Elec. Jl., vol. 23, no. 7, July 1926, pp. 338-341, 6 figs. Development of growth in size; description of machine.

CUPOLAS

CHEMISTRY. Some Notes on Chemistry of the Cupola, F. C. Thompson and M. L. Becker. Metal Industry (Lond.), vol. 29, nos. 3, 4 and 5, July 16, 23 and 30, 1926, pp. 65-66, 86-87 and 111-112, 4 figs. Points out that only possible sources of economy lie in heat actual or potential lost in gases, about one-half of all heat which could be generated by coke, and slight gain by use of burnt lime; reactivity of coke; addition of further air through auxiliary tuyeres.

CORES

MAKING. Produce Cores by Thousands with Watch-Making Accuracy, P. Dwyer. Foundry, vol. 54, no. 16, Aug. 15, 1926, pp. 638-642, 7 figs. Coremaking facilities and equipment installed in Central Foundry of Saginaw Products Co., Saginaw, Mich.

COST ACCOUNTING

FORGE SHOP. Forge Shop Production; Cost Accounting, F. S. Hatch. Forging—Stamping—Heat Treating, vol. 12, no. 7, July 1926, pp. 235-238. Enthusiastic organization with confidence in management is essential to high production; carefully-planned cost system is invaluable.

CUPOLAS

OPERATION. Operating the Cupola Efficiently, R. Micks. Can. Foundryman, vol. 17, no. 7, July 1926, pp. 7-9. Lining cupola; charging; location of slag hole; melting losses of metal; mixing of iron a factor in production.

SHAKING HEARTH. Jigger Hearth for Cast Iron, C. Irresberger. Foundry Trade Jl., vol. 34, no. 518, July 22, 1926, pp. 64-65, 1 fig. Describes hearth developed by J. Dechesne; efforts to desulphurize cast iron suggested idea of trying to effect this by jigging and shaking freshly tapped metal; characteristic of effects of jigging is possibility of very liberal steel additions without endangering casting capabilities owing to viscousness, without risk of piping and without tendency to white solidification. Translated from Stahl u. Eisen, June 30, 1926. See also Iron Age, vol. 118, no. 7, Aug. 12, 1926, pp. 413-414, 2 figs.

CUTTING METALS

ART OF. Advantages of Improving the Metal and Shape of Cutting Edge of Tools (Die Vorteile der Verbesserung des Stoffes und der Scheidenform beim Werkzeug), W. Hippler. Maschinenbau, special no., 1926, pp. 7-12, 11 figs. Examines question as to whether it is more advantageous to improve quality of metal of tool or shape of cutting edge and concludes that in neither direction is there much room for improvement.

Effect of Shape of Chip-Profile on Generation of Heat and Wear of Cutting Edge (Einfluss der Gestalt des Spanquerschnittes auf die Wärmeentwicklung und die Schneidhaltigkeit), G. Engel. Maschinenbau, special no., 1926, pp. 32-42, 27 figs. Discusses Freidrich equation and its deviation for practical cutting speeds; formulates heat generated, etc., shape of chip and heat generation, effect of size of chip profile on wear of cutting edge, determination of economic cutting speeds.

TURNING. Maximum Efficiency in Lathe Work (Höchstleistung beim Drehen), E. Baltz. Maschinenbau, special no., 1926, pp. 12-20, 12 figs. Shows that by cooling tool greater efficiency and cutting speed result, compared with dry cutting; use of lathes with gear cases and normal feeds and special drive with motor regulatable in ratio of 1:25.

Research and Practice with Cutting Tools (Forschung und Praxis in der Zerspanung), K. Hegner. Maschinenbau, special no., 1926, pp. 1-3, 1 fig. Discusses formulation of fundamental laws and their application in practice; gives AWF table enabling calculation of load for tool steel of given quality, hardness and shape, and details of lathe.

D

DIESEL ENGINES

AIRLESS-INJECTION. New Airless-Injection Diesel with Displacer Piston. Oil Engine Power, vol. 5, no. 8, Aug. 1926, pp. 486-487, 3 figs. 4-cycle machine of small bore and high speed.

EXHAUST GASES. Diesel Exhaust Gives Valuable Information. Power Plant Eng., vol. 30, no. 16, Aug. 15, 1926, p. 901, 2 figs. Conclusions regarding influence of load, speed, fuel, cooling-water temperature and irregularities in engine operation upon temperature and CO_2 content of exhaust, based on tests of horizontal, two-cylinder, four-cycle, belt-drive, Koerting solid-injection engine. Translated from Wärmewirtschaft, Mar. 1926.

FOOS. Higher Speed Range for New Engine Model. Oil Engine Power, vol. 5, no. 8, Aug. 1926, pp. 472-476, 5 figs. Engine develops 50 hp. per cylinder and runs up to 900 r.p.m.; complete enclosure without exterior moving parts.

HEAVY-OIL-BURNING. Burning Heavy Fuel Oil in Diesel Engines, R. Hilderbrand. South. Power Jl., vol. 44, no. 7, July 1926, pp. 56-56, 3 figs. Showing how heating system assisted in solving problem when used in connection with small engine.

LUBRICATION. Some Notes on Marine Lubrication, R. S. Robinson. Mar. Engr. & Motorship Bldr., vol. 49, no. 588, Aug. 1926, pp. 285-286, 1 fig. With particular reference to Diesel-engine lubricants and their purification.

TWO-CYCLE VS. FOUR-CYCLE. Two- and Four-Cycle Engines Compared. Motorship, vol. 11, no. 8, Aug. 1926, pp. 592-593. Comparison of year's operation of Japanese trans-Pacific motorships Atago Maru and Asuka Maru.

DRAINAGE

BELOW-SEWER LEVEL. Disposal of Below-Sewer-Level Drainage, R. M. Starbuck, Jr. Domestic Eng. (N.Y.), vol. 116, no. 5, July 31, 1926, pp. 24-26, 45 and 48, 14 figs. Discusses problem of taking care of sub-soil drainage and of large volumes of sewage produced in use of plumbing fixtures at this low level.

ROADBED. Increasing the Efficiency of Roadbed Drainage. Good Roads, vol. 69, no. 7, July 1926, pp. 261-264, 12 figs. New method of subdrainage with perforated iron pipe; its advantages and applications to highway and municipal work.

DREDGES

DIESEL-ELECTRIC. Electrical Equipment for a 30-inch Diesel-Electric Pipe-Line Dredge, R. W. McNeill. Elec. Jl., vol. 23, no. 8, Aug. 1926, pp. 403-407, 8 figs. Details of Clackamas, constructed by Port of Portland, known as 30-inch dredge, this being diameter of discharge pipe line.

DRILLING MACHINES

HOEFER. Repetition Drilling of Pistons. Automobile Engr., vol. 16, no. 217, July 1926, pp. 258-259, 3 figs. Description of three drilling machines made by Hoefer Mfg. Co., Freeport, Ill.

INVERTED-SPINDLE. Inverted-Spindle Drilling Machine. Machy. (Lond.), vol. 28, no. 720, July 29, 1926, pp. 490-491, 3 figs. Five-spindle machine developed by Selson Eng. Co., Coventry, for work requiring drilling of blind holes, such as float-chamber aperture in carburetor bodies.

MULTI-SPINDLE. Multi-Spindle Drilling. Brit. Machine Tool Eng., vol. 4, no. 40, July-Aug. 1926, pp. 453-458, 8 figs. Reviews contemporary practice in various machining operations, giving representative examples of drilling machines and attachments that have effected economies in production.

RADIAL. All-Geared Radial Drilling Machine. Engineer, vol. 142, no. 3681, July 30, 1926, pp. 122-123, 4 figs. Machine made by Midgley & Sutcliffe, Bradford, Eng.; features of particular interest are pillar about which radial arm rotates, eight-speed gear box and enclosed spindle head.

TYPES. Drilling and Honing Machines. West. Machy. World, vol. 17, no. 7, July 1926, pp. 305-308, 11 figs. Descriptions of various types.

DRILLS

TWIST. Making Milled Twist Drills, A. E. Granville. Can. Machy., vol. 36, no. 6, Aug. 5, 1926, pp. 19-21, 9 figs. Describes how either tool-steel or high-speed drills are made from round bar stock when flues are milled.

E

EDUCATION, ENGINEERING

AID TO INDUSTRY. Can the University Aid Industry? B. F. Bailey. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 8, Aug. 1926, pp. 742-745. Author believes there is growing spirit of co-operation between industry and university, and it is believed that this tendency to co-operate will continue and will be of great advantage to both parties.

EUROPE. The Engineering Scene, W. E. Wickenden. Mech. Eng., vol. 48, no. 8, Aug. 1926, pp. 794-796. Critical glance at technical education in Europe and how America may profit by it.

ELECTRIC CONDUCTORS

SHORT-CIRCUIT STRESSES IN SUPPORTS. Practical Calculation of Short-Circuit Stresses in Supports for Straight, Parallel Bar Conductors, O. R. Schurig, C. W. Frick and M. F. Sayre. Gen. Elec. Rev., vol. 29, no. 8, Aug. 1926, pp. 534-544, 8 figs. Formulas and curves for determining stresses; two-wire, three-phase line-to-neutral short circuits; also direct current; vibratory characteristics of busbars.

ELECTRIC CURRENTS

TRANSFORMATION. The Taylor Connection for Three-Phase to Two-Phase Transformation, J. B. Gibbs. Elec. Jl., vol. 23, no. 7, July 1926, pp. 341-343, 6 figs. Explanation of Taylor connection; calculation of currents.

ELECTRIC FIELD

MECHANICS OF. The Mechanics of the Electric Field, J. J. Thomson. Instn. Elec. Engrs.—Jl., vol. 64, no. 355, July 1926, pp. 721-726. Discusses whether equations of electrodynamics express statistical or particle dynamics.

ELECTRIC FURNACES

ANNEALING. Electric Annealing at Walworth Plant, J. L. Faden and J. D. McManus. Elec. World, vol. 88, no. 5, July 31, 1926, pp. 215-218, 7 figs. Wrench forgings treated in electric furnace at saving of $3 per ton; oil-fired equipment displaced; heating cycle cut down and improved; quality gains.

AUXILIARY EQUIPMENT. Auxiliary Equipment for Electric Furnaces, J. D. Keller. Fuels & Furnaces, vol. 4, nos. 1, 5, 6, 7 and 8, Jan., May, June, July and Aug. 1926, pp. 49-56, 541-548 and 566, 661-672, 789-794 and 832; 895-900 and 930, 68 figs. Jan.: Wiring diagrams, control and safety switches, relays and fuses, for resistor-type furnaces. May: Pyrometers and temperature records. June: Automatic temperature regulators. July: Control panels, meters and transformers. Aug.: Equipment for melting furnaces at resistance and arc types.

IRON-MELTING. Electric Furnace Melting of Grey Iron. Metallurgist (Supp. to Engineer, vol. 142, no. 3681), July 30, 1926, pp. 101-102. Review of article by E. Richards, in Stahl u. Eisen, Feb. 25, 1926, in which author deals with problem of high cost of production by electrical means, and goes into detail regarding desirable electric-furnace practice for this purpose.

RESISTANCE. Electric Resistance Furnaces, W. Y. Anderson. Elec. Rev., vol. 99, no. 2540, July 30, 1926, pp. 178-179, 2 figs. Tests of installation at Summer Lane, Birmingham, Eng., consisting of 60-kw. furnace, manufactured under Wild-Barfield patents.

ELECTRIC GENERATORS

COOLING. Systems for Cooling Electric Generators. Power Plant Eng., vol. 30, no. 16, Aug. 15, 1926, pp. 905-907, 1 fig. Among various systems developed and suggested, proposed use of hydrogen as cooling medium is most novel.

LOCATING FAULTS. Locating Faults in Direct-Current Machines, C. O. Mills. Power, vol. 64, no. 6, Aug. 10, 1926, pp. 195-197, 6 figs. Tells how wrong brush position causes sparking at commutator.

ELECTRIC GENERATORS, D.C.

PARALLEL OPERATION. Some Problems of Parallel Operation of Direct-Current Generators, I. C. Smith. Elec. Jl., vol. 23, no. 8, Aug. 1926, pp. 407-412, 18 figs. Describes situation when generators are connected in parallel at negative terminal when voltage characteristics, as measured between this point and positive terminal, are rising; remedy is to connect generators at point where voltage has drooping characteristic when load is taken from machines at that point.

THREE-WIRE. Control and Protection of Three-Wire Direct-Current Generators, W. A. Holland. Gen. Elec. Rev., vol. 29, no. 8, Aug. 1926, pp. 531-533, 3 figs. Overspeed protection; locations of devices and instruments in circuits; two types of control equipment; analysis of operation.

ELECTRIC MOTORS

MOUNTING AND INSTALLING. Mounting and Installing Industrial-Type Motors, G. Fox. Indus. Engr., vol. 84, no. 8, Aug. 1926, pp. 357-360 and 363, 16 figs. Methods of installation so as to secure accessibility, reduce vibration, and lower maintenance and repair costs; describes several types of supports and relative merits, etc.

RATING. Rating of Industrial Motors, C. L. Collens. Elec. World, vol. 88, no. 7, Aug. 14, 1926, pp. 317-318. Cannot be divorced from service conditions; industry requires infinite variety of duty cycles and affords multitude of service conditions; usual service conditions normal basic rating.

TRACTION. Characteristics of Generators and Motors for Gas-Electric Traction, C. A. Atwell. Elec. Jl., vol. 23, no. 7, July 1926, pp. 363-366, 9 figs. Use of electric transmission to eliminate gear reductions; principles of electric transmission.

ELECTRIC MOTORS, A.C.

CROSS-FIELD THEORY. The Cross-Field Theory of Alternating-Current Machines, H. R. West. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 2, Feb. 1926, pp. 160-165, 5 figs. Shows how analysis by cross-field theory may be used to obtain accurate, purely numerical methods of calculating performance characteristics of a.c. machines; methods of calculation are derived and sample calculations are given for single-phase induction motor and repulsion motor.

INDUCTION. Design Problems in Flat-Front Induction Motors, A. W. Forbes. Elec. World, vol. 88, no. 6, Aug. 7, 1926, pp. 278-279, 7 figs. Deals with induction motors with shaft close to one side of frame; problem is to secure uniformly rotating field with irregularly distributed windings.

Characteristics of Induction Motors on A.C. Networks, R. G. Warner. Elec. World, vol. 88, no. 7, Aug. 14, 1926, pp. 324-325, 5 figs. Curves showing changes in characteristics when 220-volt motors are operated at network voltages; heating limitation not so serious as decreased starting and breakdown torque.

The Effect of the Number of Poles on the Power-Factor of Induction Motors, F. L. Moon. Elec. Jl., vol. 23, no. 8, Aug. 1926, pp. 428-431, 15 figs. Induction motor having small number of poles has relatively high power-factor, while one with many poles has relatively low power-factor; author discusses underlying reasons for this condition.

SQUIRREL-CAGE. Starting Characteristics and Control of Polyphase Squirrel-Cage Induction Motors, H. M. Norman. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 2, Feb. 1926, pp. 153-159, 7 figs. Considers part that primary and secondary resistance and total reactance play in determination and manipulation of starting losses, and to value of secondary resistance that will give minimum starting time for given field strength; shows how proceeding short-cut method can for most cases be made more simple without sacrificing accuracy of result to any appreciable extent.

ELECTRIC TRANSMISSION LINES

CALCULATION. Simplification of Line Calculations, C. Morrison. Elec. World, vol. 88, no. 2, July 10, 1926, pp. 72-73, 3 figs. Extended Mershon chart used to arrive at power loss values; methods for short-cutting calculations.

INTERCONNECTION. Some Economic and Social Aspects of Interconnection, W. E. Creed. Nat. Elec. Light Assn.—Bul., vol. 13, no. 7, July 1926, pp. 409-413. United States far in lead; California proving ground; centralization checked; industry profits by change; city comforts in country; farm motors never idle.

SAFETY AND CONSTRUCTION STANDARDS. Safety and Construction Standards for Transmission Lines, J. S. Martin. Engrs'. Soc. of West Pa.—Proc., vol. 42, no. 4, May 1926, pp. 185-195, 2 figs. Sizes and type of wire; proper spacing; critical span; clearances; clamps; splices; clevices; insulators; foundations.

SYSTEM STABILITY. Practical Aspects of System Stability, R. Wilkins. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 2, Feb. 1926, pp. 142-151, 21 figs. Results of field tests of 220-kv. system establishing following facts: system stability as problem is inextricably entangled with operating economics, and cannot be handled solely as problem in design, except for very simple cases; proper relay equipment and action is vital; oil-switch operation is important factor; operating distribution of excitation current is one of major problems.

TOWERS. Safety in Tower-Line Construction, H. S. Brubaker. Nat. Elec. Light Assn.—Bul., vol. 13, no. 7, July 1926, pp. 459-461, 8 figs. Digging holes; careful selection of men.

UNDERGROUND. Underground Electric Transmission. Power Plant Eng., vol. 30, no. 15, Aug. 1, 1926, pp. 848-850, 3 figs. Internal ionization theory points way to design of high-voltage underground cable.

ELECTRIC WELDING

ARC STABILITY. Factors Affecting Arc Stability, J. B. Green. Welding Engr., vol. 11, no. 7, July 1926, pp. 25-27 and 35, 3 figs. Study of metallic electric arc, indicating importance of electrode material as affecting welding operation.

PIPE. Making Electrically-Welded Pipe for East Bay Conduit. Eng. News-Rec., vol. 97, no. 4, July 22, 1926, pp. 128-131, 7 figs. Shop methods worked out successfully for making up and testing 65-in. pipe, using steel plates ½-in. thick; welding, testing, dipping and wrapping operations.

ELECTRIC WELDING, ARC

COMMERCIAL APPLICATION. Commercial Arc Welding Applications, W. L. Warner. Iron Age, vol. 118, no. 7, Aug. 12, 1926, pp. 421-422, 6 figs. Application to gas-holders, piping in large sizes, purifiers for gas, details of construction, doors and blast gates handled.

ELECTRICAL APPARATUS

SUPERVISORY CONTROL. Supervisory Systems for Electric Power Apparatus, C. Lichtenberg. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 2, Feb. 1926, pp. 116-123, 12 figs. Survey of various types of supervisory systems for control and indication of remotely-located electrical apparatus; describes selector, distributor, audible, code-visual, synchronous-relay-visual and carrier-current systems, with principles and features of each; deals also with telemetering.

ELECTRICAL EQUIPMENT

INVISIBLE HAZARDS. Guarding Against the Invisible Hazards of Electrical Installations, W. Greenwood. Iron & Steel Engr., vol. 3, no. 7, July 1926, pp. 336-338. Points out that hazard connected with operating electrical equipment by persons not authorized, even though they may be qualified, should not be underestimated; hazard connected with grounding in disconnecting wires from electrically-saturated equipment, etc.

ELECTRICAL MACHINERY

PHASE ADVANCERS. A New Phase Advancer. Engineer, vol. 142, no. 3679, July 16, 1926, p. 71, 1 fig. Machine made by Metropolitan Vickers Electrical Co. is claimed to combine many operating characteristics unobtainable with other types of phase advancers, whereas simplicity results in low initial cost and minimum maintenance expenses.

RATINGS. The Ratings of Electrical Machines as Affected by Altitude, C. J. Fechheimer. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 2, Feb. 1926, pp. 124-130, 6 figs. Presents equations applicable to machines cooled by forced air connection currents; considers effect of altitude from two standpoints, namely, change in temperature rise, rating remaining the same, or change in rating, temperature rise at given altitude equalling that of sea-level. See discussion in no. 8, Aug. 1926, pp. 763-766, 2 figs.

ELECTROMAGNETIC FIELDS

MAPPING. Mapping Magnetic and Electrostatic Fields, A. D. Moore. Elec. Jl., vol. 23, no. 7, July 1926, pp. 355-362, 24 figs. Rectilinear fields; two-dimensional fields; curvilinear squares; corner-flux principles; special problems; division of m.m.f.; calculations on two dimensional field maps.

ELEVATORS

SAFETY DEVICES. Safety Devices of Elevators and Lifts (Dispositifs de Securité dans les ascenseurs et monte-charges), G. Baignères. Société des Ingénieurs Civils de France Mémoires et Compte Rendu des Travaux, vol. 79, no. 3-4, 1926, pp. 71-110, 37 figs.

EXPLOSIVES

SAFETY IN HANDLING. Safety and Economy in Handling Explosives, J. E. Tiffany. Min. Congress Jl., vol. 12, no. 8, Aug. 1926, pp. 593-597, 5 figs. Bureau of Mines recommends that coal be mined exclusively with permissible explosives, fired electrically, and that as aid to blasting, all coal which it is feasible to cut should be cut or sheared.

F

FILTRATION

HYDRAULIC JUMP AS MIXING DEVICE. The Hydraulic Jump as a Mixing Device, A. G. Levy and J. W. Ellms. Water Wks., vol. 65, no. 7, July 1926, pp. 323-331, 4 figs. Investigations at Cleveland of hydraulic jump as chemical mixing device in filtration.

FILTRATION PLANTS

LIVERPOOL, ENG. The Oswestry Filter Beds of the City of Liverpool Waterworks. Engineering, vol. 122, no. 3159, July 30, 1926, pp. 123-125, 17 figs. Growing demand for water has rendered it necessary to increase area of slow sand filter beds, and three new beds were completed; construction presents novel features.

WASHINGTON, D.C. Universal Metering of Water Supplies, J. Ericson. Water Wks., vol. 65, no. 7, July 1926, pp. 307-309. Design and constructional features; foundation; control chambers; coagulating basins; filters; pumping station; filtered water reservoir; multi-ducts; wash water reservoir; alum manufacture; power plant.

FIREBRICK

SPALLING. The Mechanism of Spalling, F. H. Norton. Am. Ceramic Soc.—Jl., vol. 9, no. 7, July 1926, pp. 446-461, 20 figs. Study of stresses and fractures developed in solid when rapidly heated or cooled.

FIRE PREVENTION

WASHINGTON, D.C. Report of Committee on Fire Prevention and Engineering Standards on the City of Washington, D.C. Nat. Board of Fire Underwriters—Committee Report, no. 275, June 1926, 36 pp., 2 figs. Fire-fighting facilities; fire department; fire alarm system; fire department and auxiliaries; structural conditions and hazards; recommendations.

FLOW OF GASES

POPPET-VALVES. A Study of the Potential Flow of Gas Through the Poppet Valves, K. Tanaka. Soc. of Mech. Engrs. (Japan)—Jl., vol. 29, no. 3, July 1926, pp. 397-408, 8 figs. Seeks to solve case of tulip-type valve with conical seat in its increased lift, and compares results with those derived by Eck, in other words, with those of plane seated and ordinary conical-seated valve. (In English.)

FLOW OF WATER

PIPES. Theoretical Energy Losses in Intersecting Pipes, J. C. Stevens. Eng. News-Rec., vol. 97, no. 4, July 22, 1926, pp. 140-141, 2 figs. Confined to impact and eddies; general formula deduced, with application to number of particular cases.

FLYING BOATS

DURALUMIN HULLS, REPAIRING. Repairing Duralumin Hulls and Pontoons. Aviation, vol. 21, no. 6, Aug. 9, 1926, pp. 242-243, 5 figs. Fractures and punctures in duralumin may be repaired effectively and with great facility.

FORGING

SUPERHEATER PARTS. Forged Return Bends for Superheater Units. Machy. (Lond.), vol. 28, no. 718, July 15, 1926, pp. 423-424, 2 figs. Operation in forging superheater return bends on upsetting type of forging machine.

FORGINGS

DEFECTS IN. Defects in Carbon-Vanadium Forgings, O. B. Schultz. Forging—Stamping—Heat Treating, vol. 12, no. 7, July 1926, pp. 230-234, 9 figs. Defects which have been found in large carbon-vanadium locomotive forgings, and means for their prevention.

PICKLING. The Elements of Good Pickling Practice, R. L. Rolf. Forging—Stamping—Heat Treating, vol. 12, no. 7, July 1926, pp. 248-249 and 254. Various factors which enter into practice of pickling are briefly discussed; pickling of forgings; unlike tumbling or sand blasting; reveals defects.

FOUNDRIES

FUEL ECONOMY. Fuel Economy in the Foundry, A. Campion. Metal Industry (Lond.), vol. 29, no. 3, July 16, 1926, pp. 63-65. Fuel consumption in foundry practice; heat generation; temperature of gaseous current; heating in reverberatory furnaces; annealing operations; drying of molds.

SAFETY IN. Safety in Foundries. Nat. Safety News, vol. 14, nos. 1 and 2, July and Aug. 1926, pp. 43-53 and 42-54, 54 figs. No. 73 of series of safe-practices pamphlets. July: Training new man; handling raw material; sand mills, cutters and sifters; moulding and core-making; flasks; ovens; foundry floor; cupolas and furnaces; crucible furnaces. Aug.: Open-hearth furnaces, ladles; handling molten metal; shaking out castings; cranes, hoists and accessories; wheelbarrows and trucks; sand buckets; protective clothing; ventilation; heating and lighting.

STATISTICAL DATA, UNITED STATES. Consummated Deflation Shown in Foundry Count. Foundry, vol. 54, no. 16, Aug. 15, 1926, pp. 627-632, 8 figs., 6 tables. Compilation of statistics shows increase in all classes of castings plants except those specializing in gray iron.

FOUNDRY EQUIPMENT

HEAT-TREATING. Heat Treatment and Foundry Plant. Machy. (Lond.), vol. 28, no. 719, July 22, 1926, pp. 459-460, 4 figs. Details of coke-fired muffle furnace, No. 2 Simpson intensive sand mixer and core stove, constructed by August's Muffle Furnaces, Halifax.

MAGNETIC-SEPARATOR PULLEYS. Magnetic Separator Pulleys in Foundries, C. H. S. Tupholme. Foundry Trade Jl., vol. 34, no. 518, July 22, 1926, pp. 76-77, 3 figs. Principles and characteristics.

PARTING MATERIALS. Composition of Foundry Parting Material. Foundry, vol. 54, no. 13, July 1, 1926, p. 509. Although composition of powder designed to serve as parting medium, placed on market by manufacturers of foundry supplies, is guarded as trade secret, it is generally understood that lycopodium and tripoli form base.

FUELS

CARBON MONOXIDE AND HYDROGEN FROM. Synthetic Fuel from Carbon Monoxide and Hydrogen, O. C. Elvins and A. W. Nash. Fuel, vol. 5, no. 6, June 1926, pp. 263-265. Methods available for transformation of CO and H into compounds containing carbon and hydrogen are divided into four groups, all requiring use of catalyst and increased temperature.

LOW-GRADE. Using Low-Grade Fuel (L'utilisation des combustibles minéraux de qualité inférieure), M. Berthelot. Société des Ingénieurs Civils de France—Mémoires et Compte Rendu des Travaux, vol. 79, no. 5-6, May-June, 1926, pp. 318-369, 9 figs.

FURNACES, ANNEALING

LINING. New Furnace Lining, R. Walker. Iron Age, vol. 118, no. 7, Aug. 12, 1926, p. 420, 2 figs. Monolithic structure replaces brickwork; method of using.

FURNACES, GAS

ANNEALING. Bright Annealing by Gas Furnaces, J. B. Nealey. Iron Age, vol. 118, no. 7, Aug. 12, 1926, pp. 422-423, 3 figs. Making percolator parts in plant of Manning, Bowman & Co., Meriden, Conn.; air-gas ratio regulated to prevent scale formation.

COMBUSTION-SPACE REQUIREMENTS. Combustion-Space Requirements, O. L. Kowalke and A. W. Carlson. Gas Age-Rec., vol. 58, no. 4, July 24, 1926, pp. 107-109, 5 figs. Behaviour of burners attached to furnaces; maximum amount of gas which can be completely burned per unit volume of combustion space.

FURNACES, HEATING

RE-HEATING. A Direct Method of Calculating the Size of Continuous Re-Heating Furnaces, C. Gerrard. Iron & Coal Trades Rev., vol. 113, no. 3044, July 2, 1926, p. 3. Input to furnace; output; method of calculating furnace size.

G

GAS HOLDERS

CORROSION. Corrosion of Gas Holders. Gas Jl., vol. 175, no. 3296, July 21, 1926, pp. 141-142. Review of report of committee of Société Technique de l'Industrie du Gaz; influence of gas composition and of tank water; exterior influences; constitution of metal employed; protective measures.

TANKLESS. Explosion in a Tankless Holder. Gas Jl., vol. 175, no. 3296, July 21, 1926, pp. 135-138, 5 figs. Translated report to conference of German engineers on explosion of gas holder in Posen, Poland, having capacity of 1¾ million cu. ft., diameter of 112 ft. and height of 190 ft.; cause of accident appears to have been tilting of disk or piston, which, by displacing tar seal, allowed gas to pass into enclosed space between top of disk and roof; explosive mixture thus formed was apparently ignited by friction, and blew roof distance of 40 yds.

GAS TURBINES

STEELS FOR. Internal Combustion Turbines, W. H. Johnson. Autocar, vol. 57, no. 1604, July 30, 1926, pp. 165-166. Points out that solution of problem lies in discovery of suitable steels to withstand very high temperatures generated; recent development of new high-temperature steel by Hadfield concern may be of far-reaching importance to automobile industry by bringing gas turbine within bounds of practicable possibility.

GEARS

AUTOMOBILE. The Institution of Automobile Engineers, H. E. Merritt. Automobile Engr., vol. 16, no. 217, July 1926, pp. 266-274, 15 figs. Camshaft drives; pump gears; gear box; calculations of velocities of sliding and rolling; influence of rolling and sliding on lubrication; final drive; worm drive. Paper awarded Daimler premium for 1924-25.

HELICAL. Solving a Helical Gear Problem by Unconventional Methods, E. Buckingham. Am. Mach., vol. 65, no. 8, Aug. 19, 1926, pp. 327-328. Selection of change gears without use of continuous fractions; calculation of theoretical pitch radius for hob and root radius of gear.

INSTRUMENT. Die and Assembling Fixture for Instrument Gears. Machy. (Lond.), vol. 28, no. 719, July 22, 1926, pp. 456-458, 6 figs. In manufacture of certain delicate recording instruments, it is necessary to employ gears of exceedingly fine pitch in trains having high gear ratios; friction is minimized partly by use of small delicate bearings and correspondingly small arbours for gears.

GIRDERS

CONTINUOUS. A Simple Method of Dealing with Continuous Girders, A. W. Loveridge. Engineering, vol. 122, no. 3157, July 16, 1926, p. 63, 6 figs. Shows that much use may be made of principle of reciprocal deflections in forming deflection equations.

TRUSSED. Trussed Girders, N. Tate. Mech. World, vol. 80, no. 2066, Aug. 6, 1926, pp. 99-100, 8 figs. Strength of trussed girders depends largely on depth of trussing, which, in turn, is often regulated by headroom available.

GOLD DEPOSITS

NOVA SCOTIA. The Gold Deposits of Nova Scotia, S. Brunton. Can. Inst. of Min. & Met.—Bul., no. 171, July 1926, pp. 781-847, 29 figs. Analysis of history and present status, and hypothesis concerning structural features of Province in relation to deposits of gold.

ONTARIO. District of Patricia Red Lake and Adjacent Areas, W. R. Rogers. Ont. Dept. of Mines—Bul., no. 56, 1926, 11 pp., 3 figs. Summary of reports and maps published by Geological Survey of Canada and Ontario Department of Mines.

GRINDING

CAMS. Automobile Camshaft Grinding and Checking, E. W. Hancock. Machy. (Lond.), vol. 28, no. 720, July 29, 1926, pp. 493-497, 7 figs. Method of accurate cam grinding suitable to policy which has moderate output and variety of designs.

INTERNAL. Internal Grinding, H. Darbyshire. Automobile Engr., vol. 16, no. 217, July 1926, pp. 254-255, 3 figs. Measures to be observed in securing accurate work and high output.

H

HARDNESS

ROCKWELL TEST. Rockwell Hardness-Test Approved. Soc. Automotive Engrs.—Jl., vol. 19, no. 2, Aug. 1926, pp. 125-126. Principle of test recommended by sub-division of Soc. of Automotive Engrs. Standards Committee.

HEATING, GAS

HOUSES, WIND EFFECT. The Effect of Wind on Gas Fires (Das Haus im Windstrom), Kobbert. Gas- u. Wasserfach, vol. 69, no. 20, May 15, 1926, pp. 404-412, 33 figs; also translated abstract in Gas World, vol. 85, no. 2190, July 24, 1926, p. 83, 1 fig.

RADIATING HEAT. The Role of Radiating Heat in the Heating Effect of Gas Heaters (Ueber den Anteil der strahlenden Wärme an der Wärmewirkung von Gasheizungen), F. Hurdelbrink and R. Polenske. Gas- u. Wasserfach, vol. 69, no. 2., May 22, 1926, pp. 421-430, 9 figs. Method of determining heat radiated from given source to given distance and surface, and its experimental test with heating lamp, gas heater filled with refractories, and cast-iron stove.

HEATING, HOT-AIR

FLUE-GAS SAMPLING. Principles of Design in Furnace Heating, A. M. Daniels. Sheet Metal Worker, vol. 17, no. 12, July 16, 1926, pp. 452-454, 10 figs. Combustion of coal; products of combustion; flue-gas analysis.

HEAT LOSSES. Cooling of Water in Pipes of Heating Plant (Il raffreddamento dell'acqua nelle tubazioni degli impianti a termosifone), A. Gini. Ingegneria, vol. 5, no. 5, Mar. 1926, pp. 164-168, 1 fig. Discusses piping for heating plants with little change in level, with distribution from lower level; calculation of area of radiators for each; heat losses in lower-level plants, etc.

HEATING, STEAM

CENTRAL. Fundamental Factors in District Steam Distribution. Heat. & Vent. Mag., vol. 23, no. 8, Aug. 1926, pp. 73-76, 3 figs. How to predetermine initial pressures, transmission-line location and other elements to secure best results.

HIGHWAYS

RESEARCH. Results of Highway Research in Iowa, R. W. Crum. Mun. & County Eng., vol. 71, no. 1, July 1926, pp. 58-61. Results obtained from work completed on 15 research projects active during year 1925, under direction of research organization of Iowa State Highway Commission and from work accomplished on three research projects in which this organization co-operated with other agencies.

TRACTIVE RESISTANCE OF. An Experiment in Tractive Resistance on Various Types of Highways, H. B. Shaw. Good Roads, vol. 69, no. 6, June 1926, pp. 225-226. Purpose of tests; apparatus used.

HOUSES

MINERS. Miners' Dwelling Houses, H. E. Mitton. Colliery Guardian, vol. 182, no. 3419, July 9, 1926, pp. 75-77, 12 figs. Site; streets; houses; lighting; hot water; furnace.

HOUSING

LABOR. Housing. Monthly Labor Rev., vol. 23, no. 1, July 1926, pp. 71-76, 1 fig. Volume of building construction, 1919 to 1925, New York housing law; housing situation in Germany, 1925.

HYDRAULIC TURBINES

DEVELOPMENTS. Present State and Tendencies in Hydraulic-Turbine Construction (Les progrès, l'état actuel et les tendances de la construction des turbines hydrauliques), P. Cayère. Arts & Métiers, vols. 78 and 79, nos. 58, 59, 64 and 65, July and Aug. 1925 and Jan. and Feb. 1926, pp. 269-286, 318-327, 11-24 and 63-67, 57 figs.

DRAUGHT TUBES. Draught Tube Lined with Cast Iron at Big Creek No. 8 Plant. Eng. News-Rec., vol. 97, no. 5, July 29, 1926, pp. 182-183, 2 figs. Lining of steel plates, loosened by vibration, is replaced by heavier construction in California hydro plant.

GOVERNORS. Hydraulic-Turbine Governor Pressure Fluids, M. B. Thurston. Power, vol. 64, no. 7, Aug. 17, 1926, p. 248. Discusses what appears to be best for oil-pressure governor; author's preference is fairly light oil of good flash test; strength of film and stability.

RUNNERS, PITTING OF. Pitting of Hydraulic Turbine Runners. Elec. News, vol. 35, no. 15, Aug. 1, 1926, p. 40. Causes of this form of corrosion and methods for its prevention.

HYDRO-ELECTRIC DEVELOPMENTS

NEWFOUNDLAND. The Humber Development of Newfoundland Power and Paper Company, Limited, H. C. Brown. Eng. Jl., vol. 9, no. 8, Aug. 1926, pp. 359-372, 22 figs. Power equipment and development and its installation in paper mill in Newfoundland; investigation of precipitation and flood conditions; canal and canal intake works; pipe line, power house and transmission lines, substation, switchboard room, conduit system, wire and cable.

HYDRO-ELECTRIC PLANTS

MECHANICAL EQUIPMENT. Equipping the Water Power Plant, F. Johnstone-Taylor. Power House, vol. 19, nos. 4, 5 and 8, Feb. 20, Mar. 5 and Apr. 20, 1926, pp. 19-23, 19-21 and 29-31, 31 figs. Feb. 20: Sluices and other control apparatus. Mar. 5: Pipes and pipe line. Apr. 20: Valves and protective devices.

QUEBEC. Rapid Work on Gatineau Power Plants. Contract Rec., vol. 40, no. 31, Aug. 4, 1926, pp. 736-738, 11 figs. Details of storage dam at Lake Bascatong power houses at Farmers' Rapids and Chelsea Falls, and pulp and paper mill at East Templeton.

SAFETY IN. Developing the Safety Habit in a Hydro-Electric Station, R. D. Shaub. Nat. Safety News, vol. 14, no. 2, Aug. 1926, pp. 11-13 and 18, 6 figs. Methods and precautions employed at Holtwood hydro-electric station, Pa.

I

INDICATORS

MEAN-PRESSURE. Mean-Pressure Indicator, J. Geiger. Eng. Progress, vol. 7, no. 7, July 1926, pp. 181-183, 8 figs. In all reciprocating engines there exists simple relation between mean-pressure referred to stroke and mean-pressure referred to time; describes measuring instrument indicating both pressures directly.

INDUSTRIAL MANAGEMENT

CATALOGS. Catalogs (Die Stückliste), W. Heinze. Maschinenbau, vol. 5, no. 14, July 15, 1926, pp. 649-653, 6 figs. Discusses use of list of goods manufactured at given shop, in which for each item details of all its parts are given, and for each part all specifications, etc., for production, recommending this list as sole reference for producers and buyers, its information being complete to satisfy all demands; examples of sheets with tabulation; for parts and for finished goods.

PRODUCTION LOTS, DETERMINING PROPER SIZE OF. Method of Finding Minimum-Cost Quantity in Manufacturing, R. C. Davis. Mfg. Industries, vol. 12, no. 2, Aug. 1926, pp. 129-131, 1 fig. Formulas for size of production lots. Continuation of article in Apr. 1925, issue of same journal. See reference in Eng. Index 1925, p. 400.

INDUSTRIAL PLANTS

POWER AND HEAT SUPPLY. Selecting a Power and Heat Supply for Industrial Plants. Mech. Eng., vol. 48, no. 8, Aug. 1926, pp. 806-807. Discussion of paper by M. K. Bryan, published in June, 1926, issue of journal.

INDUSTRIAL RELATIONS

SMALL PLANTS. Plans for Industrial Relations Work in Small Plants, R. W. Kelly. Mfg. Industries, vol. 12, no. 2, Aug. 1926, p. 132. In Associated Oil Co. scattered divisions in producing fields have successfully developed plan of using so-called employment foremen.

INSULATION, HEAT

INDUSTRIAL APPLICATIONS. Heat Insulation in Industrial Plants, L. B. McMillan. Engrs. and Eng., vol. 43, no. 7, July 15, 1926, pp. 191-194, 5 figs. Observed conditions; useful curves; effect of circulating air; maintaining temperature head.

INSULATING MATERIALS, ELECTRIC

PORCELAIN. Selection of Porcelain for Electrical Purposes, M. Kraner. Elec. Jl., vol. 23, no. 7, July 1926, pp. 344-348, 14 figs. Composition of porcelain; action of heat; superiority of American clays; dry process porcelain; high-strength insulation; glazes.

INTERNAL-COMBUSTION ENGINES.

FRICTION LOSSES. Research on Friction Losses in Explosion Engines (Recherches sur les pertes par frottement dans les moteurs à explosions), A. Planiol. Technique Automobile et Aérienne, vol. 17, nos. 133 and 134, 1926, pp. 33-42 and 81-90, 18 figs. Experiments carried out to determine any connections between phenomena of internal friction in explosion engines, whether losses increase with power and velocity; study and operation of Watt indicators; variation of losses with charge; tests at variable speed and temperature.

See also Airplane Engines; Automobile Engines; Diesel Engines; Oil Engines.

IRON ALLOYS

IRON-CARBON. The Carbon Content of Pearlite in Iron-Carbin Alloys Containing One Per Cent Silicon, A. Hayes and H. U. Wakefield. Am. Soc. Steel Treating—Trans., vol. 10, no. 2, Aug. 1926, pp. 214-221 and (discussion) 221-232, 7 figs. Review of modification of diagram for pure iron-carbon alloys which was constructed to conform to experimental data for malleable white-iron composition.

IRON DEPOSITS

CANADA. Mississagi Reserve and Goulais River Iron Ranges, District of Algoma, E. S. Moore. Ontario Dept. of Mines, vol. 34, 1926, pp. 1-33, 21 figs. Topography; economic and general geology of iron districts.

IRON ORE

FUTURE PRODUCTION. Factors Affecting Probable Future Iron Ore Production, W. G. Swart. Min. & Met., vol. 7, no. 236, Aug. 1926, pp. 334-336, 4 figs. Factors which will affect future production; increased cost of mining; competition of foreign ores; changes in furnace location and practice; unequal ownership.

J

JOINTS

WELDED, X-RAY EXAMINATION. Welded Joints Searched by X-Rays, J. T. Norton. Iron Age, vol. 118, no. 7, Aug. 12, 1926, pp. 409-412, 9 figs. Defects which can be detected and some which cannot; methods of making and testing welds; typical radiographs.

L

LABOUR

PRODUCTIVITY INDEXES. Index of Productivity of Labour in the Steel, Automobile, Shoe and Paper Industries. Monthly Labour Rev., vol. 23, no. 1, July 1926, pp. 1-19. First of series of studies of labour-productivity indexes in American industry now being carried on by U. S. Bur. of Labour Statistics.

WAGES AND HOURS. Wages and Hours of Labour. Monthly Labour Rev., vol. 23, no. 1, July 1926, pp. 38-40. Wages and labour conditions in Louisiana; English views of American wage policies; wage fixing and wage rates in New South Wales; wages and prices in Cuba; average daily wages and output in French coal mines, 1920-1925; wages and cost of living in Nagarit, Mexico.

LABORATORIES

HYDRAULIC. New Hydraulic Laboratory for Worcester Polytechnic. Eng. News-Rec., vol. 97, no. 3, July 15, 1926, pp. 96-97, 3 figs. Small laboratory built in 1894 replaced by much larger one; provisions made for many kinds of tests.

LADDERS

IRON. Iron Ladders: Some Notes on Design and Construction, H. Atkin. Mech. World, vol. 80, no. 2063, July 16, 1926, p. 48, 4 figs. Supports for wall ladders; sections to employ; ladder rungs; assembly; finish.

LAPPING

MACHINES FOR. New Machine Eliminates Hand-Lapping of Crankshafts. Automotive Industries, vol. 55, no. 2, July 8, 1926, pp. 48-49, 2 figs. Does work of two to six men with greater precision; all line and rod bearings lapped simultaneously; single operator able to handle machines due to automatic timing feature.

LIGHTING

ARTIFICIAL SKYLIGHT. Artificial Skylight Illumination, D. H. Tuck. Elec. World, vol. 88, no. 6, Aug. 7, 1926, pp. 281-282, 2 figs. Success of Cleveland auditorium lighting scheme duplicated in Milwaukee; concentration of prismatic reflectors over skylights used.

RESIDENCE. Commercial Possibilities of Home Lighting, M. Luckiesh. Nat. Elec. Light Assn.—Bul., vol. 13, no. 7, July 1926, pp. 427-431. Shaded lights; commercial possibilities of better lighting; average annual consumption per home; active and average sockets; kitchen lighting; portable lamps; utilitarian brackets; utility equipment; future prospects.

STREET. Modern Tendencies in Ornamental Street Lighting, C. J. Stahl. Elec. News, vol. 35, no. 14, July 15, 1926, pp. 37-42, 12 figs. Progress of improvement, design; rating and costs; overcoming glare; cost of asymmetric distribution.

Essentials of Modern Street Lighting, C. J. Stahl. Elec. World, vol. 88, no. 2, July 10, 1926, pp. 65-67, 2 figs. Safety of first importance, ornamentation and advertising value also desirable; strong silhouette effect with feeble vertical illumination not sufficient; how desired effects can be produced.

LIQUIDS

ELECTRIC HEATING. Electric Heating of Liquids and Compounds, L. P. Hynes. Indus. Engr., vol. 84, no. 8, Aug. 1926, pp. 361-363, 4 figs. Analysis of problems involved, and describes equipment available for this purpose.

LOCOMOTIVE BOILERS

FEEDWATER PREHEATING. Experiments with Preheating Locomotive Feedwater (Esperimenti con preriscaldatori d'acqua per locomotive), Rivista Tecnica delle Ferrovie Italiane, vol. 29, no. 15, Mar. 15, 1926, pp. 181-213, 10 figs. Tests carried out by Italian State Railways with various types of preheaters, including those by Weir, Worthington, Knorr, Davies & Metcalfe, A. C. F. I. and Friedmann; their fuel consumption, efficiency, etc.

LOCOMOTIVES

DIESEL-ELECTRIC. Diesel-Electric Locomotive Built in Russia. Ry. Age, vol. 81, no. 5, July 31, 1926, pp. 208-209. Locomotive weighing 198 tons, including fuel and water, driven by 1,000-hp. engine.

1,000-H.P. Diesel-Electric Locomotive. Engineering, vol. 122, no. 3159, July 30, 1926, pp. 150-152, 6 figs. Locomotive built by Baldwin Locomotive Works, Philadelphia; results of tests.

OIL-ELECTRIC. Russian Oil-Electric Locomotive of 1,000-Hp. Oil Engine Power, vol. 5, no. 8, Aug. 1926, pp. 490 and 495-497, 3 figs. Has 10-cylinder airless injection engine; motors with thermocouples and ball-bearing axles.

VALVE DIAGRAMS FOR. Valve Diagrams for Locomotives. Ry. Engr., vol. 47, no. 559, Aug. 1926, pp. 290-291, 3 figs. Points out that use of Zeuner, or other valve diagram, for purpose of design is not so usual, due perhaps to fact that certain amount of rather troublesome "trial and error" work is usually involved; author seeks to find more direct way of working.

LUBRICATING OILS

DISTILLATION. The Distillation of Lubricating Oils Under High Vacuum, B. T. Brooks. Ind. & Eng. Chem., vol. 18, no. 8, Aug. 1926, pp. 789-793, 4 figs.

FIRE-POINT CARBON TEST. Fire-Point Carbon Test, R. M. Byrd and F. C. Vilbrandt. Ind. & Eng. Chem., vol. 18, no. 7, July 1926, pp. 699-701. This test, which consists of determining amount of residue formed upon heating oil to its fire point and diluting heated oil with gasoline, measures tendency toward oxidation of lubricating oils; no special or elaborate equipment is needed and its execution is simple and rapid.

MID-CONTINENT. The Composition of Mid-Continent Petroleum, C. F. Mabery. Ind. & Eng. Chem., vol. 18, no. 8, Aug. 1926, pp. 814-819. Explains improvements in solvent fractionation; most of lubricants undergo vacuum distillation without great decomposition; behaviour of petroleum lubricants on standardized frictional testing machine shows comparative strength of individual molecules to resist breaking stress as indicated by appearance of smoke and final rupture.

PROPERTIES. Lubricating Oils (Généralités sur les huiles de graissage), R. Fillon. Bul. Technique du Bureau Veritas, vol. 5, nos. 5 and 6, May and June 1926, pp. 83-85 and 104-106. Examines mineral, vegetable and animal oils and greases; origin, manufacture, properties, flash point, freezing, emulsions, impurities, acidity, etc.

LUBRICATION

HIGH-SPEED JOURNALS. Lubrication of High-Speed Journals and the Properties of the Oil in Its Use, T. Hayashida. Soc. Mech. Engrs. (Japan)—Jl., vol. 29, no. 110, June 1926, pp. 319-373, 23 figs. Results of experiments on lubrication and lubricants. (In Japanese.)

REFRIGERATING MACHINERY. Cold Storage and Refrigeration-Machinery Lubrication. Lubrication, vol. 12, no. 7, July 1926, pp. 73-84, 21 figs. Discusses importance and systems of lubrication; selection of ammonia-compressor lubricants; control of oil supply; reclaiming of oil; lubrication of carbonic-anhydride compressors; sulphur-dioxide-machinery lubrication, etc.

STEAM CYLINDERS. Fundamental Principles of Efficient Steam Cylinder Lubrication. Nat. Engr., vol. 30, no. 8, Aug. 1926, pp. 361-363. Essential requirements for effective cylinder lubrication; oil as piston-sealing medium; lubrication without friction or wear; reduction of oil consumption; service problems and performance records.

M

MACHINE TOOLS

HISTORICAL NOTES. Pioneer Tools Serve Industry 150 Years. Can. Machy., vol. 36, no. 4, July 22, 1926, pp. 15-17, 5 figs. Machine tools at work in Soho foundry, Birmingham, Eng., after 150 years of continuous service.

NUT-DRIVING MACHINES. Nut-Driving Machine. Machy. (Lond.), vol. 28, no. 719, July 22, 1926, pp. 469-470, 3 figs. Radial air-driven type for tightening nuts on railway trucks or removing them.

MACHINING METHODS

BORING AND DRILLING. Boring and Drilling Automobile Components. Machy. (Lond.), vol. 28, no. 718, July 15, 1926, pp. 431-432, 4 figs. Boring and drilling and automobile rear axle and differential cover.

GEAR CASE. Machining a Motor Cycle Three-Speed Gear Case. Machy. (Lond.), vol. 28, no. 721, Aug. 5, 1926, pp. 517-520, 9 figs. Methods employed at works of Scott Motor Cycle Co., Saltaire, Yorks.

MAGNESIUM

CASTINGS. Casting Magnesium, Characteristics and Recent Progress (La fonderie de magnésium—ses particularités—ses récents progrés), R. de Fleury. Technique Moderne, vol. 18, no. 14, July 15, 1926, pp. 426-429. Discusses metallurgy of magnesium and its difficulties; concludes that German Griesheim Elektron Co., Italian Isotta Fraschini Co., and French Michel Co., have succeeded in industrial production of magnesium castings.

MAGNETIC FIELDS

INTENSE, GENERATION OF. The Generation of Very Intense Magnetic Fields, T. F. Wall. Instn. Elec. Engrs.—Jl., vol. 64, no. 355, July 1926, pp. 745-757, 10 figs. Method of generating magnetic fields of order of magnitude of 1 million gauss and for impressing such fields on specimen of magnetic material at regular intervals to ascertain whether any disturbance of electronic orbits can be obtained of sufficient magnitude to produce marked effect on magnetization curve of specimen.

MATERIALS HANDLING

EQUIPMENT FOR PRODUCTION PROCESSES. Fixed Equipment for Production Processes, W. T. Spivey. Factory, vol. 37, no. 2, Aug. 1926, pp. 257-259, 6 figs. Final economy of standardized type; combining cranes, monorails, hoists, conveyors; progressive assembly.

FACTORIES. Controlling Production Mechanically, W. F. Bailey. Can. Machy., vol. 36, no. 4, July 22, 1926, pp. 21-24, 9 figs. Mechanical handling methods used in Hoover Company's factory.

INDUSTRIAL PLANTS. Handling Studies Pay in the Otis Plant, R. J. Pearson. Mfg. Industries, vol. 12, no. 2, Aug. 1926, pp. 115-120, 10 figs. Cranes and motor, electric and hand-lift trucks operate under comprehensive and completely organized schedule.

WAREHOUSES. Reducing Handling Costs in the Warehouse, G. F. Zimmer. Indus. Mgmt. (Lond.), vol. 13, no. 7, July 1926, pp. 299-304, 4 figs. Explains how economies may be effected in handling of cases and packages in warehouse by employment of modern conveying appliances.

YARD HAULAGE AND HANDLING. Yard Haulage and Handling, T. F. Barbier. Factory, vol. 37, no. 2, Aug. 1926, pp. 245-247, 252 and 254, 8 figs. Deals with trailers, gas tractors, cranes, hoists, and railways.

METALS

BENDING. Tools and Machines for the Bending of Metals. Machy. (Lond.), vol. 28, no. 721, Aug. 5, 1926, pp. 509-515, 8 figs. Bending motor-armature coils; formers and formulas for former settings; bending machines for coils.

CORROSION-RESISTING. Corrosion-Resisting Materials for Chemical Plant Construction, A. Grounds. Indus. Chemist, vol. 2, no. 18, July 1926, pp. 296-300, 5 figs. Notes on corrosion-resisting irons and steels, aluminum, etc.

ENGINEERING. Present Tendencies in Engineering Materials, J. A. Mathews. Mech. Eng., vol. 48, no. 8, Aug. 1926, pp. 791-794. Specifications and what they should embody; widening expanse of engineering requirements in materials; recent demands on steel metallurgist; applications of alloy steels.

LATENT HEAT OF FUSION. Conclusions Concerning Latent Heat of Fusion and Melting Point of the Metals, H. Etherington. Chem. & Industry, vol. 45, no. 26, June 25, 1926, pp. 430-431, 1 fig.

PROPERTIES. Metals and Their Properties, T. Newton. Sheet Metal Worker, vol. 17, no. 14, Aug. 13, 1926, pp. 535 and 537. Conductivity; expansion and contraction; table of coefficients of linear expansion; surface expansion; expansion of volume; examples of expansion.

PROTECTIVE COATINGS. Protective Coatings for Metals, J. A. Aupperle. Blast Furnace & Steel Plant, vol. 14. nos. 6, 7 and 8, June, July and Aug., 1926, pp. 281-283, 322-325 and 341-343 and 357, 1 fig. Various methods for protecting metal surfaces against corrosion and exidation. July: Theory of sherardizing; how precipitation of vapor on metal occurs; tin plate; schoop metal-spraying process; dip process. Aug.: Nature of coating; asbestos-protected metal; red and black paint; vitreous enamelled sheets.

SURFACE FLAWS. A Method of Observing Flaws in Metal Surfaces and of Comparing the Conductivities of Metal Plates, E. W. Marchant and J. L. Miller. Instn. Elec. Engrs.—Jl., vol. 64, no. 355, July 1926, pp. 737-744, 9 figs. Principle of action of apparatus; design and method of use; experimental results.

MICROSCOPES

INDUSTRIAL USES. The Use of the Microscope in Industry, R. G. Guthrie. West. Soc. of Engrs.—Jl., vol. 31, no. 6, June 1926, pp. 215-225, 32 figs. Kinds of microscopes; application to study of treatment of metals.

MILLING

RAILWAY SHOPS. Milling Operations in Railroad Shops. West. Machy. World, vol. 17, no. 7, July 1926, pp. 285-286, 6 figs. Reduction in time due to installation in railroad shop of modern milling machines for manufacture of rolling stock and replacement parts.

MILLING MACHINES

TYPES. Milling Machines. West. Machy. World, vol. 17, no. 7, July 1926, pp. 294-296, 6 figs. Description of 6 milling machines by various manufacturers.

MOULDING METHODS

MACHINE MOULDING. Machine Moulding Boiler Section Castings, R. F. Ringle. Can. Foundryman, vol. 17, no. 7, July 1926, p. 11. When production requirements demand casting of uniform metal thickness, with all fitting parts true to pattern, Weil McLain Co. has found machine moulding casting incomparable.

MOULDS

DIE-CASTING. Some Features of Mould Design and Construction for Aluminium Die-Casting in Gravity Dies, N. V. Pearson. Machy. (Lond.), vol. 28, no. 718, July 15, 1926, pp. 425-427, 6 figs. Drawings of examples of gravity dies for die casting.

INGOT, WALL THICKNESS. The Influence of Mould Wall Thickness, F. Leitner. Forging—Stamping—Heat Treating, vol. 12, no. 7, July 1926, pp. 245-247, 11 figs. Influence of primary crystallization and time of solidification are examined in three different mould sizes with decreasing wall thickness; medium-wall moulds have advantage, giving better crystal development and are less expensive than heavy moulds. Translated from Stahl u. Eisen, May 13, 1926, p. 629.

MOTOR BUSES

ENGINE REQUIREMENTS. Engine Requirements of Interurban Motorcoach Service, L. P. Kalb. Soc. Automotive Engrs.—Jl., vol. 19, no. 2, Aug. 1926, pp. 179-182, 2 figs. Analyzes requirements of engine for 29-passenger interurban motor bus as to piston displacement, accelerative ability of vehicle, fuel consumption, number of cylinders, engine speed, and relation of horsepower available to power required to propel vehicle with various ratios.

HEATING AND VENTILATING. The Heating and Ventilating of Motorcoaches, L. C. Josephs, Jr. Soc. Automotive Engrs.—Jl., vol. 19, no. 2, Aug. 1926, pp. 173-178. Both systems should perform their functions efficiently in entirely unobtrusive manner; requirements of heating system include unobtrusiveness, protection of passengers from hot pipes and danger from fire, even distribution, and freedom from noise and fumes; sources and methods of heating.

MOTOR-GENERATOR

AUTOMATIC CONTROL. Automatic Control of Edison Lighting Motor-generator Sets, H. Bany and G. R. McDonald. Gen. Elec. Rev., vol. 29, no. 7, July 1926, pp. 482-489, 5 figs. Application of automatic control to machines feeding d.c. networks; constant voltage and continuous service prime essentials; control takes full advantage of favourable machine characteristics; protection and operation, single-unit and multiple-unit installations.

MOTOR-GENERATORS

DESIGN. Private Electric Power Stations, W. Kreul. Eng. Progress, vol. 7, no. 7, July 1926, pp. 190-191, 3 figs. Design and operation of motor-generator sets; Kreul system of semi-automatic stations, equally useful for lighting, power and water supply plants, as for cooling, ventilating and heating plants.

N

NUTS

STRENGTH TEST. Tests with Nuts 0.8 of the Bolt Diameter in Thickness (Versuche mit 0.8 d hohen Muttern), K. Schimz. Maschinenbau, vol. 5, no. 12, June 17, 1926, pp. 552-554, 8 figs. Discusses jolting and breaking tests of bolts and nuts, decreasing thickness of nut, and applies results to nuts of 0.8 of bolt diameter.

O

OILS

BIBLIOGRAPHY. Recent Articles on Petroleum and Allied Substances, H. Britton. U. S. Bur. of Mines, May 1926, 34 pp. History and geographic occurrence, geology and origin, properties, refining, production, utilization, etc.

CRACKING. The Development of a Liquid-Phase Cracking Process, S. J. M. Auld and A. E. Dunstan. Ind. & Eng. Chem., vol. 18, no. 8, Aug. 1926, pp. 803-807, 5 figs. Deals with Auld, Dunstant, and Herring cracking process; fundamental principles upon which design of plant was based; problem of maintaining liquid phase; factors which operate for and against this state; mechanism of cracking; experiments to determine relationship between oil temperature, skin temperature, and furnace temperature, so as to design heating arrangements of plant.

REFINING. Systematic Refining of Cracked Distillates, J. C. Morrell. Ind. & Eng., Chem., vol. 18, no. 7, July 1926, pp. 733-738, 2 figs. Chemical factors in refining.

OIL ENGINES

HEAT TRANSMISSION. Heat Transmission in Oil Engines, W. Nusselt. Mar. Engr. & Motorship Bldr., vol. 49, no. 588, Aug. 1926, pp. 301-303, 5 figs. Deduction of theoretical expression from actual tests.

SKETCHES AND WORKING. Sketches and Working of Oil Engines. Motorship, vol. 11, no. 8, Aug. 1926, pp. 617-619 and 620, 2 figs. Fuel-injection methods as distinguishing characteristics; effect on economic status and technical characteristics.

OIL FUEL

BURNERS. Oil-Fuel Burning Systems. Mech. World, vol. 80, no. 2066, Aug. 6, 1926, pp. 103-110, 29 figs. Types of equipment on market may be broadly classified under three systems according to method of atomizing fuel; pressure or mechanical, compressed-air, and steam-jet system; describes number of leading types of oil-fuel burning apparatus.

CHARACTERISTICS. The Liquid Fuel Question, F. Burgess. Machy. Market, no. 1341, July 16, 1926, pp. 21-22. Characteristics of fuel oil; advantages, disadvantages, and economy.

OPEN-HEARTH FURNACES

TEMPERATURE MEASUREMENT. Optical Temperature Measurement on Open-Hearth Furnace, B. M. Larsen and J. W. Campbell. Am. Inst. of Min. & Met. Engrs.—Trans., no. 1581-C, Aug. 1926, 15 pp., 6 figs. Possible errors in optical measurements; temperature gradients in walls and roof of melting chamber; differences between flame-off and flame-on optical readings; temperature distribution in melting chamber.

OXYACETYLENE WELDING

ALLOY STEEL. Gas Welding Alloy Steels, G. L. Walker. Welding Engr., vol. 11, no. 7, July 1926, pp. 28-30, 13 figs. How high-carbon steels and high-speed steels can be successfully welded; some applications of process.

PIPE. Pipe Welding for the Building Contractor, H. E. Wetzell. Acetylene Jl., vol. 28, no. 2, Aug. 1926, pp. 65-72 and 102, 18 figs. Deals with welding of water, gas and steam pipes used in building construction.

COPPER. Copper Welding, S. W. Miller. Machy. (Lond.), vol. 28, no. 720, July 29, 1926, p. 483. Results of series of tests made by author on copper welding rods containing such deoxidizers as silicon, manganese, aluminum, phosphorus, and various combinations of them.

TOOL STEEL. Welding High Carbon Tool Steel and High Speed Steel with the Oxy-acetylene Torch, G. L. Walker. Am. Welding Soc.—Jl., vol. 5, no. 7, July 1926, pp. 40-48, 13 figs. Rules to be observed.

P

PACKING

MACHINERY. Packing Machinery and Heavy Goods. Indus. Mgmt. (Lond.), vol. 13, no. 7, July 1926, pp. 318-322, 1 fig. Methods in use for packing such bulky articles as machinery, automobiles, airplanes, and power plants for home and overseas markets.

PROBLEMS. Good Packing as an Economic Factor in Production. Indus. Mgmt. (Lond.), vol. 13, no. 7, July 1926, pp. 270-274, 6 figs. Problems connected with packing of foodstuffs, articles of household use, medical and toilet preparations, and certain articles of clothing.

PAINTS

LIGHTING VALUE. Lighting Value of Paint in Industrial Plants, M. Luckiesh and E. W. Commery. Indus. Engr., vol. 84, no. 8, Aug. 1926, pp. 350-353, 4 figs. Reflection factor and other properties which affect its value, with pointers that will aid in using it most effectively.

PATTERNMAKING

PIPE WORK. Economies of Pipe Patterns, J. McLachlan. Can. Foundryman, vol. 17, no. 7, July 1926, pp. 16-17, 8 figs. Author stresses fact that work involved in patternmaking for pipe work in foundry is not as simple as patternmakers who have had no practical experience imagine; describes use of templets.

PATTERNS

CARE OF. The Care of Patterns, W. Dobbs. Foundry Trade Jl., vol. 34, no. 519, July 29, 1926, pp. 87-88, 2 figs. System adopted in small foundry, whose work was partly of outside-order type.

MOUNTING. Mounting Patterns Requires Varied Ingenuity, H. N. Tuttle. Foundry, vol. 54, nos. 11, 12 and 13, June 1, 15 and July 1, 1926. pp. 438-441, 479-482 and 521-522, 35 figs. Patterns are classified into three general types: match-plate patterns, rock-over machine patterns, and stripping-plate patterns; first is used chiefly for bench work, while rock-over and stripping-plate patterns are in general use for floor work; material for pattern plates; advantages of cast plate; gating patterns.

PLATES. Pattern Plates, E. Ronceray. Foundry Trade Jl., vol 34, no. 519, July 29, 1926, pp. 89-92, 12 figs. Methods of manufacturing pattern plates and core-boxes adopted by Etablissements Ph. Bonvillain & E. Ronceray, which include considerable number of improvements and apparatus to facilitate their use. Paper read before Czecho-Slovakian Foundrymen's Assn.

PAVEMENTS, CONCRETE

IMPACT STRESS. Impact Stress in Concrete Pavement by an Electric Strain Gage, D. D. McGuire. Eng. News Rec., vol. 97, no. 7, Aug. 12, 1926, p. 251, 2 figs. Stress-strain law assumed to apply to impact so that stresses are determined from areas under recorded curve.

OVERRUNS, COST OF. Cost of Quantity Overruns on Concrete Paving Work, J. L. Harrison. Highway Eng. and Contractor, vol. 15, no. 1, July 1926, pp. 29-32, 2 figs. Cause of overrun; short batches; cost of spillage; bulking of sand; coarse sand; coarse aggregate; calculating overrun losses.

PIPE, CAST-IRON

CENTRIFUGALLY CAST. Machine for Centrifugally Casting Iron Pipe (Note sur une machine à couler les tuyaux en moules métalliques, par centrifugation), C. Derulle. Fonderie Moderne, vol. 20, June 1926, pp. 138-140, 1 fig. Details of French machine which, it is said, will cast a length of pipe every 5 min.

SAND-SPUN CAST-IRON PIPE MANUFACTURE. Foundry Trade Jl., vol. 34, no. 517, July 15, 1926, pp. 45-52, 9 figs. Raw material; plant used; sand reclamation; facing molds; melting plant; chemical and physical control.

HORIZONTAL CASTING. Casting Standard Lengths of Pipe Horizontally, J. R. McWane. Water Wks. Eng., vol 79, no. 15, Aug. 1, 1926, pp. 983-984. Emphasizes advantages of method of making cast-iron pipe horizontally, and employing green sand moulds; new method is said to be entirely different from old. (Abstract.) Paper read befroe Am. Water Wks. Assn.

MANUFACTURE. Modern Methods of Cast Iron Manufacture, T. E. Dimbleby. Junior Instn. Engrs.—Jl. and Rec. of Trans., vol. 36, part 10, July 1926, pp. 421-450, 19 figs. Vertical moulding plant; pit with fast and stationary boxes; cores and coremaking; assembling, casting and stripping; mechanical production of moulds; moulding machines; ramming machines; making pipes in permanent iron moulds; centrifugal process.

PIPE LINES

INLET AIR VALVES. Pipe Line Inlet Air Valves, J. W. Ledoux. Water Wks., vol. 65, no. 7, July 1926, pp. 303-306. Principles for determining number of air valves required on steel pipe lines with solution of practical problems.

PISTONS

ALUMINUM AND MAGNESIUM ALLOYS OF. Pistons of Aluminum "Alpax" and Magnesium (Les pistons en aluminium, en alpax et en magnésium), R. de Fleury. Académie des Sciences—Comptes Rendus, vol. 182, no. 10, Mar. 8, 1926, pp. 628-630, 1 fig. Disadvantages of thin-walled pistons in regard to carbonization, over-heating with consequent ill-effects on scavenging and efficiency, and on necessary tolerances in diameter, of ribbed pistons in respect of high heat transfer to lubricant, and of thick pistons on account of their weight, are claimed to be overcome by design described, which is intended to be made in light metal; advantages accruing from use of aluminum and magnesium alloys are demonstrated by data on their thermal constants.

INTERNAL-COMBUSTION ENGINES. The Pistons of Internal-Combustion Engines. Engineering, vol. 122, no. 3159, July 30, 1926, p. 142. As a result of numerous experiments, it has become recognized that cooling of pistons takes place chiefly by heat conductivity through walls in contact with cylinders; theoretical shape of piston must be modified according to coefficient of heat conductivity of metal employed; enumerates advantages of proper cooling of piston heads.

POLES, CONCRETE

CHARTS FOR. Charts for Reinforced Concrete Poles, P. Gillespie and F. E. Wilson. Can. Engr., vol. 51, no. 5, Aug. 3, 1926, pp. 175-179, 8 figs. Graphical methods for readily determining flexural resistance, deflection, etc., of reinforced concrete poles of typical section; their use will minimize materially labour ordinarily required.

POWER FACTOR

CORRECTION. Savings from Power Factor Correction, R. L. Hall. Elec. World, vol. 88, no. 2, July 10, 1926, pp. 61-64, 4 figs. British Columbia Elec. Railway Co. saves approximately $120,000 annually by power factor correction; necessity for additional generator capacity obviated.

Power-Factor Correction and How It May Be Accomplished, H. W. Terry. Power, vol. 64, no. 7, Aug. 17, 1926, pp. 242-244, 4 figs. There are five ways in which power-factor may be corrected; rearrangement of induction motors, use of static condensers, installation of synchronous condensers, installation of synchronous motors, and of self-excited induction-synchronous motors; each of these methods is considered.

The Economic Limit of Power-Faction Correction, A. R. Stevenson, Jr. Gen. Elec. Rev., vol. 29, no. 8, Aug. 1926, pp. 574-579, 4 figs. Importance and economic bearing of power factor; setting conditions for problem; measuring of terms; mathematical analysis; computations.

POWER TRANSMISSION

STRESS WAVE TRANSMISSION. The Transmission of Stress Waves Through Elastic Media, D. Laugharne-Thornton. World Power, vol. 6, no. 32, Aug. 1926, pp. 81-90, 5 figs. Describes wave stress system of power transmission.

PRECIPITATION

ELECTRICAL. Electrical Precipitation as Applied to Gas Streams, H. R. Hanley. Univ. of Missouri, School of Mines and Metallurgy—Bul., vol. 9, no. 2, Feb. 1926, pp. 7-64, 31 figs. Theory of electric precipitation; research work; electrical machinery; determination of solids in gases.

PRESSWORK

RADIO AND TELEPHONE PARTS. Press Work on Radio and Telephone Parts, F. J. Oliver, Jr. Am. Mach., vol. 65, no. 8, Aug. 19, 1926, pp. 309-312, 11 figs. Tooling for rapid production of high-quality standardized parts; blanking, drawing, forming and perforating operations are involved.

PRODUCER GAS

FURNACES FOR. Furnaces for Highly-Purified Producer Gas, K. Wentzel. Eng. Progress, vol. 7, no. 7, July 1926, pp. 179-180, 6 figs. Chemical purifying and desulphurizing of producer gas hitherto gave rise to difficulties owing to its acid character and tar vapours suspended in it; these difficulties have been overcome by addition of alkali to purifying mass and corresponding heating of latter; system developed by firm of Gafag in Frankfort, Germany.

PUBLIC UTILITIES

FINANCING OF. Financing Public Utility Corporations, M. J. Insull. West. Soc. of Engrs.—Jl., vol. 31, no. 6, June 1926, pp. 235-242. Method of operation and necessity for so-called holding companies.

PULVERIZED COAL

MARINE BOILERS. Pulverized Fuel for Marine Boilers. Mar. Engr. & Motorship Bldr., vol. 49, no. 588, Aug. 1926, pp. 298-300, 1 fig. Experiments carried out with powdered coal as fuel under Scotch boiler; particulars of new British fuel; method of distillation which results in production of gas, "L. & N." oil, and "L. & N." fuel from coal; "L. & N." process is method of low-temperature distillation developed by Sensible Heat Distillation Co., London.

PREPARATION COSTS. Powdered Coal Costs in Factory Plant, F. L. Wolf. Power Plant Eng., vol. 30, no. 16, Aug. 15, 1926, pp. 894-896, 5 figs. Ohio Brass Co. keeps detail records of coal-preparation costs.

SMALL PLANTS. Is Pulverized Coal Practical in Small Plants? H. C. Shields. Pit & Quarry, vol. 12, no. 8, July 21, 1926, pp. 71-74. Special equipment needed; more than fine grinding necessary; large furnace areas not necessary; amount of oxygen important; tube mill; destructive flames eliminated.

PUMPS

BOILER-FEED. Selection and Operation of Modern Boiler-Feed Equipment, C. L. Hubbard. Nat. Engr., vol. 30, no. 8, Aug. 1926, pp. 341-344, 6 figs. Types of boiler-feed pumps and their application for different operating conditions and service requirements; advantages and disadvantages of direct-acting power-driven and centrifugal pumps for different services; characteristics of centrifugal pumps.

GEAR. Gear Pump Capacities, H. Walker. Machy. (Lond.), vol. 28, no. 719, July 22, 1926, p. 451. Presents tables showing capacity factors of gear pumps of all sizes; capacity factor represents output in gallons per minute for one revolution of pump which has gears of unit face width.

R

RADIOTELEGRAPHY

SIGNALS AND INTERFERENCE, EFFECTS OF. Behaviour of Radio Receiving Systems to Signals and to Interference, L. J. Peters. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 8, Aug. 1926, pp. 707-716, 12 figs. Develops simple but effective way of answering questions which raise in dealing with effects of both signals and interference upon radio receiving systems when steady-state properties of system are known, or of arriving at best steady-state properties of system for receiving given signal through interference.

RADIOTELEPHONY

ELECTRIC LIGHT COMPANIES, RELATION TO. Radio and the Electric Light and Power Company, D. Sarnoff. Nat. Elec. Light Assn.—Bul., vol. 13, no. 7, July 1926, pp. 421-426. Present status of radio technical developments; radio and public good will; increased consumption of power; merchandizing aspects of radio; central stations' share of radio market; radio retailing, inductive interference.

RAILS

TRANSVERSE FISSURES. How the Illinois Central Watches Its Transverse Fissures. Ry. Eng. & Maintenance, vol. 22, no. 8, Aug. 1926, pp. 302-307, 7 figs. Methods and records which make possible prompt removal of defective heats.

RAILWAY ELECTRIFICATION

GREAT NORTHERN. Great Northern Electrification Plans. Elec. World, vol. 88, no. 7, Aug. 14, 1926, pp. 321-323, 2 figs. Single-phase motor-generator-type locomotives adopted; main-line electrification over cascades to cost more than three millions; Northern Pacific studying electrification.

RECTIFIERS

Mercury-Vapour. Glass Type Mercury-Vapour Rectifiers. Power Engr., vol. 21, no. 245, Aug. 1926, pp. 298-300, 4 figs. Account of British developments in static-converting plant.

REFRIGERATING MACHINES

Gas-Fired. Gas Refrigeration, N. T. Sellman. Gas Industry, vol. 26, no. 7, July 1926, pp. A-12-A-14 and (discussion) A-14-A-15. Claims that most gas machines developed to date are less noisy, less complicated and have fewer moving parts than electric ice machines; describes machine which is a small compact gas-fired refrigerating unit of absorption type and enumerates points which test on this machine will show.

Household-Type. Design Problems of the Household-Type Refrigerating Machines, M. Lassen. Refrig. Eng., vol. 12, no. 12, June 1926, pp. 409-413 and 4 5, 1 fig. Outline of factors which must be considered in any well-organized plan for developing small automatic refrigerating machine.

Improvements. Recent Improvements in Refrigerating Apparatus, F. Ophuls and G. A. Horne. Refrig. Eng., vol. 12, no. 12, June 1926, pp. 406-408 and 414-415. Authors' comment on discussion by T. Shipley on their paper presented at Fourth International Congress of Refrigeration in London, 1924, and published in this journal in May, 1926.

Diesel and Electric Drive. Comparison of the Electric and Diesel Drives for Ice Plants, C. T. Baker. Refrig. World, vol. 61, no. 7, July 1926, pp. 14-15. Basis for comparing relative merits of two systems of drive.

REFRIGERATION

Adsorption and. Adsorption and Its Relation to Refrigeration, F. G. Keyes. Refrig. Eng., vol. 12, no. 12, June 1926, pp. 416-417. Enumerates characteristics which adsorbent useful in refrigeration art must possess; aspect of problems encountered in connection with adsorbents and absorbents.

REFUSE DISPOSAL

Recovery of Urban Wastes. The Recovery and Use of Waste Materials, I. B. C. Kershaw. Indus. Chemist, vol. 2, no. 18, July 1926, pp. 309-314, 5 figs. Methods followed in preparing refuse for destructor plants; American and continental methods of refuse disposal.

REGULATORS

Induction. Operating Induction Regulators in Series-Parallel, E. H. Coxe, Jr. Elec. World, vol. 88, no. 5, July 31, 1926, pp. 226-227, 2 figs. Regulators having combined secondary relay and limit switch and regulators having double-pole, knife-blade type limit switches operate satisfactorily with primary relay operating two secondary relays in parallel, no other changes being made.

RIVERS

Bank Protection. Behaviour of Flexible Reinforced-Concrete Mattresses as Bank Protection on Deep Rivers, B. Okazaki. Eng. News-Rec., vol. 97, no. 7, Aug. 12, 1926, pp. 248-250, 1 fig. Satisfactory results obtained in river work in Japan; method of laying mattresses and fascines in deep water; experience with steel wire for under-water work.

Circulating Water Intakes on. Circulating Water Intakes on Inland Rivers, C. E. Colborn. Power Plant Eng., vol. 30, no. 16, Aug. 15, 1926, pp. 898-899, 4 figs. In absence of specific data, stratification of water in rivers must not be assumed.

ROAD, ASPHALT

Asphalt Mixers. 14-Ton Asphalt and Tar Macadam Plant. Engineering, vol. 122, no. 3159, July 30, 1926, pp. 130-132, 2 figs. Machine is equipped with elevator gear, rotary dryer, dust collector and paddle mixer.

ROADS, CONCRETE

Repairing. Methods of Repairing Concrete Roads, A. H. Hinkle. Roads & Streets, vol. 66, no. 1, July 1926, pp. 50-55, 1 fig. Procedure of Indiana State Highway Department. Paper presented before Miss. Valley State Highway Departments.

ROADS, EARTH

Lime, Use of. Use of Lime in Earth Roads, H. W. Wood, Jr. Cement Mill & Quarry, vol. 29, no. 2, July 20, 1926, pp. 26 and 28. Test for stabilizing effect; results of tests; practical treatment with lime; maintenance; test roads.

ROADS, GRAVEL

Sand and. Gravel and Sand Roads, R. H. Picher. Can. Min. Jl., vol. 47, no. 29, July 16, 1926, pp. 716-718. Composition; grading; binder; testing; construction; maintenance.

Type of Gravel. What is the Best Type of Gravel for Road Use? R. H. Picher. Contract Rec., vol. 40, no. 30, July 28, 1926, pp. 717-719. Important points in connection with use of gravel for highway construction and maintenance, based on observations of roads in Eastern Canada.

ROADS, MACADAM

Asphalt-Macadam. Asphalt-Macadam in Northeastern States, V. L. Ostrander. Roads & Streets, vol. 66, no. 1, July 1926, pp. 5-8. Construction details of work in New York and New England. Paper presented before New Hampshire Good Roads Assn.

Bituminous Macadam. Bituminous Macadam and Surface Treatment, E. B. Lockridge. Roads & Streets, vol. 66, no. 1, July 1926, pp. 56-58. Application of bituminous material; reconstruction of 21 miles of Lincoln Highway; patching bituminous macadam; treatment of stone and gravel surfaces. Paper presented at Twelfth Annual Road School, Purdue Univ.

Improvement in Design. Suggested Improvement in Macadam Road Design, A. T. Goldbeck. Eng. News-Rec., vol. 97, no. 6, Aug. 5, 1926, pp. 221-223, 8 figs. Granular subbase, stone shoulder drains, concrete or bituminous curbs to stop spreading and give edge strength. Abstracted from Jl. of Nat. Crushed Stone Assn.

ROOFS

Steel Truss. Steel Truss Roof for Chicago Riding Club. Eng. News-Rec., vol. 97, no. 7, Aug. 12, 1926, pp. 250-251, 1 fig. Light and ventilation factors in design; upper floor hung from transverse cantilever trusses.

S

SAFETY

Electrical Hazards. Electrical Hazards and the Safe Use of Electrical Apparatus, F. A. Gaby. Elec. News, vol. 35, no. 14, July 15, 1926, pp. 32-34. Ontario Hydro Commission regulation to avoid danger from shock and fire.

SAND, MOULDING

Facing Sands. A Practical View of Facing Sands. Foundry Trade Jl., vol. 34, no. 518, July 22, 1926, p. 79. Points out importance of mixing of facing sand; sands used in facings should be properly dried and then coal dust added; gives table of mixtures for various classes of mouldings; rule of blackings in facing mould.

Permeability and Cohesion, Measurement of. Practical Use of Apparatus for Measuring Permeability and Cohesion of Moulding Sand (Utilisation pratique des Appareils de mesure de la perméabilité et de la cohésion des sables de moulage), R. Lemoine. Fonderie Moderne, vol. 20, July 1926, pp. 155-162, 3 figs. Discusses mixtures for a given product, their composition and method of preparation; control of uniformity of materials for mixtures; control of mixtures to assure regularity of operations and uniformity of properties.

SCREW THREADS

Cutting Equipment. Thread-Cutting Equipment. West. Machy. World, vol. 17, no. 7, July 1926, pp. 302-304, 4 figs. Descriptions of various threading machines, die heads and taps.

SEPARATORS

Steam. Saving Fuel by Using Dry Steam, F. Dawson. Eng. & Boiler House Rev., vol. 40, no. 2, Aug. 1926, pp. 67-70, 5 figs. Types of separators for eliminating moisture from steam.

SEWAGE DISPOSAL

Activated-Sludge. New Activated-Sludge Plant of Essen, Germany, K. Imhoff. Eng. News-Rec., vol. 97, no. 8, Aug. 19, 1926, pp. 298-299, 6 figs. Submerged paddles supplemented by compressed air from diffuser plates produce activation at 8 hp. per M.G.

SEWER CONSTRUCTION

Concrete Road Machinery for. Concrete Road Machinery Adopted for a Three and a Half Million Dollar Sewer Job, F. W. Skinner. Good Roads, vol. 69, no. 7, July 1926, pp. 256-258, 4 figs. Work accomplished in construction of very large and deep concrete sewer, for which many of principal items of plant installed were identical with those necessary for heavy road construction; thus making it easy for any contractor for road work to make advantageous bids for sewer construction in idle times or vice versa.

SEWERS

Design. Notes on the Design of a Main Sewer, F. Wilkinson and F. W. Brown. Surveyor, vol. 70, no. 1800, July 23, 1926, pp. 77-82, 8 figs. Important factors governing design, such as drainage area, depth of sewer, construction and materials necessary for tunnelling and cost.

Laying. Laying 42-in. Concrete Pipe Sewer on Ocean Bottom. Eng. News-Rec., vol. 97, no. 8, Aug. 19, 1926, pp. 292-293, 1 fig. Work damaged by earthquake restored; derrick barge lowered pipe singly to diver; jointing done under water.

SHEET IRON

Pickling. Some Factors Influencing the Rate of Pickling of Sheet Iron, J. E. Hansen and G. S. Lindsey. Am. Ceramic Soc.—Jl., vol. 9, no. 8, Aug. 1926, pp. 481-492, 13 figs. Results of experiments with regard to various factors entering into pickling of sheet iron.

SHEET METAL

Machines for Working. Equipment for Sheet Metal and Structural Fabrication. West. Machy. World, vol. 17, no. 7, July 1926, pp. 309-311, 8 figs. Description of various machines, shears, rivetters, bending rolls, flanging machines, hammers, etc.

SHOVELS

Steel. The Steel Shovel—How It Is Made, M. W. Von Bernewitz. Iron Age, vol. 118, no. 5, July 29, 1926, pp. 273-274. Features of mine and works shovel; types reduced by standardization; larger use of steel handles; proper way to shovel.

SNOW REMOVAL

Highways. Snow Removal on Mountain Pass Highways. Eng. News-Rec., vol. 97, no. 8, Aug. 19, 1926, pp. 300-304, 9 figs. Two articles, as follows: Snoqualmie Pass Highway in Washington, N. A. Bowers; Fall River Pass Highway in Colorado, C. H. Vivian.

SOLAR ENGINES

Design Principles. Solar Engines, Remshardt. Eng. Progress, vol. 7, no. 7, July 1926, pp. 185-189, 8 figs. General principles for design; explanation of refractory plant planned by Remshardt.

STACKS

Welded Steel. Welded Steel Stacks Avoid Corrosion at Joints. Power Plant Eng., vol. 30, no. 16, Aug. 15, 1926, pp. 908-909, 5 figs. Guyed stacks built at shop and erected in one piece; self-supporting stacks built in place; both types are strong jointless steel cylinders.

STEAM PIPES

Expansion. Notes on Expansion of Steam and Hot Water Pipes, A. Lewis. Heat. & Vent. Mag., vol. 23, no. 28, Aug. 1926, pp. 61-64, 5 figs. With charts covering practice on high-pressure steam mains and hot-water piping. (Abstract.) Paper read before Victorian Inst. of Engrs.

STEAM TURBINES

Efficiencies. Notes on the Comparison of Steam Turbine Efficiencies, E. L. Robinson. Gen. Elec. Rev., vol. 29, no. 7, July 1926, pp. 503-510, 15 figs. Fundamental relations between efficiencies; reheat factor; condition curves; non-thermodynamic effects; percentage of heat recovery and economy.

Extraction. Extraction Turbine Fills Many Needs, S. B. Roberts. Power Plant Eng., vol. 30, no. 16, Aug. 15, 1926, pp. 896-898, 8 figs. Installation of 1,580-kva. mixed-pressure extraction unit effects considerable savings in industrial plant.

STEEL

Heat-Resisting. Modern Heat-Resisting Steels, Mech. World, vol. 80, no. 2064, July 23, 1926, pp. 59-60, 2 figs. New "Era/HR" heat-resisting steel produced by Hadfields, Ltd., Sheffield, Eng., exceptional characteristic of which is its freedom from scaling combined with unusually great strength at high temperatures.

Hardening. The Hardening of Steel: A Review and Some Comments, W. T. Griffiths. Metallurgist (Supp. to Engineer, vol. 141, nos. 3665, 3670, 3672 and 3676), Mar. 26, Apr. 30, May 28 and June 25, 1926, pp. 34-36, 51-53, 72-74 and 89-90, 8 figs.

High-Temperature Testing. Safe Stresses at High Temperatures. Metallurgist (Supp. to Engineer, vol. 142, no. 3681), July 30, 1926, pp. 104-106, 3 figs. Particulars of rated pressure of recent boiler installations; review of high-temperature tests, especially of work by Cournot and Sasagawa in Revue de Métallurgie, Dec. 1925, giving results for creep strength or viscosity limit relating to carbon steels, high-speed steel, silicon-chromium steel and nickel-chromium alloy.

Magnet. Some Factors Affecting Coercive Force and Residual Induction of Some Magnet Steels, J. R. Adams and F. E. Goeckler. Am. Soc. Steel Treating—Trans., vol. 10, no. 2, Aug. 1926, pp. 173-190 and (discussion) 190-194, 1 fig. Coercive force and residual induction of magnet steels as applicable to commercial problems; metallurgical factors that have greatest influence on these values are composition, melting, casting, rolling or forging, and heat treatment; tables which show effects of these factors upon magnet steel are investigated.

PHOSPHORUS, EFFECT OF. Effect of Phosphorus on the Endurance Limit of Low-Carbon Steels, F. F. McIntosh. Min. & Met., vol. 7, no. 236, Aug. 1926, pp. 332-333. Phosphorus increases strength and ability to withstand fatigue within limits; should be considered alloying element, not merely impurity.

STEEL, HEAT TREATMENT OF

CARBON STEELS. Facts and Principles Concerning Steel and Heat Treatment, H. B. Knowlton. Am. Soc. Steel Treating—Trans., vol. 10, no. 2, Aug. 1926, pp. 285-298. Manufacture, properties and uses of plain carbon steels other than tool steels from standpoint of consumer; effect of different carbon contents upon properties of steel.

CHEMICAL AND PHYSICAL CONSIDERATIONS. Heat Treatment Practice. Automobile Engr., vol. 16, no. 217, July 1926, pp. 262-263. Thermal critical points of steel; annealing; hardening and tempering; alloy steels.

GAS AS FUEL FOR. Gas as a Fuel for Heat Treating Metal, I. Ginsberg. Forging—Stamping—Heat Treating, vol. 12, no. 7, July 1926, pp. 250-252, 3 figs. Scope of industry great; efficient equipment results in economy; provisions for materials handling; most fuels essentially gaseous.

STEEL, HIGH-SPEED

HEAT TREATMENT, EFFECT OF. Hardness and Toughness of High-Speed Steel, R. K. Barry. Am. Soc. Steel Treating—Trans., vol. 10, no. 2, Aug. 1926, pp. 257-266, 10 figs. Physical properties of high-speed steel can be closely controlled by manner of heating, cooling, tempering and drawing; results of tests covering heat treatment.

STEEL MANUFACTURE

CHROME STEEL. Production of High Chromium Alloy Steel, R. S. Kerns. Blast Furnace & Steel Plant, vol. 14, no. 8, Aug. 1926, pp. 334-336. Manufacture of high-chromium alloy steel in acid-lined furnace; with proper care, acid furnaces are as satisfactory as basic.

RIMMED. Rimmed Steel and How It Is Made, H. D. Hibbard. Iron Age, vol. 117, no. 25, June 24, 1926, pp. 1778-1780, and vol. 118, nos. 3 and 4, July 15 and 22, 1926, pp. 142-143 and 214-215. June 24: Products made from rimmed or effervescence steels; uses and properties; effervescence and skinholes. July 15: Melting-furnace practice; effect of manganese; intermediate and central holes. July 22: Character of slags and casting temperatures; scums and what they indicate; extent of segregation.

STOKERS

COAL PRE-DRYING. Pre-Drying of Coal in Conjunction with Mechanical Stokers. Eng. & Boiler House Rev., vol. 40, no. 2, Aug. 1926, pp. 63-65, 2 figs. Points out that whole subject of pre-drying coal in conjunction with mechanical stokers ought to be reconsidered, especially as regards water-tube boilers.

STREAM POLLUTION

INVESTIGATION. Investigations of Stream Pollution, W. H. Frost. Mun. & County Eng., vol. 71, no. 1, July 1926, pp. 15-20. Review of research work of Bur. of Public Health Service.

STRUCTURAL STEEL

MADISON SQUARE GARDEN. Steelwork Found in Excellent Condition, F. W. Skinner. Blast Furnace & Steel Plant, vol. 14, no. 8, Aug. 1926, pp. 337-341, 7 figs. Structural framework of Madison Square Garden, except for few unprotected places, found in almost perfect condition after 35 years of service.

WELDED. Welded Steel Members and Joints Tested at Pittsburgh. Eng. News-Rec., vol. 97, no. 7, Aug. 12, 1926, pp. 263-265, 2 figs. Built girders and structural connections tested to failure; welds able to develop full strength of steel.

SUBWAYS

PHILADELPHIA. Subway Construction in Philadelphia, H. E. Ehlers. Contractors & Engrs. Monthly, vol. 13, no. 1, July 1926, pp. 55-62, 12 figs. Report of discussions by H. E. Ehlers, Director, Department of City Transit, Philadelphia, Pa., and Paul J. Brown, Managing Engineer, Keyston State Construction Company.

SWITCHGEAR

METAL-CLAD. Metal-Clad Switchgear. Power Engr., vol. 21, no. 245, Aug. 1926, pp. 289-293, 6 figs. Notes on recent introductions in high-tension switchgear.

T

TAPS

MANUFACTURING. Making Fine Taps in a Modern Tool Shop. Am. Mach., vol. 65, no. 8, Aug. 19, 1926, pp. 317-318, 6 figs. All material is subjected to chemical analysis and physical tests before being racked; different methods employed to make different kinds of taps.

TELEPHONY

ENGINEERING COSTS. Engineering Costs Studies, F. L. Rhodes. Telegraph & Telephone Age, no. 15, Aug. 1, 1926, pp. 339-344. Engineering costs studies made in connection with telephone industry; transmission standards and studies; other applications; factors entering into annual costs and their evaluation.

LOADING FOR CIRCUITS. Development and Application of Loading for Telephone Circuits, T. Shaw and W. Fondiller. Elec. Communication, vol. 4, no. 4, and vol. 5, no. 5, Apr. and July 1926, pp. 258-276 and 38-52, 18 figs. Review of art of loading telephone circuits as practised in United States; phantom group loading; loading for repeatered circuits; incidental cables in open wire lines; cross talk; telegraphy over loaded telephone circuits; loading for exchange area cables; submarine cables; extent of commercial application.

TRAFFIC DISTRIBUTION. Methods of Distributing Traffic, E. L. Gaines. Telephony, vol. 91, no. 5, July 31, 1926, pp. 12-15. Partial and intermediate distributing frame and other methods of distributing telephone traffic in use at present time.

TIDAL POWER

UTILIZATION. Choice of Current for Utilization of Tidal Power (Sure une forme de courant propre à l'utilisation des marées), L. Schwob. Revue Génerale de l'Electricité, vol. 19, no. 22, May 29, 1926, pp. 859-866, 2 figs. In author's belief transformation energy from tidal waves should be effected by means of apparatus of turbine-dynamo type with direct-current and variable speed; he recommends and describes Thury distribution system.

TEMPERATURE MEASUREMENTS

SURFACE. Measurement of Surface Temperatures, M. W. Boyer and J. Buss. Ind. & Eng. Chem., vol. 18, no. 7, July 1926, pp. 728-729, 2 figs. Portable thermocouple device compensated for heat losses.

TESTING MACHINES

MEASURING DIALS AND SPRING GAUGES. Measuring Dials and Spring Gauges for Testing Machines. Eng. Progress, vol. 7, no. 7, July 1926, p. 184, 2 figs. Testing machines with measuring dials, as developed by firm of Mohr & Federhaff of Mannheim; combination of two power-measuring devices offers advantage that either sliding weight balance or hydraulic balance may be operated singly or both measuring simultaneously.

TRANSFORMERS

HARMONICS, CIRCULATION IN CIRCUITS. Circulation of Harmonics in Transformer Circuits, T. C. Lennox. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 8, Aug. 1926, pp. 755-757, 9 figs. Describes manner in which certain harmonic currents may be permitted to flow within transformer network; shows how fifth and seventh harmonics of transformer exciting current may be eliminated from transmission lines; extent to which harmonic currents generated in rectifier may be eliminated from a.c. lines by means of phase multiplication.

220,000-VOLT. 28,866-kv.-a., 220,000-volt Transformers for Pennsylvania Power and Light Company, F. F. Brand. Gen. Elec. Rev., vol. 29, no. 7, July 1926, pp. 499-502, 5 figs. Largest 220-kv. transformers in world; support and insulation of coils; ratio adjuster; dimensions.

RATIO CHANGE UNDER LOAD. 60,000-Kv.-a. Transformer Banks Equipped for Change of Ratio Under Load, W. M. Dann. Elec. Jl., vol. 23, no. 8, Aug. 1926, pp. 398-402, 10 figs. Installation at Richmond Station of Phila. Elec. Co. consists of 120,000-kva. of transformer capacity, comprising two banks of 60,000-kva. each, made up of three 20,000-kva. single-phase units; adjustment of ratio under load is accomplished by having low-voltage winding arranged in two similar paralleled parts.

TUBES

TESTING. How Metal Tubing Should Be Tested, N. S. Otey. Iron Age, vol. 118, no. 8, Aug. 19, 1926, pp. 477-480, 11 figs. Tensile properties as affected by shape of test specimens; tube diameter influential factor.

TUNNELS

NORTHWESTERN PACIFIC R. R. N.W.P. Has a Thoroughly Safe Tunnel, W. S. Wollner. Ry. Rev., vol. 79, no. 4, July 24, 1926, pp. 127-128, 1 fig. Protection includes electric lights, circuit breakers and manual switches.

RAILWAY. Progress and Methods on the New Cascade Tunnel. Eng. News-Rec., vol. 97, no. 3, July 15, 1926, pp. 100-101. Construction detailed on 7¾-mile tunnel on Great Northern Railway; power equipment, character of ground, tunnelling plant.

VEHICULAR. The Holland Tunnel (The Hudson River Vehicular Tunnel), O. Singstad. Am. Inst. of Min. & Met. Engrs.—Trans., no. 1582-A-F, Aug. 1926, 19 pp., 2 figs. Basis of ventilation; difficulty in handling air flow; composition of exhaust gases; ventilation stations and systems; fan equipment and fan capacity; characteristics of ventilation system; compressed air tunnelling; solution of foundation problems; structure of tunnel; classes of materials penetrated; working through silt; blowouts and their cause.

VENTILATION. Ventilating the Holland Vehicular Tunnel. Heat. & Vent. Mag., vol. 23, no. 8, Aug. 1926, pp. 79-80, 4 figs. There are four ventilating stations with seven sources of air supply; exhaust fans in groups of three; air flow in tunnels.

TURBO-ALTERNATORS

FLUCTUATING LOAD WITH. Stability of Alternating-Current Turbine Generators with Fluctuating Loads, J. Strasser. Elec. Jl., vol. 23, no. 8, Aug. 1926, pp. 413-420, 16 figs. Deals with stability of synchronous machines where assumption of constant magnetic reluctance in any radial direction can be made, such as turbo-generators; special attention is paid to case of leading current in generator.

U

UNEMPLOYMENT

RELATION TO PRICE CHANGES. A Statistical Relation Between Unemployment and Price Changes, I. Fisher. Int. Labour Rev., vol. 13, no. 6, June 1926, pp. 785-792, 2 figs. Author finds correlation between rate of price changes and employment, and describes methods by which results are achieved.

V

VALVE GEARS

3-CYLINDER ENGINE. Calculation of the Valve Gear for 3-Cylinder Engines, S. Taga. Soc. Mech. Engrs. (Japan)—Jl., vol. 29, no. 110, June 1926, pp. 374-386, 5 figs. Method of calculation for 3-cylinder valve gear when (1) cylinders are in same plane and cranks are at 120 deg.; (2) when middle cylinder is inclined and cranks are at 120 deg., and (3) when middle-cylinder inclines and crank angles are correspondingly changed. (In Japanese.)

VENTILATION

RATIONAL BASIS FOR. A Rational Basis for Ventilation, J. E. Rush. Am. Soc. of Heat. & Vent. Engrs.—Jl., vol. 32, no. 8, Aug. 1926, pp. 581-616. Historical review of experimental work; composition of air and changes on respiration and combustion; consideration of various constituents of air.

VOLTMETERS

WAVE-SHAPE FACTOR AND. A New Wave-Shape Factor and Meter, L. A. Doggett, J. W. Heim and M. W. White. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 2, Feb. 1926, pp. 131-136, 6 figs. Star-connected circuit consisting of two voltmeters and one variable condenser has certain properties upon which wave-shape factor may be based; from any measured ratio of voltmeter readings, purity of voltage wave may be determined; maximum possible percentage of any single harmonic present in wave can be immediately obtained; wave-shape meter is proposed for practical application which consists essentially of two voltmeters and variable condenser.

W

WAGES

BASIS OF. What Determines Wages in Industry, J. D. Cox, Jr. Open Shop Rev., June 1926, p. 255-264. Relative wages; importance of management; problem of general level of wages; wage levels depend on productive efficiency; law of general wage level; problem of price and wage cycles.

BONUS SYSTEMS. *See Bonus Systems.*

WATER GAS

MANUFACTURE. The Story of Carburetted Water Gas, T. W. Stone. Am. Gas Jl., vol. 125, nos. 2, 3 and 4, July 10, 17 and 24, 1926, pp. 30-31, 40, 49-51 and 72-74. July 10: Six periods of development outlined. July 17: Development of details; rise in back pressure; steam; oil economy; automatics, hydraulics, interlocks; regulation. July 24: Economizing processes; waste-heat boiler; automatic charger; self-cleaning grates.

WATER PIPES

LININGS AND COVERINGS. Linings and Coverings for Water Pipes, B. Talbot. Can. Engr., vol. 51, no. 3, July 20, 1926, pp. 151-152. Various methods of preserving pipes from corrosion; bitumen dipping for steel pipe; causes of corrosion: properties a preservative should possess; Talbot hydrocarbon process for protecting pipe and its principal features.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

ABRASIVE WHEELS

Standard Types. Standard Types of Grinding Wheels. Am. Mach., vol. 65, no. 11, Sept. 9, 1926, p. 465. Reference-book sheet. Simplified-practice standards.

ACCELEROMETERS

Types. Accelerometers, F. Paulsen. Elec. Jl., vol. 23, no. 9, Sept. 1926, pp. 475-478, 12 figs. Simple forms of accelerometers; mechanical and hydraulic types; electrical accelerometers. Bibliography.

ACCIDENT PREVENTION

Industrial. Industrial Accidents and Hygiene. Monthly Labor Rev., vol. 23, no. 2, Aug. 1926, pp. 41-46. Problem of national accident statistics; what is being done in collection of accident statistics; and to develop national accident-prevention statistics; other phases of accident-prevention problem; resolutions passed by Conference.

AERIAL PHOTOGRAPHY

Surveying. Aerial Photographic Survey of International Waters. Eng. News-Rec., vol. 97, no. 11, Sept. 9, 1926, p. 431. Advantages in time, cost, detail and accuracy in mapping Rainy lake district by amphibian plane.

AIR COMPRESSORS

Turbo. Turbo Compressors and Turbo Blowers (Turbo-Compresseurs et Turbo-Soufflantes), E. Moerlen. Société Alsacienne de Constructions Mecaniques—Bul., vol. 4, no. 15, July 1926, pp. 59-69, 13 figs. Design and construction of Société Alsacienne machines; their advantages, fields of application, control, constant and variable speed regulation.

AIR-CONDITIONING

Principles and Apparatus. Air-Conditioning and Air-Conditioning Apparatus, J. W. Cooling. Domestic Eng. (Lond.), vol. 46, nos. 7 and 8, July and Aug. 1926, pp. 140-145 and 157-163, 11 figs. Control of temperature, humidity, cleanliness and air distribution; air-conditioning apparatus; automatic controls.

Problems. Air-Conditioning, S. C. Bloom. Refrig. Eng., vol. 13, no. 1, July 1926, pp. 10-13 and (discussion) 13-15. Term includes heating, cooling, humidifying, dehumidifying, purifying and distributing air for regulation of atmospheric conditions within enclosed spaces; deals with offices and cooling problem.

AIRPLANE ENGINES

Air-Cooled. Some Problems in the Design of an Air-Cooled Radial Engine, R. W. A. Brewer. Aviation, vol. 21, no. 10, Sept. 6, 1926, pp. 410-411. Considers problems which confront designer, such as brake horse power, speed of revolution, cooling and cowling, weight, number of cylinders, disposition of accessories, lubrication and fuel arrangement, kind of fuel to be used, mounting, type and arrangement.

Compression-Ignition. The High-Duty Compression-Ignition Engine, D. R. Pye. Engineering, vol. 122, no. 3163, Aug. 27, 1926, pp. 277-279, 1 fig. Describes what has been done toward development of engine burning heavy oil for use in air; this type of engine offers great possibilities of development, both as regards fuel economy and saving of weight in material. Paper read before Sect. G, Brit. Assn.

Developments. Progress in Aircraft-Engine Design, A. Nutt. Soc. Automotive Engrs.—Jl., vol. 19, no. 3, Sept. 1926, pp. 239-247, 14 figs. Reviews marked advance made in last ten years in constructional details in airplane-engine and airplane performance; describes each type of engine produced successively by Curtiss Airplane & Motor Co., Buffalo, and tells of changes made to improve performance.

AIRPLANE PROPELLERS

Airplane Structure, and. Interaction Between Air Propellers and Airplane Structures, W. F. Durand. Nat. Advisory Committee Aeronautics—Report, no. 235, 1926, 23 pp., 36 figs. Investigation conducted at Leland Stanford Junior University to determine character and amount of interaction between air propellers as usually mounted on airplanes and adjacent parts of airplane structure.

Characteristics. Navy Propeller Section Characteristics as Used in Propeller Design, F. E. Weick. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 244, Aug. 1926, 7 pp., 10 figs.

Vibration. Airscrew Vibration and Gear Stripping, J. Morris. Roy. Aeronautical Soc.—Jl., vol. 30, no. 188, Aug. 1926, pp. 495-502, 2 figs. Author contradicts statement made by J. D. Siddeley in paper published in same journal in March 1925, in which he stated that inclusion of reduction gears has been responsible for limiting seriously degree of reliability of power unit.

AIRPLANES

Airfoils. Aerodynamic Characteristics of Airfoils. Nat. Advisory Committee for Aeronautics—Rept, no. 244, 1926, pp. 191-230, 124 figs. Collection of data on airfoils made from published reports of number of leading aerodynamic laboratories of United States and Europe.

Rotating Wings. An Airplane with Rotating Wing (Avion a voilure tournante), J. L. Breton. Académie des Sciences—Comptes Rendus, vol. 182, no. 18, May 3, 1926, pp. 1079-1082. Details of Moineau vertical type, consisting of one or more paddle wheels, whose oblique action gives lifting power similar to that of helicopter.

The Rotating Wing in Aircraft, H. E. Wimperis. Engineering, vol. 122, no. 3162, Aug. 20, 1926, pp. 246-248, 3 figs.

Three-Engined. Three-Engine Planes for Air Transport, C. G. Peterson. Aviation, vol. 21, no. 9, Aug. 30, 1926, pp. 354-357, 7 figs. Points out that reliability and punctuality are insured by three-engine principle in commercial air transportation; comparative fuel costs.

AIRSHIPS

Mooring. The Development of Airship Mooring, G. H. Scott. Roy. Aeronautical Soc.—Jl., vol. 30, no. 188, Aug. 1926, pp. 459-474 and (discussion) 474-481.

Shenandoah Disaster. Technical Aspects of the Loss of the U.S.S. Shenandoah. Am. Soc. Nav. Engrs.—Jl., vol. 38, no. 3, Aug. 1926, pp. 487-694, 29 figs. Conclusions arrived at by National Advisory Committee for Aeronautics in design of Shenandoah.

ALLOY STEEL

Chemically Resistant. Chemically Resistant Steels—With Special Reference to Very High and Very Low Temperatures, T. G. Elliot and G. B. Willey. Chem. & Industry, vol. 45, no. 31, July 30, 1926, pp. 526-534, 7 figs. Discusses properties of steels for very high and very low temperatures; newer types of nickel-chromium and other steel alloys mentioned offer great promise to chemical engineer for nitrogen fixation, synthetic ammonia, oil cracking, nitric acid, etc.

ALLOYS

Aluminum. *See Aluminum Alloys.*
Copper. *See Copper Alloys.*
Gun Metal. *See Gun Metal.*
Iron Alloys. *See Iron Alloys.*

ALUMINUM

Casting. *See Casting Aluminum.*

Castings. Aluminum Castings of High Strength, R. S. Archer and Z. Jeffries. Am. Inst. of Min. & Met. Engrs.—Trans., no. 1590-E, Sept. 1926, 26 pp., 5 figs. Describes compositions and processes which appear to authors to offer greatest promise for production on commercial scale of aluminum castings of superior mechanical properties, with special reference to heat-treated castings; tests for suitability of alloy; casting characteristics; toughness in castings; heat treatment of castings; commercial development of heat-treated castings; "Y" alloy castings; recent laboratory results.

Corrosion, Protection Against. The Protection of Aluminum and Its Alloys Against Corrosion by Anodic Oxidation, G. D. Bengough and H. Sutton. Engineering, vol. 122, no. 3163, Aug. 27, 1926, pp. 274-277, 6 figs. Authors find that film produced by anodic oxidation in bath containing chromate, bichromate or chromic acid is effective method of protecting against corrosion; details of treatment of various alloys of aluminum by this method, results of testing such treated specimens in sea water, and development of process on technical lines. Paper read before Sect. G of Brit. Assn. See also Metal Industry (Lond.), vol. 29, nos. 7 and 8, pp. 153-154 and 175.

ALUMINUM ALLOYS

Aluminum-Silicon. The Constitution and Structure of the Commercial Aluminum-Silicon Alloys, A. G. C. Gwyer. Inst. Metals—Advance Paper, no. 404, for mtg. Sept. 1-4, 1926, 43 pp., 54 figs.

AMMONIA

Heat Diagram. Ammonia Heat Diagram—How to Use It, T. M. Gunn. Refrigeration, vol. 40, no. 2, Aug. 1926, pp. 44-46, 1 fig. Examples of use of chart prepared by Bureau of Standards.

AMMONIA COMPRESSORS

Atmospheric Pressure, Effects of. Atmospheric Pressure Affects Ice Machines, W. H. Motz. Power Plant Eng., vol. 30, no. 18, Sept. 15, 1926, pp. 1019-1020. Analysis of difference in capacity and power consumption between identical machines with different barometric pressures.

Improvement. Recent Improvements in Refrigerating Compressors. Power Engr., vol. 12, no. 246, Sept. 1926, pp. 336-337, 1 fig. Effect of increased speed on methods of construction.

Leakage Reduction. How to Reduce Ammonia Compressor Leakage, F. H. Randolph. Power, vol. 64, no. 11, Sept. 14, 1926, pp. 404-405. Suggests proper precautions in plants having difficulty in getting proper results from compressor stuffing box.

APPRENTICES, TRAINING OF

Foundry. Creates Supply of Skilled Labour, R. A. Fiske. Iron Age, vol. 118, no. 12, Sept. 16, 1926, pp. 766-768 and 823, 4 figs. Chicago foundry conducts apprenticeship course in moulding, pattern-making and tool-making; both class-room instruction and shop training provided.

Training Boys for the Foundry, E. N. Simons. Foundry Trade Jl., vol. 34, no. 523, Aug. 26, 1926, pp. 175-176. In majority of foundries, system of "learnership" is in force; these usually comprise precise verbal agreement between employer and lad that latter shall have opportunity to pick up trade at former's plant, though employer is not bound to teach lad; examination of methods of training adopted.

ASBESTOS

PAINTS. Asbestos and Asbestos Paints, H. Cornell. Asbestos, vol. 8, no. 2, Aug. 1926, pp. 9-11, 13, 14, 16, 18, 20 and 23. Includes references to ancient knowledge of asbestos, general data on properties and uses, indications as to how it is ordinarily prepared for use; analyses. Translated from Farbe and Lack, Centralblatt.

AUTOMOBILE ENGINES

CRANKCASE-OIL DILUTION. Eliminating Dilution by the Application of Heat, J. C. Coulombe. Soc. Automotive Engrs.—Jl., vol. 19, no. 3, Sept. 1926, pp. 282-287, 4 figs.

FUELS. *See Automotive Fuels.*

OIL-RECTIFIERS. The Oil-Rectifier, W. G. Wall. Soc. Automotive Engrs.—Jl., vol. 19, no. 3, Sept. 1926. pp. 279-282, 3 figs. Describes rectifier designed to take out all water and to keep diluent between 4 and 5 per cent and viscosity above 250 sec. at 100 deg. Fahr., oil being forced through by pressure of oil pump at rate of about 3 gal. per hr.

PISTONS. *See Pistons.*

AUTOMOBILES

PARTS, MANUFACTURE OF. A Modern Plant for the Manufacture of Automotive Parts. West. Machy. World, vol. 17, no. 8, Aug. 1926, pp. 341-343, 8 figs. Methods and equipment of new plant of Mann Manufacturing Co., Berkeley, Cal.

SPRING-SUSPENSION. Relation of Spring-Suspension to Riding Qualities, F. C. Mock. Soc. Automotive Engrs.—Jl., vol. 19, no. 3, Sept. 1926, pp. 288-294, 9 figs.

AUTOMOTIVE FUELS

ALCOHOL. Experiences with Alcohol Motor Fuels, J. D. Ross and W. R. Ormandy. Chem. & Industry, vol. 45, no. 33, Aug. 13, 1926, pp. 273T-280T, 8 figs. Modern researches into nature and behaviour of various types of fuel in automobile cylinder.

BENZOL. *See Benzol.*

SPONTANEOUS IGNITION. Spontaneous Ignition of Carburetted Fuel Mixtures (L'Auto-inflammation des mélanges carburés), A. Pignot. Jl. des Usines à Gaz, vol. 50, no. 15, Aug. 5, 1926, pp. 293-298, 12 figs. Discusses difficulty encountered in increasing coefficient of compression in explosion engines due to premature ignition and studies flammability of carburetted fuel mixtures from this point of view.

AVIATION

LIGHTING EQUIPMENT. Lighting Equipment for Airways, Airports and Airplanes. Soc. Automotive Engrs.—Jl., vol. 19, no. 3, Sept. 1926, pp. 309-319, 22 figs. In Part I, by H. C. Ritchie, navigational aids needed to enable pilot to keep on his course are discussed. Part II, C. T. Ludington, outlines certain other phases of aeronautic lighting and particularizes on products of company represented by author.

B

BEAMS

J. & L. JUNIOR. "J. & L." Junior Beam Construction Tested, C. R. Young. Can. Engr., vol. 51, no. 9, Aug. 31, 1926, pp. 255-256, 3 figs. Test panel carries normal dead load and 4.38 times rated live load without failure; deflections for twice rated live load much less than those permissible for plastered ceilings; hanger tests satisfactory.

BENDING

TESTS. Material Bend Tests. Machy. (Lond.), vol. 28, no. 722, Aug. 12, 1926, p. 557. Admiralty bend test; machining of test pieces; grinding on test piece.

BENZOL

AUTOMOBILE FUEL, AS. Tests of Benzol as a Motor Engine Fuel. Oil Eng. & Technology, vol. 7, no. 124, Aug. 1926, pp. 355-358, 5 figs. Examination of tendency to deposit resinous compounds on automobile engine parts.

BLAST FURNACES

AIR DRYING. Drying Air for Blast Furnaces with Silica-Gel, F. Krull. Iron & Coal Trades Rev., vol. 113, no. 3049, Aug. 6, 1926, pp. 191-192, 2 figs. Air drying is understood to mean reduction of water vapour or humidity content per weight unit of air in contradistinction to change in humidity of air by increase of temperature; previous drying processes; use of silica-gel as adsorbent. Translated from Zeit. des Vereines deutscher Ingenieure.

BLASTING

SUBMARINE. Submarine Blasting, S. R. Russell. Contractors' & Engrs'. Monthly, vol. 13, no. 2, Aug. 1926, pp. 73-76, 1 fig. Discusses methods and costs. Rock removal under water is more difficult procedure than other kinds of blasting and is higher in cost; precautions that have to be taken. See also Contract Rec., vol. 40, no. 32, Aug. 11, 1926, pp. 767-769, 1 fig.

BOILER FEEDWATER

CONDITIONING. Boiler Water Conditioning with Special Reference to High Operating Pressure and Corrosion, R. E. Hall. Combustion, vol. 15, no. 3, Sept. 1926, pp. 156-159, 1 fig. Scope of boiler-water conditioning; prevention of scale formation on evaporating surfaces; relation between chemical used in treatment and operating pressure; control of non-condensable gases in steam by conditioning of boiler water.

EQUIPMENT. The Selection and Operation of Modern Boiler Feed Equipment, C. L. Hubbard. Nat. Engr., vol. 30, no. 9, Sept. 1926, pp. 401-405, 12 figs. Operating principles, construction details, and applications of automatic water-level regulators; feed-water regulation problems in practice; type of regulators and their applications; construction details of different types of regulators.

BOILER FIRING

HONEYCOMBING. Fuel Losses Resulting from Honeycombing and Excessive Clinkering, S. W. Parr. Combustion, vol. 15, no. 3, Sept. 1926, pp. 167-168. Points out that primary cause for honeycombing is presence of finely-divided particles in coal as fired; clinkering of grates.

INDUSTRIAL POWER PLANTS. How Industrial Power-Plant Boilers Are Fired. Power, vol. 64, no. 12, Sept. 21, 1926, p. 445, 1 fig. Hand-firing is still used in one-half of industrial plants; 35 per cent use automatic stokers.

BOILER PLANTS

TEXTILE MILLS. Modernized Boiler Plant and Electric Drive Nets 35 Per Cent on Investment, H. M. Wilson. Power, vol. 64, no. 12, Sept. 21, 1926, pp. 428-430, 5 figs. By replacing obsolete engine and power transmission equipment with motors using purchased energy, and by substituting stoker firing with re-designed furnaces for hand-firing, management of textile mill, with initial investment of $225,000, reduced annual operating cost from $195,000 to $115,000.

BOILERS

BARREL PLATES. Boiler Barrel Plates. Ry. Engr., vol. 47, no. 560, Sept. 1926, pp. 306-307, 1 fig. Formula and chart for calculation.

ELECTRIC. Electric Steam Generation, C. H. Tupholme. Elec. Rev., vol. 99, nos. 2543 and 2544, Aug. 20 and 27, 1926, pp. 292-293 and 331-333, 10 figs. Details of modern electric-boiler equipment.

JOINT EFFICIENCY. Joint Efficiency Easily Checked with New Tables, A. G. Peterse. Power, vol. 64, no. 9, Aug. 31, 1926, pp. 338-340. To determine safe working pressure of boiler, it is necessary to know efficiency of its rivetted joints; presents tables compiled to eliminate tedious calculations necessary to determine weakest part of joint and efficiency.

LOSS ANALYSIS. Analyzing Boiler Losses, L. J. Levit. Power, vol. 64, no. 11, Sept. 14, 1926, p. 420, 2 figs. Author points out causes of boiler losses and shows their relative importance.

LOCOMOTIVE. *See Locomotive Boilers.*

TESTS. Operating Boiler Tests Show Important Relations. Power Plant Eng., vol. 30, no. 17, Sept. 1, 1926, pp. 944-946, 6 figs. Variation of draft loss, superheat, efficiency and losses with rate of forcing and percentage of CO_2.

WATER-GAUGE GLASS. A High-Pressure Water-Gauge Glass. Engineer, vol. 142, no. 3685, Aug. 27, 1926, p. 232, 1 fig. With object of providing water-gauge glass capable of safely withstanding high boiler pressures, R. Klinger, London, has made several modifications in its original form of prismatic glass, which shows water in black, while steam space is bright; this effect is produced by refraction from ribbed inside face of glass.

BRASS

EXTRUDING. Problems in Extruding Brass, L. Kroll. Brass World, vol. 22, no. 8, Aug. 1926, pp. 253-254, 3 figs. Tested methods in obtaining good results; how to prevent cracking.

BRASS FOUNDRIES

COSTS. Brass Foundry Costs. Brass World, vol. 22, no. 8, Aug. 1926, pp. 245-246. Careful analysis of fuel expense shows cost of gas for melting metal less than cost of labour for pouring.

HEALTH HAZARDS. Health Hazards of Brass Foundries, J. A. Turner and L. R. Thompson. Metal Industry (N.Y.), vol. 24, no. 9, Sept. 1926, pp. 375-376. Results of field investigations; following conditions which have directly or indirectly detrimental influence upon health and efficiency of workers were observed to be present in foundries visited: exposure to dust; inadequate illumination and glare; inadequate ventilation; presence of fumes, gases, smoke, heat, cold, dampness.

BRIDGE DESIGN

BRACING. The Lateral and Transverse Bracing of Bridges, J. Husband. Structural Engr., vol. 4, no. 8, Aug. 1926, pp. 264-268, 5 figs. Lateral systems of deck bridges follow closely same line as for through bridges; transverse bracing comprises sway and portal bracing.

BRIDGE STRENGTHENING

RAILWAY BRIDGES. Strengthening Existing Bridges, O. Arup. Concrete & Constr. Eng., vol. 21, no. 8, Aug. 1926, pp. 544-549, 6 figs. How problem has been tackled in case of three single-track railway bridges in Sweden.

BRIDGES, CONCRETE

ARCH. Six Concrete Arch Bridges at the Twin Cities. Eng. News-Rec., vol. 97, no. 10, Sept. 2, 1926, pp. 370-371, 1 fig. Four bridges under construction in and near St. Paul and Minneapolis represent diverse features of design adapted to special conditions at respective sites.

CURVED ARCHES. Curved Arch Spans in Long Concrete Bridge, C. H. Wood. Eng. News-Rec., vol. 97, no. 9, Aug. 26, 1926. pp. 342-344, 3 figs. Sharp turn in recently-opened bridge over Mohawk, at Schenectady, is carried by two arches curved in plan.

WINTER ERECTION. Concrete Bridge Built in Winter Time. Contract Rec., vol. 40, no. 33, Aug. 18, 1926, pp. 780-781, 2 figs. New structure over mill stream, Galt, Ont., is designed as double culvert; constructed during winter to take advantage of lower costs.

BRIDGES, HIGHWAY

NEW JERSEY AND STATEN ISLAND. Highway Bridges to Connect New Jersey and Staten Island, O. H. Ammann. Eng. News-Rec., vol. 97, no. 9, Aug. 26, 1926, pp. 345-347, 2 figs. Details of two large structures being built by Port of New York Authority across Arthur Kill.

BRIDGES, RAILWAY

INTERMEDIATE SUPPORT. Hanging Girder Ends from Above Eliminates Necessity for Piers, G. A. Haggander. Ry. Age, vol. 81, no. 10, Sept. 4, 1926, pp. 411-413, 5 figs. Unusual method of supplying intermediate support for bridge spans in location that did not permit of construction of pier or bent was adopted by Chicago, Burlington & Quincy, for structure carrying wye track over tracks of three other railroads.

BRIDGES, SUSPENSION

CABLE CALCULATION. Cable Calculations for the Delaware River Bridge, G. M. Rapp. Franklin Inst.—Jl., vol. 201, no. 6, June 1926, pp. 712-734, 4 figs. Outline of composition, physical qualities and geometry of cables; calculation of cable design, tower analysis; stiffening truss analysis; erection.

DELAWARE RIVER. The Erection of the Suspended Structure of the Delaware River Bridge, R. G. Cone. Franklin Inst.—Jl., vol. 201, no. 6, June 1926, pp. 691-711, 17 figs. Erection was divided into two distinct phases: hanging steel on cables and adjusting members for rivetting; adjusting and rivetting; roadway-slab details.

BUILDING MATERIALS

UNIT STRESSES. Unit Stresses, F. E. Turneaure. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 7, Sept. 1926. Symposium of articles, as follows: Unit Stresses, F. E. Turneaure, pp. 1424-1427; Unit Working Stresses in Reinforced Concrete, A. E. Lindau, pp. 1428-1431; Unit Stresses in Structural Steel (For Buildings), D. B. Steinman, pp. 1432-1435; Unit Stresses in Timber, J. A. Newlin, pp. 1436-1443, 4 figs.

BRONZES

PROPERTIES. Physical Properties of Engineering Materials. Power Engr., vol. 21, nos. 241, 242, 244 and 245, Apr., May, July and Aug. 1926, pp. 136-138, 183-185, 264-266, 294-295, 7 figs. Apr.: Gunmetal. May: Phosphor and Aluminium bronze. July: Silver bronze, manganese bronze; miscellaneous bronzes. Aug.: Manganese.

C

CABLES, ELECTRIC

MUSCLE SHOALS INSTALLATION. Cable Installation for Muscle Shoals Power House Described, H. M. Friend. Elec. World, vol. 88, no. 11, Sept. 11, 1926, pp. 517-520, 3 figs. Specifications for cable manufacture rigidly observed, with strict inspections during course of manufacture; additional exacting tests applied in installation at plant; arrangement of circuits in power house.

Sag-Tension Curves. Sag-Tension Curves, E. S. Parker. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 7, Sept. 1926, pp. 1335-1342, 4 figs. New method of analysis for tensions and sags in span of wire or cable.

Three-Core. The Economical Thickness of Dielectric in a Three-Core H.T. Cable, N. A. Allen. World Power, vol. 6, no. 33, Sept. 1926, pp. 143-146, 3 figs. Attempts to develop formula which will be correct for three-core cables.

CASE-HARDENING

Gas Furnaces for. Case-Hardening and Fuel Costs. Metal Industry (Lond.), vol. 29, no. 8, Aug. 20, 1926, pp. 178-179, 2 figs. Application of gas heating to different heating processes connected with case-hardening and similar work; describes type of furnace for work with system of double regenerators; developed by Davis Furnace Co., Luton; it is known as Revergen and operates upon coal gas at ordinary main pressure.

Case-Hardening in Gas-Heated Furnaces, A. J. Smith. Forging—Stamping—Heat Treating, vol. 12, no. 8, Aug. 1926, pp. 289-290, 1 fig. Application of reversible regeneration to case-hardening furnaces makes use of artificial gas a satisfactory and economical fuel.

Piston Rods. Carburizing Piston Rods and Long Tubes. Am. Mach., vol. 65, no. 12, Sept. 16, 1926, pp. 491-492, 3 figs. Methods that have been developed for handling large pieces commercially; securing uniform work that must meet very severe specifications.

CAST IRON

Heat Treatment, Effect of. Improve Gray Iron Properties by Heat Treatment, O. W. Potter. Foundry, vol. 54, no. 17, Sept. 1, 1926, pp. 678-680, 3 figs. Results obtained from various tests for tensile, transverse and impact properties; results of tests for dimensional changes and hardness, showing in detail effect of heat treating on physical properties of cast iron.

Testing. Shearing Tests to Determine Strength Properties of Cast Iron (Scherversuche zur Beurteilung der Festigkeitseigenschaften von Gusseisen), M. Rudeloff. Giesserei, vol. 13, nos. 33 and 34, Aug. 14 and 21, 1926, pp. 577-584 and 594-598, 20 figs. Method is tried out by which it is possible to determine properties of iron on different parts of casting varying in thickness.

CASTING

Aluminum. The Casting of Aluminum. Brass World, vol. 22, no. 8, Aug. 1926, pp. 255-256. Fundamental requirements necessary to obtain good results; gas or oil furnaces preferred to coke; electric arc not successful because of oxidation.

Centrifugal. Bronze Worm-Gear Blanks Produced by Centrifugal Casting, F. W. Rowe. Inst. Metals—Advance Paper, no. 411, for mtg. Sept. 1-4, 1926, 13 pp., 14 figs.; also abstract in Engineering, vol. 122, no. 3165, Sept. 10, 1926, 338-341, 8 figs. Describes general metallurgical features which obtain in bronze worm-wheel gears cast by various methods and improvements which result from casting these wheels by centrifugal method.

Centrifugal Casting and Its Problems, L. Frommer. Iron Age, vol. 118, no. 9, Aug. 26, 1926, pp. 548-550, 1 fig. Comparisons with sand casting; alloys suited for centrifugal product; phenomena in mold of each process. Translated abstract from Zeit. für Metallkunde, 1925, p. 245.

Cored Work in Iron. Casting Cored in Iron, W. J. May. Mech. World, vol. 80, no. 2065, July 30, 1926, pp. 90-91. Enclosed cores of any kind or shape should always be compressible up to certain stage.

CASTINGS

Inspection. Inspecting Castings. Metal Industry (Lond.), vol. 29, no. 8, Aug. 20, 1926, pp. 177-178. Duties of inspector.

Iron. *See Iron Castings.*

Specifications. Tentative Specifications for 88-8-4 Sand Castings. Foundry, vol. 54, no. 17, Sept. 1, 1926, supp. page. Foundry data sheet for physical properties and tests.

CENTRAL STATIONS

Control of Auxiliaries. Control Equipment for Electrically-Driven Central Station Auxiliaries, W. C. Plumer and J. W. Dodge. Gen. Elec. Rev., vol. 29, no. 9, Sept. 1926, pp. 617-623, 17 figs. Auxiliary control requirements for central stations; control for various types of a.c. and d.c. motors; automatic combustion regulation.

Organization of. Building Up an Organization to Operate the New Plant. Power, vol. 64, no. 9, Aug. 31, 1926, pp. 324-325. Finds out that continuity of service is most important thing in power station, and next most important is efficiency.

CHAINS

Standard. Standard Chains, Eyebolts and Shackles. Machy. (Lond.), vol. 28, no. 724, Aug. 26, 1926, pp. 613-614, 6 figs. Presents tables for standard chains (single and double), eyebolts and shackles which should be found of value inasmuch as usual tables do not state safe loads.

CHIMNEYS

Concrete, Shell Temperatures. Electrical Determination of Temperatures in Chimney Shells, E. A. Dockstader. Elec. World, vol. 88, no. 8, Aug. 21, 1926, pp. 363-365, 5 figs. Importance of temperature stresses in reinforced-concrete chimneys is emphasized; individual thermocouple circuits give best results; preliminary heat-drop data.

CIRCUIT BREAKERS

Oil. E.H.T. Oil Circuit-Breakers. Elecn., vol. 97, no. 2515, Aug. 13, 1926, p. 185, 3 figs. New heavy-current type for Canadian market; satisfactory heat and tripping tests.

CITY PLANNING

Aerial Surveys for. Aerial Surveys for City Planning, G. H. Matthews. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 7, Sept. 1926, pp. 1349-1360. Considers what kinds of maps are best suited for city planning and zoning, and in what way aerial photography may be used to advantage in producing such maps.

COAL

By-Products. Power Possibilities of Coal By-Products, W. H. Blauvelt. Franklin Inst.—Jl., vol. 202, no. 3, Sept. 1926, pp. 307-322, 6 figs. Presents lists of principal products obtained from petroleum and those obtained from treatment of coal; author claims that if advantages gained by processing of coal are to be anything like great advantages suggested by similar work done in petroleum industry, some efficient process for low-temperature distillation of raw coal must be found; improvements made in recent processes seem to offer hope that some of them will succeed in effecting improvement in form value of this raw material to advantage not only of power user, but to other industries.

Carbonization. The Low-Temperature Carbonization of Coal, R. V. Wheeler. Colliery Guardian, vol. 132, no. 3425, Aug. 20, 1926, pp. 405-406, 1 fig.

The Parr Process of Low-Temperature Carbonization of Coal, W. R. Chapman. Fuel, vol. 5, no. 8, Aug. 1926, pp. 355-361, 4 figs. Discusses process invented by S. W. Parr, which was one of earliest in point of time.

Coking. The Carbonization of Coal, J. Roberts. Combustion, vol. 15, no. 3, Sept. 1926, pp. 159-163, 3 figs. Coking and non-coking coals.

The Examination of Coking Coals and Estimation of Their Value, R. Kattwinkel. Fuel, vol. 5, no. 8, Aug. 1926, pp. 347-355, 10 figs. Methods of investigating coking coals—crucible test, distillation behaviour and coking power—and coke-density, porosity and friability; Meurice method for determining coking power was modified and new apparatus for this purpose described.

Combustion. The Combustion of Particles of Coal in Air, H. E. Newall and F. S. Sinnatt. Fuel, vol. 5, no. 8, Aug. 1926, pp. 335-339, 3 figs. Study of cenospheres.

Distillation. Low-Temperature Distillation of Coals. Colliery Guardian, vol. 132, no. 3424, Aug. 13, 1926, pp. 348-349, 2 figs. Details of Crozier process as practised at Wembley in Crozier retort; process of fractionation is entirely automatic under steady operating conditions; results in considerable reduction in refining costs, as compared with older methods of treatment; treatment of bituminous coals.

Pulverized. *See Pulverized Coal.*

COAL HANDLING

Equipment. Solving the Coal and Ash Handling Problem, E. J. Tournier. Indus. Mgmt. (N.Y.), vol. 72, no. 2, Aug. 1926, pp. 77-78, 27 figs. Modern mechanical equipment for large and small power plants.

Methods. Modern Methods in Coal and Ash Handling, W. W. Sayers. Power, vol. 64, nos. 4, 5, 6, 7 and 8, July 27, Aug. 3, 10, 17 and 24, 1926, pp. 133-136, 169-171, 204-206, 240-241 and 284-286, 35 figs. July 27: Traces progress made in field and emphasizes importance of fuel-handling problem. Aug. 3: Conditions governing selection and application of centrifugal discharge and continuous-bucket elevators, flight and screw conveyors. Aug. 10: Belt conveyors and skip hoists. Aug. 17: Bucket conveyors and storage equipment. Aug. 24: Equipment for crushing coal.

COAL MINES

Pit-Head Frames. Reinforced Concrete Pit-Head Frame at the National Maurits Colliery, Holland. Engineering, vol. 122, no. 3163, Aug. 27, 1926, pp. 258-260, 28 figs. partly on p. 266 and supp. plate. Total height above ground is 179.3 ft.; 2,100 cu. in. of concrete were employed in its construction, and 160 tons round steel bars for reinforcement.

COKE

Quenching. Economic Coke Quenching. Colliery Eng., vol. 3, no. 30, Aug. 1926, pp. 360-361, 1 fig. Novel process of quenching coke by Heller-Bamag system; advantages claimed for process are: production of high-pressure steam by heat contained in incandescent coke; production of water-gas; improvement in quality of coke; production of coke under conditions which are dustless and hygienic; small amount of space required by plant, and low initial and operating costs.

COMBUSTION

Chemistry. Unusual Features of Combustion Chemistry, R. T. Haslam and J. T. McCoy. Power Plant Eng., vol. 30, no. 17, Sept. 1, 1926, pp. 941-942, 2 figs. Hydrogen in fuel explains variation of CO_2 and O_2 in flue gas with changes in excess air.

Control. An Essential Principle for Scientific Boiler Firing (Un principe essentiel pour la conduit scientifique des combustions industrielles), M. Bouffart. Chaleur & Industrie, vol. 7, no. 76, Aug. 1926, pp. 437-442, 1 fig. Discusses theory of combustion of coal excess or deficiency of air; air supply and incombustibles; combustion of gas in blast furnaces, etc.

Automatic Combustion Control, J. F. Cassell. Gas Age-Rec., vol. 58, no. 9, Aug. 28, 1926, pp. 279-280 and 284, 7 figs. Results of study of various types of automatic combustion controls.

Surface. Surface Combustion and Its Influence on the Future Economics of Heat and Power, T. G. Tulloch. Chem. & Industry, vol. 45, no. 33, Aug. 13, 1926, pp. 280T-285T and (discussion) 285T-287T. Economics of surface combustion.

CONCRETE

Expansion. Expansion of Concrete, with Special Reference to Concrete Tanks, W. H. Glanville. Concrete & Constr. Eng., vol. 21, no. 8, Aug. 1926, pp. 561-568 and 572, 7 figs. Draws attention to particular example of construction of tank for storage of water at temperatures up to boiling point; results of stress analysis.

Manufacture Control. Controlling the Manufacture of Concrete to Obtain Uniformity of Strength, A. E. Wynn. Concrete & Constr. Eng., vol. 21, nos. 6, 7 and 8, June, July and Aug. 1926, pp. 413-423, 487-494 and 588-596, 14 figs. Shows how theory involving terms, such as water cement ratio, slump test, fineness modulus, etc., is put into practice on job under actual construction conditions. July: Job equipment for designing mixtures, design of mixture by fineness modulus method; effect of arbitrarily changing proportions; designing concrete mixture by "trial" method; tests. Aug.: Measuring material; measurement of aggregates by batchers; measuring sand, etc.

Permeability. Permeability of Concrete. Concrete & Constr. Eng., vol. 21, no. 8, Aug. 1926, pp. 573-577. Results of investigation of permeability of portland cement concrete, with object of determining conditions influencing permeability and their relative importance; influence of constituent materials, effect of methods of preparing concrete, and influence of subsequent treatment. Abstracted from Building Research Tech. Paper No. 3.

Strength Control. Old and New Ideas on Control of Strength of Concrete, J. G. Ahlers. Concrete, vol. 29, no. 2, Aug. 1926, pp. 13-19, 12 figs. Plain, practical discussion of factors that affect strength of concrete; theories explained; putting them into effect on job; how to control variables that affect strength of concrete.

Strength of Mortar and. The Strength of Mortar and Concrete as Influenced by the Grading of the Sand, J. G. Rose. Pub. Roads, vol. 7, no. 5, July 1926, pp. 106-107, 1 fig. Study of relation between grading of sand for use in concrete and strength developed in mortar and concrete; graph was developed which may be used as basis for preliminary judgment of quality of sands proposed for use.

Uniform Quality. Producing Concrete of Uniform Quality, R. B. Young. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 7, Sept. 1926, pp. 1394-1406. Points out that concrete to be successful must take into account different operations of manufacturing process, and provide proper conditions for their performance; author states thoroughly what these conditions are and methods by which one organization has attempted to provide them.

Water-Ratio Specification. Water-Ratio Specification for Concrete, F. R. McMillan and S. Walker. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 7, Sept. 1926, pp. 1407-1421, 4 figs. Presents specification based on fundamental principle that strength and other desirable properties of concrete are definitely determined by proportion of water to cement in mixture, provided only that concrete is plastic and workable and aggregates are clean, durable and structurally sound. Contains appendix on specification for concrete and concrete materials as used in construction of Portland Cement Association Building, Chicago, Ill.

CONCRETE CONSTRUCTION, REINFORCED

SLABS. The Thickness of Reinforced Concrete Slabs, M. A. Merciot. Concrete & Constr. Eng., vol. 21, no. 8, Aug. 1926, pp. 551-552. Describes method which avoids all guesswork about weight of slab; it may be applied to slabs of any degree of fixity at their ends. Translated from Constructeur de Ciment Arme.

CONCRETE, REINFORCED

BOND BETWEEN CONCRETE AND STEEL. Studies of Bond Between Concrete and Steel, D. A. Abrams. Concrete Products, vol. 31, no. 2, Aug. 1926, pp. 59-64, 11 figs. Study of bond resistance as influenced by variations in quantity of mixing water, grading of aggregate, quantity of cement, consistency, age, etc.

STEEL CORROSION. Corrosion of Structural Steel Within Concrete, G. W. Burke and P. B. Place. Concrete, vol. 29, no. 2, Aug. 1926, pp. 23-24, 3 figs. Discusses effects of corrosion and analysis of causes.

CONDENSERS, STEAM

FAILURES. Failure of Modern Condensers, F. J. Drover. Indus. Mgmt. (Lond.), vol. 13, no. 9, Sept. 1926, pp. 404 and 406. Considers causes of condenser failure, which in practically every case is due to failure of tubes and ferrules; and methods adopted to prevent, or at least greatly lessen, chances of serious breakdown.

SURFACE. Testing a Surface Condenser in Action, Chas. E. Colborn. Power, vol. 64, no. 12, Sept. 21, 1926, pp. 431-433, 6 figs. To secure maximum performance, continuous check is necessary, not only to detect unusual conditions such as air leaks, but to assist in forecasting probable need for cleaning of condenser tubes; suggestions for making condenser tests.

CONDUITS

PRESSURE. Determining Maximum Economic Dimensions of Metal Pressure Conduit (La Solution générale du Problème de la Détermination des Dimensions Economiques Maximum d'une Conduite forcés en Métal et son Application aux Calculs pratiques), P. Santo Rini. Houille Blanche, vol. 25, no. 200, May-June 1926, pp. 65-71. Calculation of discharge, diameter, coefficient of roughness in rivetted and welded pipe, effect of water hammer, etc.; gives examples.

COPPER ALLOYS

AMPCO. Characteristics of Ampco Metal. Am. Mach., vol. 65, no. 9, Aug. 26, 1926, p. 377. Reference-book sheet. Ampco is copper-aluminum alloy containing appreciable percentage of iron; nature of alloy; machining; forging and welding.

COPPER-MAGNESIUM. Preliminary Experiments on the Copper-Magnesium Alloys, W. T. Cook and W. R. D. Jones. Inst. Metals—Advance Paper, no. 410, for mtg. Sept. 1-4, 1926, 14 pp., 13 figs. Account of preliminary experiments of research; chief feature is production of sound chill-cast bars free from smooth-sided internal gas cavities by means of double-melting process, similar to that recently recommended by Archbutt for production of castings in aluminum free from pinholes; details of method adopted and type of bottom-pouring crucible used to eliminate inclusions of flux and slag; properties of chill-cast bars containing up to 10 per cent copper.

CORES

OVERHANGING. Setting Overhanging Core Simplified Through Practical Methods, H. N. Tuttle. Foundry, vol. 54, no. 17, Sept. 1, 1926, pp. 691-693, 8 figs. Overhanging core is name usually applied to core where print overhangs or projects beyond body of core; methods of setting these difficult cores.

CORROSION

IRON AND STEEL. The Corrosion and Rusting of Steel and Cast Iron (Recherches sur la corrosion et l'enrouillement de l'acier et de la fonte), R. Girard. Revue de Métallurgie, vol. 23, nos. 6 and 7, June and July 1926, pp. 361-367 and 407-417. 33 figs. June: Action of weak acid solutions on ferrous metals. July: Action of saline solutions.

CRANES

DESIGN. Tendencies of Modern Crane Design, E. G. Diegehen. Mech. World, vol. 80, nos. 2063 and 2065, July 16 and 30, 1926, pp. 47-48 and 85-86. Introduction of electric drive; wire ropes; improved materials. Review of recent developments indicates increasing tendency to adapt crane to its job and its environment, rather than to subordinate process to limitations of standard types of crane.

TRAVELLING. Travelling Cranes for Handling Freight Cars in Railway Terminal Yards, H. B. Dwight. Elec. Jl., vol. 23, no. 9, Sept. 1926, pp. 448-450, 3 figs. Method of moving long string of cars by means of cranes allow cars in most congested parts of yard to be taken out as easily as those on outside parts of yard and gives complete freedom in order in which cars are made up into train.

CUPOLAS

JET-CUTTING MACHINES. Jet-Cutting Machines. Machy. (Lond.), vol. 28, no. 722, Aug. 12, 1926, pp. 541-544, 6 figs. Application of machines, using jet of oxygen as cutting medium to railway-car building.

CUTTING TOOLS

COOLANTS. Coolants as Aids to Cutting Tools, S. French. Am. Mach., vol. 65, no. 9, Aug. 26, 1926, pp. 381-382. High-speed removal always requires coolants; effects of heating; qualities of coolants; dangers of separation of ingredients.

D

DAMS

VERTICAL BUTTERFLY GATE. Vertical Butterfly Gates on Exchequer Dam. Eng. News-Rec., vol. 97, no. 9, Aug. 26, 1926, pp. 344-346, 4 figs. Steel gates, made up in 14- x 24-ft. units, control spillways on recently-completed dam in California.

WINTER CONSTRUCTION. Dam Construction in Winter on the Androscoggin. Eng. News-Rec., vol. 97, no. 9, Aug. 26, 1926, pp. 326-331, 14 figs. New 27,000-hp. hydro-electric plant in Maine containing 90,000 cu. yd. of concrete involved special plant arrangement for mixing and conveying hot material.

DIELECTRICS

BREAKDOWN. The Mechanism of Breakdown of Dielectrics, P. L. Hoover. Am. Inst. Elec. Engrs., vol. 45, no. 9, Sept. 1926, pp. 824-831, 10 figs. Critical study of theories of dielectric behaviour have been made in attempt to obtain working hypothesis that more nearly meets stringent requirements of experimental facts; logarithmic formula is shown to give erroneous results if applied to high-voltage cables when they are operating under high stress; breakdown occurs when equilibrium conditions are so disturbed that installation as a whole become unstable, electrically; high stress or strain and high temperature affect conditions of equilibrium considerably.

DIE CASTING

BRASS AND BRONZE WORK. Conflicting Foundry Methods, J. G. Kaiser. Brass World, vol. 22, no. 8, Aug. 1926, pp. 263-264. Manufacturer of special foundry equipment presents arguments in favour of new machine for making die castings for brass and bronze work.

DIESEL ENGINES

AIRLESS-INJECTION. Compressorless Fuel Injection (Ueber die Mittel zur kompressorlosen Brennstoffeinspritzung), G. Eichelberg. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 32, Aug. 7, 1926, pp. 1079-1089, 43 figs. Requirements of fuel injectors; behaviour of fuel-injection devices with regard to these requirements; indirect injection with accumulation.

DESIGN. New Tendencies in Diesel-Engine Design (Neueste Bestrebungen im Bau von Dieselmotoren), F. E. Bielefeld. Schiffbau, vol. 27, nos. 11, 12 and June 2, 16 and July 7, 1926, pp. 313-316, 341-346 and 365-368, 50 figs.

DRAGLINE EXCAVATOR, FOR. Dragline Excavator with Diesel Engine. Engineering, vol. 122, no. 3165, Sept. 10, 1926, pp. 324-326, 7 figs. Details of Diesel engine developed by Northwest Engineering Co. of Chicago, based on experimental work extending over several years; it is of solid-injection type and has four cylinders.

FOUNDATIONS. Good Foundations Best Diesel Insurance, J. J. McDougall. Power Plant Eng., vol. 30, no. 18, Sept. 15, 1926, pp. 1005-1006, 7 figs. Points out that light, poorly constructed foundations endanger all parts of engine.

HEAVY-OIL. Development of Heavy-Oil Engines and Their Applications (l'evolution des moteurs à huile lourde et leurs applications), A. Veranneman. Technique Moderne, vol. 18, no. 15, Aug. 1926, pp. 449-460, 23 figs. Discusses advantages and disadvantages of various types; results of tests; efficiency and fuel consumption, including 4-stroke and 2-stroke engines, pneumatic and mechanical injection, semi-Diesels, still engine; heat recovery; marine Diesels, tractors, locomotives, etc.

LARGE. Large Diesel Engines, R. Johnstone-Taylor. Gas & Oil Power, vol. 21, no. 252, Sept. 2, 1926, pp. 263-264, 3 figs. Recent progress and research; details of Nobel and M.A.N. engine, and British design brought out by Richardsons Westgarth; engine of the future.

LOGGING EQUIPMENT, FOR. Largest Oil-Engined Logging Drum Commissioned. Oil Engine Power, vol. 4, no. 9, Sept. 1926, pp. 541-544, 4 figs. Long Bell Lumber Co. uses 150-hp. Diesel yarding engine; summarizes advantages of Diesel-equipped logging machinery.

OIL-VAPOUR EXTRACTION. A Diesel Engine Oil-Vapour Extractor. Mar. News, vol. 13, no. 4, Sept. 1926, pp. 60 and 67, 4 figs. Recently perfected apparatus recovers large portion of lubricating oil and prevents pollution of engine-room atmosphere.

SOLID-INJECTION. Boiler Fuel in the Solid Injection Engine, D. W. Dickie. Pac. Mar. Rev., vol. 23, no. 8, Aug. 1926, pp. 356-357, 1 fig. Heretofore experiments made by writer to get solid-injection engine to run on boiler fuel have been based upon theory that viscosity of boiler fuel was cause of trouble; this theory was entirely exploded by heating boiler fuel; steam-turbine nozzle experimenters threw light on subject of flow of steam through nozzles, and clew may possibly be obtained from their work.

TEMPERATURE STRESSES. Tests Explode the Myth of Excessive Temperature Stresses in Diesels. Power, vol. 64, no. 12, Sept. 21, 1926, pp. 438-440, 6 figs. Temperature distribution in cylinder walls based on volume and time; temperature stresses at starting and during operation; temperature measurements in Sulzer 2-stroke-cycle marine engine. Reported by Sulzer Bros., Winterthur, Switzerland.

WASTE-HEAT UTILIZATION. Use of Waste-Heat from Diesel Engines. Oil Eng. & Technology, vol. 7, no. 123, July 1926, pp. 301-302, 2 figs. Describes Diesel engine plant of King's College Hospital; economic combustion of boilers receives considerable aid from exhaust gases of Diesel engines by passing gases through air heater in which air to furnaces is pre-heated to about 20 deg. Fahr.; further saving is effected by utilizing cooling water from cylinder jackets of Diesel engines.

DIRECTION FINDING

RADIO. The Cause and Elimination of Night Errors in Radio Direction-Finding, R. L. Smith-Rose and R. H. Barfield. Instn. Elec. Engrs.—Jl., vol. 64, no. 356, Aug. 1926, pp. 831-838 and (conclusion) 838-842, 12 figs. Experiments carried out with view to obtaining more conclusive evidence as to causes of apparent variations in bearings observed under certain conditions on wireless direction-finders; Adcock 4-aerial direction-finder has been developed, and with its aid it is shown that actual deviation in azimuth of wireless constitutes proof that variable errors observed on closed-coil direction-finders at night are caused by downcoming waves arriving from upper atmosphere and polarized with electric force in horizontal plane; point out possibility of Adcock system being developed into practical direction-finder free from night errors.

DRILLING MACHINES

BOILER-PLATE. Multiple Boiler-Plate Drilling Machine. Boiler Maker, vol. 26, no. 8, Aug. 1926, pp. 234-235, 2 figs. Heavy-type plate and rivet-hole drilling machine specially designed for boiler, tank and structural shops, constructed by Cincinnati Bickford Tool Co., Ohio

INDEX PLATES. A Machine for Drilling Index Plates, M. Wright. Am. Mach., vol. 65, no. 9, Aug. 26, 1926, p. 369. Automatic drilling machine for drilling circles of holes in index plates for dividing heads.

DROP FORGING

PROCESS. The Drop Forging Process, J. H. G. Williams. Am. Soc. Steel Treating—Trans., vol. 10, no. 3, Sept. 1926, pp. 409-435, 10 figs. Describes entire process of drop forging from inspection of raw materials to finished products; estimate of cost of producing certain types of drop forging.

E

ELECTRIC DISTRIBUTION

ECONOMICS. Some Features of the Economics of Electrical Distribution, J. M. Kennedy. Engineering, vol. 122, no. 3161, Aug. 13, 1926, pp. 214-216, 1 fig. Considers problems to be faced in England if proposals before Parliament for co-ordination of generation throughout country materialize. Paper read before Sect. G of Brit. Assn.

ELECTRIC DISTRIBUTION SYSTEM

FEEDER-END PRESSURES. Measuring Feeder-End Pressures, J. A. McHugh and A. F. Hamdi. Elec. World, vol. 88, no. 8, Aug. 21, 1926, pp. 367-369, 2 figs. Method used by New York Edison Co. to measure individual and average feeder-end pressures on 3-wire d.c. network; may be used in automatic stations.

ELECTRIC GENERATORS, A.C.

STABILITY CHARACTERISTICS. Stability Characteristics of Alternators, O. E. Shirley. Am. Inst. Elec. Engrs., vol. 45, no. 9, Sept. 1926, pp. 813-819, 15 figs. Shows that power limits may be reached with very short lines and certain classes of load; criteria for stability of alternator as developed by author are short-circuit ratio, saturation, power factor, etc.

ELECTRIC LAMPS

ECONOMIC CHOICE. The Economics of Lamp Choice, D. J. Bolton. Instn. Elec. Engrs.—Jl., vol. 64, no. 356, Aug. 1926, pp. 844-848, 1 fig. Choice of type (carbon metallic vacuum and gas-filled) is first considered and then choice of rating for given type, latter being treated both graphically and algebraically.

ELECTRIC MEASURING INSTRUMENTS

RECOMMENDATIONS. Instruments and Measurements, A. E. Knowlton. Am. Inst. Elec. Engrs., vol. 45, no. 9, Sept. 1926, pp. 808-812, 4 figs. Report of Committee on instruments and measurements; selection of instrument transformers; potential transformers; current transformers; watt-hour meter; dielectric losses and power factor.

ELECTRIC METERS

THREE-PHASE FOUR-WIRE SYSTEMS, FOR. Methods of Metering Energy, C. Oman. Elec. Jl., vol. 23, no. 9, Sept. 1926, pp. 445-447, 11 figs. Discusses three methods in general use for metering energy in 3-phase 4-wire systems.

ELECTRIC MOTORS

CONTROL. Sectionalizing of Mine Circuits, E. L. Hough. Gen. Elec. Rev., vol. 29, no. 9, Sept. 1926, pp. 611-616, 5 figs. Character of mine electrification; advantages of sectionalizing mine distribution systems; automatic reclosing feeders; details of equipment and its operation.

ELECTRIC MOTORS, A.C.

CONTROL. Choice of Control for Synchronous Motors in Industrial Plants, R. M. Matson and D. W. McLenegan. Gen. Elec. Rev., vol. 29, no. 9, Sept. 1926, pp. 628-633, 1 fig. Fundamental considerations; essential control equipment; full-voltage and reduced-voltage starting; manual and automatic control; protection; instrument and meters.

SINGLE-PHASE. Characteristics of Single-Phase Motors, J. O. Walz. Elec. Jl., vol. 23, no. 9, Sept. 1926, pp. 461-467, 11 figs. Gives general theory of more commonly used motors and discusses their characteristics; those discussed are split-phase, repulsion, repulsion-start induction, and repulsion-induction motors.

SQUIRREL-CAGE. Alternating-Current Motors, Squirrel-Cage Rotors, B. A. Briggs. Power, vol. 64, no. 8, Aug. 24, 1926, pp. 276-278, 12 figs. Materials used in rotor windings; effects of winding resistances on starting torque of motor; methods of connecting end rings and slot conductors; troubles that develop in winding connections and how these are overcome.

The Squirrel-Cage Repulsion Motor, G. Windred. Elecn., vol. 97, no. 2517, Aug. 27, 1926, pp. 230-232, 7 figs. Recent development in single-phase commutator-motor construction and its advantages over existing types.

STARTING. Starting Squirrel-Cage Type Induction Motors, G. O. Wilms. Power, vol. 64, no. 12, Sept. 21, 1926, pp. 434-435, 4 figs. Comparison of advantages and disadvantages of compensator and resistance-type starting equipment.

Motor Starters and Controllers for Small Powers. Engineering, vol. 122, no. 3160, Aug. 6, 1926, pp. 179-181, 14 figs. Control generators of d.c. type constructed by Brookhurst Switchgear, Ltd., Chester, Eng.

STARTERS. The Selection of Starters for Induction Motors, L. F. Adams. Gen. Elec. Rev., vol. 29, no. 9, Sept. 1926, pp. 624-627. Large choice in motor-starting equipment; types suited to various motors; manual and automatic starters; motor-speed regulation; motor protection.

ELECTRIC TRANSMISSION LINES

INDUCTANCE. Inductance of Overhead Transmission Lines with Unequal Spacing of Wires, A. Still. Franklin Inst.—Jl., vol. 202, no. 3, Sept. 1926, pp. 365-372, 4 figs. Effect of transposing conductors of three-phase transmission; inductance of parallel circuits as affected by position of conductors.

INTERMEDIATE SUPPORTS. Calculation of Intermediate Supports for Transmission Lines, V. P. Farmakovsky. Electritchestvo, no. 6, June 1926, pp. 275-279, 8 figs. Combined graphical and analytical method of calculating intermediate supports for transmission lines for case of unilateral breakage of half of wires in span, adjoining to anchor support, with earth wire drawing together top of supports remaining whole. (In Russian.)

POWER LIMITS. An Investigation of Transmission-System Power Limits, C. A. Nickle and F. L. Lawton. Am. Inst. Elec. Engrs., vol. 45, no. 9, Sept. 1926, pp. 864-874, 6 figs. Discusses results of theoretical analysis, verified by miniature-system tests of power limits of transmission systems; concludes that criteria for stability under all conditions is steady-state power limit; charging kva. exercises marked detrimental effects of stability; characteristics of synchronous terminal apparatus are of great importance, etc.

TOWERS. Economic Base Width of Transmission Towers, C. R. Young, W. B. Dunbar and C. E. Lewis. Can. Engr., vol. 51, no. 7, Aug. 17, 1926, pp. 211-215, 8 figs. Least weight base width 0.215 of height for usual specifications; greater for high permissible slenderness ratios; stay members lessen weight but increase pound cost; designing diagonals for tension or compression advantageous.

ELECTRICAL SUPPLY

RURAL SERVICE COSTS. Allocating Rural Service Costs, L. C. White. Elec. World, vol. 88, no. 11, Sept. 11, 1926, pp. 524-526. Method of defining responsibilities of farm customers for plant investment required to serve them; importance of increasing energy consumption in reducing unit prices.

ELECTRIC WELDING

ARC. *See Electric Welding, Arc.*

SPOT. New Method of Spot Welding, R. G. Hudson. Elec. World, vol. 88, no. 8, Aug. 21, 1926, p. 375, 2 figs. Pin-type welding is developed to meet need for improvement over rivetted and spot-welded joints.

ELECTRIC WELDING, ARC

PENETRATION. Factors Affecting Penetration, J. B. Green. Welding Engr., vol. 11, no. 8, Aug. 1926, pp. 28-31, 3 figs. Study of penetration in metallic arc welding becomes simplified when it is considered in terms of heat.

STRUCTURAL STEEL. Electric Arc Welding Steel Structures, J. B. Abell. Elec. Light & Power, vol. 4, no. 9, Sept. 1926, pp. 21-23, 48 and 54, 5 figs. Application of arc welding to new two-storey and basement commercial building for Peerless Auto Sales Co. in Canton, Ohio.

Electric Welding Steel Structures. Gen. Elec. Rev., vol. 29, no. 9, Sept. 1926, pp. 33-34. Tests prove superiority of welded over rivetted connections; effort to amend building codes.

Tests of Arc Welded Structural Steel, A. M. Candy and G. D. Fish. Iron & Steel Engr., vol. 3, no. 8, Aug. 1926, pp. 380-384B. Describes series of test specimens which were all welded with various members located in same position and manner as would be required if various members were actually part of building structure.

ELECTRICITY

ENGINEERING TERMS. The B.E.S.A. Glossary of Electrical Engineering Terms, G. W. O. Howe. Engineering, vol. 122, no. 3162, Aug. 20, 1926, pp. 245-246; also Elecn., vol. 97, no. 2515, Aug. 13, 1926, pp. 178-179 and 184. Criticism of glossary published by British Engineering Standards Assn. with object in view (1) to standardize and co-ordinate electro-technical terms used in British Empire, and (2) to provide basis for British portion of international vocabulary, in course of preparation by International Electrotechnical Commission. Paper read before Sect. G of British Assn.

ELECTRICITY SUPPLY

DEVELOPMENTS. The Present and Future Development of Electricity Supply, J. F. C. Snell. Engineering, vol. 122, no. 3161, Aug. 13, 1926, pp. 194-198. Historical review of developments and future prospects. Presidential address to Sect. G of Brit. Assn.

ELEVATORS

BRAKES. Operation and Adjustment of A.C. Elevator Brakes, H. B. Cook and F. A. Annett. Power, vol. 64, no. 10, Sept. 7, 1926, pp. 366-370, 9 figs. Problems involved in obtaining satisfactory a.c. elevator brakes; operation and adjustment of three different designs.

ENGINEERS

CHANGING STATUS OF. The Changing Status of the Engineer, F. B. Jewett. Engrs'. Bul., vol. 10, no. 8, Aug. 1926, pp. 3-6. How twentieth century conditions are altering his relations to his profession, to industry, and to society.

EXHAUST STEAM

TEXTILE MILLS. The Use of Exhaust Steam for Process Work in Textile Plants, S. M. Green. Engrs. & Eng., vol. 43, no. 6, June 15, 1926, pp. 160-164, 2 figs. Details of recent installation of 3,500-kw. turbine and its performance.

F

FERTILIZERS

CHEMICAL PROBLEMS. Chemistry's Contributions to the Fertilizer Industry, J. E. Breckenridge. Indus. & Eng. Chem., vol. 18, no. 9, Sept. 1926, pp. 941-943, 2 figs. Perfection of acid-phosphate manufacture; harmful materials rendered useful; supply of nitrogen increased; American potash made available; further problems for chemistry.

FILTRATION PLANTS

WALTON, ENGLAND. New Filtration Plant at Walton-on-Thames. Engineer, vol. 142, nos. 3681, 3682 and 3683, July 30, Aug. 6 and 13, 1926, pp. 109-112, 134-136 and 160-164, 24 figs. partly on p. 118 and 172. Outstanding feature of new work is fact that filtration of water is effected in two stages, stored water from reservoirs, or when they are at low level water pumped direct from river, being first treated in primary filters, discharge from which is passed on to ordinary slow sand filters; filtration plant consists first of 18 primary open gravity filters, each designed to be capable of filtering between one and two million gallons of water per sq. ft. per hr., and secondly, of six ordinary slow sand filters; pumping machinery installed in connection with filtration plant.

FIREBRICK

STRENGTH OF TEXTURE. A Comparison of the Uniformity of Strength and Texture of Fire Brick Made by Different Processes, A. E. R. Westman and W. H. Pfeiffer. Am. Ceramic Soc.—Jl., vol. 9, no. 9, Sept. 1926, pp. 626-632, 1 fig. Of brands examined, those made by stiff-mud process are found to be more uniform in strength and less uniform in structure than those made by dry-press process.

FLIGHT

LONG-DISTANCE. Long-Distance Flying, A. Cobham. Roy. Aeronautical Soc.—Jl., vol. 30, no. 188, Aug. 1926, pp. 482-491 and (discussion) 492-494. Author discusses two main types of long-distance flying, firstly, long non-stop flights, and secondly, long flying journeys where many landings are made.

FLOODS

RAPIDLY RISING IN SMALL STREAM. Hydraulic Data on Rapidly-Rising Flood in Small Stream, D. J. F. Calkins. Eng. News-Rec., vol. 97, no. 11, Sept. 9, 1926, pp. 416-417, 1 fig. Squillchuck Creek in Central Washington has flood of great concentration though observed rainfall was low.

FLOW OF WATER

MEASUREMENTS. Flow Measurements with the Flat Plate Orifice. Pow Plant Eng., vol. 30, no. 18, Sept. 15, 1926, pp. 997-1000, 6 figs. Simplified formulas and coefficients facilitate use of flow meter for temporary, or portable-meter; use in air; steam and water measurement.

FORGE SHOPS

SAFETY WORK IN. Safety Work in the Drop Forge Shop, G. A. Kuechenmeister. Forging—Stamping—Heat Treating, vol. 12, no. 8, Aug. 1926, pp. 284-288, 4 figs. Points out that enforcement of safety rules and complete data on equipment may result in material reduction of accidents; board-hammer pulley catchers.

FORGING

BRASS. An Outline of the Methods Used in Forging Brass, F. W. Curtis. Am. Mach., vol. 65, no. 10, Sept. 2, 1926, pp. 393-396, 10 figs. Characteristics of metal and shapes that can be forged; temperatures necessary for best results; types of dies; important points to be considered.

TEMPERATURE, EFFECT OF. The Effect of Temperature in Forging, H. Brearley. Forging—Stamping—Heat Treating, vol. 12, no. 8, Aug. 1926, pp. 290-292 and 295, 4 figs. Improper heating of steel for hot-working is frequently responsible for introduction of serious mechanical defects in finished product.

UPSETTING. Upsetting Places Fibres in Compression, Not Tension, C. D. Harmon. Iron Trade Rev., vol. 79, no. 10, Sept. 2, 1926, pp. 574-575, 6 figs. Deals with action of steel when upset in modern forging machine.

FOUNDRIES

BRASS. *See Brass Foundries.*

MERCHANDIZING POLICY. Better Merchandizing is Need of American Foundry Industry, S. W. Utley. Iron Trade Rev., vol. 79, no. 12, Sept. 16, 1926, pp. 709-711 and 714. Author shows that faulty merchandizing is responsible for many of ills of foundry industry and that sacrificing profit in interest of increasing output is almost business suicide.

STEEL. Savings Results from Pre-Heating. Iron Age, vol. 118, no. 12, Sept. 16, 1926, pp. 759-762, 6 figs. Mechanical reclaiming of foundry sand, use of electricity for annealing steel castings in annealer of unique design, pre-heating of scrap before it is charged into electric melting furnace, and baking of cores electrically are features of practice of Industrial Steel Casting Co., Toledo, Ohio.

VARIETY OF PRODUCTS, FOR. Variety of Product a Factor in Success, R. Micks. Can. Foundryman, vol. 17, no. 8, Aug. 1926, pp. 5-6, 3 figs. Methods and equipment of foundry of Gilson Mfg. Co., Guelph, Ont.

FOUNDRY EQUIPMENT

MIXERS. Blast Furnace Metal Mixer Adapted for Foundry Use, H. Illies and A. Hesse-Wortmann. Foundry Trade Jl., vol. 34, no. 521, Aug. 2, 1926, pp. 131-132, 2 figs. Oil-fired 25-ton mixers with flat hearths operated in large pipe foundry in Germany; they are tilted hydraulically and receive all iron that arrives from blast furnaces; in case blast furnace furnishes insufficient metal, cupola iron is added, and any quantity can be tapped at desired time.

Sand Mixer. A New Mixing Apparatus for Moulding Sand (Eine neuartige Formsandaufbereitungsanlage), H. Behrens. Giesserei, vol. 13, no. 23, June 5, 1926, pp. 413-416, 8 figs; also translated abstract in Foundry Trade Jl., vol. 34, no. 522, Aug. 19, 1926, p. 154, 3 figs. New apparatus, known as "Eirich" patent, consisting of bottom plate rotating around vertical axis and runner with two scrapers moving around axis in opposite direction; table and runner can be regulated to any vertical distance.

FURNACES, HEAT TREATING

Hardening. Gas-Fired Hardening Furnaces Insure Accurate Temperature Control, J. A. Cameron. Iron Trade Rev., vol. 79, no. 12, Sept. 16, 1926, pp. 712-713, 4 figs. Gas-fired furnaces used in making of machines manufactured by Cameron Machine Co., combining new type of burner and method of radiation.

FURNACES, HEATING

Gas-Fired Rivet. Rivet Heating in Gas-Fired Furnaces, J. L. Munnis. Forging—Stamping—Heat Treating, vol. 12, no. 8, Aug. 1926, p. 295, 1 fig. Details of furnace used in large box-car plant.

Mechanical Firing. Heating Furnace Fired Mechanically, C. H. Lawrence. Iron Trade Rev., vol. 79, no. 12, Sept. 16, 1926, pp. 720 and 723, 2 figs. Stoker-operated billet-heating furnace at plant of Elyria Iron & Steel Co., Elyria, Ohio.

G

GAUGES

Slip. Slip Gauges. Indus. Mgmt. (Lond.), vol. 13, no. 9, Sept. 1926, pp. 407-408. Deals with slip or combination block gauge system of measurement.

GAS PRODUCERS

Progress in. Progress in Gas-Producer Practice. Colliery Eng., vol. 3, nos. 28 and 29, June and July, 1926, pp. 277-279 and 327-329, 9 figs. Automatic charging, mechanical agitators, and automatic ash removal discussed.

GEARS

Cast-Iron, Repairing. Repairing a Cast-Iron Gear, Discussion, E. Andrews. Am. Mach., vol. 65, no. 11, Sept. 9, 1926, pp. 454-455, 4 figs. Discussion of article by O. P. Williams published in same journal, vol. 63, p. 586. Modern welding methods have shown that welding in or building up gear-teeth, give homogeneous structure that may easily be machined and which possess degree of strength equal to that of original section.

Chain-Driven. A Continuously-Variable, Chain-Driven Change-Speed Gear. Engineer, vol. 142, no. 3685, Aug. 27, 1926, pp. 220-222, 8 figs. Positive, infinitely variable gear, manufactured by P.I.V. Gear Syndicate; it has been applied in bakery, confectionery and biscuit-making industries and in connection with manufacture of cement, paper, electric cables, cotton and artificial silk.

Stub Teeth. The Strength of Stub Teeth, W. E. Wright. Engineering, vol. 122, no. 3165, Sept. 10, 1926, pp. 316-317, 3 figs. Main features of stub tooth are that addendum and dedendum are smaller than those of Brown and Sharpe standard, while angle of contact is greater; discusses three principal systems of measurements of stub teeth in vogue, in all of which measurements along pitch circle are unaltered.

Teeth in Action. Gear Teeth in Action, E. Buckingham. Am. Mach., vol. 65, nos. 10 and 11, Sept. 2 and 9, 1926, pp. 389-392 and 451-454. Sept. 2: Eliminating gear noise in relation to uniformity of profiles and spacing; effect of eccentricity on gear noises; "Music of Gears"; resonance; harmonious ratios. Sept. 9: Relation of noise to design of gear blanks, cases and carriers; function of lubricant on gear teeth; selection of proper lubricant to meet various conditions.

Worm. Worm Gearing, H. E. Merritt. Machy. (Lond.), vol. 28, no. 724, Aug. 26, 1926, pp. 605-607, 4 figs. Theory and practice of design; detail dimensions of straight-sided worms; elements of worm-gear action; calculation of nominal and actual pitch diameters.

GOVERNORS

Steam-Turbine. Principles of Steam Turbine Governors. Power Plant Eng., vol. 30, no. 18, Sept. 15, 1926, pp. 991-996, 14 figs. Construction details and method of operation of various makes of governors in present-day use.

GRINDING

Cylindrical. Cylindrical Grinding Without Traverse, J. Denton. Am. Mach., vol. 65, no. 12, Sept. 16, 1926, p. 476, 1 fig. Describes grinding to diameter of outer races or cups of roller bearings.

GRINDING MILLS

Fine Grinding. Some Recent Research in the Art of Fine Grinding, G. Martin. Concrete, vol. 29, no. 2, Aug. 1926, pp. 95-97 and 110, 3 figs. Results of study made by British Portland Cement Research Assn. between 1923 and 1925; importance of fine grinding; tabulations of results; efficiency of grinding machines; discussion of sizes and shapes of ground material.

GUN METAL

Porosity, Prevention of. Prevention of Porosity and Improvement in the Physical Properties of Gun-metal, W. Reitmeister. Foundry Trade Jl., vol. 34, no. 523, Aug. 26, 1926, pp. 177-180, 5 figs.

H

HARDNESS

Testing. Methods of Hardness Testing. Am. Mach., vol. 65, no. 12, Sept. 16, 1926, p. 501, 2 figs. Rockwell hardness testing. Reference-book sheet.

HEAT TRANSMISSION

Theory. The Theory of Heat Transmission (Ueberblick über die Lehre von der Wärmeübertragung), H. Gröber. Zeit. des Vereines deutscher Ingenieure, vol. 70, no. 34, Aug. 21, 1926, pp. 1125-1128, 3 figs. Significance of heat-transmission coefficient; empirical and mathematical-physical method of research; heat transmission in solid bodies and in pipes; radiation of surfaces of solid bodies; radiation of gases; relation of theory of heat transmission to important technical problems.

HEATING, STEAM

Humid-Air Method. Analyzing the Humid-Air Method of Steam Heating Buildings, T. N. Thomson. Plumbers' Trade Jl., vol. 81, no. 4, Aug. 15, 1926, pp. 369-370 and 405. Mechanical construction of radiator steam valve and Venturi tube at radiator inlet, which are elements that made humid-air method possible.

Low-Pressure. Operating Data on Low Pressure Heating in Minneapolis Schools, A. L. Sanford. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 32, no. 9, Sept. 1926, pp. 647-654, 2 figs. Comparison of high- vs. low-pressure plants and description of typical heating plants of Minneapolis Public Schools. Paper read before Nat. Assn. Pub. Schools Officials, Toronto.

HYDRAULIC TURBINES

Developments. Recent Developments in Water Power Equipment. Power Engr., vol. 21, nos. 241, 242, 244, 245 and 246, Apr., May, July, Aug. and Sept. 1926, pp. 125-126, 174-176, 258-261, 301-303 and 344-346, 26 figs.

Pitting of Runners. Pitting of Hydraulic Turbine Runners. Nat. Elec. Light Assn.—Report, no. 256-318, Apr. 1926, 31 pp., 14 figs. Study for purpose of collecting actual experience data from operating companies in United States and Canada, and to classify and analyze these data in such fashion as to throw light on causes of and means of preventing pitting.

Propeller-Type. A 7,500-Horse Power Propeller Type Water Turbine. Engineer, vol. 142, no. 3686, Sept. 3, 1926, pp. 254-256, 6 figs. Turbines under construction for Kachlet Power Plant on Danube River by J. M. Voith, Germany; turbine is designed for total output of 7,500 h.p. when working under normal head of 7.65 m. and with water consumption of 87.5 cu. m. per sec., speed being 75 r.p.m.

25,000-H.P. A 25,000-H.P. Water Turbine and Alternator. English Elec. Jl., vol. 3, no. 5, July 1926, pp. 201-212, 16 figs. Details of "English Electric" turbine and generator installed in Sorocaba power station by Sao Paulo Elec. Co.; it is reaction type and operates under head of 670 ft.; alternator has full-load output of 20,500-kva., 3-phase, 60 cycles per sec. and power factor of 0.88 and pressure of 6,600 volts when running at 600 r.p.m.

HYDRAULICS

Problems. Some Problems in Hydraulics and River Engineering, E. S. Bellasis. Engineer, vol. 142, no. 3684, Aug. 20, 1926, pp. 202-203, 2 figs. Changes in rivers; dam sites; silt and scour; canals without barrage; backwater problems.

I

INDUCTANCE COILS

Audiofrequencies, for. On the Design of an Inductance Coil for Audiofrequencies which has the Iron Core with the Air Gap, H. Nukiyama and K. Nagai. Inst. Elec. Engrs. of Japan—Jl., no. 456, July 1926, pp. 734-741, 4 figs. Authors have obtained length of air gap theoretically; results of experimental tests. (In Japanese.)

INDUSTRIAL MANAGEMENT

Manufacturing Control. Estimating Forthcoming Orders by the Pooled Orders Index, J. H. Barber. Mfg. Industries, vol. 12, no. 3, Sept. 1926, pp. 199-202, 4 figs. Shows ways in which confidential pooled-orders index, developed by Walworth Co., give definite guidance.

Manufacturing Losses, Reducing. Tracing that Average 28 Per Cent Loss, C. U. Carpenter. Mfg. Industries, vol. 12, no. 3, Sept. 1926, pp. 179-184, 4 figs. In plant having 8,000 employees, production increased and costs came down when author set standards for each job; established bonus system, and provided additional incentive through three-step plan of promotion.

Production Methods. Bringing Production Methods to the Job Shop, J. Younger. Am. Mach., vol. 65, no. 9, Aug. 1926, pp. 349-351. One production shop, The Packard Motor Car Co., not only specifies chemical constituents of its steels, but also stipulates physical factors and further adds microphotographic specification; material turnover in job shop; standardization and simplification.

Purchasing Schedules. Complete Graphic Checks on Purchasing Schedules and Deliveries, H. D. Murphy. Mfg. Industries, vol. 12, no. 3, Sept. 1926, pp. 211-212, 2 figs.

INDUSTRIAL RELATIONS

Future of. The Future Relationship Between Employer and Employee, R. A. Hadfield. Indus. Mgmt. (Lond.), vol. 13, no. 8, Aug. 1926, pp. 358-359. Messages received from leaders of industry on future relationship between employer and employee and its bearing on industrial reconstruction; outlines conciliation system by which industrial strife may be avoided; striking just balance between capital and labor.

INDUSTRIAL TRUCKS

Automobile Manufacturing Plants. How the Automotive Industries Have Put the Electric Industrial Truck to Work, H. J. Payne. Indus. Mgmt. (N.Y.), vol. 72, no. 2, Aug. 1926, pp. 88-95, 15 figs. Discusses practical application of industrial trucks, handling fender stock; use in forge plants and in malleable foundry, in body building plant, and in glass plant; building automobile tires.

INSULATION, HEAT

Developments. Heat Insulation, R. H. Heilman. Engrs. & Eng., vol. 43, no. 8, Aug. 15, 1926, pp. 209-218, 5 figs. Author traces development of heat insulation during past 40 years; presents tables showing efficiencies, heat savings and unit heat losses which can be obtained from 3-in. thickness at heat insulation, and time required to repay original cost and savings per year for temperatures of 500 to 600 deg. Fahr.; explains how to make intelligent use of tables.

Tests. Heat Insulator Tests, C. H. Herter. Refrig. World, vol. 61, no. 8, Aug. 1926, pp. 9-12, 1 fig. Deals with such insulating materials as lith, balsam, wool, Cabot's cel-grass quilt, pyrocell, thermofill, house lining and paper-pulp boards.

INSULATORS, ELECTRIC

Pyrex vs. Porcelain. Temperature of Pyrex and Porcelain in Sunlight, J. T. Littleton, Jr., and W. W. Shaver. Am. Ceramic Soc.—Jl., vol. 9, no. 9, Sept. 1926, pp. 618-625, 6 figs. Relative temperatures of Pyrex glass insulators and porcelain insulators in sunlight are determined in three ways; experiments show that temperature of porcelain insulator increases on average about three and one-half times that of Pyrex glass insulator.

INTERNAL-COMBUSTION ENGINES

Compression-Ignition. Improving the Performance of a Compression Ignition Engine by Directing Flow of the Inlet Air, C. Kemper. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 242, July 1926, 9 pp., 6 figs. Results of tests to determine effect on engine performance of directing flow of inlet air to 5-in. by 7-in. single-cylinder, solid-injection, compression ignition engine; it was found that directing flow of inlet air towards fuel-injection valve gave steadier engine operation, appreciable increase in power and decreased fuel consumption; results indicate simple means for improving air flow in given combustion chamber without changing its shape.

Dust-Driven. An Engine that Runs on Dust, W. A. Noel and R. Hellback. Power, vol. 64, no. 11, Sept. 14, 1926, pp. 402-404, 5 figs. That engines can run on such dust as elevator floor sweeping, starch dust and powdered coal, has been proved in tests by Bureau of Chemistry, Department of Agriculture; preliminary experiments suggest that more attention be given to solid-fuel engine.

Solid-Injection. The Coal Fuel Engine. Gas & Oil Power, vol. 21, no. 251, Aug. 5, 1926, pp. 239-240, 5 figs. Development of solid-fuel internal-combustion engine by A. Schnürle, a German inventor; combustion is effected in special chamber which is in connection with working cylinder but separated from it by porous filter screen plate, through which gases can pass, but not coke and coal dust; chamber contains finely pulverized fuel which is in glowing state.

TEMPERATURE STRESSES. Temperature Stresses and Deflexions in the Fins and Barrels of an Air-Cooled Internal Combustion Engine Cylinder, A. M. Binnie. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. of Science, vol. 2, no. 8, Aug. 1926, pp. 449-462, 21 figs. Attempt is made to evolve method of calculation; for simple case considered it is shown that much weight can be saved by reducing thickness of fins towards their tips; that spacing of fins is of importance; and that to small extent temperatures stresses in fins assist barrel to withstand internal pressure in cylinder.

See also Airplane Engines; Automobile Engines; Diesel Engines; Oil Engines.

IRON ALLOYS

STAINLESS IRON. Stainless Iron, N .L. Mochel. Am. Soc. Steel Treating—Trans., vol. 10, no. 3, Sept. 1926, pp. 353-392 and (discussion) 392-394, 38 figs. Characteristics of low-carbon chromium-iron alloys known commercially as stainless iron; data relative to physical properties of alloys of varying heat treatment; elastic limit and impact values; effect of varying chromium content and silicon, copper and nickel, on physical properties, microstructure, resistance to corrosion and workability of alloys.

IRON CASTINGS

CLEANING AND GRINDING. Cleaning and Grinding Castings, R. Micks. Can. Foundryman, vol. 17, no. 8, Aug. 1926, pp. 7-8. In majority of foundries, tumbling mill is principal method of cleaning castings; sand blast is another valuable cleaning agent, but much depends on quality of abrasive used; portable grinding wheels.

FURNACE SCRAP, FROM. Bad Castings and Furnace Scrap, H. H. Hopkins. Foundry Trade Jl., vol. 34, no. 522, Aug. 19, 1926, p. 164. Discusses question as to whether use of pig iron, made partly with scrap, results in defective castings; author gives practical results and points out errors in reasoning.

SHRINKAGE. Shrinkage Cracks in Steel and Iron Castings, G. A. Luers. Nat. Engr., vol. 30, no. 9, Sept. 1926, p. 406, 1 fig. Author claims that in nearly 50 per cent of cases, breakage is traced directly back to foundry.

STRAIGHTENING WARPED. Straightening Warped Iron Castings, W. J. May. Mech. World, vol. 80, no. 2069, Aug. 27, 1926, 3 figs. By careful heat treatment warping in most cases can be corrected without overmuch trouble; small partly machined castings which are warped will often recover their straightness by mere application of heat for some hours.

J

JIGS

ETCHING SYMBOLS. Etching Symbols on Jigs and Fixtures, R. B. White. Am. Mach., vol. 65, no. 9, Aug. 26, 1926, pp. 367-368, 1 fig. The pantograph and matrices; composition of acid-resisting ground; wax dam prevents acid from spreading; acids for etching different metals.

MANUFACTURE. Production Pointers in Jig Making, C. C. Hermann. Can. Machy., vol. 36, no. 10, Sept. 2, 1926, pp. 17-19, 11 figs. Points out that making of busing is difficult piece of work in ordinary shop, initial requirement being concentric hole so that surrounding metal will be uniform thickness.

L

LABOUR

BIBLIOGRAPHIES. Book Notes. Int. Labour Rev., vol. 14, no. 1, July 1926, pp. 135-150. International, official and non-official publications.

Publications Relating to Labour. Monthly Labour Rev., vol. 23, no. 2, Aug. 1926, pp. 236-239. Official and non-official publications in United States and foreign countries.

LAKES

LEVELS, GREAT LAKES, N.A. The Levels of the Great Lakes of North America, W. Porthouse. Engineer, vol. 142, no. 3685. Aug. 27, 1926, pp. 218-219, 1 fig. Levels of Great Lakes have provided problem of immense difficulty and supercomplexity.

LATHES

CENTRES. Design of Lathe Centres, F. Horner. Machy. (Lond.), vol. 28, nos. 721 and 722, Aug. 5 and 12, 1926, pp. 528-532 and 564-568, 16 figs. Typical designs for different classes of work.

LIGHTING

STREET. Remote Control Equipment for Street Lighting Circuits, H. R. Crago. Gen. Elec. Rev., vol. 29, no. 9, Sept. 1926, pp. 666-668, 7 figs. Advantages of centralized control.

LIGHTNING ARRESTERS

FUSE PROTECTION. Fuse Protection of Lightning Arresters, J. D. Roberts. Elec. Light & Power, vol. 4, no. 9, Sept. 1926, pp. 27 and 82, 2 figs. On large transmission system in Middle West, fuses are installed in connection with oxide film, electrolytic and auto-valve types of arresters where used in connection with 33,000-volt and 66,000-volt transmission system; fuses are only installed at isolated locations not having constant attendance.

KLYDONOGRAPH TESTS. Arrester Tests with the Klydonograph, L. R. Golladay. Elec. World, vol. 88, no. 10, Sept. 4, 1926, pp. 477-479, 6 figs. Results of investigations on several station-type auto-valve arresters during summer and fall of 1925; characteristics of lightning discharges observed for storms differing widely in degree of severity.

LIME

MANUFACTURE FROM SMALL STONE. Manufacture of Lime from Small Stone, W. M. Myers. Can. Min. Jl., vol. 47, no. 35, Aug. 27, 1926, pp. 846-850. Difficulty of calcining small stone; present method of study of sintering machine as means of lime burning; construction, operation and tests of sintering machine; properties of lime produced by sintering machine and its possible utilization in manufacture of lime.

LOCOMOTIVE BOILERS

PITTING. Pitting of Locomotive Boilers, W. A. Pownall. Ry. Rev., vol. 79, no. 8, Aug. 21, 1926, pp. 263-270, 5 figs. Observations of boiler corrosion in various forms.

Water-Tube. Suggestions for a Water-Tube Locomotive Boiler, L. A. Rehfuss. Boiler Maker, vol. 26, no. 8, Aug. 1926, pp. 218-219, 2 figs. Outline of advantages to be expected from carefully developed water-tube locomotive-boiler design.

LOCOMOTIVES

DESIGN AND CONSTRUCTION. Locomotive Design and Construction. Ry. Rev., vol. 79, no. 6, Aug. 7, 1926, pp. 197-207, 2 figs. Abstract of progress report on building engines to reduce track stresses.

DIESEL ENGINED. Geared Diesel Locomotive 2-E-1 of Russian State Railways (Diesel-Getriebelokomotive 2-E-1 für Staatsbahnen der U.S.S.R.), G. Lomonossoff. Organ für die Fortschritte des Eisenbahnwesens, vol. 81, no. 11, June 15, 1926, pp. 193-198, 13 figs. Design of Diesel locomotive of 1,200-h.p., with gear transmission by Hohenzollern, A.G., comparison with Diesel-electric locomotive; advantages of former. (Transl. from Russian.)

DRIVING WHEELS. On the Action of a Locomotive Driving Wheel, F. W. Carter. Roy. Soc.—Proc., vol. A112, no. A780, Aug. 3, 1926, pp. 151-157, 1 fig. Author attempts to compute tractive force per unit creepage to rail.

FOUR-CYLINDER COMPOUND. French Four-Cylinder Compound 4-8-2 Type Locomotive, M. Chambon. Ry. Age, vol. 8 , no. 7, Aug. 14, 1926, pp. 276-278, 3 figs. Develops 41,446-lb. tractive force, with 40,000-lb. axle loads; grate area large for European practice.

LUBRICATION. A High-Pressure Locomotive Lubricator. Engineer, vol. 142, no. 3683, Aug. 13, 1926, p. 180, 5 figs. New type of forced feed lubricator manufactured by Bosch Co.

OIL-ENGINED. Transmission of Power on Oil-Engine Locomotives, A. I. Lipetz. Mech. Eng., vol. 48, nos. 8 and 9, Aug. and Sept. 1926, pp. 797-806 and 929-940, 31 figs. Classification of power transmission in chronological order of their appearance in art; class A comprises full-power elastic-fluid transmissions; class B consists of differential elastic-fluid transmissions; class C pertains to mechanical (gear-clutch) and direct transmissions.

PACIFIC-TYPE. Atlantic & West Point Passenger Locomotives. Ry. Rev., vol. 79, no. 10, Sept. 4, 1926, pp. 331-333, 3 figs. Pacific-type engines designed to handle heavy trains over mountain grades at high speeds.

THREE-CYLINDER. Three-Cylinder Mountain Type Locomotive. Ry. Age, vol. 81, no. 10, Sept. 4, 1926, pp. 431-433, 3 figs. Built for Denver & Rio Grande Western for heavy passenger service; tractive force, 75,000 lb.

LUBRICATING OILS

VISCOSITY. Viscosity and the Conradson Carbon-Residues of Lubricating Oils, G. W. Burke. Soc. Automotive Engrs.—Jl., vol. 19, no. 3, Sept. 1926, pp. 249-251, 4 figs. Deals with relationship between viscosity and Conradson carbon-residues of lubricating oils for internal-combustion engines; present evidence indicating that true relationship does not exist between viscosity at any temperature and carbon-residue value, and shows in general way what can be expected as to carbon-residue value when viscosity is known.

LUBRICATION

PROTECTION. Lubrication Protection. Lubrication, vol. 12, no. 8, Aug. 1926, pp. 85-96, 22 figs. Oil filtration and purification; types of systems, namely, precipitation and filtration, centrifugal separation and mechanical coagulation of impurities with suitable chemicals; filtering and cleaning of air.

M

MACHINE TOOLS

RAILWAY SHOPS. New Machine Tools for Railway Workshops. Ry. Engr., vol. 47, no. 560, Sept. 1926, pp. 308-311, 4 figs. Heavy motor-driven wheel lathe, and special machine, also motor-driven for boring axle-boxes.

REPLACEMENT POLICY. Systematic Replacement of Machine Tools, H. K. Spencer. Machy. (N.Y.), vol. 33, no. 1, Sept. 1926, p. 19. Outlines method for systematically replacing machine-tool equipment in plant so that it may be kept up-to-date.

MACHINING METHODS

LOCOMOTIVE REPAIRS. Machining Methods that Cut Locomotive Repair Costs, F. W. Curtis. Am. Mach., vol. 65, nos. 4, 5 and 6, July 22, 29 and Aug. 5, 1926, pp. 159-161, 193-194 and 249-251, 24 figs. Methods used in locomotive repair shop. July 29: Milling shoes and wedges, planing crossheads; reboring cylinders; boring and facing driving boxes; air-operated tools for squaring valve parts and cutting out superheated flues. Aug. 5: Turning in drill press; trepanning flue sheets; gauges made in punch press.

MAGNETIZATION

LAW OF. Law of Magnetization, S. L. Gokhale. Am. Inst. Elec. Engrs., vol. 45, no. 9, Sept. 1926, pp. 846-863, 17 figs. Investigation of reliability of Frolich's law of magnetization near saturation; it was found that law is not as reliable as it is generally believed to be, particularly for purpose of computation of saturation value.

MALLEABLE IRON

BLACK-HEART. Carbon in Black-Heart Malleable, C. Kluijtmans. Foundry Trade Jl., vol. 34, no. 521, Aug. 12, 1926, pp. 133-135, 9 figs. For black-heart malleable, carbon content must be between 2.20 and 2.60 per cent; under 2.20 difficulties will be encountered in foundry on account of poor fluidity of such iron and chance of shrink; over 2.60 per cent, although this iron is quite suitable for moulding, higher carbon would produce primary graphite, thus precluding satisfactory annealing and in any case yielding weak casting; results of tests show that for similar annealing conditions the larger the initial masses of cementite the larger the resultant graphite.

MATERIALS HANDLING

CHAIN BLOCKS. The Chain Block and Its Almost Unlimited Field, F. C. Eibell. Indus. Mgmt. (N.Y.), vol. 72 no. 2, Aug. 1926, pp. 96-101, 14 figs. Discusses various types and their most economical applications; there are three general types in use; differential, screw-geared and spur-geared blocks.

GENERAL ELECTRIC CO., SCHENECTADY. Where Size and Variety Complicate the Handling of Materials, R. H. Rogers. Indus. Mgmt. (N.Y.), vol. 72, no. 2, Aug. 1926, pp. 125-131, 15 figs. How General Elec. Co. solves its materials-handling problems.

INDUSTRIAL PLANTS. Getting Production in a Limited Space, C. O. Herb. Machy. (N.Y.), vol. 33, no. 1, Sept. 1926, pp. 38-40, 10 figs. How lack of space was successfully overcome in one plant by adoption of time- and labour-saving methods of handling work.

MAN-POWER. Lifting and Handling by Man-Power, F. L. Eidmann. Indus. Mgmt. (N.Y.), vol. 72 no. 2, Aug. 1926, pp. 111-114, 14 figs. Lift truck and portable elevator as reducers of handling costs.

METALLURGY

DEVELOPMENTS. Metallurgy Fifty Years Ago and Now, W. M. Corse. Indus. & Eng. Chem., vol. 18, no. 9, Sept. 1926, pp. 892-895. Deals with copper, zinc, tin, lead, nickel, cadmium, antimony, chromium, molybdenum, uranium, tungsten, tantalum, titanium, zirconium, vanadium, manganese, silicon, etc.

METALS

CORROSION. Principles and Methods of Testing the Submerged Corrosion of Metals, F. N. Speller, R. P. Russell and W. G. Whitman. Mass. Inst. of Technology —Publications, vol. 62, no. 34, Aug. 1926, 8 pp., 6 figs. General principles and specifications for testing; submerged corrosion tests; method of reporting corrosion results and recommended testing methods.

TESTING. Modern Testing of Materials and Its Application (Die neuzeitliche Materialprüfung und ihre kritische Auswertung), R. Hinzmann. Gewerbefleiss, vol. 105, no. 6, June 1926, pp. 117-124, 17 figs. Discusses methods of physical and mechanical testing; tensile strength and elongation, hardness, notched-bar strength; metallographic testing; lays stress on testing for behaviour under given conditions.

METEOROLOGY

WEATHER FORECASTING. Solar Radiation and Weather Forecasting, C. F. Marvin and H. H. Kimball. Franklin Inst.—Jl., vol. 202, no. 3, Sept. 1926, pp. 273-306, 23 figs. Examination of measurements by Abbot of solar thermal energy and conclusions as to their weather-forecasting value. Bibliography.

MILLING MACHINES

TURBINE BLADES, FOR. Profile Milling Turbine Blades. Machy. (Lond.), vol. 28, no. 722, Aug. 12, 1926, pp 558-559, 4 figs. By means of slight modifications to their well-known profiling and cam-milling machine, Webster & Bennett, Coventry, have been successful in adapting it for profile milling back of turbine blades.

MINE HAULAGE

COAL MINES. Modern Haulage Systems for Coal Mines, G. Bright. Modern Min., vol. 3, no. 8, Aug. 1926, pp. 272-276, 6 figs. Deals with power distribution; rail weights to use, mine cars and locomotives.

MINE TIMBERING

PRESERVATIVE TREATMENT. Preservative Chemical Treatment for Mine Timbering, A. M. Howald. Modern Min., vol. 3, no. 8, Aug. 1926, pp. 242-244, 2 figs. Wood-treating plants for mine operator.

MOULDING METHODS

LARGE-SIZE STRAINER. Method of Moulding a Large-Size Strainer, J. H. List. Metal Industry (Lond.), vol. 29, no. 7, Aug. 13, 1926, p. 155. Method employed in moulding strainer 6 ft. long overall with 36-in. outside diameter of body and 20-in. inlet bore.

MACHINE MOULDING. Machine Moulding with Single Flask. Iron Age, vol. 118, no. 10, Sept. 2, 1926, pp. 604-606, 4 figs. Time for making asphalt moulds lowered by machine combining jolt ram, rollover power draw, and other operations.

MOULDS

DRYING. The Drying of Moulds, with Special Regard of Permissible Maximum Temperature (Ueber die Trocknung von Gussformen, unter besonderer Berücksichtigung der zurlässigen Höchsttemperateur), W. Schultze. Giesserei, vol. 13, no. 35, Aug. 28, 1926, pp. 634-647, 15 figs.

INGOT. Life of Ingot Moulds (Sur la Durée des Lingotières), A. Legrand. Fonderie Moderne, vol. 20, Aug. 1926, pp. 181-188, 4 figs. Discusses current formulas and ideas; excellent results obtained with theoretically poor composition and disastrous results with chemically perfect composition, etc.

MOTOR BUSES

BRAKES. Bus Brakes, K. W. Stillman. Automotive Industries, vol. 55, no. 9, Aug. 26, 1926, pp. 334-335. Problems of design and maintenance.

N

NON-FERROUS METALS

MELTING. Melting Soft Metals, E. L. Gates. Gas Age-Rec., vol. 58, no. 8, Aug. 21, 1926, pp. 241-244 and 248, 5 figs. Gives table listing more commonly used commercial alloys; brass melting furnaces using gas for fuel are of two types, crucible and non-crucible variety; recuperation and regeneration; cost of gas vs. coal in melting furnaces.

O

OIL

PREHEATERS. Oil Preheater Design, F. L. Kallam. Oil Bul., vol. 12, no. 8, Aug. 1926, pp. 847-848, 1 fig. Selection of metal for heater tubes; diameter and spacing of tubes; expansion of tubes and shells; oil and steam distribution.

COMBUSTION. Oil Engine Combustion Systems, C. E. Klitgaard. Pac. Mar. Rev., vol. 23, no. 8, Aug. 1926, pp. 358-360. Considers four phases of combustion, namely, injection, gasification, ignition and actual combustion.

COMBUSTION CONTROL. Control of Combustion in Oil Engines, A. B. Newell. Nat. Engr., vol. 30, no. 9, Sept. 1926, pp. 4.9-421. Principles of operation and hints on operation, repair, maintenance and adjustment of fuel-injection devices and valves of modern oil engines.

CONVERTIBLE OIL-GAS ENGINES. Convertible Oil-Gas Engine. Mech. World, vol. 80, no. 2070, Sept. 3, 1926, pp. 179-180, 1 fig. Engines placed on market by National Gas Engine Co., Manchester, Eng., as suitable for use with either gaseous or liquid fuel; can be changed over quite simply from one to other as economic conditions dictate.

FUEL COMBUSTION, IMPROVEMENT OF. Improving Fuel Combustion in Oil Engines, E. J. Kates. Oil Engine Power, vol. 4, no. 9, Sept. 1926, pp. 545-546. Increasing cyclic efficiency considered as possibility for reducing weight and cost.

INDICATING. Indicating a Paraffin Engine, N. Harwood. Mech. World, vol. 80, no. 2067, Aug. 13, 1926, pp. 126-127, 5 figs. Indicating device employed and method of application.

MARINE. Marine Oil Engine Trials. Instn. Mech. Engrs.—Proc., no. 3, Mar. 1926, pp. 523-595 and (discussion) 596-618, 32 figs; also abstract in Engineering, vol. 121, nos. 3150, 3151 and 3153, May 28, June 4 and 18, 1926, pp. 639-641, 675-677 and 742-744, 26 figs. Results of tests of M. V. British Aviator and also engines, covering shore and sea tests. Vessel was propelled by Balmer-Camellaird-Fullagar, opposed-piston, 2-stroke cycle, single-acting oil engine with blast-air fuel injection.

PISTONS. *See Pistons.*

SKETCHES AND WORKING. Sketches and Working of Oil Engines. Motorship, vol. 11, no. 9, Sept. 1926, pp. 686-690 and 695-696, 13 figs. Practical considerations underlying injection of fuel without use of compressed air.

STRAIN METERS FOR. Direct-Reading Strain Meter, J. Geiger. Oil Engine Power, vol. 4, no. 9, Sept. 1926, pp. 564-567, 10 figs. New instrument for measuring strains in engine parts by 200,000-fold magnification.

OIL FUEL

COMBUSTION. The Combustion of Fuel Oil, W. Kemp, Jr. Oil Eng. & Technology, vol. 7, no. 123, July 1926, pp. 303-308, 5 figs. Study of conditions for burning fuel oil efficiently.

Experiences with the Combustion of Fuel Oil in Power Plant Boilers, J. F. Barkley. Engrs. & Eng., vol. 43, no. 8, Aug. 15, 1926, pp. 221-224, 1 fig. Types of burners used are grouped into two general classes, those using steam to effect atomizing of oil, and those using mechanical means.

OIL WELLS

PUMPING. An Analysis of Deep-Well Oil Pumping, W. H. Clapp. Mech. Eng., vol. 48, no. 9, Sept. 1926, pp. 941-946, 12 figs. Points out that present methods of pumping oil from underground are unsatisfactory; author develops ideal motion where abrupt forces are reduced to minimum, thus reducing fatigue stresses and other causes of failure; develops design of air-driven engine which should have indicator card corresponding to ideal kinematic requirements, and summarizes its advantages in reducing chances of breakage in sucker rods and reducing friction in actuating mechanism; combination of central compressor plant actuated by internal combustion engines is shown to give possibility of cheaper source of power.

OXY-ACETYLENE CUTTING

RAILWAY-CAR CONSTRUCTION. Jet-Cutting Machines. Machy. (Lond.), vol. 28, no. 722, Aug. 12, 1926, pp. 541-544, 6 figs. Theory of oxygen cutting; preheating agents and cutting speeds; universal templet and universal mechanical machines; Hancock oxygen-cutting machine; pantograph machine.

OXY-ACETYLENE WELDING

ROOF TRUSSES. Tests on Oxwelded Roof Trusses, H. H. Moss. Welding Engr., vol. 11, no. 8, Aug. 1926, pp. 32-34, 5 figs. Demonstrating application of engineering principles and procedure control to oxy-acetylene welding of structural steel.

SHEET METAL. Oxy-Acetylene Welding and Cutting, F. X. Morio. Sheet Metal Worker, vol. 17, no. 15, Aug. 27, 1926, pp. 573-574 and 580, 4 figs. Theory and practice as applied to sheet-metal trade with suggestions as to welding and cutting various metals.

STEEL. Welding High Carbon Tool Steel and High-Speed Steel with the Oxy-Acetylene Torch, G. L. Walker. West. Machy. World, vol. 17, no. 8, Aug. 1926, pp. 350-353, 3 figs. Author points out that there yet remains need for further study and development in methods and materials before these steels are as successfully and as extensively welded as are lower-carbon steels.

TEXTILE-MILL EQUIPMENT. Oxy-Acetylene Welding Equipment for Mills. Textile World, vol. 70, no. 6, Aug. 7, 1926, pp. 63-64, 1 fig. Apparatus composing typical welding and cutting outfit capable of effecting large savings in any textile plant; advice in regard to purchase of torches, welding rods, flux, regulators and hose; cost of portable unit.

P

PAPER MANUFACTURE

PARCHMENT PAPER. Parchment Paper and Its Manufacture, M. DeKeghel. Paper Trade Jl., vol. 83, no. 10, Sept. 2, 1926, pp. 57-62. Parchmentizing with zinc-chloride apparatus for parchmentizing; properties and uses of parchment paper; parchment-paper preparations; artificial parchment.

PATENTS

CO-PATENTEES. Co-Patentees, E. L. Francis. Automobile Engr., vol. 16, no. 218, Aug. 1926, pp. 313-314. Consideration of their relative rights.

PATTERN-MAKING

FITTING IRREGULAR SHAPES. Fitting Irregular Pattern Shapes, J. McLachlan. Can. Foundryman, vol. 17, no. 8, Aug. 1926, pp. 14-15, 7 figs. Describes several methods of fitting branches, ribs and bosses on irregular shapes which are not rule-of-thumb and yet will be found very accurate, without use of geometry.

MACHINES AND DRIVING BELTS. Patternshop Machines and Driving Belts. Metal Industry (Lond.), vol. 28, nos. 24 and 25, June 11 and 18, 1926, pp. 554-555, 578-579. June 11: Combination-type and sandpapering machines. June 18: Advantages of wooden pulleys; belt problems.

PAVEMENTS, ASPHALT

FOUNDATIONS. Foundations for Asphalt Pavements, A. K. Vickery. Asphalt Assn.—Circular no. 36, 30 pp., 2 figs. Papers and extracts from papers and discussions presented at Fourth Annual Asphalt Paving Conference held at Detroit, Mich., Oct. 21-23, 1925. Includes specifications (on loose folders) for asphaltic concrete base, asphaltic concrete surface course, and sheet asphalt binder and surface courses.

PIERS

SUBSTRUCTURE. A New Design of Permanent Substructure for Piers and Wharves, W. G. Chase. World Ports, vol. 14, no. 10, Aug. 1926, pp. 32-34, 3 figs. Substructure proposed comprises combination of shells of spun reinforced concrete pipe assembled vertically with suitable end joints to form hollow columns of height desired; these columns are filled with concrete reinforced with rods and rings of steel to develop proper supporting strength.

PILES

DRIVING. Pile-Driving and Concreting Methods on a Large Substructure Contract, F. W. Skinner. Engineering, vol. 122, nos. 3 61 and 3163, Aug. 13, and 27, 1926, pp. 187-190 and 253-254, 11 figs. Describes driving of large number of wooden foundation piles for building for new telephone cable and switchboard manufacturing works of Western Elec. Co. now in process of construction on 60-acre site between Newark and New York; piles will be carried down average depth of about 35 ft. below low-tide level and covered with concrete footings; advantages of this type of foundation; total number of piles required will be about 200,000; work now under construction requires about 40,000; driving was accomplished as much as possible by floating equipment.

PIPE, SUBMERGED

LAYING. Laying 1,200-ft. of Submerged Pipe Line. Contract Rec., vol. 40, no. 34, Aug. 25, 1926, pp. 811-814 and 820, 7 figs. New 36-in. rivetted steel pipe line constructed by City of Vancouver, providing additional conduit from Seymour Creek intake to Little Mountain reservoir.

PIPE

CONNECTIONS. A Problem in Pipe Connection, W. T. McClenahan. Power, vol. 64, no. 8, Aug. 24, 1926, pp. 274-275, 2 figs. Presents results of mathematical analysis which develops fairly simple formulas applicable to any case.

PISTONS

OIL ENGINES, FOR. Light-Metal Piston for Oil Engines. Oil Engine Power, vol. 4, no. 9, Sept. 1926, pp. 548-550, 4 figs. Type of aluminum-alloy piston recently found best adapted to Diesel engines was first proved out by extensive practical use; pistons are cast of special alloy of nickel, aluminum and copper, produced by process which results in complete union of metals; bands of steel are cast in metal of skirt, one above piston pin, one near bottom edge, with additional bands in other locations if required.

POWER

COSTS INVESTIGATION. The Investigation of Power Costs, W. A. Shoudy. Mfg. Industries, vol. 12, no. 3, Sept. 1926, pp. 203-206, 6 figs. Methods for studying utilization and generation of power to show where costs can be reduced.

POWER FACTOR

CORRECTION. Methods of Correcting Power Factor, J. B. Holston. Indus. Engr., vol. 84, no. 9, Sept. 1926, pp. 409-414, 12 figs. Uses of Equipment in industrial plants designed for this purpose.

The Influence of Voltage Harmonics on Power-Factor Correction by Condensers, E. Hughes. Engineering, vol. 122, no. 3161, Aug. 13, 1926, pp. 216-218, 10 figs. Concludes that power factor of system having harmonics in voltage wave cannot be increased to unity by means of condensers; it is possible that after capacity calculated to give unity power factor for sinusoidal waves has been installed, final power factor may be lower than initial value. Paper read before Sect. G Brit. Assn.

IMPROVEMENT. Getting the Most Out of Your Power Lines, J. O. Coates. Mfg. Industries, vol. 12, no. 3, Sept. 1926, pp. 195-198, 4 figs. Methods by which low power factor can be improved.

MEASUREMENT. The Measurement of Power Factor in Unbalanced Three-Phase Systems, G. W. Stubbings. World Power, vol. 6, no. 33, Sept. 1926, pp. 124-126, 3 figs. Investigation of behaviour of 6-coil power-factor meter and reactive meter externally compensated with voltage unbalancing.

POWER TRANSMISSION

LINESHAFT DRIVE. Erecting and Aligning a Lineshaft Drive, G. Trimm. Indus. Engr., vol. 84, no. 9, Sept. 1926, pp. 398-401, 2 figs. Procedure in installing shaft which is of considerable length.

PROJECTILES

TOLERANCES. Sane Specifications and Intelligent Inspection, C. L. Ruggles. Mech. Eng., vol. 48, no. 9, Sept. 1926, pp. 909-915, 11 figs. Points out that problem of tolerances to be allowed in projectile manufacture can be solved only by experimental study of effects of dimensional variations.

PULVERIZED COAL

BOILER FIRING. Pulverized Coal Firing (Einige Bermerkungen über Kohlenstaubfeuerungen), W. Lulofs. Elektrotechnische Zeit., vol. 47, no. 24, June 17, 1926, pp. 694-696, 3 figs.

Pulverized Coal is Fuel for Industrial Plants (Poederkool als brandstof voor industrieele stookinrichtingen), D. Dresden. Iengenieur, vol. 41, no. 25, June 19, 1926, pp. 505-507, 2 figs. Advantages of pulverized coal firing and its application in various countries, including Holland.

GASIFIED-FUEL BURNING SYSTEM. The Gasified-Fuel System of Burning Pulverized Coal. Engineering, vol. 122, no. 3164, Sept. 3, 1926, pp. 294-296, 9 figs.

SUGAR MILLS. Producing Sugar with Pulverized Coal, A. Murphy. Power House, vol. 19, no. 15, Aug. 5, 1926, pp. 19-26 and 52, 15 figs. Describes new power plant of Dominion Sugar Co. at Wallaceburg, Ont., in which three 670-h.p. water-tube boilers, fired with pulverized coal, are effecting saving of 50 tons of fuel a day.

PULLEYS

TYPES AND CHARACTERISTICS. Pulleys. Power Engr., vol. 21, no. 246, Sept. 1926, pp. 347-349, 3 figs. Notes on several types and their characteristics.

PUMPS

BOILER-FEED. Boiler-Feed Pump Characteristics. Mech. World, vol. 80, no. 2065, July 30, 1926, pp. 79-80, 2 figs. Summarizes argument contained in pamphlet entitled The All-Electric Boiler-Feed Pump, issued by Mather and Platt, Manchester, Eng.; considers relative economies of steam-driven and electrically-driven pumps; typical characteristics of various types of pumps.

PUMPS, CENTRIFUGAL

SELF-PRIMING. A Self-Priming Centrifugal Pump. Engineer, vol. 142, no. 3683, Aug. 13, 1926, p. 179, 1 fig. Details of small Elmo pump, supplied by Siemens-Schuckert, and exhibited in South Kensington Science Museum, which will even continue to operate when it is sucking considerable proportion of air with water.

SPECIFICATIONS. Centrifugal Pump Specifications Should Be Complete, C. C. Brown. Power Plant Eng., vol. 30, no. 18, Sept. 15, 1926, pp. 996-997, 1 fig. Characteristics should be studied for each installation and all terms used in specifications defined.

R

RADIO COMMUNICATION

SHORT-WAVE LENGTHS. On the Relation Between Short-Wave Lengths and Possible Communication Hours Together with the Communication Distance, T. Nakayama, T. Ono and C. Anazawa. Inst. Elec. Engrs. of Janpan—Jl., no. 456, July 1926, pp. 695-711, 11 figs. Authors made long-distance communications with different short-wave lengths for one year to find out relation between wave lengths and communication distances; concludes that wave of about 24 m. is critical; waves having length of 25 m. or more are best utilized for long-distance night communication; waves having length of 22 or less are good for long-distance daylight communication; phenomena of skipped distance exists in short-wave transmission, especially for short-wave below 20 m. (In Japanese.)

RADIOTELEGRAPHY

HIGH-FREQUENCY TRANSMISSION. Relation Between the Height of the Kennelly-Heaviside Layer and High-Frequency Radio Transmission Phenomena, A. H. Taylor. Inst. Radio Engrs.—Proc., vol. 14, no. 4, Aug. 1926, pp. 521-540, 11 figs. Deals with waves short enough to show skip distance effect.

SHORT-WAVE. On the Wireless Beam of Short Electric Waves, S. Uda. Inst. Elec. Engrs. of Japan—Jl., no. 456, July 1926, pp. 712-724, 30 figs. Experiments in directional radio transmission on wave length of 4.4 m.; according to author's experience, parabolic reflector is not necessary; reflector consisting of vertical metallic rods arranged along polygonal base line drawn on ground is equally effective; gives various types of directive antennas, such as L type, inverted L type, U type and rectangular type. (In Japanese.)

FIELD-STRENGTH MEASUREMENTS. A Radio Field-Strength Measuring System for Frequencies up to Forty Megacycles, H. T. Friis and E. Bruce. Inst. Radio Engrs.—Proc., vol. 14, no. 4, Aug. 1926, pp. 507-519, 11 figs. Deals with new system of measurement which has been used successfully at frequency as high as 40 megacycles; apparatus is double detection receiving set equipped with calibrated intermediate frequency attenuator and local signal comparison oscillator.

RECTIFIERS

DIRECT-READING GAUGE. Direct-Reading Gauge for Mercury-Arc Power Rectifiers, A. Gaudenzi. Brown, Boveri Rev., vol. 13, no. 9, Sept. 1926, pp. 224-226, 7 figs. Direct-reading vacuum gauge of hot-wire type which allows pressure in cylinder to be observed continuously; designed by Brown, Boveri & Co.

MERCURY-VAPOUR. The Restification of Alternating Currents with Steel-Enclosed Mercury-Arc Power Rectifiers and their Auxiliary Devices, O. K. Marti. Am. Inst. Elec. Engrs., vol. 45, no. 9, Sept. 1926, pp. 832-846, 22 figs. Deals with most important theoretical treatments and describes steel-enclosed rectifier of modern design. Bibliography.

OXIDE. A Distinctly New Rectifier, H. H. Sheldon. Sci. Am., vol. 135, no. 3, Sept. 1926, pp. 186-187, 5 figs. Dry metal oxide between two electrodes makes rectifier for use in connection with radio sets.

REFRACTORIES

CARBORUNDUM. Carborundum as a Refractory Material, B. Kleinschmidt. Chem. Age, vol. 15, no. 373, Aug. 21, 1926, p. 178. Its increasing use in Germany; properties of carborundum and industrial applications.

FIREBRICK. *See Firebrick.*

FIREBRICK-COAL-ASH. Fusion Points of Firebrick-Coal-Ash Mixtures, L. C. Hewitt. Am. Ceramic Soc.—Jl., vol. 9, no. 9, Sept. 1926, pp. 575-582, 4 figs. Six types of refractory brick were tested with five types of coal ash; cone fusion points of brick ash mixtures being determined over range of 10 per cent brick, 90 per cent ash to 40 per cent brick, 60 per cent ash; results obtained indicate that cone-slag test is of very limited value as means of selecting refractories for boiler service.

REGULATORS

ACCELEROMETER-TACHOMETER. The Charmilles Accelero-Tachometric Regulator (Le régulateur accélérotachymétrique des Ateliers des Charmilles S. A. à Genève), M. E. Volet. Technique de la Suisse Romande—Bul., vol. 25, no. 16, July 31, 1926, pp. 190-196, 19 figs.

REFRIGERATING MACHINES

HIGH-SPEED. Modern High-Speed Refrigerating Machines, G. W. Daniels. Brit. Cold Storage & Ice Assn., vol. 22, no. 2, 1925-26, pp. 5-20 and (discussion) 21-45. Summarizes relative advantages of high-speed and low-speed types; points out that adoption of higher speeds necessitates number of changes in design, most important of which are discussed, such as valves, suction pipes and passages; lubrication, balancing, scantlings and motion work; types and examples of machines.

REFRIGERATION

ELECTRIC. A Record in Electric Refrigeration. Elec. World, vol. 88, no. 9, Aug. 28, 1926, pp. 424-425, 1 fig. Ohio Public Service Co. attains 2.3 per cent saturation of customers; experience in selling and installation; definite plan of sales organization.

RESEARCH

INDUSTRIAL. British Workshops Industrial Research. World Power, vol. 6, no. 33, Sept. 1926, pp. 159-164, 5 figs. Notes on Research Laboratories of (Brit.) General Electric Co.; main pipe trunks, electricity supply; routine testing, and laboratory-factory.

ROAD CONSTRUCTION

DOUBLE-DECKED HIGHWAY. Building Double-Decked Highway in Trap Rock Cut. Eng. News-Rec., vol. 97, no. 11, Sept. 9, 1926, pp. 415-416, 3 figs. Holland tunnel approach in New Jersey requires careful blasting because of nearby railroad cut and tunnel; novel concreting plan.

ROADS

SOIL TESTS. Adaptation of Atterberg Plasticity Tests for Subgrade Soils, A. M. Wintermeyer. Pub. Roads, vol. 7, no. 6, Aug. 1926, pp. 119-122, 8 figs. Results obtained so far with test have been so satisfactory that it has been decided to employ it regularly in conjunction with other tests now being used by Bureau of Public Roads in surveys being made to determine influence of subgrades, subbases and drainage of condition of pavements.

ROADS, CONCRETE

CRACKING. Cracking of a Concrete Road. Engineer, vol. 142, no. 3686, Sept. 3, 1926, pp. 247-247, 3 figs. Particulars concerning construction of road in Manchester, England, which recently fractured in curious manner.

S

SAND, MOULDING

HANDLING SYSTEMS. Sand-Handling System Yields Economies, R. A. Fiske. Iron Age, vol. 118, no. 11, Sept. 9, 1926, pp. 703-705, 4 figs. Equipment for handling and distributing sand in steel foundry saves labour and floor space, speeds up production, and simplifies shop routine.

SCREW MACHINES

AUTOMATIC. Smallpiece 1½-in. Automatic Screw Machine. Mech. World, vol. 80, no. 2070, Sept. 3, 1926, p. 179, 1 fig. Developed by Armstrong, Whitworth & Co., Manchester, Eng., to meet requirements of motor and air-craft industries; it is guaranteed to produce accurately most complex parts made from heat-treated high-tensile steels.

SCREWS

MEASUREMENT. Correction for Elastic Compression in the Measurement of Screws with Small Cylinders, G. A. Tomlinson. Machy. (Lond.), vol. 28, no. 724, Aug. 26, 1926, pp. 616-618, 2 figs. Points out that in accurate measurements of small screw, correction should be applied on account of compression that ordinarily occurs; presents nomogram for computing compression correction in effective diameter measurement.

SEWAGE DISPOSAL

AUSTIN, MINN. Struggles of Small Town with Large Sewage Problem, F. Bass. Eng. News-Rec., vol. 97, no. 9, Aug. 26, 1926, pp. 339-342, 3 figs. Austin, Minn., after strenuous controversy over direct oxidation, decides on Imhoff tank and sprinkling filters; packing-house waste receives partial separate treatment.

CHEMICAL AND BIOLOGICAL INVESTIGATIONS. Chemical and Biological Investigations of the Sanitary District, F. W. Mohlman. West. Soc. Engrs.—Jl., vol. 31, no. 7, July 1926, pp. 267-276, 3 figs. Routine analytical work and special investigations carried out by laboratories and testing stations of Sanitary District, including (1) bacteriological analyses of water from Lake Michigan and from municipal supplies taken from lake; (2) sanitary investigations of diversion channels and Illinois River; (3) control of operation of sewage treatment works and experimental testing of new processes of sewage treatment; (4) investigations of volume and character of industrial wastes and study of best methods for treatment of these wastes.

ACTIVATED SLUDGE. The Activated Sludge Process, H. T. Calvert. Contract Rec., vol. 40, no. 34, Aug. 25, 1926, pp. 804-806. Outline of chemical and bacteriological processes involved in this method of sewage treatment; latest developments.

GRIT-CHAMBER PRACTICE. Grit-Chamber Practice. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 7, Sept. 1926. Symposium of articles, as follows:—Grit-Chambers for Sewage Treatment Works, G. B. Gascoigne, pp. 1366-1382, 4 figs; Canadian Practice, F. A. Dallyn, pp. 1383-1385; British Practice in the Design of Grit-Chambers or Detritus Tanks, A. J. Martin, pp. 1386-1392, 3 figs; Grit-Chambers in German Sewage Purification Plants, K. Imhoff, p. 1393.

MECHANICAL VS. BIOLOGICAL TREATMENT. Mechanical vs. Biological Sewage Treatment, G. A. Johnson. Can. Engr., vol. 51, no. 9, Aug. 31, 1926, pp. 251-254. Arguments in support of statement that "man can never control bacterial mass action in sewage treatment," in order to stimulate interest in treatment of sewage by mechanical methods.

PUMPING STATION. East Chicago Sewage Pumping Station, H. D. White. Pub. Works, vol. 57, no. 7, Aug. 1926, pp. 242-245, 6 figs. Design of new Alder Street sewage pumping station at East Chicago, Ind., and methods of overcoming construction difficulties; vertical and horizontal pumps with total capacity of 145 M.G.D., operated by electric motors with oil engines as stand-by.

TORONTO, ONT. North Toronto Sewage Disposal Report, G. G. Nasmith and H. P. Eddy. Can. Engr., vol. 51, nos. 4 and 5, July 27 and Aug. 3, 1926, pp. 155-162, 6 figs. Report discussing three alternative projects; activated sludge plant with preliminary sedimentation recommended.

SHAFTS

ALIGNING. How to Align Long Shafts, A. B. Newell. Power, vol. 64, no. 12, Sept. 21, 1925, p. 448, 2 figs. Method of establishing a straight line used by large firm in mechanical field.

SLAG

BLAST-FURNACE. Blast-Furnace Slag Analyses, W. G. Imhoff. Iron Age, vol. 118, nos. 4, 9 and 10, July 22, Aug. 26 and Sept. 2, 1926, pp. 209-210, 547-548 and 612-613, 5 figs. July 22: Practical interpretation of significance of slag characteristics; iron, manganese and sulphur are heat indicators. Aug. 26: Relations between temperature and chemical composition; between basic and acid slags; two principles demonstrated. Sept. 2: Fifteen principles governing interpretation; examples show reasons for "Off" iron and how corrected.

SLIDE RULES

CIRCULAR. A New Circular Slide Rule. Engineer, vol. 142, no. 3684, Aug. 20, 1926, p. 206, 2 figs. Calculator in circular form developed by W. H. Fowler; advantages claimed for instrument are that it is more portable, gives extremely accurate results, is more easily and quickly operated, and is independent of climatic conditions.

SNOW REMOVAL

HIGHWAYS. Fighting Snow in Practice and Theory. Bus Transportation, vol. 5, no. 9, Sept. 1926, pp.469-473, 13 figs. Public facilities inadequate, although improving; co-operation from city and inter-city lines likely to be continued for long time to come; more powerful equipment to be used for 1926-1927 season; snow fences and similar preventive measures best remedy in many localities.

NEW YORK CITY. Snow Removal in New York City, R. Hawkins. Am. City, vol. 35, no. 3, Sept. 1926, pp. 327-329, 2 figs. Snow fighting and removal; famous storm of Feb. 1920, and snow-fighting speeded by motor equipment.

STEAM

CRITICAL VELOCITY. Critical Velocity of Steam with Counter-Flowing Condensate. W. A. Pearl and E. B. Parker. State College of Wash.—Eng. Bul., no. 13, vol. 5, no. 9, Feb. 1923, 18 pp., 2 figs. By critical velocity is meant maximum flow of steam that can be maintained without hindering continuous return of condensate; account of research to study conditions existing in one-pipe system and to arrive at conclusions that will be useful in any designs requiring counter-flowing condensate.

STEAM ACCUMULATORS

RUTHS. Steam Accumulators, H. E. Witz. Elecn., vol. 97, no. 2514, Aug. 6, 1926, pp. 154-155, 5 figs. Notes on their theory, application and development; Ruths principle in practice; use in traction stations. Abstract translated from Elektrotechnische Zeit.

STEAM ENGINES

BLEEDER-TYPE. A Bleeder-Type Steam Engine. Power, vol. 64, no. 11, Sept. 14, 1926, pp. 396-397, 3 figs. Exhaust belts of 6-cylinder uniflow are provided with selective process valves.

A Pass-Out Steam Engine. Engineer, vol. 142, no. 3686, Sept. 3, 1926, pp. 257-258, 8 figs, partly on p. 250. Engine installed in paper mill by Belliss and Morcom, to drive all machinery and supply low-pressure steam necessary for drying cylnider; it is standard triple-expansion set, differing from normal practice only in provision of means for abstracting some of steam between intermediate- and low-pressure cylinders for heating purposes in paper machines.

HORIZONTAL, ALIGNING. Simple Directions for Aligning a Horizontal Engine, Wm. Brehmer. Power, vol. 64, no. 9, Aug. 31, 1926, pp. 336-337, 3 figs. Although approximate alignment test can be made without removal of any of running parts, more accurate results can be obtained if shaft, connecting rod, cross-head, piston, stuffing box and cylinder head are removed; indicates general method of alignment.

STEAM GENERATION

SUPER-PRESSURE. Super-Pressure Steam Generators, D. Brownlie. Inst. Mar. Engrs.—Trans., vol. 37, Aug. 1926, pp. 103-133 and (discussion) 133-142, 5 figs. Attempt is made to give concise outline of subject; by super-pressure steam is meant use of pressures far beyond present average practice, and generally above 1,200-lb. per sq. in. gauge, intended mainly for power generation by means of engines or turbines, and with employment of apparatus different in principle to any ordinary type boiler at present in common use.

STEAM GENERATORS

BENSON SUPER-PRESSURE. Steam at 3,200-lbs. Pressure. Ry. Engr., vol. 47, no. 560, Sept. 1926, p. 326. "Benson" steam generator and its significance for locomotive work.

STEAM PIPES

DESIGN. Design and Construction of Modern Power Plant Piping Systems, G. A. Smith. Nat. Engr., vol. 30, no. 9, Sept. 1926, pp. 413-417. Points out that after sizes of main steam header, boiler inlets, and leads to various units have been decided upon, it is necessary that pipe of sufficient weight be specified to take care of pressure and strains caused by expansion and contraction, and quality of pipe must be such as to insure long life.

WELDED. Welded Steam Mains. Power Engr., vol. 21, no. 246, Sept. 1926, pp. 337-338. Precautions necessary for welding steam-pipe-line sections; describes typical installation.

STEAM POWER PLANTS

INDUSTRIAL. Our Industrial Power Plants and Their Effect on Power Rates, E. Douglas. Nat. Engr., vol. 30, no. 9, Sept. 1926, pp. 397-400, 1 fig. Points out that outlook for future permanency of business in equipment line for isolated plant is far brighter than outlook for industrial power business for central stations.

STEAM TRAPS

THERMOMETER TO CHECK OPERATION. Recording Thermometer Used to Check Operations of Steam Traps, R. A. Taylor. Power, vol. 64, no. 8, Aug. 24, 1926, p. 286. Where traps discharge water at temperature below 212 deg., which is boiling point at atmospheric pressure, recording thermometer can be used to good advantage to check their operations.

STEAM TURBINES

BREAKDOWNS. Breakdowns of Steam Turbines and Engines. Engineer, vol. 142, no. 3684, Aug. 20, 1926, p. 201. Review of reports for 1925 issued by British Engine Boiler and Electrical Insurance Co., discussing most noteworthy break-downs which have come under notice of Company's inspectors during year.

CHANGING OPERATING CONDITIONS FOR. Design Steam Turbine for Change in Operating Conditions. Elec. World, vol. 88, no. 8, Aug. 21, 1926, p. 377. Turbine that can be used with relatively low steam pressure and temperature in present station but that with slight changes can be used with steam of high pressure and temperature when station is modernized is being obtained by Trinidad Elec. Transmission Railway & Gas Co. of Colorado.

DE LAVAL. The Behaviour of Air in a De Laval Turbine, R. H. Grundy. Instn. Mech. Engrs.—Proc., no. 3, Mar. 1926, pp. 619-630, 6 figs. Principal experiments of large series made to examine behaviour of compressed air at various temperatures and pressures in De Laval turbine; with particular reference to temperatures and pressure in De Laval turbine; with particular reference to temperature drop realized, and brake horse power developed.

EXTRACTION. Utilization of Extraction Steam. Mech. World, vol. 80, nos. 2067, 2068 and 2069, Aug. 13, 20 and 27, 1926, pp. 129-130, 249 and 164. Part 1, E. D. Dickinson: Shows increasing demand for turbines where steam is to be used in manufacturing process. Part 2, A. D. Somes: Discusses ways in which various types of steam turbines may be applied to economical production of power and process steam for industrial processes. Part 3, R. G. Standerwick. Methods of regulating flow of steam through turbines, with particular reference to extraction and mixed-pressure applications; applies to General Elec Co. 3,600-r.p.m. units.

PACKING GLANDS. Packing Glands for Large Steam Turbine Shafts. Power Plant Eng., vol. 30, no. 17, Sept. 1, 1926, pp. 947-950, 6 figs. Carbon ring, water seal and labyrinth glands, or combinations of them, together with gland heaters, form important item in successful operation.

STEEL

ALLOY. *See Alloy Steel.*

HIGH-PRESSURE STEAM, FOR. Sound Metal Needed for High Pressures. Power Plant Eng., vol. 30, no. 18, Sept. 15, 1926, pp. 1000-1001, 3 figs. To determine condition of metal in high-pressure fittings, series of etching and X-ray tests were undertaken at Watertown Arsenal; tests disclosed defects which experts at foundry, where fittings were made, had no idea existed; summary of causes of defects.

HIGH-SPEED. *See Steel, High-Speed.*

INGOTS, SQUARE. Improvement in High-Grade Steel Industry Through Use of Turned Square Ingots (Verbesserung des Edelstahlbetriebes durch Verwendung abgedrehter Vierkantblöcke), P. Eyermann. Stahl u. Eisen, vol. 46, no. 32, Aug. 12, 1926, pp. 1083-1084, 3 figs. Reasons for discarding and subsequently resuming square ingot in high-grade steel industry; describes lathe for square ingots and gives operating results.

The Mechanical Properties of Four Heat-Treated Spring Steels, G. A. Hankins and G. W. Ford. Iron & Steel Inst.—Advance Paper, no. 6, for mtg. Aug. 1926, 26 pp., 15 figs. Investigation undertaken at National Physical Laboratory as part of systematic investigation of mechanical properties of steels commonly used in spring manufacture.

STEEL, HEAT TREATMENT OF

CALCULATING MACHINES. Where Heat-Treatment Increased the Life of Machines, F. H. Colvin. Am. Machinist, vol. 65, no. 12, Sept. 16, 1926, pp. 473-475. 7 figs. Methods and equipment that have proved successful in plant of Monroe Calculating Machine Co., Orange, N.J.

DIE BLOCKS. Heat-Treatment of Die Blocks, A. J. Porter, Jr. Am. Soc. Steel Treating—Trans., vol. 10, no. 3, Sept. 1926, pp. 447-456. Outlines development of die blocks to meet demands placed upon it through rapid growth of drop-forging industry; explains ways in which die blocks are mistreated, which causes breakage; advanced arguments for heat-treated die block.

Tentative Recommended Practices for the Heat Treatment of Plain and Alloy Steel Die Blocks. Am. Soc. Steel Treating—Trans., vol. 10, no. 3, Sept. 1926, pp. 477-486. Tentative recommended practice for heat-treatment of cold- and hot-forming die blocks and of alloy-steel die blocks, cold-heading dies, die blocks for silverware.

ELECTRIC. Heat-Treating Axe Bits by Electricity, C. H. Carpenter. Am. Mach., vol. 65, no. 12, Sept. 16, 1926, pp. 481-483, 2 figs. Use of electrically-heated lead bath permits accurate temperature control; description of apparatus and results obtained; at plant of Kelly Axe & Tool Co., Charleston, W.Va.

Heat-Treating Axle Shafts by Special Machinery, F. C. Hudson. Am. Mach., vol. 65, no. 12, Sept. 16, 1926, pp. 485-486, 2 figs. Electrically-heated furnaces with air-operated devices for placing and removing work; mechanical quenching; automatic timing of work in furnace.

MANGANESE STEEL. How to Treat Manganese Steel, Dr. B. Egeberg. Iron Age, vol. 118, no. 11, Sept. 9, 1926, pp. 676-678, 5 figs. Experience with both cast and forged product; manufacture and heat-treatment of austenitic type.

NICKEL STEEL. Effect of Heat-Treatment on Nickel Steel, J. Trantim, Jr. Forging—Stamping—Heat Treating, vol. 12, no. 8, Aug. 1926, pp. 293-294. Compilation of data on physical properties of rolled electric nickel steel, heat-treated by quenching in water and drawing at various temperatures.

STEEL, HIGH-SPEED

LATHE CUTTERS. The Performance and Testing of High-Speed Steel Cutters (Die Leistung von Schnellstahlmessern und ihre Prüfung), F. Rapatz. Stahl u. Eisen, vol. 48, no. 33, Aug. 19, 1926, pp. 1109-1116 and (discussion) 1116-1117, 35 figs. partly on supp. plates. Investigations of high-speed steel cutters; influence of hardening temperature and nature of hardening, annealing, cutting speed, and properties of workpiece on time required for cutting.

STOKERS

UNDERFEED. Over-Fire Air Injection with Underfeed Stokers, M. K. Drewry. Power, vol. 64, no. 12, Sept. 21, 1926, pp. 446-447, 2 figs. Experience of Milwaukee Elec. Ry. & Light Co., summarized from its test reports, shows how to reduce smoke and increase efficiency in installations having small furnace volume.

STRESSES

TORSIONAL AND REPEATED BENDING. Combined Torsional and Repeated Bending Stresses, F. C. Lea and H. P. Budgen. Engineering, vol. 122, no. 3162, Aug. 20, 1926, pp. 242-245, 16 figs. Effect of constant torsional stress upon specimens subjected to repeated bending stresses. Paper read before Sect. G of Brit. Assn.

SUB-STATIONS

A.C. DISTRIBUTION. Some Principles of Design of Alternating-Current Distribution Sub-Stations, H. E. Wolfing. Elec. Light & Power, vol. 4, no. 9, Sept. 1926, pp. 24-26, 76, 78, 80 and 82, 4 figs. Outstanding features that should be considered when new a.c. distribution sub-station for urban area is contemplated.

AUTOMATIC. Cleveland Railway Extends the Use of Automatic Sub-Stations, L. D. Bale. Elec. Ry. Jl., vol. 68, nos. 10 and 11, Sept. 4 and 11, 1926, pp. 373-374 and 417-422, 17 figs. All power is purchased and converted through system of manual and automatic sub-stations; 10 or 15 sub-stations are automatic but all are supervised by control system centralized in dispatcher's office; standard 1,500-kw. units used in all sub-stations.

AUTOMATIC CONTROL. Application of Automatically-Controlled Equipment to Sub-Stations, R. E. Powers. Elec. Ry. Jl., vol. 68, no. 7, Aug. 14, 1926, pp. 257-261, 4 figs. Complete control sequence of sub-station apparatus is necessary from time unit receives its initial starting impulse till it is taken out of service; various forms of supervisory control systems meet requirements.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the Amer.can Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

ACCELEROMETERS

TWO-COMPONENT. The Cambridge Two-Component Recording Accelerometer. Engineering, vol. 122, no. 3167, Sept. 24, 1926, pp. 396-397, 7 figs. Instrument constructed by Cambridge Instrument Co., London, for obtaining record of accelerations in two planes at right angles, or in two directions at right angles in same plane; it is of portable type.

AIR COMPRESSORS

OIL-ENGINED. Oil Engine-Driven Air Compressor. Engineer, vol. 142, no. 3689, Sept. 24, 1926, pp. 333-334, 4 figs, 50-hp. direct-connected cold-starting oil engine and air compressor introduced by Ingersoll-Rand Co.; installation has been in continuous operation for some time in Derbyshire mine, where it is supplying air at pressure of 100 lb. per sq. in. for power purposes.

AIR CONDITIONING

DEPARTMENT STORES. Air Conditioning and Cooling in Hudson Stores, D. C. Lindsay. Power Plant Eng., vol. 30, no. 20, Oct. 15, 1926, pp. 1120-1122, 4 figs. Experience has taught operators of department stores that temperature and humidity of atmosphere within store reacts directly upon volume of business; system installed in Detroit department store; new refrigerant, known as dichlorethylene, was used.

REFRIGERATION APPLIED TO. Refrigeration as Applied to Air Conditioning, A. Lewis. Domestic Eng. (Lond.), vol. 46, no. 9, Sept. 1926, pp. 179-182, 4 figs. Air conditioning of automatic telephone exchanges, where it is stipulated that humidity should not exeeed 70 per cent and that air should be clean.

AIRCRAFT

SPEED TESTING. Testing Aircraft on the Speed Triangle, H. H. Blee. Aviation, vol. 21, no. 16, Oct. 18, 1926, pp. 666-667, 3 figs. Simple method of determining true air speed of aircraft, regardless of direction and velocity of wind.

AIRPLANE ENGINES

TWO-STROKE. Power Output and Air Requirements of a Two-Stroke Cycle Engine for Aeronautical Use, C. R. Paton and C. Kemper. Nat. Advisory Committee for Aeronautics.

AIRPLANE PROPELLERS

MODEL TESTS. Report on Tests of Metal Model Propellers in Combination with a Model VE-7 Airplane, E. P. Lesley. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 245, Aug. 1926, 15 pp., 18 figs.

VORTEX RING STATES. The Analysis of Experimental Results in the Windmill Brake and Vortex Ring States of an Airscrew, H. Glauert. Aeronautical Research Committee—Reports and Memoranda, no. 1026, Feb. 1926, 8 pp., 2 figs.

AIRPLANES

ALL-METAL. Recent Development in the Construction and Operation of All-Metal Airplanes, C. Dornier. Nat. Advisory Committee for Aeronautics—Tech. Memorandums, no. 378, Sept. 1926, 23 pp., 24 figs.

ENGINEERING ASPECTS. The Engineering of the Modern Airplane, E. P. Warner. Boston. Soc. of Civ. Engrs.—Jl., vol. 13, no. 7, Sept. 1926, pp. 312-321 and (discussion) 321-323, 1 fig.

TAILLESS. The Tailless Aeroplane, G. T. R. Hill. Roy Aeronautical Soc.—Jl., vol. 30, no. 189, Sept. 1926, pp. 519-538 and (discussion) 538-544, 15 figs. Basic principles involved; functions of airplane controls; power of normal controls; evolution of tailless design; details of experimental work; results of flight tests.

WINGS. Formulas for Comparison of Polar Loci (Formules de comparaison des polaires Influenee de l'allongement des cellules), M. Roy. Aérophile, vol. 34, nos. 15-16, Aug. 1-15, 1926, pp. 241-246, 7 figs. Develops formulas for comparing wings of same type and different extension; tests of wings of different types to determine value of relative depth.

Wind Channel Tests of Slot and Aileron Control on a Wing of R.A.F. 15 Section, F. B. Bradfield, A. S. Hartsborn and L. Caygill. Aeronautical Research Committee—Reports and Memoranda, no. 1008, Nov. 1925, 29 pp., 11 figs. Part I: When central portion of wing is R.A.F. 15. Part II: When central portion of wing is slotted and fitted with flap.

ALLOYS

ALUMINUM. *See Aluminum Alloys.*
BRASS. *See Brass.*
BRONZES. *See Bronzes.*

ALUMINUM

CASTINGS. Aluminum Casting Output, Its Difficulties, R. Micks. Can. Foundryman, vol. 17, no. 9, Sept. 1926, pp. 32 and 37-39, 6 figs. Difficulties involved in production of aluminum castings, and improvement in practice; use of chloride of zinc; deseribes two types of machines.

ALUMINUM ALLOYS

ALPAX. Some Mechanical Tests of Cast Bars of Alpax, H. J. Tapsell. Aeronautical Research Committee—Reports and Memoranda, no. 1011, Dec. 1925, 9 pp., 2 figs. Results obtained from tests to determine mechanical properties at air temperature and at elevated temperatures of cast silicon-aluminum bars; it is shown that this material is valuable casting alloy; ultimate tensile strength compares favourably with that of chill-cast Y alloy.

CASTINGS. Aluminum-Alloy Permanent-Mold Castings, R. J. Anderson. Am. Foundrymen's Assn.—Preprint no. 5, for mtg. Sept. 27-Oct. 1, 1926, 29 pp., 10 figs. Indicates directions which have been taken by more recent developments in aluminum-alloy permanent-mold casting; discusses properties, mode of manufacture and fields of application, and gives comparison with sand and die castings; it is shown that aluminum-alloy permanent-mold castings have greater soundness, finer grain size, greater strength and hardness, greater resistance to impact and alternating-fatigue stresses, and greater resistance to corrosion than sand castings.

Recent Developments in the Production of Aluminum-Alloy Castings, R. J. Anderson. Am. Metal Market, vol. 33, no. 180, Sept. 18, 1926, pp. 9-10 and 13-14, 9 figs. Applications of aluminum-alloy castings; alloys for easting production; melting in foundry practice; heat treatment of castings; sand-casting and die-casting practice; permanent mould-casting.

CONSTITUTION. Constitution of Alloys of Aluminum, Zinc and Tin and Aluminum, Zinc and Cadmium, V. Jares. Am. Inst. Min. & Met. Engrs.—Trans., no. 1588-E, for mtg. Sept. 1926, 15 pp., 17 figs. Results of experiments on binary and ternary alloys.

AMMONIA COMPRESSORS

REFRIGERATING CAPACITY. Refrigerating Capacity of Ammonia Compressors, W. H. Motz. Refrigeration, vol. 40, no. 3, Sept. 1926, pp. 44-46, 1 fig. Refrigerating and ice-making capacities of ammonia compressors; effect of evaporator and eondenser pressures; practical problems on capacities.

VERTICAL DOUBLE-ACTING. Ammonia Compressor Design, E. Markham. Cold Storage, vol. 29, no. 342, Sept. 16, 1926, pp. 389-390. Advantages possessed by vertical double-acting machine over other types.

VERTICAL-SHELL AND TUBE-TYPE. Test of Vertical-Shell and Tube-Type Ammonia Condenser, F. R. Zumbro. Refrig. Eng., vol. 13, no. 2, Aug. 1926, pp. 49-57 and (discussion) 57-63 and 67, 13 figs. Results of tests made for purpose of obtaining such data as would enable one to prophesy, with reasonable accuracy, performance under various conditions; numerous advantages of this type of condenser.

APPRENTICES, TRAINING OF

CHANGING METHODS. Apprentice Methods Changing. Iron Trade Rev., vol. 79, no. 14, Sept. 30, 1926, pp. 846-847. Modern industrial conditions make different courses advisable; more attention paid to schooling.

ASH HANDLING

HYDRAULIC. Hydraulic Ash Disposal Proves Economical, L. C. Shelain. Power Plant Eng., vol. 30, no. 19, Oct. 1, 1926, pp. 1046-1048, 2 figs. System developed by Rockford Elec. Co., during war-time emergency, is simple and economical.

Hydraulic Removal of Ashes at the Paris Electricity Co.'s Northern Works (L'enlèvement hydraulique des macheferes à l'Usine Nord de la Compagnie Parisienne de Distribution d'Electricité), C. Postweiler. Génie Civil, vol. 89, no. 9, Aug. 28, 1926, pp. 179- 81, 3 figs. Describes system which has advantage that no piece subject to wear comes in contact with ashes, thus practically eliminating attendance and lubrication.

AUTOMOBILE ENGINES

CASTING-INSPECTION FIXTURES. Two Engine-Casting Inspection Fixtures, A. R. Fors. Soe. Automotive Engrs.—Jl., vol. 19, no. 4, Oct. 1926, pp. 370-372, 8 figs. Describes fixture for checking unit cylinder-and-crankcase blocks to assure that castings will be machined correctly; other device is gauge for checking depth of combustion chambers in cylinder-head castings to assure that they will have equal volumetric capacity and to eliminate expensive operation of machining them.

AVIATION

EUROPE. Air Transport in Europe. Soc. Automotive Engrs.—Jl., vol. 19, no. 4, Oct. 1926, pp. 337-342. Situation in Germany and France; British policy and air services; activity in other European countries; experimental work under way.

REGULATION. Regulation of Air Transport, W. P. MacCracken, Jr. Engrs. & Eng., vol. 43, no. 9, Sept. 15, 1926, pp. 242-243. Discusses problem of regulation in United States, and points to necessity that Federal Government take jurisdiction over all flying.

B

BEAMS

REINFORCED CONCRETE. Shear Tests of Reinforced Concrete Beams, W. A. Slater, A. R. Lord and R. R. Zipprodt. U. S. Bur. of Standards—Technologic Papers, vol. 20, no. 314, Apr. 13, 1926, pp. 387-493, 79 figs. Results of tests carried out in establishment of basis for design of concrete ships during World War; most of beams were I-shaped cross-section; web thickness varying from 2 to 12 in., depth from 8 in. to 10 ft. and span from 9 ft. 6 in. to 20 ft.; tensile stress in web and shearing strength of beam were generally independent of compressive strength of concrete of beam and dirctly dependent upon amount of web reinforcement; shearing strengths found were generally much higher than obtained in previous investigations.

BEARINGS

JOURNAL. Reclaiming Journal Bearings at the Great Northern Shops, F. W. Curtis. Am. Mach., vol. 65, no. 13, Sept. 23, 1926, pp. 519-520, 4 figs. Furnace for melting worn linings and reclaiming old bearing metal; boring, facing and relining brasses; relined brasses are finished by milling.

BELT DRIVE

EFFICIENCY. Efficiency in Belt Drives. Automobile Engr., vol. 16, no. 219, Sept. 1926, pp. 337-338. Points out necessity for cleanliness; belt dressings and capacities; jointing belts.

SMALL. Small Belt Drives. Machy. (Lond.), vol. 28, no. 723. Aug. 19, 1926. pp. 581-583, 8 figs. Their general application, types of belts used, and design of efficient pulleys.

BLAST FURNACES

SPECIFIC EFFICIENCY. Specific Efficiency of the Blast Furnace, R. Franchot. Min. & Met., vol. 7, no. 237, Sept. 1926, pp. 368-372 and (discussion) 372-374, 1 fig. Furnace burden now limited to that which can absorb less than half energy input is claimed by author. In discussion, T. L. Joseph questions these conclusions.

BOILER FEEDWATER

IMPURITIES. Water and Its Impurities, J. C. Moore. Power House, vol. 20, no. 17, Sept. 5, 1926, pp. 17-19. Effect of impurities in feedwater of boilers is to cause deposition of scale on interior of water-heating surfaces, in addition to deposition of mud or sediment, thus facilitating corrosion and foaming; corrosion results mainly from use of hard water; causes of hard water; how deposit becomes hard; carbonates of magnesia; alkalinity of water; test for calcium salts; treatment to prevent scale; water filtration.

PREHEATING PUMP. Preheating Pump, E. Josse. Eng. Progress, vol. 7, no. 8, Aug. 1926, pp. 208-209, 3 figs. Details of pump manufactured by firm of F. Seiffert & Co., Berlin, novel feature of which is that boiler feedwater is heated inside pump in direct contact with bleeder steam, pump raising pressure of condensate of prime movers fed back to boilers, from condenser pressure to boiler pressure.

REGULATORS. Campbell Boiler Feed Regulator. Paper Trade Jl., vol. 83, no. 13, Sept. 23, 1926, pp. 48-49, 1 fig. New regulator has no moving parts and is simple hollow casting with inlet, outlet and pressure port; describes how it works and its numerous advantages.

TREATMENT. Treatment of Feed Water. Nat. Elec. Light Assn.—Report, no. 256-71, July 1926, 30 pp., 21 figs. Results in several plants with use of sodium aluminate as accelerator in outside treating systems, and experience with acid-treating apparatus used in connection with zeolite system; scale troubles in interdeck and radiant-heat-type superheaters; boiler-scale troubles in high-pressure plant, which has been endeavouring to maintain suggested sulphate-carbonate ratio; caustic embrittlement troubles with boilers at Long Beach steam plant of Southern California Edison Co.; acid treatment of boiler water as developed by Dallas Power & Light Co.

BOILER FURNACES

CLINKER DISPOSAL. Methods of Clinker Disposal on Furnace Side Walls Using Chain Grate Stokers, F. Dawson. Eng. & Boiler House Rev., vol. 40, no. 3, Sept. 1926, pp. 124-128, 3 figs. American methods and devices.

DESTRUCTOR. The Industrial Steam Raising Destructor, D. Wilson. Power Engr., vol. 21, no. 247, Oct. 1926, pp. 377-378, 1 fig. Combined destructor furnace and water-tube boiler for dealing with refuse daily available from case and box-making factory; boiler portion of plant is of Vickers patent portable type.

STOKER-FIRED. Stokers and Furnaces. Nat. Elec. Light Assn.—Report, no. 256-257, June 1926, 80 pp., 94 figs. Few of new furnace installations, or those contemplated, are without water screening in some form or other; experimenting along lines of mixing and elimination of stratification in furnace gases; design of stoking equipment to meet demands for higher capacities; application of air-cooled walls to pulverized-fuel furnaces; air-heater performance, indicating increasing popularity of this apparatus; refractories.

BOILER PLANTS

INSTRUMENTS. Boiler and Turbine Room Instruments. Nat. Elec. Light Assn.—Report, no. 25-107, Jan. 1926, 23 pp., 28 figs. Gives operating experiences of companies with instruments of many kinds, and description of numerous applications of instruments to solution of power-plant problems.

PULVERIZED-COAL. Pulverized Fuel Plant and Boilers for Messrs. Synthetic Ammonia and Nitrates, Limited. Engineering, vol. 122, no. 3167, Sept. 24, 1926, pp. 381-383, 14 figs, partly on p. 388 and supp. plate. Installation comprises two Thompson 4-drum water-tube boilers fitted with Thompson superheaters, Foster economizers and Usco air heaters; Lopulco system of firing pulverized coal has been adopted, mills being of Raymond roller type and burners and furnaces with their water-cooled elements follow standard Lopulco practice.

SAFETY OF OPERATION. Safety of Operation in the Steam Plant. Nat. Elec. Light Assn.—Report, no. 256-268, July 1926, 6 pp., 6 figs. Deals with general hazards of boiler room and special hazards incident to pulverized coal.

BOILER PLATE

TIGHTENING MACHINE. A Pneumatic Boiler Plate Tightening Machine. Eng. & Boiler House Rev., vol. 40, no. 3, Sept. 1926, pp. 132-135, 3 figs. Machine known as Hallett Patent Pneumatic Plate Tightening Machine, consisting essentially of two sets of double toggles operated by opposed pistons travelling in pressed-steel cylinders.

BOILERS

BLOWDOWN. Chart Calculates Proper Boiler Blowdown, C. K. Jackson. Power, vol. 64, no. 16, Oct. 19, 1926, p. 582, 1 fig. Presents chart giving blowdown required to maintain concentration of 500 grains per gallon.

DEVELOPMENTS. Boiler, Superheaters and Economizers. Nat. Elec. Light Assn.—Report, no. 256-11. Apr. 1926, 60 pp., 61 figs. Data on operation at Edgar Station, Hudson Avenue Station, Chester Station of Phila. Elec. Co., and Hell Gate Station; radiant-superheater installations; statement by Uniform Boiler Law Society.

INSPECTION. Uniform Examinations for Boiler Inspectors, C. D. Thomas. Boiler Maker, vol. 26, no. 9, Sept. 1926, pp. 268-269. Discussion of necessity for uniform inspections and reports to provide for acceptance of boilers in all boiler-code States.

LOCOMOTIVE. *See Locomotive Boilers.*

SCALE PREVENTION. The Prevention of the Formation of Boiler Scale. Engineering, vol. 122, no. 3168, Oct. 1, 1926, pp. 415-416, 5 figs. Water-cooled type of apparatus known as filtrator, which is now being used to prevent formation of boiler scale for removal of old deposit.

WASTE-HEAT. The Economy of Waste-Heat Recovery, C. M. Walker. Gas Age-Rec., vol. 58, no. 14, Oct. 2, 1926, pp. 457-458, 2 figs. Installation by West Gas Improvement Co. of two Kirke waste-heat boilers at plant of Springfield Gas Light Co., which is example of what may be accomplished in way of utilizing heat previously wasted.

WATER-TUBE. *See Boilers, Water-Tube.*

BOILERS, WATER-TUBE

TEST CODE. A Contribution to the Test Code of Water-Tube Boilers, K. Kumabe. Soc. of Mech. Engrs. (Japan)—Jl., vol. 29, no. 112, Aug. 1926, pp. 474-480, 2 figs. In evaporation test of boilers, quantity of heat absorbed by furnace-wall during heating period is very large compared with that after thermal stationary state is reached; author proposes to establish rule on preliminary firing period for such cases to limit error of result within certain range, and formulas for calculation are given. (In English.)

BORING MACHINES

HORIZONTAL. Horizontal Boring Machines. Times Trade & Eng. Supp., vol. 18, no. 427, Sept. 11, 1926, p. 587. Modern designs; lathe-bed type; base-plate design; comparison of types; varied mechanisms.

BRAKING

ELECTRIC. Electric Braking, W. Wilson. Engineering, vol. 122, no. 3169, Oct. 8, 1926, pp. 435-437, 13 figs. Requirements of ideal electrically applied brake; solenoid braking; plugging; regenerative braking.

BRASS

EXUDATIONS. Exudations on Brass and Bronze, W. B. Price and A. J. Phillips. Am. Inst. Min. & Met. Engrs.—Trans., no. 1586-E, for mtg. Sept. 1926, 9 pp., 6 figs. Calls attention to phenomena which authors have encountered; protuberances on admiralty brass, bronze and on leaded brass; theory of inverse segregation.

MUNTZ METAL. Standardization of Microscopic Examinations of Muntz Metal Alloys, R. S. Pratt. Min. & Met., vol. 7, no. 237, Sept. 1926, pp. 374-375, 5 figs. Presents sketches adopted in preference to photomicrographs in laboratory of Bridgeport Brass Co., where it was felt that they could be more veniently made to present exact type of structure desired.

BRASS FOUNDRIES

DEVELOPMENTS. Controlling Quality in a Brass Foundry, R. Micks. Can. Foundryman, vol. 17, no. 9, Sept. 1926, pp. 19-21, 4 figs. Recent expansion in automotive, radio, vacuum-cleaner and electrical industries seems to assure development of brass foundry in Canada; equipment and methods of Sully Brass Foundry, Toronto.

BRICK

SPECIFICATION REQUIREMENTS. Discussion of Specification Requirements for Common Brick, C. O. Christenson. Clay-Worker, vol. 86, no. 3, Sept. 1926, pp. 197-203. Compilation of practically all available data on prescribed tests for brick and their respective relations to actual service; tests were made at various times at different testing laboratories; curves showing relations between compressive strength on edge and side, modulus of rupture and absorption by boiling and by immersion; summary of present building-code requirements.

BRIDGE DESIGN

BRACING. The Lateral and Transverse Bracing of Bridges, J. Husband. Structural Engr., vol. 4, no. 9, Sept. 1926, pp. 287-289, 2 figs. Majority of recognized specifications call for sway bracing to resist one-half panel wind load on upper chord in case of through spans; investigation shows that not more than 20 per cent of load of one track is likely to be transferred as vertical shear through transverse bracing from near to far side main girder, in case of deck bridges, and less than 10 per cent in case of through bridges.

BRIDGES, CONCRETE

ARCH. Novel Methods Used in Building Long Concrete Arch Bridge, W. H. DeButts. Eng. News-Rec., vol. 97, no. 16, Oct. 14, 1926, pp. 621-623, 5 figs. Pier foundation cylinders sunk from overhead suspension; raising and releasing steel arch centres for 304-ft. spans of Fort Snelling-Mendota Bridge, Minn.

Concrete Arch Bridges Support Clarifier Mechanism, L. G. Straub. Eng. News-Rec., vol. 97, no. 16, Oct. 14, 1926, pp. 619-620, 2 figs. Adopted for esthetic reasons in place of usual steel bridges for new plant at Springfield, Ill.

HIGHWAY. New Concrete Bridge at Galt. Can. Engr., vol. 51, no. 13, Sept. 28, 1926, p. 329, 2 figs. Old Ainslie Street bridge replaced by specially-designed concrete structure built in winter months.

BRIDGES, HIGHWAY

LANE LOADING. Maximum Shear Formulas for Lane Loading of Highway Bridges. C. M. Strahan. Eng. News-Rec., vol. 97, no. 12, Sept. 16, 1926, pp. 464-465, 2 figs. Live-load assumption adopted by state highway officials as basis for new shear formulas.

BRIDGES, RAILWAY

STEEL. Old Timber Truss Bridge Used for Erecting Steel Arch, H. F. Blood. Eng. News-Rec., vol. 97, no. 12, Sept. 16, 1926, pp. 466-468, 4 figs. Method adopted in railroad-bridge replacement on Clackamas River, Ore., in preference to cantilever erection.

BRIDGES, SUSPENSION

DELAWARE RIVER. The Delaware River Bridge at Philadelphia, C. E. Chase. Conn. Soc. Civ. Engrs.—Trans., 1926, pp. 3-17, 7 figs. Main piers were founded on caissons 70 x 143 ft. in plan; one of distinctive features of pneumatic caissons was that they were made of steel with no internal bracing in working chamber; flexible type of tower was adopted; cable construction, etc.

SELF-ANCHORED. Erecting a Self-Anchored Suspension Bridge—Seventh Street Bridge at Pittsburgh, V. R. Covell. Eng. News-Rec., vol. 97, no. 13, Sept. 23, 1926, pp. 502-505, 7 figs. Bold method of construction adopted in order to avoid falsework in channel; each half built as cantilever, with temporary diagonal struts between chains and stiffening girder.

BRONZES

COMMONLY USED. Bronzes in Common Usage, E. G. Jarvis. Brass World, vol. 22, no. 9, Sept. 1926, pp. 285-287. Formulas for preparing some of popular mixtures; effects of silicon, manganese, nickel and phosphorus.

HEAT TREATMENT. Heat Treatment Improves Bronzes, N. K. B. Patch. Iron Age, vol. 118, no. 13, Sept. 23, 1926, pp. 841-842, 2 figs. Modern methods for control of crystal structure in castings; effect on aluminum bronze.

BUILDING CONSTRUCTION

VAULTED ROOF. Vaulted Roof of Cut Stone Built from Steel Staging. Eng. News-Rec., vol. 97, no. 13, Sept. 23, 1926, pp. 490-493, 6 figs. Large erection structure of steel devised by contractor to support derricks and centreing for placing 90,000 tons masonry in St. John's Cathedral, New York City.

C

CABLES, ELECTRIC

FAILURES. Cable Operation and Underground System Maps and Records. Nat. Elec. Light Assn.—Report, no. 256-40, May 1926, 21 pp., 11 figs. Analysis of cable and joint failures on cables operating at 6600 volts and above as reported by 36 companies; it indicates that rate of burnouts is increasing, and goes into various causes for failures; comparative study of reliability of sector cable and round cable; cable of foreign manufacture and performance of cables inspected by Electrical Testing Laboratories; data on underground system maps and records reported by 18 companies and several geographic divisions; typical maps and forms adequately covering various planes of work.

INSPECTION AND TESTING. Inspection and Testing of Cable. Nat. Elec. Light Assn. —Report, no. 256-43, June 1926, 10 pp., 2 figs. Compares results of inspection and testing of cable by Electrical Testing Laboratories for three years and discusses general subject of inspection and testing, and development in cable construction as indicated by test results.

INSTALLATION. Cable Installation. Nat. Elec. Light Assn. Report, no. 26-7, Feb. 1926, 3 pp., 2 figs. New methods and practices; pulling stresses.

JOINTS. Cable Joint Design and Construction. Nat. Elec. Light Assn.—Report, no. 256-30, Apr. 1926, 6 pp., 5 figs. Experiences of Cleveland, Chicago and Brooklyn with migration of compound from joints using partly or entirely thin compound; describes single-conductor joint for 75 kv. 3-phase installation by Phila. Electric Co.; method of filling joints with pressure gun as used by Public Service Production Co.

LOCALIZATION. Fault Localization on Cables, N. A. Allen. Elec. Rev., vol. 99, no. 2549, Oct. 1, 1926, pp. 532-533, 2 figs. New applications of Kenotron apparatus.

UNDERGROUND. General Report of the Underground Systems Committee, 1925-1926. Nat. Elec. Light Assn.—Report, no. 256-78, Aug. 1926, 12 pp. Includes following reports: 75 Kv. Underground Cable Installation at Philadelphia, J. W. Sylvester; 132 Kv. Underground Cable Installation, C. H. Shaw; Research Work Being Carried on Under Auspices of Impregnated Paper Insulated Cable Research Committee, F. M. Farmer; Revision of N.E.L.A. Cable Specifications; Underground Systems Reference Book.

CABLES, HOISTING

CARE OF. Lessons from a Hoisting Accident, L. Balliet. Eng. & Min. Jl., vol. 122, no. 16, Oct. 16, 1926, pp. 614-615. Broken cable caused little damage, thanks to counterweight; virtues of efficient rope lubrication.

CANALS

WELLAND SHIP. Good Progress on Welland Ship Canal. Can. Engr., vol. 51, no. 12, Sept. 21, 1926, pp. 303-305, 4 figs. It is expected that undertaking will be ready by spring of 1930; total cost estimated at $115,000,000; work in progress on all sections; quantities of materials excavated and used.

CARBON MONOXIDE

POISONING. Diagnosis of Carbon Monoxide Poisoning, W. P. Yant. Safety Eng., vol. 52, no. 3, Sept. 1926, pp. 110-115, 2 figs. Historical records of poisoning by CO; principles of diagnosis; possible errors; positive sign of CO poisoning; Bureau of Mines apparatus for testing of poisoning.

CAST IRON

ELASTICITY. Elasticity of Cast Iron at Ordinary and Elevated Temperatures, I. Sugimura. Soc. of Mech. Engrs. (Japan)—Jl., vol. 29, no. 112, Aug. 1926, pp. 437-473, 15 figs. For measurement of elasticity, newly-designed extensometer was employed; study was undertaken to obtain quantitative elucidation on casting stress phenomena; casting stresses are those stresses induced in metal on account of its being cast, corresponding to "Gusspannungen" in German. (In English.)

FATIGUE TESTS. Fatigue Tests of Cast Iron, C. H. Bulleid. Engineering, vol. 122, no. 3168, Oct. 1, 1926, pp. 429-430, 4 figs. Results of tests made with special type of Wöhler reversed bending machine; it is shown that for so variable material as cast iron, conclusions from tests of one sample must be made with due caution.

GRAPHITE IN. The Comparison of the Size and Distribution of Graphite in Cast Iron. Foundry Trade Jl., vol. 34, no. 526, Sept. 16, 1926, p. 237. For general purposes, most satisfactory method of comparing size and distribution of graphite in different specimens is use of comparative microstructures carefully prepared under comparative and standard conditions.

GROWTH. The Effects of Various Alloys on the Growth of Gray Iron Under Repeated Heatings, R. R. Kennedy and G. J. Oswald. Am. Foundrymen's Assn.—Advance Paper, no. 25, for mtg. Sept. 27-Oct. 1, 1926, 11 pp., 5 figs. Work undertaken with idea of developing gray iron having slow rate of growth under repeated heatings above critical range, and which could be reproduced by addition of various alloys to gray iron in ladle.

MANGANESE, DESULPHURIZING ACTION OF. Desulphurizing Action of Manganese in Iron, C. H. Herty, Jr., and J. M. Gaines, Jr. Am. Inst. Min. & Met. Engrs.—Trans., no. 1597-C, for mtg. Oct. 1926, 6 pp., 1 fig. In order to ascertain extent of and factors controlling elimination in ladle, several casts were sampled carefully at blast furnace and again when ladles were being emptied, either at mixer, open hearth or foundry; effect of temperature and time; percentage elimination of sulphur; conclusions.

NICKEL ADDITIONS. Improving Gray Cast Iron with Nickel. Int. Nickel Co.—Bul., no. 8, 11 pp., 5 figs. Describes various useful effects of nickel additions to gray iron and suggests ways in which they can be and are used to-day by iron foundries in meeting many problems; gives list of castings for which nickel additions are recommended and are being successfully used.

PHOSPHOROUS, INFLUENCE OF. The Influence of Phosphorus on Cast Iron, J. T. MacKenzie. Am. Foundrymen's Assn.—Advance Paper, no. 16, for mtg. Sept. 27-Oct. 1, 1926, 23 pp., 6 figs.

SHEARING TEST. A Shearing Test for Gray Cast Iron, G. K. Elliott. Am. Foundrymen's Assn.—Advance Paper, no. 13, for mtg. Sept. 27-Oct. 1, 1926, 13 pp., 6 figs.

STRENGTH AND THICKNESS. The Strength of Cast Iron in Relation to Its Thickness, W. H. Rother and V. Mazurie. Am. Foundrymen's Assn.—Preprint, no. 31, for mtg. Sept. 27, Oct-1. 1926, 21 pp., 6 figs. Cast iron beams of various thicknesses do not follow regular beam formulas as set down for rolled steel; investigation to determine just how cast iron varies with thickness.

TESTING. Testing Cast Iron, C. H. Bulleid. Foundry Trade Jl., vol. 34. no. 524, Sept. 2, 1926, p. 210. Describes work done by author. (Abstract.) Paper read before Brit. Assn.

Testing Cast Iron, A. E. LeThomas. Am. Foundrymen's Assn.—Advance Paper, no. 34, for mtg. Sept. 27-Oct. 1, 1926, 53 pp., 13 figs. Observations made in course of several years and in some of larger foundries regarding application of those methods which have been retained by Association Technique de Fonderie de France; economic justification of tests; reasons governing choice of methods of testing; properties of high-resistance cast iron; examination of testing methods; shearing, compression, static bending, ball and tensile tests; micrographic examination and chemical analysis; relation between results given by various methods of testing machine castings; bases of specification for machine castings. Bibliography.

CASTING

CENTRIFUGAL. Centrifugal Tube Casting in Hot Moulds, L. Cammen. Am. Foundrymen's Assn.—Preprint no. 36, for mtg. Sept. 27-Oct 1, 1926, 7 pp. Materials for heated moulds; experiments to develop material; protecting mould surface from solvent action of hot steel; temperature of hot moulds.

CEMENT

RAPID HARDENING. Rapid Hardening and Special Cements. Can. Engr., vol. 51, no. 11, Sept. 14, 1926, pp. 297-298. Report of Committee on Concrete appointed by Instn. of Structural Engineers, covering aluminous rapid hardening Portland cements of special character.

CEMENT, PORTLAND

PROPORTIONING. German Method of Proportioning Raw Cement Materials, H. Nitzsche. Rock Products, vol. 29, no. 18, Sept. 4, 1926, pp. 70-71. Deals with subject of combining materials in purely mathematical way; symbols are used for percentages of each element in raw materials and formulas are derived algebraically for lime limit, silica ratio and combining ratio of ignited and unignited materials; substitutions in formulas permit rapid calculation of quantities.

CENTRAL STATIONS

FOUNDATIONS. Building Foundation of a 1,000,000-Horse Power Generating Station, J. S. Kerins. Eng. World, vol. 29, no. 3, Sept. 1926, pp. 143-146, 5 figs. Construction details of foundation of station being erected by New York Edison Co. on East River at foot of 14th Street; building has average height of about 130 ft. with steel smoke stacks towering additional 240 ft. above roof; one of chief problems encountered was designing system for distributing concrete which would satisfactorily meet unusual requirements placed upon it; system of aerial distribution from mixing plant entirely outside area of excavation was finally adopted; details of excavation, etc.

FRANCE. Characteristics of Modern Central Stations (Les caractéristiques des grandes stations centrales à vapeur récentes ou en cours d'achèvement), A. de Casanova. Génie Civil, vol. 89, no. 5, July 31, 1926, pp. 104-105, and translated abstract in Eng. & Boiler House Rev., vol. 40, no. 3, Sept. 1926, pp. 142 and 144.

HUNLOCK CREEK, PENNA. Hunlock Creek, Penna., Power Station. Power Plant Eng., vol. 30, no. 19, Oct. 1. 1926, pp. 1040-1045, 4 figs. Initial capacity of new station was fixed at 20,000 kw. to meet rate of growth in load with plans for future development to 190,000 kw.; generators connected direct to transformers; turbine bled for feedwater heating; make-up water evaporated.

HYDRAULIC VS. STEAM. Economic Relations Between Hydraulic and Steam Generation of Electric Power (Die wirtschaftlichen Beziehungen zwischen der elektrischen Energie, die hydraulisch erzeugt wird und solcher, die man thermisch erzeugt, Bedingungen, unter denen beide systeme vorteilhaft zusammenarbeiten können), F. Kreiger. World Power Conference, Sect. Basle Mtg., 1926—Advance Paper, no. 57, 23 pp., 1 fig.

PULVERIZED-COAL BURNING. Pulverized Fuel at Ashley Street Plant, E. H. Tenney. Elec. Light & Power, vol. 4, no. 10, Oct. 1926, pp. 21-23, 6 figs. Unit type of pulverizer was chosen largely because physical arrangement of equipment already operating was not suited to application of central pulverizing system without unjustified cost.

SWEDEN. Turbine and Plant Efficiencies, R. H. Andrews. Power, vol. 64, no. 15, Oct. 12, 1926, p. 560, 2 figs. Presents efficiency curves obtained with Kaplan and propeller-type turbines in low-head plant at Lilla Edet in Sweden.

TECUMSEH, KANSAS. Tecumseh Serves Topeka District, Power Plant Eng., vol. 30, no. 20, Oct. 15, 1926, pp. 1088-1094, 7 figs. New plant of Kansas Power & Light Co. is designed for ultimate capacity of 125,000 kva.; at present it has installed capacity of 15,000 kva. in two units with room for third unit of 20,000 kva.; steam is generated at 375-lb. pressure with 250 deg. superheat, house turbine and motor-driven auxiliaries are used; vertical condensers installed.

CHIMNEYS

STREAM-LINE. Tests on Stream-Line Stacks, E. Prat and L. C. Whiton, Jr. Power Plant Eng., vol. 30, no. 20, Oct. 15, 1926, pp. 1101-1105, 8 figs. Determination of air flow, power used for induced draft and efficiency.

CIRCUIT-BREAKERS

OIL. Requirements of Oil Switch Operating Mechanisms, R. Wilkins. Elec. World, vol. 88, no. 15, Oct. 9, 1926, pp. 753-755, 3 figs. High speed of break, minimum power input and low cost are important factors; describes stored mechanical energy device.

CITY PLANNING

MARIEMONT, OHIO. The Development of Mariemont, Ohio, F. H. Hay. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 8, Oct. 1926, pp. 1619-1635, 8 figs. This town, situated just outside city limits of Cincinnati, is result of joint effort of men representing various professions; it is intended primarily as place of residence for families of widely different economic standing, and especially for wage-earners.

PROBLEMS. Town Planning and Its Relation to the Professions Involved, J. Nolen. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 8, Oct. 1926, pp. 1612-1618. Enumerates chief characteristics of town planning; nature of engineering, architecture and landscape architecture, especially as they are employed in community development.

COAL

CARBONIZATION. Low-Temperature Carbonization, D. Brownlie. Combustion, vol. 14, nos. 4, 5, 6, vol. 15, nos. 1, 2, 3 and 4, Apr. May, June, July, Aug., Sept. and Oct. 1926, pp. 253-259, 321-325, 385-391, 38-40, 108-110, 169-172 and 237-241, 7 figs. Apr.: Predrying of raw fuels before combustion carbonization, or gasification; low-temperature carbonization in conjunction with mechanically fired furnaces. May: Julius Pintsch process; work of Merz and McLellan, Ltd.; Pluto-stoker process. June: Carborite dual coal carbonization. July: Low-temperature carbonization in conjunction with pulverized-fuel firing; advantages and disadvantages. Aug.: McEwen-Runge process. Sept.: Midland Coal Products Co. process. Oct.: Staveley Coal & Iron Co. of Markham processes.

The "Midland Coal Products" Process, D. Brownlie. Gas Engr., vol. 42, no. 605, Sept. 1926, pp. 186-187, 2 figs. Low-temperature carbonization and partial gasification of briquetted small non-coking coal.

Low Carbonization of Coal, W. E. Standley. Instn. of Engrs. (India) —Jl., vol. 6, July 1926, pp. 146-161. Special reference to Bikaner lignite and "Tozer" process.

The Carbonization of Coal, J. Roberts. Combustion, vol. 15, no. 4, Oct. 1926, pp. 227-230, 9 figs. Plastic layer and its elimination; improving texture of coke; heat penetration.

The Economics of Low-Temperature Carbonization, P. C. Pope. Gas Engr., vol. 42, no. 605, Sept. 1926, pp. 192-193. Commercial aspect of distillation of coal at low temperature.

The Economics of Low-Temperature Carbonization, P. C. Pope. Eng. & Boiler House Rev., vol. 40, no. 3, Sept. 1926, pp. 113-114. Commercial aspect of distillation at low temperature.

COMBUSTION. Coal Testing and Combustion Calculations, F. Dransfield. Elec. Rev., vol. 99, no. 2546. Sept. 10, 1926, pp. 413-415, 4 figs. Attempt is made to correlate number of coal tests with view to either (1) obtaining flue-gas loss directly from proximate analysis, or (2) determining carbon content more exactly from proximate analysis so that losses can be calculated by existing methods.

DISTILLATION. Low-Temperature Distillation Systems. Machy. Market, no. 1351, Sept. 24, 1926, pp. 27-28, 5 figs. In Crozier process, induction of heat throughout mass is provided by means of diagonal flues arranged in series which pass across retort and distribute heat evenly throughout continuously descending material under treatment.

DRYING AND PREHEATING. Coal Drying and Preheating. Power Engr., vol. 21, no. 247, Oct. 1926, pp. 379-380, 1 fig. Discusses economy derived from preheating coal before firing.

OXIDATION. An Investigation of the Behaviour of Solid Fuels During Oxidation, B. Moore and F. S. Sinnatt. Fuel, vol. 5, no. 9, Sept. 1926, pp. 377-380, 4 figs. Method which indicates marked alteration in ignition properties of coal during storage; results show that modification leads to diminution of tendency of coal to ignite.

PULVERIZED. *See Pulverized Coal.*

COAL HANDLING

BRIDGES, PROTECTION OF. Wind Measurement and the Protection of Coal and Ore Bridges, C. Stenbol. Eng. Jl., vol. 9, no. 10, Oct. 1926, pp. 425-429, 2 figs. Discussion existing wind-recording instruments and special designs for use as protective measure on coal and ore bridges and study of wind action on such bridges.

TOWERS. A Four-Ton Coal-Handling Tower, M. R. Summer. Elec. World, vol. 88, no. 13, Sept. 25, 1926, pp. 653-654, 6 figs. Capacity, 400 tons per hour; hopper capacity, 125 tons; belt conveyor to bunkers; barge shifter used; construction details and costs.

UNLOADING PLANT. 2,000-Ton Coal Handling Plant and Automatic Weighing Machines. Eng. & Boiler House Rev., vol. 40, no. 3, Sept. 1926, pp. 128-132, 2 figs. Largest coal-unloading plant in Europe installed at Beckton Gas Works.

COKE

CENTRAL HEATING WITH. Coke Economy in Central Heating, Gunther. Gas World, vol. 85, no. 2198, Sept. 18, 1926, p. 243. For central heating, gas coke is to be preferred, but tests of this are necessary; two questions must be considered, namely, how is firing to be tended, and what is meant by economic heating.

COKE MANUFACTURE

FILMER PROCESS. Filmer Process for Coke Manufacture and Recovery of Oil Distillates in Closed-Circuit System. Can. Chem. & Met., vol. 10, no. 9, Sept. 1926, pp. 213-214, 2 figs. Objective of process is production of coke of domestic and metallurgical quality in course of from one to two hours and maximum elimination of gas products; as far as is known, this is first closed-circuit system producing coke, oil and hydrocarbon values without excessive pressures.

COMPRESSED AIR

HYGIENIC PROBLEMS. Compressed Air, Its Origin and Practical Uses and Its Effect Upon the Human System, E. Levy. Mun. Engrs'. Jl., vol. 12, 1926, pp. 102-120. Survey of developments that have led to present effective engineering operations employing compressed air; hygienic problems arising from operations using compressed air.

CONCRETE

MIXING. Vary Mix Design for Concrete to Be Used at Different Ages, R. T. Giles. Eng. News-Rec., vol. 97, no. 13, Sept. 23, 1926, pp. 510-511. Tests show water control has most effect on early strength and fine aggregate control most important for ultimate strength.

PROPORTIONING. Water-Ratio Method of Designing Concrete Mixtures, D. A. Abrams. Concrete, vol. 29, no. 3, Sept. 1926, pp. 45-46. Outline of Abrams' theory of proportioning; water-cement-ratio and fineness modulus; older forms of specifications; reports from other laboratories that confirm theory.

SEGREGATION. An Analysis of Certain Factors Affecting Segregation in Concrete, G. W. Hutchinson. Concrete, vol. 29, no. 3, Sept. 1926, pp. 13-16, 5 figs. Causes of variations in strengths of concrete; methods of controlling these factors; accurate proportioning; separation of materials in handling concrete; workability; effect of gradation of aggregates on strength of concrete; effect of segregation on strength.

CONCRETE CONSTRUCTION

GRAIN ELEVATORS. Water-Ratio on Grain Elevator Job. Concrete, vol. 29, no. 3, Sept. 1926, pp. 21-23, 10 figs. How C.M. & St.P. Railway is using Abrams' theory with ordinary equipment to obtain good and uniform concrete on grain tank job in Milwaukee.

CONDUCTORS

VIBRATION. Notes on the Vibration of Transmission-Line Conductors, T. Varney. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 10, Oct. 1926, pp. 953-957, 23 figs. Results of tests with graphic recorder to show vibration of transmission-line conductors under various conditions of wind velocity, conductor tension and span length; method of taking records; formulas for determining velocity of propagation of transverse waves along conductor, wave length of vibration and frequency of vibrations caused by eddies formed at conductor subjected to air currents.

CONDUITS

TYPES. Types of Water Conduits, W. A. Scott. Eng. World, vol. 29, no. 3, Sept. 1926, pp. 137-142, 14 figs. Refers to certain pipe installations and makes use of available data pertaining to them; deals with rivetted steel and lock-bar steel pipe, electric-arc welding pipe, wood-stave pipe and concrete conduits.

UNDERGROUND. Underground Conduit and Manhole Construction. Nat. Elec. Light Assn.—Report, no. 256-41, Apr. 1926, 3 pp., 2 figs. Chief among changes observed are tendency toward increase in size of ducts due to increase in voltage and size of cables; tendency toward increased separation of ducts as they enter manhole; experience with laying monolithic concrete ducts; crystallization of standards in manhole design; standardization of manhole frames; use of cast steel for manhole covers, etc.

WATER HAMMER. Water Hammer Not So Important Under Highest Heads. Eng. News-Rec., vol. 97, no. 15, Oct. 7, 1926, p. 577, 2 figs. On account of high initial pressure increase due to hammer is small in proportion and within safe limits.

CONVERTERS

SYNCHRONOUS. Step-Induction Regulator-Controlled Synchronous Converters, M. F. Packard. Elec. World, vol. 88, no. 15, Oct. 9, 1926, pp. 747-749, 2 figs. Automatic operation and absence of usual starting apparatus are features of this type of converter control; permit most effective utilization of equipment in emergencies.

CONVEYORS

AUTOMOBILE INDUSTRY. Conveyors Used in the Automotive Industry, C. A. Brock. Soc. Automotive Engrs.—Jl., vol. 19, no. 4, Oct. 1926, pp. 343-350, 18 figs. Describes various types of conveyors serviceable to automotive industry; principles of selection and design; drawings and photographs of some of latest developments.

Transportation by Conveyor, P. Phelps and N. H. Preble. Soc. Automotive Engrs.—Jl., vol. 19, no. 4, Oct. 1926, pp. 413-421, 21 figs.

COOLING PONDS

SPRAY. Costs of a Spray-Pond Cooling System, R. H. Emerick. Power, vol. 64, no. 15, Oct. 12, 1926, p. 559, 2 figs. Describes spray-pond cooling-water system.

COPPER MINES

MANITOBA. Mining North of the Pas, Manitoba, W. T. Thompson. Eng. Jl., vol. 9, no. 10, Oct. 1926, pp. 437-439, 1 fig. Mining claims and mineral prospects in this district.

CORE OVENS

ELECTRIC. Core Baking with Electric Heat. Nat. Elec. Light Assn.—Report, no. 256-288, Aug. 1926, 6 pp., 5 figs. Core sands and binders; strength of cores; preparation of core mixtures; drying core; electric core baking; advantages of electrically heated core ovens.

OIL-FIRED. Baking of Radiator Cores in Oil-Fired Ovens, I. S. Wishoski. Fuels & Furnaces, vol. 4, no. 9, Sept. 1926, pp. 1077-1079 and 1086, 3 figs. Car-type ovens arranged in two batteries of five ovens each are individually heated by single oil burners firing into long combustion chambers beneath ovens; very uniformly baked cores are produced and good fuel economy is obtained.

CORES

BINDERS FOR. A Standard Sand for Use in Testing Core Binders, H. L. Campbell. Am. Foundrymen's Assn.—Preprint no. 24, for mtg. Sept. 27-Oct. 1, 1926, 7 pp., 1 fig. Establishes specification for sand which would be recommended for general use in testing core binders; effect of grain size on dry bond and permeability was determined; from test results it was concluded that sand for testing purposes should be limited to one sieve size which, according to writer's opinion, is that sand which passes 60-mesh sieve and is retained on 70-mesh sieve.

Methods for Determining the Properties of Cores Made with Cereal Binders, H. L. Campbell. Am. Foundrymen's Assn.—Advance Paper, no. 30, for mtg. Sept. 27-Oct. 1, 1926, 10 pp., 2 figs.

CORE OILS. Some Properties of Core Oils, C. A. Hansen. Am. Foundrymen's Assn.—Preprint, no. 9, for mtg. Sept. 27-Oct. 1, 1926, 32 pp., 1 fig.

SUPPORTS. Core Supports in Large Castings, I. Lamoreux. Am. Foundrymen's Assn.—Preprint, no. 20, for mtg. Sept. 27-Oct. 1, 1926, 7 pp., 8 figs. By examining reactions of core support during casting, author tries to evolve instructions for founder.

CRUCIBLES

PROLONGING LIFE OF. How to Extend Crucible Life. Foundry, vol. 54, no. 18, Sept. 15, 1926, pp. 745 and 754, 2 figs. Attention directed to faulty practice resulting in rapid destruction of crucibles; detailed instructions given for simple annealing oven.

CUPOLAS

HOT-BLAST. Hot-Blast Cupola, P. Dwyer. Foundry, vol. 54, no. 18, Sept. 15, 1926, pp. 729-735 and 754, 14 figs. Preheated air effects economy in continuous and stringent service at foundry of Griffin Wheel Co., Chicago; heated and unconsumed gas is drawn from cupola through ring of tuyeres located 2 ft. below charging door level; this gas is burned with addition of little free air under insulated steel-plate chamber containing number of vertical cast-iron tubes; flame travels through these tubes and heats cold blast which enters through suitable opening and circulates among tubes.

MELTING STEEL CHARGES. Melting All-Steel Charges in a Cupola Furnace, T. F. Jennings. Am. Foundrymen's Assn.—Advance Paper, no. 6, for mtg. Sept. 27-Oct. 1, 1926, 8 pp.

MELTING ZONE OF. A Study of Iron Melted in the Cupola, R. E. Wendt and J. P. Walsted. Am. Foundrymen's Assn.—Advance Paper, no. 4, for mtg. Sept. 27-Oct. 1, 1926, 11 pp., 5 figs. Discusses question of melting zone of cupola and shows that all melting does not take place in what is commonly known as melting zone.

VOLUME MEASUREMENT. The Pitot Tube and the Measurement of Cupola Volume, J. F. Francis. Metal Industry (Lond.), vol. 29, no. 11, Sept. 10, 1926, pp. 247-248, 1 fig. Discusses Pitot-static tube method of measuring blast volume, and points out some of factors tending to cause inaccurate readings and how best to overcome them.

CUTTING METALS

OXYGEN PURITY AND TEMPERATURES. Relative Effect of Oxygen Purity and Temperature in Metal Cutting, F. P. Wilson, Jr. Gen. Elec. Rev., vol. 29, no. 10, Oct. 1926, pp. 722-727, 10 figs. Difference between cutting efficiency of 98.5 and 99.5 pure oxygen controversial; comparative tests show definite savings of much greater magnitude by preheating oxygen; maximum economy obtainable by using cheaper gas with preheat; preheat also facilitates quick starting, and eliminates moisture troubles and hardening face of cut.

D

DAMS

ARCH. Experimental Deformation of a Cylindrical Arched Dam, B. A. Smith. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 8, Oct. 1926, pp. 1596-1601, 1 fig. Results of tests to confirm author's formulas in paper published in same journal 1919-20, vol. 83, p. 2042; determination of elastic constants.

FAILURES. Two Arch Dams Fail Through Undermining of Abutments. Eng. News-Rec., vol. 97, no. 16. Oct. 14, 1926, pp. 616-618, 7 figs. One dam failure was that of Cynide Gold Mining Co. of Moyie River, Idaho, and other was that of Lake Lanier Developing Co., Tryon, N.C.

GRAVITY. Problem of Pressure at Base Gravity Dams (Il problema delle sottopressioni nelle dighe a gravita), E. Scimemi. Energia Elettrica, vol. 3, no. 5, Mar. 1926, pp. 393-402, 6 figs. New Italian regulations; static calculations of dams constructed on permeable ground and on rocks; experiences and examples.

Hydraulic Sluicing. Methods and Cost of Hydraulic Sluicing. Eng. & Contracting, vol. 65, no. 1, July 1926, pp. 25-32, 4 figs. How over 2,000,000 cu. yd. were excavated in Miami Conservancy District in Ohio.

Masonry. Water-Proof Masonry Dams, W. W. Pagon. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 8, Oct. 1926, pp. 1571-1577, 3 figs. Describes method of preventing uplift, rather than neutralizing it; it consists in provision of water-tight membrane or sheet, placed as near up-stream face of dam as is practicable, with, in addition, system of under-drainage to ensure removal of any seepage from foundation bed.

Movable. On the Design of Movable Dams, K. I. Karlsson. World Power Conference, Sect. Vasel Mtg., 1926—Advance Paper, no. 30, 9 pp., 6 figs. Discusses design based on conditions in Scandinavia; measures for securing proper service in winter and for facilitating rafting of timber; points out that ice troubles are hardly dependent upon special construction of sluices, but to great extent on accessibility of packings and glides; advantages of segment-shaped sluices for rafting.

Tieton, Washington. Puddle Core Investigations at Tieton Dam, Washington, I. E. Houk. Eng. News-Rec., vol. 97, no. 14, Sept. 30, 1926; pp. 544-547, 6 figs. Goldbeck cell readings show consolidation; sluicing controlled by corewall movements; direct-pressure observations; ball-penetration tests; friction coefficients.

DIES

Expanding. Dies for Expanding Pressed Shapes, E. Heller. Machy. (Lond.), vol. 28, no. 726, Sept. 9, 1926, pp. 694-696, 3 figs. Construction of expanding die; operation of die; angle of expanding cone; die with rubber expanding member; replacement of rubber member.

DIESEL ENGINES

Characteristics and Difficulties. Fundament Diesel Characteristics Important, J. J. McDougall. Power Plant Eng., vol. 30, no. 19, Oct. 1, 1926, pp. 1058-1059, 2 figs. Points out that poor maintenance and overloads are responsible for many Diesel-engine difficulties.

Large, Quantity Production of. Quantity Production of Larger Diesels Under Way. Power Plant Eng., vol. 30, no. 20, Oct. 15, 1926, pp. 1107-1109, 4 figs. New units of 480, 600, and 720 hp. offered by Fairbanks-Morse & Co. to meet demands of industry for quantity production of larger engines.

DOCKS

Ore-Shipping. Ore-Dock Reconstruction on Two Different Designs. Eng. News-Rec., vol. 97, nos. 12 and 13, Sept. 16 and 23, 1926, pp. 455-457 and 496-499, 12 figs. All-concrete and combined concrete and steel docks; details of concrete design of Northern Pacific Railway.

DRILLING MACHINES

Heavy-Duty Gang. Heavy-Duty Gang-Drilling Machines. Engineering, vol. 122, no. 3167, Sept. 24, 1926, pp. 380-381, 2 figs. Four-spindle and three-spindle machines constructed by J. Archdale & Co., Birmingham, Eng.

Multiple-Spindle. Rapid Drilling and Tapping on Multiple-Spindle Machines. Machy. (Lond.), vol. 28, no. 726, Sept. 9, 1926, pp. 681-683, 6 figs. Drilling connecting rods; washing-machine parts, holes at angles, etc.; special jigs and fixtures, and machines on which they are used, made by Moline Tool Co., U.S.A.

Radial. New Radial Has Distinctive Features. Iron Age, vol. 118. no. 14, Sept. 30, 1926, pp. 929-930, 2 figs. Radial drill developed by Cincinnati Bickford Tool Co. and known as Super-Service radial; 36 speeds, 18 feeds and power rapid traverse are incorporated in head; control centralized, oiling is automatic; roller bearings employed.

E

EDUCATION, ENGINEERING

Foundry Instruction. Foundry Instruction in Technical Schools. Am. Foundrymen's Assn.—Advance Paper, no. 2, for mtg. Sept. 27-Oct. 1, 1926, 39 pp., 9 figs. Foundry instruction at Carnegie Inst. of Technology, Purdue Univ., Univ. of Michigan and Univ. of Illinois; purpose of courses and details of instruction.

Seminars for Practising Engineers. Excellent Seminars for Practising Engineers, E. Bennett. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 10, Oct. 1926, pp. 996-998. Brief sketch of two seminars for practising engineers sponsored by University of Wisconsin; significance of seminars to engineering education.

ELECTRIC CURRENTS

Transients. Measurement of Transients by the Lichtenberg Figures, K. B. McEachron. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 10, Oct. 1926, pp. 934-939, 13 figs. Results of comprehensive study of effect of transients on size and appearance of Lichtenberg figures; such transients may occur on transmission or distribution circuits during periods of disturbance.

ELECTRIC DISTRIBUTION

Rural. Rural Electrification in Western Canada, C. A. Clendening. Eng. Jl., vol. 9, no. 10, Oct. 1926, pp. 433-436. Compendium of problems encountered in venturing into new market for power, with particular reference to rural distribution.

ELECTRIC DISTRIBUTION SYSTEMS

A.C. Low-Voltage. Alternating-Current Low-Voltage Networks. Nat. Elec. Light Assn.—Report, no. 256-36, Apr. 1926, 26 pp., 18 figs. Details regarding systems in use, chief problems involved in their design and such data as are available on actual operating experience; deals particularly with multiple feed networks.

Philadelphia. An Alternating-Current Network, P. H. Chase. Elec. World, vol. 88, no. 13, Sept. 25, 1926, pp. 633-639, 12 figs. Philadelphia system designed to supply reliable and economical service over large areas; primary loop feeders, sectionalizing breakers and balanced pilot-wire control used.

ELECTRIC DRIVE

Individual and Group. Determining Economy of Individual Drive, F. H. Penney. Can. Machy., vol. 36, no. 13, Sept. 23, 1926, pp. 17 and 34. Although there is decided tendency toward individual motor drive for all tools in plant, author points out that group drive with its much smaller installed motor capacity is sometimes preferable.

Group and Individual Drive for Industrial Machinery, L. H. Hopkins. Indus. Mgmt. (N.Y.), vol. 72, no. 4, Oct. 1926, pp. 211-219, 3 figs. Factors to be studied in determining selection.

ELECTRIC FURNACES

Annealing. Annealing Iron and Steel in the Electric Furnace. Nat. Elec. Light Assn.—Report, no. 256-281, Aug. 1926, 5 pp., 4 figs.

Annealing Aluminum in. Annealing Aluminum in the Electric Furnace. Nat. Elec. Light Assn.—Report, no. 256-283, Aug. 1926, 3 pp., 2 figs.

Brass. Annealing Brass and Copper in the Electric Furnace. Nat. Elec. Light Assn.—Report, no. 256-259, Aug. 1926, 3 pp., 3 figs.

Melting Brass in the Electric Furnace. Nat. Elec. Light Assn.—Report, no. 256-287, Aug. 1926, 6 pp., 3 figs. Summary of disadvantages of fuel-fired furnaces and advantages of electric furnaces; induction, direct-arc, indirect-arc, indirect-resistance, combinations of previous principles, and high-frequency furnaces.

Melting. Melting Steel and Gray Iron in the Electric Furnace. Nat. Elec. Light Assn.—Report, no. 256-284, Aug. 1926, 6 pp., 4 figs. Discusses advantages of electric furnaces for this purpose.

Tempering. Rotary Tempering Furnace for Gears. Iron Age, vol. 118, no. 15, Oct. 7, 1926, pp. 1001-1002, 2 figs. Continuous electric, rotary-type, oil-tempering furnace with automatic control installed in plant of Warner Gear Co., Muncie, Ind.; it is used for heat-treating gears and is said to be first continuous oil-drawing furnace ever built; designed by Strong, Carlisle & Hammond Co., Cleveland.

Thermal Insulation. Thermal Insulation of Electric Furnaces, M. L. Hartmann and O. B. Westmount. Am. Electrochem. Soc.—Advance Paper, no. 12, for mtg. Oct. 7-9, 1926, pp. 155-176, 15 figs. Gives thermal conductivities of fused alumina, fused magnesia, fireclay and high-temperature insulating refractory; mean specific heat curves for these refractories are also given; suggests possibilities of energy conservation in electric furnaces by properly-designed composite walls.

ELECTRIC GENERATORS, A.C.

Synchronous. Synchronous Machines, R. E. Foherty and C. A. Nickle. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 10, Oct. 1926, pp. 974-987, 21 figs. Explanation of Blondel's two-reaction theory; it is shown that armature leakage flux which causes reactance voltage drop in synchronous operation comprises all fluxes due to armature currents which generate fundamental voltage except space fundamental component, latter constituting total flux of armature reaction.

ELECTRIC LAMPS, INCANDESCENT

Developments. Report of Lamp Committee 1925-1926. Nat. Elec. Light Assn.—Report, no. 256-47, for mtg. May 17-21, 1926, 9 pp., 11 figs. Carbon filament lamps; standard voltages; street series lamps; standardization activities.

ELECTRIC LOCOMOTIVES

Brazil. New Electric Locomotive for Brazil. Elecn., vol. 97, no. 2518, Sept. 3, 1926, pp. 262-263, 3 figs. Details of 100-ton locomotive completed by Metropolitan-Vickers Electrical Co. for passenger service on Paulista Railway of Brazil; most powerful equipment yet constructed in England.

Tractive Resistance. The Tractive Resistance of Electric Locomotives and Cars, W. J. Davis, Jr. Gen. Elec. Rev., vol. 29, no. 10, Oct. 1926, pp. 685-707, 13 figs. Source of data; train resistance classified; discussion of three main classes; formulas for total resistance; tables and charts.

ELECTRIC METERS

N.E.L.A. Committee Report. Report of Meter Committee 1925-1926. Nat. Elec. Light Assn.—Report, no. 256-17, May 17-21, 1926, 27 pp., 44 figs. Outline of proposed activities of National Meter Committee and status of work in National Sub-committees and Geographic Division Committees; records development in auxiliary testing apparatus and recent productions by manufacturers of meters and equipment used in installation and testing of meters.

ELECTRIC MOTORS

Protection, Pulverized Coal Plants. Protecting Motor Drives in Pulverized-Fuel Plants, M. B. Wyman. Power, vol. 64, no. 15, Oct. 12, 1926, pp. 557-559, 4 figs. Selecting proper protection for motors and controllers, electrical interlocking system to insure correct functioning of equipment and reliable power supply are three essentials to satisfactory operation.

ELECTRIC MOTORS, A.C.

High-Speed. A New High-Speed Three-Phase Motor, U. Herrenberg. Eng. Progress, vol. 7, no. 8, Aug. 1926, p. 224, 1 fig. New type, designed by Himmelwerk, Tübingen, Germany, which permits of attaining speeds of 3,750 to 6,000 r.p.m. in spite of fact that motor is connected up to normal three-phase supply system of 50 cycles per sec.

Induction. General Theory of the Single-Phase Induction Motor, G. Windred. World Power, vol. 6, no. 34, Oct. 1926, pp. 193-196, 3 figs. Analysis and practical application of trigonometrical theorems.

ELECTRIC MOTORS, D.C.

Interpole. The Theory and Development of the Interpole Motor, M. MacLaren. Franklin Inst.—Jl., vol. 202, no. 4, Oct. 1926, pp. 449-468. Traces development of d.c. machine in general; by use of interpoles, problem of commutation has been so far eliminated in many cases that this ceases to have controlling influence upon design; this type of motor has demonstrated its superiority over other forms for cranes, hoists and all forms of traction where cost of distribution is not controlling factor.

ELECTRIC POWER

Purchased vs. Generated. Economic Factors Governing the Purchase of Generation of Power, W. A. Shoudy. Engrs. & Eng., vol. 43, no. 9, Sept. 15, 1926, pp. 246-250. Items which must be considered in comparing cost of private with purchased power.

Saskatchewan. Electrical Development of Southern Saskatchewan, S. R. Parker. Eng. Jl., vol. 9, no. 10, Oct. 1926, pp. 430-432. Review of existing conditions and advantages of comprehensive scheme for development of power resources of province.

ELECTRIC TRANSMISSION LINES

Europe. Some Notes on Electricity Transmission, G. F. Chellis. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 10, Oct. 1926, pp. 958-967, 27 figs. Recent overhead and underground transmission developments in Europe, summary and analysis of recent report of Weir Commission of England, recommending policy with regard to superpower development in that country; report covers programme extending to 1940 and proposed plan of interconnection and base-load plant construction intended to tie together practically all parts of England.

Interconnection. Interchange of Energy, E. J. Fowler. Nat. Elec. Light Assn.—Report, no. 256-44, for mtg. May 17-21, 1926, 5 pp. Economic features involved in interconnection; advantages; proposed basis of interchange rates where water power is involved; interconnection and superpower.

220-Kv. 220-Kv. Transmission Line Construction, J. B. Wheeler. Elec. World, vol. 88, no. 13, Sept. 25, 1926, pp. 662-664, 3 figs. Third 220-Kv. transmission line, known as Vincent line, being built by Southern California Edison Co., will serve to bring out changes in methods and practice of constructing such lines; this line will be 223 miles in length and will serve as link between Big Creek hydro-electric plants in Central California and receiving substations at Eagle Rock and Laguna Bell, near Los Angeles.

Rural. Report of Rural Electric Service Committee 1925-1926. Nat. Elec. Light Assn.—Report, no. 256-37, for mtg. May 17-21, 1926, 16 pp., 1 fig. Costs of rural lines; plan for rural service department; general rural extension plan of Adirondack Power & Light Corp., Ohio Public Service Co., Iowa Railway & Light Co., and Wisconsin Power & Light Co.; rules and regulations for rural service of Commonwealth of Pennsylvania.

OVERHEAD SYSTEMS. Report of Overhead Systems Committee 1925-1926. Nat. Elec. Light Assn.—Report, no. 256-34, May 17-21, 1926, 41 pp., 42 figs. Service tests on treated and untreated poles; construction methods and labour-saving devices; live-line maintenance and construction methods and tools; insulators and protective devices for insulators.

ELECTRIC WELDING

BUTT. On Electric Butt Welding, T. Okamoto. Inst. Elec. Engrs. Japan—Jl., no. 457, Aug. 1926, pp. 885-898, 16 figs. Deals with butt welding of soft steel bars. (In Japanese, with brief English abstract.)

GAS HOLDERS. Electric Welding Steel Gas Holders, G. T. Horton. Can. Engr., vol. 51, no. 10, Sept. 7, 1926, pp. 277-279, 3 figs. Tendency towards heavier and more economical construction; welding various parts of gas holders; advantages of spherical pressure containers for gas or oil. Paper presented at Can. Gas Assn.

PRACTICAL ADVANTAGES. Practical Electrical Welding, S. Halas. Elecn., vol. 97, no. 2522, Oct. 1, 1926, pp. 388-390, 6 figs. Workshop advantages; mass production and special types; localizing heat; space question.

ELECTRIC WELDING, ARC

ELECTRODE EFFICIENCY. Electrode Efficiency, P. L. Roberts. Welding Engr., vol. 11, no. 9, Sept. 1926, pp. 25-27. Result of tests made to determine amount of electrode usefully deposited by metallic arc.

STRUCTURAL STEEL. Arc Welds in Structural Steel, A. M. Candy and G. D. Fish. Welding Engr., vol. 11, no. 9, Sept. 1926, pp. 30-33, 7 figs. Tests show that ultimate strength of structural members can be obtained and special designs are needed.

ELECTRIC WIRING

COST REDUCTION. Lower Wiring Costs. Nat. Elec. Light Assn.—Report, no. 256-35, May 17-21, 1926, 10 pp. One of principal objects of Committee was to discuss and encourage wiring methods which are economical and endeavour to stop growing tendencies toward making wiring increasingly costly; deals with non-metallic sheathed cables; National Electrical code; bare neutral wire; grounding of portable electrical appliances; attachment plugs and receptacles; additional safety rules; uniform electrical ordinance.

ELECTRICAL APPARATUS

DEVELOPMENT. Report of Electrical Apparatus Committee 1925-1926. Nat. Elec. Light Assn.—Report, no. 256-29, May 17-21, 1926, 38 pp., 24 figs. Improvement in adequacy of electrical apparatus available for use on power systems through intensive study of service conditions and requirements of apparatus to meet such conditions; supervisory contact of this committee with other organizations dealing with subjects within committee's scope.

SPECIFICATIONS. Guides for Specifications Covering Electrical Apparatus and Equipment. Nat. Elec. Light Assn.—Report, no. 256-72, July 1926, 32 pp. Discusses various aspects entering into use of specifications from standpoint of both operating companies and manufacturers; use of guides for specifications covering electrical apparatus, equipment and materials; 14 guides to aid in preparation of specifications.

ELECTRICAL MACHINERY

DEVELOPMENTS. Electrical Machinery, B. L. Barns. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 10, Oct. 1926, pp. 940-952. Annual report of Committee on Electrical Machinery; list of subjects which Committee has under consideration; ventilation and testing; turbo-alternators; water-wheel driven alternators; d.c. machines; synchronous and induction motors; synchronous converters; regulators and rectifiers. Bibliographies.

ELECTRICAL MEASUREMENTS

BRIDGE. Solution of Wheatstone Bridge Network, H. P. St. Clair and C. A. Imburgia. Power Plant Eng., vol. 30, no. 20, Oct. 15, 1926, pp. 1114-1115, 3 figs. Gives solution of network in form of Wheatstone bridge, consisting of two triangles.

ELECTRICITY, APPLICATIONS OF

AGRICULTURE. Rural Electrification and the Canadian Hydro, E. A. Stewart. Nat. Elec. Light Assn.—Bul., vol. 13, nos. 7, 8 and 9, July, Aug. and Sept. 1926, pp. 432-434, 504-509 and 563-564, 1 fig. July: Rural electrification of Ontario, Canada; rural line construction and costs. Aug.: Rates for rural service; electricity on farms; discussion of rates and uses of electricity. Sept.: Observations and conclusions.

The Development of Rural Electrification in the United States, E. A. White. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, no. 78, 16 pp., 7 figs. At present rural electrification plays only minor part in United States; only 7.8 per cent of all farms use electricity for other purposes than lighting; recently national committee was founded to study relations between electricity and agriculture; of all states, California has done most to further agricultural electrification.

Application of Electricity to Agriculture, F. Ringwald. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, no. De, 17 pp. Review of nine reports received on this subject dealing with conditions in America, Germany, Japan, England, France, Switzerland, Denmark and Norway. English translation of original German text.

ELECTRICITY SUPPLY

RATE RESEARCH. Report of Rate Research Committee 1925-1926. Nat. Elec. Light Assn.—Report, no. 256-51, for mtg. May 17-21, 1926, 5 pp. Information as to current rates and decisions bearing upon rates.

STATISTICAL METHODS. Report of Statistical Methods Committee 1925-1926. Nat. Elec. Light Assn.—Report, no. 256-16, May 17-21, 1926, 6 pp. Presents principles of electric-utility statistics as foundation for future committee work; outlines tentative classification of statistics for development as guide to collection and arrangement; suggests definitions of few commonly used technical terms for criticism, with ultimate view to international standardization of terminology; principles underlying presentation of statistical data in tabular and graphic form.

ELECTRODEPOSITION

ADDITION AGENTS. The Common Properties of Addition Agents in Electrodeposition, G. Fuseya and K. Murata. Am. Electrochem. Soc.—Advance Paper, no. 7, for mtg. Oct. 7-9, 1926, pp. 87-114, 1 fig. Reviews various theories proposed to account for beneficial effect on cathode resulting from addition of glue and other substances of electrolyte.

ELECTRODES

TEMPERATURE OF CONTACT. Temperature of a Contact and Related Current-Interruption Problems, J. Slepian. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 10, Oct. 1926, pp. 930-933, 6 figs. Formula is derived for temperature rise of last contact point of pair of separating electrodes; relation of this to arcing at switch, brush drop and commutation; experiments on interruption of current by switch in vacuum.

ELEVATED RAILWAYS

SUSPENDED. Bennie Railplane System on Elevated Tracks. Tramways & Ry. World, vol. 60, no. 14, Sept. 16, 1926, pp. 131-134, 6 figs. System is combination of car constructed along lines of airship practice and monorail from which car is suspended; lower guide rail for purpose of avoiding sway of car is also provided, and system has points of novelty while yet broadly following methods adopted in transport system already in use on Barmen-Elberfeld line spanning Wupper River in Germany.

EMPLOYEES' REPRESENTATION

SURVEY OF. Survey of Employee Representation. Ry. Mech. Engr., vol. 100, no. 10, Oct. 1926, pp. 586-587. Discussion of books on improved supervision and better employee relations.

EMPLOYMENT MANAGEMENT

EFFICIENCY CONTESTS. Efficiency Contests Increase Production, J. A. Muir. Mfg. Industries, vol. 12, no. 4, Oct. 1926, pp. 255-256, 4 figs. Plan in use at Baltimore Works of General Electric Co. was adapted to suit plant conditions by collaboration of members of managerial staff of plant; it includes following points of review; workmanship, keeping of promises, economy, good housekeeping, attendance and punctuality and general deportment.

EVOLUTION OF. The Evolution of Personnel Management, W. J. Matherly. Indus. Mgmt. (N.Y.), vol. 72, no. 4, Oct. 1926, pp. 256-257. Beginning of factory system; twentieth-century methods; effects of World War and post-war reaction.

ENGINEERING

PROBLEMS, SOLUTION OF. The Solution of Engineering Problems, F. L. Watson. Am. Mach., vol. 65, no. 15, Oct. 7, 1926, pp. 581-583. Points out that engineering work can be done at its lowest cost during slump and new work is then ready for use when general demand rises, that is to say, when it is most wanted.

F

FATIGUE

INDUSTRIAL. Industrial Fatigue, E. J. Kunze. Indus. Mgmt. (N.Y.), vol. 72, no. 4, Oct. 1926, pp. 233-235. Methods of increasing satisfaction of tasks; effect of fatigue on failure; physical surroundings; stimulus of high wage; personal pride and individuality, as against submergence as cog.

FERROALLOYS

ADDITIONS, DETERMINING WEIGHT OF. Determining the Weight of Alloy Additions, R. S. Kerns. Blast Furnace & Steel Plant, vol. 14, no. 10, Oct. 1926, pp. 439-441, 1 fig. Author has prepared series of curves which make it possible to quickly determine amount of ferroalloy to be added to any weight of charge.

FILTRATION PLANTS

DESIGN. New Ideas in Filter Plant Construction, J. L. Porter. Water Works Eng., vol. 79, no. 18, Sept. 15, 1926, pp. 1197-1198 and 1210. Improved underdrain developed by local engineer for New Orleans purification system; interchangeability of old and new plants. (Abstract.) Paper read before Southwest Water Works Assn.

FLOTATION

BIBLIOGRAPHY. A Bibliography on Flotation. Eng. & Min. Jl., vol. 122, no. 14, Oct. 2, 1926, pp. 535-536. Lists of article appearing in this journal and several other periodicals, Government bulletins, books, patents, etc.

FLOW OF WATER

CULVERTS. Flow Through Culverts. Pub. Works, vol. 57, no. 8, Sept. 1926, pp. 282-285, 3 figs. Results of experiments at State University of Iowa on pipe and box culverts show relative carrying capacities of different sizes and kinds of pipe, different treatments of entrance and exit openings, wing walls, etc.

FLOW METERS

ELECTRIC. Electric Flow Meter Has Interesting Features, T. R. Harrison. Power Plant Eng., vol. 30, no. 20, Oct. 15, 1926, pp. 1130-1132, 3 figs. Manometer made by Brown Instrument Co., and its operation.

FLOW OF FLUIDS

TURBULENCE. Some Experience on Motion of Fluids, T. Terada and K. Hattori. Aeronautical Research Inst., Tokyo Imperial Univ.—Report, vol. 2, no. 16, May 1926, pp. 88-112, 19 figs. Results of experimental investigations begun in 1922 in connection with inquiry into practical problem concerning airships; diffusion and scattering of fluid issuing from small aperture; convection currents in rectangular vessel; formation of whirl due to ascending current. (In English.)

FLUE-GAS ANALYSIS

SAMPLING LINES TO CO_2 RECORDERS. Successful Sampling Lines, C. C. Phelps. Power, vol. 64, no. 15, Oct. 12, 1926, pp. 546-548, 3 figs. Points out that slight changes in sampling line have eliminated 80 to 90 per cent of attention formerly required; brass or copper best for sampling lines, preventing galvanic action.

FORGING

FURNACES. Economically-Operated Forging Furnace, G. L. Davis. Ry. Mech. Engr., vol. 100, no. 10, Oct. 1926, pp. 632-633, 1 fig. Oil-fired adaptation of older type of down-draft, coal burning forge.

PRESSES. The Largest Steam-Hydraulic Forging-Press, W. J. Priestly. Min. & Met., vol. 7, no. 238, Oct. 1926, pp. 426-429, 5 figs. Notable war-time achievement described for first time; press used for forging armour, as well as bending and rectifying it, and forging ingots for large calibre guns.

FOUNDRIES

NON-FERROUS. Temperature Determination in the Non-Ferrous Foundry. Am. Foundrymen's Assn.—Advance Paper, no. 8, for mtg. Sept. 27-Oct. 1, 1926, 24 pp., 4 figs. Symposium of papers as follows: Pyrometer Control in a Brass Foundry, A. S. Hall; Use of Pyrometers in the Casting of Non-Ferrous Metals, R. D. Bean; Thermo-Couple for Ladle Temperatures of Brass, A. A. Grubb, L. H. Marshall and C. V. Nass; Visual Judgment of Non-Ferrous Metal Temperatures, R. R. Clark. See also Metal Industry (N.Y.), vol. 24, no. 10, Oct. 1926, pp. 409-416.

TEMPERATURE CONTROL. Temperature Control. Am. Foundrymen's Assn.—Advance Paper, no. 15, for mtg. Sept. 27-Oct. 1, 1926. Contains following articles: Temperature Control in Aluminum Foundries, K. Marsh, pp. 2-29, 7 figs.; Temperature Control in the Brass Foundry, H. M. St. John, pp. 30-36.

FUELS

COAL. *See Coal; Pulverized Coal.*

COKE. *See Coke.*

LOCOMOTIVE CLINKERS, RECOVERY FROM. Fuel Recovery from Locomotive Clinkers. Eng. Progress, vol. 7, no. 8, Aug. 1926, p. 212, 2 figs. Describes portable clinkers dressing plant employed by German State Railways for recovery of about 20 per cent utilizable fuel.

OIL. *See Oil Fuel.*

PULVERIZED COAL. *See Pulverized Coal.*

SOLID SMOKELESS. Conference on Solid Smokeless Fuel. Chem. & Industry, vol. 45, no. 35, Aug. 27, 1926, pp. 289T-295T and (discussion) 296T-301T. Summary of papers and discussion on this subject during 1925; requirements of solid smokeless fuel; present use of coke; ease of ignition and combustibility; dryness of coke; strength and compactness; coke grading.

FURNACES, GAS

RADIANT-HEAT. A Radiant-Heat Furnace. Gas Jl., vol. 175, no. 3302, Sept. 1, 1926, p. 474, 2 figs. Patented design was invented and applied by Wollers of Krupp Laboratories; its chief characteristics are (1) heating is entirely by radiation without flame formation, and consequently without disadvantages of flame contact with contents; (2) intimate admixture of gas and air (latter heated in recuperator) is effected in early stages.

FURNACES, INDUSTRIAL

DESIGN. General Principles of Furnace Construction and Design, W. Trinks. Gas Age-Rec., vol. 58, nos. 13 and 14, Sept. 25 and Oct. 2, 1926, pp. 4.9-422 and 453-456, 16 figs. Sept. 25.: Types and features of design; points out that heating capacity of furnace is based upon (1) temperature equalization in charge, (2) heat transfer to charge, (3) liberation of generation of heat. Oct. 2: Selection of cheapest fuel, everything considered; furnace design to utilize that fuel to best advantage; circulation of gases.

G

GARBAGE DISPOSAL

PRACTICE. Garbage Disposal. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 8, Oct. 1926. Symposium containing following articles: Administrative and Engineering Work in the Collection and Disposal of Garbage: A Review of Problem, S. A. Greeley, pp. 1642-1655; Garbage Collection and Disposal, Lansing, Michigan, E. D. Rich, pp. 1656-1659; California Practice of Garbage Disposal by Hog Feeding, W. T. Knowlton, pp. 1660-1661; The Disposal of Organic Waste by the Beccari System at Scarsdale, New York, A. Boniface, pp. 1662-1665; High-Temperature Incineration at Toronto, Ontario, Canada, J. A. Burnett, pp. 1666-1669; The Cobwell Ssystem of Garbage Reduction and Some Phases of Its Operation at Rochester, New York, J. V. Lewis, pp. 1670-1678.

GASES

DENSITY. A Review of the Literature Relating to the Normal Densities of Gases, M. S. Blanchard and S. F. Pickering, U.S. Bur. of Standards—Sci. Papers, no. 529, 1926, pp. 141-177. Attempt has been made to choose most reliable value for each gas.

GEARS

TEETH, STRENGTH OF. Strength of Gear Teeth, E. Kieft. Iron & Steel Engr., vol. 3, no. 9, Sept. 1926, pp. 405-415, 5 figs. Stresses due to load and shock.

WORM. Worm Gearing, H. E. Merritt. Machy. (Lond.), vol. 28, nos. 725, 726, 727 and 728, Sept. 2, 9, 16 and 23, 1926, pp. 648-650, 684-685, 716-718 and 743-744, 11 figs. Sept. 2: Undercutting; assembly interference; choice of thread section. Sept. 9 and 16: DBS standard module system of worm-gear design; basis of system; standard worm forms; calculation and choice of module; specification of work; addendum, dedendum and clearance; calculation of lead angle and normal module pitch; example of calculation of work and wheel dimensions. Sept. 23: Tooth reaction; journal and thrust loads.

Worm Gearing—Comment, F. W. Shaw. Machy. (Lond.), vol. 28, no. 728, Sept. 23, 1926, p. 747, 1 fig. Critical discussion of series of articles by H. E. Merritt in same journal, with special reference to assembly interference; author questions whether this really exists, and claims that it is not possible to generate wheels which will not assemble radially.

GRINDING MACHINES

CUTTER. Automatic Universal Cutter Grinder. Machy. (Lond.), vol. 28, no. 726, Sept. 9, 1926, pp. 686-687, 3 figs. Machine is intended for dry grinding, 3-in. suction pipe being provided for removing particles of abrasive.

VERTICAL-SPINDLE. Vertical-Spindle Surface Grinding Machine. Engineer, vol. 142, no. 3689, Sept. 24, 1926, p. 342, 2 figs. Built by Beyer, Peacock & Co., Manchester, Eng., for tool-room work such as finishing of templates, gauges, etc., and grinding of small details.

WORM. New Automatic Worm Grinder. Iron Age, vol. 118, no. 14, Sept. 30, 1926, p. 928, 2 figs. New machine for thread grinding on production basis made by Pratt & Whitney Co., Hartford, Conn.

H

HAMMERS

STEAM. Chambersburg Double-Frame Steam Hammer, Type B. Am. Mach., vol. 65, no. 15, Oct. 7, 1926, p. 613, 1 fig. Anvil is solid and cores have been avoided except at side for handling purposes.

HARBOR IMPROVEMENT

SUBMARINE LEDGE REMOVAL. Removing Submarine Ledges, J. R. Kennerly. Compressed Air Mag., vol. 31, no. 10, Oct. 1926, pp. 1795-1798, 13 figs. Methods employed in locating, drilling, blasting and clearing away obstructions of this kind.

HARDNESS

TESTERS. Comparison of Various Methods of Measuring Hardness of Tempered Metals (Les résultats comparatifs des diverses Méthodes de mesure de la dureté des métaux trempés), N. Swaine. Génie Civil, vol. 89, no. 8, Aug. 21, 1926, pp. 159-161, 7 figs. Discusses methods of Vickers, Hultgren, Rockwell, Brinell, Amsler, Baumann, and gives comparative figures.

HEAT TRANSMISSION

SKIN FRICTION AND. Further Experiments on the Relation Between Skin Friction and Heat Transmission, D. Marshall. Aeronautical Research Committee—Reports and Memoranda, no. 1004, Nov. 1925, 19 pp., 11 figs.

HEATING

LARGE BUILDINGS. General Principles of the Heating of Large Buildings, W. W. Nobbs. Domestic Eng. (Lond.), vol. 46, no. 9, Sept. 1926, pp. 183-185. Problems which beset both architect and engineer; heating systems applicable to large buildings; discusses hot air, steam and hot water, giving special applications and advantages of each.

HEATING, ELECTRIC

INDUSTRIAL. Industrial Electric Heating, J. R. Crossley. Elecn., vol. 97, no. 2522, Oct. 1, 1926, pp. 386-387 and 392, 5 figs. Discusses baking and other important applications; saving space.

HUMIDITY

CALCULATION. The Calculation of Atmospheric Humidity, A. L. Egan. S. African Min. & Eng. Jl., vol. 37, no. 1818, July 31, 1926, pp. 621-622, 1 fig. Author develops new method for determining humidity.

HYDRAULIC TURBINES

NET HEAD. Notes on the Definition of Net Head as Used for the Experimental Determination of Turbine Efficiency, R. Neeser. World Power Conference, Sect. Basel Mtg. 1926—Advance Paper, no. 62a, 9 pp. As defined in Switzerland and in Europe generally, net head is actual operating head on turbine wheel; gives American definition of net head set up by standard testing code for hydraulic turbines, adopted by Machinery Builders' Society, Oct. 11, 1917; author expresses wish that there should be universal agreement, not only on subject of net head definition and efficiency, but on the whole question with regard to experimental determination of efficiency of hydraulic machines. See also abstract in Engineering, vol. 122, no. 3169, Oct. 8, 1926, pp. 441-443.

PROPELLER TYPE. Swiss Test New Propeller Type Runner, F. Johnstone-Taylor. Power Plant Eng., vol. 30, no. 19, Oct. 1, 1926, p. 1066, 3 figs. Draft-tube design proves important in high-speed installation at Matte power station, Berne, Switzerland.

REGULATING GATES. Hydraulic Turbine Regulating Gates, L. H. Burpee. Can. Engr., vol. 51, no. 10, Sept. 7, 1926, pp. 267-271, 5 figs. Operating difficulties in connection with them; effects of trash in turbine casing; gate mechanisms; renewable parts; correction of "sprung" gates; record of gate troubles at several Canadian plants.

RUNNERS, AIR ADMISSION TO. Admitting Air to Turbine Runners Improves Efficiency, S. L. Kerr. Power, vol. 64, no. 16, Oct. 19, 1926, pp. 580-582, 4 figs. Methods of admitting air to turbine runners to improve efficiency and how to make tests to determine adjustment of air valves to obtain most efficient operating performance.

SPECIFICATIONS. Specifications for Hydraulic Turbines, J. S. Carpenter. Power Plant Eng., vol. 30, no. 20, Oct. 15, 1926, pp. 1118-1120. Points out that uniform practice with regard to specifications is needed to eliminate misunderstandings.

SWEDEN. Turbine Designs: Latest Progress in Sweden, H. Munding. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, no. 31, 15 pp., 11 figs.

SWISS. Water-Power Utilization and Inland Navigation (Wasserkraftnutzung und Binnenschiffahrt), A. L. Caflisch. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, no. 53, 26 pp., 16 figs. Hydraulic turbines by Swiss concerns, turbines of propeller, screw and Kaplan types which have been installed in low-head stations, have realized efficiencies up to 91 per cent with specific speeds up to 900; for very large output, high-head Francis turbine with vertical shaft has been developed to high state of perfection; impulse turbines of horizontal-shaft type have been built with great economic efficiency; new principles of quantity production have been applied to manufacture of governors; pipe lines are constructed with view to best utilization of material and minimum loss of head.

HYDRAULICS

PARAMETERS, USE OF. On the Use of vd/v as a Parameter in the Practice of Hydraulics, E. Parry. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, no. 3, 11 pp., 2 figs. Author advocates abandonment of all empirical formulas for coefficient of frictional resistance in hydraulics and substitution from series of curves determined by experiment, each curve representing particular degree of roughness in relation to diameter; points out that such series of curves are universal in character and apply equally to all fluids, gascous or liquid, and at all temperatures.

HYDRO-ELECTRIC DEVELOPMENTS

FRANCE. Hydro-Electric Development in France, D. Fitz. Roy. Engrs. Jl., vol. 40, no. 3, Sept. 1926, pp. 458-468, 13 figs. Geographical distribution of water power in France; nature of works; high-head plants; economics of water power.

Power Developments on Gatineau River. Can. Engr., vol. 51, no. 13, Sept. 28, 1926, pp. 321-324, 6 figs. Two power developments, storage reservoir dam, and large newsprint mill under construction in Gatineau River district, Chelsea and Farmer's Rapids power developments; new mill of International Paper Co.; transmission lines.

WASHINGTON. Skagit River Hydro-Electric Development for Seattle, J. D. Ross. West. Constr. News, vol. 1, no. 18, Sept. 25, 1926, pp. 26-31, 10 figs. Commencement of $63,000,000 programme; 4.25-mil. extension of railway to dam site in Diablo Canyon; construction of dam 365 ft. high to follow soon after.

HYDRO-ELECTRIC PLANTS

AUTOMATIC. Automatic Hydro-Electric Power Stations in Sweden, F. Zachrisson. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, no. 32, 7 pp., 4 figs.

AUTOMATIC AND SUPERVISORY CONTROL. Automatic and Supervisory Control of Hydro-electric Generating Stations, F. V. Smith. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 10, Oct. 1926, pp. 967-973, 8 figs., and (discussion), pp. 1029-1035, 2 figs. Application of automatic equipment and supervisory control to number of interesting hydro-electric installations.

COMBINED STEAM AND. Economic Problems of Water Power and Interconnections Between Hydro-Electric and Steam Plants (Considérations économiques sur l'energie hydro-électrique et les liaisons entre centrales hydro-électriques et centrales thermiques), M. Lassalle. World Power Conference, Sect. Basel Meeting, 1926—Advance Paper, no. 7, 20 pp., 6 figs.

Interconnection of Hydro-Electric and Steam Plants (Hydroelektrische Verbundwirtschaft unter Mitwirkung kalorischer Anlagen), R. Hofbauer. World Power Conference, Sect. Basel Meeting, 1926—Advance Paper, no. 16, 15 pp., 7 figs. Discusses question of co-operation between steam and hydro-electric plants in Austria.

CONSTRUCTION. Distinctive Features of Hydro-Electric Construction, L. F. Harza. Elec. World, vol. 88, no. 13, Sept. 25, 1926, pp 657-661, 5 figs. Discusses phases of hydro-electric construction; factors which determine schedule; making draft-tube forms ready for excavation; grading methods; progress records.

Economical Hydro-Electric Plant Construction, J. F. Vaughan. Elec. World, vol. 88, no. 13, Sept. 25, 1926, pp. 627-628. Importance of seeking to control fixed charges; rewards of detailed planning; individual responsibility more important than contract forms.

ELECTRICAL EQUIPMENT. Electrical Equipment of Swiss Design for Hydro-Electric Plants (Die elektrischen Einrichtungen hydro-elektrischer Werke schweizerischer Herkunft), W. Wyssling. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, no. 61a, 27 pp., 11 figs.

FRANCE. The Eguzon Hydro-Electric Power Station, L. B. Desbleds. Elecn., vol. 97, no. 2521, Sept. 24, 1926, pp. 351-353, 6 figs. Long-distance supply of Paris; meeting traction load on Orleans Railway; interconnections with Gennevilliers; constructional details.

ITALY. The Arquata Scrivia Plant of the Edison Co. (L'officina di Arquata Scrivia della Soceita Edison), G. Guastalla. Energia Elettrica, vol. 3, no. 6, June 1926, pp. 459-483, 36 figs. Describes plant and equipment, consisting of repair shop, transformer station (130,000 volt.), generating plant of 3 groups of asynchronous alternators of 6,500 kw. each, and synchronous condensers of 6,000 kva., switch-plant, busbars, etc.

Low-Pressure. Low-Pressure Hydro-Electric Plants (Niederdruckwasserkraftwerke), H. E. Gruner. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, no. 26, 14 pp., 1 fig. Capacity of low-head plants of Switzerland is considerably larger than capacity corresponding to minimum flow.

I

INDUSTRIAL MANAGEMENT

Automobile Manufacturing Plants. A Simple Works System. Automobile Engr., vol. 16, no. 219, Sept. 1926, pp. 343-347, 12 figs. Organization of automobile factory for moderate and varied output.

Budgetary Control. Budgetary Procedure for the Rubber Industry. Mfg. Industries, vol. 12, no. 4, Oct. 1926, pp. 283-288. Miscellaneous adjustments; forecast of collections from accounts receivable; estimated profit and loss statement; comparison form budget versus actual amounts monthly and to date.

Business Forecasting. We Owe 1926 Profits to Our Business Forecast, H. Coonley. Factory, vol. 37, no. 4, Oct. 1926, pp. 591-595, 660, 662, 748 and 750. Practice of planning department of Walworth Co., Boston; from study of coming year's sales it is possible to arrive rather definitely at what costs and prices will be.

Economical Manufacturing Quantities, Determining. How to Determine Economical Manufacturing Quantities, B. Cooper. Indus. Mgmt. (N.Y.), vol. 72 no. 4, Oct. 1926, pp. 228-233, 7 figs. Method for determining most economical manufacturing quantities, incorporating both accuracy and relative simplicity; formulas and charts are developed.

Production Control. A Flexible Production Control System, E. J. Kunze. Mfg. Industries, vol. 12, no. 4, Oct. 1926, pp. 289-292, 5 figs. System applied to both manufacturing and special orders.

Costs and Selling Prices. Normal Costs and Selling Prices, L. P. Alford. Mfg. Industries, vol. 12, no. 4, Oct. 1926, pp. 269-272, 1 fig. Deals with following questions: What constitute costs, how much profit should be made, and how should selling prices be set?

Taylor System. Taylor System of Scientific Management (Il sistema Taylor d'organizzazione scientifica del lavoro), L. A. Boncinelli. Industria, vol. 40, no. 11, July 1926, pp. 283-285. Discusses advantages and disadvantages, and analyses results of application of Taylor system in Italy; conclusions are in its favour generally.

World Progress. The World Movement of Scientific Organization. Int. Permanent Delegation of Sci. Mgmt. Congress, vol. 1, no. 1-2, June 1926, pp. 16-27. Deals with technical science and management; importance, endeavours and progress of scientific organization. See same article in French, pp. 4-15.

INDUSTRIAL ORGANIZATION

Pacific Gas and Electric Co. Administrative Methods of the Second Largest Gas and Electric Company in the Country, Chas. W. Geiger. Indus. Mgmt. (N.Y.), vol. 72, no. 3, Sept. 1926, pp. 196-199.

INDUSTRIAL RELATIONS

N.E.L.A. Committee Report. Report of Industrial Relations Committee 1925-1926. Nat. Elec. Light Assn.—Report, no. 256-32, May 17-21, 1926, 29 pp., 7 figs. Studies of phases of employment, compensation and pensions.

Plant Programme. Plan Wins Employees' Good Will, B. Finney. Iron Age, vol. 118, no. 13, Sept. 23, 1926, pp. 835, 1 fig. Industrial-relations programme in moderate-sized plant of Diamond Chain & Mfg. Co., Indianapolis; individual instruction given apprentices; group insurance and mutual-relief association are features.

INDUSTRIAL TRUCKS

Electric. Saving in Foundry Handling with the Electric Industrial Truck, H. J. Payne. Am. Foundrymen's Assn.—Preprint no. 11, for mtg. Sept. 27-Oct. 1, 1926, 16 pp., 10 figs.

INSULATION, HEAT

Furnaces. Selection of Proper Furnace Insulation, M. H. Mawhinney. Forging—Stamping—Heat Treating, vol. 12, no. 9, Sept. 1926, pp. 328-333, 12 figs. Also Blast Furnace & Steel Plant, vol. 14, no. 10, Oct. 1926, pp. 426-431, 12 figs. Suggestions for selection of proper furnace insulation for various conditions which are commonly found in practice.

INTERNAL-COMBUSTION ENGINES

Detonation. The Effect of Metallic Sols in Delaying Detonation in Internal Combustion Engines, C. J. Sims and E. W. J. Mardles. Aeronautical Research Committee—Reports and Memoranda, no. 1021, May 1926, 11 pp. It was found that colloidal solutions of iron, lead and nickel in gasoline are as effective in delaying detonation as organic compounds of these metals; metallic iron seems to be more effective than its carbonyl compound.

Horizontal Multi-Cylinder. The Case for the Horizontal Multi-Cylinder Internal Combustion Engine, R. M. H. Lewis. Roy. Engrs. Jl., vol. 40, no. 3, Sept. 1926, pp. 403-410, 12 figs. Criticizes various claims for superiority put forward on behalf of vertical multi-cylinder engine; advantages of horizontal type.

See also Automobile Engines; Diesel Engines; Oil Engines.

IRON CASTINGS

Gating. On Gating Iron Castings, H. W. Dietert. Am. Foundrymen's Assn.—Preprint no. 26, for mtg. Sept. 27-Oct. 1, 1926, 11 pp., 4 figs; also abstract in Foundry Trade Jl., vol. 34, no. 529, Oct. 7, 1926, pp. 313-314 and 316, 4 figs. To determine factors of gating in common use in plant with which author is connected, study was made of rates of pouring of castings according to weights; pouring times of numerous moulds were plotted against weights of castings in moulds; data secured show that there is definite relation between pouring time and weight; as result of investigation, charts were developed which enables foundry organization to specify sizes of gates for various castings and rates of pourings.

L

LABOUR TURNOVER

Cost of. Your Labour Turnover: Good or Bad? W. A. Berridge. Factory, vol. 37, no. 3, Sept. 1926, pp. 416-418, 528, 532, 536 and 540, 3 figs. Author explains what can be done to make labour-turnover figures real measure of efforts to stabilize force.

LABORATORIES

Heat-Treatment. Heat-Treatment Industrial Laboratories. Metal Industry (Lond.), vol. 29, no. 13, Sept. 24, 1926, pp. 290-291, 2 figs. Methods and equipment of laboratory of city of Birmingham Gas Department, England; details of recuperator furnaces and temperature recorders; research work; demonstrations on commercial scale of hardening, tempering, case-hardening or normalizing.

Metallographic. Wheel Makers Expand Laboratory, R. A. Fiske. Iron Age, vol. 118, no. 13, Sept. 23, 1926, pp. 838-840, 4 figs. Test specimens studied in new metallographic department of Assn. of Manufacturers of Chilled Car Wheels; laboratory is located at plant of Griffin Wheel Co., Chicago, where facilities of chemical laboratory are available to supplement microphotographing and physical testing equipment owned by Association.

Methods and Equipment. Laboratory Technique, Methods and Equipment, F. Jehle. Soc. Automotive Engrs.—Jl., vol. 19, no. 4, Oct. 1926, pp. 373-384, 14 figs. Methods to be followed in making investigation are elucidated by examples of study of adapting existing carburetor to existing engine and of study of charge distribution by manifold to cylinders of four-cylinder engine.

LACQUERS

Inflammable, Storage and Handling of. Storage and Handling of Inflammable Lacquer Materials. Paint Mfrs'. Assn. of U. S., Sci. Section—Circular, no. 285, Sept. 1926, pp. 133-139. Approved methods for safe handling, storage and use of inflammable materials in lacquer industry.

LAKES

Storage. Some Principles of Lake Storage with Special Reference to Swedish Conditions, C. Schmidt. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, no. 28, 10 pp., 2 figs. In order to avoid unnecessary damage on account of raised water levels and too large discharges of water, and in order to utilize stored water in rational manner, it is necessary to draw up plan for economical distribution of water.

LATHES

Developments and Uses. Development and Use of the Lathe, L. A. Catlin. Can. Machy., vol. 36, no. 12, Sept. 16, 1926, pp. 15-17, 7 figs. It is shown that development of lathe through ages was slow. (Abstract.) Paper read before Glasgow & West of Scotland Assn. of Foremen Engrs.

Flywheel Machining in. Machining of Flywheels. Brit. Machine Tool Eng., vol. 4, no. 41, Sept.-Oct. 1926, pp. 478-479, 2 figs. Butler flywheel turning, boring and bossing lathe on which gas-engine flywheel 5 ft. diameter may be completely finished in 3 hours, 50 minutes; machine is provided with five cutting tools, all of which may be in operation simultaneously.

LIGHTING

Factories. How Much Does Light Affect Production? R. A. Palmer. Mfg. Industries, vol. 12, no. 4, Oct. 1926, pp. 263-267, 7 figs. Fifteen cases show increases in output varying from 8.5 to 35 per cent due to better lighting.

Street. Modern Street Lighting and the Future, S. B. Langlands. Elec. Times, vol. 70, no. 1822, Sept. 23, 1926, pp. 345-346, 2 figs. Discusses controversial points in present-day public lighting practice, including question of bare lamps, as against sprayed lamps; question of overhead suspension as against special lighting poles or wall brackets, etc.

What is Street Lighting? H. T. Harrison. Elec. Times, vol. 70, no. 1822, Sept. 23, 1926, pp. 346-347. Points out that street lighting is not question of illumination only, and must be considered from following points of view: (1) public or casual observer, (2) police, and (3) vehicle driver.

LIGHTNING ARRESTERS

Characteristics. Time, Voltage and Current Characteristics of Lightning Arresters, K. B. McEachron. Gen. Elec. Rev., vol. 29, no. 10, Oct. 1926, pp. 678-685, 7 figs. Influence of electrostatic field; action during discharge; values of flashover voltage and discharge current; operation of different types of arresters; test with Dufour oscillograph.

LOCOMOTIVE BOILERS

Water-Tube. Structural Changes in the McClellon Water-Tube Locomotive Boiler. Boiler Maker, vol. 26, no. 9, Sept. 1926, pp. 249-255, 11 figs. Side water-tube arrangements altered in recent order for 10 locomotives for New York, New Haven & Hartford R. R.

LOCOMOTIVES

Design. Some Important Details, C. T. Ripley. Ry. Age, vol. 81, no. 12, Sept. 18, 1926, pp. 499-500. Discusses question of design of detailed parts of locomotive, particularly those features which need improvement; expansion stresses in firebox; frames and moving parts; need of cross-counterbalancing.

Diesel-Engined. Diesel Locomotive Operation in Russia, G. V. Lomonossoff. Ry. Rev., vol. 79, no. 13, Sept. 25, 1926, pp. 457-459, 5 figs. Gear-magnetic transmission compared with electric drive and gear-shift system.

Diesel Locomotives for Main Line Traffic. Ry. Engr., vol. 47, no. 561, Oct. 1926, pp. 357-363 and 368, 11 figs. Two separate designs for Russia, one with electric and other with geared transmission; first was supplied by Brown-Boveri & Co. and is 2-10-2 type; and other is 4-10-2 type, supplied by Hohenzollern Works, Germany; locomotive-testing plant.

Steam-Turbine. Visit to Santa Fé and Inspection and Trial of Ljungström Turbo-Condensing Locomotive. Ry. Gaz., vol. 45, no. 11, Sept. 10, 1926, pp. 310-312, 3 figs. Account of locomotive in service; test results; spark-prevention devices on locomotives.

LUBRICATING OILS

Deleterious Properties. Some Deleterious Properties of Lubricating Oils, J. E. Hackford. Diesel Engine Users' Assn.—Report, no. S72, for mtg. June 25, 1926, 22 pp., 2 figs. Author describes tests that may help to predict future behaviour of oil; includes discussion.

Kerosene Addition. The Effect of the Addition of Kerosene on the Oiliness of Lubricating Oils, S. A. McKee. Soc. Automotive Engrs.—Jl., vol. 19, no. 4, Oct. 1926, pp. 356-360, 6 figs. Results of tests of performance of oils diluted with kerosene in journal-bearing friction machine with regard to so-called oiliness property of lubricant, oiliness being defined as property that causes difference in friction when two lubricants of same viscosity at temperature of oil film are used under identical conditions; method of procedure and precautions taken to keep speed, load, bearing temperature and oil pressure constant throughout duration of run; results show that, under conditions of these tests, addition of kerosene decreases oiliness effect of lubricant.

Properties and Application. The General Properties of Lubricating Oils and Their Practical Application, A. E. Dunstan and R. W. L. Clarke. Chem. & Industry, vol. 45, no. 39, Sept. 24, 1926, pp. 690-694. Manufacture of lubricating oils from petroleum; nomenclature of lubricating oils; general properties.

M

MACHINE TOOLS

National Steel and Machine Tool Exhibition, Chicago. Exhibitors and What They Will Exhibit at the National Steel and Machine Tool Exhibition. Forging—Stamping—Heat Treating, vol. 12, no. 9, Sept. 1926, pp. 318-324 and 338, 2 figs. List of exhibits arranged alphabetically according to makers.

MACHINING METHODS

COST REDUCTION. Reducing Machining Costs. Machy. (Lond.), vol. 28, no. 727, Sept. 16, 1926, pp. 701-708, 16 figs. Use of specially prepared forms of metals; bright drawn steels, turned and ground stock, hollow bars and seamless tubing, die castings, hot pressing and stampings, close-to-limit castings and extruded sections.

ICE MACHINES. Production Methods in an Ice-Machine Plant, F. W. Curtis. Am. Mach., vol. 65, no. 16, Oct. 14, 1926, pp. 623-625, 9 figs. Methods and equipment of Baker Ice Machine Co., Omaha, Neb.

MALLEABLE CASTINGS

BLACK-HEART. Black-Heart Malleable (Remarques sur la malléable à coeur noir), C. Kluytmans. Fonderie Moderne, vol. 20, Sept. 1926, pp. 209-214, 12 figs. Discusses defects of black-heart malleable produced in reverberatory furnace, originating in crude metal of casting, and in annealing, and gives examples.

PROPERTIES. A Study of Malleable Cast Iron, O. Quadrat and J. Koritta. Am. Foundrymen's Assn.—Preprint no. 21, for mtg. Sept. 27-Oct. 1, 1926, 7 pp.

REQUIREMENTS. What May Be Required of Malleable Cast Iron, H. A. Schwartz. Am. Foundrymen's Assn.—Advance Paper, no. 44, for mtg. Sept. 27-Oct. 1, 1926, 16 pp.

STRENGTH. Resistance of Malleable Iron to Repeated Impact Stresses and Comparison of Strength of Machined and Unmachined Malleable Castings, E. Touceda. Am. Foundrymen's Assn.—Preprint, no. 39, for mtg. Sept. 27-Oct. 1, 1926, 9 pp., 2 figs. Results of tests.

METALS

CORROSION-RESISTING. Metals to Resist Corrosion or High Temperatures, H. J. French. Am. Electro-Chem. Soc.—Advance Paper, no. 5, for mtg. Oct. 7-9, 1926, pp. 47-79, 6 figs. Principal characteristics and typical applications of metals used industrially to resist high temperatures or corrosion; those considered include commercially pure copper, aluminum, lead, tin, silver, nickel and iron, and their alloys.

DILATOMETRIC ANALYSIS. Principles and Chief Applications of Dilatometric Analysis of Materials, A. Portevin and P. Chevenard. Am. Foundrymen's Assn.—Advance Paper, no. 22, for mtg. Sept. 27-Oct. 1, 1926, 43 pp., 34 figs. Thermal and physical analysis; superiority of dilatometric analysis; calculation of coefficient of expansion; application of dilatometric analysis.

PLASTIC DEFORMATION. The Question of Plastic Deformation, H. Preussler. Blast Furnace & Steel Plant, vol. 14, no. 10, Oct. 1926, pp. 442-447, 17 figs. Author gives insight into character of plastic deformation; various observations and theories discussed; application to rolling, forging and pressing. Translated from Stahl u. Eisen.

METALLURGY

BIBLIOGRAPHY. Research in Metallurgical Literature, R. Rimbach. Forging—Stamping—Heat Treating, vol. 12, no. 9, Sept. 1926, pp. 354-357. Outlines procedure to be followed in making research into metallurgical literature; gives list of periodicals and magazines as guide.

MICROSCOPES

TOOLMAKERS'. Bausch & Lomb Toolmakers' Microscope. Am. Mach., vol. 65, no. 16, Oct. 14, 1926, pp. 652-653, 2 figs. Principle of operations of instrument adapted to workshop and laboratory.

MILLING MACHINES

AUTOMOBILE INDUSTRY. Tooling 1927 Models of Auto Industry, H. Rowland. Can. Machy., vol. 36, no. 13, Sept. 23, 1926, pp. 14-16, 8 figs. Describes recent installations of productive milling equipment.

UNIVERSAL. Large Universal Milling Machine. Machy. (Lond.), vol. 28, no. 728, Sept. 23, 1926, pp. 745-746, 5 figs. Machines built by P. Huré & Cie, Paris, using table with universal head; drive is by constant-speed single pulley; most interesting feature of machine is double swivelling head.

MOULDING METHODS

DIFFERENTIAL-PITCH PROPELLERS. Metal Industry (Lond.), vol. 29, no. 10, Sept. 3, 1926, pp. 223-224, 6 figs. Most usual method is to employ inner and outer templets; explains why this is unsatisfactory method; author suggests that it is not only possible, but really simpler to strike it with one templet; sweeping bed is done by means of two boards, one being fixed to spindle and other being pinned to it near centre.

MOULDS

PERMANENT. Permanent and Long-Life Moulds, R. Moldenke. Am. Foundrymen's Assn.—Advance Paper, no. 32, for mtg. Sept. 27-Oct. 1, 1926, 8 pp.

Permanent and Long-Life Moulds. Am. Foundrymen's Assn.—Advance Paper, no. 10, for mtg. Sept. 27-Oct. 1, 1926, 28 pp., 7 figs. Symposium of following papers: Durable Moulds, J. A. Murphy; A. Permanent Mould Process, H. A. Schwarts; Some Considerations of Metal for Heavy Iron Castings in Permanent Moulds, H. P. Kimber and S. M. Udale.

SAND, MELTING STEEL FOR. Melting Steel for Sand Moulds, T. F. Hull. Foundry, vol. 54, no. 19, Oct. 1, 1926, pp. 785-787. Points out that requirements for castings differ from ingots; metal must be superheated shrinkage and contraction; liquidity and fluidity. (Abstract.) Paper presented before West Yorkshire Met. Soc. of England.

MOTOR TRUCKS

ELECTRIC. The Commercial Use of Electric Vehicles, H. A. Child. Instn. Engrs. Australia, vol. 7, no. 2, 1926, pp. 37-64, 8 figs. History of development of electric vehicle; mechanical construction of trucks, design of motor, controller and battery, and characteristics; charging and maintenance.

O

OFFICE MANAGEMENT

FORM DESIGN AND PRINTING. Design and Printing of Forms. Nat. Elec. Light Assn.—Report, no. 256-322, Apr. 1926, 11 pp., 3 figs. Outline of considerations to be given to design, selection of paper and methods of printing forms for office or general business use.

OIL ENGINES

MAINTENANCE. Factors That Influence Oil-Engine Maintenance, L. H. Morrison. Power, vol. 64, no. 16, Oct. 19, 1926, pp. 590-592, 3 figs. Points out that prestudy of plant conditions permits accurate prediction of repair costs.

OIL FUEL

ATOMIZATION IN BURNERS. Factors Affecting Atomization in Oil Burners, J. F. Barkley. Power Plant Eng., vol. 30, no. 19, Oct. 1, 1926, pp. 1048-1049, 1 fig. Data secured and conclusions drawn from experiences with combustion of oil in power-plant furnaces.

BURNERS. Progress in Industrial Heating, L. Macleod. West. Machy. World, vol. 17, no. 9, Sept. 1926, pp. 388-390, 5 figs. Details of Ray fuel-oil burning system, which is supplied with oil from independent pump set; applications of these burners to industry.

DEVELOPMENTS. Burning of Liquid and Gaseous Fuels. Nat. Elec. Light Assn.—Report, no. 25-106, Jan. 1926, 15 pp., 11 figs. Effect of furnace-volume upon maintenance, given by New Orleans Public Service; results of burning residuum from cracking stills as reported by Wichita Falls Electric Co.; progress made in burning of oil in combination with gas and coal, and results of recent developments and operating experience.

HANDLING FROM CAR TO BURNER. Handling Fuel Oil from Car to Burner, W. C. Kammerer. Forging—Stamping—Heat Treating, vol. 12, no. 9, Sept. 1926, pp. 333-334, 2 figs. Sets forth important factors that must be taken into consideration in handling of heavy fuel oil from tank car to burner.

RESEARCH. Fuel and Lubrication Research, W. A. Whatmough. Automobile Engr., vol. 16, no. 219, Sept. 1926, pp. 329-330, 2 figs. Résumé of recent investigation in carburation and oils.

OPEN-HEARTH FURNACES

SULPHUR ABSORPTION IN. Absorption of Sulphur During Melting in the Open-Hearth Furnace, C. H. Herty, Jr. Min. & Met., vol. 7, no. 238, Oct. 1926, pp. 444-447, 4 figs. High-sulphur gas imparts sulphur to scrap during melting; low-sulphur gas partly desulphurizes scrap; keep sulphur in fuel low.

P

PAINTS

LIFE OF. Paint and Varnish as Enemies of Corrosion, E. B. Timmerman. Can. Chem. & Met., vol. 10, no. 9, Sept. 1926, pp. 205-207. General discussion of factors affecting life of paint and varnish.

WHITE. Primers for White Paints Used on Refrigeration Cork Board Insulations, H. A. Gardner. Paint Mfrs'. Assn. of U. S., Sci. Section—Circular, no. 288, Sept. 1926, pp. 150-154, 1 fig. Note on iron sulphate as stain preventive in applying white paints to some woods.

PAPER MILLS

HEAT LOSSES. Heat Losses in Paper Mills, F. C. Farnsworth. Paper Mill, vol. 49, no. 39, Sept. 25, 1926, pp. 20 and 22. Recent test of Harrisburg Dual Clearance Uniflow Engine shows that reclamation of heat from compression that is ordinarily lost in common counterflow cylinder and saving of condensation losses actually shows saving of steam amounting to 20 to 30 per cent of total steam used; describes various ways in which heat losses prevail in paper mills and damage that water does when it lies on surface of heating units.

POWER AND HEAT PROBLEM. The Power and Heat Problem of a Roofing Felt Mill, K. B. Howell. Power, vol. 64, no. 15, Oct. 12, 1926, pp. 542-543. Points out that in common with other types of paper mills, power problem of mill manufacturing roofing felt is essentially determination of most economical feasible layout which will supply combined requirements of process steam and mechanical power; full-load plant costs do not tell whole story; actual variations in load have large influence.

SPEED REDUCTION. Speed Reduction Methods. Paper Trade Jl., vol. 83, no. 12, Sept. 16, 1926, p. 55. Comparison between cone and step pulley drives and Reeves variable speed transmissions in number of New England paper mills.

PATTERNMAKING

BAND SAW, USE IN. Band Saw is Important Pattern Shop Tool, W. C. Ewalt. Foundry, vol. 54, no. 18, Sept. 15, 1926, pp. 746-749, 14 figs. Points out that special care is necessary in successful operation of this machine tool, and safety measures are essential.

PHOTO-ELASTICITY

EYE-SHAPED BAR-END INVESTIGATION. Eye-Shaped End of Bar Investigated by Photo-Elastic Method, K. Takemura and Y. Hosokawa. Aeronautical Research Inst., Tokyo Imperial Univ.—Report, vol. 11, no. 4, July 1926, pp. 127-143, 21 figs. Point of maximum stress at inner edge of eye-shaped end changes its position according to manner of loading, and magnitude of maximum stress varies considerably with contour of eye-shaped end.

PIPE, CAST-IRON

CENTRIFUGALLY CAST. Experience with the Use of De Lavaud Centrifugally Cast Iron Pipe, P. J. Hurtgen. Am. Water Works Assn.—Jl., vol. 16, no. 3, Sept. 1926, pp. 373-386. Author relates actual experiences of water-works officials on use of de Lavaud pipe.

STRESSES IN SOCKETS. Stresses in Cast Iron Pipe Sockets. Engineer, vol. 142, no. 3690, Oct. 1, 1926, pp. 366-368, 7 figs. Investigation made by R. G. Batson and W. F. Cope at National Physical Laboratory.

PIPE, STEEL

ARC WELDING. Progress of Welded Pipe Lines for Oakland Water-Supply. Contractors' & Engrs'. Monthly, vol. 13, no. 3, Sept. 1926, pp. 71-72, 3 figs. Steel pipe fabricated by new process of arc welding used throughout.

PLANERS

HELICAL-GEAR. "Sunderland" Double Helical-Gear Planer. Brit. Machine Tool Eng., vol. 4, no. 41, Sept.-Oct. 1926, pp. 465-473, 15 figs. Application of Sunderland generating system as embodied in new Parkinson-Sunderland double helical-gear planers.

PLOWS

ELECTRIC. Electric Ploughing, R. B. Matthews. World Power Conference, Sect. Basel Meeting, 1926—Advance Paper, no. 17, 47 pp., 26 figs. Establishes formula for power needed in ploughing; discusses factors affecting this, including soil resistance, adjustment of plough, size of furrow and speed; recent experiments have established electrical method of reducing draft; advantages of electric ploughing; power is generally supplied from high-tension overhead lines by special tappings.

POWER FACTOR

IMPROVEMENT. Power Factor Improvement. Nat. Elec. Light Assn.—Report, no. 25-104, Jan. 1926, 26 pp., 7 figs. Report indicates that generally power-factor improvement equipment can be installed on growing systems with over-all gain in economy.

PROFIT SHARING

GREAT BRITAIN. Profit Sharing. Monthly Labour Rev., vol. 23, no. 3, Sept. 1926, pp. 62-64. Profit sharing and labour co-partnership in Great Britain and Northern Ireland in 1925.

PROSPECTING

ELECTRICAL. Practical Points on Electrical Prospecting for Location of Mineral Deposits, H. Lundberg. Min. Congress Jl., vol. 12, no. 10, Oct. 1926, pp. 737-738 and 763. Results dependent on conductivity and position of ore bodies; geological reconnaissance essential; sulphide deposits especially favourable; cost usually less than drilling; nature of ore body and zones of dissemination disclosed.

Electrical Prospecting at the Britannia Mine, J. I. Moore, Jr., and F. Ebbutt. Can. Inst. Min. & Met.—Bul., no. 173, Sept. 1926, pp. 1017-1028, 8 figs. Electrical prospecting is not intended to displace prospecting of old type, but to aid established methods, supplementing work of prospector and geologist, and is to be followed effectively by diamond drill; general and potential methods.

PULVERIZED COAL

Boiler Firing. A New System for Firing Boilers with Powdered Fuel. Iron & Coal Trades Rev., vol. 113, no. 3052, Aug. 27, 1926, p. 296, 1 fig. Improved system at Gateshead Works of Clarke, Chapman & Co., England.

Pulverized Fuel Firing at a French Colliery, M. Sohm. Colliery Guardian, vol. 132, no. 3427, Sept. 3, 1926, p. 509, 3 figs. Details of installation at Bruay power station; in designing plant, chief objects were systematic removal of all dust from coal intended to be washed to facilitate washing operation and to prevent formation of slime; deduction of amount of labour in boiler-house, at same time improving condition of boiler-house workers. Translated from French.

Developments. Pulverized Fuel. Nat. Elec. Light Assn.—Report, no. 256-79, Aug. 1926, 78 pp., 64 figs. Bibliography. See abstract in Power Plant Eng., vol. 30, no. 20, Oct. 15, 1926, pp. 1098-1100, 1 fig.

Making Electrical Drives Safe in Pulverized Coal Plants, M. B. Wyman. Power, vol. 64, no. 14, Oct. 5, 1926, pp. 504-507, 7 figs. Methods used to eliminate explosion hazard in pulverized coal plants and how to select motors and controllers for these applications.

Low-Temperature Solid Residuals as. Low-Temperature Solid Residuals as Powdered Fuels, H. Nielson. Iron & Coal Trades Rev., vol. 113, no. 3054, Sept. 10, 1926, pp. 384-386, 4 figs. Powdered distilled residue, provided that it is result of low-temperature distillation, where primary oil products have been subjected to slight, if any, cracking, burns as freely as powdered raw coal, if not more so; it occupies same volume, ton for ton, as that of raw coal; physical properties, specific gravities, moisture absorption and combustibility were for practical purposes identical.

Pulverizers. The Clarke Chapman Turbo-Pulverizer. Machy. Market, no. 1349, Sept. 10, 1926, pp. 25-26, 5 figs. Machine is so arranged that all wearing parts can be inspected and replaced in minimum amount of time; fan for primary air, which is integral part of machine, draws fine coal from separator and discharges coal and primary air direct to burners.

Water Works, Use in. Use of Pulverized Fuel in the Water Works Plant, C. S. Denman. Am. Water Works Assn.—Jl., vol. 16, no. 3, Sept. 1926, pp. 296-301. Enumerates advantages of pulverized coal firing. Bibliography.

PUMPING STATIONS

Automatic. Automatic Public Water Supply. Engineering, vol. 122, no. 3169, Oct. 8, 1926, pp. 454-455, 5 figs. First public water supply with automatic pumping plant in England opened at Princes Risborough; plant consists of two sets of three-throw pumps, one driven by gasoline engine and other by electric motor, together with two cylindrical tanks.

PUMPS

Rotary. A New Conical Rotary Pump. Mech. World, vol. 80, 2073, Sept. 24, 1926, p. 239, 2 figs. Developed by A. G. Mumford, Ltd., Colchester, Eng.; it is known as Niagara pump and is intended for pumping oil fuel, brine, and for general work.

PYROMETERS

Radiation. Some Considerations on Radiation Pyrometers, A. J. Philpot. Sci. Instruments Jl., vol. 3, no. 11, Aug. 1926, pp. 366-373. Theoretical consideration of effect of varying distance from radiating source in total-radiation pyrometers of focusing and non-focusing lens and mirror types.

The Measurement of Combustion-Chamber Temperatures, H. W. G. Westlake. Eng. & Boiler House Rev., vol. 40, no. 3, Sept. 1926, pp. 115-117, 4 figs. Describes radiation-type pyrometer.

R

RADIOTELEGRAPHY

Transmitters. The Keying of Valve Transmitters, W. T. Ditcham. Experimental Wireless, vol. 3, no. 36, Sept. 1926, pp. 526-531, 9 figs. Deals with two main divisons of valve transmitters, namely, self-excited oscillators and magnifiers excited by master oscillator.

RAILWAY ELECTRIFICATION

Developments. The Electrification of Railways, E. Huber-Stockar. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, Ee, 22 pp.

France. Electrification of a Section of the Orleans Railway, H. Parodi. Instn. Elec. Engrs.—Jl., vol. 64, no. 357, Sept. 1926, pp. 893-908 and (discussion) 909-919, 24 figs.

Railway Electrification in France (Electrification des chemins de fer Francais), H. Parodi. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, no. 43, 29 pp., 5 figs.

Paris Suburban. Paris Suburban Electrification, T. Rich. Elecn., vol. 97, no. 2520, Sept. 17, 1926, pp. 316-317, 8 figs. Details of cable and track system; avoiding ice troubles; third-rail insulations.

South Africa. The Natal Electrification. S. African Engr., vol. 16, no. 99, July 1926, pp. 3-11, 9 figs. Electrified section covers route mileage of 175 miles and track mileage of 309; it is largest electrification in world on 3-ft. 6-in. gauge.

United States. Railroad Electrification, W. S. Murray. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, no. 74, 14 pp. Compares development which in past 25 years has been made in United States in field of power transmission and railway electrification.

RAILWAY MANAGEMENT

Purchasing. The C. M. & St. Paul Budgets Its Purchases. Ry. Age, vol. 81, no. 15, Oct. 9, 1926, pp. 665-669, 5 figs. Plan for budgeting purchases called allotment plan, whereby orders for material must be kept within predetermined amount each month; this allotment is fixed by chief purchasing officer and operates through general storekeeper and local storekeepers.

Statistics, Development of. Development of Railway Statistics, with Special View of Economy in Operation. Int. Ry. Congress—Bul., vol. 8, nos. 9-10, Sept.-Oct. 1926, pp. 841-853. Discussion by sections; contains appendix giving statistics published annually by Italian State Railways, in addition to statistics contained in annual report and monthly bulletins.

RAILWAY TRACK

Gravity-Electric Power Units. The Sheremeteff Gravity-Electric Power Unit, J. A. Malan. Australasian Elec. Times, vol. 5, no. 7, July 27, 1926, pp. 493-494, 6 figs. Apparatus installed on Darling railway line, Melbourne, invented and patented by Russian railway engineer, by means of which power in form of gravity is obtained from passing rolling-stock wheels and stored up in raised weight; power thus obtained is controlled electrically, and can be used for operating points or signals or possibly other apparatus.

Joints. Track Joints and Their Maintenance. Ry. Age, Sect. 1, vol. 81, no. 13, Sept. 25, 1926, pp. 552-553. Length of track joints; kind of bolts and springs; installation and maintenance of joints. (Abstract.) Paper read before Roadmasters' & Maintenance of Way Assn.

RAINFALL

Skew-Frequency Laws. Straight-Line Plotting of Skew-Frequency Data, R. D. Goodrich. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 6, Aug. 1926, pp. 1063-1105, 17 figs. Deals with application of new equations for both " integral " or " duration " curve and " frequency " or " differential " curve; and for expressing variations in occurrence of phenomena which follow skew-frequency laws as to their distribution; these equations are particularly applicable to plotting of hydraulic data (rainfall and run-off) having limited number of observations in series; examples of use of equations in plotting of curves on new type of skew-frequency paper.

REFRACTORIES

Foundry. Foundry Refractories, M. C. Booze. Fuels & Furnaces, vol. 4, no. 9, Sept. 1926, pp. 1071-1076. Discusses conditions imposed on refractories in foundry furnaces, namely, abrasion, flame, impingement and expansion, and wall construction; insulation, effect of joints, wall thickness and heat capacity; specifications and method of testing.

REFRIGERANTS

Properties. Engineering Tables of Properties of New Refrigerants. Power, vol. 64, no 14, Oct. 5, 1926, pp. 512-513. Tabular data on properties of butane, isobutane and propane.

REFRIGERATING MACHINES

Water-Vapour. Water-Vapour Refrigeration, W. W. O'Mahoney. Ice & Cold Storage, vol. 29, no. 342, Sept. 1926, pp. 227-229, 3 figs. Details of new Follain machine with account of its application to industrial uses.

REFRIGERATING PLANTS

Corrosion. The Prevention and Retardation of Corrosion in Refrigerating Systems, N. B. Ornitzor. Refrig. Eng., vol. 13, no. 2, Aug. 1926, pp. 64-65 and (discussion) 65-67.

REFUSE DISPOSAL

Destructor, from. San Francisco Makes Fills with Residue from Destructor. Eng. News-Rec., vol. 97, no. 12, Sept. 16, 1926, pp. 469-470, 2 figs. Total of 600 tons of refuse handled daily; ashes and unburned waste delivered in railroad cars to fills on bay shore.

RESEARCH

Engineering College and Industry. Research Relations Between Engineering Colleges and Industry, W. E. Wickenden. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 10, Oct. 1926, pp. 987-988. Points out that policy of concentrating resources in Europe has led to upbuilding of group of notable and distinctive research centres which are principal factor in attracting and holding to educational and research work outstanding authorities in several fields; results have been to give several institutions individuality quite unknown in United States.

RIVERS

Retards. Brush, Wire Mesh and Old Rails Make River Retards. Eng. News-Rec., vol. 97, no. 15, Oct. 7, 1926, pp. 576-577, 3 figs. Channel of river in Pueblo, Colo., restored; bank caving reduced; protection of bridge piers a feature.

ROADS, CONCRETE

Finishing and Curing. Finishing and Curing of Concrete Roads, C. L. McKesson. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 6, Aug. 1926, pp. 1125-1138, 6 figs. Reviews modern practice and appliances in finishing concrete; data regarding tests for determining relative efficiency of finishing machines of two well-known types; use of Vialog is recommended as aid in securing smooth pavement surface; results of investigations of curing concrete indicate that period of watering may be much reduced from present standard practice; and average time during which pavement is kept closed to traffic may be reduced.

ROADS, EARTH

Maintenance. Dirt Road Maintenance. Pub. Works, vol. 57, no. 8, Sept. 1926, pp. 290-292. Supplementing table published in May issue and containing information furnished by questionnaires received since it was compiled; kind, width and crown of road, equipment used and frequency of treatment.

ROLLING MILLS

Rolling, Theory and Practice of. The Theory and Practice of Rolling Steel, W. Tafel. Iron Trade Rev., vol. 79, nos. 2, 4, 6 and 8, July 8 and 22, Aug. 5 and 19, 1926, p. 76-79, 196-199, 313-315, 436-437 and 446, 22 figs. July 8: Rolled cast designs. July 22: Considerations to be used for so-called ornamental iron, which is tye of periodic profile; complex profiles. Aug. 5: Power required for rolling; how to determine work; determination to relation of rolling passes to total working time. Aug. 19: Use of gas-steam engines for rolling-mill drive.

Seamless-Tube Manufacture. Make 50-Ft. Tubes from Ingots. Iron Age, vol. 118, no. 13, Sept. 23, 1926, pp. 846-850, 11 figs. Seamless-tube plant at Allenport, Pa., embraces one piercing mill and two pilger mills; reheating and polishing feature finishing operations.

S

SAND, MOULDING

Clay Bond, Use of. Practical and Technical Data Obtained from the Use of Clay Bond in Moulding Sand Heaps, R. F. Harrington, A. S. Wright and M. A. Hosmer. Am. Foundrymen's Assn.—Preprint no. 29, for mtg. Sept. 27-Oct. 1, 1926, 18 pp.

Control. Sand Control in the Foundry, H. W. Dietert and H. W. Wakefield, Jr. Am. Foundrymen's Assn.—Preprint no. 35, for mtg. Sept. 27-Oct. 1, 1926, 23 pp., 10 figs.

Grading. The Grading of Moulding Sands, C. A. Hansen. Am. Foundrymen's Assn.—Preprint no. 3, for mtg. Sept. 27-Oct. 1, 1926, 30 pp., 8 figs.

Metallurgical Control. Metallurgical Control of Foundry Sands, L. B. Thomas. Am. Foundrymen's Assn.—Advance Paper, no. 18, for mtg. Sept. 27-Oct. 1, 1926, 22 pp., 1 fig.

Mulling, Effect of. The Effect of Mulling on the Physical Properties of Foundry Sands, A. V. Leun. Am. Foundrymen's Assn.—Preprint no. 33, for mtg. Sept. 27-Oct. 1, 1926, 34 pp., 12 figs. Results of experiments to determine compressive strength, tensile strength, permeability and distribution.

Refractoriness. Some Experiments on the Retractoriness of Foundry Sands, D. W. Trainer, Jr. Am. Foundrymen's Assn.—Advance Paper, no. 27, for mtg. Sept. 27-Oct. 1, 1926, 19 pp., 5 figs.

SEWAGE DISPOSAL

Plants. The Design, Construction and Operation of a Small Sewage Disposal Plant, F. Hudson, Jr. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 8, Oct. 1926, pp. 1602-1611, 6 figs. Describes plant at Stroud, Okla., town of 2,000 inhabitants.

Small Plants. Design of Small Sewage Disposal Plants, F. Johnstone Taylor. Can. Engr., vol. 51, no. 11, Sept. 14, 1926, pp. 285-287, 4 figs. Construction and operation of septic tanks for residences and institutions; method of dealing with domestic sewage in districts where sewerage facilities are not available; process in tank similar to that in large plants.

SEWERS

Connections. Experiments on Hydraulic Jump in Sewer Connections, W. H. Ashley. Eng. News-Rec., vol. 97, no. 14, Sept. 30, 1926, pp. 548-550, 4 figs. Drop connection, rather than free fall, drop manhole or flight manhole; eliminates odor, noise, vibration and energy.

SHEET METAL

Galvanized, Bend Tests of. Bend Tests of Galvanized Sheet Metal, H. A. Stacy. Am. Inst. Min. & Met. Engrs.—Trans., no. 1600-C, for mtg. Oct. 1926. 35 pp., 22 figs. Results of series of tests; study of tabulated results and curves show that for substantial proportion of all sheets there were few specimens showing bend failure with high mandrel thickness; curves, as a rule, show fairly uniform gradient up to 90 per cent point.

SHERARDIZING

Electric. Electro-Sherardizing. Nat. Elec. Light Assn.—Report, no. 256-85, Aug. 1926, 4 pp., 2 figs. Consists of covering iron or steel with protective coating by revolving material in drums in zinc-dust preparation maintained at temperature of approximately 375 to 400 deg. cent. by means of electric heat; data on electric sherardizing.

SILK

Artificial. Manufacture of Artificial Silk (La fabrication de la soie artificielle), A. Guillaumin. Technique Moderne, vol. 18, no. 18, Sept. 15, 1926, pp. 545-551, 16 figs. Principle of viscose production; preparation, grinding, ripening of alkaline cellulose; scanthogenate; purification of viscose, etc., and apparatus used.

SLAGS

Open-Hearth. Open-Hearth Slags, W. C. Hamilton. Am. Foundrymen's Assn.—Advance Paper, no. 7, for mtg. Sept. 27-Oct. 1, 1926, 11 pp. Discusses acid and basic slags, their function, composition and control; particular attention is paid to limestone, dolomite and use of fluorspar.

SMOKE ABATEMENT

Smokeless Heat and Power Production. Smokeless Production of Heat and Power, M. Fishenden. Gas. J., vol. 175, no. 3304, Sept. 15, 1926, pp. 606-608.

SNOW REMOVAL

Organization and Operation. Snow Removal Problems of Organization and Operation, G. E. Hamlin. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 6, Aug. 1926, pp. 1121-1124. Experience of several years in development of snow-removal organization in Connecticut has been utilized in general recommendations for maintenance problem.

Snow Control. The Possibilities of Snow Control to Reduce Snow Removal, C. A. Wagner. Highway Mag., vol. 17, no. 10, Oct. 1926, pp. 239-240, 4 figs. Points out that snow fence cannot take place of snow removal, but its use in modern improved form will in many cases prevent deep drifts and make light traffic roads passable for many additional days during winter.

SOLDERS

Electrically-Heated. Electrically-Heated Lead, Solder and Babbitt Pots. Nat. Elec. Light Assn.—Report, no. 256-90, Aug. 1926, 7 pp., 3 figs. Sizes and types considered; electrical rating of pot; babbitting motor bearings.

STANDARDIZATION

Engineering Aspects. Some Engineering Aspects of Standardization, E. G. Bern. Gen. Elec. Rev., vol. 29, no. 10, Oct. 1926, pp. 736-741, 6 figs.

STANDARDS

Introducing. Best Ways to Introduce Standards, L. F. Swenson. Mfg. Industries, vol. 12, no. 4, Oct. 1926, pp. 261-262, 2 figs.

STEAM

High-Pressure. Higher Steam Pressures and Temperatures. Nat. Elec. Light Assn.—Report, no. 256-77, July 1926, 8 pp., 5 figs. Data from plants employing high-pressure or high-temperature steam cycle have been tabulated in such form that heat consumption of these plants can be analyzed; gives curves showing behaviour of metal under prolonged stress at high temperature.

STEAM ACCUMULATORS

Uses of. Smoothing Out the Load with a Steam Accumulator, A. A. Potter and M. J. Zucrow. Power, vol. 64, no. 15, Oct. 12, 1926, pp. 554-556, 3 figs. Constant boiler load with variable steam demand extends boiler capacity, improves efficiency and opens way to use of inferior fuels.

STEAM PIPES

Distribution Lines. Steam Distribution Lines at Rochester, E. R. Benedict. Power Plant Eng., vol. 30, no. 19, Oct. 1, 1926, pp. 1067-1070, 5 figs. Construction operations involved in furnishing city with heat from central line station.

High-Pressure. Long Steam Line Efficient at High Pressure, R. H. Baker. Power Plant Eng., vol. 30, no. 20, Oct. 15, 1926, pp. 1095-1097, 5 figs. Steam equivalent to 10,000 kw. delivered at 163 lb. through 4,500-ft. line with 3 per cent loss.

STEAM POWER PLANTS

Developments. Modern Steam Generation, J. D. Troup. Int. Sugar Jl., vol. 28, nos. 327, 328, 329 and 333, Mar., Apr., May and Sept. 1926, pp. 133-136, 188-191, 240-244 and 459-462, 3 figs. Developments in water-tube boilers, furnace designs and stoking, air preheating, boiler pressures, increasing furnace temperature. Apr.: Feedwater, steam accumulator. May: Boiler-house control. Sept.: Maintaining clean heating surfaces; steam-jet principle; soot blowers; pneumatic system.

Recent Developments as Affecting Design and Construction of Power Plants, W. P. Gavit. Elec. World, vol. 88, no. 13, Sept. 25, 1926, pp. 623-627, 10 figs. Points out that reheating, regeneration, preheating and burning of pulverized coal have, except for last, not imposed large changes in practices of power-house design and construction.

Fuel Economy. How to Cut 14 Per Cent from the Power Bill, W. A. Shoudy. Mfg. Industries, vol. 12, no. 4, Oct. 1926, pp. 273-276, 4 figs. Points out that a few simple, inexpensive instruments and an intelligent fireman will assist effectively in reducing fuel consumption.

The Use and Abuse of Fuel in the Industrial Power Plant, F. H. Daniels. Engrs. & Eng., vol. 43, no. 9, Sept. 15, 1926, pp. 233-237. Characteristics of coal and sizing; suggestions for coal saving; improvement due to stokers; type of stokers; pulverized coal versus stokers; comparison of pulverized coal equipment and stokers.

STEAM TURBINES

Developments. Steam Turbine Development Since 1900, C. C. Brown. Power Plant Eng., vol. 30, no. 20, Oct. 15, 1926, pp. 1106-1107, 2 figs. Sets forth graphically trend of steam-turbine development from standpoint of steam economy, steam temperatures and pressures, and unit capacities, as experienced in actual operation of number of plants which were installed in various years; also daily fuel-oil consumption for two western steam-generating plants.

Turbines. Nat. Elec. Light Assn.—Report, no. 25-103, Dec. 1925, 52 pp., 64 figs. Characteristics of outstanding turbine installations made during past year; evaluation of present-day tendencies in design. Bibliography.

15,000-Kw. Test of 15,000Kw. Turbine at the Cleveland Municipal Plant, L. A. Quayle. Power, vol. 64, no. 16, Oct. 19, 1926, pp. 583-585, 6 figs.

High-Pressure. The Use of High Pressures for Steam Turbine Installations, S. S. Cook. Nature (Lond.), vol. 118, no. 2969, Sept. 25, 1926, pp. 450-452, 1 fig. Presents diagram exhibiting shortcomings of Rankine cycle in comparison with ideal Carnot cycle, and points out that similar departures from ideal are present in any type of engine in practical use; shows that not only high temperatures, as in case of adoption of high superheat, but also high boiler pressures, lead to substantial increase in overall thermal efficiency.

STEEL

Fatigue Tests. Some Comparative Fatigue Tests in Special Relation to the Impressed Conditions of Tests, H. J. Gough and H. J. Tapsell. Aeronautical Research Committee—Reports and Memoranda, no. 1012, Apr. 1926, 21 pp. Results of lengthy series of endurance tests on two steels adopted by Aeronautical Research Committee as standard material for comparative tests by various investigators.

Hardness. A Further Study of the Distribution of Hardness in Quenched Carbon Steels, and Quenching Cracks, T. Kasé. Tohoku Imperial Univ.—Sci. Reports, vol. 15, no. 3, July 1926, pp. 371-386, 21 figs.

STEEL CASTINGS

Converter Process. Some Physical Properties and Composition of Cast Converter Steel, C. M. Campbell. Am. Foundrymen's Assn.—Preprint, no. 37, for mtg. Sept. 27-Oct. 1, 1926, 6 pp.

Defects. Defects in Steel Castings Discovered After Shipment from the Foundry, J. M. Sampson. Am. Foundrymen's Assn.—Preprint no. 41, for mtg. Sept. 27-Oct. 1, 1926, 23 pp., 11 figs.

Defects in Steel Castings in the Foundry, R. S. Munson. Am. Foundrymen's Assn.—Preprint no. 38, for mtg. Sept. 27-Oct. 1, 1926, 8 pp.

Manganese in. Manganese in Cast Steels, J. H. Hall. Am. Foundrymen's Assn.—Preprint no. 40, for mtg. Sept. 27-Oct. 1, 1926, 16 pp., 4 figs. In author's opinion, results of tests fully justify opinion that heat-treated cast steels containing from .20 per cent to .30 per cent carbon, and manganese from 1 to 2 per cent. possess remarkable combination of properties that makes them of greatest value for severe service in machine parts.

Annealing. The Heat Treatment of Steel, H. M. Boylston. Fuels & Furnaces, vol. 4, no. 9, Sept. 1926, pp. 1035-1066, 22 figs. Annealing of forged or rolled carbon-steel objects of cold-worked objects, steel castings, and tool steel, high-speed steel and special steels; furnaces for annealing; toughening treatments, hardening, tempering, carburizing and case-hardening; heat treatment of case-hardened objects.

Ferro-Carbon-Titanium. Treatment of Steel with Ferro-Carbon-Titanium, G. F. Comstock. Foundry Trade Jr., vol. 34, no. 524, Sept. 2, 1926, pp. 205-207.

STREAM POLLUTION

Industrial Wastes in. Stream Pollution and Industrial Wastes, J. A. Newlands. Conn. Soc. Civil Engrs.—Trans., 1926, pp. 52-67. Points out that industrial-waste investigations have nowhere kept pace with constantly-increasing diversity of wastes produced; co-operative investigation between states and its industries is, in author's belief, logical method of attacking these problems.

STRUCTURAL STEEL

Philadelphia Central Station. Architectural Development and the Use of Silicon Steel in the Richmond Power Station, F. N. Kneas. Eng. News-Rec., vol. 97, no. 12, Sept. 16, 1926, pp. 450-455, 7 figs. Impressive and esthetic appearance primary objective in planning Philadelphia's largest electric station; turbine hall has steel arch roof, in which 8,000 tons silicon steel were used; results of punching and impact tests.

SUBSTATIONS

Automatic. Automatic Substations on Pacific Electric System, S. H. Anderson. Elec. Jl., vol. 23, no. 10, Oct. 1926, pp. 496-499, 5 figs. Automatic substations have been operated on this system 7 years with entirely satisfactory results, under wide diversity of operating conditions; total installed capacity of all of substations, both manual and automatic, is 68,000 kw., of which 25 per cent is automatically operated; all equipments except one are operated in 600-volt service.

Interconnection. An Interconnection Substation, M. R. Summer. Elec. World, vol. 88, no. 13, Sept. 25, 1926, pp. 648-652, 14 figs. Construction features and details of station at one end of 66-kv. tie line between Penn-Ohio Electric Co. and Duquesne Light Co.; handling of equipment and costs of substation elements.

SURVEYING

Aerial Photographic. Improvements in Photogrammetric Survey, C. H. Pollog. Eng. Progress, vol. 7, no. 8, Aug. 1926, pp. 213-215, 2 figs. Describes photogrammetric map with contours obtained by ground survey, and apparatus for rectifying aerial photographs for production of above-mentioned maps.

Azimuth and Time from Sun Observation. Azimuth and Time from Sun Observation, A. Lighthall. Can. Engr., vol. 51, no. 12, Sept. 21, 1926, pp. 307-308. Simplified and workable method of finding direction of line and time from sun observation knowing latitude and longitude; formulas for finding azimuth and hour angles.

T

TELEPHONY

Carrier-Current. Carrier-Current Communication on Submarine Cables, H. W. Hitchcock. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 10, Oct. 1926, pp. 923-929, 13 figs. Seven telephone channels and one telegraph channel on one single-conductor deep sea cable have been made possible by employment of carrier-current on one side of two submarine cables across Cataline channel; this is only application of carrier telephony to deep sea cables; system is shortest carrier system (26 mi.) in commercial operation, and it provides more separate carrier channels (six) than has been previously attempted...

TERMINALS, LOCOMOTIVE

Roundhouses. An Effective Combination of New and Old Roundhouses. Ry. Age, vol. 81, no. 14, Oct. 2, 1926, pp. 623-628, 7 figs.

THERMOMETERS

DEVELOPMENTS. Thermometry, W. F. Higgins. Roy. Soc. of Arts—Jl., vol. 74, nos. 3850, 3851 and 3852, Sept. 3, 10 and 17, 1926, pp. 946-959, 962-975 and 978-986, 16 figs. Sept. 3: Consideration of historical aspect for purpose of tracing evolution of thermometer from early types to modern instrument; introduction of mercury thermometers; pressure corrections; scales of temperatures. Sept. 10: Principal types of thermometric glass used at present time; consideration of types of zero variation; typical specification for thermometer. Sept. 17: Method of obtaining greatest accuracy in use of mercury thermometer; question of thermometric lag; comparison of thermometers with standard instruments.

REFRIGERATION PLANTS. Thermometers and Other Instruments for Refrigeration Plants, R. Harrison. Ice & Cold Storage, vol. 29, no. 341, Aug. 1926, pp. 207-209, 7 figs. Dial and distance thermometers; recording thermometers or thermographs; indication of humidity.

REMOTE-CONTROL. Distance Control Thermometers (Les Thermometres à distance), L. Poincaré. Aéronautique, vol. 8, no. 88, Sept. 1926, pp. 300-304, 6 figs. Principle of Chenu and Fournier types of thermometers based on measuring vapour tension of volatile liquid; Aero thermometer, design and operation.

TESTS AND TESTING

METAL. The Mechanical Engineer and Testing Materials (Konstrukteur und Materialprüfung), L. Traeger. Maschinenbau, vol. 5, no. 15, Aug. 5, 1926, pp. 689-692. Testing metals for tensile strength and limit of elongation; dynamic elongation and limit of elasticity, standards for dynamic testing of materials, etc., in connection with machine-shop practice.

TIDAL POWER

PASSAMAQUODDY PROJECT, CONN. Some Aspects of the Passamaquoddy Tidal Power Project, D. S. Cooper. Conn. Soc. of Civ. Engrs.—Trans., 1926, pp. 29-34 and (discussion) 34-36. Power development is located in Maine near Eastport, and contemplates construction of modern low-head hydro-electric station using tides as source of water supply.

UTILIZATION. Using Tides and Ocean Waves for Electric Power Production (Ausnützung der Gezeiten und Meereswogen zur elektrischen Energieerzeugung), W. Meyer. Elektrotechnischer Anzieger, vol. 43, nos. 64 and 65, Aug. 11 and 14, 1926, pp. 719-721 and 729-730. Severn (England) and Vraach (France) projects; single-basin and double-basin system; compressed air and electricity as means for equalizing fluctuations in energy. Bibliography.

TOLERANCES

QUANTITY PRODUCTION, FOR. Checking Dimensions in Quantity Production (Le contrôle des dimensions des pièces mécaniques, les tolérances), S. Thomas. Génie Civil, vol. 89, nos. 3, 4 and 5, July 17, 24 and 31, 1926, pp. 56-59, 76-79 and 93-96, 12 figs. Discusses accurate and rapid checking of parts produced in quantities; formulato express error; limit gauges and other devices for checking; tolerances, screw threads; relative diameters of holes and shafts in various types of assembly.

TOOLS

STRAIGHT-FORM. Considerations Governing the Design of Straight-Form Tools with Top Rake, F. Parks. Machy. (Lond.), vol. 28, no. 725, Sept. 2, 1926, pp. 651-653, 3 figs. Recent investigations have resulted in development of formulas which are original, as far as author is aware.

TOOL STEEL

SELECTION OF. Selection of Proper Material for Tool Manufacture, J. B. Mudge. West. Soc. Engrs.—Jl., vol. 31, no. 8, Aug. 1926, pp. 295-305, 7 figs. Reviews practice by company in selecting raw material, such as tool steel; selection of steel for job.

TRACTORS

CRANKCASE DILUTION. Crankcase Dilution in Kerosene Tractors, L. G. Heimpel. Agric. Eng., vol. 7, no. 8, Aug. 1926, pp. 273-275, 2 figs. Results of investigation seem to indicate that close relationship exists between mechanical condition of engine and rate of dilution.

TRAFFIC

BUILDING CONDITIONS, EFFECT ON. Street Traffic as Affecting Building Conditions, M. McClintock. Highway Engr. & Contractor, vol. 15, no. 3, Sept. 1926, pp. 63-67, 2 figs. Author claims that traffic congestion in cities has direct effect upon rental values of property in congested areas, and point is reached in congestion when circulation of traffic is so clogged that serious loss follows; discusses problems and steps to be taken to remedy conditions.

TRANSFORMERS

AIR BLAST. Air Blast Transformers, L. H. Burnham. Gen. Elec. Rev., vol. 29, no. 10, Oct. 1926, pp. 716-721, 11 figs. These are useful where space limitations are severe; bare coil construction; arrangement of air ducts; rating and temperature rise; main application to synchronous converters; comparison with oil and water-cooled units.

LOAD-RATIO CONTROL. Two 60,000-kva. Load-Ratio Control Transformer Banks for Philadelphia Electric Company, A. Palme and H. O. Stephens. Gen. Elec. Rev., vol. 29, no. 9, Sept. 1926, pp. 634-638, 6 figs. Three single-phase main power transformers; regulating transformer; mechanism for tap-changing; protective features.

POLARITY MARKINGS. Transformer Polarity Markings, G. W. Stubbings. Elec. Rev., vol. 99, no. 2542, Aug. 13, 1926, pp. 253-254, 3 figs. Gives simple d.c. method of testing.

TAP, CHANGING EQUIPMENT. Transformer Tap Changing Equipments. Nat. Elec. Light. Assn.—Report, no. 256-69, July 1926, 38 pp., 65 figs. Statements by leading transformer manufacturers of equipment available for changing taps in power transformers.

TRANSPORTATION

ROAD-RAIL SYSTEM. The Auto-Rail System (Das "Autobahn" System), L. Tlaskal. Verkehrstechnik, vol. 39, no. 33, Aug. 13, 1926, pp. 523-526, 3 figs. Describes system which combines highway and rail transportation.

TURBO-GENERATORS

80,000-KW. Construction of an 80,000-Kw. Generator, J. R. Taylor. Elec. World, vol. 88, no. 10, Sept. 4, 1926, pp. 465-468, 6 figs. Design details of cross-compound bas-load turbo-generator to be installed by Brooklyn Edison Co. in Hudson Avenue station.

V

VALVES

MOTOR-OPERATED. Motor-Operated Valves Aid Plant Operation. Power Plant Eng., vol. 30, no. 18, Sept. 15, 1926, pp. 1001-1004, 4 figs. Principal details of valves and controls, costs of installing and applications.

VIADUCTS

LOS ANGELES, CAL. Seventh Street Viaduct Over Los Angeles River, H. H. Winter. West. Constr. News, vol. 1, no. 14, July 25, 1926, pp. 31-38, 4 figs. Proposed viaduct is 1,580-ft. long from end to end of approach walls; roadway is 56-ft. wide with 5-ft. sidewalk on each side.

VIBRATION

ELIMINATION OF. Insulation Against Noise and Vibrations (Isolierung gegen Geräusche und Erschütterungen), W. Speiser. Dinglers polytechnisches Jl., vol. 341, no. 11, June 1926, pp. 117-120, 12 figs. Discusses insulating properties of cork and use of "Korfund" sheets of cork wood in iron frames for foundations of various machines to eliminate vibration, also resulting in smoother running.

VOCATIONAL TRAINING

PSYCHOPHYSIOLOGY. Some Experiments in Vocational Psychophysiology, L. Walther. Int. Labour Rev., vol. 14, no. 1, July 1926, pp. 55-71. Author's experiments show practical results which may be expected from judicious application of physiology and psychology to vocational activities; vocational selection and training; application of motion study to industrial work; industrial fatigue.

VOLTAGES

STANDARDS FOR A.C. SYSTEMS. A Proposed Set of Voltage Standards for A.C. Electrical Systems and Equipment. Nat. Elec. Light Assn.—Bul., vol. 13, no. 9, Sept. 1926, pp. 549-553, 2 figs. Records new set of voltage standards for electrical apparatus proposed to supersede present one, namely, those of N.E.L.A. and Power Club.

VOLTAGE REGULATION

REGULATORS. Induction Voltage Regulators for Power Transmission. English Elec. Jl., vol. 3, no. 5, July 1926, pp. 219-228, 15 figs. Advantages of induction regulators and designs developed by English Electric Co.; they are usually oil-immersed and either self-cooled or water-cooled.

VOLTMETERS

FLUX. A Flux Voltmeter for Magnetic-Tests, G. Camilli. Am. Inst. Elec. Engrs.—Jl., vol. 45, no. 10, Oct. 1926, pp. 989-995, 13 figs. Voltmeter for a.c. circuits, voltage indications of which are directly proportional to maximum flux density, regardless of wave shape of voltage; its most important application is to reduction of transformer core-loss measurement to sine-wave basis; new meter makes it necessary to use for reliable results large generators to reduce wave distortion caused by transformer excitation loads, and permits use of any generator that will carry load thermally.

W

WASTE ELIMINATION

INDUSTRIAL. Elimination of Waste in Industry, W. G. Wetherill. Forging—Stamping—Heat Treating, vol. 12, no. 8, Aug. 1926, pp. 271-274. What Department of Commerce has accomplished in elimination of waste in industry; points out that average industrial waste is 49 per cent. Paper presented before Am. Drop Forging Inst.

WATER FILTRATION

SAND. Solving Some Unusual Problems in Sand Filtration, M. E. Dice. Chem. & Met. Eng., vol. 33, no. 9, Sept. 1926, pp. 529-533, 9 figs. Clarifying softened boiler feedwater involved unexpected difficulties due to entrained air that caused precipitate to penetrate into sand surface.

WATER MAINS

LAYING SUBMERGED. Laying Submerged Main at Vancouver, C. Brakenridge. Can. Engr., vol. 51, no. 9, Aug. 31, 1926, pp. 247-250, 7 figs. City of Vancouver lays 36-in. steel pipe across Burrard inlet at Second Narrows to augment water supply; pipe hauled across by donkey engine and system of sheaves and cables; 1,200-ft. submerged course and 1,200-ft of tidal flat.

WATER METERS

MANUFACTURE. Making Meters to Record Flow of Water, A. Murphy. Power House, vol. 20, no. 18, Sept. 20, 1926, pp. 27-31, 11 figs. Meters made by National Meter Co. of Canada at their Toronto plant are of postive-displacement oscillating-piston type; such meters with suitable modifications will also measure other liquids, such as oils and gasoline.

WATER PIPE

CORROSION. The Prevention of Corrosion of Pipe, W. W. Brush. Am. Water Works Assn.—Jl., vol. 16, no. 2, Aug. 1926, pp. 173-176 and (discussion) 177-180, 1 fig. Condition of pipe recently uncovered in Brooklyn portion of New York distribution system illustrates protection of metal and condition that develops with soft corrosive water with inadequate protection of metal.

LAYING. Pipe-Laying Methods, J. W. Toyne. Am. Water Works Assn.—Jl., vol. 16, no. 2, Aug. 1926, pp. 213-215 and (discussion) 215-217. Review of methods showing tendency towards elimination of hand labour and substitution of material and equipment to this end.

WATER POLLUTION

SULPHUR BACTERIA AS INDICATORS. Sulphur Bacteria as Indicators of Polluted Waters, D. Ellis. Engineering, vol. 122, no. 3162, Aug. 20, 1926, pp. 231-232, 2 figs. Refers to blackening of sand in Clyde Estuary; investigation proved that blackening was due to formation of ferrous sulphide as result of interaction of sulphuretted hydrogen and containing constituents of sand. Paper read before Sect. G of Brit. Assn.

WATER POWER

INLAND NAVIGATION AND. Relation Between Water-Power Utilization and Inland Navigation (Die Beziehungen zwischen der Wasserkraftausnutzung und der Binnenschiffahrt), Höbel. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, no. 24, 13 pp.

Utilization of Water Power and Inland Navigation, H. L. Cooper. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, no. 75, 11 pp., 28 figs. Describes Wilson dam in Tennessee River at Muscle Shoals.

NATIONAL ASPECTS. National Aspects of the Study of Water Resources, N. C. Grover. World Power Conference, Sect. Basel Mtg., 1926—Advance Paper, no. 72, 17 pp., 15 figs.

N.E.L.A. COMMITTEE REPORT. Report of Hydraulic Power Committee, 1925-1926. Nat. Elec. Light Assn.—Report, no. 25-26, May 18, 1926, 30 pp., 24 figs. Contains following reports: Reliability of Hydro-Electric Units; Forecasting Water Supply; Vibration in Hydraulic Machinery; Restriction in Flow Due to Vegetable and Animal Growths in Conduits; Manufacturers' Statements Regarding Developments in the Hydraulic Field, 1925. Bibliography.

VALUATION. Some Fallacies in the Valuation of Water Power, A. D. Adams. Eng. News-Rec., vol. 97, no. 12, Sept. 16, 1926, pp. 470-471. Some of contentions frequently made in court to increase award of damage for diverted water.

WATER SOFTENING

ZEOLITES FOR. Data on Zeolite Water Softeners, T. J. Ess. Power Plant Eng., vol. 30, no. 16, Aug. 15, 1926, pp. 888-890, 3 figs. Principles involved; methods of determining quantities of salt and zeolites necessary; design data.

WATER SUPPLY

CROSS-CONNECTIONS. Experiences with Cross-Connections in Chicago, A. E. Gorman. Am. City, vol. 35, no. 2, Aug. 1926, pp. 169-174, 5 figs. Results of systematic survey of cross-connections begun by Chicago Department of Health in 1925 and still in progress. (Abstract.) Paper read before Am. Water Works Assn.

INDUSTRIAL WASTES AND. Progress Report on Recent Developments in the Field of Industrial Wastes in Relation to Water Supply. Am. Water Works Assn.—Jl., vol. 16, no. 3, Sept. 1926, pp. 302-329. Report of Committee No. 6 on industrial wastes in relation to water supply; extracts from Bureau of Mines on stream pollution by acid mine drainage and stream pollution by wastes from by-product coke ovens; extract from paper by R. M. Crawford on elimination and recovery of phenols from crude ammonia liquors; information from report of London Metropolitan Water Board on water examination; progress in stream pollution control in various states; disposal of industrial wastes in England.

MONTREAL, QUE. The Water Supply System of Montreal, Quebec, Canada, F. E. Field. Am. Soc. Civ. Engrs.—Proc., vol. 52, no. 7, Sept. 1926, pp. 1361-1364. Aqueduct canal and supply conduit; filtration works; average results of operation for 1924; new low-level pumping station.

PROVIDENCE, R.I. The Scituate Water-Supply Project for Providence, R.I. Am. City, vol. 35, no. 3, Sept. 1926, pp. 309-312, 5 figs. New water supply known as Scituate Project will furnish city with adequate supply for many years to come; source is large storage reservoir on north branch of Pawtucket River, formed by dam under construction at Kent, R.I.; reservoir will hold 37,000 million gallons and will deliver water by gravity at least 50 ft. higher than now served by Sockanosset reservoir; dam has length of 3,200 ft. at top; purification works; aqueduct and distribution system.

WATER TREATMENT

CHLORINATION. Home-Made Electrolytic Chlorine at Sacramento, H. N. Jenks. Eng. News-Rec., vol. 97, no. 5, July 29, 1926, pp. 170-172, 4 figs. Flexibility of control and economy characterize operation of chlorination direct from chlorine cells.

PURIFICATION PLANTS. Some Small Water Purification Plants, W. A. Hardenbergh and K. W. Grimley. Pub. Works, vol. 57, no. 8, Sept. 1926, pp. 275-279, 11 figs. Well and surface waters of 18 of 35 plants in Jefferson County, Alabama, serving more than 50 persons receive some treatment; details of small filter and chlorination plants.

WATERWAYS

FORMULA FOR. General Formula for Waterways, C. S. Jarvis. Eng. World, vol. 29, no. 2, Aug. 1926, pp. 79-83, 2 figs. Gives graphic representation of selected run-off formulas, including original and modified Myers formulas, and maximum run-off of representative streams.

ELECTRIC. *See Electric Welding; Electric Welding, Arc.*

WATER WORKS

INTAKES. Water Works Intakes of the Great Lakes Region, G. H. Fenkell. Am. Water Works Assn.—Jl., vol. 16, no. 3, Sept. 1926, pp. 267-289 and (discussion) 289-295. Outlines various factors entering into location and design of such intakes and their connecting conduits and cites from information at hand examples covering practice that has been followed in construction of these structures.

SMALL TOWNS. Water Works Systems for Small Towns, H. F. Hunter. Can. Engr., vol. 51, no. 2, July 13, 1926, pp. 123-125. Requirements of various inspection bureaus for water works systems in order to secure adequate fire protection. Paper presented to Illinois Section, Am. Water Works Assn.

TORONTO. Toronto Duplicate Water Works System, Can. Engr., vols. 50 and 51, nos. 22, 6, 7 and 8, June 1, Aug. 10, 17 and 24, pp. 611-615, 197-200 and 237-240, 6 figs. Argument on which recommendations were based for extension of water works system from report by Wm. Gore, of Gore, Nasmith & Storrie, Consulting Engineers, Toronto, and H. G. Acres, of Niagara Falls, Ont. Aug. 24: High-lift pumping plant; location and object of reservoir; recapitulation and estimate; summary of costs.

WATTMETERS

DYNAMOMETERS. The Use of the Dynamometer Wattmeter, E. S. Lee. Am. Inst. of Elec. Engrs.—Jl., vol. 45, no. 8, Aug. 1926, pp. 746-754, 15 figs. For measuring dielectric power loss and power factor of insulation of high-tension lead-covered cables.

WATT-HOUR METERS

PERIODIC TESTING. Periodic Test Schedule for Watt-Hour Meters and Method for Recording Results. Nat. Elec. Light Assn.—Report, no. 256-13, Mar. 1926, 4 pp., 4 figs. Presents value to utility of careful systems of periodic meter testing and maintenance; simple method of recording periodic meter test results, together with sample "step-shart" analyses of these results.

WELDING

ALUMINUM CRANKCASES. Repairing Oil-Saturated Crankcases. Welding Engr., vol. 11, no. 7, July 1926, pp. 37-38, 2 figs. Aluminum castings require careful treatment to remove oil before welding.

ELECTRIC. *See Electric Welding; Electric Welding, Arc.*

PIPE LINES IN BUILDINGS. Welding Pipe Lines in Buildings, H. E. Wetzell. Welding Engr., vol. 11, no. 9, Sept. 1926, pp. 34-38, 4 figs. Points out that welding can make possible saving as great as $40 on single joint.

REFRIGERATING EQUIPMENT. Welding of Refrigeration Equipment, W. F. Scharphorst. Ice & Refrigeration, vol. 71, no. 3, Sept. 1926, pp. 177-178, 4 figs. Author suggests that caution should be observed before plunging into electric or gas welding too promiscuously; describes so-called intermittent system of refrigeration and presents graph showing how three generators operated; illustrations of welded vessels.

STEEL. Welding Carbon and High-Speed Steels, G. L. Walker. Forging—Stamping—Heat Treating, vol. 12, no. 7, July 1926, pp. 255-258, 13 figs. Success in welding high-speed or carbon tool steels depends upon preparation of steel, filler rod, flame characteristics and size of welding tips.

WELLS

CONCRETE. Increasing Supply by Sinking Concrete Well. R. B. Champion. Water Wks. Eng., vol. 79, no. 15, Aug. 1, 1926, pp. 971-972, 2 figs. Account of well-sinking in Holland, Mich., involving construction of concrete well 72 ft. in depth.

WINDING ENGINES

CABLE CONTROL. Control of Cables of Winding Engines (Leràglage des câbles d'extraction), M. Gottrand. Revue de l'Industrie Minérale, no. 134, July 15, 1926, pp. 317-330, 1 fig. Discusses mathematical determination of control factors of cable on drums or reels, and develops formulas for correcting irregularities; biconical drums and reels.

SAFETY APPLIANCES. Overspeed and Overwind Prevention. Iron & Coal Trades Rev., vol. 113, no. 3044, July 2, 1926, pp. 8-11, 10 figs. Description of Norton, Caledonia, Whitmore, Melling, profile and Visor overwind preventers.

OVER-SPEED PREVENTION. Over-speed and Over-wind Prevention. Iron & Coal Trades Rev., vol. 113, nos. 3046 and 3047, July 16 and 23, 1926, pp. 88-90, 124-125, 17 figs. Examples of German practice. Translated from article by H. Hoffman, in Glückauf.

WIRE DRAWING

CONTINUOUS. Continuous Wire Drawing, K. B. Lewis. Wire, vol. 1, nos. 3 and 4, July and Aug. 1926, pp. 79-80 and 99-100 and 116-117 and 140-141, 6 figs. Discusses various types of continuous wire-drawing machinery.

WIRE ROPE

CARE AND MAINTENANCE. Care and Maintenance of Wire Rope. Foundry, vol. 54, nos. 19 and 20, Oct. 1 and 15, 1926, supp. sheets. How to measure wire rope; lubrication. Oct. 1: Foundry data sheet. Oct. 15: How to seize wire rope.

How, When and Why of Wire Rope, W. Voigtlander. Min. & Met., vol. 7, no. 237, Sept. 1926, pp. 389-392, 6 figs. Presents useful hints on care of ropes.

WOOD PRESERVATION

PROBLEMS. Wood Preservation and the Engineer, R. W. Smith. Military Engr., vol. 18, no. 100, July-Aug. 1926, pp. 311-313, 5 figs. Most important property of wood preservative is that it be toxic to decay-producing organisms and wood borers; wood-preserving plants and what they consist of; treatment of railway ties, transmission-line poles, mine timber, etc.

WOOD-WORKING MACHINERY

HIGH-SPEED. High-Speed Wood-working Machines. Engineering, vol. 122, no. 3162, Aug. 20, 1926, pp. 230-231, 3 figs. Details of glue jointer and edge moulder, three-drum endless bed sander, and automatic cut-off saw, manufactured by J. A. Fay and Egan Co., Cincinnati, Ohio.

MODERN. Workshop Experience with Modern Woodworking Machinery, J. Gillrath. Eng. Progress, vol. 7, no. 7, July 1926, pp. 192-195, 7 figs. Advantages of electrically-driven woodworking machines; details of exhibit at Leipzig Spring Fair.

WOOL

ARTIFICIAL MANUFACTURE. Artificial Wool Manufacture, H. Drexler. Paper Trade Jl., vol. 83, no. 13, Sept. 23, 1926, pp. 47-48. Discusses production of new fibre, named artificial wool, which, in appearance, closely resembles natural wool; developed by Italian firm, Snia Viscosa; it is claimed that new product is easy to dye; Xanthogenate process is probably used.

WROUGHT IRON

PROPERTIES. Quality Depends on Base Metal, B. B. Wescott. Iron Trade Rev., vol. 79, no. 7, Aug. 12, 1926, pp. 380-382 and 388, 11 figs. Genuine wrought iron for pipe manufacture is made from muck bars processed from all pig-puddled iron; competent microscopic examination definitely will determine character of material.

FAIRBANKS-MORSE DIESEL ENGINE

The Product of Experience

Behind the type "Y" Diesel are the priceless lessons learned in building more than three million horsepower of internal combustion engines for industrial application. Today there are over 900,000 horsepower of FAIRBANKS-MORSE two-cycle oil engines in daily operation, a total that compares favorably with the aggregate horsepower of all other Diesel engine applications in America.

From a practical standpoint the FAIRBANKS-MORSE two-cycle Diesel has many advantages. It means the elimination of complications—of valves and valve mechanism, of high pressure auxiliary air compressors, of complicated cylinder heads. It operates economically on low-priced fuel oils, and reduces upkeep costs to a minimum. Starts instantly from cold without the use of any hot bulbs or torches.

Write for our new pamphlet, giving a comparison of Diesel Engine principles.

THE MAKERS OF FAIRBANKS SCALES AND VALVES

The Canadian Bridge Co., Limited

Main Office and Works: Walkerville, Ont.

Designers, Manufacturers and Erectors of

STRUCTURAL STEEL WORK

Railway and Highway Bridges
Locomotive Turntables and Train Sheds
Office Buildings and Manufacturing Plants
Crane Girders and Runways, Coal and Ore Handling Bridges.

Grain Elevators, Storage Bins and Conveyor Bridges
Tank and Plate Work of all kinds
Blast Furnaces, Ore Bins, Coal Bins
Lock Gates, Regulating Gates and Penstocks
Plain Structural Material furnished from stock.

An adequate engineering staff is prepared to advise and to co-operate with prospective clients by furnishing specifications, designs, estimates, reports and tenders.

Special Attention Given to the Design and Manufacture of

ELECTRICAL TRANSMISSION TOWERS

THE CANADIAN BRIDGE COMPANY, LIMITED
Main Office and Works: WALKERVILLE, Canada
Sales Offices: MONTREAL - WINNIPEG - EDMONTON.
